The land problem is most serious. The unequal distribution of land, the small size of farms, the share rent, and the increase of the landless have combined to precipitate the agrarian revolution in recent years. The seriousness of the situation can be seen from the tabulation given below:

Unequal Distribution of Land Property

Locality	Haves		Have-Nots	
	Per Cent of Families	Per Cent of Land Owned	Per Cent of Families	Per Cent of Land Owned
Ting Hsien (Hopei)	2.3	19.1	71.5	29.4
Wusih (Kiangsu)	5.7	47.3	68.9	14.2
Lin'an (Chekiang)	4.7	52.1	88.9	21.8
Nanyang (Honan)	4.2	30.5	38.9	7.2
Kwangtung	6.0	66.0	74.0	19.0

An investigation of 58,569,000 farms in twenty-five provinces covering 1,148,874,000 *mow* of land showed the following results

(one *mow* is equal to 0.164 acre):

Land Condition in 25 Provinces

Region	Percentage of Irrigation	Average Number of <i>Mow</i> Per Family
Northeast	2.0	52
Southeast	62.0	12

Region	Percentage of Irrigation	Average Number of <i>Mow</i> Per Family
Northwest	8.8	29
North Plain	5.7	20
Lower Yangtze Valley	46.1	15
Southwest	43.6	17
25 Provinces	24.0	19

Land Rent in 22 Provinces

	Rent Practices in 22 Provinces	Rent in 700 <i>Hsien</i> Expressed in Per Cent of the Land Value
Cash rent	21.2 per cent	11.0 per cent
Crop rent	50.7	12.7
Share rent	28.1	15.2

Increase of the Landless

Province	Owner Farmer		Part Owner		Tenant Farmer	
	1912	1930	1912	1930	1912	1930
Yunnan	45	28	26	31	29	41
Kweichow	43	32	24	25	33	43
Szechuan	30	20	19	27	51	58

Realizing the seriousness of the situation, the National Government in 1930 enacted the Land Law, which provided that, if

the landlord is absent from the locality where his land is situated, the tenant may proceed to own the land under certain legal conditions after he has operated it for ten years. Rent shall not be more than 37.5 per cent of the main produce from the land. The farmers individually or collectively shall have the free use of the cultivated public land but they are not allowed to own it. The rate of taxation on improved farm land shall be one per cent of its value; that on unimproved land shall be 1.5 to 10 per cent of its value. The tenant is free to make any improvement he wishes on the land and will be compensated by the landlord. The tenant cannot be evicted unless he is two years in arrears in the payment of rent or has not operated the land for an entire year without proper reason.

The land policy of Soviet China, now incorporated as a Special District, may be cited in contrast. Here a survey conducted in 1926 by the Peasants' Committee of the Kuomintang showed that 10 per cent of the rural population owned 70 per cent of the cultivable land in China; 15 per cent was owned by middle-class peasants; and only from 10 to 15 per cent of the arable land was owned by 65 per cent of the rural population—peasants, tenant farmers, and farm laborers. According to Edgar Snow the Northwest Soviet Government promulgated a land law in 1935 which provided for the confiscation of land not cultivated by the owners themselves, and the distribution of such land, waste land, and land of absentee owners among poor peasants. The term landlord included any farmer, the major part of whose income was derived from land rented out to others. The aim of the law was to guarantee the basis of a decent livelihood for every peasant family by providing sufficient land and abolishing tax exploitation.

Usury and cooperatives

In 1933 an investigation conducted by the University of Nanking into the indebtedness of the farmers of 850 counties in twenty-two provinces showed that 50 per cent of the farmers are in debt and 48 per cent of them borrow grain for food. On more than 90 per cent of the loans the interest was higher than 20 per cent per annum; on nearly 24 per cent of the loans the annual interest was over 40 per

cent. Of the loans 95 per cent are borrowed from feudalistic sources (pawnshops, native banks, village stores, landlords, rich farmers, and merchants) and only 5 per cent from banks and cooperatives.

In order to check usury and to help relieve the peasants, the cooperative movement was originated in connection with the student movement in 1918. From 1918 to 1927 the movement was primarily social and philanthropic in aim. Since 1927 political motives have been injected in its promotion. The Chinese banks since 1934 have invested more and more of their funds in the cooperatives. Beginning with one cooperative in 1918 the number grew to 37,318 in 1936 with 1,643,670 members and a share capital of CN\$5,139,795. (Note:At the present rate of exchange the Chinese dollar is worth 25 cents.)

On account of the lack of popular control, the requirement of property guarantee, and a rate of interest ranging from 12 to 18 per cent per annum—more than the prevailing agricultural income—the cooperatives have not on the whole proved to be of advantage to the poor peasants. Dr. Chen, after studying the cooperative movement, reached the following conclusion:“In brief, the original sponsorship of the cooperative movement in China came from intellectuals and leaders sincerely desirous of bettering the lot of the country's millions. But in the course of development and expansion, it has fallen a victim to all the social ills inherent in China's economy....For individual usury is substituted collective usury.”

Soviet China also placed great emphasis on the cooperatives which have been continued under the present administration in order, among other things given in detail by Edgar Snow, “to raise the economic-political level of the masses”and“to encourage the participation of the lowest strata of society.”

Diseases and health centers

The rural population has suffered much more from diseases than the urban. The most prevailing diseases in the villages are malaria, consumption, and eye, teeth, and skin troubles. Casualties due to childbirth and infantile mortality are also high in the country because of lack of medical care and health information. Contagious diseases,

such as smallpox, often levy a high toll upon the village people.

In recent years much work has been done, by way of experimentation and demonstration, in trying to improve the health conditions of the farming population. An independent National Health Administration was established in 1935. Consolidation of the work of the health services had been systematically developed in the seven provinces of Kiangsi, Hunan, Kansu, Ninghsia, Chinghai, Shensi, and Chekiang. Each provincial center has an administrative office, a hygiene laboratory, and a hospital. The work is furthered by *hsien* health centers, health stations, and health sub-stations or clinics in the towns and villages. Altogether 74 *hsien* health centers and 144 stations and clinics have been established. Demonstration centers have been established in Kiangning, Ting Hsien, Lanchi, and Chowping, which on account of the war have been moved to Central China. These village centers have attempted under the direction of the medical staff, to use village health workers who are laymen recruited in the villages and given only a short period of training in simple procedures such as smallpox vaccination, reporting of communicable diseases, births, and deaths, the use of a few simple drugs, first aid, and treatment of common skin diseases and simple surgical wounds. Throughout the country there are 27 medical schools, 217 schools of nursing, and 38 midwifery schools which are far from being sufficient for the overwhelming demands. A good beginning has been made, however, and the work is moving in the right direction.

Famine and the control of nature

Famine is a frequent visitor to China, and it is the farmers who suffer most from it. Among the causes of famine may be mentioned deforestation, lack of irrigation, inadequacy of river control, primitive methods of farming, the decline of agricultural production as a result of the increase of large landholdings, and the diminution of the size of cultivation which combine to produce the flood and drought that have often reduced the people to starvation. Further, owing to lack of means of communication it is difficult to transport food from one region to another.

In recent years there has been a great movement for reforestation.

Students, civil officers, and peasants are encouraged at the Tsingmin Festival to plant trees. The Relief Commission has devoted its attention to building dams in order to provide better irrigation for the Northwest. For the year 1936-1937, \$5,000,000 (Chinese) was appropriated for irrigation work and about \$9,000,000 (Chinese) was used for conservation work on Hwai River, Hupeh Dyke, and the Haiho and Yunting Rivers. In scientific agriculture much has been done in the selection of seeds, especially cotton; the Central Bureau of Cotton Cultivation has increased the distribution of improved seeds in Kiangsu, Honan, Shensi, and Hopei from 570,000 mow in 1934 to 3,000,000 mow in 1936. Attention has also been given to the improvement of animal husbandry in the Northwest and to the Chimen tea. Finally, motor roads have increased from 1,185 km. in 1921 to 66,111 km. in 1931 and 96,345 km. in 1935.

External aggression and united resistance

The century-old aggression from outside has reduced China to a semi-colonial state. The recent aggression by Japan is threatening national existence. Here again the peasants are the ones who suffer most. First, foreign goods have destroyed the village handicrafts. Second, since China did not win her tariff autonomy until 1929, the development of Chinese national industry was handicapped and the peasants were unable to find sufficient employment in the cities. Third, the Japanese occupation of Manchuria closed a most important outlet for peasant emigration and made their life in North China much harder. Fourth, the smuggling of Japanese goods into the Chinese market without paying tariff duties since August, 1935, has been a most serious blow at Chinese industries and has been one of the main causes of unemployment as well as of loss of revenue to the National Government, amounting to \$100,000,000 (Chinese) a year. Fifth, in the occupied areas the peasants are forced to sell their best land at a nominal price almost amounting to confiscation.

Since "divide and conquer" has been the policy of Japanese aggression, the only way to liberty for the Chinese is to "unite and resist." The peasants in China have cast their lot to fight for national liberation. It is they who have formed the mass base for the Chinese

Invisible Army that is now making it difficult or rather impossible for the invaders to secure permanent occupation of the country. Indeed, Chinese unity has been increasingly achieved. All armies are now fighting under the unified command of Generalissimo Chiang Kai-shek, and the Chinese peasants will play a decisive role in this historic struggle for freedom.

B Educational Conditions

Illiteracy and education

By illiteracy is ordinarily meant the inability to read and write. In this sense China has about 120,000,000 people who can be classified as literate and the rest, numbering about 330,000,000, can be called illiterate. The percentage of this kind of illiteracy is much higher in the villages than in the cities. But literacy takes a broader definition as education widens its scope. Should life itself be considered as education, then there is social, economic, and political literacy as well as school literacy. In this sense the peasants of some parts of China may have a higher degree of literacy than some scholars or farmers of the West. Yet academic literacy being such an important means to further one's own education, mass illiteracy among the Chinese peasants must be solved in order to help them to achieve greater progress. At the same time, in discussing this phase of the problem, it must not be forgotten that a real education of the peasantry must include an understanding of all the vital problems in relation to village life, an appreciation of all the forces that are affecting the farmers, and positive efforts to help them or guide them to help themselves to solve these problems and achieve a decent standard of living.

Elementary education

There are various types of elementary schools. First, there is the six-year elementary school comprising the four-year lower primary and the two-year higher primary courses. This type of school is usually located in the capital of the *hsien*, and is rarely found in the villages. Second, there is the four-year lower primary schools, most of which type exist in small towns and cities with a small percentage in the villages. Third, there is the one-year course which is primarily

intended to reach village children. Fourth, there is the old-fashioned private school which is still the prevailing type in the villages.

The National Government has made a special attempt to spread the one-year course and to reform the old-fashioned private schools, which are induced to conform more or less to the standard of the one-year course. The subjects to be taught in the one-year primary schools are national language, composition, penmanship, arithmetic, citizenship, and physical training, distributed over thirty-six periods with 1,080 minutes per week.

The increase in the enrollment of pupils in these schools has been remarkable during the last two decades, and reached a total of 16,588,000 in 1935-1936. To this should be added another 7,000,000 pupils who are enrolled in the old-fashioned private schools, which, as a rule, are not yet registered.

The elementary schools are usually of small size and even in the cities they average around three classes per school. Very few schools have as many as ten or twenty classes. In the villages and small towns there is as a rule only one class per school. It is very interesting to notice the differences in per-pupil cost in the city and village schools. In the cities the per-pupil cost reaches as high as \$28.71 (Chinese) while in the province of Kansu, where the population is mainly rural, the per-pupil cost is \$4.77 (Chinese). It has been said that the Chinese peasants are generous in giving the children of the landlords a rich education, their own children a poor education, and themselves no education.

The number of elementary schools increased from 86,318 in 1912 to 293,000 in 1935-1936; the enrollment in the same period increased from 2,795,475 to 16,588,000 pupils, and the expenditure from \$19,334,480 (Chinese) to \$106,594,685 (Chinese) .

Adult education

Since the Literary Renaissance emphasis has been placed upon adult education to which a fresh momentum was given by the Mass Education Movement. A new demand for adult education was created by the Revolution of 1925-1927. Since that time the Government has undertaken to promote the movement. Its growth has been from 6,708

schools with 206,201 students in 1928 to 38,000 schools with 1,300,000 students in 1934-1935;the expenditure in the same period advanced from \$466,562 (Chinese) to \$1,900,000 (Chinese). The total expenditure for all types of adult education was\$3,632,466 (Chinese) in 1928 and\$16,900,000 (Chinese) in 1934-1935.

Compulsory education

In 1930 a twenty-year plan for universalizing education in China was adopted by the Second Conference of Education called by the Ministry. In 1935 the Provisional Outline for Enforcing Compulsory Education was promulgated, and provided that between August, 1935, and July, 1940, all illiterate adults and children of school age must attend the one-year primary school;between August, 1940, and July, 1944, the two-year course;and from August, 1944 on, the four-year course. Every primary school district must have one one-year primary school. For every five to ten primary school districts there must be one four-year school.The school age for children was fixed as from eight to twelve. Adults between sixteen and thirty are to be given preference in the schools. Parents or guardians are liable to a fine of from\$1 to\$5 (Chinese) for failing to send their children to the appointed schools.

The most notable feature of the Law of 1936 was that adult education was to be made universal within six years. The Ministry of Education in 1937 alone distributed 5,500,000 copies of text books for adults. Large numbers of radios were also distributed to enrich the educational program. A special fund to promote compulsory education was provided by the Ministry and the provincial governments amounting to \$15,847,000 (Chinese) in addition to the regular educational expenditures for 1936-1937. Through these efforts there was an increase of 33,000 one-year and four-year primary schools with an increased enrollment of 3,400,000 pupils in 1935-1936.The forecast for 1936-1937 was an additional increase of 46,000 one-year primary schools and 3,000 four-year primary schools with another increase of 6,000,000 pupils.The Minister was optimistic enough to say that in two years (by the end of 1937) China would have 23,000,000 pupils.

Training of village teachers

The movement to give special training to village teachers was originated in the Morning Village Experiment in 1927. The promoters of this movement advocated that village teachers should be trained in a village environment. The prospective teachers should spend some time in living among the peasants, learning from them, and sharing their sorrows as well as their joys. Since 1932 private experiments have been discontinued and all normal schools have become government institutions.

There are now several ways of training village teachers: First, the normal schools admitting students with junior middle school graduation and offering a course of three years; second, the special normal course, admitting senior middle school graduates to a one-year course; third, the short-course normal schools admitting higher primary school graduates and offering a four-year course; fourth, the short-course normal classes attached to normal or middle schools admitting junior middle school graduates to a one-year course.

In 1932 there were 50,150 students in 477 village normal schools, and 18,712 students in short-course village normal schools; the number of students in the 141 village normal courses attached to middle and vocational schools was not reported.

The subjects of instruction in the village normal schools include citizenship, physical training, military training for boys, military nursing and domestic science for girls, hygiene, Chinese, mathematics, geography, history, biology, chemistry, physics, logic, manual and fine arts, music, agricultural theory and practice, village economy and cooperatives, irrigation, introduction to education, educational psychology, primary school subjects, methods and administration, tests and statistics, village education, practice teaching, extra-curricular athletics, and private study. The program calls for 60 hours a week, 36 hours for classwork and practice teaching and 24 hours for athletics and private study.

Experiments in village education

During the last fifteen years a number of experiments have been carried on in China in the field of village education; of these the following are outstanding.

(1)*The Association for Mass Education*, founded in 1923 by Mr. James Yen, has four objectives—health, vocation, citizenship, and culture. All work in educating the village people is carried on through three agencies, namely, the school, the home, and the social group. The Association advocated a reduced vocabulary for the peasants, usually known as the 1,000-character readers, and has a Training Institute for Rural Reconstruction consisting of four research departments in education, rural economics, agriculture, and public health.

(2)*The Shantung Institute of Rural Reconstruction*, founded by Mr. Liang Shou-ming, undertook an experiment in two *hsien* selected by the civil administration. Each *hsien* was divided into a number of districts which were further divided into a number of villages. The basic principle underlying this experiment is “government and education in one.” Accordingly, the administrative power of the district is vested in the district school; that of the village in the village school. The personnel making up a village school is composed of four divisions. (a) trustees, the village gentry who take charge of public affairs; (b) the principal, an elder who is supposed to teach the village people by example and precepts; (c) the teachers and supervisors; and (d) the pupils, the whole population of the village, men, women, and children. The emphasis in the economic reconstruction of the village is put on various forms of cooperatives. Village defense is emphasized for self-protection and discipline. A Research Department and a Training Department were also established.

(3)*Kiangsu College of Education*, founded in 1928 by Dr. Chao Tsungding, trains village teachers and administrators who prosecute research and experiment in rural education. A social survey has been conducted and studies have been made in psychology, adult reading materials, and educational literature. The college maintains four units of experiments, two of which are devoted to rural life and problems, with the threefold purpose of bettering the economic conditions, raising the civic competency, and spreading the education of the people. Other experiments have been directed to (a) utilizing the village houses and village teaching personnel for educational

activities; (b) economizing time in school courses; (c) combining classes for children and adults and (d) organizing the village people for village reform.

Because of the present war, all these experiments have been moved to Hunan where, as reported, there exists closer cooperation than before. More detailed information about these experiments may be found in an article by Mrs. Chindon Yui Tang, on "Adult Education and the Chinese Village."

Peasant education in Soviet China

The story of Chinese peasant education is not complete without an account of the educational activities in Soviet China. According to Edgar Snow, the Communists, as they passed through provinces populated by more than 200,000,000, held great mass meetings, gave theatrical performances, taxed the rich heavily, freed many slaves, and preached liberty, equality, and democracy. The aims of the agrarian revolution and of the anti-Japanese policy were explained. Education was provided to disseminate literacy, to train for the army, and to spread political theory. Mass organizations were formed for self-study groups under Communists or literati as leaders with propaganda material for texts.

The People's Education Movement

This movement, sometimes called the New Mass Education Movement, refers to an organization of education of the people, by the people, for the people. It was started about eleven years ago when a group of professors and students undertook to develop a method of education which would be of real service to the peasants. The aims of the movement, as defined in 1935, are to promote (1) the united defense of Chinese democracy; (2) world peace through international cooperation; (3) the uplift of the people by their own efforts; and (4) free education for all.

Relay teachers. For the present discussion the last of these movements is important. Because of the simplicity of its technique the peasants of China have been enabled to educate and qualify themselves more and more to participate in the great struggle for freedom. A system of relay teachers has been worked out; after a class

is dismissed each pupil himself becomes a teacher and every home a center of learning. It has been found that one-tenth of the Chinese farmers are born teachers, capable of handling large classes with the added advantage that they speak the farmer's language and understand his problems.

Little teachers. In addition to the relay teachers, a system of "little teachers" has been established. School children who at the end of the school day return to their homes and teach their relatives and neighbours. Grandparents and grandchildren play and teach and learn together. Hundreds of thousands of "little teachers" are helping to disseminate education in China, with the special advantage that they can help women to acquire some education in a social situation where women teachers are few in number and custom frowns on men teachers for girls and women.

For some years progressive village schools have been guided by the principle "All come, all served." With the increasing attendance at school of peasants and their children, the little teachers have helped to save the situation and have added to the principle the slogan "Those who cannot come will receive attention on delivery without charge"; to those who cannot come to the school, the little teachers deliver education in their homes. In this way the isolation of the school is broken down, the whole village becomes the school, and the light of education radiates everywhere. The lonely teacher in a ruined temple joined suddenly by tens of little comrades cannot fail to see a new vision of his profession and to feel uplifted to the historic mission that he is to fulfill.

The new script. The People's Education Movement is also interested in promoting a new script for the Chinese spoken language. The scripts for the Northern, Shanghai, Canton, and a few other dialects have been worked out. They treat the Chinese spoken language as a polysyllabic language and in so doing have succeeded in eliminating the minute symbols for the different tones. With the new script peasants in different localities can, by devoting an hour a day to it, learn to read and write letters in their dialect in one month.

Use of public places for education. Since money is not available for

special buildings people willingly offer the only rooms they have for educational purposes. Not only are temples, tea-houses, and vacant rooms utilized in this way, but a shady tree or a nature-made open-air auditorium for larger meetings are sufficiently adequate places for mass meetings, the singing of songs, telling stories, learning simple truths, and discussing national and international problems.

Conclusion

With relay teachers, little teachers, the new script, and society as the school, peasants are enabled to provide an education by and for themselves. Education itself has changed; it is no longer a luxury for the few; it is like the sunshine for all to enjoy, like the air for all to breathe, like water for all to drink. A new peasantry is emerging in China with the help of all the forces that are cooperating in the villages. The farmer in Pearl Buck's *The Good Earth* striving to get more and more land for his own family in order to become richer than his fellow farmers is no longer an example for others to follow. Progressive farmers in China today desire to have land enough for each to live a decent life. A picture of the new Chinese peasantry is reflected in the following poem.

The Dancing of the Hoe

Take up your hoe!
Hail, Revolution
Take up your hoe!
The hoe must defend.
Cut off the weeds,
Long live the hoe!
The crops will grow.
Fight to the end.
Drive off the foe,
When fighting alone,
Sons of the Ancient Country!
The hoe can't stand long.
Under the hoe
Machines and hoes unite!
There is Liberty.

A new world is in sight.

中国（1938）

① 农村生活状况

中国的村庄 据估计，中国有100万个村庄，平均每个村庄的人口为400人。这些村庄遍布在黑龙江流域、长江流域、黄河流域、珠江流域，或西北高原与华北平原，组成结构不一，生活方式各异。有些村庄是由同一个祖先繁衍下来的众多家庭构成，有一个供奉先祖的祠堂，族长或多或少起到控制作用。另一些村庄则为多个家族混合构成，绅士或者退休还乡的官吏可以在地方行政官员和村民之间起联络作用，并且常常对地方事务有最终发言权。越是进步的村庄则越是民主，村吏由选举产生。在许多村庄，茶馆即是舆论的中心。不定期营业的杂货店向村民供应食盐、蔬菜、油、糖、纸、煤油和其他日常必需品。除了少数地主之外，多数村民以务农为生。一般来说，每一农户有五六口人，拥有3.5英亩稻田或6英亩麦产田，分布在四五块地方。即使是这样一小块耕地，在很多情况下也并不完全属于甚至完全不属于农民所有。农户家如果有一头牛或一头小毛驴帮助干活，那就算幸运的了。通常农户家都养有一头猪或一只羊、两三只母鸡、几棵树和一块屋边小菜园。金陵大学关于土地利用情况的研究报告指出，农村纯收入的15%来自辅助工业和服务业。这些行业包括织布、谷物加工、榨油、土法缫丝、制茶、制糖、造纸、竹木编和稻草器皿。在工业城市周围的村民于农闲季节打零工。他们也从事贩卖水果、谷物或蔬菜。

人口 据专家估计，全国总人口的12%居住在一万或万人以上人口的城镇里。保守地说，4.5亿人口中的80%居住在农村。在每年新增加的400万人口中，至少有300万来自农村。农村剩余的人口从前是向东北迁移，到满洲寻找生路；或是向南迁移至国外；或是随着工业发展到城市里谋生。自从1929年世界范围内经济萧条以来，海外约20万至25万的中国劳工被迫返回故乡。每年有15万至18万农民向长城以北和东北迁移，但由于日本侵占满洲，这一方向的人口迁移已大大受阻。中国民族工业由于受到外国竞争的阻碍，又没有任何关税保护，其缓慢发展已经不能为中国剩余农业人口提供出路了。

土地问题和土地政策 中国土地问题最为严重。土地分配不均、农场经营规模较小、耕地收获的分成地租、无地农民的增加——这些因素结合起来加速了近年来的土地革命。情况之严重，从下表可以看出：

土地财产的不平等分配

地方	占有土地者		无土地者	
	农户百分比	占有土地百分比	农户百分比	占有土地百分比
定县（河北）	2.3	19.1	71.5	29.4
无锡（江苏）	5.7	47.3	68.9	14.2
临安（浙江）	4.7	52.1	88.9	21.8
南阳（河南）	4.2	30.5	38.9	7.2
广东	6.0	66.0	74.0	19.0

对25个省占地1,148,874,000亩的58,569,000个农户的调查，其结果显示如下（1亩=0.164英亩）：

25个省的土地状况

地区	可灌溉百分率	每农户平均亩数
东北	2.0	52
东南	62.0	12
西北	8.8	29
华北平原	5.7	20
长江下游	46.1	15
西南	43.6	17
25个省	24.0	19

22个省的地租状况

	22个省收取地租的习惯做法	700个县用地价百分比表示的地租
现金地租	21.2%	11%
实物地租（收获物）	50.7%	12.7%
分成地租	28.1%	15.2%

无土地农民的增加

省份	占有土地农民		部分占有土地农民		佃农	
	1912	1930	1912	1930	1912	1930
云南	45	28	26	31	29	41
贵州	43	32	24	25	33	43
四川	30	20	19	27	51	58

当认识到情况的严重性之后，国民政府于1930年颁布了《土地法》。《土地法》规定，若地主离开其土地，则在该土地上耕种已满十年之佃农即可根据若干合法条件占有该土地，地租不得超过耕地正产物收获总额的37.5%。农民可以独自地或集体地自由使用公有耕地，但不得占有公有耕地。改良耕地的税率应为地价的1%，非改良耕地的税率应为地价的1.5%至10%。佃农可以随意对土地进行改良，并将由地主给予补偿。除非佃农拖欠地租达两年之久或无故不耕种所租土地达一年之久，否则地主不得将佃农所租土地收回。

可列举现已合并为一个特区的中华苏维埃地区的土地政策作为对照。国民党农民委员会于1926年所作的一次调查显示，10%的农村人口占有全国70%的可耕地；中产农民占有15%；占农村人口65%的自耕农、佃农和雇农则仅占有全国可耕地的10%—15%。据埃德加·斯诺³报道，西北苏维埃政府于1935年颁布了一项土地法，该法规定：凡土地所有人不自行耕作之土地一律没收，并将没收之土地、荒地以及主人不在之土地分配给贫农。地主一词，包括主要收入来源于向他人收取地租的所有农人。该法之目的在于通过提供充分之土地和消灭地租剥削来保证每位农户体面的生活基础。

高利贷及合作社 1933年金陵大学对22个省850个县的农民负债状况进行调查，结果显示，50%的农民负债，48%的农民借粮为食；90%以上的债务年利高达20%以上，差不多24%的债务年利竟高于40%；债务中95%贷于封建性的处所（当铺、钱庄、农村商店、地主、富农和商人），只有5%是向银行及合作社借的。

为了遏制高利贷，解除农民的痛苦，合作社运动于1918年与学生运动相应而起。从1918年至1927年，合作社运动在定位上主要是社会性和慈善性。自1927年以来，政治动机注入了提倡合作社运动中。自1934年以来，中国的银行已经将越来越多的资金投入合作社。从1918年第一个合作社出现，到1936年合作社的数目已达37,318个，社员1,643,670人，股金本金5,139,795中国元（注：当下汇率为1中国元等于25美分）。

由于缺少公意监督、需要财产作抵押，年利率又高达12%—18%，比一般的农业收入还高，所以总的看来，合作社对于贫苦农民并无好处。在对合作社运动进行了研究之后，陈（翰笙）博士得出如下结论：“简言之，中国合作社运动的最初发起者都是真诚希望改善国内千百万人民命运的知识分子和领袖人物。但在发展和扩大的过程中，合作社运动却成了中国经济所固有的一切社会弊病的牺牲品……仅仅是个体的高利贷为集体的高利贷所取代而已。”

中华苏维埃地区也非常重视合作社，并在现时政府的领导下继续经营，其目的，如埃德加·斯诺所详述，包括为了“提高群众的经济、政治水平”以及“鼓励社会最低阶层参与”。

疾病和医疗中心 农村人口要比城市人遭受更多的疾病痛苦。农村最流行的疾病是疟疾、肺病以及眼病、牙病和皮肤病。由于缺乏医护条件和卫生知识，农村产妇及婴儿死亡率也很高。诸如天花之类的传染病常常使村民大量死亡。

近年来，通过实验和示范的方式在力图改善农村人口的健康状况方面已经做了不少工作。1935年建立了独立的全国卫生管理机构。江西、湖南、甘肃、宁夏、青海、陕西、浙江七个省系统地开展了巩固卫生服务工作。每一个省的中心点都有一个行政办事处、一个卫生实验室和一所医院。各县卫生工作通过县卫生中心、卫生站以及各镇各村的卫生分站或诊疗所得到进一步推进。已经建立起来的总共有74个县卫生中心、144个卫生站和诊疗所。江宁、定县、兰溪、邹平诸县则建立了示范中心，这些示范中心因战争关系已迁往华中。这些农村的卫生中心试图在医疗人员的指导下，在农村招收普通人，经过短期的、简单的工作程序上的培训成为农村的卫生员，教会他们诸如种牛痘、传染病以及出生和死亡情况报告、几种简单药物的使用、急救、常见皮肤病和简单外伤的治疗。全国现有27所医科学校、217所护士学校、38所助产士学校，但还远远不能满足极其巨大的需要。然而，良好的开端已经有了，而且这项工作正在朝着正确的方向前进。

饥荒和对自然的调节 饥荒时常降临中国，使农民深受其害。造成饥荒的原因甚多，其中可以列举的有如下诸多方面：森林遭受毁坏、水利设施缺乏、河流调控不当、耕作方法落后，这些因素综合起来，产生水旱灾害，加之大规模土地占有的增加和耕作规模缩小而致农业生产下降，从而常使人民陷入饥馑。而且由于缺乏交通工具，很难将粮食从一个地区运往另一地区。

近年来，已经开展了大规模的重新植树造林运动。政府鼓励学生、

文职官员和农民于清明节种树。救灾委员会已致力于建造拦河坝，以便为西北地区提供更好的灌溉条件。在1936年至1937年间，拨款5,000,000元（国币）用于水利工程，约9,000,000元（国币）用于淮河、湖北防水坝以及海河与永定河上的水土保持工程。在科学耕作方面已经做了许多工作，特别是对棉花等作物的选种；中央棉垦局已将改良棉种分配给江苏、河南、陕西、河北，种植面积从1934年的570,000亩增加到1936年的3,000,000亩。同时也对西北地区的畜牧和祁门茶的改良十分重视。最后，公路已从1921年的1,185公里增加到1931年的66,111公里和1935年的96,345公里。

外来侵略和团结抗战 百年来的外来侵略已使中国沦为一个半殖民地的国家。最近日本的入侵正威胁着民族的生存。其中仍是农民受害最深。第一，外国货已经摧毁了农村的手工业。第二，由于直到1929年中国才获得关税自主，其自身民族工业的发展受到阻碍，农民不能在城市得到充分的就业机会。第三，日本侵占满洲，关闭了农民外出谋生这条非常重要的出路，使他们在华北的生活更加艰难。第四，自1935年8月以来，日货走私进入中国市场，不缴纳关税，给予中国工业极为严重的打击，成为失业的主要原因之一，同时也是国民政府税收损失的主要原因之一，其损失每年高达1亿元（国币）。第五，沦陷区的农民被迫以几乎与没收无异的低微价格出售他们最好的土地。

自从“分而治之”成为日本侵略的政策，中国人获得自由的唯一道路便是“团结抗战”。中国农民为民族解放战斗作出很大贡献。正是他们形成了中国“看不见的军队”的群众基础，正是这支“军队”使得侵略者如今难于，更确切地说的不可能永久占领中国。中国人的确已经日益团结了起来。所有军队现时正在蒋介石委员长的统一指挥下进行战斗，而中国农民将在这一为获得自由而战的历史性斗争中发挥决定性的作用。

② 教育状况

文盲和教育 所谓文盲，即通常所指的没有读写能力的人。从这个角度来讲，中国大约有1.2亿人可以列为有文化者，其余大约3.3亿人可以称作文盲。文盲在农村的比例要远远高于城市。但是，随着教育范围的扩大，“文化”便有了更宽广的内涵。如果把生活本身视之为教育，那么文化不仅包括学校习得的读写能力，而且包括社会方面、经济方面和政治方面汲取的知识。从这个意义上讲，中国某些地区的农民可能比西方一些学者或农场主具备的文化程度要高。然而由于基本读写能力是促进个人自身教育的重要手段，中国农民中大量的文盲问题就必须解决，以便帮助他们取得更大的进步。同时，在讨论问题的这个层面时，有一点

不容忽视，即真正的农民教育必须包括对关系农村民生的所有重大问题的理解，包括对正在影响农民的一切力量的鉴别，还包括积极努力帮助或引导他们自行解决这些问题，过上富足的生活。

初等教育 有各种类型的初等学校。第一，是六年制的小学，包括四年制的初级小学课程和两年制的高级小学课程。这一类型的学校通常设在县城里，农村则很少见。第二，是四年制的初级小学校，这一类型的学校多数在小城镇，在农村的百分比很小。第三，是主要以农村儿童为对象的一年制课程。第四，是在农村仍旧盛行的私塾教育。

国民政府特别致力于普及一年制课程，并对私塾教育加以改革，引导它们尽量符合一年制课程的标准。一年制小学校的教学科目有：国语、作文、写字、算术、公民和体育，课时为每周36节，共1,080分钟。

近20年来，这些学校的招生人数有显著增加，在1935—1936学年度，招生总数达到16,588,000名。还应该加上700万名私塾学生，他们通常未经注册，也未加到统计数字上去。

初等学校一般规模很小，甚至在城市里平均每所学校也仅有3个班左右。只有极少学校有10到20个班级。在农村里和小镇上，通常每校只有一个班。城市学校和农村学校学生人均费用之间的差异非常值得注意。在城市里，每个学生的费用高达28.71元（国币），而在以农村人口为主的甘肃省，每个学生的费用却只有4.77元（国币）。曾经有人说，中国农民很慷慨，给地主的孩子优良的教育，给自己的孩子低劣教育，不给自己任何教育。

初等学校的数目从1912年的86,318所增加到1935—1936学年度的293,000所；同一时期招生数从2,795,475人增加到16,588,000人，经费从19,334,480元（国币）增加到106,594,685元（国币）。

成人教育 自从中国的文艺复兴以来，成人教育已经受到重视，普及教育运动又给予成人教育以新的推动。1925—1927年的革命对成人教育提出了新的要求。从那时起，政府已经承担起推进这一运动的责任。成人教育运动的发展情况是：从1928年的6,708所学校、206,201名学生，增加到1934—1935学年度的38,000所学校、130万名学生；同一时期的经费从466,562元（国币）增加到190万元（国币）。各种类型的成人教育的经费总额：1928年是3,632,466元（国币），1934—1935年度是1,690万元（国币）。

义务教育 1930年，教育部召开的第二次教育会议通过了一项在中国普及教育的二十年规划。1935年，颁布了《实施义务教育暂行办法大

纲》。该大纲规定，1935年8月至1940年7月期间，所有成人文盲及学龄儿童必须上一年制小学；在1940年8月至1944年7月期间，必须修学两年制课程；1944年8月以后，修学四年制课程。每一个小学学区必须有一所一年制小学。每五至十个小学区必须有一所四年制小学。儿童学龄定为8岁至12岁。对于16岁至30岁成年人应给予选择学校的优先权。父母或监护人如不将儿童送往指定的学校，将会受到1元至5元（国币）的罚款。

在1936年法律中最值得一提的是：成人教育将于6年之内普及。教育部仅在1937年一年内，就向成年人分发教科书550万册。为丰富教育项目还大批分发了无线电收音机。除1936—1937学年度正常教育经费外，教育部及各省政府还拨出15,847,000元（国币）专款以推广义务教育。通过这些努力，1935—1936学年度共计增加一年制及四年制小学校33,000所，注册学生增加340万人，预计1936—1937学年度一年制小学校增加46,000所，四年制小学校增加3,000所，又可增招新生600万名。教育部长充满乐观地预言，两年内（至1937年底）中国就将有2300万名小学生。

乡村教师培养 专门培养乡村教师的运动始于1927年的晓庄试验乡村师范。这一运动倡导农村教师应在农村环境中进行培训。未来的农村教师应与农民同生活，向农民学习，与农民同甘共苦。自1932年以来，私人实验已经停止，所有师范学校都已成为官办学堂。

如今有几种培训乡村教师的途径：第一，师范学校招收初中毕业生，修习三年制的课程；第二，特别师范课程，招收高中毕业生，学制一年；第三，短期师范学校，招收高年级小学毕业生，修习四年制课程；第四，附设于师范学校或中学的短期师范科，招收初中毕业生，学制一年。

1932年共有50,150名学生在477所乡村师范学校学习，18,712名学生在短期农村师范学校就读；141个中学和职业学校的附设乡村师范科的学生数字没有报告。

乡村师范学校的教学科目包括公民、体育、军训（专为男生设置）、军事护理和家政学（专为女生设置）、卫生、国文、数学、地理、历史、生物学、化学、物理、逻辑、手工与美术、音乐、农业理论与实践、农村经济与合作社、水利、教育入门、教育心理学、小学各科教材、教法与管理、测验与统计、乡村教育、教学实习、课外活动、自修。教学计划要求每周60小时，课堂教学和教学实习36小时，体育运动和自修24小时。

乡村教育实验 在最近15年里，中国已经在乡村教育这个领域内进行了若干实验，下面是其中比较出色的：

（一）平民教育促进会：由晏阳初先生于1923年创建，开设有四大科目：卫生、生计、公民、文艺。对村民的教育全部是通过学校、家庭和社会小组这三个机构进行。促进会推行一套经过精简专供农民掌握的词汇，通常以千字课本的方式印制。促进会还设立了一所“乡村建设育才院”，由教育、农村经济、农业和公共卫生四个部门组成。

（二）山东乡村建设研究院：由梁漱溟先生创建。该院在民政部门选定的两个县为试点，每县分为若干区，每个区又再分为若干村。“政教合一”是这一实验的基本原则。相应地，区的行政权力被赋予区校，村的行政权力被赋予村校。一个村校的人员由四个部分构成：（1）理事，即负责公共事务的乡绅；（2）校长，即被认为应该以身作则、训诫村民的长者；（3）教师和视导员；（4）学生，即包括男、女、儿童在内的全体村民。全村经济建设的重点，放在各种形式的合作社上面。在保卫村庄方面，强调自卫和纪律，还建立了一个研究部和一个训练部。

（三）江苏小学师范院：由赵崇鼎（叔愚）博士于1928年创建。该院培训从事农村教育研究和实验的农村教师和管理人员。已经进行了一次社会调查，并对心理学、成人读本和教育文献作了研究。该院设四个实验单位，其中两个单位专门以农村生活和农村问题为研究对象，它们瞄准改善生活条件、提高公民能力、普及大众教育三重目的。其他实验则致力于：（1）利用农村房屋和乡村教师从事教育活动；（2）节约学校课程的时间；（3）把儿童与成人合班教学；（4）组织村民进行乡村改造。

由于目前的战争，所有这些实验都已移到湖南，据报道，这些实验相互间的合作比以往更为密切了。关于这些实验较为详细的情况参见俞庆棠女士所作《成人教育与中国乡村》一文。

中华苏维埃的农民教育 中国的农民教育不能不包括中华苏维埃地区的教育活动。根据埃德加·斯诺的报道，红军在经过有两万万人口的省份时，召开了大规模的群众集会，进行戏剧表演，课富人以重税，释放许多长工，宣传自由、平等和民主。他们向人民解释土地革命和抗日政策的宗旨。他们还传播文化、训练军队和传播政治理论而兴办了教育。许多群众组织了自学小组，在共产党人或文化的人的领导下，把宣传材料当作课本来学习文化。

大众教育运动 这个运动有时被称作新的大众教育运动，指的是一个以“民有、民治、民享”为宗旨的教育组织。运动开始于大约11年前，当

时一批教授和学生着手研究和制定一种真正为农民服务的教育方法。在1935年，这场运动的目标被定为：（1）团结起来维护中国的民主；（2）通过国际合作达到世界和平；（3）通过民众自己的努力提高他们的道德修养和文化水平；（4）全民免费教育。

传递先生 根据目前的讨论情况，最后一种运动十分重要。由于其方法简单易行，它使中国农民能够通过自我教育、自我适应越来越多地参加到为获得自由而进行的伟大斗争中。“传递先生”机制已经形成；课下，每位学生就变成了先生，每个家庭变成了学习的中心。事实表明，十分之一的中国农民是天生的先生，能够驾驭大“班级”，说农民的语言，理解农民的问题，有着独特的有利条件。

小先生 除了传递先生之外，“小先生”制也已经建立。学童在学校结束一天的课程回家之后，将所学知识教给自己的亲属和邻居。爷孙辈在一起玩耍、学习、分享知识。中国几十万小先生正在帮助播撒教育种子，他们所具有的特殊优势是：在女教师数量少、不赞同男教师教女学童及妇女的社会环境中，他们能够帮助妇女接受一些教育。

几年来，先进的农村学校已经遵循“来者不拒”的原则。由于农民和他们的孩子上学人数越来越多，小先生们便不只帮助解决了缺少教师的困难，更提出“对无条件上学者，免费送课上门”的口号，即小先生们把教育送到那些无条件上学的群体的家中去。这样一来，学校的孤立状态就被打破，整个村庄成了学校，教育之光能照射到每一个角落。破庙里孤零零的教师突然有了几十个小先生并肩作战，不能不看到自己职业的新前景，并为自己应当去完成的历史使命而感到精神振奋。

新文字 大众教育运动也非常热衷于推进根据汉语口语制定的新文字。北方方言、上海方言、广东方言和其他几种方言的新文字方案已经制定。这些方案把汉语口语视为一种多音节语言来处理，同时成功地取消一些代表不同声调的小符号。有了新文字，不同地方的农民只需每天花上一个小时，一个月之内就能用他们的方言阅读和写信了。

利用公共空间教学 由于没有钱建造专用的校舍，人们便自愿把他们仅有的房屋用来办学。不但庙宇、茶室和空房被这样利用起来，而且树阴下，或天然的露天大礼堂也足够用来开大会、唱歌、讲故事，学习朴素的真理，讨论国内外的问题。

结束语 有了传递先生、小先生、新文字、社会这所学校，农民就能够拥有他们自办并为他们自己服务的教育了。教育本身就起了变化，它不再是少数人的奢侈品。它像阳光，人人可以享受；像空气，人人可以呼吸；像水，人人可以饮用。有了合作改造乡村的一切力量的帮助，新的

农民正在中国出现。赛珍珠女士所著《大地》中，农民竭力为自己的小家庭捞到更多的土地以求比别的农民兄弟更富裕，这已不再成为别人仿效的榜样。在今日之中国，进步农民渴望每一个农民都拥有足够的土地过上富足的生活。如下诗歌充分展现了新一代中国农民的状况。

锄头舞歌

手把个锄头锄野草呀，锄去野草好长苗呀！
五千年古国要出头呀，锄头底下有自由呀！
革命的成功靠锄头呀，锄头锄头要奋斗呀！
光棍的锄头不中用呀，联合机器来革命呀！

THE VILLAGE EDUCATION MOVEMENT IN CHINA¹

The Magnitude of the Problem

China is predominantly an agricultural country. According to popular estimates, nearly eighty-five per cent of her population, i.e., three hundred and forty million people, live in the villages. To educate and modernize the Chinese villagers and their children is one of the most gigantic undertakings of the Far East. Village education in China is a mass phenomenon that cannot escape the notice of any world-minded person. Whether it is for good or for bad, it affects one-fifth of the world population.

The Village Schools of the Present

The present schools actually found in Chinese villages cannot meet the demands. What they give to the children is nothing more than book knowledge. They make the farming population less productive. They make the rich poor, and the poor poorer; the strong weak, and the weak weaker. These schools belong to the past and are not serving the real needs of our farmers. The cry for change is heard from every part of the land. A new era is at its dawn!

The New Movement is Creative and Revolutionary

During the last few years, the National Association for the Advancement of Education has set itself to the task of evolving a type of village education which will meet the needs of Chinese village life. The authorities who have been charged with this study have taken the realities of village life as their guide. Deviating from former practices, they no longer cling to old methods nor copy foreign models. As a new nation is being born, a new education is needed to fit her farmers for the new life. Old conceptions and methods, inadequate to meet the new needs, have to be thrown away and new ones devised. Thus in many respects the movement has assumed a creative and revolutionary character.

Three Steps

Three steps have been conceived in carrying out the whole movement. The first and the most fundamental step is experimentation. Experimental schools of various kinds are being conducted in order to discover better methods and contents for village education. Second, on the basis of findings through experimentation, the right type of village teachers and other personnel are to be trained. Third, the movement is to be extended according to the number of these trained.

The Centre Schools

The movement starts with a few centre schools. The term centre school (*chung hsin hsioh hsiao*) derives its meaning from three sources. First, it takes village life as the centre of school life. Second, it forms the centre for reconstructing village life. Third, when the stage of training and extension is reached, it will naturally be the centre for normal training. All the centre schools are of an experimental nature. The National Association has under its direction three centre schools of elementary grade. The First Centre School is located at Swallow Cliff. It has six grades, a full elementary school according to the New System. The second, situated at Yao Hwa Men, has four grades, but the teaching is organized according to the double grades plan. The third is the Morning Village Centre School, which is an ungraded school run by one teacher. These schools are all in Nanking or its suburbs.

In spite of all the differences in organization and adaptation to local differences, these centre schools have certain points in common.

First, they have a common philosophy of education and life. They take village life as their centre and at the same time they become the centre of village reform. Not only this, they serve as the centre at which the little village meets the world at large.

Second, the principle of methods is common to all. Here the maxims are "Think when you work," "Use your mind when you use your hands." Active work becomes the centre of learning.

Third, tools are considered as a most important medium of education. Education for life demands life-tools. Real education is an education in life-tools. It implies how to invent tools, how to make

tools and how to use tools. Books are considered as one kind of tool and no longer worshipped as the only tool.

Fourth, the principle of economy is emphasized from the start. The running expenses of these schools are not higher than the schools of the neighborhood. On the basis of average per capita cost, these schools try to work out standards which can easily be reached by other schools. It is due to this minimum cost that they are exerting a wider influence than the ordinary first-class schools.

Fifth, as the school is the village centre, so the school-master is the soul of both school and village. His personal example has the greatest influence over his students and the villagers. The school-masters of the three schools have three qualities in common:

(1) They all have a farmer's physique. They can do a farmer's work. These qualities have given them several advantages over ordinary school-masters. In the first place they thoroughly understand farmers' difficulties, hardships, and problems, and are in a better position to be a helping friend to them. Second, in utilizing their leisure time on a vegetable garden and the like, their low salary can be compensated for in part. Third, the possession of a farmer's hands enables them to take active interest in the villages, which offer them abundant opportunities to express themselves in actual deeds.

(2) They all have the mind of a scientist. They are all open-minded. They want to observe and experiment. They take interest in scientific agriculture and other new discoveries in science and are eager to introduce them to the farmers. This attitude of mind is essential to a village teacher in order to counteract the most conservative influence of the farming population.

(3) They all have the spirit of a social reformer. They make the school to serve as a social dynamo, sending light to every home, making the whole village bright. Even in the one-teacher-school, they never feel single-handed. Every pupil is a life-wire connecting the school and the community. The school is successful only when all the villagers become happy and truly patriotic.

Centre Schools at Work

The working of the centre schools may be rendered more concrete

if actual examples are given of a day's activities.

The country children are certainly early birds. They usually come to school as early as six o'clock. The first thing they do is to make the school clean and put everything in order. The teacher and the pupils work as fellow comrades in sweeping, washing, dusting, and arranging. Each one is responsible for a certain area, and in less than half an hour the school looks as everybody wishes it to look. In this way one can readily see how our centre school has been able to dispense with the services of a janitor, who so often deprives the students of the opportunity for doing practical work. It can also be readily seen how these schools save money for securing necessary life-tools in spite of the nationwide financial difficulties.

Then comes the Morning Exercise which consists of the raising the national flag, the revolution song, the principal's address, and finally the procession into the classroom.

The personal cleanliness of the pupils is examined by the teacher and elder students. This includes the examination of the face, eyes, teeth, fingers, etc. Washing the face, brushing teeth and cutting finger nails are done in school if they have not been done at home.

All are now ready for class work. Reading, writing, and arithmetic are each related to country life and to the material of the other subjects. We seize every opportunity to practice the use of language in meeting actual needs. For instance, when an illiterate farmer comes to ask us to write a letter for him, we submit it to the older pupils to write it out. After correction by the teacher, the best letter is given to the farmer. But all who write the letter will be given credit for language work.

Just half an hour before lunch, current events of national or world significance, or messages which affect the welfare of the village, or projects which call for the cooperation of all villagers are told to the student body. Most frequently, these are worked out in story form by the teacher and the older students. All pupils are required to tell the story to home folks and report their reactions.

The project on mosquitoes and the campaign against them may be given as an example of the work in nature study. Specimens of the

various stages of development of different kinds of mosquitoes are collected by the pupils under the direction of the teacher. These are preserved and shown in tubes. In this way the pupils come to a real understanding of mosquitoes and are determined to fight against them. They are also led to see how frogs and other insects eat mosquitoes and to consider them their allies in the Anti-Mosquito Campaign.

Gardening is of two kinds: school projects and home projects. We have solved two of the most difficult problems in conducting school gardens. The first is the farmers' objection to having their children work on the school garden. They say, "We send children to school for study and not for work." Many schools failed in introducing gardening into the curriculum just because of this stubborn objection. We know this before we introduce it. We call on the parents, telling them that the school teaches children to write, read and count according to what they grow in the garden. After they have taken part in gardening they will be able to read, write and count the thing as well as to grow it. They can either bring the produce home or sell in the market. The parents are pleased with the arrangement and the school garden goes on well.

The second difficulty is the teaching of gardening in an ungraded school where students of different ages gather in one class. We have tried to solve the difficulty by differentiating the processes of the project and making assignments according to the ability of the pupil. Thus every pupil is kept busy and interested in the work which he is able to do.

Handwork in these schools consists of repair work, and the making of simple apparatus and equipment. The carpentry and masonry work of the school is for the most part done by pupils under the direction of the teacher. Apparatus needed for teaching science is, so far as possible, self-made. So is some of the ordinary equipment for the school.

Health work is carried on by the teacher under the supervision of a travelling doctor. The teachers are taught to examine the eyes, to give vaccination of smallpox and a few other simple practices.

Treatment of trachoma has produced very satisfactory results. In these schools individual wash towels, tooth brushes and drinking cups are provided. We hope to add a travelling nurse for the three schools.

An example of group projects is found in the arranging for a reception of welcome given in honor of a prominent visitor. As soon as the students knew he was coming they called a meeting and with the help of the teacher made preparations for the reception. A student leader was elected to take the chair and another to record the minutes. The program was outlined and items assigned: welcome address, music, speech by guest of honor, singing by the student body, etc. Two students were elected to write a letter of invitation and two others elected to take the letter to the guest. All this was done in half an hour. Twenty minutes after he received the letter he was ushered to the platform and the reception began. A picture was taken by a student after the meeting.

The school building is open to villagers for public uses. It is the meeting place for the Cooperative Society, for the demonstration of scientific agriculture, the Farmers' Boxing Club, wedding ceremonies, and above all, the farmers' evening class. The evening class was formerly carried on by the teacher. But it was decided that the teacher, after the day's strenuous work, should rest in the evening, so a better plan was devised. In every village there must be some intelligent, public-spirited person who can and is willing to serve as evening school teacher. This supposition becomes a reality. You will find that there are not only teachers, but good teachers. We have tried such persons in the Swallow Cliff School and the result is wonderful. The tool we use is the *One Thousand Character Reader*, edited for the special use of the villagers. By spending one hour a day, the average farmer will soon be able to read vernacular newspapers and write common letters. Here one can readily see how the elementary school can serve to teach the adult as well as the young.

The Centre Village Kindergarten

Kindergartens are especially needed in Chinese villages. During the busy months the farmer's wife is occupied with much more work than at ordinary times. She has to help in farm work, prepare food

and drink for farm workers, and carry on all the other household duties. Older children of elementary grades are called home to help on the farm, but the little children under five become a burden. It would be a great relief to the mother if somebody could be found to take care of them for her. Sometimes an elder brother or sister is kept at home simply for the purpose of looking after them. At other times the mother just sends the little ones with a bench to the school and asks the teacher as a special favor to watch them for her. All she asks is to have the baby sit on the bench and not move about. Here we can see the need for a kindergarten and all the problems it could help in solving. The village kindergarten will be a relief to the mother during the busy months and it will help to keep those older children at school who would otherwise be needed to take care of younger brothers and sisters. But the kindergarten as it is can never hope to be introduced into the villages. For the ordinary kindergarten to go into the village is something like a camel trying to pass through the eye of a needle. The present-day kindergarten is aristocratic, foreign, and expensive. Before it can be introduced into the village, fundamental changes have to be made so that it may become more democratic, more Chinese and more economical. Various plans have been worked out in adapting kindergarten education to village conditions. The untimely death of our kindergartener, Mrs. Wang Lu Shenyü, has delayed the experiment for some time. But in the fall this experiment will be carried on in accordance with the policies mentioned above.

The Experimental Village Normal School

This school is located at the Morning Village, near to the Third Centre School, about one mile and a half from the First Centre School, and about three miles from the Second Centre School. This school aims to train village teachers so that they may possess the qualifications for village leadership. The objectives of the training are threefold: (1) To cultivate a farmer's physique. (2) To cultivate a scientific mind. (3) To cultivate the spirit of a social reformer.

The method adopted in the school is what we call "the combination of teaching, learning, and working." The method of working determines the method of learning, and this in turn

determines the method of teaching. For instance, farm work is to be done on the farm, therefore it should be learned on the farm and taught on the farm. This is termed the “combination” method, as opposed to the “divisional” method prevailing in Chinese normal schools. According to the divisional method, the normal students are supposed to spend three years and a half on academic studies, the last half year for practice teaching, and then carry on real teaching after graduation. The combination method demands that the students teach from the start. The students learn through teaching under real, responsible and supervised conditions. With this method the students are compelled to learn not only the knowledge but also the methods of transmitting the knowledge. It is only through making others understand a certain thing that we may readily understand it ourselves. According to our plan, each student is required to take full charge of a class for a week, under strict directions, in each of the three centre schools.

The curriculum covers the whole field of life. All curriculum is life and all life curriculum. There are no extra-curriculum activities; the term itself does not suit our philosophy.

The first group of activities is the life of the centre schools. This constitutes half of the credits. The ordinary normal school has practice teaching done in the “attached school,” which does not possess organic unity with the normal school. With us the elementary school forms the centre of normal training. The elementary schools are founded before the training school. They are the mother; they are the dynamo. The training in the activities of the centre school is divided into six parts, namely: language and arithmetic, citizenship, health, nature study, gardening, play and recreation. Each division is headed by a research supervisor. The normal students may choose one or two of the divisions and serve therein as assistants. Each supervisor, after having worked out the lessons and the methods, will hold a conference with the student teacher, demonstrate how it should be taught, observe how he teaches and help him to improve. The directing supervisor is appointed by the president and has control over the whole work.

The second group of activities is the administration of the normal

school: clerical work, bookkeeping, business management, sanitation, and other work are being done by the students under the guidance of the supervisors. The whole school has only one laborer, who carries water. All other work is divided among the students and the supervisors. Even the cooking is done by themselves. This is rather a practical necessity because village teachers sometimes have to rely upon themselves to cook food when they are sent to communities not friendly to the new schools.

The third group consists of activities in controlling the natural environment. This includes scientific agriculture and forestation, fundamental handwork, and sanitation.

The fourth group consists of activities in village reform which includes village government, village mass education, cooperative societies, village surveys, and farmers' recreation. In doing social work, the area for the first stage is within a one mile radius from the school. For every village there are two persons designated to be responsible. There are now twelve villages included in this plan. As we have said before, our teaching and learning all centres at the doing, so this is the case with our social work. The course on village survey is not a classroom study but an actual survey of the twelve villages. The course on cooperative societies is also the actual promotion of such societies among the farmers, according to the strict principles required for the success of such societies. The other courses are run in the same way. The two persons for each village are expected to make friends with genuine farmers so that when these courses are conducted there will be sympathetic response from them. These two representatives from the school to the village form the vital link between them.

Fifth, there are the self-determined activities. These are planned and selected by the students themselves. They, for the most part, are concerned with the personal aspects of school life.

One of the outstanding characteristics of the school is that books are studied in the library. They are no longer studied in the classroom. Students come to the supervisor only when they meet difficulties in the books. Further, books are studied as references to the performance of

life activities, and are no longer studied for their own sake.

Another characteristic is found in the fact that both supervisors and students appear in farmer's costume, sometimes with bare feet in straw shoes. The students are required to work as a farmer from the very day of their entrance examination. We have the conviction that we should be transformed into the farmer before we can transform him.

Then, you find little difference between the supervisors and the students. Here the demarkation is not sharp. Everybody teaches and all learn. "Teach others with what I know," "What I do not know I will learn from others," are among our mottoes.

We do not give diplomas to our students until they have run a school successfully for half a year. The connection between the normal school and its students is to be sustained even after they have left school for service. The travelling supervisor will keep the connection ever more vital.

The Department for Training Village Kindergarteners

The Experimental Normal School, beginning this fall, will create a department for the training of village kindergarteners. This department will centre in the activities of the Centre Village Kindergarten. It will admit girls from the villages for matriculation. The wife, fiancée, or relatives of the village teacher will be especially welcomed. Such a department has the following merits in its favor: (1) It will turn out kindergarteners to run the much needed village kindergarten. (2) It will open a new profession for educated girls in the villages. (3) If the village teacher's wife or fiancée would receive such training, he and she could both work in the same village. This in turn will have five important effects: (a) The village teacher will feel happier in the village; (b) since the wife is running a kindergarten, the economic condition of the home will be better; (c) the teacher's tenure of service in the village will probably be prolonged; (d) on account of the influence of the woman educator, female education in the village may make more headway than without her; (e) the teacher's home may serve as a model for the villagers. It is with these considerations that we intend to open the department in spite of all difficulties.

The Research Council

The Research Council of Village Education consists of research supervisors of the normal school and honorary research members. This council will make studies on all problems related to village education. It should be more emphasized in the future, as herein lies the hope of real progress in village education. College students have come in to serve as assistants in the council. It is hoped that as the council develops, advanced students will come in to take active participation in original researches for this most important undertaking.

Auxiliary Activities

The centre schools, the Experimental Village Normal School, and the Research Council on Village Education form the main pillars of the present movement of village education in China. Besides, there are a few other allied activities of the movement which should be mentioned.

(1)*Dormitories for visitors.* In the centre schools facilities are provided for persons interested in village education to stay for a shorter or longer period in order to acquire an insight into the working of these schools. Teachers from as far as Mukden², Szechwan, and Canton have availed themselves of this advantage. This arrangement will enable the movement to spread wider and faster.

(2)*National League of Village Teachers.* This is an affiliated institution of the National Association for the Advancement of Education. The members have now reached one thousand. After the political situation has settled down this league is bound to grow. It has adopted a Village Teacher's Creed of eighteen articles. It issues a bi-weekly paper entitled "Village Education," which has a circulation of two thousand.

(3)*Travelling Supervisor of Village Schools.* The National Association has secured the service of Mr. Ting, a most successful village principal, to help schools in other communities to improve. Any school wishing to reform has to send its principal to make a careful study of the centre schools. Then our supervisor will go to his school to make an intensive study. Then they both work out a plan for reform which is to be carried out by the principal with the guidance of our supervisor.

(4)*The Village Clinic.* In the Morning Village we have established a medical clinic. The doctor, besides giving treatment to the village patients, trains the normal students on simple medical operations and conducts medical inspection of the children in the centre schools.

(5)*The Farmers' Self-Defence League.* Real farmers in the twelve villages are given training in Chinese Boxing. Military tactics will be taught to them as soon as the government gives permission to do so.

(6)*A cooperative society* on a small scale has been started at Yao Hwa Men. Another one will be organized soon in Morning Village. And it is hoped that the work of the societies will gradually develop and that farmers will be trained to organize similar societies by themselves.

This is a brief summary of the Village Education Movement in Nanking. Such work will be started at Canton, Wuchang, Chengtu, Peking, Mukden and Quenming as soon as possible. It is our hope that finally every province or even every suitable district will have a centre for this work. Our final goal is to train one million village teachers who will be able to lead the one million villages to the birth of a new life.

中国乡村教育运动之一斑

中国乡村教育问题之巨大 中国是一个农业大国。据一般估计，中国农民占全国人口总数的85%，就是说，全国有三万万四千万人住在乡村。所以，村民及其子女的教育问题和农村的现代化进程是远东的一项重大事业。中国的乡村教育是一个十分普遍的现象，凡关心世界问题的人，决不至忽略它。无论好坏，它影响了占世界五分之一的人口。

现有的乡村学校 中国现有的乡村学校确实不能满足乡村的需求。它们能给予孩子的仅仅是书本知识。它们使农村人口生产力降低，使富人变穷，穷人变得更穷；强的变弱，弱的变得更弱。这样的学校过时了，并不能够满足农民真正的需要。改造农村教育的呼声随处皆是。一个新纪元的曙光正在来临！

新运动具有创造性和革新性 在过去几年中，中华教育改进社拟订了改造中国乡村教育的计划，以使乡村教育适应中国乡村生活的需要。这一教育研究的倡办者以乡村实际生活作为他们的指南。与先前的教育实践不同，他们不再将墨守旧法或照抄外国模式作为解决问题的方式。由于新的国民产生了，新教育必须适应新农民追求新生活的需要。老的观念和方法已经不适合新的需要，非抛弃不可，并设计出新的方法。因此中国现时的乡村教育运动是从各方面展现出新农民生活的创造性和革新性的特点。

三个阶段 整个新运动要想顺利实施，需要分三个阶段：第一阶段，也可以说是最重要的阶段，即是试验期。在这一时期里，要设立各种试验学校，通过试验发现乡村教育中种种更好的方法和材料。第二阶段是训练期。基于试验结果，培训适合于乡村生活的教师和其他有用的人才。第三阶段是布种期。依据接受过培训的人才的多寡从事推广。

中心学校 这个运动起初在几所中心学校展开。“中心学校”一词意义来源于三个方面：第一，以乡村生活为学校生活的中心；第二，以学校为改造乡村生活的中心；第三，当这所学校办到可以进行培训和推广的时候，它就自然可作为培训师资的中心。所有中心学校都具备试验性质。接受中华教育改进社指导的有三个中心小学，第一中心小学在燕子矶，是一所根据单式编制的六年制完全小学；第二中心小学在尧化门，四级制，采用复式编制；第三中心小学叫做晓庄小学，是单级制小学，全校只有一位教师。这几所学校都位于南京及市郊。

尽管地方差异导致学校的机制和编制不同，但是以上三个中心小学

有几个共同特点。

第一，它们对于教育与人生有共同的理念，即以乡村生活为中心，同时把学校视为改造乡村的中心。不仅如此，而且将学校作为小村庄与世界沟通的中心。

第二，学校总体原则相同。格言即是：“在劳力上劳心”，“用手用脑”。主动工作成为教学的中心。

第三，它们深信工具是教育最重要的媒介。为生活的教育须通过生活中的工具来实现。真正的教育必须通过工具。它教人们发明工具、制造工具、运用工具。图书被视为其中一种工具，但不再被尊崇为唯一的工具。

第四，经济原则从一开始就受到高度重视。经营这些学校的经费不高于邻近小学。根据平均每人的支出，这些学校试图制定出易于其他学校参照的标准。因为最小化开支，这些学校比普通的高档学校具有更大的影响力。

第五，学校作为乡村的中心，校长便是学校乃至整个乡村的灵魂。他的言行无论对学生还是对村民都产生了巨大的影响。三所小学的校长都具有三种共同的品格。

1.他们都具有农夫的身手。他们可以做农活。这一特点使他们相对于其他学校的校长有如下几点优势：首先，他们会十分了解农民的困苦艰难和一切问题，并且容易成为为村民排忧解难的朋友；第二，他们可以利用闲暇时间在菜园种菜等等，以补贴他们较低的薪俸。第三，他们有了农人的身手，在乡间便有用武之地，为他们提供在实际工作中展示自己的好机会。

2.他们有科学的头脑。他们具备开放的心胸，愿意观察与尝试。他们对于科学农业及其他新的发明都具有浓厚的兴趣，并且很热衷把这些科学知识介绍给村民。这是乡村教师最应当有的态度，以控制一般农村人口最守旧思维的影响。

3.他们都具有改造社会的精神。他们把学校视之为社会的发电机，将电力输送到每家每户，点亮整个村庄。即使在仅有一位教师的学校中，也不觉得孤单无助，因为每个学生都是一根连接学校与社会的活电线。当所有村民们都变得幸福爱国，学校才算办得成功。

中心小学的活动 要想具体表现中心小学的工作，须实际叙述他们一天的活动。

乡村儿童真是像早起的小鸟，他们通常早上六点钟就来到了学校。他们来校的第一件事是打扫学校，将每样物件摆放整齐。教师和学生

如同事般一起扫地、擦桌子、擦窗、摆放桌凳等。每个人负责一处地方，不足半个小时，整个学校都如大家所愿被打扫得干净、整洁。通过这种方式，人们不难发现这些中心小学是如何省却了门卫之需，这一职务常常“剥夺”了学生们的劳作机会。同时也可以看出，在目前国家教育经费紧张的情况下，学校是如何通过生活中必备的技能节约开支的。

然后是晨会。活动内容包括升国旗、唱革命歌曲、校长讲话。散会后学生排队进入教室。

学生的个人卫生由教师和学长监督。包括检查学生的脸部、眼睛、牙齿、手指等等。洗脸、刷牙、剪指甲，倘若这些在家里没有做到，在学校就必须完成。

这些活动完毕以后，就开始班级活动。无论读书、写字、算术，都和乡村生活以及其他相关学科的教学相联系。要抓住各种机会将文字运用到实际生活需要上去。例如，有一个不识字的村民，要求学校替他写一封信，教师就请年长的学生来写。经过教师的修正，选最好的交给村民。所有写信的学生都会得到相应的语言分数。

午餐前半小时，学校向学生通告国家或世界的重大时事，或者一些影响乡村福祉的信息，或须所有村民齐心协力的事情。通常由教师或年长的学生以故事的形式讲给大家，并要求所有学生回家后将这些内容讲给家人听，再将家人听了以后的反应报告到学校。

我们可以用灭蚊子为例来介绍自然课。在教师的指导下，学生搜集不同时期蚊子发育的标本，装在玻璃瓶里展示。通过这种方式，学生真正理解蚊子的变化，生成与之战斗的决心。同时教师又指导学生认识青蛙以及其他吃蚊子的昆虫，认它们为友军，从事扑灭蚊子的运动。

园艺有两种形式：校园园艺与家庭园艺。我们已经解决了校园园艺工作中两个最大困难。第一，农民反对教师率领学童从事校园园艺工作。他们认为：“我们把孩子送到学校是来读书的，不是来做工的。”许多乡村学校无法将园艺引入学校课程中就是由于他们坚决反对。在引进这门课之前我们已经预料到了，因此我们拜访了许多学生的父母，与他们沟通，告诉他们：“我们想借助园艺和地上的出产，教给他们读、写与数数。在他们参与园艺劳作之后，他们除了学会怎么种植，还学会了怎么读、写、数所种的作物。学童们可以将自己劳动成果带回家去与家人分享，也可以将它们拿到市场上去卖掉。”父母听后，均表示赞成，园艺这门课也因此在学校顺利开展起来。

第二个困难是单级小学里的园艺课程。单级小学里不同年龄的学生在一个班级上课。为解决这一困难，我们将劳作分为不同的阶段，然后

根据学生能力大小分配任务。因此每一位学生都能根据自身的能力与兴趣忙于自己的工作。

这些学校的手工科包含维修校具、校舍以及制造简单教具、校具。学校的木工和泥水工等工作主要由学生在教师的指导下进行。教学所需的科学器具也尽可能自己制作。学校的一些其他普通器材也是如此。

卫生保健是教师在巡回医生的指导下展开的。学校教师跟着医生学做眼部检查、布种牛痘以及其他一些简单的医术。治疗沙眼已经取得非常满意的成效。在这些学校里，每个人都有单独的手巾、牙刷、茶杯。我们希望不久三校再添聘一名巡回护士。

团体项目可以以接待贵宾为参照。在客人来访之前，学生已经接到通知并召开会议，在老师的帮助下，筹备如何欢迎客人。推举一名学生做主席，一名学生作记录。拟定秩序单，并将具体的工作分配给个人：致欢迎辞、奏乐、来宾演说、全体唱歌等，并且选定两名学生写请柬，两名学生送信邀请客人。以上的工作均在半小时以内完成。在客人接到请柬后20分钟，他会被引座员带上讲台，欢迎会开始，会后集体合影留念。

校舍可供全体村民公开使用。它可以供信用合作社开会使用，是科技农产物展览会、村民武术会、村民结婚的场所，以及最重要的是，农民夜校的教室。起初夜校由专职老师授课，但是，大家认为，在一天繁重的工作后，老师需要在晚间休息，因此出台了更科学的方案。在每一个村庄，由一位有头脑、乐于公共服务的人来做夜校的老师。我们发现这些人不仅可以胜任教师的职位，而且都是良师。我们将燕子矶学校作为试点，成效很好。我们用的教材是专供农民使用的《千字课》。一般的农民每天花费一个小时的时间学习，很快就能阅读当地报纸、写普通的信件。这样做我们不难发现，乡村小学不仅能为学童提供教育，而且为成年人所用。

中心乡村幼稚园 中国乡村格外需要幼稚园。尤其是农忙的时候，农妇会比平时花费更多的时间忙于各种事务。她不仅需要帮助种田、收割，更要为农民做饭煮茶，甚至承担起其他所有的家务。在这个时候，年长的小学学龄儿童都被叫回家帮助劳作，五岁以下的孩子便成为了累赘。倘若有一个地方替农妇照看孩子，妈妈们自然会减轻不少负担。有的时候，在小学里读书的学童被留在家，仅仅是为了照看弟弟妹妹。有的时候，做母亲的拿一条小凳子，抱着小孩子到小学里来，请老师替她看孩子，她唯一的要求，便是希望老师看着这个孩子坐在凳子上，不要乱动。因此我们也不难看出建立乡村幼稚园以解决这些问题的必要

性。幼儿园可以缓解农忙季节农妇作为母亲的负担，同时可以解放那些被召唤回家照看弟弟妹妹的学童。但是将现有的幼稚园照搬至乡村里是不可能的，将普通幼稚园模式运用于乡村就犹如骆驼穿针眼般艰难。如今的幼稚园都是贵族的、外国的，且价格昂贵。如若在乡村兴建幼稚园，必须从根本上作出改变，使幼稚园变成更加平民的、中式的、价格合理的。目前已经制定出各种适宜乡村条件的幼稚教育计划。不久前去世的陆慎如女士，曾经为兴办乡村幼稚园作出努力，她的不幸逝世使我们暂缓了这一行动。不过预计今年秋季我们将会按照上述计划逐步落实。

试验乡村师范学校 这所乡村师范学校设在晓庄，和第三中心小学邻近，距第一中心小学五里（一哩半），距第二中心小学十里（三哩）。创办这所学校的目的是要培养乡村教师的领导能力。这样的培养目标有三：1.培养农夫的身手；2.塑造科学的头脑；3.培养改造社会的精神。

这个学校的校训是“教学做合一”：即主张在做上学，学上教。例如，农活是要在田里做的，就须在田里学，在田里教。这是合一的方法，与通常中国的师范学校所用的分割方法不同。按照分割的方法，师范生先是从事三年半学术研究与学习，最后半年时间用来实习，毕业后便执教。合一的教学法要求做学生之初就要进行教学活动，即学生在真实的、负责的和有指导的环境下进行教学。通过这样的方法，学生不仅要自己汲取知识，而且要学会传播知识的方法。某件事情能够教他人理解，自己方才可以算得上真切地了解，以教人者教己。根据这个方法，要求每个师范生在严格的指导下到三个中心小学里去担负一星期的教学任务。

课程包括了生活中的全部内容。一切课程即生活，一切生活即课程。没有课外活动，这个词本身不符合我们的教育哲学。

第一部分活动是中心小学生活教学做。这部分教学占全部教学分值的一半。普通的师范学校均有“附属小学”实习一科，这种办法与师范学校缺少有机联系。在我们这里，小学成为了师范教育的中心，小学一般在师范学校之前建立。中心小学好比是母亲，也是发电机。中心小学教学活动可以分为六组：国语算术、公民、卫生、自然、园艺、游戏娱乐。每组均由一位研究指导老师带领。师范生每人可以选择一至两组，作组里指导老师的助手。在制定了课程和方法之后，需要开会与学生助手探讨，向学生示范教学，观察学生的教学并加以指导，使其有所提高。指导老师由校长委任，对整个工作全权负责。

第二部分活动是师范学校院务教学做。全校的文书、会计、庶务、

卫生以及其他工作，都是由学生在指导员指导下进行。全校只有一个粗工担任挑水，其余的工作都是由学生和指导员分担，甚至烧饭、炒菜也由他们自己完成。烧饭的工作，对于乡村教师而言是很重要的，因为学生们倘若被派到对新式学校不友好的乡村去，就必须自己动手做饭。

第三部分是征服自然环境教学做，这项包括科学农业、植树造林、基本手工和卫生保健。

第四部分是改造社会环境教学做，其中包括乡村自治、乡村平民教育、合作组织、乡村调查和农民娱乐休闲等。在社会工作方面，第一步从学校四周三里（一哩）路范围内着手做起。每一个小村庄由指定的两人主要负责。现在归入计划的有12个小村庄。如前所述，我们无论什么事情都以教与学作为中心，社会工作亦如此。乡村调查并非课堂研习，而是对12个村庄的实地调研。又如合作社，也是要依照成功所必须的各种原则，在农民中取得实际促进。其他的教学亦是如此。希望派驻村庄的两人真正能够融入乡村，真正成为农民的朋友。这样，一旦开设了这些课程，农民就会真心响应。这样的两位代表便成为了维系学校与村庄的重要纽带。

第五部分是学生自动的教学做。这些活动都由学生自己规划和选择，大部分是关于个人学校生活的事情。

晓庄学校一个突出特点即是：学生在图书馆用书，不再在教室里读书，遇到书本中不明白的问题时才向老师请教。他们为生活而读书，以书本为参考，并非为了读书而读书。

另一个特点是：指导员与学生都是农民的形象，有时赤脚穿着草鞋。学生从入学考试的那天起，就必须像农民一样地做农事。我们深信，我们倘若想要感化农人，必须自己先受农人感化。

随后，您会发现师生之间差异很小，界限并不明显。所有的人都既教且学。“会的教人，不会的跟人学”，是我们的座右铭之一。

学生毕业时是没有文凭的，要到毕业胜任工作半年之后，方才给予毕业证书。学生虽然离校工作，但仍与学校保持密切的关系。巡回辅导员维系着这个纽带。

幼稚师范院 从今年秋季开始，在试验师范学校里，我们将设有幼稚师范院。该院以乡村中心幼稚园为教学活动的中心，招收乡村的女子入校学习。乡村小学教师的妻子、未婚妻或亲戚尤为受欢迎。该院有如下几个显著的优点：（1）可以培养许多幼稚园教师，创办急需的乡村幼稚园。（2）可以为乡村间受教育的女子们开辟一个新的职业。（3）若乡村教师的妻子或未婚妻能受此种教育，将来夫妻可在同一乡村从事教

育，可以有下列五点好处：a.可以增进乡村教师在乡间服务的幸福感；b.如果妻子可以经营幼稚园，家庭的收入可以提高；c.乡村教师的服务期限可能延长；d.乡村有了女性教育家，乡村妇女教育可以更快速地推广；e.这位教师的家庭，就可以成为一个模范乡村家庭。有了以上的种种优势，虽然有许多困难，我们还要设法开设幼稚师范院。

乡村教育研究部 乡村教育研究部由从事乡村研究的指导员和名誉研究员组成，专门从事乡村教育研究，以谋乡村教育实际问题的解决。研究部应着重于未来之研究，因为这才是乡村教育真正进步的希望所在。大学生来做研究员的助理。我们希望随着研究部发展，高年级学生可以积极参与这一重要领域的原创性实验与研究。

辅助事业 以上所说的中心学校、试验乡村师范学校和乡村教育研究部构成了当前中国乡村教育运动的中流砥柱。此外还有几项附属活动值得一提。

(1) 招待参观。为便利远道来校参观者起见，在中心学校里设备床位，以便有兴趣于乡村教育的来访者作深入考察，对学校工作深入研究。从奉天、四川、广州等地来的教师已经获得了这一便利。这个方法可以使乡村教育运动推广得更远、更快。

(2) 乡村教育同志会。该会为中华教育改进社的分支机构，有会员千人。政局稳定后，这一团体肯定会成长起来。该会曾议决乡村教师信条十八条，发行双周刊物一种，即《乡教丛讯》，现在销数有二千份。

(3) 乡村学校巡回辅导员。改进社请了一位办乡村学校卓有成绩的校长丁超先生做乡村学校巡回辅导员，帮助其他地区改进学校。任何想谋学校之改进的乡村学校，均可以先派校长到中心小学来实地观察，再由我们的辅导员去考察该校的实际状况，然后合拟改进的方法，由校长进行，辅导员则随时前去指导帮助。

(4) 乡村卫生所。晓庄创办了一个乡村卫生所，医生除了为乡民看病以外，还训练师范生简单的医药卫生常识与检查中心小学儿童的疾病。

(5) 联村自卫团。晓庄附近的12个乡村里的农人，都可〔由师范学校武术指导员〕教以相当之武术。一经政府许可，也可教他们军事战术。

(6) 合作社。尧化门小学已经办了一所小规模的合作社。不久在晓庄也要创办一所。我们希望把范围逐渐扩大，并训练农民自行组织。

以上是中国乡村教育运动在南京的简要报告。类似的工作将在广

州、武昌、成都、北京、奉天、昆明各地尽快展开。我们的希望是最后各省各县都有这样的乡村教育做改造事业的中心。我们最后的目的是培养一百万个乡村教师，引导一百万乡村获得新生命。

MR. H. CHI'S NEW CONTRIBUTION¹

It has not been long since we witnessed Mr. Chi's ingenious invention of the Chinese typewriter; again, we are preparing to welcome the advent of his *New Chinese Dictionary*. Through his invention of the typewriter, Mr. Chi had availed himself with an insight of the nature of Chinese characters. This intimate acquaintance suggested to him the possibilities of simplifying the arrangement of the Chinese dictionary. As a byproduct of the typewriter, the new device of the Chinese dictionary was framed up by the end of last May. Having been privileged with a perusal of the manuscript before its publication and deeply impressed by the advantages of the new work, the writer wishes to take this opportunity to tell the public some stories about the new dictionary, either as a message of comfort to those who have become tired of the old dictionary or as a stimulus of encouragement to those who take interest in scientific investigation.

The old *Kang-shi Dictionary* has certainly made a great progress beyond other types of dictionaries in the fact that it has based its arrangement of vocabularies upon the order of the number of strokes of their radicals. It works alright when we have only words of one undebatable radical to find. The difficulties arise when we meet words of two, three or more radicals. The *Kang-shi Dictionary* only takes one radical into account, and classifies each word under one radical and one radical only. Thus it is not infrequent that a word cannot be found until three or four radicals have been tried. Sometimes, it even takes an hour to locate a single word. It not only wastes time and energy, but also discourages students from making further appeal to dictionary.

Therefore the first problem of simplification is how to enable a man to hit upon the right radical at once. This Mr. Chi has succeeded by using two methods. First, the definite prefixes and suffixes with which words can be found under a definite radical, and their exceptions are classified into groups according to their kinds. These

are part of the author's keynotes with which every reader should be familiar. With a knowledge of these prefixes and suffixes and their exceptions, words composed of them can be found readily under their proper radicals. Besides those words with definite prefixes or suffixes, all other irregular words which are composed of more than one radical are classified under each of all the radicals which compose the word. This means that any word can be found under any radical that is a part of the word. It enables us to locate the word without going through trial and error. All words in the dictionary can be found with approximately equal ease. This plan is not cumbersome because it needs only nine hundred repetitions of words to accomplish the purpose.

The internal arrangement of the dictionary furnishes us another merit. The arbitrary division of the old dictionary into sections according to Tsi, Chiu, Ying, Mou, etc. and the random locating of the radical and the word in the book rather than by index are eliminated. In place of the old cumbersome arrangement, the new dictionary is first divided into seventeen strokes of radicals, ranging from one to seventeen. For instance, all words with radicals of two strokes are put in section two, of three strokes, in section three, etc. Second, on the outer side of the dictionary seventeen side-figures (1-17) are indexed, designating at a glance where to find the radicals of a certain number of strokes. Third, on the front page of the seventeen sections, all radicals of the same number of strokes are printed. At the upper corner of each of these radicals, figures are indexed to show the page where words with any one of these radicals can be found. Fourth, the arrangement of the pages is continuous and the trouble of locating the page is eliminated. With these arrangements what the finder has to do is to count the strokes of the radicals, look at the side index corresponding to the number of strokes of the radical, open the book, locate the radical on the front page of the section, read the index at the upper corner of the radical and find the page accordingly, count the remaining strokes of the word besides radical, and locate the word according to the number of the remaining strokes. An experiment has been made by Mr. Chi and the writer to determine the approximate

efficiency of the new system. The result shows that the rate of finding English words is about fourteen words per five minutes, that of finding Chinese regular words by the new method is about ten words per five minutes, while by the old method the rate of finding Chinese regular words is five words per five minutes, or one word per minute.

Put it into a nutshell, so far as the regular words are concerned, the efficiency of the new dictionary is one time greater, and in case of irregular words, it is tremendously greater than that of the old dictionary. It enables us to find any word in the dictionary within half a minute.

Besides these chief merits there are some minor points that need to be considered. The number of words in the dictionary is seven thousand; adding nine hundred repetitions, it makes the total of seven thousand and nine hundred. The selection of these words is based on the *Source of Familiar Quotations*. Brief synonyms and clear definitions are cited. In order to avoid confusion, only important classical phrases are quoted. So far as pronunciation is concerned, the Tsieh-yin of the common words are eliminated but those of the less common words are still retained. In addition, every word is accompanied by a romanized pronunciation of the mandarin language. For the time being, as no satisfactory standard pronunciation has been made, Mr. Chi is obliged to adopt the method of Romanization contained in the *Chinese Students' Dictionary*, which is based mainly on Wade's system. Such are the features of Chi's *New Chinese Dictionary*. With the help of this dictionary, I am sure every student's work will be greatly facilitated.

祁氏汉语字典的新贡献

我们刚刚见证了祁先生精心发明的中文打字机，又准备迎接他的《新汉语字典》的问世。通过发明打字机，祁先生领悟到了汉字的特性。这种切身体验向他显现出简化汉语字典编排的可能性。作为打字机的副产品，今年五月末新版汉语字典的构想完成。笔者蒙允在出版前精读手稿，对其优点留下深刻印象，愿借此机会将有关这本新字典的情况介绍给广大读者，既可告慰那些对旧字典感到厌倦者，亦可激励那些有志于科学探索者。

老的《康熙字典》相对于其他类型的字典当然有了很大进步。它对字汇的编排顺序是根据字的部首的笔画数。这对查找具有一个无可置疑的部首的字而言是不成问题的，而当我们碰上那些具有两个、三个或更多部首的字的时候就会有困难了。《康熙字典》只考虑到采用一个部首，每个字归类时按且只按一个部首分类，于是常常出现查了三四个部首才能找到所要找的那个字的情况，有时甚至要花上一个小时去查找一个简单的字。这样不仅浪费时间和精力，而且打消了学生们进一步查字典的兴致。

因此，简化的首要问题是怎样使人能一下就确认正确的部首。祁先生运用两种办法来解决这个问题。首先，将可以在确定的部首下查到的字的明确的字首和字尾以及例外的情况根据它们的类别分组。这些是作者的部分主旨，每个读者都应当明了。在对字的字首、字尾及其例外的情况有所了解之后，就可以很容易地在相应的部首之下查到它们。除了有明确字首字尾的字外，那些具有一个以上部首的不规则字都全部被归到构成该字的所有部首项下。也就是说，任何单字均可在构成该字的任何一个部首之下查到。这样我们在查找字时就不用反复尝试和出错。这本字典中所有的字查找起来几乎是一样地容易。这种构想并不繁琐，因为只需900个单字重复出现就可以达到目的。

该字典的内部编排即是它的另一大特色。老式字典那种按照子、丑、寅、卯等任意分部并随意而非按索引编排部首次序的办法被淘汰了。新字典中替代原有繁琐编排的方法是，首先按17个笔画分出部首，从1排到17。例如，所有部首为2画的放在第2部，部首为3画的放在第3部，依此类推。其次，字典外侧标以17个边码（1—17），这一索引使人一眼就可发现某一笔画数的部首所在。第三，在17个部的首页上都印出笔画数相同的所有部首，在每一部首的上角处列出数码，标明带有这

一部首的字所在的页数。第四，页数的编排是连续的，避免了寻找页码的麻烦。按照这种编排方式，查找者所要做的只是数出部首的笔画数，在边码上找到与该部首笔画数相应的数码，打开字典，在该部首页上找出这个部首，再看该部首上角处的数码找到其所在页数，然后数出该字除部首外剩余的笔画数，根据此剩余笔画数查出这个字。为测定新系统大致的效率，祁先生和笔者进行了一项试验。其结果表明，查找英语单词大约是每5分钟14个，按新方法规则汉字每5分钟可查10个字，而若按老的方法每5分钟只能查到5个规则汉字，亦即每分钟1个字。

简而言之，就规则汉字而言，新字典的查找效率较旧的字典提高了一倍。而对不规则汉字，则其效率的提高更为惊人。我们能在半分钟之内在字典中查到任何一个字。

除了上述的主要特色外，还有一些细微之处也是值得重视的。该字典共收入7,000字，加上900个重复出现的字，总字数为7,900。选字以《常用语源》为基础，采用了简单的同义字和清楚的定义。为避免混乱，只对重要的经典短语加以引用。至于发音，则删除了常见字的注音符号而保留了非常见字的注音符号。此外，每个字还伴有官话罗马拼音注音。由于暂时还没有制订出令人满意的标准发音，祁先生不得不采取《中国学生字典》中所载的罗马拼音，其主要是基于威氏法的。以上就是祁氏《新汉语字典》的特点。我相信在这本字典的帮助下，每位中国学生的学习都将得到很大的提高。

CREATIVE EDUCATION¹

The Primary School is the foundation of all education. The conception of the educational process has changed greatly through the years.

I. School and Society

At first school and society were entirely separate; more recently society was brought into the school. This was like bringing a beautiful bird into a cage so as to enjoy it and watch it.

Lately we have begun to take the school into society. The school is poor; it uses society as its school room and becomes rich. By taking the school into society, using the community as the school room, the educational process becomes: first, Rich; second, Natural; third, Real; fourth, Economical; fifth, in Harmony with the Progress of Society.

It does not go ahead too fast, nor lag behind. To invite a vocational teacher to come to the school is very expensive; to go to the industries of the community to learn gets better results and these results are all real and practical.

II. Education and Life

In the first stage of man's life education and life were one and the same, but as the need for formal schools arose they became separated.

Later, it was said, "Education is life." Education tried to bring as much of life as possible into the school.

I believe that life is education. The kind of education you receive depends on the kind of life you live. Hygiene text books and living hygienically are two things. Therefore we will get our education while we are living.

III. Education and Method

For many years, education was giving knowledge to the student; later, education was teaching the student to learn; still more recently, education is teaching the student how to work. This brings about a unity, in teaching, learning, acting. The method of acting determines the method of learning; the method of learning determines

the method of teaching.

Creative education is the result of this method. Creative education means a transfusion of energy in the creation of a new order. It will imply that the whole of society is a school—not a room and 42 benches.

There are five steps in Dewey's reflective thinking:

1. The feeling of difficulty.
2. The location of difficulty.
3. The proposed solution.
4. The selection of one solution for trial.
5. After repeated trials, verify the results.

This philosophy came to China fifteen years ago, and was received with joy. Chinese scholars welcomed reflective thinking, so people just sat and thought. They recognized the difficulties and thought about them. They were difficulties felt through books and lectures. These difficulties were manufactured in our heads. I propose to add one step before the feeling of difficulties. The first step should be action. Then the other five may follow and they will lead to more action. So education should begin with action. Then difficulties will be real, not felt simply through book knowledge, lectures, facts and figures, but experienced through action and followed by reflective thinking.

I would give a new name to the whole: "Reflective action." Action will connect ideas and motor fibers and the electric current will come through. Reflective activity implies action of both brain and hands. We no longer have a class in society for hands, another class with head. All are hands and head.

IV. Education and the Masses

In early education, ears and mouth only were used. The result was about inches of education, the distance between the ear and the mouth.

Later, eyes, ears and mouth were used. Chinese education is now in this triangular stage.

In the new education, hands and brain are connected. Action and thinking must progress together. Coolies use only action; intellectuals

use only brains;both lead to defeat.Using both together leads to progress and invention.

There are two approaches to this universal education.(a) Teach farmers and workers to use their heads.(b) Teach scholars and students to use their hands.The electrical lamps that shine upon us were built by thinking and experiment, step by step.They are the results of applied thinking.Reflective activity always brings invention.If brains and hands come together, there will be built a new civilization.By bringing both hands and head, a new world will be created.

Two treasures with us lifelong remain,
A pair of free hands and a great brain;
He who doesn't use his hands
Belongs to the dethroned King's bands.
He who doesn't use his brain
Has to endure hunger and pain.
He who uses both brain and hand
Can set up Heaven's kingdom on Satan's land.

V.Education and the Student

We have to begin this process in childhood.My children do this better than I do.Take the children out of the amah's hands.Cast out of them all fears.Then children will be little workers and teachers, the directors of work.Each will have a share in creation and be a creator.

The new school is not just a school;neither is it a factory.It is a place for collective living, a community.It is shop, school, and life.The school doesn't depend upon buildings, expensive equipment, wide playground.Every occupation uses sciences, hands and brain.Let the children use occupation as their school, and learn by working as workers and thinkers and creators.

We cannot create a new China and hand it down to future generations.We must educate the children and give them from the beginning their part in the creation of a new world.

It is the doer not the enjoyer who gets the education.Those who do must learn to enjoy;those who enjoy must learn to do.

These are some of the proposals which I make to Chinese

education.

创造性教育

小学教育是全部教育的基础。这些年来教育过程的理念已发生了很大的改变。

① 学校与社会

从前，学校与社会基本上是隔绝的。随后，社会被学校同化，这便如同为了观赏而把一只漂亮的小鸟关进笼子里。

最近，我们已开始将学校带进社会。学校是贫乏的；它以社会为教室，因此变得丰富。将学校引入社会，以社区为教室，教育的过程变得：第一，丰富；第二，自然；第三，真实；第四，节俭；第五，与社会进步相协调。

现在我们走得不是太快，也并不落后。聘请一位职业教师到学校十分昂贵，去社区工厂学习，效果更好，真实而且实用。

② 教育与生活

在人类生活的第一阶段，教育与生活合而为一。但是当正规的学校兴起以后，它们彼此开始分离。

后来，有人说，“教育即是生活”，教育试图把尽可能多的生活引进学校。

我相信生活即教育。你所受的教育取决于你的生活。健康教育教科书与过健康的生活是两码事。因此，我们会从生活中获得教益。

③ 教育与方法

多年以来，教育就是给予学生知识；后来，教育就是教学生学习；直到最近，教育就是教学生如何工作。这就带来了教学做合一。做的方法决定了学的方法，学的方法决定了教的方法。

创造性教育即是这种方法的结果。创造性教育意味着为创造新的秩序输入能量。它暗指整个社会就是一所学校，并不只是一间屋子和42条板凳。

杜威的反省理论有五个步骤：

- 1.感知困难；
- 2.定位困难；
- 3.提出解决方案；
- 4.选择其中一个方案尝试；
- 5.反复尝试后证实结论。

这套哲学理论15年前就已经来到中国，并被欣然接受。中国学者喜

欢反省，因此只是坐着空想。他们认识到困难并且冥思苦想。他们从书本与听讲中感知困难，这些困难是我们头脑里制造出来的。我提议在感知困难之前加一步。第一步应当是行动，接着是其他五个步骤，并引发进一步的行动。所以，教育应当始于行动。此时的困难才是真实的，不是简单地通过书本知识、听讲、事例和数据去感觉困难，而是通过行动去体验并伴随着思想反省。

我给这个理论另起新名：反省行动。行动将连接意念与运动纤维，电流从此通过。反省行动意味着手脑并用。我们的社会不再有劳力者与劳心者之分，全是手脑并用。

④ 教育与大众

早期的教育，只用耳朵与嘴巴。结果是教育不过几英寸而已，即从耳朵到嘴巴的距离。

后来，眼、耳、嘴都用。中国的教育现在就在这个“三角”阶段。

在新的教育里，要求手脑并用。行动与思想必须协同共进。苦力只会用手，知识分子只会用脑，结果两者都遭到挫败。手脑并用才会导致进步与革新。

推行这种大众教育有两种途径：（1）教农夫与工人用脑。（2）教学者与学生用手。照亮我们的电灯是一步一步的思想与试验的结晶，它们是运用思考的结果。反省行动总会带来创新。如果手脑并用，将会构筑一个新的文明，创造一个新的世界。

人生两个宝，
双手与大脑。
用脑不用手，
快要被打倒！
用手不用脑，
饭也吃不饱。
手脑都会用，
才算是开天辟地的大好佬。

⑤ 教育与学生

这种教育必须从孩提时开始。我的孩子们在这一点上做得比我好。让孩子脱离奶妈的双手，驱逐他们心中全部的恐惧。他们将成为小工人、小先生、工作中的指导者。每个人都将有所创造并是一个创造者。

新型的学校既不仅仅是一个学校，也并非是一个工厂。它是一个群居的场所，是一个小社会，它是工学团。这个学校并不依赖于房屋、昂贵的设备、宽广的运动场而存在。每个工作都运用科学、双手与大脑。

让孩子们把工作当成他们的学校，在工作中学习做工人、思想者和创造者。

我们不能创造一个新中国然后把她交给下一代。我们必须教育孩子们，使之从一开始就明了自己在创造一个新世界中所扮演的角色。

受到教育的是实干者而非享乐者。实干者必须学会享受，享受者必须学会实干。

这就是我对中国教育的一些建议。

THE LITTLE TEACHER AND THE LITERACY MOVEMENT¹

The recent statistics of the Ministry of Education show that China has now ten million children in school, only one-eighth of what ought to be. Yet with the endeavor of the literacy movement in the past decade or so, there at least ought to be some forty million children who are able to read and write now. It is true that there are many factors involved, but the fact still remains that the method used in the whole movement is inefficient and needs reconsideration. As a result of thinking and experimenting for the last two years, I find the “little teacher” to be a way out. If used on a nationwide scale, the whole country would be educated in two years' time. As an illustration, let me give the following three instances.

(1) Some ten years ago, when I was working zealously for the literacy movement, my mother thought of learning to read too. My child of six was the only one that had the time to help her. As a result, my mother was able to read sixteen characters. Based on those sixteen characters, I sent her a letter, and she was able to understand what I wrote. A child of six could help his old grandmother—is not this a proof of the “little teacher's” ability? I think this is not only true of China, but also of children in the Western countries.

(2) After the close of the Hsiao Chuan Normal School, a number of children realizing the need of education, started organizing a school themselves. The children conduct all the management and the teaching, and it is of such a success that it has been registered. When I sent them a poem, which most of my friends thought to be unalterable, congratulating them on their success, they made a very nice suggestion which led to my changing of one of the characters in the poem. Is not this a further proof of the ability of the “little teacher”?

(3) Then a third proof happened last fall. Some seven children in one of the schools at Hwai-an started on their own excursions to

various parts of Kiangsu province. There was no one to lead them. They did their own planning, and earned their way through by giving talks in the various schools they visited. They were even able to save enough money to buy a number of books. Both the trip and the talks were a success.

The "little teachers" though young are able to achieve a great deal. But in order to ensure success, school teachers ought to help. These things need special mention here. (1) To start the work, villagers or city folks ought to be gathered together and told the need of education. This may be in the nature of a party or a social gathering or anything that serves the purpose. (2) Once the work is actually started, teachers ought to help in methods of teaching. (3) There is the supervision work to be done. The best way is to make the teaching of others a part of the pupils' regular work. They are required to hand in the work they are doing, to fill in reports, etc. This, by no means, increases the teacher's work. He can attend fewer meetings, drop out some of the useless tasks, such as correcting character-writing or the too-monotonous diaries written by children who have no variation in their everyday work. For the child, to be able to help two of the less fortunate children or adults, means not only that he will be more acquainted with his own work, but that he is also learning to serve others—the spirit of service.

Any facility that helps, like radio, a letter or a movie show, ought to be turned to the service of the movement.

There are now several places which have the experiment on a large scale: (1) The Shou Hai Kung Sheo Twan, (2) The Pao Shan District, and (3) The Tsui-Ping District, Shanghai. In the latter place, the organization is in the form of a military legion—five to a group, one child is to lead four others, these five groups again form a larger unit, and so on up, when the generalissimo of the complete unit is made the head of more than fifteen thousand people.

As all of you are working in the Christian elementary field, I hope you will endorse this plan of mine, and help push forward the movement.

小先生与识字运动

教育部最近的统计显示，中国目前有1,000万在校儿童，仅为应入学人数的八分之一。然而，经过过去十多年识字运动的努力，至少应有4,000万左右的孩子现在能读会写了。尽管确实受到许多因素的影响，这个运动中使用的方法的低效却是事实，需要重新考虑。作为个人过去两年思考和试验的结果，我发现“小先生”是一条出路。如果举国推广，那么全国两年内便能普及教育。为了说明这一点，让我接下来举三个例子。

(1) 大约十年前，当我正热心于识字运动的时候，我母亲也想识字读书。我六岁的孩子是唯一有时间教她识字的人。结果，我母亲认识了16个字。我用这16个字给她写信，她能明白我写的什么。一个六岁的小孩能帮助他的老祖母——这不是小先生能力的证明吗？我认为，这点不仅中国的孩子可以做到，西方国家的孩子们也同样能做到。

(2) 晓庄师范学校被封闭之后，很多孩子认识到教育的重要性，就自发组织起一所学校。孩子们包下了所有的教学和管理。他们做得如此成功，以致学校现在已经注册。当时我送他们一首诗以表祝贺，我的大多数朋友认为此诗已无可修改之处，他们则提了很好的建议，让我改掉了诗中的一个字。难道这不是对小先生能力的进一步证明吗？

(3) 第三个例证发生在去年秋天。淮安一所学校的几个七岁小孩去江苏省各地游览。没有人带领他们，他们自己做计划，靠给沿途参观的学校演讲挣路费。他们甚至能省下钱来买一些书。旅行与演讲都取得了成功。

小先生虽然年幼，却能做许多事情。但为了确保成功，学校的老师应该给予指导。以下事情在这里需要特别提醒一下。1) 作为工作的启动，应将村民们或者市民们召集起来，告知他们教育的必要性。可以是一次聚会，或者是一次社会性集会，抑或任何可以达成此目的的其他形式。2) 一旦工作真正开始了，教师们应当在教学方法上给予帮助。3) 要做好辅导工作。最好的办法是让教导别人成为学生们日常工作的一部分。要求他们提交所作的工作情况报告等等。这决不是说要增加教师的工作量。他可以少参加会议，放弃部分无用的任务，比如纠正孩子们写字或批改其记录天天如此的单调生活的日记。对于孩子们来说，能够帮助两个更不幸的同龄人或者成年人，这不仅意味着他会对自己的工作更加熟悉，而且从中他也习得如何服务他人，即一种服务精神。

任何有助益的设备，像收音机、信件或者电影放映，都应当用来为这一运动服务。

现在已有几个地方在开展大规模的试验：1）山海工学团；2）上海的宝山区；3）上海遂平区。后者采用了类似军队的组织——五人一组，一个孩子领导其他四个；五组又组成一个更大的单位。如此类推，最后整个单位的最高统帅已是超过15,000人的首领了。

你们大家都在基督教小学做事，我希望你们会赞成我的这个计划，并协助推进这个运动。

THE NEW MASS EDUCATION MOVEMENT¹

A cultural revolution against an educational system as old as China itself is taking place in China today. This system made the Chinese language so difficult that it condemned 80% of the people to illiteracy. Requiring years of study, it was possible only for the privileged few to master the tens of thousands of Chinese characters necessary to read and write. The students and intellectuals, who call themselves “cultural workers,” have taken upon themselves the task of romanizing the intricate alphabet and teaching it to the masses. This romanized alphabet, containing 28 letters, is known as *Latin Hua*.

In order to bring the new education to the people, a system of workers' and peasants' schools was created. These schools have no paid teachers. The students and intellectuals give one or two hours a day to train the masses, and after a time the masses develop teachers of their own. In nearly every class there are four or five persons, who have a natural aptitude for teaching and who, after a training of some months, can lead a class or a group on their own initiative. Thus you find peasants teaching peasants in the rural districts and in the cities workers' schools which are taught by the workers themselves.

The principle of the Mass Education Movement is that everyone who knows a little, even though he has attended school only a few months, should teach what he knows to others. This is the basis of the “Little Teacher” system. Even little children can be found playing the role of these “Little Teachers,”—the more able ones leading classes and others teaching groups of three or four. It is not uncommon to find girls and boys of five or six years teaching their parents, grandparents, servants, etc., to read and write.

A new psychology underlies this new mass education movement. Changes in life mean changes in education. This education need not and sometimes cannot be accomplished in an ordinary school. Therefore our education is not confined to the school form. Any

place where the people live or congregate is essentially a mass school, since real education comes from the contact of life with life. Thus our schools are held in courtyards, in corridors, in the streets, in the shops, in the village temples and in the army camps. The whole society becomes our school and all of life our curriculum.

Cultural workers are organizing this system of mass education throughout China. Similar organizations of musicians and cinema workers carry on the same activity, and propaganda for the new education is embodied in the tales told in the tea-houses. Thus the idea is spread far and wide.

New text books have been written and periodicals published in the **Latin Hua**. The Peiping and Shanghai alphabetical systems have been completed, and we are now working on the Fukien and Canton alphabets, since each of these provinces has its own dialect. It is estimated that an illiterate man or woman can learn to read and write with this new alphabet in one month. Thus after a very short period of training, the people can continue their education by themselves.

The new mass education movement, which was initiated in Shanghai, should not be confused with that type of education advocated by Mr. James Yen at Ting Hsien. In the Chinese language the Ting Hsien type of education is called "*ping min jiao yü*," meaning the common people's education, while the New Mass Education is called "*da zhong jiao yü*," meaning the education of the great masses. The difference in terminology implies fundamental differences in essentials. Ting Hsien advocates mass education, but in practice it results in an education of the few, while the new mass education aims at a real education of the mass, by the mass and for the mass.

This movement is entirely self-supporting. The Association for National Liberation Education is supported by a ten cent membership fee, and while contributions from sympathizers of the movement are always welcomed, the main activities of the society do not depend on these contributions, but upon the people themselves.

It is quite natural that this cultural revolution should be inextricably connected with the movement for national liberation. Mass education cultivates mass consciousness, and the movement aims

not only to teach the people to read and write, but also to teach them the problems of today, and to guide them so that they will understand how to meet these problems. The test of the validity of any educational system is whether or not it can stand the test of reality. The masses need an education that will help them face life. The educational system that evades reality implies an intrinsic weakness which unfits it to perform its function.

Although the Mass Education Movement teaches national liberation, it must not be understood that it advocates a narrow nationalism. In spite of our national crisis, we have not forgotten to cultivate international-mindedness. International-mindedness is, needless to say, the foundation of world peace. The teachers of the masses in China dare not forget this important principle.

With the possible exception of India, there is no other country in the world where education has been so much a privilege of wealth as China. This new movement, developed and continued over a period of years, will make it possible to abolish the appalling illiteracy in China, to bring culture to the people, and to enable them to defend their national culture against foreign cultural aggressions.

新大众教育运动

当前中国正在兴起一场反对陈旧教育制度的文化革命，它同中国本身同样古老。这种教育制度使得汉字十分艰深难学，以致造成80%的人为文盲。因为需要多年学习，所以只有少数有学习条件的人才能掌握几万个汉字，具备读写能力。一些自称“文化工作者”的学生和知识分子担负起了将复杂的汉语拼音字母罗马化的任务，并把这套罗马化字母教给民众。罗马化的字母共有28个，以“拉丁化”闻名。

为了把新的教育带给民众，创立了“工学团”的制度。这种学校不聘用领薪的教师。学生和知识分子们每天花一至两个小时来培训民众，过一段时间民众间便产生了自己的教师。差不多每个班级总有四五个人具备做教师的天赋，经过几个月的培训，他们就能独立地带领一个班级或一个小组。于是，在农村便可看到农民教农民的场景，在城市里可以看到工人自己当教师的“工学团”。

大众教育运动的原则是：每个人即使只学习过几个月，只要学到一点，就应“即知即传人”。这是小先生制的基础。很小的孩子也可以当小先生——能力较强的可以领导一个班级，其余的也可以教一个三四个人的小组。五六岁的孩子教他们的父母、祖父母、佣人等读书、写字是常见的事情。

一种新的心理学原理支撑着这种新的大众教育运动。生活的变化就意味着教育的改变。这种教育不需要，有时也不可能在普通的学校中得到。因此，我们的教育不局限于校园的形式。任何有人居住或聚集的地方实际上就是一所学校，因为真正的教育来源于生活中的碰撞。因此，我们的学校可以是庭院、亭子间里、街道上、商店里、乡村庙宇里和兵营中。整个社会都是我们的学校，全部生活便是我们的课程。

文化工作者正在全中国组织实施这种大众教育制度。音乐家和戏剧工作者也以类似的团体进行同样的活动，这种新教育通过在茶馆里讲故事的方式得以推广，从而得以更广泛地传播。

新课本用拉丁化文字编写，期刊也以拉丁化文字出版。各个省份都有各自的方言，北平话和上海话的拉丁化拼写系统已经编制完成，我们目前正在编制福建话和广东话的拉丁化拼写系统。据估计，无论男女文盲，都能够在一个月内学会用新文字读写。因此，经过短期培训，普通民众就能够接着自学。

新的大众教育运动起源于上海，不应把这一教育运动和晏阳初先生

在定县所提倡的那种教育方式相混淆。用汉语来说，定县办的“平民教育”，是指普通百姓的教育；而新大众教育，汉语叫做“大众教育”，意思是广大民众的教育。名称上的差异意味着实质上的区别。定县宣称办平民教育，但实际上却办成了少数人的教育；而新大众教育则旨在真正办民有、民治、民享的教育。

这一运动完全靠自己维持。国难教育社靠每人只收一角钱的社员费维持，虽然欢迎对运动同情者的捐助，但该社主要的活动并不依赖这些捐款，而依靠大众本身。

这场文化革命理所当然地是和民族解放运动紧密联系在一起的。大众教育在于培养大众觉醒，其不仅限于教大众能读会写，而且还教他们了解当前存在的各种问题，并引导他们懂得如何对待这些问题。任何一种教育制度的有效性在于它是否经得起现实的检验。大众需要的是能够帮助他们面对生活的教育，回避现实的教育制度是无能的教育、无效力的教育。

虽然大众教育运动要争取民族解放，但决不可把它理解为提倡狭隘的民族主义。尽管我们面临着民族危机，我们仍然没有忘记培植国际视野。不言而喻，国际视野乃是世界和平的基础。中国广大民众的教师们不敢忘掉这个重要的原则。

可能除了印度之外，世界上没有任何别的国家像中国这样将教育视为有钱人的特权。这一新的运动发展和持续几年之后，将可能扫除令人吃惊的中国文盲数量，给人民带来文化，使他们能够捍卫自己的民族文化，抵御外来的各种文化侵略。

CHINA:THE MASS EDUCATION MOVEMENT¹

China is predominantly an agricultural country and a poor one at that, so that it cannot afford the expense of educating its whole people along Western lines. If China is to make its population literate in the next few years it must develop a technique of its own. This is now doing through the Mass Education Movement, which began twelve years ago but has entered upon a new stage during the last two years. The Movement has set itself to solve three of the most pressing problems that face education in China today. In the first place there is the expense of erecting new schools. Instead of putting money into buildings, the organizers of the movement conceived of the whole of society as a school. Temples, theatres, parlours and attics of private houses, and even outhouses, have been utilised as schools for the masses, and thus money surely needed for other projects has been saved.

A second problem has also been solved in a new way. Chinese peasants and workers have no money to buy knowledge and pay teachers. So the organizers of the movement lay it down that anyone who possesses knowledge has the responsibility of sharing it with others. The thirty or forty farmers who join an evening class, or come for instruction either before or after harvest when they have more leisure, are not only students but also teachers. They are encouraged to go home, even after the first lesson, and teach their wives and daughters what they have just learnt. Children, too, are acting successfully as teachers. A grandmother of fifty-seven is taught to read and write by her grandson of six. Teachers in the elementary and middle schools are therefore encouraged and helped to train their children to become "little teachers."

The term "little teachers" may sound curious, but in China these little teachers have acquired a great prestige. They have been able to deal more effectively than adults with one of China's special problems.

Most Chinese women are illiterate and women teachers are very rare. But it is not convenient for a man to teach girls of sixteen or seventeen. So children, who are in school in the daytime, become little teachers in the evening and teach the women and girls in their neighbourhood. This system has been extraordinarily successful, and wherever it has been adopted the literacy of the men and the women is nearly equal.

Certain dangers have of course to be guarded against. The system must be kept a voluntary one. But the children are enthusiastic, and as soon as they hear of it most of them want to become teachers and thus do a service to the nation. Another danger is that they may do too much teaching and thus injure their health. Care must be taken to prevent this from happening. It might be supposed that the knowledge they pass on is very faulty. In practice, however, it is found that they are very conscientious and by teaching what they have learnt make the subject-matter clearer to themselves.

The Mass Education Movement has tackled another problem, that of a simple Chinese script. Chinese characters, one picture for each word, are very hard to learn. A new Latinised script has been worked out for the Chinese language which has been tried in Canton, Shanghai, and the Northern Provinces. It can be understood by three-fourths of the whole nation, and a farmer can learn to read and write by means of it in one month.

With the solution of these three problems an instrument has been forged which will enable the masses to educate themselves without waiting for the industrialization of China. If she had to wait so long, it would be too late; without mass education China would be a ruin, losing her integrity and freedom. For, to be frank, Chinese education has now one aim—national liberation. If education fails to help China to make herself a free and independent nation, education is meaningless.

But when national liberation is emphasised, this does not mean narrow nationalism. A free and independent China will help world peace, for China has not the least idea of adopting an imperialistic policy. It seeks to cultivate in its youth the spirit of national liberation

in relation to China and of international understanding in relation to the world as a whole.

中国大众教育运动

中国是农业为主的国家，而且是一个穷国，因此没有钱按照西方的方式让全国人民享受教育。中国如果要在未来几年内使全国人民能读会写，就必须制定出一套适合自己的方法来。目前中国正通过大众教育运动做这件事，这一运动始于12年前，但在最近两年进入一个新的阶段。这个运动旨在解决当前中国教育面临的三个最迫切的问题。首先是新建学校的经费问题，运动的组织者们不是把钱投入建校舍，而是以整个社会为学校。庙宇、戏院、堂屋、亭子间以至外屋都被大众利用了作学校，从而把钱节省下来用在刀刃上。

第二个问题也已经有了新的解决方法。中国的农民和工人没有钱学知识、聘请老师，因此运动的组织者们规定，凡是有知识的人都有责任将知识传授给别人。参加夜校或是在收割庄稼前后的闲暇时间来学习的三四十个农民，不仅是学生，而且也是先生。他们即使只学了第一课，也被鼓励回家去把刚学到的内容教给他们的妻子和女儿。小孩们也能当好先生。6岁的孙子可以教57岁的祖母读书写字。小学和中学的教师们因此受到鼓舞和帮助去培训他们的学生们当小先生。

“小先生”这个词听起来似乎很奇特，但是在中国，这些小先生却获得了很高的声誉。他们已经能够比成年人更有效地应对中国的一个特殊问题。中国妇女多数是文盲，而女教师又非常少，可是男教师教十六七岁的女孩子又不是特别方便。所以那些白天在学校读书的孩子们，晚上就去当小先生，教邻居的妇女和女童。小先生制非常成功，凡是采用了小先生制的地方，男人和妇女的读写能力几乎相当。

当然还必须防范若干危险。小先生制须坚持自愿原则。但孩子们是热情的，他们一听到小先生制，多数就想当先生为国效劳。另一个危险是他们可能任教过多，有损自身健康。必须注意防止这样的事情发生。可能有人猜想，他们传授的知识中充满错误。而实际上，人们发现，他们是非常认真的，把学到的东西教给别人，也使自己对学习的内容更加了解。

大众教育运动还解决了另一个问题，即简化中文文字。中国方块文字，一个象形一个字，很难学。一套新的汉语拉丁化文字已经制定出来了。这套拉丁化文字已经在广州、上海和北方各省试行。它能为全国四分之三的人所读懂，一个农民凭借这套拉丁化文字一个月之内就能学会读书写字。

随着这三个问题的解决，一种自我教育的工具铸造出来了，大众即有能力自学，不必等到中国工业化之后。如果中国要等待那么久，那就太晚了；没有大众教育，中国就要崩溃，丧失它的完整和自由。坦率地说，现在中国的教育只有一个目的：民族解放。如果教育不能帮助中国成为一个自由、独立的国家，那就是毫无意义的教育。

可是，强调民族解放，并不意味着狭隘的民族主义。一个自由、独立的中国将有助于世界和平，因为中国丝毫没有采取帝国主义政策的意思。中国力图达到的是在中国青年身上培养民族解放精神和整个世界的国际谅解精神。

THE PEOPLE'S EDUCATION MOVEMENT IN CHINA¹

The People's Education Movement started some twelve years ago when a group of professors and students plunged into the life of the peasantry and tried to work out a method of education which would be of real service to the peasants. It has been an effort to supplement what the regular school system cannot do. It has been an attempt to develop an education from native soil as against education imported from foreign lands which have different historical and physical backgrounds. It has been an attempt to develop an education for the great masses of toiling people as against the education for the privileged few. It has been an attempt to develop an education for the whole life as against the education for an abnormal intellect. In order to achieve these objectives we have laid down four conditions to guarantee its success:

- 1.The experimenters must live among the masses and learn from them;
- 2.The methods must be based on reflective acting instead of academic thinking;
- 3.The cost of education must be reduced to a minimum both in money and time;
- 4.A will to free ourselves from the bias and prejudices of the teaching profession.

These are some of the things that show a partial picture of the Morning Village Experiment (Shao Chuang).The chief results of this experiment are the formulation of the theories of Life as Education, Society as School, and the Unity in Teaching, Learning and Reflective Acting.The Shan Hai Labour Science Union and the Little Teachers came to answer the challenge of the Invasion of 1931 and 1932. When the Invasion penetrated into North China and the Peking students rose to call for its protection, our movement took the form of the Society of National Crisis Education and cooperated hand in hand with the All-

China National Salvation Association. Ever since December, 1935, the aims of this movement have been:

1. United defence of Chinese democracy;
2. World peace through international cooperation;
3. Self-uplifting of the people;
4. Free education for all.

It is only the last aim and the methods for attaining it that will receive detailed discussion here. Even here it is not linguistic literacy alone that is looked for, but also political and economic literacy. All the while we are trying our utmost to discover the simplest technique that will make it possible for an education of the people, by the people and for the people to be worked out so that our people will be qualified more and more for participating in the great struggle for a free China among the family of free nations.

A The Scholar Ghost

A wrong conception of education with centuries' tradition behind it is in our way. Education in the old sense has been identified with book-reading. A scholar is called "*dushuren*" which means one who reads books. When you ask a professor what his profession is, in a very usual manner he would answer, "I am teaching books in Peking University." In the same way a student would answer, "*wo zai Beida dushu*," meaning that he is reading books in Peking University. While we value books as an important means of enlightening ourselves in past and contemporary civilization, we doubt whether reading books alone can lead us to freedom and doubt whether one has done justice to books by merely reading them. In more progressive circles such scholars are nicknamed as "bookworms." My friend, Dr. P. C. Chang, calls them "scholar ghosts." Here is a little poem of mine which gives a picture of such scholars:

What is a scholar ghost?
He lives along the Pacific Coast.
He has bookish knowledge to boast.
He has his eyes on the official post.
He likes delicious food,
And makes the half-starved farmers to be his hosts.

When jobless, he teaches children,
And makes all of them little scholar ghosts.

B Hands and Brains Unite

Traditional education in China seems to have created two types of strange human beings. In the schools the students are fed with knowledge to swell their heads and are provided with little opportunity for the use of their hands. Servants are doing many things for them that should be done by themselves. The making of mud pie and the opening of a watch for examination are punished alike. From the development of the human race we know it was our hands that helped to make the brain. As our hands were set free by the erected position we began to work, and as we were working we made noises that were gradually selected to serve as our spoken languages. The written languages and tools are all the creation of our hands. The discouragement of the use of hands in the older schools has really defeated their own purposes of developing the brain. With this abnormal training the students have acquired a store of undigested and unrelated knowledges without being able to identify them with realities. They seem to have a big head which cannot think accurately in terms of the objective world. Therefore those who have had the opportunity of schooling come out with a big head and a pair of small hands, and in figurative speech, look somewhat like a kangaroo, having only the strength to pick up a pen and write a few lines. On the other hand the great masses of our people, doing the great bulk of work for the nation, are left without school education. While they are paying taxes for schools to run, they and their children have been deprived of every leisure hour for cultural growth. They have been forced to exist with the appearance of a small head and a pair of big hands. The Life Education Movement aims at the restoration of these strange human beings to normal life. We want to awaken the scholars to pull out their hands to work and awaken the great masses of people to blow something into their heads in order to think. The bringing into contact of the scholars with the peasants has achieved almost miracles. Both the scholars and the peasants have rediscovered something they had forgotten. The scholars, seeing the splendid

productive work done by the peasants, cannot but cry out, "Don't we have hands too? Why don't we work?" In a similar way the peasants have rediscovered their brain: "We have head, sure, we have head, let us think!" Indeed real education must help to produce people who can think and build. What we need is an education for brain-directed hands and hands-motorised brain. This new conception of education is pictured by a poem, entitled "Brain and Hands Unite":

Two treasures with us lifelong remain:
A pair of free hands and a great brain.
He who does not use his hand
Belongs to the dethroned king's band.
He who does not use his brain
Has to endure hunger and pain.
He who uses both his brain and hand
Can create a new world on exploited land.

C Labour Science Union

From the principle of the Unity of Brain and Hands we have evolved the idea of Labour Science Union. This seemed to be a very awkward term, but it tells the contents, methods and organization of our new education: labour to nourish life; science to understand life; union to protect life. This gives the whole content of education. Further, the methods of labour, science and union determine the methods of education which will no longer be purely academic. Finally, the term shows the nature of the organization. It is a richer term than school, because a school in the traditional sense may excel in science but offers very little opportunity for the students to work and cooperate. It is even a better term than a cooperative society which does not give enough attention to other phases of human life besides the immediate economic needs.

In practice the Labour Science Union takes three forms. First, those which apply the new principle in the strict sense and take the name of Labour Science Union, such as the Cotton Growers' Labour Science Union in Paoshan, and the News-Boys' Labour Science Union in Shanghai. In the former case, cotton-growing is labour, the seeking of a better way of growing cotton and a better understanding of life as

a whole is science, and the organizing of the peasants engaged in growing cotton in such a way as to be able to protect their fruits of labour from exploitation as well as to participate in the greater protection of the nation and mankind against aggression constitutes the real meaning of a union. The improvement of the quality of cotton through a better selection of seeds has enabled a small community to reap an increase of 2,000 dollars averaging at \$6 per acre. One-tenth of this extra income has enabled them to start a Children's Labour Science Union in the same village, aiming to give a better education to their children.

The News-boys' Labour Science Union on Bubbling Well Road, Shanghai, was founded in a very interesting way. One day it was noticed that these boys could not read the newspapers they were selling. We offered the service of a young man to teach them. This was accepted by the boys with gladness. Then they met with the difficulty to find a classroom. The boys were charged with the mission to find a place by themselves. Finally, the mother of Lv Kungyi, one of the boys, was generous enough to offer her only room for the use of these boys. They spent one hour a day with the voluntary teacher there. The newspapers became their text books. Headlines were their first lessons. They were given education free, but in turn they had the duty to share what they learned with their neighbours. The boys were self-supporting. Selling newspapers began to be regarded as a very honourable labour. Once united the boys became strong. They had a better chance to deal with the news dealers. Some of them had even won respect from enlightened police.

The second form of Labour Science Union is worked out under the name of schools. They have enriched their programme by incorporating some productive and socializing activities, but still keep the name of a school.

The third form consists of vitalizing the cooperatives with cultural and defensive features while strengthening the productive phase. They are Labour Science Union in reality but keep the name of cooperative societies. This movement will render its timely service to the millions of refugees.

D The Little Teachers

The little teachers are the children who share education with others. During the earlier stage of development the most prevailing type of little teachers is school children who volunteer to help their home folks and neighbours to acquire the elements of knowledge. As time goes on even children of the street pass on whatever they have learned to their friends. The first hint of the possibility of the little teacher was suggested by an incident some fourteen years ago when my mother, then fifty-seven years of age, got interested in learning. She wanted to read my letters sent home and wanted to know something of what was going on in the world. The only teacher available for her was my second boy who was then six years old and happened to have finished the first reader. The grandma and the grandson played and studied. In one month my mother finished the first book. This happy incident did not arouse much enthusiasm beyond my family circle at the time. But the fact that a six-year-old boy, without a diploma from a normal school or a certificate from a superintendent of education, succeeded in teaching a fifty-seven-year-old grandma to finish the first reader, had made upon my mind a very deep impression which was one of the determining factors in discovering "the little teacher."

When Manchuria was invaded and Shanghai attacked in 1931 and 1932, we began to be convinced that the nation could not be saved without national unity through a general awakening of the whole population. This calls for a free education for all at the lowest cost and within the shortest period of time. Young men and young ladies with progressive ideas flooded into the villages in order to help the peasants to understand the national crisis. Some of them came to me for a word of guidance. My advice was simple: all come all served. But as the peasants became increasingly aware of the importance of education to themselves and their children, they and their youngsters began to flood the small schools with attendance. Not a few teachers were doubting how long they could keep it going on this principle. Frankly saying, some teachers were considering how to reduce the attendance by charging fees or by having an entrance examination. If

this was allowed the whole purpose of people's education would have been defeated, for it meant a return to the education for the few. We tried our best to urge them to face reality and devise new ways to meet the situation. Under the pressure of necessity, they naturally delegated some able pupils to take charge of the surplus attendance. One day, in November of 1932 I visited the Shan Hai Labour Science Union and was amazed to watch a twelve-year-old boy Lü Peng handling a class of more than forty children. Every little soul was in his palm! In a flash the incident of the grandson teaching his grandma emerged from my subconsciousness. A meeting of the staff was called at once and I told them that they themselves had already found a way to save the school and the nation. That is "the little teachers." With the rise of the little teachers we have been enabled not only to keep the guiding principle "all come all served," but in addition we have a new slogan, "they who cannot come will receive education on delivery without cash." Since then we have witnessed the little friends delivering education to housewives and cowboys who cannot possibly attend regular classes without breaking their rice bowls. This feature of delivering education and home teaching has made the little teacher system unique and differentiated it from the Lancastrian pupil-teacher. Another difference is found in the fact that sooner or later even the cowboys and housewives begin to share their education with others.

The little teachers are rendering one unique service to China, that is to help grown-up girls and women to acquire some education. Men teachers find it difficult to teach grown-up girls in the villages where old customs prevail. A young man daring to do so will run the risk of gossip and the girls will be scared away and he will have to teach benches and chairs! Women teachers are very few. The problem of extending education to women has puzzled us for many years. But when the little teachers come up this problem just melts like snow before sunshine. They can penetrate into the chamber of a bride and give her a lesson. The little ones are much more accommodating than the regular teachers. As a little teacher is delivering education to a peasant's home, if the housewife has not finished dish-washing, she can ask the little friend to wait for a while. The little friend will be

glad to do so and take the opportunity to play a little while on the yard. In this way the little teachers have helped to promote women education. In the One Hundred Dukes Village, Kwangtung, there were in 1934 two hundred school children who volunteered to teach two thousand villagers of whom fifteen hundred were girls and women.

The little teachers are very clever in convincing the generation for further progress. A story may be of interest to all. Near the West Lake there is the Cave of Clouds and above the Cave there is a little tea growing community, called Wung Cha Hill, which has a school in a temple. This school has about one hundred "little teachers." Once a little teacher just twelve years old told me a very interesting story of how he converted his grandma to take lessons from him. He approached his grandma with a beautiful book. "Grandma, if you'd like to study this book, I will be glad to help you." The old lady answered, "My good boy, your grandma is too old to study. I am about leaving this world. What is the use of learning to me?" This was quite a stiff problem for the little boy to solve. But after having puzzled for a little while, he returned to Grandma, "On leaving the world, where are you planning to go?" "Well, I am a good woman, and am entitled to enter Heaven." The boy said, "Congratulations! But suppose the Angels at the Gate of Heaven should require you to sign your own name before you are admitted, what are you going to do?" Grandma seemed to be thoroughly convinced and immediately asked him to teach her how to write her name. "Bring me a pencil. Give me a piece of paper." She began to practice writing her name. A more interesting thing happened at midnight. In our country the grandma usually takes charge of the surplus children of the family. This boy was sleeping with grandma. At midnight he suddenly woke up and suspected that some insects were crawling up his legs! When he stretched his hand and felt, to his surprise, it was not insects, but the fingers of his grandma, making crosses, circles and strokes. When she was asked why she did it, the grandma answered, "Well, I am practicing writing my name."

From our experience, the little teachers are very enthusiastic. A song gives a better picture of the little teacher's enthusiasm:

I am a little teacher, you know,
My heart is like a little volcano.
I am not afraid of frost and snow;
Melt ignorance wherever I go.

The little teachers are sometimes called “mosquito teachers.” I presume most of us do not like mosquitoes. But there is one thing I can defend for them. When you have gangsters around you, the mosquitoes will keep you awake all night. Indeed, the little teachers today have gone far beyond the teaching of reading and writing. They are constantly bringing to the people songs, stories, news, knowledge and problems for discussion. The Sin An little teachers have even gone a step further by organizing themselves into a touring corps, carrying with them radio sets, news reels, records, and dramatic equipment. They have travelled through nearly all the northern provinces and visited many villages along the highways and army camps behind the battle fields. Wherever they go they give performances, shows and lectures, and start reading circles or discussion groups in order to keep the national struggle alive in the minds of our people.

The principle derived from the little teachers is very simple. Anyone who has learned a simple truth has the qualification to teach it and has the duty to share it with others.

Speaking from our experience the little teacher movement has shown the following merits:

1. The children learn more by teaching others. He who keeps his knowledge in the cold storage of his head learns the least.

2. Knowledge is no longer a commodity for sale. Education becomes a free gift for all. It is like the air which everybody can breathe, like water which everybody can drink, and like sunshine which everybody can enjoy.

3. The older generation and youths make progress together. The constant contact between adults and children in intellectual growth tends to make the old people younger.

4. It helps to solve the insurmountable difficulties of women's education and makes it possible for us to extend an essential education to half of our population which can be hardly reached by

other means.

5. A new change in the school itself coincided with the arrival of the little teachers. Formerly the village school was a lonely thing in the country. Now with the little teachers as live-wires connecting the village school with every home, the whole village becomes the school, and the light of education radiates everywhere while the school is in turn vitalized by the stream of problems calling for solution. The lonely teacher in a ruined temple, joined suddenly with tens of little comrades, cannot but see a new vision in his profession and feel elevated for the historic mission that he is to fulfill. Mr. Tsao Dai-kiang, a teacher in the Temple of Emperor Shun, was about to resign because he found it difficult to keep his family alive with the meager salary at a Shansi village school. When on the point of resignation he came across the methods of the little teachers from a magazine called *Life Education*. He gave it a trial and sent out a message that has inspired many village teachers to stick to their posts. He said, "With the little teachers and the little workers as my comrades, I am confident that we can rebuild the village life in a few years. I feel as if the destiny of the whole nation is in the hands of teachers." In conclusion he wrote that he would not resign even if he should be offered a salary ten times higher.

The little teacher movement is not without its dangers. I may mention two. Firstly, the little teachers, under the control of over-enthusiastic leadership, are apt to be overworked. This will do harm to the child's health and retard the cause. As a rule we do not advise the little teachers to teach more than half an hour a day. Secondly, some politicians and dogmatic ministers have availed themselves to use these children as little propagandists. This is against our principle. A teacher is one who teaches truth and nothing but truth. In order to teach truth he has to seek truth. Free criticism is absolutely necessary. In order to prevent the abuse of children for propaganda, we must inject the anti-toxin of free criticism.

E Relay Teachers

Another type of voluntary teachers, modeled on the same principles that govern the little teachers, are called relay teachers. The

difference is found in age. The little teachers are below sixteen while the relay teachers are above sixteen years of age. The term "relay teacher" is derived from relay race, passing the banner to the succeeding runner. The best way to show the working of the relay teaching is to invite an audience to imagine themselves as the farmers of China attending an evening class in the village and the speaker as a country school teacher. The mission of the evening school teacher is not teaching the farmers as students but to help them to become relay teachers, who are supposed to go out to teach others not after four or five years' graduation; they are supposed to teach others right after the class is dismissed, every student becomes a teacher and every home becomes a centre of learning. It is quite surprising to find that one tenth of our farmers have the ability to lead independent classes. The rest can teach at least two friends, one on the lefthand side and the other on the righthand side. If the two friends are too poor to buy books, the relay teacher's own book can be shared by three. The relay teacher has got his lesson fresh from the evening class and he has to review it. In reviewing his own lesson he has taught his two friends. And in teaching his friends he learns more, more clearly and more profoundly. The moment one wishes to share his knowledge with others, his own knowledge will have a high jump. "Pass the truth on to your neighbour" has been the motto for the relay teachers. It is very gratifying to see so many of our farmers and workers who have come to serve as relay teachers of their fellow men.

F Relay Teaching Applied by Women Workers

Miss Chu Ping-yu, a woman worker in a tobacco company, Yangtsepoo, Shanghai, has done most excellent work in extending relay teaching to women workers. She works in Shanghai and lives in Pootung, about five miles distant. In Pootung, near her home, there is an evening school for the training of relay teachers, conducted under the auspices of the Shanghai Y.W.C.A. Miss Chu takes one hour lesson there every evening except Sunday. Before daybreak she crosses the Hwangpoo River and walks about two miles in order to enter the factory in time. At noon, the factory has one hour recess, releasing all the workers to take their lunch in the street. The factory is then closed

and will not open until a few minutes before 1 p.m. The simple meal in the street lasts ten minutes. Miss Chu has a plan in her mind to help her sister workers to acquire some education by utilizing the rest of the time. First, she calls for her comrades to meet in an open place. However, the men workers crowd into the same place in order to watch what the women are doing. They are curious about these women because never before did they see this wonder-women gathering in the open air with books in hands and maps posted. The men are amazed to witness these women reading, discussing and singing songs. The presence of men has proved to be a great nuisance to the sisters. Miss Chu is finally forced to seek for a shelter. This she has secured when an elementary school principal has been finally induced to let her have one classroom for holding the recitation since his school children do not return until one o'clock. Since then the enrolment of sister workers increases by leaps and bounds and in a few days Miss Chu has to choose an able student from her class to be relay teacher of a second group. In a month she has to occupy all the rooms at the disposal of the good principal in order to meet the increasing demand. After all the rooms have been crowded new groups are formed in the homes of the sisters and capable relay teachers are selected by each group for the evening instruction. Thus the classes started by Miss Chu and her associates have become the training centre of relay teachers for women workers in that district and the light of education radiates wherefrom to every home that has come in contact with them. As time goes on, workers of other districts have caught the wind of what has been going here. Some of them have been inspired to carry on similar projects. Even those men workers who have caused some trouble to Miss Chu's class begin to see the importance of this education and decide to start men's classes, applying similar principle.

G A New Script

The People's Education Movement is also interested in promoting a new script for the Chinese spoken language. The attempt of inventing a phonetic script for the Chinese spoken language started more than seventy years ago but the last attempt has proved to be the

best and most fruitful. The scripts for the Northern, Shanghai, Canton, Amoy² and a few other dialects have been worked out. The new script treats the Chinese spoken language as a polysyllabic language and has succeeded in eliminating the troublesome minute symbols for the different tones. It is this great merit that makes it surpass all the previous inventions. With the new scripts for the various dialects the peasants in different localities can learn to read and write letters in their own dialects in one or two months by spending one hour a day. How great is the amount of time saved!

The greatest and most urgent need of China today is to rally all the people around the central thought and action in resisting Japanese aggression. We must not hesitate in mobilizing all the vehicles of communication for achieving this unity. The New Scripts are some of the best vehicles at our disposal and must be used to their best advantage in spite of all the difficulties in the way.

For want of space I shall present only the New Script for the Northern Dialect. The six vowels are: a as a in papa, e as e in after, i as i in is, o as o in home, u as oo in food, y as the German ü. The twenty-two consonants are: b as be in Berlin, c as ts in Tsitsihar, ch as ch in child, d as de in wonder, p as p in part, r as r in run, rh as r with tongue drawn back and concavely pressed upon the jaw, f as f in for, g as g in girl, j as y in yes, k as k in kind, l as le in let, m as me in men, n as ne in Brennen, ng as ng in king, s as s in see, sh as sh in she, t as te in Terman, w as woo in wood, x as he in Herman, z as z in zinc, zh as ch with tongue drawn back and concavely pressed on the upper jaw. The fifteen compound vowels are: ai as i in high, ao as ou in out, ei as a in fate, ie as first i in legitimate, ou as eu in Pasteur, with the low jaw extended out, ia as ya in yard, iao equals i plus ao, iou equals i plus ou, iu as eu in Europe, uo equals u plus o, ua equals u plus a, uai equals u plus ai, ui equals u plus i, ye equals ü plus e, yo equals ü plus o. The fifteen nasal vowels are: an, ang, en, eng, ian, iang, in, ing, uan, uang, un, ung, yan, yn, yng. The three variable consonants are: g, k, x, which change into soft sounds when they appear before i and y. These complete the New Script for the Northern Dialect. The Northern Dialect can be understood by three-fourths of the whole

population. If the New Script of the Northern Dialect could command a universal adoption, three-fourths of our illiteracy could be wiped out in two or three years. The New Script has received great momentum during the last year. In one city alone 300,000 have learned the New Script and can read publications published in it. It is hoped that the government will see the importance of its adoption at least as one of the alternatives and use its prestige and influence to spread it among the less fortunate of the population who have neither time nor money to learn the thousands of Chinese characters which will take years to master.

H Society as School

Another conception is to regard the community as our school, utilizing all the available resources for the uplifting of the people. An application of this idea is to utilize temples, tea-houses and every possible vacant place for reading circles, discussion groups, etc. Our policy is to spend as little as possible on buildings. Wherever a room will not be available, the shade of a tree will do. Bigger meetings are always held in the open air. The nature-made auditorium is indeed magnificent. With the blue sky as our roof, mother earth as our floor, the constellations as our walls, the moon there as our lamp, our farmers are holding their mass meetings and forums. It is in such an auditorium that the peasants of China are singing their songs, telling their stories, learning their simple truth, and discussing national and international problems.

I Birth of a New Peasantry

Under all these forces operating in the villages, taking command of them and marshalling them, a new peasantry is rising in the East. The farmer in *Good Earth* trying all the time to get more and more land for his own family in order to become richer than his fellow farmers is no longer an example for others to follow. The present-day progressive farmers in China want to have land enough for every farmer to lead a decent life. It is for this reason that they take so great and heroic a part in the struggle against Japanese aggression. It is also for the same reason that they want to unite all the people in action in order to insure the final victory. Here is a picture of this New

Peasantry:

Dancing of the Hoe

Take up your hoe.	Hail Revolution!
Take up your hoe.	The hoe must defend.
Cut off the weeds,	Long live the hoe!
The crops will grow.	Fight to the end.
Drive off your foe!	When fighting alone
Sons of the Ancient	The hoe cannot stand
Country.	long.
Under the hoe,	Machines and hoes unite,
There is liberty.	A new world is in sight.

中国的人民教育运动

人民教育运动大约始于12年前，一群教授和学生与农民同生活，试图找到一种真正为农民服务的教育方法。人民教育运动旨在尽力弥补正规学校制度的缺陷，做它所做不到的事。人民教育运动努力发展本国教育，而不是从历史背景和自然条件不同的外国引进教育；努力发展为广大劳苦大众服务的教育，而不是办只为少数特权阶层服务的教育；努力发展整个的生活教育，而不是办畸形的智力教育。为了达到这些目的，保证运动成功，我们制定了四个条件：

1. 试验者必须与大众同生活，拜大众为师；
2. 方法必须是在劳力上劳心，而不只是学院派的冥思苦想；
3. 用最短的时间，花费最少的钱；
4. 有志于将自己从对教师职业的偏见中解放出来。

上述事例能够展现出“晓庄试验”的部分面貌。该试验的主要成果是形成了生活即教育、社会即学校、教学做合一的理论。“山海工学团”与“小先生”于1931年及1932年应对外来侵略的挑战而诞生。当侵略者深入到华北，北京学生奋起要求保卫华北时，我们的运动以“国难教育社”的形式展开，并与全国各界救国联合会携手合作。1935年12月以来，这一运动旨在：

1. 团结起来保卫中国的民主；
2. 通过国际合作，达到世界和平；
3. 人民自我提升；
4. 实行全民免费教育。

只有最后一个目标及实现该目标之方法才是本文详细讨论的内容。这里讨论的甚至也不只是追求识字，还包括学政治、经济。我们一直在尽最大的努力寻求最简捷的方法实现民有、民治、民享的教育，这样我国人民就愈来愈具备条件参加使自由的中国屹立于世界自由民族之林的伟大斗争。

① 书呆子

有着数百年传统的错误教育观念是我们前进的障碍。依旧观念看，教育就是读书。学者被称为“读书人”，意思是专门读书的人。若问一位教授的职业是什么，通常他会这样回答：“我在北京大学教书。”同样学生会回答：“我在北大读书。”意思是他在北京大学读书。虽然我们把书

作为帮助了解过去及当代文明的重要工具，但是我们怀疑光读书是否就能使我们获得自由，仅靠读是否能鉴赏到书的内涵。较进步的人给这样的读书人取了个绰号叫“书虫”。我的朋友张彭春博士，称他们为“书呆子”。下面是我写的一首描写这种读书人的小诗：

我是书呆子，家住太平洋；
读破万卷书，想中状元郎；
农家供酒肉，主人快饿死；
失业教蒙童，尽变小呆子。

② 手脑相长

中国的传统教育似乎造就了两种怪人。在学校，学生的头脑被知识塞得满满的，却很少有机会使用他们的双手。许多本该由他们自己做的事都由仆人们代做了。玩泥巴、打开表盖看看都要受到惩罚。从人类发展史我们知道，正是由于手的活动促进了人脑的发达。直立行走使双手得到解放，人类开始工作；工作时发出的声音，逐步成为人类的口头语言。文字及工具都是我们的双手创造的。旧式学校不鼓励运用双手实际上妨碍他们实现发展大脑的目的。由于受到这种非正常的训练，学生只获得一大堆未经消化、互不联系、脱离实际的知识。他们看似拥有发达的头脑却不能按客观世界的情况准确地思考。因此，那些有机会上学的人毕业后变得脑大手小，打个比方说，他们看起来像只袋鼠，只有提笔写几行字的力气。另一方面，我们的人民大众为国家做了大量的工作，却享受不到学校教育。尽管他们不断地为办学缴纳税款，他们和他们的孩子却一直被剥夺了享受文化教育的闲暇时间。他们被迫以脑小手大的状态生存。生活教育运动的目的就在于使这两个畸形的群体恢复正常的生活。我们希望唤醒读书人伸出手来干活；唤醒广大人民群众学点知识、学会思考。让知识分子与农民相结合已经取得了堪称奇迹的成就。读书人和农民都重新发现了他们已经遗忘的东西。读书人看到农民那出色的劳动成果，禁不住惊叹：“我们不也有手吗？为什么我们不劳动？”同样地，农民重新发现了他们的大脑：“我们也有大脑，真的，我们有大脑，让我们来思考吧！”确实，真正的教育必须有助于造就能思考又能建设的人。我们需要的就是能造就会用脑指挥手、用手促动脑的人的教育。这种教育的新理念可用一首诗来表述，题目为《手脑相长歌》：

人生两个宝，双手与大脑。
用脑不用手，快要被打倒。

用手不用脑，饭也吃不饱。

手脑都会用，才算是开天辟地的大好佬。

③ 工学团

运用手脑相长的原则，我们逐步形成了办“工学团”的想法。“工学团”似乎是个不好理解的术语，但是它阐明了我们所办新教育的内容、方法及组织形式：工以养生，学以明生，团以保生，把教育的全部内容讲得清清楚楚。而且，工学团的方式决定了其教育的方法不再是纯学术性的了。最后，该术语还表明了组织的性质。它比“学校”包含更丰富的内容，因为按传统观念来说，学校擅长传授科学知识，但学生几乎没有机会工作及合作。该术语甚至比“合作社”更贴切。合作社除了关注眼前的经济需要以外，不够重视人类生活的其他方面。

工学团实际上采用了三种形式。第一种是那些严格贯彻新原则，取名“工学团”的组织，如宝山的棉农工学团、上海的报童工学团。就棉农工学团而言，种棉花是（做）工；摸索种棉花更好的方法、更加明了整个生活是学（科学）；组织棉农，使之能保卫他们的劳动果实不受剥削，并能参加反对侵略、保卫祖国及人类的更伟大斗争，这便是团（体）的真正意义。通过精选种子来改进棉花质量，可使一个小组增收二千元，平均每英亩增收六元。这笔额外收入的十分之一可使他们在同一村子里成立一个儿童工学团，让他们的孩子受到更好的教育。

上海静安寺路的报童工学团成立的方式很有趣。一天，我们注意到这些报童看不懂他们卖的报纸，表示要派一位年轻人去教他们识字。孩子们非常高兴地同意了。然而他们在寻找教室时遇到了困难，于是孩子们便开始为自己找地方学习。最后，报童吕公义的妈妈很慷慨地把她唯一的一间房让给这些孩子们使用。每天，孩子们同志愿教师一起在那儿学习一小时。报纸成了他们的课本，标题是他们的第一课。他们受教育是免费的，但作为回报他们有责任把所学到的东西教给邻居。报童们是自立的，卖报开始被当作光荣的劳动。一旦联合起来，孩子们的力量就强大了，同报纸批发商打交道就变得容易。有些孩子甚至还赢得了开明警察的尊敬。

工学团的第二种形式是以学校的名义进行，就是在教学计划中融合一些生产活动及社会活动的内容，但仍使用学校的名字。

第三种形式是合作社在加强生产的同时，使其具有学文化及懂防御的特点，使合作社办得更有生机。这样的合作社挂的是合作社之名，行的是工学团之实。这一运动将及时为数以百万计的难民服务。

④ 小先生

“小先生”是与他人分享教育的儿童。在小先生运动发展的较早阶段，最常见的小先生是自愿帮助家人及邻居学习基础知识的学童。随着时间的推移，甚至街上的孩子也即知即传，把学到的知识教给自己的朋友。大约14年前的一件小事使我第一次感到小孩子教人的可能，那年我57岁的母亲对识字产生了兴致。母亲想读我寄回去的家信，还想了解时事。她唯一能找到的先生就是我的二儿子，当时他6岁，刚好学完《千字课》第一册。奶奶和孙子俩人边玩边学。一个月后，我母亲便学完了《千字课》第一册。当时，这令人愉快的事情并没有引起我家以外的人们的多少热情。然而，一个6岁的孩子，没有师范学校的毕业文凭，没有督学颁发的证书，却顺利地教他57岁的祖母学完了《千字课》第一册，这一事实使我印象深刻，成为开创小先生制的决定性因素之一。

1931年，满洲被侵占；1932年，上海遭进攻。这时，我们才开始深信只有唤醒全国民众实现全民团结，国家才能得救。这就需要用最少的经费、在最短的时间内实行全民免费教育。进步青年男女潮水一般涌到农村，让农民知晓国家的危机。有些青年到我这儿来求教。我的意见很简单：来者不拒。当农民越来越明白教育对他们及其子女的重要性时，他们及其子女便都涌到小小的学校来听课了。当时，不少教师怀疑，根据这一原则能维持多久。坦白地说，有些教师还在考虑如何以收费或入学考试的办法来减少听众。如果允许这样做，就不能实现大众教育的全部目的了，因为它意味着又回到了只为少数人服务的教育。我们尽力促使他们面对现实，想出新的办法来应付这一形势。在需要的压力下，他们自然而然地委派一些能干的学生负责教那些教室里坐不下的听众。1932年11月的一天，我参观了山海工学团，很惊奇地看到一个12岁的男孩倡朋教一个有四十多个儿童的班级。每个幼小的心灵都在他掌控之下！一刹那间，在我的潜意识中突然浮现出孙儿教祖母的情景，随即召开了一个教职员会，会上我告诉大家，他们自己已经找到了救校救国的新方法，那便是“小先生”。随着小先生的兴起，我们不仅能一直遵循“来者不拒”的指导原则，还提出“不能来者，免费送教上门”的新口号。从那时起，我们的小朋友们就把教育送给不能参加正规课堂学习的家庭妇女及放牛娃，这样他们既学习又不会打破饭碗了。送教育上门这一特点是小先生制所独有的，将它与兰卡斯特“导生制”区别开来。另一个不同点在于，即便是放牛娃和家庭妇女迟早也开始与他人分享教育。

小先生们正以一种独特的方式为中国服务，即帮助大姑娘及成年妇女接受教育。在旧风俗习惯仍然盛行的农村，男教师感到很难教大姑娘。敢于这样做的年轻男子会招来风言风语，大姑娘们会被吓跑，他就

只能教椅子和板凳了！而女教师又很少。多年来，让教育普及到女子中的问题一直困扰着我们。小先生们一出现，这问题便迎刃而解，就像积雪遇到阳光便消融了一样。他们可以到新娘的新房里给她上课。孩子们比常规的教师行动方便得多。当小先生到农民家去上课时，如果农妇还没有洗完碗，她可以让小先生等一等，小朋友何乐而不为？正好可以在院子里玩一会儿。小先生正是以这种方式为推动女子教育效力。在广东省百侯村，1934年，200名学童自愿教2,000名村民，其中1,500名是女孩及妇女。

小先生很善于说服老一代继续学习。有个故事可能大家都感兴趣。西湖附近有个烟霞洞，洞上边有个小茶场叫翁家山。山上小庙里有个小学，这所学校大约有百名小先生。有一次，一个年仅12岁的小先生对我讲了他如何说服祖母跟他学习的故事，非常有趣。他拿着一本漂亮的书走到祖母身边：“奶奶，如果您想学这本书，我很乐意帮助您。”老太太回答道：“好孩子，奶奶太老了，学不进去。我都快离开人世了，学习对我有什么用呢？”对一个小男孩来说，这可是个棘手的问题。一阵困惑之后，小男孩又回到祖母身旁：“您离开人世到哪儿去呢？”“呃，我是个规规矩矩的好人，死后可以进天堂。”孩子说：“恭喜恭喜！如果天堂的守门神要您亲自签上您的名字后才能进去，您怎么办呢？”祖母似乎完全相信孙儿的话，马上要他教她写自己的名字：“给我一支铅笔，给我一张纸。”于是她开始练习写自己的名字了。另一件更有趣的事发生在半夜里。在我国，祖母通常承担起照顾家里一部分孩子的责任。这孩子同祖母一起睡。半夜里，他突然醒了，以为有小虫子顺着他的腿往上爬！伸手一摸，他大吃一惊，那不是虫子，而是祖母的手指，正在划十字、圆圈，练习笔划哩！当孙儿问她为什么这样做时，她答道：“哦！我在练习写自己的名字。”

从我们的经验来看，小先生们非常热情。下面这首歌生动地描写了小先生的热情：

我是小先生，
热心好比火山喷，
生来不怕霜和雪，
踏破铁鞋化愚蒙。

小先生有时被称为“蚊子先生”。我想我们当中大多数人都不喜欢蚊子。但有一点我可以为蚊子辩护。若你周围有歹徒，蚊子可以使你彻夜不眠。的确，现在的小先生，已经远远不止教人读和写了，他们经常教大众唱歌、讲故事、谈新闻、传授知识、提出问题来讨论。新安小学的

小先生们甚至自己组成旅行团，随身带着收音机、新闻缩微胶卷、唱片及演戏的道具。他们几乎走遍了北方各省，访问了公路两旁许多村庄及战场后方的兵营。他们走到哪儿，就在哪儿演出、放电影、演讲、成立识字小组或讨论小组，为的是使人民牢记民族斗争。

从小先生那里得出的原则非常简单：任何明了一点简单真理的人，就有资格传播它，并有责任与他人分享。

从我们的经验来讲，小先生运动有如下优点：

1. 孩子们通过教别人学得更多。把知识冷藏在脑子里的人学得最少。

2. 知识不再是买卖的商品。教育成为人人可以免费得到的礼物。它像空气，人人可以呼吸；它像水，人人可以饮用；它像阳光，人人可以享受。

3. 老少共同进步。成人与儿童经常接触，共同增长知识，可以使老人年轻起来。

4. 它帮助解决了妇女教育这个不可克服的困难，使我们能够把初级教育扩展到全国的一半人口，而这是其他任何方法都办不到的。

5. 小先生一出现，学校本身也就有了新变化。从前的乡村学校在农村中是孤立的。现在，小先生就像通电的电线把乡村学校和每家每户联结起来，全村都成了学校，教育之光可以照遍每个角落，而众多需要解决的问题又激发出学校的勃勃生机。破庙中曾经孤零零的教师突然多了几十个小同事，不只会看到他的职业新前景，也会为他应该完成的历史使命而振作起来。舜帝庙的教师曹代江先生因为山西乡村学校教师那微薄的薪金养不活他一家人正准备辞职时，在《生活教育》杂志上偶然发现了“小先生”教学法。他便进行试验，并发出了一封信。这封信鼓舞了许多乡村教师坚守自己的岗位。他说：“有小先生和小工人做我的同事，我相信几年之内我们就能重建乡村生活。我感到，似乎整个国家的命运都掌握在教师手里。”在信的结尾他写道，即使给他高十倍的薪金，他也不辞职了。

小先生运动不是没有危险的，我可以举出两个例子：第一，在过分热情的领导之下，小先生容易操劳过度，这就可能损害孩子的健康，妨碍事业的发展。通常我们不提倡小先生每天教学时间超过半小时。第二，有些政客及武断的官吏为了自己的利益，利用这些孩子做小宣传员，这是与我们的原则相违背的。先生是传授真理的人，而且非真理不传授。为了传授真理，他必须追求真理。自由批评是绝对必要的。为了阻止滥用孩子作宣传工具，我们必须注射自由批评这一抗毒剂。

⑤ 传递先生

另一类同样依照小先生原则的志愿教师称为“传递先生”。它与小先生的区别仅在于年龄。小先生的年龄在16岁以下，而传递先生的年龄在16岁以上。“传递先生”这一术语源自接力赛跑，把旗帜传给下一个赛跑者。展现传递教学过程的最好办法就是邀请一些听众，让他们把自己想象为在乡村学校上夜校的中国农民，把演讲者想象为乡村学校的教师。夜校教师的任务不是把农民当学生教，而是培养他们成为传递先生，放学后就能教别人，不必等毕业四五年后才出去教书。每位学生都是教师，每个家庭都是学习中心。我们惊讶地发现，十分之一的农民有独立带领班级的能力。其余的至少也能教两个朋友，一个坐在左手边，一个坐在右手边。倘若这两个朋友穷得买不起书，传递先生自己的书可以供三人共用。传递先生刚刚在夜校习得新知，也需要温习一下。他一边复习自己的功课，一边还教了他的两个朋友。在教朋友的过程中，他学得更多、更清楚、更深入。一个人想将自己学的知识与他人分享时，他自己的知识就会有大的飞跃。“把真理传给您的邻居”已成为传递先生的座右铭。十分令人欣慰的是，我们这么多的农民和工人逐渐成为自己同胞的传递先生。

⑥ 女工的传递教师

上海杨树浦一个烟草公司的女工朱冰如小姐将传递先生推广到女工中，成绩显著。她在上海上班，住在离上海约五英里的浦东。在她浦东家的附近有一所上海基督教女青年会主办的专门培养传递先生的夜校。除了星期天，朱小姐每晚在该校学习一小时。拂晓前她就过黄浦江，步行两英里左右按时上班。中午工厂午休一小时，让所有的工人到街上去吃午饭。工厂就关门直到下午一点差几分才开门。在街上吃顿便饭只需十分钟。朱小姐心中盘算着，要利用空余时间帮助她的姐妹们接受教育。起初她约伙伴们到一个空场地集中，但男工们也蜂拥而至，要看她们干什么。他们觉得这些女工很奇怪，因为他们从未见过女工们聚集在露天里，手里拿着书，墙上贴着图。男工们惊讶地看到这些女工在念书、讨论问题、唱歌。男工们的围观令姐妹们十分厌烦。朱小姐不得不另找安身之处。这一愿望终于实现了，一位小学校长最终被说服，答应借给她一间教室，在学生一点钟返校之前作诵读用。从那以后，女工听课人数猛增。几天以后，朱小姐不得不从她的班上挑出一名能干的学生作第二小组的传递教师。一个月后，她不得不占用了这位好心肠校长所掌控的所有教室以满足不断增长的听课女工。所有的教室都挤满之后，又在姐妹们家中成立了新的小组。每组选出能干的传递教师晚上授课。

这样，朱小姐和她的伙伴们创办的班就成了那个地区女工传递教师的培养中心。教育之光从那儿发出，照到每个与她们有联系的家庭。随着时间的推移，其他地区的工人听到了这边的风声，有些人备受鼓舞，也开始施行类似的计划。甚至当初给朱小姐的班添麻烦的男工们也开始发觉这种教育的重要性，决定应用类似的原则成立男工班。

⑦ 新文字

人民教育运动还提倡一种新文字以便推广汉语口语。七十多年前人们就开始尝试为汉语口语发明一套拼音文字，但最近的尝试才证明是最好、最有成效的。为北方、上海、广州、厦门及其他几种方言使用的新文字已编制出来。新文字将汉语口语当多音节语言处理，成功地取消了那些代表不同声调的复杂的小符号。正是这一大优点使新文字超过了以前所有的发明。有了这些新文字，不同方言区的农民每天花一小时，一两个月之内就能学会用本地语言读书写字。这样节省了多少时间啊！

当今，中国的燃眉之急是联合全国民众，将思想和行动集中到抵抗日本侵略上来。我们必须毫不犹豫地动员所有能够传达信息的工具实现这一联合。新文字是我们可支配的最好的工具之一。尽管有许多困难，我们也要充分地利用它们的长处。

限于篇幅，我只介绍北方方言的新文字。6个元音是：a，就像papa中的a；e，就像after中的e；i，就像is中的i；o，就像home中的o；u，就像food中的oo；y，就像德语的ü。22个辅音是：b，就像Berlin中的be；c，就像Tsitsihar中的ts；ch，就像child中的ch；d，就像wonder中的de；p，就像part中的p；r，就像run中的r；rh，就像发r音一样，舌头后缩，成凹形顶住上颚；f，就像for中的f；g，就像girl中的g；j，就像yes中的y；k，就像kind中的k；l，就像let中的le；m，就像men中的me；n，就像Brennen中的ne；ng，就像king中的ng；s，就像see中的s；sh，就像she中的sh；t，就像Terman中的te；w，就像wood中的woo；x，就像Herman中的he；z，就像zinc中的z；zh，就像发ch音一样，舌头后缩，成凹形顶住上颚。15个双元音是：ai，就像high中的i；ao，就像out中的ou；ei就像fate中的a；ie就像legitimate中的第一个i；ou，就像pasteur中的eu，发音时下颚伸出；ia，就像yard中的ya；iao，等于发i后再发ao；iou，等于发i后再发ou；iu，就像Europe中的eu；uo，等于发u后再发o；ua，等于发u后再发a；uai，等于发u后再发ai；ui，等于发u后再发i；ye，等于发ü后再发e；yo，等于发ü后再发o。15个鼻元音是：an，ang，en，eng，ian，iang，in，ing，uan，uang，un，ung，yan，yn，yng。还有3个可以变化的辅音g，k，x，

在i和y前出现时，它们发轻音。这些就是全部北方方言新文字。我国四分之三的人口懂北方方言。倘若北方方言新文字能普遍被采用，则四分之三的文盲可在两三年内扫除。去年学习新文字的人越来越多。仅在一个城市就有300,000人学会了新文字，能看懂用新文字出版的文章了。希望政府能看清采用新文字的重要性，至少把它当作一种可以选择的方案，利用政府的声誉及影响，在既无钱又无时间去学那些要花好多年才学会的几千汉字的“不幸”的中国人中间普及。

⑧ 社会即学校

另一个想法是把社会当成学校，利用一切可用的资源提升人民的文化素养。实现这一主张的方法之一就是庙宇、茶馆及所有空闲的地方开设读书处和讨论小组等。我们的方针是尽可能少花钱建房屋。找不到房子，树阴下也可以。一些大的会议也总是在露天举行的。大自然造就的礼堂的确十分雄伟，我们的农民就在其中开民众大会和讨论会，以青天作屋顶，大地作地板，群星作墙，当空的月亮作灯。正是在这样的礼堂里，中国的农民唱他们的歌，讲他们的故事，学习他们朴素的真理，讨论国内和国际的问题。

⑨ 新农民诞生

在乡村所有这些力量的作用下，一代新农民在东方崛起，掌握并调动这些力量。赛珍珠在小说《大地》中描写的那个竭力为自己的小家庭积攒越来越多的土地，以便比别的农民兄弟更富裕的农民，不再成为别人仿效的榜样。当代进步的中国农民想使每个农民都有足够的土地，都过上体面的生活。正因为如此，他们才在抵抗日本侵略的斗争中发挥如此伟大、英勇的作用。也正是由于这个原因，他们才想团结全国人民行动起来，以确保取得最后的胜利。下面这首诗便是新农民的写照：

锄头舞歌

手把个锄头锄野草呀，
锄去野草好长苗呀！

五千年古国要出头呀，
锄头底下有自由呀！

革命的成功靠锄头呀，
锄头锄头要奋斗呀！

光棍的锄头不中用呀，
联合机器来革命呀！

WAR IN CHINA:STRUGGLE FOR LIBERTY OR SLAVERY¹

China is struggling for ideals that it holds in common with Canada:ideals of peace, freedom, justice and democracy.

Peace with equality, enough to eat, liberty and justice are what the Chinese people want.

Democracy is an old tradition in China. A great Chinese once said,“Heaven sees through the eyes and hears through the ears of the people.”This is a cardinal principle of the Republic of China.

Japan's eyes are bigger than her stomach. While you are listening to me, every minute of the time, five human beings are being killed or wounded in China. Yet it will take Japan 400 years to wipe out China at that rate.

The Chinese people have made up their minds to stop the march of Japan. We have achieved unity in our country through our determination to resist the oppressor.

Dealing with the Japanese allegations of the cause of the struggle, there are five chief ones, and none of them valid. To each we gave the following objections:

1.Japan must expand because of overpopulation—China formerly admitted Japanese without even demanding passports. While the Japanese declared their country overpopulated, they have encouraged a high birthrate instead of controlling it.

2.Japan is fighting for the friendship and cooperation of China—an odd way to get it.

3.Japan wishes to increase trade with China—they have destroyed that great trade.

4.Japan wishes to civilize China—all the civilization of Japan and much of that of the world as a whole has been derived from China.

5.Japan is trying to stop the spread of Communism—it would be more sensible to attack even England on this score, for China is a highly individualistic nation, and England, on the other hand,

harbored Karl Marx while he wrote *Das Kapital* and the *Red Flag* was written by a man from Tipperary.

Real reason of the Japanese attack is the desire to monopolize the raw materials of China, and to secure more cheap labor.

One of China's main sources of arms supply is Japan. Our mobile army gets behind the Japanese forces and captures large supplies of material.

It is not correct to say the Chinese are conducting guerilla warfare, for they do not fight as civilians, but as authorized, uniformed troops. The mobile forces merely fight without a base and on a highly mobile system.

The war in China is not only a life or death struggle, it is liberty or slavery. For us, liberty is dearer than our lives.

中国的抗战是不自由就受奴役的斗争

中国人正在为之奋斗的理想和加拿大的理想是共同的，这种理想就是和平、自由、正义和民主。

平等的和平、足够的食品、自由和正义，这些正是中国人民所想要的。

民主在中国有古老的传统。一位中国伟人曾说：“天视自我民视，天听自我民听。”（《尚书·泰誓中》）这是中华民国的一条根本原理。

日本的眼睛比他的胃口还大。你们现在听我演讲的时候，每一分钟在中国就有五个人类的成员死伤。然而，即便按这个速度，日本要消灭中国人也需要四百年。

中国人民已下定决心，要阻止日本的进军。凭着抵抗压迫者的决心，我们国内已经团结起来了。

日本为其侵略行径辩护，列举了五条理由，没有一条是站得住脚的。针对每一条，我们提出如下异议：

1.因为人口过多，日本必须扩张——中国以前允许日本人入境，甚至不要求出示护照。日本一方面宣称人口过多，同时却鼓励高出生率，而不是控制它。

2.日本是为了争取与中国的友谊和合作而战——以侵略寻求友谊和合作是一种诡异的方式。

3.日本想要增加同中国的贸易——他们摧毁了两国之间昌隆的贸易。

4.日本想使中国开化——日本的全部文明和全世界的很大一部分文明都源于中国。

5.日本要阻遏共产主义的传播——按照这条理由，甚至去进攻英国还更合理些，因为中国是一个高度个人主义的国家，而英国在马克思撰写《资本论》时庇护了他，《红旗》的词作者是蒂珀雷里人²。

日本进攻中国的真正原因是企图独占中国的原料并得到更廉价的劳动力。

中国武器供应的主要来源之一是日本。我们的机动部队从背后打击日本军队，缴获了大量供给物资。

说中国是在进行游击战，这是不对的。因为我们作战的不是老百姓，而是得到正式授权的正规部队。机动部队只是在没有基地的情况下以高度机动的方式在作战。

中国的抗战不仅是生死存亡的斗争，而且是不自由就受奴役的斗争。对我们来说，自由比生命更可贵。

EDUCATION FOR ALL¹

1.Name of Project:

A Preliminary Plan of Promoting Democratic Education for 450 Million People in China.

2.Auspices:

Life Education Association and Yu Tsai School.

3.Guiding Principles:

1.Democracy First. To learn democracy by living a democratic life. Fundamental reconstruction of the schools and the school system according to democratic ideals needed in order that an education of the people, by the people and for the people may flourish in China. Democracy is not only penicillin for China's illness but also blood transfusion giving the Chinese people new vitality to create a better country.

2.Education for all. Equality of opportunity for boys and girls, men and women, adults and children, irrespective of differences in religion, race, wealth and class to which they belong.

3.An all-round education. Heart, head, hands unite. Unity in political, economic and cultural literacy. Health, science, labor, art, and democracy will be woven into a harmony of life.

4.Education for the whole life. To cultivate an appetite for learning. Learn to live;live to learn. Learn as long as we live. Once the habit of learning is established, a lifelong progress of the individual is insured.

5.The foundation of democratic education should be laid on as early as babyhood. Perhaps at the present, the best and most economical way to approach the problem is to teach the babies through teaching the parents and brothers and sisters, especially through teaching the mother, sisters, and women servants.

6.Recognizing China is still an agricultural country and is bound to be very poor, we must offer to the people wholesome cultural food at the lowest cost. By utilizing the handwriting class of 12,000,000 ordinary school pupils for copying people's readers, in a month we can

have 12,000,000 books for the people to use. Daylight classes are preferred in order to save oil. Chopsticks can be applied with water on table to practice writing. Sign boards on the street can serve as a lesson if text books are not ready. High cost education means no education or education for the very few.

7.Society as school. Mobilizing all possible forces, institutions and personnel already existing in society to render this great service to the people. Temples, tea-houses, prisons, army camps, shops, factories,disabled soldiers hospitals and vacant houses and rooms of ordinary schools should be utilized as reading circles or training centres.The 80 million adult literates with a period of reeducation can serve as teachers helping their family members and neighbors to make progress.

8.Cultivate a sense of responsibility, a feeling of honor and an inner urge to share learning with others. One who has learned a truth carries with him the duty and the privilege to transmit that truth. One who has learned a word has the qualification to teach that word and also has the duty to teach that word;after he has acquired the appetite for intellectual sharing, he will consider it a pleasure to do so.

9.Under the principle of common sharing of truth with our fellow men we have developed the little teachers as vanguards of free education. Since the first little teacher came to our consciousness some twenty three years ago, it has come to acquire certain merits which are essential to the spread of education in such a country as China.

a)The little teacher system has been found to be the most effective weapon in solving the difficulties of women education.

b)Adults taking lessons from children cannot help being reborn as children and catch the spirit of youth.

c)Knowledge in the hand of the little teacher is no longer a commodity for sale but a free gift for all.

d)The little teacher learns the subject matter more clearly and thoroughly from teaching it and learns many important things from the people whom he teaches.

e)The enrollment has changed its character. All come, all

served; those who cannot come can receive education on delivery without cash.

f) The school itself has changed, and magnified many times. The community has become the school and the so-called “School” has become one of the classrooms, or more realistically, a powerhouse, sending light, heat and power through the little teachers as live wires to the homes of the community so that all members can enjoy all that is generated. Then the little teachers bring in turn from the little dynamoes of the homes everything that makes the central powerhouse more powerful in rendering its service to the people.

g) The lonely teacher in the country school has also changed. He is no longer teaching, living, cooking, struggling alone. In a stroke he has become a captain of fifty or a hundred little comrades, who are no longer little bookworms, but all active little teachers, little workers, little fighters and above all little builders of China's Democracy.

10. The principle of common sharing of truth not only gives rise to the little teachers but also gives birth to the relay teachers. The ablest teachers of the people I have ever seen have come out from the great masses of the people, from the peasants, the workers, the artisans, and the shop apprentices. They begin to help others in an informal way as soon as they themselves have had only a few lessons. In other words they have become relay teachers. At this stage, they are most enthusiastic, and the able ones can be developed as the best relay teachers of the people.

11. The greatest emphasis is to be put on the education of the people in villages and recovered territories.

12. Encouraging the people to study with a job in hand. Never throw away the rice bowl for a school diploma.

13. Using Romanized (Latinized) scripts whenever and wherever it is necessary and possible.

14. Fullest utilization of the radio, cinema, airplanes, railways and steamships to convey ideas, personnel and materials of “democratic education” to the farthest corner of the country so that the most backward part of the country can be democratized at the earliest possible date.

15.Encouraging people's initiative and subsidizing local experiments.

16.Discovering and selecting talents from the masses and recommending them to Yu Tsai School or other suitable institutions for special and advanced learning.

17.The project confines itself in researching, experimenting, training, publishing, demonstrating, promoting, motivating activities and making recommendations to the government and other agencies for reference and nationwide adoption.

18.Exchange of information and experience with other nations in regard to the progress of democratization of education.

4.Possibilities of Realization:

In applying the principles stated above a dozen years ago, the Shan Hai Labor Science Union achieved universal and free education in 25 villages in half a year without costing the government a cent.The movement under the leadership of Life Education Association spread over 23 provinces in 9 months and continued to spread until thought control set in and since then it has dwindled with the retreat of Democracy, except of course in the 17 liberated areas where the little teachers have been most flourishing and are still multiplying themselves for the service of the 100 million people living there. Recently with the return of the democratic tide, one school, the Yu Tsai School alone, has extended educational opportunities to 4,500 adults and children in its vicinity. If the 113 colleges, 2,278 middle schools, 218,758 elementary schools and 79,550 social education organizations under the control of the Ministry of Education should do the same thing with the same principles at the same rate, they might, in their combined effort, carry the 350,000,000 people with them in continuous learning and progress. Of course, the uneven distribution of these schools should make a big discount. But under the inspiration of Democracy, with the government power [in] back of it, readers and materials ready for use, and nationwide voluntary promotion and competition flourishing, the 300,699 institutions armed with the little teachers and relay teachers can hardly have any doubt to reach 100,000,000 people in a year;with the assistance of the reeducation of

the 80 million literate adults, they could accomplish the whole job in four years, and making allowances for all unforeseen obstacles in the way they could accomplish complete success at most in ten years. Once the habit of learning and the habit to share learning with others have been formed they will march on with their own momentum, and continual progress toward Democracy is likely insured.

5.First Year's Budget for Starting the Movement (October 1, 1945—September 30, 1946):

a)Research Institute \$140,000 gold

In the light of democracy, studying the problems, difficulties and methods in regard to

- 1)Education of the peasants.
- 2)Education of the workers.
- 3)Education of shop employees and apprentices.
- 4)Education of disabled soldiers.
- 5)Education of women.
- 6)Education adapted to Mongolian life.
- 7)Education adapted to Tibetan life.
- 8)Education adapted to Miao life.
- 9)Education adapted to the life of the Chinese Turkistan².
- 10)Education of abnormal children.
- 11)Education of prisoners.
- 12)Health education.
- 13)Science education.
- 14)Handicrafts, agricultural and industrial arts education.
- 15)Drama as a means of people's education.
- 16)Music as a means of people's education.
- 17)Painting as a means of people's education.
- 18)Further studies into the little teacher system.
- 19)Reconstruction of the existing educational system and army education.
- 20)Reeducation of the literates and leaders.

Research \$1,000 \$40,000

Professors 40 at

Research Assistants 80 at	\$500	\$40,000

Total

\$100,000

e)Subsidies for 5,000 local organizations:

Local schools or organizations which wish to extend democratic
education to the people may apply for books, publications, technical
training, and demonstration on the condition that the local agency
agrees to bear part of the expenses (from 1/10 to 1/2) according to
the financial condition of the applicant. Books and publications within
the limit of 5,000,000 to 9,000,000 sets will be supplied by the
printing office without extra charge to the budget.

Technical training and demonstration will be given partial subsidies for food and travel by the training centres and incur no additional expenses.

f)An Editorial Board and a Printing Office which are capable of keeping 10,000,000 people in constant supply of cultural food and capable of further development. In the first year we hope to produce four People's Readers, 10,000,000 copies; the first shelve of The People's Library consists of 100 books, one set for each Reading Circle of 10 persons, so we need 1,000,000 sets, totaling 100,000,000 separate books; then monographs of research, periodicals, and material for 25,000 members in the ten Training Institutes, 100 Demonstration Centres, and guide books for 1,000,000 little teachers;finally a weekly Magazine for each of the 1,000,000 Reading Circles. \$1,100,000 gold

Administrative Expenses		\$20,000
Editors 20	at\$700	\$14,000
Printers 20	at\$700	\$14,000
Printing		\$46,000
Machines and Complete Outfits		
Ink		\$6,000
Paper		\$1,000,000
Total		\$1,100,000
Grand Total		\$2,000,000 gold

6.Financial Campaign:

It is our plan to raise the equivalent of\$1,000,000 gold from our allied friends who are interested in China's progress.The Chinese Campaign has been started since September 18. We hope to enlist the interest of 100,000 Chinese friends who will give contribution to match the allied donation.

7.Results Expected:

If conditions should prove to be favorable with this fund of \$2,000,000 gold, we could introduce in the first year 6 million to 10 million people to the elements of democratic culture and turn all of them into fishermen who will fish people for Democracy; this will give great momentum and stimulus to the next and next year's movement and it will not be too ambitious to expect that within a decade the 450 million people of China with both individual and collective appetite for learning and to share learning will become the indestructible pillars and invincible defenders of Chinese and World Democracy.

全民教育

1. 计划名称 《促进四万万五千万中国人民民主教育初步计划》

2. 主持单位 生活教育社及育才学校

3. 指导原则 （一）民主第一。过民主生活以学习民主。根据民主理念的需要从根本上重建学校及学制，使“民有、民治、民享”的教育在中国蓬勃发展。民主不仅是治疗中国疾患的盘尼西林（青霉素），而且也是输血，能使中国人民有新的活力去创造更好的国家。

（二）全民教育。不论宗教、种族、财富及所属阶级有何不同，男孩与女孩机会均等，男子与女子机会均等，成人与儿童机会均等。

（三）全面教育。心、脑、手相长。政治、经济、文化素养相结合。卫生、科学、劳动、艺术及民主构成和谐的生活。

（四）终生教育。培养求知欲。学习为生活；生活为学习。活到老，学到老。一旦养成学习习惯，终生不辍的进步就有保障。

（五）民主教育的基础应该尽早在婴儿期奠定。或许目前处理这个问题最好、最经济的办法是通过教父母、兄弟、姐妹，尤其是通过教母亲、姐妹及老妈子来教育婴儿。

（六）我们认识到中国依然是个农业国，必定很穷，所以必须以最低廉的成本向大众提供有益的文化粮食。让1,200万名普通小学生利用写字课抄写大众读本，一个月以后，就有1,200万本书供大众使用了。上课最好安排在白天，以节省灯油。筷子蘸水就可以在桌上练习写字。课本没有准备好，街上的招牌也可以当作一课。教育费用高昂就意味着没有教育或是只有极少数人能接受教育。

（七）社会即学校。动员社会上一切现存的力量、学校和其他机构以及个人尽力为民众服务：庙宇、茶馆、监狱、兵营、商店、工厂、伤兵医院、普通学校不上课的房间和空出的教室，都应给识字小组及训练中心使用。8,000万识字成人经过一段时间再教育可以作为教师帮助家人及邻居进步。

（八）培养责任感、荣誉感及发自内心的与他人分享知识的迫切愿望。明了一项真理的人就有责任和特权将这项真理传播出去。学会一个字的人就有资格教那个字，也有责任教那个字。有了与他人分享知识的欲望，才会认为这样做是一种乐趣。

（九）根据知识为公的原则，我们把小先生培养成为免费教育的先锋。大约23年前，我们认识了第一位小先生。从那以来，这样做的一些

优点终于表现出来了，这些优点是在像中国这样的国家普及教育所必不可少的。

1.小先生制已经证明是攻破女子教育难关最有效的手段。

2.成人拜小孩子为师，不禁会感到像小孩一样获得重生，并受到青年精神的感染。

3.小先生手中的知识，不再是出卖的商品，而是免费赠送给全民的礼物。

4.通过教别人，小先生对课程内容会理解得更清楚、更透彻，还从他们所教的人身上学到很多重要东西。

5.招生的性质改变了。来者不拒，不能来者免费送教育上门去。

6.学校本身也起了变化，扩大了许多倍。社会变成学校；所谓的“学校”变成教室中的一间，更实在地说，变成发电所，通过小先生输送光、热和力；小先生就像通电的电线一样，把学校与社会的千家万户联结起来。这样，所有的社会成员便都能享受发电所里发出的光、热和力了。然后，小先生又从各家各户的小发电机上反馈回来一切，增加中心发电所的功率，使之为能更多的光、热和力送给民众。

7.乡村学校中孤独的教师也变了。他不再孤零零地教书、起住、做饭，不再孤零零地奋斗了。他一下子就成了有50个或100个小同事的队长，这些小同事也不再是些小书呆子，而是活跃的小先生、小工人、小战士，而更重要的是，他们是中国民主的小建设者。

（十）知识为公的原则不仅产生了小先生，而且产生了传递先生。我所见到的最能干的人民教师均来自于人民大众，来自农民、工人、工匠及商店学徒。他们自己学习了那么几课后，就开始不拘形式地帮助别人。换句话说，他们就成了传递先生。在这一阶段，他们非常热情，其中能干的人可以培养成为大众最好的传递先生。

（十一）农村及收复地区民众的教育应当最受重视。

（十二）鼓励民众边工作边学习。决不要为一张学校毕业文凭而扔掉饭碗。

（十三）无论何时何地，只要有必要、有可能，就使用罗马化（即拉丁化）文字。

（十四）最充分地利用广播、电影、飞机、铁路、轮船，把“民主教育”的理念、人员及物资输送到最边远的角落，以使国家最落后的地方也能尽早实现民主。

（十五）鼓励人民的首创精神，资助地方实验。

（十六）从群众中发现和挑选人才，把他们推荐到育才学校或其他

合适的学校及机构受特殊的、高级的训练。

(十七) 本计划仅限于研究、实验、训练、出版、示范、推广和激励活动等，并向政府及其他机构提出建议，供他们参考并在全中国范围内采用。

(十八) 与其他国家交流教育民主化进展的情况和经验。

4. 实现的可能性 12年前在贯彻上述原则时，山海工学团不花政府一分钱在半年之内就在25个村庄普及了免费教育。生活教育社领导的这场运动，在九个月内就在23个省铺开，并继续在发展，直到思想控制介入为止。从那时起，随着民主的倒退，该运动的声势也减弱了。当然，17个解放区除外。在这些解放区，小先生制蓬勃发展，方兴未艾。小先生队伍正在扩大，为在那儿居住的1亿民众服务。最近，随着民主潮流的回归，育才学校开始扩大教育机会，仅这一所学校就为附近4,500名成人和儿童提供了受教育的机会。如果113所大学、2,278所中学、218,758所小学及79,550个属教育部管辖的社会教育组织贯彻同样的原则，以同样的速度做同样的事情，它们合起来就可以使3.5亿人继续学习和进步。当然，学校分布不均衡会使人数打个大折扣。但在民主的鼓舞下，有政府力量的支持，有现成的读本和材料，有自愿提倡教育、竞相办教育等活动在全国的蓬勃开展，几乎不容置疑，300,699个用小先生和传递先生武装起来的学校，一年内就可以使1亿人接受教育；再加上受过再教育的8,000万有文化的成人的帮助，四年就可以完成全部任务了；即使把所有意外的障碍都估计在内，至多也只要十年就可以完全成功。一旦养成学习的习惯及知识为公的习惯，他们就会依靠自身的力量向前进，因而不断朝着民主方向的进步就有了极为可靠的保证。

5. 运动启动第一年的预算 (1945年10月1日—1946年9月30日)：

(一) 研究所 140,000美元

根据民主的精神，研究下述问题、困难及解决的方法：

1. 农民教育
2. 工人教育
3. 店员及学徒的教育
4. 伤兵教育
5. 女子教育
6. 适应蒙民生活的教育
7. 适应藏民生活的教育
8. 适应苗民生活的教育
9. 适应新疆生活的教育

- 10 . 异常儿童教育
- 11 . 囚犯教育
- 12 . 健康教育
- 13 . 科学教育
- 14 . 手工艺、农艺、工艺等教育
- 15 . 戏剧作为民众教育的手段
- 16 . 音乐作为民众教育的手段
- 17 . 绘画作为民众教育的手段
- 18 . 进一步研究小先生制
- 19 . 现存教育制度的重建及军队教育
- 20 . 有知识的人及领导人的再教育

研究教授40人	每人1,000美元	共40,000美元
研究助手80人	每人500美元	共40,000美元
交通费		10,000美元
图书馆		20,000美元
房屋		10,000美元
设备		16,000美元
函电		2,000美元
杂费		2,000美元
总计		140,000美元

（二）行政费 60,000美元

用

所长秘书处

秘书20人	每人500美元	共10,000美元
现场指导主任	每人1,000美元	共30,000美元

30人

交通费	5,000美元
房屋	1,000美元
设备	12,000美元
函电	1,000美元

杂费		1,000美元
总计		60,000美元
(三) 收复地区及普通地区10个战略中心的推广示范人员训练所		600,000美元
教授100人	每人1,000美元	共100,000美元
推广示范人员25,000人，接受1—3个月训练		
1.部分交通费资助		150,000美元
2.部分伙食资助		150,000美元
3.10幢房屋		10,000美元
4.学校设备10套；广播、电影、戏剧、音乐及医疗全套器材100套		150,000美元
5.25,000人的印刷材料		30,000美元
6.杂费		10,000美元
总计		600,000美元
(四) 100个示范中心：收复地区及普通地区		100,000美元

共100个

主管100名	每人500美元	共50,000美元
助手100名	每人400美元	共40,000美元

印刷所为1,000,000人免费提供阅读材料，训练中心免费补充全套示范用品

杂费	10,000美元
总计	100,000美元

（五）资助5,000个地方组织

有意向人民群众普及民主教育的地方学校或相关机构，在地方机构同意根据申请单位的经济情况承担部分费用（从1/10到1/2）的条件下，即可以申请书籍、出版物、技术训练及示范。书籍和出版物在5,000,000套至9,000,000套之间，由印刷所供应，不另计预算外费用。

技术训练和示范将由训练中心提供部分伙食补助和交通补助，无附加费用。

（六）一个足够不断供应10,000,000人的文化粮食的编辑委员会和印刷所，并且它们自身能够进一步发展。第一年我们希望出4册大众读本，印数10,000,000册。人民图书馆的第一层书架上有100本一套的书，每10人的识字小组要有一套，我们就需要1,000,000套，总共100,000,000本书；然后才是供10个训练所、100个示范中心的25,000人使用的研究专著、期刊及各种材料，供1,000,000个小先生用的指导用书；最后才是供1,000,000个识字小组使用的周刊，每组一份。
1,100,000美元

管理费用		20,000美元
编辑20人	每人700美元	共14,000美元
印刷工人20人	每人700美元	共14,000美元
印刷机及全套设备		46,000美元
油墨		6,000美元
纸		1,000,000美元
总计		1,100,000美元

以上各项总计

2,000,000美元

6. 资金募集 我们计划从对中国的进步感兴趣的盟友中募集相当于1,000,000美元的资金。“中国运动”9月18日就开始了，我们希望引起100,000位中国朋友的兴趣，募集到与盟友的赠款相当数额的捐款。

7. 预期的结果 如果条件有利，募集到2,000,000美元，我们便能在第一年向600万到1,000万人普及民主文化的基本教育，把他们都变成“钓鱼人”，携起手来向大众传播民主的理念，从而将大大推动和刺激第二年及其后每一年的运动。十年内，个人和集体都好学上进、乐于互学的四万万五千万中国人将成为中国和世界民主坚不可摧的栋梁和不可战胜的捍卫者，这并非奢望。

YU TSAI SCHOOL FOR TALENTED REFUGEE CHILDREN¹

A The Founding of Yu Tsai School

In order to have a better understanding of Yu Tsai School it is necessary to give some explanation of how Yu Tsai has come into existence and how the school has proceeded to discover and nourish especially the scientific talents when they are very young. Among the influences that have given an impetus to my founding of a school like Yu Tsai, three persons stand out as beacon lights: Faraday, Thomas Alva Edison and Sanderson of Oundle.

Faraday spent his boyhood in serving as an apprentice in a book-binding store owned by Mr. Ribeau. He was slow in his work. Other apprentices made complaints to Ribeau about his slowness. But Ribeau remarked sympathetically that while Faraday was binding his book, he was eating it too. He told them that anyone who was as studious as Faraday would have his tolerance. Once Faraday came to a topic on electricity when he was binding an Encyclopedia and found only two pages on so interesting a topic which of course could not satisfy his appetite. Having read it with a hungry mind, he made the decision: "Some day I shall write a book on Electricity." This he succeeded in after he had found his way into Humphry Davy's Laboratory through the help of a customer who offered tickets to Faraday for attending his lectures.

As school education has not become universal in China, it is reasonable to estimate that a great many talents are imbedded under the rock of apprenticeship. Here is a rich mine of genius for modern educators to explore. And Ribeau's sympathy, understanding and tolerance are worthy examples not only for heads of stores and captains of industry but also for school masters to follow.

The childhood of Thomas Alva Edison and the sympathetic care of his mother, Mrs. S. Nancy Edison, have given a great impetus to my founding of Yu Tsai. As you know, Edison, when a boy, was fond of

playing with chemicals. Being dissatisfied with by his old-fashioned teacher, he was dismissed after only three months' schooling. His mother had a better understanding of her boy and allowed him to continue his experiments in the cellar and taught him history and geography herself. It was under the care of such a kind mother and the push of his own genius that Edison made so many contributions to science and to the welfare of mankind. Two things impressed me: for one who is gifted with scientific aptitude the study of science should begin early and teachers of gifted children should learn more from the attitude of Edison's mother.

By the end of 1931, just before the outbreak of the first Shanghai War, I had completed the translation of *Sanderson of Oundle* for the Commercial Press but unfortunately the whole manuscript was burnt away by Japanese fire and the book never published. Ever since, Mr. Sanderson's idea has become my best friend and guide. His emphasis on the spacious and the bountiful has found its realization in Yu Tsai; the fact that visitors often get the impression of Yu Tsai as a "Children's University" can be explained partly by the constant presence of Sanderson's idea. Then his idea of personified and socialized science appears to me most important. To lead a scientific world and manage it according to scientific principles is Sanderson's best contribution and advice to mankind and all posterity. We have been struggling to put these important ideas into practice against age-long prejudices, anti-scientific habits and traditions.

B Threefold Criteria of Yu Tsai School

1. Absorbing: On the basis of the child's being continually absorbed in certain specific activities, and through special provision of environment and nourishment, we aim to nurse and guide the young talent to full growth, penetrating into the field of the Unknown.	Toward creative life
2. Understanding: On the basis of the child's general intelligence and through a liberal education, we aim to nurse and guide the young talent to attain a deeper understanding of his own line as well as a broader understanding of the relationships of different phases of life and the historical development of the universe and human society.	
3. Loving: On the basis of the child's readiness to help others and through community life, we aim to nurse and guide the young talent to develop a higher love for mankind.	

C The Guiding Principles of Yu Tsai School

1. One Great Brain.

2. Two Strong Hands.

3. Three Circles—The school badge is represented by three circles. The circle is symbolic of open-mindedness, ceaseless endeavor, and unity in purpose and action. One circle represents Unity of the School; another one represents Unity of the Chinese Nation and the third represents Unity of the Democratic and Progressive World.

4. Four Keys to Cultural Treasures: 1) Chinese language, 2) One foreign language, 3) Mathematics, and 4) Scientific methods.

5. Five Roads to Truth: 1) Acting, 2) Learning from books, 3) Learning from teachers, 4) Learning from friends, and 5) Reflecting.

6. Six Groups of Studies: Yu Tsai School has six groups of special studies: 1) Music, 2) Drawing, 3) Dramatics, 4) Literature, 5) Natural Sciences and 6) Social Sciences.

7. Seven Days of Collective, Creative Living.

8. Eight Advisers: 1) What? 2) Why? 3) Who? 4) When? 5) Where? 6) How? 7) What number? 8) What direction? The first six advisers need no explanation, 7) and 8) are newly added to cultivate a conception of accuracy and a dynamic outlook.

9. Nine Times Nine Difficulties: Hsuan Chuang of Tang Dynasty, as

a legend told us, passed through eighty-one difficulties before he could get the Buddhistic Scriptures from the Western Paradise. We must take it as a matter of fact the rubs and worries of life.

10.Tenth power of strength with a pure heart to win the battle of life.

D Facts about Yu Tsai School

Aim:Education for gifted refugee children.

Grade:Primary School and Middle School. Preparations are being made for founding a professional school.

Curriculum:The school is running all year round. 3/4 of time for general education, following the Ministry Standard and 1/4 of time for special studies in accordance with the pupil's own interest and aptitude.

Special Studies:They consist of elective courses in Music, Dramatics, Painting, Ballet, Literature, Natural Sciences, and Social Sciences. Two more elective courses, Agriculture and Industrial Arts will be opened as soon as preparations are completed.

Staff:Teachers holding academic degrees from abroad, 9; teachers of college graduation standing, 33; teachers and officers of high school graduation standing, 19; total number of staff members, 61; family members of staff, 17.

Students:Regular students, 320; field students, 19; students in village reading circles, including farmers, coal miners, women, poor children, 1,500; students receiving lessons in Music Clubs, 140; total number of persons receiving Yu Tsai education, 1,960. Among the 320 regular students, there are 191 boys and 129 girls; 198 refugee and very poor children and 122 self-paid children from 17 provinces and 2 foreign countries.

Workers:School and farm workers, 40.

Equipment:Books, 22,000; Pianos, 4; Violins, 6; Cello, 1; Scientific apparatus, more than 1,000 pieces; Land, 55 *mow*, owned by school; 300 *mow*, rented.

Financial Status:Funds for the new refugee children are provided for by UCR and other friends, including an allowance for offsetting, to some extent, rising prices due to inflation. But for the maintenance of

the refugee and poor children formerly admitted, funds are far from being sufficient. The month of January began with a budget of expenditure of \$590,000, and due to high jump in prices, the budget for August has increased to more than 400% amounting to CN \$2,400,000. Against this sum UCR will grant \$1,400,000, British Aid to China will give \$170,000 ($2,000,000 \div 12$), the Middle School Relief Committee will give \$160,000, the National Relief Commission will give \$15,000, plus CN\$468,000 to be supplied by friends of Yu Tsai and other sources, making a total of CN\$2,213,000. Thus the school has a deficit of \$187,000 for August.

Urgent Needs:

1) Reenforcement of scientific apparatus \$5,000,000

2) Raising teachers salary from 4,680,000
\$8,500-15,000, 60 teachers totaling \$390,000 a month

3) Improving nutrition, 3,792,000
 $\$1,000 \times 316$ totaling \$316,000 per month

4) Balancing the budget 2,244,000
for 12 months
($\$187,000 \times 12$)

5) Capital Outlay for 5,000,000
reenforcing the Research Institute of Life Education

6) Capital Outlay for 3,000,000
founding the Agriculture Department

7)Capital Outlay for 7,000,000
founding the Industrial
Arts Department

8)Scholarships for 50 5,000,000
more poor&talented
children (\$8,000 a month
per child, amounting to
about\$100,000 for a
year)

Total \$35,716,000

E Hands and Brain Unite (School Song of Yu Tsai)

Two treasures with us lifelong remain:
A pair of free hands and a great brain.
He who doesn't use his hand,
Belongs to the dethroned King's band.
He who doesn't use his brain,
Has to endure hunger and pain.
He who uses both brain and hand,
Can set up Heaven's Kingdom on Satan's Land.

培养难童人才幼苗的育才学校

① 育才学校的创办

为了更好地了解育才学校，有必要说明育才是如何创办，又是如何发现有科学天赋的人才幼苗并加以特别培养的。促使我产生创办育才这类学校的动力中，有三个人成为指路明灯：法拉第、托马斯·阿尔瓦·爱迪生和昂多尔的桑德森。

法拉第的幼年是在利波先生的订书铺里当学徒度过的。他订书订得慢，别的学徒到利波老板那里去告状，但利波先生同情地对众徒弟说：法拉第一边订书，一边也在吃书。他还对他们说：你们当中如果有人像法拉第这样用功，我也可以容忍你们的装订速度。一次法拉第装订一部百科全书时，翻到论述电的一章，这样一个有趣的题目只有两面，他看完觉得不过瘾。如饥似渴地读完这两面后，他暗下决心：“总有一天，我要写一本论述电的书。”后来，在一位顾客的帮助下，他得到了汉弗莱·戴维讲座的入场券，而后又进入了汉弗莱·戴维的实验室工作，并最终实现了自己的诺言。

由于中国还未普及学校教育，有理由估计，许多天才正处于繁杂的学徒工作重压之下。这是现代教育家可以探索的天才富矿区。利波的同情、理解及宽容，不仅值得店主、厂主们学习，也值得学校里的教师们学习。

托马斯·阿尔瓦·爱迪生的幼年生活以及他母亲南希·爱迪生太太对儿子的理解和关爱，给了我创办育才学校的极大动力。众所周知，童年时爱迪生喜欢动手摆弄化学药品。他的老师是个古板的先生，对他大为不满，所以爱迪生入学仅三个月就被学校开除了。他母亲更了解自己的儿子，允许他在家中的地下室里继续做实验，并亲自教他历史和地理。正是在这样一位慈母的关怀之下，在他自己天才内发的驱动之下，爱迪生才为科学、为人类福祉作出了如此多的贡献。爱迪生的幼年故事给了我两个深刻的印象：有科学天赋才能的孩子要及早培养；天才儿童的教师应从爱迪生母亲的态度中学到更多的东西。

到1931年底，“一·二八”淞沪抗战爆发之前，我已为商务印书馆译完了《昂多尔的桑德森》，但不幸的是，全部手稿被日本人的战火烧光了，这本书便一直未能出版。从那以后，桑德森先生的思想便成了我最好的朋友和导师。他强调学识要广博厚实的主张在育才得到实现。他的思想给我带来的不断启发就是育才常给参观访问者留下“儿童大学”这一

印象的部分原因。我还觉得他把科学人格化及社会化的思想十分重要。用科学原则来领导和管理一个科学的世界，是桑德森对人类最大的贡献，也是他留给子孙万代最好的忠告。我们一直致力于用这些重要的思想指导我们的实践，与积久的偏见、反科学的习惯和传统作斗争。

② 育才三方针

1. 迷 根据孩子们不断地迷在某种特殊活动的天性，透过特殊的环境、设备和方法，我们培养并引导他们成长，踏进未知之门。	向着创造性生活前进
2. 悟 根据孩子们一般的智力，透过启发性的普通教育，我们培养和指导他们对特殊活动取得更深的了解，对人生各方面的关系和宇宙人类的历史的发展取得更广的认识。	
3. 爱 根据孩子们愿意帮助别人的倾向，透过集体生活，我们培养和引导他们对民族人类发生更高的自觉的爱。	

③ 育才十字诀

1. 一个大脑。

2. 二只壮手。

3. 三圈连环——育才学校的校徽由三个圈组成：圈象征三种德性：一是虚心，代表学习；二是不断，代表工作；三是精诚团结，代表最后胜利。第一个圈表示全校一体，第二个圈表示全国一体，第三个圈表示宇宙一体。

4. 四把钥匙——去开发文化的金库：一是国文，二是一门外语，三是数学，四是科学方法。

5. 五路探讨——探讨真理，我们提出五条路：（一）体验，（二）看书，（三）求师，（四）访友，（五）思考。

6. 六组学习：育才学校有六个特修课学习组：（一）音乐组，（二）绘画组，（三）戏剧组，（四）文学组，（五）自然组，（六）社会组。

7. 七（集）体创造：每周七天过富有创造性的集体生活。

8. 八位顾问：（一）什么事？（二）什么缘故？（三）什么人？（四）什么时间？（五）什么地方？（六）什么方法？（七）什么数目？（八）什么动向？前面六点毋须解释，（七）、（八）两点是为了

要改造一般书生的笼统的静止的头脑而新加上的。

9.九九难关：唐代玄奘法师的传奇故事告诉我们，他历经了八十一难才从西天取到佛经。我们应当面对人生中的患难这一事实。

10.十（誓）必克服：用力量的十次乘方加上纯洁无瑕的心灵去赢得生活之战的胜利。

④ 育才学校实况

目的：教育难童中的天才。

程度：小学和中学。正准备建成一个专业学校。

课程：全年上课。四分之三的时间按部颁标准学习普通课程，四分之一的时间则按儿童的兴趣和才能学习特殊课程。

特殊课程：包括音乐、戏剧、绘画、舞蹈、文学、自然和社会等选修课。一旦准备就绪，还要开设农艺和工艺两门选修课。

教职员：在国外获得学位的教师9名；大学毕业程度的教师33名；高中毕业程度的教师及职员19名；教职员总数61名；教职员家属17名。

学生：全日制学生320名；耕读学生19名；农村识字小组学生，包括农民、煤矿工人、妇女、穷苦孩子共1,500名；在音乐俱乐部学音乐的学生140名；接受育才教育总人数为1,960名。320名全日制学生中，男学生191名，女学生129名；难童及贫困学生共198名，自费学生122名。他们来自全国17个省及2个其他国家。

工友：校工及农工40名。

设备：书22,000册，钢琴4架，小提琴6把，大提琴1把，科学仪器1,000多件，校属土地55亩，租地300亩。

财务情况：美国援华联合会及其他朋友为新难童提供了几笔经费，其额度从某种程度上可抵消通货膨胀带来的物价上涨。但要维持以前接收的难童及贫苦学生的费用，经费还远远不够。元月份的开支预算为590,000元，由于物价猛涨，八月份的开支预算就增加到超过400%，达国币2,400,000元。为支付这笔款项，美国援华联合会将提供1,400,000元，英国援华组织将提供170,000（ $2,000,000 \div 12$ ）元，中学救济会将提供160,000元，全国赈济委员会提供15,000元，育才之友及其他来源还可提供468,000元，共计国币2,213,000元。这样一来，学校八月份的赤字就只有187,000元了。

亟需项目：

（1）添置科学仪器 5,000,000元

（2）教师工资将从

8,500元增加到15,000

元，

共60名教师，每 共计4,680,000元
月需要390,000元

(3) 改善营养，每人

每月1,000元×316人，

每月需要316,000 共计3,792,000元
元

(4) 平衡全年12个月 2,244,000元
预算 (187,000元×12)

(5) 扩大生活教育研 5,000,000元
究所基本建设费用

(6) 成立农业组基本 3,000,000元
建设费用

(7) 成立工艺组基本 7,000,000元
建设费用

(8) 为50名有才能及
穷苦儿童增设奖学金

(每人每月8,000 5,000,000元
元，一年约100,000元)

总计 35,716,000元

⑤ 手脑相长歌 (育才校歌)

人生两个宝，

双手与大脑。

用脑不用手，

快要被打倒。

用手不用脑，

饭也吃不饱。

手脑都会用，

才算是开天辟地的大佬。

ANSWERS TO QUESTIONS ABOUT YU TSAI SCHOOL¹

—To Mrs. Louise K. Rugg

1942

My dear Mrs. Rugg,

Two copies of your kind letter of March 16th have just been forwarded to me by YWCA from Chengtu. It reminds me of the pleasant hours we spent together when you and Professor Rugg visited China years ago. I heartily congratulate you upon serving on the China Aid Council and participating in the splendid work of the United China Relief² which is interested in giving material as well as cultural help to Chinese War Orphans to some of whom I have had the honor to render my service during the last three years. It is most delightful to learn that at last my brief conversation with Miss Gerlach³ has been made known to friends so far away in space. You are right, "We are now at War together." Indeed, we are fighting together for a common victory—the victory of liberty over fascism and Hitlerism. The war may not be a short one. Children grow fast. Whosoever give the best care to their children will win the real victory. It is a most noble act to extend love of one's own children to children of other lands.

In compliance with your request, let me answer your questions in the order you asked them:

1. We have 165 children in our school. Nine-tenths of them are refugee children who have lost their homes because of Japanese invasion. Of the refugee children, more than half are without parents and are real orphans. But even those who have parents cannot receive any support from them either because family fortunes have been lost or because high cost of living has reduced their parents to marginal existence. Therefore, the entire burden of subsistence and education of 150 children falls upon the school.

2. The school started in the fall of 1939 with a budget of 3,000

Chinese dollars a month. It has been steadily increasing until now it amounts almost to 40,000 Chinese dollars a month. Still, our budget is lagging far behind in view of the fact that the index of the cost of living has had a much greater increase during the same period.

Average Monthly Appropriation for the first 5 months, 1942

A.Administrative	\$1,500
Expenses	
B.Salaries and Food of Staff	8,000
C.Housing Cost	2,000
D.Food of Refugee Children	18,000
E.Clothing	3,000
F.Medical Care	1,000
G.Equipment	2,000
H.Light and Fuel	1,000
I.Printing and Text Books	1,500
J.Miscellaneous	1,500
Expenses	
Total	\$39,500

3. The total cost per child in our school is about \$240 a month, including medical care, clothing and education. For food alone, the monthly cost per child is about 120 Chinese dollars. It is still on the increase.

4. Children in our school are given opportunities for play, work and study. For play, we have basketball, volleyball, gymnastics, table tennis, chess, etc. As to work, our children do the cleaning of the dormitories and classrooms, and carry on other domestic activities. Besides, every student is given a piece of land, 1/10 of a *mow*, for growing vegetables for community consumption, but each is entitled

to a portion of the produce for his own benefit. As to study, the students are allowed 2/3 of the time to pursue general studies and 1/3 of it to pursue special studies fit for their respective interest and aptitude. As the school is running all the year round, not only can our children be promoted at the same rate as those in other schools, but also they can acquire a more solid foundation in special studies.

5. The general studies follow the elementary and junior middle school curriculum prescribed by the Ministry of Education. The special studies consist of elective courses in music, dramatics, painting, literature, natural sciences and social sciences. To these, agricultural and mechanical arts will be added soon when new students are selected. Each student is allowed to select one special course to pursue, provided he has shown evidence of a special aptitude for it.

6. We have now a staff of 26 teachers. On the average each special course has two specialists as directors, the rest being teachers of general subjects. Two-thirds of the teachers are college graduates or returned students and are trained. We have no training school as such in connection with the institution. But our Research Institute, bringing all teachers together by study of problems, reading of books, periodical conferences and inspection tours, is actually a training centre for teachers in service.

7. We have about \$20,000 a month available, of which \$8,500 come from the Central Relief Commission. About 20,000 Chinese dollars have to be raised.

8. We have a plan to increase our student population to 400 and wish to take in more talented refugee children. For the purpose of improving nutrition of students and staff, we hope you will find it possible to propose to the United China Relief to give us a monthly grant of \$2,000 gold or a yearly grant of \$24,000 gold so as to enable us to carry out our new plan. Of the sum, \$15,000 gold will be used for food, \$5,000 gold for reinforcing our technical staff, and \$4,000 gold for the increase of our equipment and the improvement of our medical service.

You will have a better understanding of Yu Tsai School if I tell you some stories of how it has come into existence. "The childhood of

Thomas Alva Edison and the sympathetic care of his mother, Madame S. Nancy Edison, have given a profound impetus to my founding of Yu Tsai. As you know, Edison, when a boy, was fond of playing with chemicals. Being dissatisfied with by his old-fashioned teacher, he was dismissed after only three months' schooling. His mother had a better understanding of her boy, allowed him to continue his experiments in the cellar and taught him history and geography herself. It was under the care of a kind mother and the push of his own genius that he made so many contributions to science and to the welfare of mankind. Two things impressed me: for one who is gifted with scientific aptitude, the study of science should begin early and teachers of gifted children should learn more from the attitude of Edison's mother." This is one of the five influences that have led me to found this institution. In order that this letter should not be too long, I have to satisfy myself in telling you just this one story and leave the rest for the future. Your kind letter gives me a sense of relief because the major part of my time has been spent in a new form of athletics—racing with rice, and need to find some way to raise enough fund so that I and my colleagues may devote our energy to the real education of our refugee children.

I thank you for your kind endeavour and look forward to hearing good tidings from you. Kindly give my best regards to Prof. Rugg and Miss Gerlach.

Your friend,
Heng Chih Tao

就育才学校情况回答罗格夫人提问

亲爱的罗格夫人：

顷接由基督教女青年会自成都转来3月16日惠书复件两份。尊函令我忆及数年前您及罗格教授访华期间我们一同度过的愉快时光。衷心祝贺您到美国援华会任职，加入到美国援华联合会的光荣工作。美国援华联合会对中国战争孤儿深为关怀，不仅在文化上，而且在物质上给他们以帮助。三年来，我本人也有幸为这些孤儿竭尽绵薄。得知上次我与耿丽淑女士所作简短之谈话竟能传至远方朋友，殊觉快慰之至。“我们如今是在共同作战”——夫人此言极是。诚然，我们正在为一个共同的胜利——为自由战胜法西斯主义、希特勒主义而一起战斗。战争也许不会很快结束，但孩子们成长很快。凡能给予孩子以最大关怀者均能赢得真正的胜利。将对本土孩子之爱延伸于他国孩子是极为崇高之举。

遵您所嘱，依所提问题之先后次序答复如下：

(1) 我校现有165名儿童。他们中十分之九为因日寇侵略而丧失家园的难童。难童中半数以上为无父无母的真正的战争孤儿。即使是父母双全之难童，亦无法获得父母之任何资助，或因其家财已丧失殆尽，或因生活费用过高使其父母陷于难以维生之境地。因此，150名儿童生存及教育之全部重任不得不由我校承担。

(2) 我校创办于1939年秋，当时每月预算3,000元。嗣后预算不断增加，目前几乎高达国币40,000元。然而，鉴于同期内生活指数增长过快的事实，我校预算远远滞后。

1942年头5个月的月平均拨款

A.管理费用	1,500元
B.职员薪金及伙食	8,000元
C.住房费用	2,000元
D.难童伙食	18,000元
E.服装	3,000元
F.医药	1,000元
G.设备	2,000元
H.照明及燃料	1,000元

I.印刷和课本	1,500元
J.杂费	1,500元
总计	39,500元

(3) 我校儿童每人费用总额约为每月240元，包括医药、服装及教育费用。仅伙食一项，人均每月费用约为国币120元，且还在不断增加。

(4) 我校为儿童提供游戏、劳动和学习之机会。游戏方面，有篮球、排球、体操、台球、象棋等等。劳动方面，我校儿童打扫宿舍和教室，开展其他校内活动。此外，还分配给每个学生一分土地种植蔬菜供集体食用，同时可留一部分产品归自己支配。学习方面，学生可用三分之二的时间学习普修课，而用三分之一的时间学习适合个人兴趣和才能之特修课。我校全年开课，因此我校儿童不仅能以与其他学校儿童相同之速度升级，而且能在特修课方面打下更为坚实的基础。

(5) 我校普修课根据教育部规定的小学及初中课程设置。特修课包括音乐、戏剧、绘画、文学、自然和社会诸方面的选修课。不久，当新生入学时，还将增加农艺和工艺两门课。就每个学生而言，只要他在某方面表现出确具特殊之才能，他就可以选定这个方向作为专攻。

(6) 我校现有教师26位。每一堂特修课平均有两位专家作指导，其余的则为普修课教师。教师中三分之二为大学毕业或留学生，并都经过专门培训。我们没有培训学校这样的专门机构，但是我们的研究所通过研究问题、阅读书籍以及定期开会和外出考察将所有教师凝聚在一起，它实际上就是在职教师的培训中心。

(7) 我们每月约有20,000元可供使用，其中8,500元由赈济委员会拨给，尚需筹募约国币20,000元。

(8) 我校计划将学生人数增至400人，希望多招具有天赋之难童。为了改善我校学生和职员的营养，我们希望您能够向美国援华联合会提出建议，每月给我们拨款2,000美元，每年总计24,000美元，使我们的新计划得以实施。拨款总额中，15,000美元将用于伙食，5,000美元将用于增加我校的技术人员，4,000美元将用于添置设备和改善我校的医疗服务。

夫人，如果我把学校诞生的几个小故事告诉您，您会更加了解育才学校的。“托马斯·阿尔瓦·爱迪生的幼年生活以及他母亲南希·爱迪生太太对儿子的理解和关爱，给了我创办育才学校的极大动力。众所周知，童年时爱迪生喜欢动手摆弄化学药品。他的老师是个古板的先生，对他大

为不满，所以爱迪生入学仅三个月就被学校开除了。他母亲更了解自己的儿子，允许他在家中的地下室里继续做实验，并亲自教他历史和地理。正是在这样一位慈母的关怀之下，在他自己天才内发的驱动之下，爱迪生才为科学、为人类福祉作出了如此多的贡献。爱迪生的幼年故事给了我两个深刻的印象：有科学天赋才能的孩子要及早培养；天才儿童的教师应从爱迪生母亲的态度中学到更多的东西。”这是促使我创办育才学校的五种力量之一。为使此信不致过长，我想讲这个故事给您听也就足矣，其余的留到将来再说。您的信使我如释重负，因为我的大部分时间都用在进行一种新型“运动”——与米价赛跑，我需要设法筹措足够的基金以使我和我的同事们能够致力于真正的难童教育。

承蒙为育才尽力，谨表谢意，并候佳音。请代向罗格教授和耿丽淑女士问候。

您的朋友陶行知

1942年

SEEKING FINANCIAL AID FROM FOREIGN FRIENDS FOR YU TSAI SCHOOL¹

—To Lady Cripps

April 10, 1944

Dear Lady Cripps,

First of all, please allow me to express our hearty appreciation of what you and your noble organization have done for the Chinese nation in her long struggle for liberation. I am sure you will be glad to hear from a school in China's Wartime Capital, which has been fighting for the education and nurture of children whose parents and homes have been sacrificed and ruined as this great struggle is going on. Its full name, Yu Tsai School for Talented Refugee Children, will show you at a glance the object which we are trying to achieve. These children have been selected through intelligence and special tests from Wartime Children's Homes, Orphanages and children's own organizations which once flourished during the first stage of the war. We devote $\frac{3}{4}$ to $\frac{2}{3}$ of their time to general studies and $\frac{1}{4}$ to $\frac{1}{3}$ of it to special studies fit for each one's own special interest and aptitude. Thus we have organized them into seven groups or departments to meet their own different needs, namely, Music, Painting, Dramatics, Literature, Ballet, Natural Sciences and Social Sciences.

The school started with 150 refugee children thus selected and organized for general and special studies. All the expenses including food, clothing, lodging, education and medical care were taken care of by the school. On account of rising prices, we have been compelled to take in some partially self-paid students. Beginning with this spring our enrollment has reached 320. And through the little teacher system we are offering our service in extending educational opportunities to 1,158 less fortunate children and adults outside our school.

Because of the abnormal rise in prices, our faculty and children

have been suffering from undernourishment and from the lack of sufficient scientific equipment. Therefore on behalf of the Yu Tsai School for Talented Refugee Children I am presenting to you this application for financial aid in order to improve the nourishment of our refugee and poor children, to ameliorate the living condition of our teaching staff and to reinforce the equipment for effective education. The subsidies we are applying for will be used in the following ways:

(1) Reinforcement of scientific apparatus	CN\$5,000,000
(2) Raising 60 teachers' monthly salaries from \$3,000 to \$10,000 each for 12 months	CN\$5,040,000
(3) Improving nourishment for 316 members including the food for refugee children, faculty and families, workers at \$1,000 each per month for 12 months	CN\$3,792,000
(4) Balancing the monthly deficit of \$170,000 for 12 months	CN\$2,040,000
Total	CN\$16,072,000 [15,872,000]

Enclosed you will please find a copy of each of *Facts About Yu*

Tsai, The Threefold Criteria of Yu Tsai, The Ten Guiding Principles, The Founding of Yu Tsai School, and Report on Yu Tsai School, by Lennig Sweet, Program Director, UCR. I hope these materials and this letter will give you a true picture of Yu Tsai and an understanding of its aspirations, efforts and difficulties. Anything you can do by way of creative relief to enable Yu Tsai to help the refugee children and teachers to obtain more wholesome food and lead a more healthy life as well as give a more effective education in order to make the experiment more fruitful and successful will be greatly appreciated.

Anticipating to hear from you as soon as there are good tidings.

Very respectfully yours,

Heng Chi Tao

Director, Yu Tsai School

吁请外国友人资助育才学校

——致克里普斯夫人

亲爱的克里普斯夫人：

首先，请允许我向您及贵组织表示衷心的感谢，感谢你们为中华民族长期的解放斗争所作的一切。我相信，你们一定会乐于听到中国战时首都的一所学校的近况，与当前这场伟大的抗日战争进行的同时，这所学校在为教育和养育父母双亡、家园被毁的儿童而进行着战斗。这所学校的全名是：培养难童人才幼苗的育才学校。一看学校的名称您就知道我们所力图达到的目的。这些儿童都是从战时儿童收容所、孤儿院以及战争第一阶段曾经一度勃兴的儿童自发组织中通过智力和特使才能的测验选拔出来的。我们安排学生用四分之三到三分之二的时间攻读普修课，用四分之一到三分之一的时间攻读适合他们各自兴趣和才能的特修课。因此，我们分成七个组以满足他们的不同要求。这七个组是：音乐组、绘画组、戏剧组、文学组、舞蹈组、自然组和社会组。

起初，学校有150名难童，都是按上述办法选拔和分组攻读普修课和特修课的。包括伙食、服装、住宿、教育和医疗在内的全部费用都由学校负责。由于物价飞涨，我们不得不招收一些自费的学生。自今年春季开始，学生注册人数已达320名。我们还通过小先生制向校外失学的1,158名儿童及成人提供受教育的机会。

由于物价暴涨，我校师生均深受营养不良和科学设备不足之苦。因此，我代表为培养难童人才幼苗的育才学校向您提出财政援助的申请，以改善我校贫苦难童之营养，改进我校教职员的生活状况，添置为实施有效教育所需要的设备。我们所申请的补助款将用于以下各项：

(1) 添置科学仪器 国币5,000,000元

(2) 60位教师的薪金
从3,000元提高至10,000
元，

共计12个月 国币5,040,000元

(3) 改善316人的营
养，包括难童、教师和家人

属

以及工人之伙食，
每人每月1,000元，共计
12个月

国币3,792,000元

(4) 平衡每月170,000 国币2,040,000元
元的赤字，共计12个月

总计

国币16,072,000元

[实计15,872,000元]

随函附奉《育才事略》、《育才三方针》、《育才十字诀》、《育才学校之创办》以及美国援华联合会项目主任甘霖林所写《关于育才学校的报告》各一份，希望这些材料和我的这封信将使您能看到育才学校的真实情况，并对学校的愿景、努力和困难有所了解。如蒙鼎力相助，以创造性的救济使育才能够帮助难童及教师得到更有营养的食品，过更健康的生活，实施更有效的教育，以使实验更富有成果、更加成功，则不胜感激之至。

谨此，恭候佳音。

育才学校校长陶行知敬上

1944年4月10日

ON "CREATIVE RELIEF"¹

—To Dr Lennig Sweet

Dec. 25, 1944

Dear Dr. Sweet,

This is four o'clock on the morning of X'mas Day. A moment ago, I was in bed. A thought, bathing in the grand magnetic field of Creative Relief, the Frontiers of Wisdom, and the Great Love of Christ, has driven me to get up and write this letter to you. I take delight in racing with daybreak and am glad to have risen before the rising sun.

Creative Relief cannot be less than the emancipation of creative geniuses, giving them enough food and sunshine, so that they can pioneer into the frontiers of Wisdom, and continue to advance the creative work of the Creator. When such Wisdom is transformed into forces that are making a better world and a better mankind we have the highest manifestation of Christian Love. If the opportunity for the Creative Genius to emancipate itself is not confined to a few but is open to the greatest number of a nation or the whole world, then that nation or the whole world has achieved the highest form of Creative Democracy.

During this long war of resistance, thousands of talented scholars including many promising unknown scientists of high calibre have been reduced to utter poverty and driven to the margin of existence or compelled to change professions which do not fit. Then, since before the war and especially since the war, tens of thousands of talented young men and women have been prevented from college education by sheer poverty and debarred from research institutes by the consequent lack of college diploma. These are compelled to lead a harder life even than the scholars and waste their creative energy in vocations which do not fit into their aptitudes or in refugee life which does not offer opportunity or encouragement of the expression of their talents. Finally, under the deep bedrock of authority, prejudice, poverty, ignorance of bosses and overlords, tight work schedule, false theory of education, and age-long tradition are buried the talents of

the great masses of apprentices, workers, artisans, farmers, chamber maidens and poor children, which are waiting to be awakened, and can be awakened with a whisper of democracy.

Six years ago on December 15, the Morning Village Research Institute was founded to start an attack on this problem. With our meagre resources, we are carrying on two projects. You are acquainted with Yu Tsai School. I ought to tell you that the mother who gave birth to Yu Tsai was the Morning Village Research Institute. Yu Tsai is simply an experimental school, under the auspices of the Education Division of the Institute. The mother is an unknown soldier, more exactly an unknown nurse. She has another unknown son—The Laboratory of Inner Combustion Engine, under the Science Division. Mr. Lee Hwa, the research professor in charge of the experiment, has sacrificed everything for conducting the experiment and I am glad to say that most probably he has nearly completed his model for a new engine.

The Morning Village Research Institute, in order to be true to the ideal that originated it, plans to take in ten more such professors of various lines, and select as many as possible research fellows from promising refugee poor youths and also recruit young research fellows from Yu Tsai. We have books worth \$2,000,000 serving as a foundation. But we need more money to maintain a larger staff, to buy more reference books and to set up more laboratories. It is my wish to apply for \$2,000,000 endowment for the Institute to expand its work and enhance its service. This will give us a good lift. In case you don't have enough fund to distribute, then any amount available in a lump sum or in installments will be welcomed. Or if you think it is more proper to make this subsidy through Yu Tsai, we have no objection, and the Institute could be organized into Yu Tsai as its highest peak. But at this stage, we prefer to run the Institute as an independent organization and receive the subsidy direct from you.

I am rather convinced that if half of your resources or the whole of the surplus fund could be used for creative relief in China, you may see, in less than a generation, miracles in this suffering nation and her millionfold contribution to be rendered to the world and mankind.

Isn't this magnificent?

Ever sincerely yours,

H. C. Tao

Director, Morning Village Research Institute

关于“创造性的救济”

——致甘霖林

亲爱的甘博士：

此时正值圣诞日早晨四点。片刻之前我尚卧床未起。沉浸在创造性救济、智慧尖端和基督伟大之爱的宏大磁场中的一个想法驱使我起床给您写这封信。我很高兴与黎明赛跑，乐于在日出之前起身。

创造性的救济不比解放创造性天才稍有逊色。创造性的救济给他们以充分的食物和阳光，使他们能够首先进入智慧的尖端，继续推进造物主的创造性工作。当这样的智慧转变为能将世界和人类改造得更好的那种力量时，才是基督博爱境界的最高显示。如果创造性天才解放自己的机会并非限于几个人，而是向一个国家或全世界的绝大多数人开放，那么，这个国家或全世界就获得了最高形式的创造式民主。

值此长期抗战的过程中，成千上万有才能的学者，包括许多很有发展前途而且很有能力的无名科学家，陷入了极度的贫困之中，被逼到几乎无法生存的边沿，或不得不改行干不适当的工作。而且，在抗战开始前，尤其是抗战开始以来，数以万计有才能的男女青年仅仅由于贫穷而与高等教育无缘，继而因为没有大学文凭而被阻于研究所门外。这些青年人被迫过着比学者们还要艰难的生活，把他们的创造能力空耗于不适合他们才能的职业，或者过着难民般的生活，没有机会也得不到鼓励来表现他们的才干。最后，在权威、偏见、贫穷、上司或把头的无知、时间紧迫的工作计划、错误的教育理论，以及古老传统的重压之下，埋没了大批艺徒、工人、工匠、农民、女佣以及贫苦儿童的才能，这些人的才能有待被唤醒，而且只要民主的一声轻唤就能被唤醒。

六年前的12月15日，晓庄研究所建立并着手来解决这个问题。凭我们少得可怜的经费，我们正在进行两个项目。您是熟悉育才学校的，我应该告诉您：孕育育才学校的母亲是晓庄研究所。育才不过是在研究所教育处赞助下举办的一个实验学校。这位母亲是一位无名战士，更确切些说是一位无名的保姆。她还有另一个无名的儿子——科学处下面的内燃机实验室。负责该项实验的研究员李华，牺牲了一切来指导这项实验；我很高兴地说，他大概已快要完成一架新内燃机的模型了。

晓庄研究所为了忠于原来创办这个研究所的理想，计划增聘十位各学科的研究员，并从有发展前途的贫苦难民青年中挑选尽可能多的研究人员，也从育才吸收年轻的研究人员。我们价值两百万元的书籍作基

础。但是我们需要更多的钱来招纳更多的工作人员，购买更多的参考书，创立更多的实验室。我想为研究所申请两百万元捐款以扩大其范围，增强其服务。这将会给我们很大的鼓舞。如果您有足够的基金可供分配，则现有的任何数额的整笔款项或分期付款均受欢迎。或者，如果您认为通过育才提供这项补助更为合适，我们也无异议，研究所可以并入育才作为它的最高层级。不过，在目前阶段，我们更倾向于把研究所作为一个独立机构来办，直接从您那里得到资助。

我颇信如果您财源中的一半，或者说全部剩余基金能够用于中国的创造性救济，那么，在不出一代人的时间里，您将会在这个灾难深重的国家看到奇迹，看到她对世界和人类作出百万倍的贡献。这岂不宏伟、壮观么？

您永远忠实的朋友
晓庄研究所所长陶行知
1944年12月25日

MY RÉSUMÉ&MY PLAN OF LIFE CAREER¹

—To Dean J. E. Russell

February 16, 1916

Dear Dean Russell,

It gives me great pleasure to acknowledge the receipt of your letter on Feb. 11th, which asks me to give a brief account of my preparation and my plan of life career for the interest of the donors of the Livingston Scholarships. I want to tell you that it is my great pleasure to comply with this order.

I am now 22 years old. I was born in Hweichow—a place where communication is almost entirely cut off from the outside world. I received my early Chinese education from my father and other teachers until I was fourteen years of age when I went to a China Inland Mission School and studied under Mr. Gibbs, who was then the only man teaching Western subjects. After two years that school was closed up and Mr. Gibbs returned to England. I was then compelled to make an adventurous move to Hangchow with an idea of studying medicine. On account of the sharp discrimination there in that institution against non-Christians even in the matter of the course of study, I finally withdrew my registration after three days' stay. With this disappointment I went back to Hweichow and devoted myself to the study of English for another year. Then I proceeded to Nanking University, where I am glad to say both Christians and non-Christians were welcome. Three years after my entering Nanking University, the first Revolution broke out. When I came back to Hweichow I was made Secretary of the Assembly of Hweichow. There I served half a year. After that I resumed my study in Nanking. With the assistance of other students and the trust of University authorities I started and edited the Chinese Edition of the University Magazine. Under the guidance of Dr. Bowen and Dr. Henke, and being deeply impressed by Prof. Jenk's "Social Significance of the Teachings of Christ" I became a

Christian in 1913. I received my first degree in June, 1914, which was the end of my fifth year in Nanking. With the assistance of my parents and friends I started for Illinois University in August. There I spent one year. Besides the amount of valuable education I got there, I also secured a by-product of my labor, i.e. an M.A. degree. During my second half year in Illinois I was the Secretary of the Students' Club.

Columbia University was selected three years ago as my final goal in this country, but my coming here was delayed by the lack of means. My sole purpose in this life is to create a democracy by education and not by military revolution. After seeing the serious defects of the sudden birth of our Republic I was convinced that no genuine republic could exist without a genuine public education. My devotion to educational administration as a life career was crystallized last summer at Lake Geneva, where I received my great inspiration from the Summer Conference of the Y.M.C.A. As I looked over all the institutions I knew of, again I found your Teachers College to be the best institution for me to go. But to select an institution is one thing; to have sufficient means to enter such an institution is another thing. Since the death of my father in January, 1915, the whole burden of my family has fallen upon me and my financial condition is almost deadly handicapped. But fortunately soon after my decision to come to your Teachers College, our government granted me a Partial Scholarship, which, together with some other miscellaneous assistance, gave me at least courage enough to make a start. However, New York is more expensive to live in than I anticipated. After half a year's stay I found my provision not sufficient for my successful study, so with Dr. Monroe's introduction I proceeded to apply for a Livingston Scholarship, which you have so generously granted to me. Besides my hearty thanks for this kind gift, I wish to assure you and the donors of the Livingston Scholarships that after two more years' preparation under Prof. Strayer and other faculties I shall go back to cooperate with other educators to organize an efficient system of public education for our people, so that they, following the steps of the Americans, will be able to develop and maintain a genuine democracy which is the only realisable Utopia of justice and liberty.

It would be of great interest to me if you will be kind enough to give me some of the names of the donors who live nearby in the city so that I may find some chance to meet each of them.

With best wishes and regards.

Very respectfully yours,

Wen Tsing Tao

我的简历及终身志愿

——致罗素院长

亲爱的罗素院长：

2月11日手示敬悉，不胜欣喜。所嘱就本人曾受训练及终身职业生涯之计划向利文斯顿奖学金捐助人作一简略报告，自当乐于从命。

余现年二十有二，生于徽州，此乃一鲜与外界交往之地。余之早期经学教育受业于家父及其他师长，至十四岁始入一中华耶稣内地会学堂，受教于唐进贤师，彼为当时校中仅有之西学教员也。两年后，该学堂停办，唐师返回英国，余乃不得不冒险前往杭州意欲习医。旋以医学堂严重歧视非基督教徒，甚至事关学业课程问题亦然，余乃于入学三日撤回注册。余带着失望返徽州专于自习英文一年。然后前往南京入金陵大学，乐于称道的是该校基督教徒与非基督教徒均受欢迎。入金陵大学三年后，武昌首义爆发，余返徽州，任徽州议会干事半载，此后回南京复学。蒙学友之助及大学当局之信任，余倡办《金陵光》校刊中文版并任主笔。因得包文博士、汉克博士之指导，复因詹克教授讲授“基督教义之社会意义”予余印象至深，1913年余成为一基督信徒。1914年6月，亦即余就学于南京之第五年末，获首个学位；8月，蒙父母及友人相助，余启程赴伊利诺大学，攻读一年，除获可贵之诸多教益外，复得余辛劳之副产物硕士学位。于伊利诺一年中之下半年，余曾任学生俱乐部干事。

三年前我即选定哥伦比亚大学为我在美之最终目标，然因财力不济而未能及时来校就读。我今生之唯一目的在于经由教育而非经由军事革命创造一个民主国家。鉴于我中华民国突然诞生所带来之种种严重缺陷，我深信若无真正之公共教育，真正之民国即不能存在。我矢志以教育管理为终身事业始于去年夏，是时正值基督教男青年会于日内瓦湖举行夏季大会，余于此受极大启迪。我曾查阅既知之所有学府，再次发现贵院乃其中最适于本人的选择去处。然而，选定一学府为一事，有无充足资力进入该学府则为另一事。自1915年1月家父逝世以还，家庭全部负担即加于我身，余之经济状况乃陷于极大困境。所幸者，在余决定来师范学院之前不多时，蒙我国政府授予“部分奖学金”，连同其他种种援助，至少已予我以作一起步之足够勇气。然而，纽约生活费用之高，竟超出余所预料；留纽约半载，已觉余之准备不足以供顺利完成学业之用，因之，蒙孟禄博士介绍，余乃着手申请利文斯顿奖学金，并已蒙慷

慨授予。衷心谢领此项厚礼之余，受业愿向您及利文斯顿奖学金捐助人保证，在斯特雷尔教授及其他科系教职员之教导下，再经两年之培训，余将回国与其他教育工作者合作，为我国人民组织一高效率之公共教育体系，以使他们能跟着美国人步伐，发展和保持真正之民主国家，因为这是唯一能够实现的正义与自由的理想之国。

如蒙告知居于纽约附近之若干捐助人姓名，俾便设法一一前往拜会，则对余当为一极有意义之事。

谨致最佳祝愿及问候。

陶文濬敬上
1916年2月16日

FOUR LETTERS BY W. T. TAO

(1)

802 West Illinois Street,
Urbana, Illinois,
April 2, 1915

Mr. Ralph E. Diffenderfer
Offices of Board of Trustees
156 Fifth Avenue
New York City
My dear sir:

It gives great pleasure to acknowledge the receipt of your letter of the 29th of March. I am very glad to know that the diploma is about ready to be sent to me as I am just planning to apply to the Chinese Educational Mission for a scholarship. In complying with the regulation I herewith send you \$5.

Dr. Speer's pamphlet, titled *How to Speak Efficiently without Notes*, has helped me very much. I find it very useful. Will you kindly give my best regard to Dr. Speer?

Sincerely Yours,
Wen Tsing Tao

(2)

802 W. Ill. St.,
Urbana, Illinois,
April 18, 1915

My dear Mr. Diffenderfer:

I sent you a letter with \$5 on the 4th of April. I wonder whether you have received them or not. I have not received the diploma. As I understood, you will send me it as soon as you get my right address. The diploma ought to reach me long time ago. Will you tell me whether you have sent it or not? Some certificates sent from China last year were lost by the post office. I wonder the same thing has happened.

With best wishes.

Most Sincerely Yours,
W. T. Tao

(3)

1010 Hartley Hall,
Columbia University,
March 16, 1916

Mr. R. E. Diffenderfer,
156 Fifth Avenue,
New York City.

My dear Mr. Diffenderfer:

It is my great pleasure to acknowledge the receipt of your good letter of March 15th. As Mr. Hu and I do not have other previous engagement on April 9, we beg to report that we are exceedingly glad to accept your kind invitation. However, I am sorry to say that I shall not be able to take part in the speech making on account of the fact that I am now over-loaded with preparations for the preliminary examination which is due to May 1st, and I can hardly find any leisure to organize materials for the talk. If it suits you I would like to reserve the speech part of the programme for some other time. So I like you to advise me whether it is possible for you to immune me from it.

With hearty thanks and best wishes to you and Mrs. Diffenderfer.

Very respectfully yours,
Wen Tsing Tao

(4)

Dear Mr. Witman:

If any contribution should come from the persons I mentioned, will you please ask Mr. Diffenderfer to send it to Mr. Carter, the treasurer of Uni. of Nanking, 156 5th Ave., instead of to Mr. Day, as it was stated in Mr. Bailie's letter.

You are also requested to ask Mr. Diffenderfer whether it is more advisable to write directly for contribution or to write letters to open a way for my personal approach.

Yours very sincerely,
W. T. Tao

陶文濬的四封信

(一)

伊利诺厄巴纳市
西伊利诺大街802号

纽约市第五大道156号董事会办公室
拉尔夫·德芬德弗先生收
亲爱的先生：

我极为高兴地确认已收到您于3月29日的来信。我很欣慰地得知，正当我准备申请中国教育机关的一项奖学金时，毕业证书已准备就绪，可以寄发给我。兹按规定随函寄奉5美元。

斯皮尔博士的小册子《如何不用讲稿而作有效率的演讲》对我帮助甚大，我发现它很有用处。您能代我向他表示最忠诚的祝愿吗？

您真诚的 陶文濬
1915年4月2日

(二)

伊利诺厄巴纳市
西伊利诺大街802号

亲爱的德芬德弗先生：

我于4月4日寄给您一封信并附上5美元，急欲知道您是否已经收到。我尚未收到毕业证书。按照我的理解，您在得到我的正确地址后会立即寄发给我，毕业证书早就该到我这里了。您可否告诉我究竟是否寄出？去年从中国寄出的一些证件就被邮局遗失了，我真担心会发生同样的事。

顺致良好的祝愿。

您最真诚的 陶文濬
1915年4月18日

(三)

哥伦比亚大学
哈特莱学生宿舍1010室

纽约市第五大道156号
拉尔夫·德芬德弗先生收
亲爱的德芬德弗先生：

我十分高兴地确认已收到您3月15日的来信。胡先生和我此前对4月

9日没有作过安排，故而我们十分乐意接受您善意的邀请。但是，考虑到要准备定于5月1日进行的预考试，负担过重，没有精力组织讲演的资料，很抱歉我不能参加讲演。如果合适的话，我可将此项讲演保留到其他时间。故我希望您能告知是否能免除我此次的讲演。

谨向您和德芬德弗夫人致以衷心的感谢和良好的祝愿。

您恭敬的 陶文濬

1916年3月16日

(四)

亲爱的威特曼先生：

如果我提到的诸位有任何捐赠，可否烦请您让德芬德弗先生将其交给第五大道156号金陵大学司库卡特尔先生，以代替巴来先生信中所说的戴先生。

另外还请您问一下德芬德弗先生，是他直接写信募捐，还是为我写封介绍信以打开一条个人接洽的通道更为相宜？

您真诚的 陶文濬

(此信原件系手写稿，且未标明日期，约写于1917年初)

《密勒氏评论周报》，1924年9月27日，第110页。
- 6 *North China Daily News*, Sixtieth Anniversary Number, p. 33.
《字林西报》60年专号第33版（1924年7月14日）。
- 7 *China Weekly Review*, March 22, 1924, p. 115.
《密勒氏评论周报》，1924年3月22日，第115页。
- 8 *Ibid.* July 12, 1924, p. 180.
《密勒氏评论周报》，1924年7月12日，第180页。

CHINA (1938) 中国(1938)

- 1 “China (1938),” by H. C. Tao, Ph.D., Director of National Liberation Education Association, was first published in the *Educational Yearbook* of the International Institute of Teachers College, Columbia University, 1938.
本文为1938年国难教育社社长陶行知博士应编者约稿而写，最初以英文发表于哥伦比亚大学师范学院国际研究所1938年的《教育年鉴》。
- 2 Amur：黑龙江（Heilong Jiang），俄语音“阿穆尔”。（编者注）
- 3 埃德加·斯诺（1905—1972）：美国记者，《西行漫记》等书作者。（译者注）

THE VILLAGE EDUCATION MOVEMENT 中国乡村教育之一斑

- 1 This paper is one of the reports to the World Conference of Education at Toronto, Canada, August 1927, signed by Tao Chi-shin, which was edited in Chapter XXIII of *Collectanea*.
本篇系中国送交1927年8月于加拿大多伦多举行的世界教育会议的报告之一，作者署名陶知行，收入会议文集第23章。
- 2 Mukden：沈阳，满语音为“mukden hoton”，又名盛京、奉天。（编者注）

MR. H. CHI'S NEW CONTRIBUTION 祁氏汉语字典的新贡献

- 1 Published on *The Chinese Student's Monthly*, Vol. 12, No. 2, Dec. 1916, signed by Wen Tsing Tao. The original note as follows：The new device of the dictionary has already been brought to China by Dr. C. Chu for publication. With a view of facilitating circulation, the dictionary has been made as a free offer to the Commercial Press to that effect. Both the dictionary and Mr. Chi's Index System, another byproduct of the typewriter, will be published

soon.

本文原载1916年12月《中国学生月刊》（赴美中国留学生联合会出版的英文杂志）第12卷第2期，作者署名陶文濬。原注如下：新版的字典已由Dr. C. Chu带到中国出版，为促发行起见，该字典免收版税，交由商务印书馆出版。该字典和祁先生编的索引——打字机的另一个副产品——都将在不久后公开于世。

CREATIVE EDUCATION 创造性教育

- 1 Published on *Education Review*, Vol. 25, No. 3, July 1933. Signed by W. T. Tao. The original note as follows: Notes from an address delivered to the International Educational Association of Shanghai, and to the Council on Primary Education of the China Christian Educational Association, reported by Clara Pearl Dyer and Isabelle Lewis Main.

原载1933年7月《教育评论》第25卷第3期，作者署名陶文濬。原注如下：此系作者向上海国际教育委员会和中华基督教教育会小学教育委员会所作的演讲记录。克拉拉·珀尔·戴尔和伊莎贝尔·刘易斯·梅因报道。

THE LITTLE TEACHER AND THE LITERACY MOVEMENT 小先生与识字运动

- 1 Published on *Education Review*, Vol. 26, No. 3, July 1934; signed by W. T. Tao. The original paper ended as follows: Dr. Tao's talk was followed by a note of thanks and a period of discussion which ended the morning session.

原载1934年7月《教育评论》第26卷第3期，作者署名陶文濬。[系1934年4月16日上午在中华基督教教育会小学教育委员会上的讲话记录。]原文结尾道：陶博士的谈话得到一致感谢，经过一段讨论后结束上午的会议。

THE NEW MASS EDUCATION MOVEMENT 新大众教育运动

- 1 Written by Professor Tao Xing-zhi (spelt according to a new alphabetical system of written Chinese); first published on March 15, 1936, in *Voice of China*, Shanghai (No. 1, Vol. 1).

《新大众教育运动》，第一次发表于1936年3月15日《中国呼声》英文版月刊（上海；第1期，第1卷），署名陶行知（采用拼音化新文字的方式拼写为“Tao Xing-zhi”）。

CHINA: THE MASS EDUCATION MOVEMENT 中国大众教育运动

1 This was a report made by Dr. Heng-Chih Tao at the Seventh World Conference of the New Education Fellowship held at Cheltenham, England, in August 1936. Dr. Tao was one of the two representatives from China attending the conference. His report appeared later in the year 1936 in *The Freedom We Seek* edited by Mr. Wyatt Rawson.

本篇是陶行知于1936年8月在英国切尔滕纳姆市举行的新教育联谊会第七次世界会议上的发言，陶行知是中国出席该会的两名代表之一，该文收入1936年底由怀亚特·罗森编辑的《我们追求的自由》文集。

THE PEOPLE'S EDUCATION MOVEMENT IN CHINA 中国的人民教育运动

1 When the first part of this article was published in *Harijan*, Oct. 29, 1938, the great leader of the Indian people Mahatma Gandhi prefixed a short note to it, which reads as follows: "When Dr. Heng-Chih Tao visited me some time ago I invited him to give me a note on the remarkable People's Education Movement going on in China. He has now sent the following instructive note which cannot but be useful to us in India. —M. K. Gandhi. It was reprinted in book form from the Indian magazine *Harijan*, Oct. 29, Nov. 5, Nov. 19, 1938, by Life Education Association, Chungking, Nov. 7, 1945.

本文于1938年10月29日开始在印度《民族旗帜》杂志上连载，第一部分发表时，印度民族运动领袖甘地曾加按语云：“陶行知博士不久前来访时，我邀请他撰文介绍正在中国开展的引人注目的人民教育运动。现在，他寄来下面这篇有指导意义的文章。这篇文章对我们印度是很有用的。——M. K.甘地。”1945年11月7日重庆生活教育社将《民族旗帜》1938年10月29日、11月5日、11月19日上连载的文稿印成单行本。

2 Amoy: 15—16世纪葡萄牙殖民主义者对厦门的称呼。（编者注）
WAR IN CHINA: STRUGGLE FOR LIBERTY OR SLAVERY 中国的抗战是不自由就受奴役的斗争

Appendix 附录

Two Pieces of Mencius

Translated from “Liang Huiwang” and “Li Lou” respectively.

A Mencius was talking with the King Hsuan of Ch'i.

“Can I care for the people?” asked the King.

“Yes, you can,” said Mencius.

“How do you know that I can?”

“I have heard Hu Heh say,” answered Mencius, “that Your Royal Highness was one day sitting in the hall, and someone led a cow past the hall, and Your Royal Highness asked, ‘Where are you leading the cow?’ and the man said, ‘We are going to smear the bell with the cow’s blood.’ Your Royal Highness said, ‘Let the cow go. I cannot bear to see the cow shuddering, like an innocent man going to his execution ground.’ The man said, ‘Then shall we dispense with the ceremony of smearing the bell with blood?’ Your Royal Highness said, ‘How can we abolish this ceremony? I do not know if it would do to substitute it with a sheep.’ ‘It would.’ was the reply. Now this kindly heart will enable you to rule over the whole country. The people think that you love the cow, but I know that you just could not bear to see the cow die.”

“Yes,” replied King Hsuan, “there are indeed people who say such things. However small my kingdom is, why should I love a cow? It was rather because I could not bear to see it shuddering, like an innocent man going to his execution ground, so I substituted a sheep for it.”

“Do not be surprised,” said Mencius, “that people think you love the cow. You substituted a small animal for a big one. How could they know your intentions? If you could not bear to see an animal die innocently, what difference was there between a cow and a sheep?”

King Hsuan laughed and said, “How could I have the heart to do such a thing? I did substitute the sheep for the cow because I considered the cow was worth more money. I am not surprised that people should think that way.”

“That does not matter,” said Mencius. “It is the way of the kind-hearted. You saw the cow, but you did not see the sheep. In regard to

animals, a gentleman can see them live, but cannot bear to see them die. When he hears their cries, he cannot bear to eat their flesh. Therefore the gentleman always keeps away from the kitchen."

B There was once a man in Ch'i Kingdom, who had a wife and a concubine. Whenever this man went out, he always had meats and wines, and when his wife asked him who he had dined with, (he said) it was always with wealthy and noble friends. So the wife said to the concubine: "Whenever our good man goes out, he always dines on meats and wines, and when we asked him who he had dined with, it was always with wealthy and noble friends. But we never see any of his noble friends come to our house. I am going to watch him and see where he goes."

She got up early and followed her good man to see where he went. In the whole Kingdom, no one talked with him. Finally he went to the Eastern Outer City, and begged of the people who were offering sacrifices (at the temples) to give him the left-overs, and having not yet been satisfied, he went on to beg of other people. This was the way he ate and drank his fill. The wife returned and told the concubine: "A good man is a person we wish to rely on for life. But our good man behaves like this." So the two women joined in railing against their husband, and were weeping in the courtyard. The husband, knowing nothing about all this, came back in his usual suave manner, and boasted as usual before his wife and concubine.

From the gentleman's point of view, people who seek for power and glory and wealth and whom their wives and concubines have not to be ashamed of and weep for are very few indeed.

孟子二篇

分别节译于《孟子·梁惠王》与《孟子·离娄》。

① 孟子与齐宣王谈。

曰：“若寡人者，可以保民乎哉？”

曰：“可。”

曰：“何由知吾可也？”

曰：“臣闻之胡龁曰，王坐于堂上，有牵牛而过堂下者，王见之，曰：‘牛何之？’对曰：‘将以衅钟。’王曰：‘舍之！吾不忍其觳觫，若无罪而就死地。’对曰：‘然则废衅钟与？’曰：‘何可废也？以羊易之！’不识有诸？”

曰：“有之。”

曰：“是心足以王矣。百姓皆以王为爱也，臣固知王的不忍也。”

曰：然。诚有百姓者。齐国虽褊小，吾何爱一牛？即不忍其觳觫，若无罪而就死地，故以羊易之也。”

曰：“王无异于百姓之以王为爱也。以小易大，彼恶知之？王若隐其无罪而就死地，则牛羊何择焉？”

王笑曰：“是诚何心哉？我非爱其财。而易之以羊也，宜乎百姓之谓我爱也。”

曰：“无伤也，是乃仁术也，见牛未见羊也。君子之于禽兽也，见其生，不忍见其死；闻其声，不忍食其肉。是以君子远庖厨也。”

② 齐人有一妻一妾而处室者，其良人出，则必饕酒肉而后反。其妻问所与饮食者，则尽富贵也。其妻告其妾曰：“良人出，则必饕酒肉而后反；问其与饮食者，尽富贵也，而未尝有显者来，吾将矐良人之所之也。”

蚤起，施从良人之所之，遍国中无与立谈者。卒之东郭墦间，之祭者，乞其余；不足，又顾而之他，此其为饕足之道也。其妻归，告其妾，曰：“良人者，所仰望而终身也，今若此。”与其妾讪其良人，而相泣于中庭。而良人未之知也，施施从外来，骄其妻妾。

由君子观之，则人之所以求富贵利达者，其妻妾不羞也，而相泣泣者，几希矣。

The Tiger and the Donkey

Rewritten from the fable entitled “A Donkey in Gueizhou(Kweichow) Province” by Liu Zongyuan (AD 773-819), a famous Chinese writer of the Tang Dynasty (AD 618-907).

Mere talk has always been another of our banes, which reminds me of a story (perhaps, with a moral) about a tiger and a donkey in Kweichow Province. In that remote region there lived a Tiger, but never any other quadruped of any size, until someone imported a Donkey. One day the Tiger met the Donkey, and was startled by its size and formidable appearance; sat back on its haunches and soliloquised: “Is this threatening looking stranger going to conquer me?” He mused, as he meticulously surveyed the armament of the Donkey, “Golly! He has four hard rocks on the ends of his legs; he has a big head, full of great teeth. And I ask you just to look at those ears.” The Tiger crept slowly around the Donkey. “By god,” said Old Stripes, “I must be careful. He may be as dangerous as he looks. I’ll find out.” The Donkey grazed quietly, as donkeys usually do. The Tiger crept about as silently as he could. He studied the Donkey from behind, gave a quick nip at his fetlocks. A hee-haw, a squeal, a fast-flying pair of heels, and back the Donkey went to his grazing. “So that’s that,” quoth the Tiger with a sigh of relief, “I’ll try the front side.” He pondered as the Donkey’s strong array of teeth bit at the grass. Then he deftly nipped the Donkey’s long ear. The Donkey brayed, squealed in panic, swiftly pivoted, lashed the atmosphere with his heels, and settled down once again to the job of feeding on the grass. “Ah ha,” laughed the Tiger, stroking his whiskers, and licking his chops, “You can only talk; you are not half as dangerous as you look; you can only squeal and kick; you are—why, bless me! You are one of those pacifists. Dang it, I’ll eat you.” And he did.

老虎与笨驴

在唐代（公元618—907）著名文学家柳宗元（公元773—819）所写《黔之驴》基础上改写而成。

空谈一直是我们的另一个祸根，由此引发我联想到一个发生在贵州的老虎与笨驴的故事（或许带有寓意）。在那偏僻的地方住着一只老虎，但没有其他或大或小的四足（哺乳）动物，直到有人运进一头驴。有一天老虎看到驴，因其体形高大、生相恐怖而大吃一惊，坐在那里自言自语：“这只看起来很吓人的怪物是来制服我的吗？”它仔细地观察驴的“装备”，默默地想，天哪！它的四条腿末端长着铁硬的蹄壳；巨大的头，满嘴的大牙。再看看那两只耳朵。”老虎绕着驴缓缓地来回移动着，“老天作证，”老条纹（虎）说，“我必须小心翼翼。它看起来很危险。我会弄清楚。”驴在静静地吃草，就如同一般的驴惯常的那样。老虎尽可能轻轻地走着，从驴的身后细细端详，快速地咬了一口它后蹄上的丛毛。驴大叫，一声长啼，一对后蹄飞速踢过去——驴又继续回去吃草。“就这点本领，”老虎宽慰地舒了一口气道，“我得从前边试一试。”驴用它那强壮的大牙吃着草，老虎则在一边沉思着，然后非常灵巧地咬了一口驴的长耳朵。驴嘶叫起来，哀痛长鸣，快速打转，蹄子腾空扑打，一会儿又安静下来继续吃它的草去了。“啊哈，”老虎大笑，抚着腮须，轻拍胸脯，“你只会叫，你连你长相的一半危险都没有，你只会叫和踢，你是——哎呀！你就是那些不抵抗主义者中的一员。畜生，我要吃了你。”于是他把驴吃掉了。

The Appointment of Kuan Yu for the Defence of Chingchow

A story from *The Romance of the Three Kingdoms* by Lo Guan-zhong (AD 1330-1400).

Man Chung was well received and conducted into the city and into the presence of Sun Chuan. He presented his letter at the conclusion of the ceremonies of reception and declared his mission.

“Wu and Wei have no fundamental quarrel, and their dissension has been brought about by Liu Pei. My master sends me to covenant with you for an attack on Chingchow, while he goes against Han and Chuan. This double attack being successful, the conquered country can be divided between you two and you can both swear to respect each other's territory.”

Having read the letter, Sun Chuan prepared a banquet in honor of Man Chung and then sent him to the guest-house to rest while he discussed the matter with his council of advisors.

Said Ku Yung, “Although the messenger's speech was correct in form, it was a special pleading. I propose that the messenger be allowed to return and that a covenant be made with Ts'ao Ts'ao for a joint attack. In addition, let spies be sent over the river to find out Kuan Yu's movements, and then we may act.”

Chuko Chin said, “I hear that since Kuan Yu has been in Chingchow, Liu Pei has found him a wife, who has borne him a son and a daughter. The daughter is too young to have been betrothed, wherefore let me go to ask for her to be married to your heir. If Kuan Yu consents, we can arrange with him to attack Ts'ao; otherwise, if Kuan refuses, then we can aid Ts'ao in an attack on Chingchow.”

Sun took this advice. So he sent Man Chung away and sent Chuko Chin to Chingchow to try to arrange for the betrothal. Chuko Chin was received; and when the time came to state the reason for his coming, Kuan Yu asked him bluntly what he had come for.

“I have come to try to ally the two houses. My master, the Marquis of Wu, has a son who is quite clever. Hearing that you have a

daughter, General, I ask for their marriage, whereby the two houses may join in an attack on Ts'ao Ts'ao. This would be an admirable result and I pray you to consider the proposal."

But the warrior flared up. "How can my tiger daughter marry a dog's whelp? Were it not for your brother, I would take your head. Say no more!"

Kuan Yu called his servants to hustle off the hapless messenger, who ran away with hands over his head, too astonished to look anyone in the face, and reaching his own place, he dared not hide the manner in which he was received, but told the whole truth.

"What ruffianism!" exclaimed the marquis.

Thereupon he ordered the council again to consider an attack on Chingchow.

关羽受命守荆州

出自罗贯中（公元1330—1400）所著《三国演义》。

（孙）权依其言，令众谋士接满宠入城相见。礼毕，权以宾礼待宠。宠呈上操书，曰：“吴、魏自来无仇，皆因刘备之故，致生衅隙。魏王差某到此，约将军攻取荆州，魏王以兵临汉川，首尾夹击。破刘之后，共分疆土，誓不相侵。”孙权览书毕，设筵相待满宠，送归馆舍安歇。权与众谋士商议。顾雍曰：“虽是说词，其中有理。今可一面送满宠回，约会曹操，首尾相击；一面使人过江探云长动静，方可行事。”诸葛亮曰：“某闻云长自到荆州，刘备娶与妻室，先生一子，次生一女。其女尚幼，未许字人。某愿往与主公世子求婚。若云长肯许，即与云长计议共破曹操；若云长不肯，然后助曹取荆州。”孙权用其谋，先送满宠回许都；却遣诸葛亮为使，投荆州来。入城见云长，礼毕。云长曰：“子瑜此来何意？”瑾曰：“特来求结两家之好：吾主吴侯有一子，甚聪明；闻将军有一女，特来求亲。两家结好，并力破曹。此诚美事，请君侯思之。”云长勃然大怒曰：“吾虎女安肯嫁犬子乎！不看汝弟之面，立斩汝首！再休多言！”遂唤左右逐出。瑾抱头鼠窜，回见吴侯；不敢隐匿，遂以实告。权大怒曰：“何太无礼耶！”便唤张昭等文武官员，商议取荆州之策。

Two Jokes

Sources unknown; duplicate copies found in the files of the Tao Heng-Chih Museum at Xiao Zhuang Normal School in Nanjing.

Special Trenches A fellow was trying to dodge military service.

“I am afraid my short-sightedness will prevent me from doing any actual fighting,” he said. The M.O. replied cheerfully: “That’s Okay, old chap. We’ve got special trenches for the short-sighted ones. Right up close to the enemy—you just can’t miss seeing ‘em.”

Anatomy School Rector may Execute Criminals The rector of a school of anatomy wrote to the executioner asking if the executions could be carried out with less savagery so that the bodies would be better suited for scientific purposes.

The executioner politely replied: “I am happy to be able to render a service to science, and in order to avoid further error I will from now on send you the bandits living so that you may kill them in the manner that seems best to you.”

笑话两则

出处不详，南京晓庄师范学校陶行知纪念馆存有复制件。

特殊的战壕 有个人想躲壮丁。

“我怕我的近视眼真正打起仗来不管用。”他说。军医宽慰地回答道：“没问题，老兄，我们专为近视的人修了一种特殊的战壕。就紧靠在敌人的边上——你不会看不见他们的。”

解剖学校校长可以处死罪犯 解剖学校的校长写信给死刑犯执行人，问行刑的时候能否不那么残忍，以便使尸体能更好地用于科学研究。

执行人客气地答道：“能为科学服务，我感到很高兴。为了避免一错再错，从现在起，我会送活土匪给您，请您用您认为最合适的方式处死他们吧。”

Look in Vain

Translated from a Chinese folk into English;first published in *The University of Nanking Magazine*, No. 1, Vol. IV, February 1913.

Men who expect to get rid of poverty would naturally ask the God of Wealth for help. This is why, during the New Year's season, so many persons, men and women, boys and girls, gather in the temple of the God of Wealth, praying, fasting and burning paper gold and silver in the hope of gaining the so-called philosopher stone in return. I would call it useless, because here is a story to illustrate it.

Once in the land of Wu-ho a husband and his wife, on the last night of the year, sat silently in a wretched cottage. With no money and no food they could only bend their heads and sigh:“Why doesn't the God of Wealth come?”No sooner did they murmur than the sky became clear;the clouds, bright;the doors of heaven opened and the God of Wealth, dignified and magnificent, came down before the poor pair.Then the wife knelt down, and the husband followed, kissing the God's feet.“I will give you three things you two first think of,”said the God.They were both glad to hear that. But the wife, having suffered hunger for three days, could endure no longer.“If the God should give me a piece of bread I would be very glad,”she thought within herself.The bread came down as soon as she thought. The husband, at the first glance, supposed that gold was coming, because the bread appeared yellow in colour. Laughing to himself, he took up the supposed gold. He found it to be light and soft. Instead of the precious metal, it was a piece of bread which cost no more than ten cash. He was filled with anger and cursed his wife, saying,“You great fool, let the bread fill up your mouth.”The bread jumped into the wife's mouth at once, which seemed to obey his command. Of the things two had gone. The husband with anger on the one hand and despair on the other began to think of something he most needed. His wife's mouth was blocked, breathing was checked, and speaking was not permitted. She now wished to free herself from the bread which she formerly eagerly demanded. As she thought thus, the bread flew away, and the God disappeared. The man and the woman, with their frowning faces,

blamed each other till the dawn of day when they were exhausted and fell asleep. The Chinese proverb says, “Look in vain.”

徒托空望

由中国民间故事翻译成英文，第一次公开发表于1913年2月英文版《金陵光》第4卷第1期。

想摆脱贫困的人自然会想得到财神帮助。这就是为什么每逢年关，就有那么多的人，男的、女的，小伙子或大姑娘，都去财神庙祈祷、斋戒、烧金银纸，以祈望获得所谓的“点金石”回报。我想告诉大家这样没用，这里有个故事足以说明。

曾经有一对夫妇，居于无禾之地，在年终岁毕之夜，静静地坐在简陋的小屋中。由于无钱无粮，只得低头叹息，“财神为何不来？”就在他们低语怨恨之际，天空晴朗，云雾袭来，闪电四射，天门大开，尊贵而又壮丽的财神下凡来到这对可怜人面前。妻子当即跪倒在地，丈夫跟着跪下，亲吻财神之脚。“我将给你们三样你们最先想到的东西，”财神说。他们闻言大喜。但妻子已经饿了三天了，不能再忍受了，“如果财神能给我一片面包我就十分高兴了，”她私下默想。念头一起，面包就从天而降。而由于面包外表是黄色的，丈夫一眼望去以为是金子飘来，不禁大笑，当他抓起他想象中的“金子”，发现它又轻又软。原来那不是什么贵重的金属，而是不值几文钱的面包。他怒气冲天地咒骂妻子道：“你这个大笨蛋，让这片面包塞住你的嘴。”这片面包立即就跳到妻子的嘴里，就好像是遵照他的指令。至此两样东西已经过去了。丈夫一面生气，一面感到失望地开始想他最需要的是什么。而他妻子的嘴被塞住了，不能呼吸，不能说话。她此时最想将她曾经热切期盼的面包吐出来。她这样一想，面包就飞走了，财神也消失不见了。这对男女愁眉苦脸，相互指责，直到天明才精疲力尽地入睡。这事应了中国古谚“徒托空望”。

Three Famous Chinese Stories

Translated from Chinese into English; first published in *The University of Nanking Magazine*, No. 3, Vol. IV, April 1913.

Tong Fang Soh, the Humorist Emperor Wu of the Han Dynasty, though a man of great genius, was very superstitious. Believing in fairies, many times he sent men to Peng Lai to seek “ambrosia” so that he might live eternally in this world by eating it. Once a Taoist claimed to have some sort of such ambrosia, the so-called honeydew and deceitfully presented it to the Emperor in the hope of gaining a high position. The Emperor heard of it gladly and appointed Tong Fang Soh, one of his ministers to receive it and to see that it was carefully protected. But as soon as Tong Fang Soh received the bottle, he boldly drank all the honeydew. Taking the empty bottle in his hand, he went back to the Emperor Wu. “Have you got the honeydew?” asked the Emperor. “Yes,” replied Tong Fang Soh, “but, I beg your pardon, I have drunk all of it.” Hearing this with unbearable anger, the Emperor condemned him to death. “May I be permitted to speak a word before I go to the execution ground?” “You may,” remarked the Emperor, “What will you say?” Then the humorist sarcastically said, “If the honeydew is a true medicine for giving eternal life, then you can never put me to death because I have drunk it. But if it is false, it will be worth nothing to you, and what use can it be to take your revenge upon my life by means of a false medicine?” Hearing this, the Emperor could only laugh and finally forgave him.

The Spear and the Shield Han Fei was a well-known debater in the time of Lih Kwoh, whose famous work, *Han Tze* (《韩子》), tells us about a spear-and-shield maker. We derive our idiom “spear and shield,” which signifies any self-contradiction, from this short and interesting story.

There was once a man who wished to sell his spear and shield. Holding up his shield, he said to the passers-by, “This shield I made is impregnable; nothing can penetrate it.” But when he took up his spear he would say, “Sharp is my spear; nothing can resist its point.” Then someone asked him, “What would you say if I should pierce your

shield with your spear?"The seller was forced to be silent.

The Kingfisher and the Clam This fable was uttered by Su Tai in the attempt to persuade the country Chao and the country Yen to join forces against the country Tsin.

Just when a clam came out and opened its shell to receive a little sunshine, a kingfisher tried to pick at its meat. The clam immediately closed its shell and firmly held the bird's beak. The kingfisher said to the clam, "If it does not rain today, and does not rain tomorrow, surely I shall have your life." "If today you cannot get out and tomorrow you cannot get out, there will be a dead kingfisher, too," replied the clam. So these two would not loose each other till a fisherman came calmly by and, laughing up his sleeve at the feast, caught both of them.

中国著名民间故事三篇

由中文翻译成英文，第一次公开发表于1913年4月英文版《金陵光》第4卷第3期。

幽默家东方朔 汉武帝虽然雄才大略，但他极其迷信神怪。他总是想着长生不老，相信仙人，多次派人到蓬莱去寻找不死之药，以期自己吃后能长生不老。一次一名方士声称自己有一坛“仙酒”，并诈称要献给皇帝，以求获得高官。武帝闻之大喜，命朝臣东方朔前往接受仙酒并细心监护。但东方朔一拿到这坛酒，就大胆地将它一饮而尽。他拿着空坛子回来见汉武帝。“你拿到了仙酒？”武帝问。“是，”东方朔回禀道，“但，臣恳请宽恕，臣已将它一饮而尽。”武帝闻言怒不可遏，处东方朔死罪。“臣能否在赴死之前说一句话？”“你说吧，”武帝道，“你想说什么？”然后，这位幽默家调侃道：“如果它真的是不死之药，那么您就不能处死臣，因为我喝了它。但如果它是假的，它对您就没有任何意义，皇上为了这假药而要臣的小命又有何用？”武帝闻言不禁大笑，饶了他一命。

矛与盾 韩非是列国时期著名的辩论家，他的名著《韩子》中，记述了一位矛与盾的制作者。成语“自相矛盾”便源自这篇简短而又有趣的故事，表示任何难以自圆其说的说法。

楚人有鬻与矛者，誉之曰：“吾之坚，莫能陷也。”又誉其矛曰：吾矛之利，于物无不陷也。”或曰：以子之矛陷子之，何如？”其人弗能应也。

鹬蚌相争 这则寓言故事讲的是（战国时谋士）苏代试图游说赵国和燕国联合一致对抗秦国。

蚌方出曝，而鹬啄其肉，蚌合而箝其喙。鹬曰：“今日不雨，明日不雨，即有死蚌。”蚌亦谓鹬曰：“今日不出，明日不出，即有死鹬。”两者不肯相舍，渔者得而并禽之。

西市买鞍鞯，

In the South Street I buy reins and saddle,

南市买辔头，

In the North Street I buy whip and spurs.

北市买长鞭。

At dawn I go forth from my mother and my father;

朝辞爷娘去，

At eve I breathe my steed at the bank of the Yellow River:

暮宿黄河边。

No longer can I hear the lamentation of my parents;

不闻爷娘唤女声，

It is only the lapping of the swift current upon the river's strand.

但闻黄河流水鸣溅溅。

At dawn I go on from the foaming Yellow River,

旦辞黄河去，

At eve I seek repose at the fountain of the Black Water;

暮至黑水头。

No longer can I hear the lamentation of my parents;

不闻爷娘唤女声，

It is only the death moaning of the stricken foe.

但闻燕山胡骑声啾啾。

For ten thousand *li* we speed on, bearing over our engines of battle.

万里赴戎机，

Through many a mountain pass sounds the hurrying tread of our horses;

关山度若飞。

The biting north wind flings afar the clang of our night sentinel's
clapper,

朔气传金柝，

Ghastly the cold moon beams glint as they seek out the dents in our
armour.

寒光照铁衣。

Thus passed a full decade of warfare,

将军百战死，

A century of victories, costing many a leader's life.

壮士十年归。

Then they came back, strong hearted comrades,

归来见天子，

Came back, to see the Emperor enthroned in his palace halls.

天子坐明堂。

The achievements of the warriors are inscribed on the bamboo,

策勋十二转，

Myriads of cash are bestowed with lavish hand.

赏赐百千强。

Emperor Ko-han bids me say what reward I would wish for.

可汗问所欲，

But what reck I of rewards and Shang Shu Lang titles?

木兰不用尚书郎。

I would fain have a steed that can course over a thousand *li* daily.

愿借明驼千里足，

I would fain haste me back to the home of my parents.

送儿还故乡。

When the word comes that at last their warrior daughter returneth,

爷娘闻女来，

Forth from the city walls hurry father and mother to meet me;

出郭相扶将；

When the word comes that at last her younger sister returneth,

阿姊闻妹来，

Gayly the elder sister bedecks her garments to greet me;

当户理红妆；

When the word comes that at last his elder sister returneth,

Quickly the younger brother prepares with a feast to entreat me.

小弟闻姊来，

磨刀霍霍向猪羊。

Then once more I pass through the door of my morn lighted chamber,

开我东阁门，

Once more I rest on the couch that I often had sought at the sunset,

坐我西阁床。

Doff the dusty armour, heavy and worn from the fighting,

脱我战时袍，

Attire myself once more in the garments soft of my girlhood;

著我旧时裳：

Plait back my glossy hair, with a maidenly glance at the mirror,

当窗理云鬓，

Coyly adorning its sable strands with a fair Yellow Flower.

对镜帖花黄。

And then I step forth from my chamber,

出门看伙伴，

Bashfully greeting my erstwhile comrades of warfare—Blankly they
gaze in amazement:

伙伴始惊惶。

Can it be that their long-time companion,

同行十二年，

Who had shared their privations and dangers?

Is really Wood Orchid a maiden?

不知木兰是女郎。

The rabbit pairs run close to the ground,

雄兔脚扑朔，

Blindly intent on their little path;

雌兔眼迷离。

How should they know or care whether I be male or female?

两兔傍地走，

安能辨我是雄雌？

A Stanza of the Short Songs

短歌行

by T'sao T'sao

曹操

When the moon is bright and stars are rare,

月明星稀，

The black crow's taking a southward flight.

乌鹊南飞，

Round a tree it's soaring thrice with care:

绕树三匝，

Which branch may be fit to stay for the night?

何枝可依？

Home-coming

回乡偶书

贺知章

by Ho Chi-chang

I left home when a boy;

少小离家老大回，

And return as an old fogey.

乡音无改鬓毛衰。

Native tongue I can still speak,

儿童相见不相识，

Frost is on my hair, you see.

笑问客从何处来。

Children do not know me; When they meet me,

Smilingly they ask,

“Where from comes he?”

Night Meditation

静夜思

by Li Pai

李白

In the front of my bed, the moon sheds her light,

床前明月光，

I suspect on the floor, frost has come.

疑是地上霜。

With my head up, I see the moon bright;

举头望明月，

Down, I am thinking of my old sweet home.

低头思故乡。

Drink Alone under Moon Light

月下独酌

by Li Pai

李白

In the midst of flowers, is a pot of wine.

花间一壶酒，

Lonely I drink, with no beloved of mine.

独酌无相亲。

Fair Moon! I raise my cup to greet thee.

举杯邀明月，

With my shadow we've a party of three.

对影成三人。

The moon knows no delight of drinking.

暂伴月将影，

In vain the shadow follows my being.

行乐须及春。

For a short time can I join them both.

Let us enjoy when it is still spring.

The moon lingers as I am singing.

我歌月徘徊，

My shadow confused as I am dancing.

我舞影零乱。

Awake we are happy together.

醒时同交欢，

After drunk, each of us goes his own way.

醉后各分散。

This loveless friendship we keep forever.

永结无情游，

May we meet again in the distant Milky Way.

相期邈云汉。

The Bride

新嫁娘

by Wang Chien

王建

The third day after wedding, the Bride enters kitchen.

三日入厨下，

She washes her hands and makes a soup of chicken.

洗手作羹汤。

Without knowing what her mother-in-law likes best,

未谙婆食性，

She asks first her Groom's sister to have a taste.

先遣小姑尝。

Departure

赠别

by Du Mu

杜牧

Overlove appears to be loveless,

多情却似总无情，

When cups abound we can't have smiling face.

惟觉樽前笑不成。

The candle has a heart of sympathy,

蜡烛有心还惜别，

Shedding tears for us till break of day.

替人垂泪到天明。

A Traveller

征人

by Ma Chih-yuan

马致远

Withered vine, old tree, a dusky crow;

枯藤，老树，昏鸦；

Little bridge, streaming water, a cottage;

小桥，流水，人家；

Ancient road, West wind, a bony horse.

古道，西风，瘦马。

The sun is setting,

夕阳西下，

A broken-hearted man on sky's edge.

断肠人在天涯。

Chrysanthemum

菊花诗

by Chu Yuan-chang

朱元璋

(First Emperor of the Ming Dynasty)

(明太祖)

When all are in full blossom,

百花发，

I do not bloom.

我不发。

When I am in full bloom,

我花发，

Be sealed their doom.

都骇杀，

For fighting the West wind in October,

要与西风战一场，

I have put on my golden armor.

遍身穿就黄金甲。

Bamboo and Snow

雪竹诗

by Chu Yuan-chang

朱元璋

Bamboos become downcast in a snowfall.

雪压竹枝低，

Though down they never touch the mud at all.

虽低不着泥。

Once more when the red sun rises high,

一朝红日出，

They again measure up to the blue sky.

依旧与天齐。

On Congee

煮粥诗

by Chen Shi-guan

陈世倌

To cook rice or congee, which is better?

煮饭何如煮粥强？

With our boys and girls discuss this matter.

好同儿女细商量。

One litre of grain may have the use of three.

一升可作三升用，

Two days' food may last for six days, believe me.

两日堪为六日粮。

Should guests come, we add water and fuel only.

有客只须添水火，

No need for soup if our purse be empty.

无钱不必作羹汤。

Avoid not plain food for lack of delicacy.

莫嫌淡泊少滋味，

Plain taste in plain food will feed us a long way.

淡泊之中滋味长。

Rock Bamboo

岩竹诗

by Cheng Ban-chiao

郑板桥

The Green Mountain is tightly in its grip,

咬定青山不放松，

In the rugged rock it has struck its root deep.

立根原在破岩中。

Thru thousands of rubs and worries,

千磨万击还坚劲，

It's made invincible and strong.

任尔东西南北风。

Wind from East or West, South or North,

Accept this challenge of its own.

Cloth-selling

卖布谣

by Liu Ta-bai

刘大白

Sister-in-law weaves cloth;

嫂嫂织布，

Elder brother sells the cloth.

哥哥卖布。

Selling cloth, buying rice,

卖布买米，

To obtain a meagre meal for hungry mouths.

有饭落肚。

Sister-in-law weaves cloth;

嫂嫂织布，

Elder brother sells the cloth.

哥哥卖布，

Little brother's trousers are worn,

小弟弟裤破，

There is no cloth to mend the trousers with.

没布补裤。

Sister-in-law weaves cloth;

嫂嫂织布，

Elder brother sells the cloth.

哥哥卖布。

Who is it that buys the cloth?

是谁买布，

The rich man in the town beyond.

前村财主。

Native cloth is coarse,

土布粗，

Foreign cloth is fine;

洋布细。

Foreign cloth is cheaper,

洋布便宜，

The rich man is glad.

财主欢喜；

Native cloth now nobody wants;

土布没人要，

Starved must be brother and sister-in-law.

饿倒了哥哥和嫂嫂。

New Year Snow

新年雪

by Hsiung Shi-yi

熊式一

Wine brings a double cheer if snow be here.

对雪饮酒酒更香；

Snow takes a brighter white from song's delight.

高歌一曲雪增辉。

Ah, but when cups abound, and song is sweet,

但愿杯长满，歌长好，雪长飘，

And snow is falling round, the joy's complete.

欢乐极兮人忘归。

Miss Autumn Fragrance the Lonely Shepherdess

可怜的秋香

Warm be the sunshine

暖和的太阳，

Sunshine,

太阳，

Sunshine remembers:

太阳它记得：

It's kissed Miss Gold's face.

照过金姐的脸，

It's kissed Miss Silver's coat.

照过银姐的衣裳，

It's kissed the Childhood of Autumn.

也照过幼年时候的秋香。

Gold has papa.

金姐有爸爸呀，

Silver has mama.

银姐有妈妈呀。

Autumn! Where's your papa?

秋香，你的爸爸呢？

And your mama?

你的妈妈呢？

She, a shepherdess, still on the lawn

她呀每天只在草场上

Taking care of

牧羊，牧羊，牧羊。

Her lambs! Her lambs! Her lambs!

可怜的秋香！可怜的秋香！

The lonely Autumn, the lonely Autumn.

Gold has a brother.

金姐有哥哥呀！

Silver has a lover.

银姐有爱人呀！

Autumn! Where's your brother?

秋香，你的哥哥呢？

And your lover?

你的爱人呢？

She, a shepherdess, still on the lawn

她呀每天只在草场上，

Taking care of

牧羊，牧羊，牧羊。

Her lambs! Her lambs! Her lambs!

可怜的秋香！可怜的秋香！

The lonely Autumn, the lonely Autumn.

All Rise

义勇军进行曲

Arise, we who are not willing to be slaves!

起来，不愿作奴隶的人们！

With our blood and flesh,

把我们的血肉，

We shall build our New Great Wall.

筑成我们新的长城。

Our nation has reached

中华民族到了最危险的时候，

The most dangerous crisis,

每个人被迫着发出最后的吼声，

Every one of us is compelled at last

起来！起来！起来！

To raise the Lion's roar.

我们万众一心，

Arise, arise, arise,

冒着敌人的炮火，

Let us unite!

前进！

Under the enemies' gunfire,

冒着敌人的炮火，

We march on!

前进！前进！前进！进！

Under the enemies' gunfire,

We march on, march on, march on and on!

Growing Up

长起来

Oh, pear flowers in spring!

春天梨花开！

The pear tree top is each year growing.

梨树每年长个头。

Mother! Please don't have those tears.

妈妈别把泪来流：

I can carry the water in two years.

过两年儿能挑水，

And in four years from now,

四年后儿能守牛。

I can take care of the cow.

Little Cabbage

小白菜

Like a cabbage small,

Yellow on the ground.

Seven or eight was I when my mother died,

Good as gold I then followed after Dad.

La, le, la, le, la,

Father now I fear

Will re-wed a wife.

La, le, la, le, la,

Children that she brings, favours will receive.

Noodles they will eat, leaving me the soup.

Chopsticks bring to mind,

My mother dear.

If she thinks of me, is it any use?

La, le, la, le, la.

I shall long for her many, many days.

La, le, la, le, la.

小白菜呀，地里黄呀；

七八岁呀，没了娘呀。

跟着爹爹，好生过呀；

只怕爹爹，娶后娘呀。

生个弟弟，比我强呀；

弟弟吃面，我喝汤呀。

端起碗来，泪汪汪呀；

亲娘呀，亲娘呀！

亲娘想我，有何用呀？

我想亲娘，在梦中呀。

亲娘呀！亲娘呀！

Self-independence 自立歌

Composed in Chinese by Dr. H. C. Tao at the end of 1925. 中文由陶行知原作于1925年底。

Drop our own sweat.

滴自己的汗，

Earn our own rice.

吃自己的饭，

Do our work with all our might,

自己的事自己干，

They who depend on others

靠人靠天靠祖上，

Can never rise.

不算是好汉。

The Song of the Dancing of the Sickle 镰刀歌

Composed in Chinese by Dr. H. C.Tao;the stanzas I&IV were composed on December 4, 1927, the stanzas II&III were first published in May 1935.中文词由陶行知所写，第1节和第4节写于1927年12月4日，第2节和第3节于1935年5月第一次发表。

I

The sun's rising, dundun, yahohei.

太阳起山墩墩，雅荷海。

The sickle's shining, hoho.

镰刀雪亮，荷荷。

Cutting off grasses, meyitseso,

遇着草儿割，梅绮紫梭，

Good for cooking.

捆去好烧锅，

'T will please popo, hoho.

见得婆婆，荷荷。

II

The sun's over head, dundun, yahohei.

太阳当顶墩墩，雅荷海。

Cut! Cut! hoho.

砍啊砍啊，荷荷。

Maidens, listen! meyitseso.

大姑娘听啊，梅绮紫梭，

'f flowers are cut off,

好花儿砍掉，

Nothing to deck, hoho.

没有戴了，荷荷。

III

The sun's westing, dundun, yahohei.

太阳偏西墩墩，雅荷海。

Cut! Cut! hoho.

Maidens, look out! meyitseso.

'f sprouts are cut off,

Autumn'll have bald head, hoho.

IV

The sun's setting, dundun, yahohei.

A clean sweep's made, hoho.

Spring gives life again, meyitseso,

For seeds survive.

Sickle! Sickle! hoho.

砍啊砍啊，荷荷。

大姑娘看啊，梅绮紫梭，

树苗若不留，

秋山秃头，荷荷。

四

太阳下山墩墩，雅荷海。

砍干净了，荷荷。

春风吹又生，梅绮紫梭，

留下种子多，

刀儿刀儿，荷荷。

The Little Workers' Song 儿童工歌

Composed in Chinese by Dr. H. C.Tao in the spring of 1931. The 4th stanza of the song in the English version actually is the 3rd stanza translated in a different way. 中文为陶行知1931年春作。英文第四节实际上是第三节的另一种译法。

We are little Pankus.

我是小盘古，

We'll remake seas and lands.

我不怕吃苦。

No hardship can scare us.

我要开辟新天地，

See the axes in our hands.

看我手中斧！

We are little Newtons,

我是小牛顿，

Though look as a fool.

让人说我笨。

Searching truth in Nature,

我要用我的头脑，

We've to keep our head cool.

向大自然追问。

We are little workers,

我是小工人，

These hands, nothing mightier.

我有双手万能。

We'll make a rich society,

我要造富的社会，

That all will be happier.

不造富个人。

We are little workers.

Mighty hands we have pairs.

Good care we must take

Not to make millionaires.

Children's Day 儿童节歌

Composed in Chinese and translated into English by Dr. H. C.Tao
on April 2nd, 1933.由陶行知中文写作并英译于1933年4月2日（当时4月4日为儿童节）。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘。

The world once owned by ups-grown,

从前世界属大人，

Now all to children belong.

现在世界属儿童。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘。

Dead books we no longer hang on.

儿童不再读死书，

With brain and hands, work shall be done.

用手用脑来做工。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘。

Ivory tower youths chewing gum,

少爷小姐是废物，

Enjoy the moment, the future is gone.

贪图享福必送终。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘；

With the hoe and the axe we come.

拿起锄头和斧头，

A New World'll be built without the rule of thumb.

造个世界大不同。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘，

The world shall be shaped by a child's heart.

世事须从小儿意，

Failing this, 't will fall apart.

不从儿意不成功，

Longdong longdong yi longdong.

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘。

In Children's world there are no old men.

儿童国里无老翁，

All old men are reborn as children.

老翁个个变儿童。

Longdong longdong yi longdong,

弄冬弄冬一弄冬，

Let's celebrate today with a song.

今天过节热烘烘。

Aggressors against the Weak can't live long.

谁要欺负弱与小，

Toward them all are mobilized to dash on.

总动员向他进攻。

Little Teachers 小先生

Composed in Chinese and translated into English by Dr. H. C.
Tao in the spring of 1934. 由陶行知中文写作并英译于1934年春。
Longdong yi longdong,

Heaven and Earth to children belong.

We are angels spreading the truth.

To every village, we dash on.

I am a little teacher, you know.

My heart is like a volcano.

I am not afraid of frost and snow.

I melt ignorance wherever I go.

弄冬一弄冬，

乾坤属儿童。

我们是真理的传布者，

瞄准乡村向前冲。

我是小先生，

热心好比火山喷。

生来不怕霜和雪，

踏破铁鞋化愚蒙。

Feng Yang Song 凤阳歌

Composed in Chinese and translated into English by Dr. H. C. Tao in 1935. 此歌在凤阳民歌基础上改作，由陶行知中文写作并英译于1935年。

I

Sing Feng Yang, Dance Feng Yang.

—
唱凤阳，舞凤阳，

Feng Yang was a good farm.

凤阳本是个好地方。

Since Imperialism came in,

帝国主义跑进来，

Nine out of ten years, it's done harm.

十年倒有九年荒。

It's done lots of harm. Jijarxei.

九是九年荒啊，依呀嗨。

Dr langdang piao yi piao, dr langdang piao yi piao,

得儿郎当飘一飘，得儿郎当飘一飘，

Dr langdang piao piao yi piao ju yi piao.

得儿郎当飘飘一飘又一飘。

II

You beat th' drum; I beat th' gong.

—
你打鼓，我打锣，

All come to hear a good song.

大家都来听好歌。

Other songs we want not to sing,

别的歌儿我不会唱，

Let us sing a *Feng Yang Song*.

单唱一支《凤阳歌》。

Indeed a *Feng Yang Song*! Jijarxei.

正是《凤阳歌》呵，依呀嗨。

Dr langdang piao yi piao, dr langdang piao yi piao.

得儿郎当飘一飘，得儿郎当飘一飘，

Dr langdang piao piao yi piao ju yi piao.

得儿郎当飘飘一飘又一飘。

Four Short Poems 短诗四首

Composed in Chinese and translated into English by Dr. H.C.Tao
on September 18, 1935. 由陶行知中文写作并英译于1935年9月18日。

1. Work

1. 做工

Doing no work,

不做工，

Eating much rice.

要吃饭。

What are you?

什么人，

A bunch of lice!

王八旦。

2. Study

2. 读书

With the belly full.

吃饱饭，

Reading no book.

不读书。

What are you?

什么人，

Just a hog!

老母猪。

3. Teaching

3. 教人

Reading a lot,

死读书，

Teaching not.

不教人。

What are you?

什么人，

A hard nut!

木头人。

4. Resist Japan

4.抗日

Teaching dead book,

教死书，

Seeing China broke.

不抗日。

What are you?

什么人，

Just a joke!

狗放屁。

Summer of 1925 1925年之夏

Composed in Chinese and translated into English by Dr. H.
C.Tao in July 1936. 由陶行知中文写作并英译于1936年7月。

On board a Japanese steamer,

日本船上，

A mass meeting was called to order;

水手聚会；

All Chinese seamen joined hands:

三等乘客，

The chairman a 3rd class passenger.

主席就位。

“Down with Japanese imperialism”

“打倒日本！”

As the shouts were led by a speaker.

呼声如雷；

The Japanese captain leaning on the upper deck,

日本船主，

From below came storm and thunder.

无法作对。

Down, he stared at the sea.

抬头看天，

Up, he stared at the sky.

低头看水。

Then he stared at the mass,

再看众人，

Giving a deep, deep sigh.

自叹倒霉。

Full Moon 月亮圆

Composed in Chinese by Dr. H. C. Tao in July 1936, and translated into English by himself on May 13, 1938. 本诗中文由陶行知作于1936年7月，1938年5月13日译成英文。

When the Moon is full,

月亮圆，

And the air is cool,

清风吹入心田，

I think of a lady,

我想到一位姑娘，

With whom I read the *Devil's Pool*.

曾结同读《魔沼》缘。

When the Moon is full,

月亮圆，

And the air is cool.

清风吹入心神，

I think of the League,

我想到国际联盟，

Ruined by a Tory fool.

毁灭于贪利蠢人。

When the Moon is full,

月亮圆，

And the air is cool,

清风吹入心头，

I think of China,

我想到我的祖国，

She has to fight a bull.

她要斗一条斗牛。

When the Moon is full,

月亮圆，

And the air is cool,

清风吹入心窍，

I think of my nation,

我想到我的民族，

She will come under people's rule.

她将由人民领导。

When the Moon is full,

月亮圆，

And the air is cool,

清风吹入心窝，

I think of myself,

我想到我自己，

When to graduate from the World School?

何时毕业于世界大学？

All China Unite 全中国大联合

Composed in Chinese and translated into English by Dr.H. C. Tao
in September, 1936. 本诗为中文手稿，随后翻译成英文，大约创作于
1936年9月。

The iron will of the four hundred million people
四万万人的钢铁公意掌舵，
Shall steer our ship towards her Destiny.
八万万只手儿共同摇桨；
Eight hundred million hands shall join together,
将大船对准使命所定的方向
Rowing the oars to the Land of Liberty.
就能摇到自由的地方。
All cheer in the same joys,
有乐同享，
And share in the same sorrows.
有祸同当。
Look! There comes a strange boat.
看啊！前面来了一只怪船，
It is the pirates who shoot the arrows.
这分明是海盗来劫抢！
Countrymen! Think of nothing else,
同胞们！不要胡思乱想，
Stop all your eloquent debates.
停止你一切雄辩的争论。
Dash to the threatening enemy,
只对着危险的敌人冲去，
And clear off the menacing pirates.
肃清了威胁我们的海盗再讲。
The iron will of the four hundred million people
四万万人的钢铁公意掌舵，
Shall steer our ship towards her Destiny.
八万万只手儿共同摇桨；
Eight hundred million hands shall join together,
将大船对准使命所定的方向

Rowing the oars to the Land of Liberty.

就能摇到自由的地方。

New Leadership 新领导

Composed in Chinese and translated into English by Dr. H.

C.Taoon October 5, 1936. 由陶行知中文写作并英译于1936年10月5日。

The world turns upside down.

世界将起变化，

The cap becomes the crown.

火把要换人拿。

Torch lights change bearers.

但愿天翻地覆，

Youths shall lead their elders.

青年领着老大。

Two Sisters 两位姊妹

Composed in Chinese and translated into English by Dr. H. C. Tao
on October 10, 1936. 由陶行知中文写作并英译于1936年10月10日。

Dedicated to French and Chinese friends who participated in the
celebration in Paris of the 25th Anniversary of the Founding of the
Republic of China on October 10, 1911.

献给参加在巴黎举办的“双十节”25周年庆祝会之中法友人

Two Sisters are born,

两位好姊妹，

You know where and when;

生辰有意义：

One, on July Fourteen;

一是七一四，

One, on October Ten.

一为十月十。

One is called China;

姊名大中华，

Miss France is the other's name.

妹名法兰西。

They fight with sword.

拿起笔与剑，

They fight with pen.

保卫德谟克拉西。

They have joined hands

For Democracy they defend.

Peace Power 和平之威力

Dedicated to Canadian friends; Jan. 16, 1938. 献与加拿大的朋友，
1938年1月16日。

I

Silently I stood before the Niagara.

默无一言我面对着尼嘎拉，

What a magnificent Water Orchestra!

洋洋乎大哉这水之交响曲！

Through her thrilling and inspiring music,

在动人心灵之美乐中，

I received a wise message from Canada.

我接到加拿大之智慧的忠告。

II

May we imagine, these little drops of water,

让我们想象这小小的水点，

Tiny and insignificant as they are,

何等的渺小而微细！

Once united from a high plain, move forward,

在高岩上一经联合奔向前，

Possess the power that reaches near and far.

便成为打破距离层的威力。

III

May friends who love peace and democracy,

爱护和平与民主的朋友，

Leaning high from the ivory tower,

高高的倚在象牙塔之上，

Unite and move forward toward the same goal.

要对准着同一个目标团结前进，

Only then are sentiments made a power.

只有这时情感才能变成力量。

IV

This power greater than the Niagara

这力量大于尼嘎拉之水力，

Can stop the War that is forced on China.

能阻止侵略战争之加于中华。

When Peace without slavery comes to earth

等到无奴隶的和平降临大地，

'T will bring prosperity also to Canada.

自然而然地也会繁荣加拿大。

Love What the People Love 民之所好好之

Composed in Chinese and translated into English by Dr. H. C. Tao
on October 27, 1945. 由陶行知中文写作并英译于1945年10月27日。

I

—

Love what the people love.

民之所好好之，

Hate what the people hate.

民之所恶恶之。

Teachers of the people.

教人民进步者，

Take lessons at the people's gate.

拜人民为老师。

II

二

Love what the people love.

民之所好好之，

Hate what the people hate.

民之所恶恶之。

He who serves the people

为人民服务者，

Becomes the people's mate.

亲民庶几无疵。

III

三

Love what the people love.

民之所好好之，

Hate what the people hate.

民之所恶恶之。

Defenders of the people

为人民奋斗者，

With blood write the people's *Iliad*.

血写人民史诗。

Petticoat—A Gift to a General 衬裙——送给一位将军的礼品

The manuscript of this poem, in English only, is in the 14th memorandum book of Tao Heng-Chih. 本诗见于陶行知的第14个备忘录上，原手稿仅有英文。

You claim yourself a hero,

你自称是英雄，

But bow down to China's foe.

却向中国的敌人卑躬。

With orders to retreat,

借口下令撤退，

You let mountains and rivers go.

让大好河山破碎。

My Petticoat is fit for you,

我的衬裙正合你身，

Let women face the foe.

让女人们去面对敌人。

Give me your uniform,

把你的军装给我，

Towards the battlefield I go.

我要上战场杀向敌阵。

Petticoat says, "No."

衬裙开口说：“不，

“What makes you think so?”

你为何这样想？”

The North has Lady Lee,

北方有李女士，

Down South is Maiden Ho.

南方有少女何。

Then China's Joan of Arc

还有中国的贞德，

Whose name is Miss Loh.

她就是小姐罗。

With petticoats

她们都是穿着裙子

They have fought the foe.

和敌人拼搏。

What a disgrace

把我送出去，

To let me go!

多么耻辱！

Leaving the heroine,

离开女英雄，

't go to the wavering hero,

投奔动摇的男将军？

No no no

不！不！不！

注释

附录

[返回总目录](#)

温源宁（1899—1984），广东陆丰人。学者，英国剑桥大学法学硕士。历任北京大学西方语言文学系教授兼英文组主任、清华大学西洋文学系教授。曾与林语堂、全增嘏、姚克等合编英文文史月刊《天下》。

代表作有英文人物随笔集《不够知己》，以素描方式、春秋笔法写下对吴宓、胡适、徐志摩、周作人、辜鸿铭、丁文江、吴经熊、冯玉祥等名人的印象记。忆人念事，臧否人物，辛辣别致，“轻快，干脆，尖刻，漂亮中带些顽皮”（钱锺书语）。文章风格出于英国散文大家的传统，“语求雅驯，避流俗，有古典味；意不贫乏而言简，有言外意，味外味”（张中行语）。

江枫（1929— ），原名吴云森，祖籍徽州，生于上海。翻译家，诗人。曾就读于西南联大附中、清华大学外文系和北京大学中文系。1995年，获彩虹翻译终身成就奖。2011年，获中国翻译文化终身成就奖。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的My Country and My People（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（A Pictorial History of Chinese Architecture），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以Peasant Life in China—A Field Study of Country Life in the Yangtze Valley为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（Has Man a Future? —Dialogues with the Last Confucian），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（Intellectual Trends in the Ch'ing Period）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（Waiting for the Dawn: A Plan for the Prince），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的

积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

编者说明

一、温源宁的集子Imperfect Understanding及几个译本的说明

The China Critic (《中国评论周报》，1928—1946) 1928年5月在上海创刊，是民国时期归国留学生主持的一份英文周刊，在现代思想史、中西文化交流史上占有重要的地位。首任主编是哈佛大学毕业生张歆海，刘大钧、桂中枢也先后担任主编，参与编辑的有潘光旦、全增嘏、林语堂、钱锺书等知名学者。封面上“中国评论周报”的字样由蔡元培题署。

1934年1月，温源宁成为周报撰稿编辑 (Contributing Editor) 的一员。1月4日，第7卷第1期新开了专栏Unedited Biographies (人物志稿)，前三期文章的传主和作者分别为：韩复榘 (Yih Chang-mung)、马君武 (陈达)、梅兰芳 (梅其驹)。第4期传主是吴宓，作者没有署名，实为温源宁。

接下来各期的人物依次是：赵元任、溥仪、吴经熊、高君珊、胡适、冯玉祥、徐志摩、薛氏兄弟、周作人、林可胜、梁遇春、陈嘉庚、周诒春、顾孟余、褚民谊、叶公超。5月24日第21期停了一期，公告说此专栏下周易名。

5月31日第22期起，专栏改名为Intimate Portraits (亲切写真)，并标明Edited by Wen Yuan-ning (为温源宁所编)，这一期的传主是林文庆；第23期接着刊载了F. T. Wang为林文庆鸣不平的长函。之后的传主依次是：黄庐隐、王文显、凌叔华、朱兆莘、卢作孚、顾维钧、梁龙、伍连德、刘复、王德林、丁文江、辜鸿铭、吴贻熙、吴稚晖、顾静徽、杨丙辰、冯友兰、刘铁云、章太炎、周廷旭、陈通伯、孙大雨、梁宗岱、舒舍予、沈有乾、盛成、刘海粟和黎锦晖、李石岑、程锡庚。此专栏至1934年底结束。

1935年1月，温源宁挑出专栏51篇文章中的17篇结集 (传主为吴宓、胡适、徐志摩、周作人、梁遇春、王文显、朱兆莘、顾维钧、丁文江、辜鸿铭、吴贻熙、杨丙辰、周廷旭、陈通伯、梁宗岱、盛成、程锡庚)，取名为Imperfect Understanding，交付上海Kelly and Walsh Ltd. (别发洋行) 刊行。1935年6月，钱默存 (即钱锺书) 在《人间世》第29期发表了一篇书评，首译书名为《不够知己》。

1988年12月，岳麓书社出版南星的Imperfect Understanding译本，书名为《一知半解：人物剪影十七幅》。2001年2月，辽宁教育出版社出版陈子善编的《一知半解及其他》，收入南星的17篇译文和温源宁几篇英文评论文章的中译。

2004年1月，岳麓书社出版了江枫的译本，英汉双语对照，收录43篇，添加注释以作背景资料，并附有林语堂的两篇译文。书名作《不够知己》。

二、本书所收篇目、编辑工作的相关说明

本次外研社版的《不够知己》（英汉对照）采用江枫的译本。本书借重温源宁1935年版Imperfect Understanding的书名，但所收篇目已远超出温源宁当年的本子。编者按照所收篇目在《中国评论周报》上的发表时间重新编排次序，并详细注明刊载日期；个别篇目非温源宁所著，亦附有原作者署名，以供读者参阅。在呈现英文篇目完整原貌的同时，经江枫先生惠允，本版对译文作了进一步修订，并补充了部分注释。需要特别提出的是，江枫先生应编者要求特为本版补译的四篇文章（传主为马君武、溥仪、章太炎、舒舍予），是首次与读者见面。

书末收入该专栏另外四篇文章的英文原文（传主为韩复榘、梅兰芳、凌叔华、卢作孚），作者分别为Yih Chang-mung、梅其驹、费鉴照、Chang Hsu-lin，并附有林语堂发表在《人间世》杂志《今人志》专栏的《吴宓》、《胡适之》两篇译文，便于感兴趣的读者参阅。

虽殚精竭虑，亦或有不当之处，盼热心读者批评指正。

新版前言

《不够知己》自2004年在岳麓书社初版以来整整七年，早已售罄，现在，终于能由外语教学与研究出版社重新编排出版，以满足读者的需求。这个版本是初版本的修订本，按照这些篇目当年的发表时间，对次序略微作了一些改动。为了不至把初版责任编辑当作温作一并收入的几篇与温作相混，分别注明了原作者。

但是，不把这几篇抽掉，既是因为这些同类短文，虽非温氏所作、却为温氏所编，并且也都刊在温氏所编专栏；还因为作为译者，我不忍割舍，特别是《王德林》篇，从中看不到尖酸刻薄，却有读之令人神往的幽默。何况，我个人初衷，本不是专为温源宁编译温源宁专集。

至于怎样判断确系温氏所作，除了温氏自己确认的那17篇，就只能是所收各篇，但凡没有足以证明并非温作的证据，均视之为温作。包括《刘铁云》篇，因为温源宁的编者注，只说明材料来源，却不曾说不是温作。

主要的修订，是根据外语教学与研究出版社责任编辑查找所得，补译了初版本的缺失，如《林文庆医生之二》，“为林文庆医生一辩”，由于最初收集材料复印疏忽而发生的漏译部分。新版还增添了几条对于文史知识不足的今日读者或有必要的注释。

不止一位热心的读者为改进译文提供宝贵的意见和建议，如果没有这种善意的帮助，比如说，我就想不出怎样正确理解和翻译Utopia College。但是，当人名涉及真实的历史人物，若无确凿的根据，便不可只凭想当然就轻易断定是与不是，尤其因为涉及褒贬，就只能留以待考。

作为双语对照读物，我注意到初版的英文文本也存在着缺陷和瑕疵，除个别篇章残缺，有些错讹，出乎意料，竟为《中国评论周报》原版文本所固有，而且，还有个别史实，记述有误。我们在这个修订本中都已一一订正，因此，也许可以说，这是一个较好的双语读本，虽然，很可能，犹有待于更进一步改进之处。

我向关心这个译本并为这个译本的改进作出了宝贵贡献的所有专家学者道谢，特别要感谢我的老友著名辞书学家黄鸿森先生。这个版本的修订成功，在极大程度上要归功于他对这本书，从正文到注释，从正误到行文，巨细无遗、细致入微的审读和基于渊博学识的慷慨建议。他的建议，涉及改进了的所有问题。

当然，如果没有外语教学与研究出版社的出版支持，没有吴浩先生及其同事的具体辛勤劳作，无论什么样的改进设想也只能是空想。

谢谢。

2010年12月

关于《不够知己》补遗

最近又收到出版社发来从《中国评论周报》搜得“温源宁文8篇”，但是，其中4篇各有其他作者署名，只有其余4篇未见署名，所以我只补译了这4篇，译是译了，从文风判断，我仍不相信《马君武》、《溥仪》两篇确为温作，因为这位恃才傲物的海归才子自称必不用we，而且所议如对溥仪登基感受之猜度，缺乏才情。而真正的作者，目前还只能存疑待考。

2011年11月29日

又据查考，《马君武》篇作者为C. T. (陈达)。

2011年12月30日

初版译序*

《不够知己》是由43篇短文合成的一个集子，这些短文都是一家英文周刊的专栏文章，先后发表在1934年THE CHINA CRITIC（《中国评论周报》）第七卷相应的各期。那一年的前五个月，专栏名称是Unedited Biographies（人物志稿），从6月起便改名Intimate Portraits（亲切写真），所刊文章绝大部分均不署名，只有一篇文末署有两个字母的缩写字头，但是改名后的专栏每期都标明为温源宁所编（Edited by Wen Yuan-ning）。由于温源宁曾把其中17篇抽出来以Imperfect Understanding（《不够知己》）为书名结集出版，大体上可以判断，除了一篇显然来自读者群中，这些文章不论署名不署名，编者也就是作者。因此，我们把这个文集视为温源宁所著Imperfect Understanding（《不够知己》）的足本。

那17篇本的Imperfect Understanding曾被译为《一知半解》出版，以“一知半解”充作一个人物速写集的集名显然不够妥帖，现在这个足本中文版决定用《不够知己》作为书名。不敢掠美，这个书名原是钱锺书为那个英文原版撰写书评时所译。林语堂认为译得“雅切”。而且，因为《吴宓日记》的出版引起了文坛争论和争论各方的广泛引用，此书竟然已经成为“名著”，其中的《吴宓》篇已经成为名篇，于是《不够知己》也就成了定译。

本书作者在上个世纪三四十年代，也曾是文化圈内的一颗明星，但是对于今天的读者，如果不是因为他写过这四十多篇臧否人物的短文，如果这些文章不曾因为直接间接涉及吴宓和钱锺书并因此而在半个多世纪后的中国文坛掀起一场风波，也许已经被人们淡忘。但是，就凭留下了这样一本小书，他也是不该被完全遗忘的。

正如读者翻看目录就会发现的，此书所记四十多人，均非等闲之辈：既有身后流芳的文人学者，也有个别后来认贼作父的祸国殃民之徒。钱锺书在同一篇书评中，既说这些文章是“富有春秋笔法的当代中国名人小传”，又说“本书原是温先生的游戏文章，好比信笔洒出的几朵墨花，当不得《现代中国名人字典》用”。不管我们相信哪一句，至少，作为同代人之间的议论本身便具有某种程度的史料价值，特别是由于颇有一些都是作者朝夕相处的同事，个别人还是他的得意门生，因而被作者称为“Intimate Portraits”（“亲切写真”），哪怕只是他的“一面之词”。

作者温源宁，广东陆丰人，出生于1899年，是一名留英归来的法学博士。1925年任北京大学英文系主任。1927年任清华大学西洋文学系教授和北平大学女子师范学院外国文学系讲师。1928年5月，《中国评论周报》在上海创刊，林语堂为编委之一。1933年，温源宁南迁，也成了《中国评论周报》的编委，这些人物小传就是他这一时期主持专栏的成果。

1935年，英文月刊《天下》在孙科支持下创刊，温源宁任主编，林语堂、吴经熊、全增嘏、姚莘农（克）等任编辑，直到1941年太平洋战事爆发停刊。

1936年12月，多半也是由于孙科的提携，温源宁曾任立法委员。1937年抗日战争爆发后，任中国国民党中央宣传部国际宣传处驻香港办事处主任。1946年11月，当选为“制宪国民大会”代表。1947年6月，任驻希腊大使。1968年退休后定居台湾。1984年元月逝世。

林语堂的一个女儿描写她对温源宁的印象时说：“[他]是英国剑桥大学的留学生，回上海之后，装出的模样，比英国人还像英国人。他穿的是英国绅士的西装，手持拐杖，吃英国式的下午茶，讲英语时学剑桥式的结结巴巴腔调，好像要找到恰到好处字眼才可发言。”（林太乙：《林语堂传》）

温源宁留给后人的文字，似乎也就是这么四十几篇人物小传了。那些“传主”，谁也不会单凭这些如讥似讽的素描或漫画而永垂不朽或是遗臭万年，却一定能通过他亦庄亦谐的描述在人间多留一份鲜活的音容形象，虽然果真是“当不得《现代中国名人字典》用”的，却可以成为任何一部正传或评传的生动插画。这些个性特征鲜明的文字所记所述，自然浸透了作者的主观色彩，一个踌躇满志的青年才俊放笔为文、幽默人间，当幽默只为了自娱甚或带上了某种哗众取宠倾向时，就很容易沦为刻薄，因此，就有了本书所收之第20篇，那是路见不平者的抗辩。事实上，真正像他笔下的林文庆那样一无是处而能当上一个大学校长的人，是找遍了全世界也难以找得出一个半个的。

当时便引起纠纷的虽不是《吴宓》篇，但是吴宓却已经由于那篇文章（温源宁的原作和林语堂的译文）而感觉受到了伤害，以至到了1937年2月，另一篇译文出现时还引发了他心头的新旧愤懑：“见《逸经》二十四期有倪某重译温源宁所为英文我之小传，而译其题曰‘吴宓：一个学者和绅士’，不曰‘君子人’。译笔亦恶劣。尤可恨者，编者简又文乃赘词曰：‘使吴君见之必欣然，谓生我者父母，知我者源宁也。’呜呼，温源宁一刻薄小人耳！纵多读书，少为正论。况未谙中文，不能读我所作文。而此一篇讥讽嘲笑之文章，竟历久而重译！宓已谢绝尘缘，而攻诋中伤者犹不绝。甚矣，此世之可厌也！”

而他在读到钱锺书的“Mr. Wu Mi & His Poetry”（《论吴宓之诗》）时，又想起了“其前半略同温源宁昔年‘China Critic’（《中国评论周报》）一文，谓宓生性浪漫，而中白璧德师人文道德学说之毒，致束缚拘牵。左右不知所可云云。按此言宓最恨。盖宓服膺白璧德师甚至，以为白师乃今世之苏格拉底、孔子、耶稣、释迦。我得遇白师……此乃吾生最幸之遭遇……至该文后部，则讥诋宓爱彦之往事，指彦为superannuated coquette，而宓为中年无行之文士，以著其可鄙可笑之情形……”

“彦”，毛彦文女士，吴宓深心爱恋、寤寐求之、求之不得的梦中情人也。我还记得1946年在上海考大学时，曾见一家方型小报旧闻新炒，刊载当年毛彦文下嫁熊希龄故事的标题还用了“一树梨花压海棠”的比喻，竟然被指为superannuated coquette，而这几个洋文用大白话翻译过来就成了“年老色衰的风骚娘们”，吴宓读了当然要生气。

可见，尽管“本书原是温先生的游戏文章”（钱锺书语），却由于涉及真实人物的褒贬荣辱，至少是有一个相关的当事人会把讥讽和嘲笑视为游戏的。今天我们翻译出版，自然也不敢视为游戏。尽管现今的翻

译界，特别是以翻译理论家自居的一部分人，很有几位在以教授和“博导”的名义巧立名目、大肆鼓噪，反对忠实而提倡译文的“深化”、“浅化”和“增色”、“减色”，我们却不敢苟同。不自觉的偏离尚且会引发或加剧争吵、造成相关人士的锥心苦恼，有意识地添油加醋或偷工减料后果可想而知。因此，我们的翻译宁愿选择“株守”忠实，尽可能地亦步亦趋紧贴原文以避免歪曲和误解。

并且，为了弥补原作者议人论事之或有偏颇，也是为了便于读者较好地理解七十多年前的人与事，为了使得这些字数不多、典故不少、特别是充满了洋典故的文章变得好读一些，我们还尽可能附加注释以为背景资料。这个版本以英汉对照的方式问世，既是因为译者惟恐译笔或有讹误，可供读者或引用者能以原文为准，当然，也是为了便于有兴趣的读者对照阅读。同时，为了满足部分读者的特殊需要，我们还在书末附录了《吴宓》篇和《胡适》篇的林语堂译文。

而这本小书之所以能够以目前的形式问世，首先要归功于岳麓书社和敬业的刘果硕士费心策划、筹措，我之所以能够有幸参与其事，也是由于岳麓书社和小刘果的热情邀约和耐得心烦，我就借此作出如上交代的机会郑重道谢了。

NOTE

These attempts at an imperfect understanding of some people I happen to know are the fruits of idle moments. Their proper place is, of course, the wastepaper basket. But they have given pleasure to some friends; and it is at the latter's instance that they have here been brought together in book form.

I hope where no offence is meant, none will be offended. However, it is just possible that one or two may object to some of the things I have said about them. If so, I beg their pardon.

My thanks are due to Mr. Kwei Chungshu, editor of The China Critic, for his kindness in allowing me to reprint these papers, which first saw the light in the Intimate Portraits column of that journal.

WEN YUAN-NING

SHANGHAI, January, 1935.

小启

有关于我偶然相识、难说深知的一些人士的这些文字，都是我闲来无事遣兴试笔之作，恰当的去处，当然是字纸篓，但是，有些读过的朋友很喜欢，正是由于他们的撙掇，才终于结集出版成书。

我无意冒犯他人，也不希望有任何人会被冒犯。然而，也还是可能会有一位两位对有关于他们的笔墨感到不悦。果如此，就只好请他们原谅了。

我要感谢《中国评论周报》主编桂中枢先生，是由于有了他的慨允，我才得以在这里使用最初全都是发表在该刊《亲切写真》栏内的这些文章。

1935年1月于上海

MR. WU MI (吴宓), A SCHOLAR AND A GENTLEMAN

Mr. Wu Mi is like nothing on earth: once seen, never forgotten. There are some people, one has to be introduced to a hundred times, and on the hundredth and one time one has to be introduced again. Their faces are so ordinary: no mannerisms, no "anything," just plain Jack, Tom and Harry. But Mr. Wu's face is worth a fortune: it is peculiar to the point of caricature. A head shaped like a bomb, and just as suggestively explosive, gaunt, wan in colour, with hair threatening to break out all over the face, but always kept well within bounds by a clean shave every morning, rugged, with very prominent cheek-bones and sunken cheeks, and eyes which stare at one like glowing coals—all this set on a neck too long by half; and a thin body, as strong and as little elastic as a rod of steel!

Head always erect, and back straight as a die, Mr. Wu looks dignity itself. He is proud of his scholarship, and his friends are just as proud to find in him one of nature's great gentlemen. Never mean, always eager to do a good turn to everybody, invariably misunderstood by both friends and foes, a little too trustful of other people's goodness and ability, and over-sensitive as regards the outside world's opinions of himself, Mr. Wu is never at peace, either with himself or with the world: if he is not distraught, he is furiously working. A great admirer of Goethe, he is as far from attaining the state of "ohne Hast, ohne Rast," as he who said, "Io fei giubbetto a me delle mie case (I made a gibbet for myself of my own dwelling)," is from ever attaining the state of grace.

Mr. Wu is one of those men, who never know what it is to be young. Actually on the right side of forty, he looks anywhere between thirty and a hundred. Always lenient in his judgment of others, he is Draconically severe on himself. A Confucianist himself, he suggests to us exactly what a Confucian scholar ought to be. Grave, taking life at its own face value and a little too seriously, with a deportment as unbending as it is "correct," he is yet the least formidable of men.

Mr. Wu is a professor in the Western Literature Department of Tsing Hua University. Besides this, he used, until this year, to edit *The Critical Review* (学衡) as well as the literary columns of *The Ta Kung Pao* (大公报).

Mr. Wu is everything that a teacher ought to be, except to be inspiring. Punctual as a clock, he works like a galley-slave at his lectures. Where others would read a quotation out of a book, he would

memorise it, however long it might be. He is as orderly as a drill-sergeant in the exposition of any subject, with his "firstly this" and "secondly that." Dull, perhaps; but never pointless. He is not one of those teachers, who talk of everything and say nothing. What he says does mean something: it may be wrong, but at least it is not hot air. He never hedges about any point; he always puts his foot plump on it. In other words, he is never afraid of committing himself to an opinion. On matters of fact, especially of those facts which are to be found in encyclopaedias and books of reference, Mr. Wu is unimpeachable. One can only fairly quarrel with him on matters of taste or of interpretation. In these, Mr. Wu shows his weakness; but it is not a weakness, due to haziness or any failing in sincerity: it is a weakness, inherent in his point of view, which is that of a humanist—a Babbittian humanist, at that. It is a pity Mr. Wu has allowed himself to be lured into Babbittian humanism. As it is, all his views are coloured by it. Ethics and art get woefully mixed up. Often, one is puzzled whether he is delivering himself on a question of literature or of morality.

As an editor, Mr. Wu stands for everything that Dr. Hu Shih is against. The avowed aim of *The Critical Review*, which Mr. Wu started a few years ago, is to fight the *Pai-hua* movement, and to strive to maintain the old ways of writing. It is a losing battle, but the effort is heroic. It was no less heroic in Mr. Wu, when he was editing the literary columns of *The Ta Kung Pao*, to try to interest the literary world of China in the facts of Western Literature, rather than in its frills and trappings. Well, with very few exceptions, practically all the younger writers of China have decided to take the frills and trappings of Western Literature, and to let the facts take care of themselves. Facts, dates, learning: they are so dull and so difficult. What one wants now-a-days is to swim with the current, and to pick up whatever flotsam and jetsam one comes across—Dowson, Baudelaire, Valéry, Virginia Woolf, Aldous Huxley, and so on, *ad infinitum*. In the contemporary world of Chinese letters, to insinuate clumsily, as Mr. Wu does, that there is some value in studying Homer, Virgil, Dante, and Milton, is to invite derision.

A tragic and lonely figure! What makes Mr. Wu's case still more tragic is his complete misunderstanding of himself. He professes to be an ardent humanist and classicist; but by temperament, he is a romanticist through and through. So sincere, and so truly himself is Mr. Wu, that he allows everybody to see this, except himself! His admiration of Byron is no secret. He has even written a long Chinese poem after the manner of Childe Harold. A contradiction, but one that is perplexing to nobody but himself!

Whenever I think of Mr. Wu, I always think of his tortured smile,

of his neat, clean, bare rooms in Tsing Hua, and of the beautiful, wild scene, just outside his curtained windows. It may be just my fancy, but I often think there would be less perplexity in his life, and less torture in his smile, if he would take down all the curtains from his windows, and see more of what is outside his rooms, or better still, abandon himself to the beautiful, wild scene out-of-doors.

[No. 4; Jan. 25, 1934]

吴宓先生¹，学者和君子

吴宓先生，举世无双，见过一次，永生难忘。有些人，需要别人介绍100次，到了第101次，还有必要再经介绍。他们的面貌太平常：没有一点特色，“什么”也没有，只是一副张三李四都可能有的平常相貌。吴先生的相貌却价值连城，怪异得就像一幅漫画。脑袋的形状像颗炸弹，也像炸弹一样随时都有可能爆炸；面容憔悴，脸色苍白，胡须几乎满面丛生，亏得每天早上都刮脸才显得中规中矩；脸上布满皱纹，颧骨高耸，两颊下陷，盯着人的一双眼睛像是烧红了的兩粒煤球——这一切全都支撑在比常人长一半的脖颈上，瘦削的躯体活像一根结实、梆硬的钢条。

吴先生永远昂首挺胸，脊背笔直，看上去仿佛就是尊严本身。他以身为学者而自豪，朋友们也都认为他是天生一位了不起的君子而为之骄傲。他从不吝啬，总是想着要给别人以帮助，却总是被朋友也被敌人所误解；对别人的善意和能力过于轻信，对外界有关他的议论又过于敏感。无论是对他自己还是对整个世界，吴先生都不能相安无事。如果他沒有心烦意乱，就一定是在发奋著述。他极其崇拜歌德²，却远未达到歌德所称美的“不慌不辍”的境界，就像说过“我把自己的住处变成我的绞架”³的人那样永远也达不到天恩眷顾的状态。

吴先生是那种从不知晓什么是年轻的人。他实际才40岁开外，但是只看外表，从30岁到100岁，说他多大都可以。他评价别人总是从宽，对自己却严格到苛刻。他信奉孔夫子的学说，能使人们想到真正的孔门儒生应该如何作为。他端庄严肃，遇事认真而有点过分，有一副“理直”因而“气壮”的架式，却仍然是个最不会令人望而生畏的人。

吴先生目前是清华大学西洋文学系的教授。此外，直到今年为止，他还一直在主编评论性刊物《学衡》⁴和《大公报》的文学副刊。

作为一般意义上的教师，吴先生无可挑剔，唯一的缺憾是少了一点启迪灵感的魅力。像钟表一样准时的他，讲起课来就像古罗马舰船上的划桨奴隶做工。在别人从书本上读出引文的场合，他宁愿背诵，而不论那段引文究竟有多长。讲解任何问题，他都像军训教官那样“第一个”、“第二个”，讲得有条不紊。或许有点枯燥，但是绝不可能言不及义。他不是那种什么都谈而唯独不说自家主张的老师。他言之有物：也可能说错，但是绝不空洞。他从不绕着问题走，总是直奔主题；也就是

说，他不害怕为某种意见承担责任。关于事实的问题，特别是在百科全书和工具书中能够查到的事实性问题，吴先生绝对无懈可击。别人只能在有关于趣味或诠释的问题上和他进行某种争论。在这些问题上，吴先生显然有弱点，但不是由于糊涂和不诚实，而是他那种思想观点所固有的，一个人文主义者——而且是一个白璧德⁵式人文主义者所固有的弱点。非常可惜，吴先生竟然会被白璧德式的人文主义所吸引而深陷其中。事实上，他所有的观点全都浸染上了这种理论的色彩。糟糕的是，伦理学和艺术被搅混在一起。因此，人们常会感到困惑，不知他是在谈论文学还是在谈论道德。

作为刊物主编，胡适博士所反对的，吴先生全都拥护。几年前吴先生创办《学衡》，公开宣扬的宗旨就是：反对白话文运动，维护传统的写作方式。这是失败的一战，然而却是英勇的一斗。吴先生为《大公报》主持文艺副刊的工作同样英勇，他试图通过这方面的努力来引导中国文学界更多地关注西方文学中的实质，而不是皮毛。是的，除去极少数的例外，几乎中国所有的年轻作家，都已经决定接受西方文学那些华而不实的皮毛，而对其实质不管不顾。史实、日期、知识，都太枯燥，而且太艰涩。如今人们想要的只是随波逐流，顺手捡拾一些无价值的琐碎之物——道森⁶、波德莱尔⁷、瓦莱里⁸、维吉尼亚·伍尔夫⁹、奥尔德斯·赫胥黎¹⁰等等。在当代中国文学界，像吴先生那样不得体地暗示研读荷马¹¹、维吉尔¹²、但丁¹³和弥尔顿¹⁴也有某种价值，就只能招人嗤笑了。

一个孤独的悲剧角色！尤其可悲的是，吴先生完全不了解自己。他自诩是个热诚的人文主义者和古典主义者；但是从气质上看，他却是个彻头彻尾的浪漫主义者！吴先生真诚，表里如一，他让每一个人都看到了这一点，却只有他自己没看到！他对拜伦¹⁵的崇拜尽人皆知，甚至模仿《恰尔德·哈罗德》¹⁶的风格写了一首中文长诗。一个矛盾，一个除了他自己谁都不难理解的矛盾！

一想起吴先生，我就总会想起他的苦笑，他在清华那几间精致、整洁而空荡的房间，还有他窗帘外面的美丽野景。也许只是我的痴想，但是我确实时常在想，如果他能拉开所有的窗帘，多看看屋外的景色，最好能投身旷野去享受一下户外景色的美，他的生活中就会少一些困惑，他的笑容里就会少一些苦涩。

MA CHUN-WU (马君武)

According to the different versions of Who's Who in China, Chinese leaders are to be had by thousands. But of this number we are certain that none is more interesting than Dr. Ma Chun-wu—interesting in the sense that in him we find not only a co-ordinated development of many talents but also a harmonious combination of Eastern and Western ideals of a true gentleman.

To know Dr. Ma as a man of achievements in the ordinary sense of the word, the reader is referred to any one of the biographical sketches that are found in the various versions of Who's Who in China, English, Chinese, or Japanese. But the following high points may be noted. A native of Kweilin, Kwangsi, he was born in 1881 of poor parents. His father appeared to have died early, and as an orphan of nine, we already found him roving around in Canton and other southern cities, working out a future by and for himself. At times we were told that he had only one or two bananas for meals. But his thirst for knowledge even at this tender age proved even more irresistible than his hunger for food, and soon opportunities were opened to him where he could both study and work. Leaving the details for biographers to work out later, we are for the present satisfied to know that he finally found his way to Japan, the mecca at that time for those who were after new knowledge and revolutionary ideals. After graduating from the Kyoto Imperial University in 1906, winning honour and a degree in agriculture he went to Germany and joined the Technische Hochschule in Berlin where he won the degree of "Doktor Ingenieur" in 1915. Facts like these are certainly uninteresting in these days when college diplomas are to be had by carloads, but it will yet go down in history that Dr. Ma is the very first Chinese to earn degrees in agriculture and engineering, which, by the way, in comparison with other kinds of degrees, are to this day quite rare.

Dr. Ma has been precocious in many ways, and in political life, he has been no exception. Prior to the completion of his engineering course, he was already body and soul in it. He has been a follower and friend of Dr. Sun Yat-sen since his' teens and his early sojourn in Japan had some close connection with this happy relationship. His association with this great leader finally led him in 1911 to be elected representative of his province to Nanking to draft the provisional constitution. We remember having seen the enlarged picture of this group of worthies at Dr. Ma's home in Yanghang, a few miles from Woosung, in which Dr. Ma stood out as the very youngest. Like the provisional constitution which the worthies in the picture had helped

to frame, the picture itself, we were once told by Dr. Ma, has been relegated to the realm of history since January 28, 1931. From 1911 onward and up to 1926, Dr. Ma led a very active political life, served the country in a variety of capacities, with official titles which all of us would like to possess if it were possible. Since 1926 when he first took up the presidency of the Kwangsi Government University, he seems to have evinced but little interest in politics. While still no less a follower of Dr. Sun, he has more than once denounced the party and party principles which Dr. Sun founded and formulated, and in no gentle terms.

But Dr. Ma is primarily a scholar. It appears that it was only youthful idealism that led him into politics in those early years. Soon after he had returned from Germany, he began to write and translate scientific works for Chinese students. He also rendered a number of Western classics into Chinese. For him there is no hurried work, for he soon acquired the habit of translating a thousand characters each day, whenever he is not travelling. As a result of this habit to which he still sticks today, he has succeeded in putting forth a great number of volumes the total weight and bulk of which would easily make the ox perspire and more than fill the attic, as the Chinese saying has it (汗牛充栋). A few examples may suffice. Among the translated works, we find Darwin's *The Origin of Species* and *The Descent of Man*, J. S. Mill's *On Liberty*, Spencer's *Principles of Sociology*, Haeckel's *Die Weltratsel*, Rousseau's *Du Contrat Social*, and a number of important works in mathematic, chemistry, mechanics, mineralogy and other technical subjects. He also wrote textbooks on zoology and botany, and compiled a German-Chinese dictionary. He is a lover of literature; among his voluminous writings, there is a collection of his Chinese poems. We recall to have seen a translated version of *Wilhelm Tell*, also done by his hand. He is a well-known calligrapher; wherever he goes, people flock to him with ink and scrolls, and he complies with ease and pleasure.

While his scholarly and educational achievements appear weighty and formidable, his personal appearance is hardly impressive, certainly not in the sense that we would have inferred from his variegated and fruitful career. Always clad in native cloth, he looks almost rustic. He has a very straightforward temperament and has no patience with those whom he dislikes. His rusticity on the one hand and frankness on the other once conspired to produce the material of a very interesting anecdote. While serving as president of the Great China University, he had the pleasure of sitting together with two other Chinese passengers who conversed in English. He soon grew impatient and interrupted their conversation by asking what was the necessity for two Chinese to *tete-a-tete* in English, while the native

tongue would serve equally well, if not better. What followed may be easily surmised by the reader. The dignity and amour propre of one who was able and modern enough to converse in English would not of course stand for such uncalled advice. A quarrel ensued and was on the point of leading to a fight when other passengers intervened and brought about peace, and it soon transpired that the offending party were really two English instructors in the University, whom Dr. Ma did not know, nor they recognized him as the president, being new in the office at that time.

Dr. Ma is a good dancer and knows the latest styles. He plays majong with a rapid hand, always taking up the new card without consulting the one to be discarded, true to the type of temperament we have just discussed. If he happens to be a loser, he would willingly stay up for the night, even though it is plain that in the end nobody really pays. He lives a very simple life. A lover of nature, in his house in Yanghang he used to be surrounded by all sorts of pets and cultivated plants. Amid a great number of hives he could look up and pick out the queen bee for you. He even cultivated strawberries. When he gave you a feast, he would let you know that all that you were given to eat were the product of the labour that himself and his much devoted wife had spent.

[No. 2; Jan. 11, 1934]

马君武¹

根据各种不同版本《中国名人录》之所录统计，中国名人可有数千之众，但是可以肯定，其中最引人关注的莫过于马君武博士——引人注目，是因为他不仅具有均衡发展的多种才能，还体现着东西方有关真君子或真绅士理想的和谐融合。

要了解一个平常意义上的名人马博士，可以查看任何一本中文、英文或是日文《中国名人录》上的生平简介。但是，可以指出如下一些值得注意之处。1881年，他出生在广西桂林一个贫苦家庭。父亲显然死得很早，9岁成为孤儿，就已经漂泊在广州和南方其他一些城市，出卖劳力谋生。据说，有时他每顿只吃一两根香蕉。但是，在这样幼小的年纪，他渴求知识的心愿，甚至比觅食疗饥的欲望，更加难以抗拒。不久，就遇到了既可以学习又能够工作的机会。有些传记作家关心的细节，不妨留待以后研究，暂时，我们知道他终于有办法来到日本也就够了。日本，曾是当年革命理想和新知识寻求者的麦加²。1906年，毕业于京都帝国大学，获得农业学位后，赴德国，入柏林工业大学，1915年，获得“工学博士”学位。³像这样一些事实，在学位证书可以用车拉的

近来这些日子里，是引不起人们关注的，但是仍然值得载入史册，因为马博士是获得农学和工学学位的中国第一人。附带说一句，这种学位，和其他种类的学位相比，至今也不多见。

马博士在许多方面都显得早熟，政治生活也不例外。早在他完成工学的课程以前，他已经身心俱在其中。他从十几岁起就是孙逸仙博士的追随者和朋友，早年逗留日本期间有幸与孙博士建立了某种亲密的关系。和这位伟大领袖的关系导致辛亥革命后他作为广西代表来到南京参与《临时约法》的起草工作。我们还记得曾看到过，这一群要人在离吴淞不远的杨行马博士家中拍的一张放大照片，其中，马博士作为最年轻的一员而显得突出。就像那张照片里的要人们协助制定的《临时约法》一样，马博士告诉我们，自从1931年1月28日以来，那张照片本身，也已经进入历史。从1911年到1926年，马博士度过一段非常活跃的政治生活，以各种不同的身份报效国家，他的那些官衔全都是我们想要的——如果可能的话。从1926年第一次担任省立广西大学校长起，他的表现好像已对政治不感兴趣。虽然依旧是孙博士的信徒，但是，不止一次，他曾以毫不委婉的措辞，谴责孙博士所缔造的党、所制定的方针。

但是，马博士首先是一位学者。早年驱使他投身政治的，好像只是年轻人的理想主义。他自德国归来不久，便开始为学生撰写和翻译科学书籍。他还把不少西方文学典籍翻译成中文。他已经没有什么急事要办，他养成了只要不旅行，每天都要译一千字的习惯。由于直到如今还在坚持的这种习惯，他译著数量之大，就像中国人所说，已经达到汗牛充栋的地步。略举几例就够了。在翻译作品中，有达尔文的《物种原始》和《人的世系》，弥勒约翰的《自由原理》、斯宾塞的《社会学原理》、海克尔的《宇宙之谜》，卢梭的《民约论》，以及一大批重要的数学、化学、机械学、矿物学和其他技术学科著作。他还撰写了动物学和植物学的教科书，并且编纂了一部德汉词典。他热爱文学，在他卷帙浩繁的著作中，有一集是他的中文诗。我们还记得看到过《威廉退而》的一个译本，也出自他的手笔。他还是著名的书法家，无论他走到哪里，都会有成群的人带着笔墨和纸来找他，他总是轻松地愉快地满足要求。

尽管他在学术和教育方面取得了显然是重大而令人敬畏的成就，但是从外表是看不出来的，从他色彩缤纷、硕果累累的业绩，很难推出他会给人的印象。总是一身土布衣服，看上去几乎就是乡下佬。他有非常直率的脾气，对讨厌的人毫无耐心。他那一身土气，加上坦诚的性格，有一次引出了一起趣事。在担任大夏大学校长期间，他曾有幸和两个用英语交谈的乘客同坐一起。很快，他就变得不耐烦而打断他们的谈话，问他们，有什么必要用英语交谈，如果本国语言同样好用，即使不更好用。读者不难想象接下去会发生什么。一个人，如果有点才能而又时髦到能用英语交谈，其自尊和自爱都不会容忍这种不请自来的忠告。随后的争吵发展到就要打起来的时候，别的乘客出面调解，平息了这场纷争。不久，人们得知，令他不快的一方，其实是他那大学的两名英语讲师，马博士并不知道他们，他们也不认识这位校长，因为他到任不久。

马博士是跳舞高手，会跳最新式的舞。他打麻将出手很快，总是不

考虑打掉什么牌就摸进新张，完全符合我们刚谈到的那种脾气。如果碰巧他是个输家，他会高高兴兴坚持通宵，即使已经十分明显，最后谁也不会真正付账。他过着一种十分简朴的生活。他喜爱自然，在杨行他的家里，他总是被包围在各种宠物和栽培植物中间。从许许多多蜂箱里，他能够给你把蜂王找出来。他甚至栽培草莓。如果他宴请，他会让你知道请你吃的，全都是他自己和他那位深情相爱的妻子共同劳动的成果。

陈 达

[第2期；1934年1月11日]

Y. R. CHAO (赵元任)

It was Aldous Huxley who said of his great friend D. H. Lawrence that he could do almost everything well. He could sing, dance, talk, cook and make fire better than anyone else; but above all, he could keep silent in company without giving the impression of being sulky. Mr. Chao is like D. H. Lawrence in this respect. The thing which would strike one on meeting him for the first time is that he is unusually uncommunicative and retiring. He is not the sort of person who is always clamouring for public attention. He is quite content to let you do all the talking, while listening to you in a flattering manner as if you were really uttering some very profound truths.

But somehow or other, even when he does or says nothing, one simply feels that here is a man who cannot be overlooked. And so he is indeed! For truth to tell, Mr. Chao is one of the most versatile scholars in China of today. Born in 1892 at Tientsin, Mr. Chao received his early education in Changchow and Nanking. In 1910, he passed the examination for Tsing Hua scholarship to America. He entered Cornell and majored in physics and mathematics, and picked up for himself music, psychology and philosophy. After graduation, he went to Harvard for advanced study of philosophy. From that institution, he got his Ph.D. degree, his thesis being on Continuity, "proving that it was impossible to prove anything and concluding that no universal proposition was true." He went back to Cornell to teach physics in 1919 and after having stayed there a year, he came home and joined the faculty of Tsing Hua College. He was invited to be interpreter for Bertrand Russell during the latter's visit of China on a lecture tour, on account of, to quote himself, "my knowing a score of Chinese dialects" and "knowing some of the queer things that he knows." In 1921, he went to America again to teach Chinese and philosophy at Harvard University. He returned to China in 1925, and since 1929, he has been a research fellow in the Department of Language and History of the National Research Institute (Academia Sinica).

Mr. Chao is much interested in the study of the Chinese language. He has devised a system of alphabetic writing of the Chinese language adequate for scientific, literary and everyday purposes. He has made a set of phonographic records of the National Language, and has compiled a book of Chinese rhymes.

Aside from the above achievements, Mr. Chao has also translated Lewis Carroll's *Alice in Wonderland* and *Through the Looking Glass* into Chinese. The translations are admirably done, considering how

difficult it is to render those masterpieces of English humour into a foreign language.

Mr. Chao's hobby is music. He has in fact composed tunes for many of the poems by Hsu Tse-mo, Hu Shih and others. He has a lot of original ideas about the theory of music and he hopes someday to invent a big fundamental idea (comparable in convenience and simplicity to the two dimensional graphic representation of functions of two variables) by which one can represent time, pitch and a third dimension for different instruments. To quote himself: "The usual notation for a score uses the vertical dimension for two different things in an intolerable mixture. To use solid models of one group of instruments behind another, or different colours for different timbers of instruments would be quite impracticable. I dare say if people could swim freely in three dimensions and draw freely and quickly solid pictures, as do the what-do-you-call-that-fish-which-emits-ink, our thought and expression would be as superior to what it is as this is superior to the ancient literature of knots tied in a one-dimensional string."

Besides his passion for music, Mr. Chao also loves to collect books "and let them lie about me instead of me about them." He is fond of collecting proverbs too, "not for keep sake, but to see what I can do with them." The following are examples of what he has "undone."

1. A friend in debt is a friend you bet.
2. Where there is a swell, there is a sway.
3. Loaf, and the world loafs with you;
Sweep, and you sweep alone.
4. No smoke without fire.
5. Fine leather makes fine boots.

Another of his weaknesses is the collection of seventeen's. This began at a time when he was studying mathematics with a teacher who always used to say: "Take any number, one, two, three, or no matter even if you take seventeen." Since then, he has discovered that quite a number of people take seventeen for their favourite "any number." Once he lifted up the telephone receiver in a hotel in New York and heard the girl announcing herself, "Operator Seventeen!", and he all but answered "Much obliged!"

But above everything else, Mr. Chao likes to collect or rather to concoct nonsensical verse. Here is one done by himself:

I start with once upon a time,
But cannot find a word to rhyme.
And this is just as near the truth,
As $Y\pi$ is π^2 .

The last line, he authoritatively states, is pronounced: "As why to the youth is pie to the tooth."

Mr. Chao is in the habit of sending a printed letter to all of his friends about once a year. He calls them "Green Letters," and the average length of each is about 15 closely printed pages. It is from these letters that most of the material in this article is gathered.

[No. 5; Feb. 1, 1934]

赵元任¹

奥尔德斯·赫胥黎在谈到他的朋友劳伦斯²时曾经说，他几乎做什么都能做得很好。他唱歌、跳舞、谈话、烹饪、生火，比任何人都做得更好。尤为突出的是，他能和朋友们在一起时默不作声，却并不给人以沉闷的印象。在这方面，赵先生很像劳伦斯。和他初次见面就会给人留下深刻印象的，是他的沉默寡言和腼腆孤僻。他不属于总是设法引起公众注意的那类人。他会让你一个人把所有的话都说尽，自己则讨人欢喜地从旁认真谛听，就仿佛你确实是在谈论某些高深的道理。

但是不知为什么，即使他什么也不说、什么也不做，人们也会感觉到，这里有一个不能忽视其存在的人。确实如此！说实话，赵先生是今日中国最多才多艺的学者之一。赵先生1892年出生于天津，在常州和南京接受了早期教育。1910年，他考取清华的留美公费，进入康奈尔大学，主修物理和数学，选修音乐、心理学和哲学。毕业后，又入哈佛进修哲学，并在那里获得他的博士学位。他的学位论文论述了“连续性”，“证明了，什么也证明不了；结论是，没有一种全称命题为真”。1919年，他回康奈尔大学讲授物理学，一年后回国，任教于清华学校。罗素³访华作巡回演讲时，他应邀担任翻译，用他自己的话来说，是由于“我懂得20种方言，还懂得他所懂的一些古怪的东西”。1921年，他再度赴美，在哈佛大学讲授汉语和哲学。他1925年回国，自1929年起任中央研究院历史语言研究所的研究员。

赵先生对研究中国语言很有兴趣。他设计出了一种书写汉语的拼音系统，既适用于科学、文学，也适用于日常生活。他已经灌制了一套国语唱片，还编写了一部汉语韵书。

除了上述成就，赵先生还把刘易斯·卡罗尔⁴的《阿丽思漫游奇境记》和《镜中世界》译成了中文，翻译得非常出色，要知道，把一部英语的幽默杰作译成外国文字该有多难。

赵先生酷爱音乐。事实上，他给徐志摩、胡适等人的好些诗作都配过曲。在音乐理论方面，他也有不少独到的见解，希望有一天能够发明一种极有价值的基本方法（就像使用二维图形表示二元函数一样方便和简单），可用以标记节拍、表示音高和代表不同乐器这三个维度。用他自己的话来说，“标记总谱时，通常的方法是使用垂直的维度来标记过分复杂的混音中两个不同的音。使用一组乐器在前、另一组在后的立体模

型，或是使用不同的颜色来标记不同乐器的不同音色，都是很不现实的。我敢说，要是人能够像喷吐墨汁的乌贼那样在三度空间里自由地游泳，自由而快捷地绘制立体图画，我们的想法和表达方式就会比现在这样的优越，就像现在的想法和表达方式要比远古单一维度的结绳记事性文献优越一样”。

除了对音乐的偏爱，赵先生还喜欢藏书，“让书围着我，别让我围着书”。他还喜欢收集格言和箴言，“并不是为了收藏，而是想要看看我能对它们做些什么”。以下几条就是被他“解决”了的：

1. 欠债的朋友是你下注信得过的朋友。
2. 有隆起必有凹陷。
3. 分食，举世皆愿与你分食；
独吞，只能孤家寡人独吞。
4. 无火不冒烟。
5. 好皮子，做出好靴子。

他的另一个癖好是收集“17”。这种癖好是从他上一位老师的数学课时开始的。这位老师常说：“取任意一个数，不论是1、2、3，甚或是17。”从那个时候起，他发现不少人都喜欢把17当作他们喜欢的“任意数”。有一次在纽约一家旅馆，他拿起电话听筒，听到一个姑娘的声音只是自报了一声“17号接线员！”，他几乎就要说“非常感谢！”

而超过其他一切的，是他喜好收集和编写打油诗。以下这首打油诗是他自己的大作：

I start with once upon a time,
But cannot find a word to rhyme.
And this is just as near the truth,
As Yu is π 2.⁵

其中最后一行，根据他的权威性说明，应该这样读：“As why to the youth is pie to the tooth.”

赵先生习惯于每年给所有的朋友寄一封打印好的信件，他称那些信件为“绿色信件”。每封信的长短平均为排印得很密的15页信纸。这篇短文里的极大部分材料，便来源于那些信件。

EMPEROR MALGRE LUI¹

In the long history of mankind there have been many commoners made emperors; there have been many emperors forced to abdicate the throne; there have also been some exiled emperors who made a successful struggle back to the throne, as, in the case of Napoleon I. But there have been few, if any, instances where a man was made emperor three times without knowing why and apparently without relishing it. Believe it or not, Mr. Henry Puyi holds the world's record in the number of times that any mortal may ascend and abdicate the throne—that is, after March 1 when he will be crowned for the third time.

Yes, Henry was born lucky—if being an emperor as he was can be considered as such. At the age of four, his late uncle Emperor Kwang Hsu died and as he left no offspring, Empress Dowager Tsu Hsi picked Henry as the nearest of kin to be the successor. So, in 1909 when he was a mere infant, Henry was ceremoniously enthroned and was supposed to reign under the title of Hsuan Tung. History does not record how he liked his coronation, but we can easily imagine how a kid of four years old would react when he is forced to leave his bed at four or five o'clock in the morning, to keep quiet on the throne and to watch kowtowing all round. Henry must have forgotten his experience at coronation, otherwise he could have told us how out of curiosity and devilry he tried to snatch the crown jewels from his own head only to be put back again by the Empress who was sitting with him. He must have wished to give up everything—crown, throne, and all—to be able to come down to have a grand tussle with some of his subjects that kept on kowtowing to him.

Whatever it was, it proved to be an unholy thought for a baby emperor and inauspicious for such an occasion, for after only three years of this grand ceremony, the revolution broke out and Yuan Shih-kai whom the Manchus trusted with the task of suppression of the revolution double-crossed his erstwhile masters and suggested abdication. What could the Manchus do against a man who was backed up to the limit by his henchmen who held important positions in the army? Accordingly, in 1912, the boy emperor was made to resign for the benefit of the country. But here again, the luck of the boy carried him through, for instead of having to submit to an ignominious fate and live in retirement as most emperors under similar circumstance would have to do, Henry was allowed to keep the palace and an enormous annuity of 4,000,000. He had lost his empire and all that it would bring, that is true; but for practical

purpose, he was just as comfortably off and could command just as much respect inside the premises of the palace as he ever could. Then, on grand occasions, like new year, birthday, etc., some of his former subjects would come to kowtow to him just as they did formerly.

However, his retirement did not last long. And if he did not appreciate the first coronation, at least he should the second occasion in 1917 when, after the successful coup d'etat by his faithful subject, the late notorious General Chang Hsun, he was again put on the throne. Henry was by this time eleven years old and certainly would have enjoyed seeing so many people fussing over him and paying respect to him. But the sin of his ancestors was evidently too much for him, for in about a week's time, Marshal Tuan Chi-jui's army surrounded Peking and Henry was again forced to abdicate and retire to the palace.

Because of this experience and other reasons, he was chased out of the palace in 1924, when Marshal Feng Yu-hsiang came into power, and he had to seek refuge in the Japanese Concession in Tientsin. It was during this period that Henry enjoyed a little of the life of a normal man. He was now married—to two wives too. He studied English under Dr. Johnston from whom he got his foreign name, Henry, and it was undoubtedly due to this Englishman that he obtained his occasional favorable press comments in English and American journals. He was learning some manly sports, tennis, golf and what not. It was also during this time that his second wife sought to leave him and Henry had to pay her ¥50,000 for alimony in order to keep the matter out of court. Henry is probably the first emperor that has to do that. Usually when an emperor was dissatisfied with his wife, he just cut her head off or had her strangled. However, in spite of desertion and scandal, this was undoubtedly the happiest period in his life. The payment of his annuity had long since stopped, it is true; but he was never in want. Many of his former subjects were still rich and ready to help. Besides he had at his disposal a great amount of palace treasures that he had secreted out with him when fleeing from Peking. Under the circumstances, Henry would have been quite satisfied if he were to be left alone to pass his life in quietude.

But evidently the sin of his ancestor was again working against him, when lo, all of a sudden there came the Japanese coup at Mukden on September 18, 1931, and he was spirited away from Tientsin and the next thing we heard of him was that he was chosen to be the head of the puppet state established by the Japanese in Manchuria. Report has it that Henry is not comfortable in his new surroundings and wishes that he could be restored the liberty and freedom that he enjoyed before. But regardless of his intentions, the Japanese are not yet through with him. They are going to make him

"emperor" once again. The future of the young man is very hard to tell. But those who realize that he is merely a victim of circumstance, in spite of the injustices that his ancestors did to the country, wish him well. May he outlive his usefulness.

[No. 6; Feb. 8, 1934]

不由自主的皇帝

在人类漫长的历史进程中，有不少平民被黄袍加身，有不少皇帝被迫退位；也有一些被流放的皇帝复辟成功，如拿破仑一世。但是，还没有人——如果有也很少——曾被三次尊奉为皇帝而不知其所以然，并且显然不觉得是一种享受。信不信由你，溥仪先生²（英文名亨利），在一个活人登基和退位的次数上，将会是世界纪录的保持者——那是说3月1日以后，他将在那一天被第三次加冕。

是的，溥仪生而有幸——如果当他当过的那种皇帝能被看作幸运的话。4岁，他伯父光绪死去，由于没有子嗣，慈禧太后便把最近的亲属溥仪选为继位人。于是，1909年，只是一个幼儿的溥仪，就行礼如仪登基，以宣统的名义“统治”国家。历史并没有记录他是否喜欢他的登基大典，但是人们可以很容易想象，一个4岁大的孩子，凌晨四五点，被迫离开他的被窝，默不作声地坐在金龙宝座上，看着四周围人人都在向他叩头。溥仪一定已经忘记他对那场大典的体验，否则就能告诉我们，他是怎样出于好奇和恶作剧，试图把皇冠珠宝从自己头上拽下，却只能是被坐在身旁的皇太后重新放回原处。³他一定希望放弃一切——皇冠、御座，和一切——以便从座位上跑下来，和几个不断对他叩头的臣民尽情扭斗一番。⁴

无论如何，事实证明，对于一个娃娃皇帝，这是一种大不敬的思想，对于这种场合，则预示不祥，因为这场大典举行仅三年，革命爆发了，被清廷委以镇压革命重任的袁世凯，出卖了往日的主子，建议退位。面对有着掌握重兵的党羽全力支持的一个人物，清廷能有什么作为？因而，1912年，这个孩子皇帝就被迫而退位以有利于国家了。但是，这时又是这孩子的幸运帮他渡过难关，不必像多数皇帝在类似局面下无可奈何地听凭耻辱命运的摆布，溥仪得以保有他的皇宫，并且获得每年400万两白银的一笔数额巨大的年金。不错，他失去了他的帝国和帝国可能带来的一切，但是，实际上在皇宫之内，他仍可过得同样舒适，享有同样多的尊敬，无异以往。之后，在诸如新年、诞辰之类重大节庆日，他有些往日的臣下还会前来向他叩头，一如既往。

然而，这样一种引退，为时不久。如果他曾经不喜欢第一次登基大典，至少，他应该会喜欢1917年的第二次，在忠于他的旧臣、那位臭名昭著的张勋将军政变成功之后，他又一次被拥上金龙宝座。这时的溥仪11岁，看到那么许多人异乎常情地关心他、向他表示敬意，一定十分开心。但是他祖先的罪孽对他来说是过分深重了一点，大约过了一个星期

⁵，段祺瑞将军的军队就包围了北京，溥仪不得不又一次退位而回到宫墙之内。

由于这一次的经历和其他一些原因，1924年，冯玉祥将军掌握大权，他被赶出了皇宫，而不得不到天津日租界去寻求庇护。正是这一时期，溥仪过上了一小段常人生活。他这时也已结婚，娶了两个妻子。他在庄士敦博士教诲下学习英文，老师给他取了个洋名亨利。无疑，是由于这位英国洋人的关系，英美报刊上偶尔会有一些有利于他的新闻评议。他还学着打网球、高尔夫球之类适合男人的运动。也是这一时期，他第二个妻子谋求离异，溥仪不得不付给她一笔5万元的赡养费，以达成庭外和解。溥仪多半是第一个不得不这样做的皇帝。通常，一个皇帝对妻子感到不满了，不是砍掉她的脑袋，就是让她被绞死。然而，尽管出现了背弃和丑闻，这仍然是他一生最快乐的时期。不错，年金支取早已停止，但是他从不缺钱。他的许多故旧臣下仍然富有，随时都乐于资助。而且，他还有大量宫廷财宝可供支配，那是他逃离北京时偷带出来的。在当时的环境下，他会十分满意，如果，能够让他平静度过余生。

但是，显然是他祖先的罪孽又一次作祟，瞧，1931年9月18日，日本人突然在沈阳发动事变，他被秘密带离天津。我们听到他的第二条消息，说他被选中，充当日本人在满洲建立的傀儡政权头目。有报道说，溥仪对他新的处境感到不舒服，希望恢复他以往享有的权利和自由。但是，日本人毫不顾忌他的意愿，还是要把他又一次立为“皇帝”。这个年轻人的前途难测。但是，不管他的祖先对这个国家做过些什么，了解他不过是环境牺牲品的人们，仍然希望他好好活着。但愿他能够活到可利用的价值用尽之后。

JOHN C. H. WU (吴经熊)

John C. H. Wu, or Wu Ching-hsiung, is a name that is familiar to people of widely different descriptions. The Ningpo merchant in Shanghai recognises in him the son of a late business leader in Ningpo, a son who has distinguished himself in fields of learning entirely beyond the comprehension or dream of his own father or of those Ningpoeese whose names are associated with steamship companies or piecegoods firms. The informed foreigner in Shanghai remembers him as a former Court president and judge noted for tempering the high austerity of the bench with the winning graces of a literary humourist. His friends, however, see in him a many-sided personality brimful of youthful enthusiasm, whose good qualities are seen to the best advantage when put side by side with his weaknesses.

As a jurist of international reputation, Wu is no mere jurist in the ordinary sense of the word. If you ask him about a common legal phenomenon in Shanghai, that is, what is the punishment for a person convicted of a charge of seduction preferred by a dancing girl, very likely he will tell you that he does not recall the precise penalty imposed by the Criminal Code, or that he does not know if it is a crime expressly provided for in the Code. He will promise you to study the case, and pending his being briefed up, will lecture to you on the psychological and sociological issues involved, citing Goethe, Whitman, and Oscar Wilde. The drudgery of looking up the law, he will leave to some of his underlings who can best utilise their talents in digging up the relevant articles in the Code and marshalling the facts in a way to await the application of the Code provision. Wu is always proud to say that he sees the function of law in society sub specie eternitatis, that is to say, in terms of eternity, or as an eternal problem. It might appear a little difficult to see how, with this mental make-up, Wu could have tackled successfully, as he did, such problems as extraterritoriality and the status of the Shanghai International Settlement, both problems being the essence of his work first in his capacity as Acting President of the Provisional Court at Shanghai and later in connection with his advisership on municipal affairs to the Shanghai Municipal Council. This is a lingering doubt in the minds not only of the public but of some of his friends. To many, also, his playful humour is such a contrast to the seriousness of the sort of work he undertakes, for instance, the drafting of a constitution that purports to put an end to the political insecurity in our country. And when his draft constitution was criticised in good or bad faith, by his friends and his enemies, many attribute his "failure" as a

constitution-maker to too much philosophising or lack of interest in political realities.

Wu was not, however, blind to the momentous character of his work. He took into account possibly more political realities than his critics had envisaged. Nevertheless, he considers the distinction between ideals and realities quite a shadowy one. The conventional distinction, when seen in the perspective of history, must fail as soon as it is pitted against the environment of the time. Dogmas in political science and law have to be shattered in order to make room for the best contributions of the age. No less unsatisfying than a constitution that pleases the reigning potentates is one that caters to the taste of scholars whose knowledge about constitutions does not go beyond Bagehot's beautiful essay or the learned treatise in our own language by the present minister of education. Wu's constitution will possibly be known as a piece of art where ideals bear indistinguishably upon the periphery of realities, but is this not true also of the best artistic productions of which we are proud?

Praise him or condemn him as we might, constitution drafting occupies a small place in the purview of Wu's interests. But the pity of it is that even his friends take this as the yardstick to measure his success. The true personality of Wu is not well-understood. He takes delight, indeed, in worldly honours. A secret joy always overtakes him as he recalls that, a young man in his thirties, he was judge of a court, lecturer at a famous American law school and is president of a law school of no mean reputation and has been entrusted with the drafting of the Chinese constitution. At heart, he is, however, a "sad laughing man," like his old friend, Justice Holmes. He regrets that he has been prevented by opportunities, or rather the lack of them, in China from making the best contribution to legal thought of which he is capable. When he was told that his admirers in America thought he had anticipated in his writings many of the thoughts of the most brilliant "realists" of the day in legal philosophy, such as Jerome Frank and Karl Llewelyn, he almost dropped tears.

From feelings of vanity he is indeed not free. Is he not a believer in the classic as well as realistic definition of vanity given by Justice Holmes: "Vanity is the most philosophical of those feelings that we are taught to despise. For vanity recognises that if a man is in the minority of one we lock him up and therefore longs for an assurance from others that one's work has not been in vain"? And has not Gladstone described, with similar truth, vanity as "a defect rather than a vice; never admitted into the septenary catalogue of the mortal sins of Dante and the Church; often lodged by the side of high and strict virtue, often allied with an amiable and playful innocence; a token of imperfection, a deduction from greatness and no more"?

吴经熊¹

John C. H. Wu，或吴经熊，在一些各不相干、完全不同的社会群体中，是一个广为人知的名字。上海的宁波商人会知道他是宁波一位已故商界领袖的儿子，这个儿子已经成了一名声誉卓著的学者，他所熟知的那些学科，是他自己的父亲和那些在轮船公司及布匹行业有名有姓的宁波人所无法理解的。上海见多识广的外国人会记得，他曾经是地方法院的庭长和法官，以擅长用幽默文学作家的动人魅力来缓和法庭高度严肃的气氛而闻名。不过，他的朋友看到的是他充满青春、热情洋溢的多面人格，他的优点与弱点放在一起时会显得更加突出。

作为一名享有国际声誉的法学家，吴经熊并不只是通常意义上的法学家。如果你问到上海一种常见的法律现象——有人由于被舞女指控诱奸而罪名成立，应该受到怎样的惩罚，他很可能会告诉你，他记不清楚刑法典上准确的惩罚规定，或者不知道这是不是法典上确有明文规定的一种罪行。他会答应你研究一下这个问题，而在掌握相关信息之前，他会引述歌德、惠特曼²和王尔德³的诗句或言论向你讲解其中牵涉到的心理学和社会学问题。查看法律条文之类枯燥的工作，他会留给下属去做，最有效地利用他们的才能到法典中去发掘相关的条款，并把事实梳理一番以备应用法典条文。吴经熊经常自豪地说，他总是以永恒的观点看待法律的社会作用，也就是说，这是一个永恒的问题。也许有点难以理解的是，具有这样一种精神气质的他，居然成功地处理了诸如治外法权和上海公共租界的地位这样的问题。解决这两个问题，对于先是作为上海临时裁判厅厅长、后来又成为上海市工部局市政顾问的他，是最主要的工作。这不仅是公众也是他某些朋友的心头挥之不去的一个疑问。而且，在许多人看来，他喜爱说笑的脾气和他从事的严肃工作（例如，草拟一部旨在结束我国政治混乱的宪法），在性质上格格不入。当他的宪法草案受到友人和敌人善意或恶意的批评时，许多人都把他作为宪法起草人的失败，归咎于空泛的议论太多或者对政治现实缺乏兴趣。

其实，吴经熊对自己工作的重要性质并非不知。他对政治现实的考虑很可能要比批评他的人们所设想的更多。尽管如此，他仍然认为理想和现实之间的区别十分模糊。从历史的角度看来，只要和当时的环境稍一较量，传统的区别便难以成立了。政治学和法律中的一些教条就必须被打破，以便为时代的最佳贡献让出空间。和一部取悦统治者的宪法一样难以令人满意的，是一部迎合学者口味的宪法，而这些学者有关宪法的涉猎超不过白哲特⁴漂亮的文章或是现任教育部长用汉语写作的学术论文。吴经熊的宪法很可能被当作一件艺术品，理想和现实的表面逼近得难以分辨——我们引以为豪的艺术珍品难道不也是这样？

我们可以赞扬他，也可以批评他，但是宪法起草在他兴趣广泛的活动中只占一小部分。可惜的是，连他的朋友也以此作为衡量他成就的尺码。吴经熊的真实个性并不为人们充分理解，不过他实在是喜欢世俗荣誉。每当想起他三十来岁就当上了法官和一家著名的美国所办大学⁵法学

院讲师，到如今已是这所响当当的法学院的院长，并且被委以起草中国宪法的重任，他就会暗自欣喜。但是在他的内心深处，他是一个“苦笑的人”，正如他的老朋友霍姆斯法官⁶一样。他为自己未能有机会在中国在他本来可能有所建树的法学思想方面作出最佳贡献而深感遗憾。有人对他说，他在美国的仰慕者认为，在他的著作里早就提出了最出色的法理学“现实主义者”杰尔姆·弗兰克和卡尔·卢埃林之流的许多想法，他听了几乎要流下眼泪。

他确实未能摆脱虚荣的情绪。难道他不相信霍姆斯法官对虚荣所下的经典而实在的定义：“虚荣，在我们被教育应该鄙视的所有情绪中，是最有哲学意味的一种。因为虚荣承认，如果一个人处于孤独的少数地位而受到人们的歧视，就会期望别人对他工作并非徒劳有所确认”？难道格莱斯顿⁷不也曾同样正确地说过：虚荣是“一种缺点而不是罪过，从来也不曾被开列在但丁或是基督教会七宗重大罪过的清单之内，倒常常被安排在崇高严谨的美德一边，常与友善顽皮的天真结盟，是不完美的一种标志，是伟大因之减色的亏欠，不过如此而已”？

[第7期，1934年2月15日]

MISS KAO KYUIN-SAN (高君珊)

I remember distinctly that night in a very cosy, though small, attic room on South Division Street. Ann Arbor was at its gayest when Freshmen came to taste the life of a university, Sophomores to grow into upper classmen and be wiser, and Juniors and Seniors to graduate and be married. So Kyuin-san crossed the Pacific for the second time to join the University of Michigan as a fellow in education. But that was nothing unusual—so many Chinese have been fellows before. The important factor was that I met her in that little attic room. Outside, there was lightning and thunder, and rain poured out of a pale September sky. There were three of us: a graduate scholar in Physics, Kyuin-san and I. We were sitting beside a desk which was much too large for the room, the Physics scholar in an armchair too big for her size, Kyuin-san occupying the seat in front of the desk, and I on a stool. With this incongruous immenseness around us, we talked about problems too immense for our comprehension and felt how little we were. Kyuin-san was telling us about the great fire in Shanghai, the cause of which one could only guess at but never make known. She told us of the poverty and sufferings of our people back home. At this, in the innocent idealism of our college days, the Physics scholar and I made a vow that we would "serve," and "sacrifice" for, our country when we came back. It thundered more, rained more. The night was growing into dawn, and the stillness of the little attic room set our hearts afire. We looked into Kyuin-san's face with almost childlike simplicity and beheld wonders in it. But our idealism faded into nothingness. The Physics scholar is now burying herself in a research laboratory; Kyuin-san still sticks to her education; and I—never mind about me.

But the idealism is not totally lost, at least not with Kyuin-san. It is not because she is a Professor of Education at Yenching University and therefore is an educator of man; but rather she educates herself. She is the symbol of both old and new. All that of the old culture and literature which the modern women lack lies in her; and yet many of the new fads and fashions which they indulge in she does not adopt. But she is not prim and biased and prejudiced. She has humour and can take a joke. A friend once said to her good-naturedly: "You looked saintly years ago, but now you are touchable."

If I were to draw a caricature of her, I would have her holding a baby in one hand, and a magazine, preferably the Life Weekly, now defunct, in the other. If I could possibly add a third without being misunderstood to be insulting, I would have that hand hold a pen and

a postcard. On it she should write 文章虽好，性命要紧 ("It is fun to write, but life is just as precious"). This was a little piece of advice which she gave to Hu Shih when she left for America in 1929, the two being very good friends. Evidently the advice proved very useful and was well taken.

Did I not say a baby? Well, this is the consummation of her humour. She adopted one. And I dare say no real mother ever loves and cares for her baby better than she does. In fact she does too much. Her room is a nursery, and her Peiping quarter will soon, I am afraid, be a kindergarten! Once Kyuin-san took her child to see a friend of hers. The child asked on the way, "Will auntie give me candy?" The auntie, whose mind was, perhaps, more on other things than on children, gave her none. Thereupon the "mother" bought her some instead. A sneeze from the baby means a trip to the doctor's; her teething trouble means a dentist's bill. Magazines, periodicals and books on education will gladly give place to "how to take care of infants" if the baby cries.

Indeed, Kyuin-san is happy, for she has found her true vocation as the "mother" of an adopted child.

[No. 8; Feb. 22, 1934]

高君珊女士¹

我还记得非常清楚，那天夜晚，在安阿伯²南区大街一间非常舒适的顶楼小房间里，那是安阿伯最欢快的时节，一年级的新生前来体验大学生活的滋味，二年级的大学生就要升级而增长智慧，三年级、四年级的大学生将要毕业、谈婚论嫁。就是在此时节，君珊第二次横渡太平洋，来到密歇根大学做攻读教育学的研究生。但是，这没有什么不寻常的——毕竟，早已经有了不少的中国研究生。重要的是，我在那间顶楼小房间里遇到了她。房间外边，灰蒙蒙的九月天空，电闪雷鸣，大雨滂沱。当时，同在一起的有我们三个：一个物理学的毕业生、君珊和我。我们坐在一张对于整个房间来说显得过大的办公桌旁：物理学家坐在对她来说显得过大的扶手椅上，君珊占据着办公桌前的位子，我坐在一只凳子上。围坐在这张比例尺度不协调的大桌子周围，我们谈论着难以理解的问题，感觉到自己那么渺小。君珊告诉我们有关上海火灾³的情况，但是，起火的原因只能凭猜测，永远不会有人公布。她告诉我们国内人民的贫困和苦难。说到这儿，在那天真的大学理想主义时代，我和物理学家都宣誓，将来回去一定要“报效”我们的国家，甚至不惜为国“牺牲”。外面的雷打了又打，雨下了又下。黑夜逐渐转化成为黎明，顶楼小屋的寂静使我们的内心热血沸腾。我们凝视着君珊几乎像孩子般单纯的面孔，看到了理想成真的奇迹。但是，我们的理想主义已经消失得无影

无踪。那位物理学家，现在正在一家研究室内埋头工作；君珊，还在坚持她的教育；而我——不必介意我在做些什么。

但是，理想主义并没有完全丢失，至少就君珊的情况来说是这样，并非因为她是燕京大学的教育学教授而成了教育人的教育家，而在于她对自己进行的教育。她既是旧的也是新的象征。所有和旧文化、旧文学相关而为现代女性所缺乏的，在她身上都有；而她们所热衷的大部分时髦和风尚，她却不接受。但是她也并不故作正经、抱持成见或偏见。她有幽默感，也开得起玩笑。一个朋友有一次和善地对她说，“几年前你看上去像个圣徒，但是现在，你已经能‘触摸到’了。”

如果我给她画一幅漫画，我会让她一手抱着婴儿，另一只手拿本杂志，最好是现在已经停刊的《生活周刊》。如果我可以画第三只手而不被误解为侮辱的话，我要让那只手拿着钢笔和明信片，卡片上写下的是“文章虽好，性命要紧”的字样。这是她1929年出国赴美时留给胡适的忠告，他俩是非常要好的朋友。显然，这则忠告非常有用，也被愉快地采纳了。

我刚才提到婴儿了吧？不错，这是她好性情的完美表现，她领养了一个孩子。我敢说，没有一个真正的妈妈对孩子的爱护能够和她相比。事实上，她关爱得有点过分。她的房间成了育儿室，我担心，她在北平的住宅很快就会变成一个幼儿园！有一次，君珊带着她的孩子去看朋友。孩子在路上问：“阿姨会给糖我吃吗？”那位阿姨也许心里正想着别的事情，没顾得上孩子，没有给她糖果。因此，“妈妈”便自己买了一些给孩子吃。孩子打个喷嚏，她就要带着去看大夫；孩子出牙期有问题，就意味着牙医有进账了。孩子一哭，有关教育的杂志、期刊和书籍，全都会乖乖地让位，让她“躬身去照顾孩子”。

实际上，君珊是幸福的，因为她找到了真正的职业，那就是作为领养孩子的“妈妈”。

[第8期，1934年2月22日]

DR. HU SHIH (胡适), A PHILOSOPHE

To a few, Dr. Hu Shih is either a good enemy or a very good friend. To the rest, he is a big brother (老大哥). All own him to be affable and charming—even his worst foes. He knows all the graces of a gallant, without himself being a gallant. In all those little, but indispensable, "airy nothings" which endear a man to society, especially to the company of ladies, Dr. Hu is an adept. He has the happy knack of making everybody feel at home in his company. The proud are flattered by his attentions; and nincompoops feel important by his treatment of them as his equals. In the best sense of the word, Dr. Hu is a democrat: he has not a touch of either social or intellectual snobbishness.

Dr. Hu keeps open house on Sundays. Nobody then is refused entrance to his house. With everyone, whether student or communist or businessman or robber, he is equally patient in hearing as in speaking. Those in distress, he helps. For those who want jobs, he writes letters of introduction. Some who seek enlightenment on points of scholarship, he tries to the best of his ability to satisfy. Others who just go to say "How do you do?", he entertains by odds and ends of news. All go away from his house with a sense of time well spent.

A little over forty, Dr. Hu looks much younger than his age. Clean shaven and neatly attired, he is neatness itself. Hair all jet black, with no touch of gray, prominent Augustan forehead, with eyes large and frank, a mobile pair of lips, suggestive of eloquence and an easy flow of speech, a good complexion, Dr. Hu's face suggests neither a scholar's "simple living and high thinking," nor a man-of-the-world's "good board and fast living." Of medium height, just right in size, agile and free in his movements, Dr. Hu has the appearance of a man-of-the-world turned scholar, rather than a scholar turned man-of-the-world.

Dr. Hu's knowledge is prodigious. Something of everything, he knows from the composition of aphrodisiacs to the most abstruse doctrines of Buddhism. He reads extensively: Tchehov, some of whose stories he has translated; Chinese poetry, of which he has formed an anthology(词选); early Chinese philosophy, on which he has written a book; Buddhist philosophy, of which we have scraps from his pen, now and again; Chinese and European novels; and so on ad infinitum. And he writes on the most diverse of subjects—politics, social questions, history, evolutionary theories, textual criticism, etc. etc. A mere glance at the contents of his collection of articles (胡适文存) will give us some idea of the range and versatility of his mind. This plus

his conversation, breezy, often informative, never pedantic, will give us a complete picture of his mind.

Dr. Hu is not one of those who keep and hide their talents underground. What he has, he shows. What he is, is all there—in his books, in his conversation, in his ways. He does not believe in hiding anything. There is no mystery in him: all is sunshine, and no shadow. His mind is like one vast, brilliantly lighted lake, where are no deep romantic chasms nor echoes of the other world. In such a lake, we are not interested in its depth, but in its surface, which reflects everything, and which has the power of giving us neat, clean, ordered pictures of Cosmos. In such pictures, nuance, soul, religion have no place.

Dr. Hu is justly admired for the lucidity of his style. *Le style, c'est l'homme*. We think of the lucidity of Haeckel's style, and then, all at once, a simple scheme of the Universe, explainable in terms of matter, force, and the inheritance of acquired characters, forms itself in our minds. We think of the lucidity of Huxley's style, and then, all at once, Man becomes a very simple animal to understand. We think of the lucidity of John Stuart Mill's style, and then, all at once, we find the processes of thought all arranging themselves under syllogisms and propositions. Have not Haeckel, Huxley, and Mill, had something to do with the admirable lucidity of Dr. Hu's style, and with the still more admirable lucidity of his Credo?

Because Dr. Hu has taught philosophy for many years in Peking National University, he has been called a philosopher. Of course, he is that; but surely, the term "philosopher" hardly describes all his activities. Because Dr. Hu writes very often in periodicals on subjects of general interest, he has been called a pamphleteer. Yes, he is that; but it would be a gross libel if any one were to think that he has the opportunism and the mentality of a pamphleteer. Because Dr. Hu never denies himself the goods of this world, he has been dubbed a man-of-the-world. Of course, he is that too; but such an impression of him can only be possible to one, who only knows him at dinner-parties. If there is one word to describe the kind of man Dr. Hu is, I think the word *philosophe*, in its eighteenth century sense, would fit in pat. Voltaire, D'Alembert, Holbach, Helvétius, Diderot, Jeremy Bentham, were all *philosophes*. They all had in them something of the worldling, something of the scholar, something of the man of affairs, and something of the philosopher. They had precise views about the scheme of the universe; and they all wrote with the optimism and the confidence of a man of affairs, in a style as authoritative as it is clear, on all sorts of subjects under the sun. Right or wrong, they had the courage of their opinions. Of this band of *philosophes*, Dr. Hu is not the least distinguished member. And in China, I am not sure that he is

胡适博士¹，一位哲人

胡适博士，在少数人心目中，不是厉害的对手就是很好的朋友。对于其他人而言，他是老大哥。所有人都承认他和蔼可亲、招人喜爱，甚至他的死对头也这样认为。他不是风流绅士，但是风流绅士处世交友那一套他都不生疏。在寒暄、恭维、献点小殷勤等以博取社交界特别是女士们的好感这些不足挂齿却又不可或缺的手段方面，他都算得上高手。他有本事使每一个和他相处的人都无所拘束。傲慢的人由于得到他的殷勤款待而沾沾自喜，庸碌之辈会由于受到平等对待而觉得身价倍增。胡博士是最佳意义上的民主人士，没有沾染一点点无论是基于社会地位还是知识水平的势利习气。

胡博士的家门每星期天都对外开放，来者不拒。任何人，不论是大学生还是共产主义者，是商人还是盗贼，只要开口，他都会耐心倾听、耐心叙谈。对于深陷困境的，他会给予帮助；对于寻求工作的，他给写介绍信。有些人来请教学术问题，他总是尽其所能加以满足；也有些人只是前来问候，他便给以零零碎碎的新闻或消息。所有的来客离去时都会觉得不虚此行。

四十出头的胡博士，看上去要比实际年龄年轻得多。刮得干干净净的一张脸，整洁入时的衣着，称得上衣冠楚楚。他头发乌黑，不见一丝灰白；饱满的奥古斯都²式额头，一双坦率的大眼睛，两片显得能言善辩的、灵活的嘴唇，面色红润。胡博士的面孔既不会使你想到学者的“大脑发达、生活简朴”，也不会使你想到俗人的“饮食丰美、生活放荡”。胡博士中等身材，肢体匀称，反应灵敏，举止自如，看上去更像是由俗人变成的学者，而不是学者变成的俗人。

胡博士学识渊博，他对万事万物——从春药的配制到佛教的深奥佛理——全都有所了解。他涉猎颇广：契诃夫³，他翻译过他的短篇小说；中国诗词，他编选过一部《词选》；中国早期哲学，他写过相关的著作；佛教哲学，他常有长短不拘的文字问世；中国和欧洲的小说；诸如此类，不胜枚举。他执笔议论的问题是五花八门——政治、社会问题、历史、进化论、文本考证等等。只消看一眼《胡适文存》的目录，就可以对他的多才多艺和涉猎之广多少有个印象。再加上他风雅有趣、常常是知识丰富而并非卖弄学问的谈吐，就能给我们一个完整的印象。

胡博士并不是喜欢把自己的才能掩藏起来的那种人：他有什么，就显示出什么；他是什么，就都在那儿了——在他的著作、他的谈吐、他的行为方式中。他不想有所隐瞒，在他的身上没有什么神秘：只有阳光，没有阴影。他的心胸仿佛是一片明亮如镜的广阔湖泊，没有浪漫的深沟，没有彼岸的回音。对于这样的湖，我们关心的不是深度，而是如镜的湖面。那湖面反映一切，能够把一幅幅精致、明净、有序的宇宙映

像呈现在我们眼前。在这样的画面里，没有玄妙、灵魂和宗教的位置。

胡博士的文风简洁明快，当之无愧地受到了称赞——文如其人。我们想起海克尔⁴的简洁文风，一个可以用物质、力、获得性状遗传加以解释的宇宙模型，就会立刻出现在我们的脑海里。我们想起赫胥黎⁵的简洁文风，人就立刻变成了非常简单的动物而不难理解。我们想起约翰·斯图尔特·穆勒⁶的简洁文风，我们就能立刻认识到思想按照三段论和命题形成的过程。海克尔、赫胥黎和穆勒与胡博士文风值得赞叹的简洁，甚至与他那更加值得赞叹的信条的简洁，是不是也存在着某种关系呢？

因为胡博士在国立北京大学讲授哲学多年，人们称他为哲学家。当然，他的确是个哲学家，但是“哲学家”这个称呼却不足以描述他所有的活动。因为他时常给刊物写文章，对普遍关心的问题发表议论，他也被称为小册子作家。不错，他的确是个小册子作家，但是，如果认为他也有小册子作家那种机会主义和心理状态，这一称呼对于他就成了极大的污蔑。因为胡博士从不摒弃世俗财富，有人就说他是个俗人。是的，他也实在是个俗人，不过，能够产生这样一种印象的，也只限于仅在宴会上认识他的人。如果世界上有一个名称能够用来称呼胡博士这样一种人，我想18世纪那种用法的philosophe（哲人）⁷就恰好合适。伏尔泰⁸、达兰贝尔⁹、霍尔巴赫¹⁰、爱尔维修¹¹、狄德罗¹²和杰里米·边沁¹³全都是哲人。在他们身上，俗人、学者、实干家和哲学家的成分全都有。他们对宇宙的结构模式都有个精确的看法，写东西都有一种实干家的乐观和自信，都用明快而有权威的文笔谈论太阳底下各种各样的问题。无论是对是错，他们全都有勇气发表和坚持自己的主张。放在这一群哲人中间，胡博士也不是最逊色的一個。而在中国，我不敢说他就不是唯一的当代哲人。

[第9期，1934年3月1日]

FENG YU-HSIANG (冯玉祥)

Feng Yu-hsiang—around that name there are, we suspect, more controversies than that of any other contemporary of ours. Have we not heard of him as a mean schemer, a treacherous ally, and have we not heard of him as man of integrity, the most honest of warlords? Have we not heard of his thrift, and have we not heard of the luxuries under the cloak of his thrift? Because of these contradictions and the tales purported to support them, his name has an air of mystery that fascinates one, and so I find myself querying those who know something about him, every time I have a chance.

One of General Feng's former teachers, now in the government service, bluntly sums up his formula of this mysterious personality thus: a half-baked person with a single-track mind. When General Feng was known as the "Christian General," he truly believed that China's salvation lay in Christianity; when he allied himself with Russia, he really believed that that was the only way to save China; later, when he supported General Chiang Kai-shek in ousting General Chang Tso-lin from Peking and the communists from Kuomintang, he sincerely believed that he was doing the only thing that could rescue China and that the realization of the San-Min-Chu-I would mean a millenium for our country. He believed in one thing at a time to the exclusion of everything else; he has the single-track mind because he is half-baked, and he is half-baked because he is a self-educated man, whose reading has been omnivorous rather than intelligently chosen.

Although it was due chiefly to his military strength that the Peking regime collapsed so soon, he publicly declared that what was good for the central government and China he would willingly accept, that the garrison posts of his troops were of no consideration at all, and that General Chiang and the central government would play fair. But when the central government decided to snatch the Hopei and Shantung provinces from him, well, the whole world knows the story already. That's human, all too human, we all can afford to be idealists when idealism doesn't touch our purse.

Another man, one of his former subordinates now living in retirement, paints a full-size portrait of him. As a boy Feng lived near Tientsin, and the pillages of Tientsin and Peking by the foreign troops during the Boxer Uprising made a lasting impression on him. However, it was due more to the desire to support his father, a retired army officer and an opium-smoker, than to defend the country that he entered the army. He was ambitious, and he began to study in spite of the jeers and mortifications of his fellow soldiers. He was filial,

patriotic and loyal to the throne. It was said that when Empress Dowager died, he cried bitterly for days. With his ambition, his excellence in military drill, and his ability to read and write, he found himself, in 1911, a major at the head of one battalion, with which he staged a revolt at Luanchow, that ended in failure. Somehow those three years between 1908 and 1911 found him greatly changed from a loyal officer to a revolutionist, to which his ability to read must have contributed no small part. However, during the first years of the republic his loyalty was transferred from the crown to his superior officers, and he never raised the standard against Yuan Shih-kai when the latter attempted to make himself emperor, for his connection with the revolutionists had never been very close.

Having been a commoner among the people and a private among the soldiers, General Feng well knew their sad plight and tried as was within his power to alleviate their conditions. This is the tenet of his patriotism and the guiding principle of his life, which remains the same, though his formulas for attaining the desired goal—a prosperous China free from foreign domination—changed with time and circumstances. This accounts for the strict discipline of his troops, which were also well cared for; and it was this more than anything else that was responsible for his conversion to Christianity. The hospitals, orphanages, and schools of the missionary found a warm corner in his heart; he believed that the salvation of China reposed in Christianity, and he tried to Christianize the soldiers under him. It was at this period too that he came into closer contact with revolutionists, for at that time many Christians were revolutionists, notably Dr. C. T. Wang and George Hsu Chien. Though he was now opposed to the Peiyang warlords, still he was loyal to his commanding officers, because he was a better soldier than a revolutionist, and because he knew that he was not strong enough to oppose them.

Later he joined Wu Pei-fu against Tuan Chi-jui, and was made Military Governor of Honan; but, just as he was planning to do something for the people of Honan, General Wu transferred him to Peiping. This highly displeased him and, together with their difference regarding certain political issues, accounted for his coup d'etat, overthrowing the Tsao Kun regime. But he was not yet powerful enough to have his way in North China, and his failure to oust General Chang Tso-lin ended in his own departure from the country.

In Russia he imbibed quite a part of communism, but he was too nationalistic to embrace it whole-heartedly. The Russians knew this and that was why they gave him such a mere pittance of support. This in turn swung him to General Chiang Kai-shek, but when General Chiang decided to give Tientsin and Peiping to General Yen Shih-shan, Feng felt himself cheated; for he had set his mind at being the master

of North China so that he could do something for the people, and from the very beginning he felt that he was cooperating with Kuomintang rather than a mere cog in the party wheel. He revolted because of the conflict of interests; but his last conflict with the central government in Charhar was one more of policy than of interests.

Yes, General Feng was largely a child of circumstances, his opinion and his policy are largely a result of the persons around him. He is honest, but too simple; and he thought, when he was in Nanking, that China could be saved by the officials getting less pay and leading a simple life. Being a simple man himself, and seeing the logic that both men and officers are employees of the government and are to serve the country, he would not allow his officers such little comfort as smoking, not to say luxuries. That is why his generals left him and would not come back to him, leaving him "without capital," as he said in his reply to Fukien's invitation to join the revolt. Perhaps, the finis is written over the public career of an extraordinary man, who rose from a private to a commander of 300,000 men at one time.

[No. 10; Mar. 8, 1934]

冯玉祥¹

冯玉祥——在我们同时代的中国人中，可能没有谁比这个名字引发过更多的争议。难道我们不曾听说，他是个卑鄙的阴谋家，是个背信弃义的盟友？难道我们不也听说过，他是个正直的人，是最诚实的军阀？难道我们不曾听说他生活俭朴，难道我们不也听说过他俭朴外衣掩盖下的奢侈？由于这些彼此矛盾的说法，和各种旨在支持这些说法的故事，他的名字便蒙上了一层使人如坠迷雾的神秘氛围。所以，我要是遇到了对他多少有所了解的人总要打听一番，绝不错过任何一次机会。

冯将军早先的一位老师，目前在政府任职，把他对这位神秘人物的评价概括为这样一句话：一个稀里糊涂的人，一个不知变通的头脑。当冯将军被叫做“基督将军”时，他果真就认为基督教可以救中国；当他和俄国结盟时，他确实就相信那是拯救中国的唯一道路；后来他支持蒋介石将军把张作霖²赶出北京、把共产党人清除出国民党，他也真诚地认为这是挽救中国所能做的唯一的事情，认为实行三民主义就意味着我们国家的千年好景。在他相信一件事情的同时就会把其余的一切排除在脑外。他有一个不知变通的头脑，是因为他稀里糊涂的；他稀里糊涂，则因为他是自学成才的——他读的书十分庞杂，没有经过明智的选择。

虽然主要是由于他的军事实力，北京政权才会那么快垮台，但是他公开声明：只要对中央政府有利、对中国有利，任何解决方式他都乐于接受；他属下部队的防区不足为虑；蒋将军和中央政府自会公平处置。但是当中央政府决定要从他的控制下夺走冀、鲁两省，瞧吧，全世界都

已经知道故事如何发展了。那是人之常情，太合乎人情了。我们全都当得起理想主义者，只要理想主义不来碰我们的钱包。

另一个人，是他以前的部下，现在已经退休，对他的标准描绘如下所述：少年时代的冯玉祥居住在天津附近，义和团运动期间外国军队对北京和天津的掠夺，给他留下了终生难忘的印象。但是他后来入伍当兵，在更大程度上是为了供养他的父亲——一个吸鸦片的退伍军官——而不是为了保卫国家。他胸怀大志，不顾入伍伙伴的嘲笑和羞辱，开始学习。他孝顺、爱国、忠君。据说，慈禧太后死的时候，他恸哭了好几天。由于他的远大理想、在训练中的出色表现以及他的文化程度，1911年，他就当上了一个营的管带。他领着这一营人在滦州造反，结果以失败告终。不知怎么地，在1908到1911这三年间，他由一个效忠清廷的军官变成了一名革命分子，他的文化程度一定是起了不小的作用。然而在民国初年，他也只是把他的忠诚从君主转移到了他的上级长官身上。袁世凯试图称帝时期，他从不曾举旗反抗，因为他和革命党人的关系从来就不十分密切。

由于在人民中间曾经是普通百姓，在军人中间曾经是普通一兵，冯将军了解他们的疾苦，因而总是在力所能及的范围内努力改善他们的处境。这是他的爱国主义信条，也是他为人的准则。虽然，他赖以实现目标——一个摆脱外国统治的、繁荣昌盛的中国——的方案随着时移势易而有所变化，那信条和准则至今依旧。正因为如此，他的部队纪律严明、训练有素，并能得到良好的照管。也正是由于这个而不是别的什么原因，导致他信奉了基督教。医院、孤儿院、教会学校，在他的心里找到了温暖的关怀。他相信，要救中国还要靠基督教，所以他试图使部下的士兵全都皈依基督。也是在这个时期，他和革命党人建立了密切的联系，因为那时候不少基督徒都是革命党人，著名的就有王正廷博士³和徐谦⁴。虽然他现在反对北洋军阀，但是他仍然忠于他的司令长官，因为他作为军人要比他作为革命党人更加合格，也因为他知道他还没有强大到足以对抗他们。

后来他参加吴佩孚⁵反对段祺瑞⁶的斗争，被任命为河南督军；但是正当他准备为河南人民做一些事情的时候，吴佩孚把他调到了北京。这种调动使他很不高兴，再加上他们在一些政治问题上的分歧，促使他发动了一次推翻曹锟⁷政权的政变。但是他的力量还不足以使他在华北为所欲为，而未能赶走张作霖将军的失败之举，则以他自己的出国而告终。

在俄国，他受到不少共产主义的熏染，但是他是一个太坚定的民族主义者而不可能全心全意地接受共产主义。俄国人对这一点也有数，所以只给了他十分有限的支持。于是他又摆向蒋介石将军，但是当蒋介石决定把天津和北京（后改称北平）交给阎锡山将军⁸时，冯将军觉得受到了欺骗。他早已打定主意要做华北的主人，这样他才能为人民做一点事情，而从一开始他就觉得自己是在跟国民党合作而不是它的一个无足轻重的卒子。他以前反叛，是由于利益冲突；但是最近一次在察哈尔和中央政府的冲突，却更是一场政策冲突。

是的，冯将军在很大程度上是环境的产儿，他的主张和政策在很大程度上是他身边人物影响的结果。他为人诚实，但是过于简单。在南京的时候，他以为只要官员们少拿点俸禄，生活简朴一点，中国就能得

救。他本身十分简朴，而且认为士兵和军官全都是政府的雇员，理当为国家服务。对他的军官，连抽烟这样的小享受他都不允许，更别提奢侈的生活了。这就是为什么他的部将会离开他并且再也不愿意回到他身边的原因，就像他答复福建邀他参加起义⁹时所说，已经使他再“没有资本”。也许，这个从普通士兵上升为30万人统帅的非凡人物，其公共职业生涯的最后章节已经写就。

[第10期，1934年3月8日]

HSU TSE-MO (徐志摩), A CHILD

Shelly's love affairs are notorious. To Victorian eyes, they are shocking. Matthew Arnold, so very interesting in his views on literature, right or wrong, made a big fool of himself, when he came to touch on Shelly's sexual relations. But Time has vindicated Shelly, cleared him from all mud, and metamorphised him into Ariel—a butterfly, fluttering about from one flower to another, a frail, slight thing, creature of the air, as beautiful as it is innocent. Shelly's *Epipsychidion* is the song of an ideal lover, who does not love this or that woman, but every woman, in whom he finds a reflection of Ideal Beauty, whether in hand, face or voice.

Well, Tse-mo's relations with women are exactly like Shelly's. Let no woman flatter herself that Tse-mo has ever loved her; he has only loved his own inner vision of Ideal Beauty. Even a pale cast of that Ideal in any woman, Tse-mo loves. His burning incense at many shrines is no disloyalty, but rather it is the essence of his loyalty to his Ideal. Like the shift and play of shadows on a bright summer day, Tse-mo flits about from one girl-friend to another: but inasmuch as the shadows are caused by one sun, so also is Tse-mo's love due to only one thing—his vision of Ideal Beauty. To that he is ever a faithful votary, not only in his relations with women, but also in his writings, in his friendships with men, and even in the vagaries and irregularities of what appears at first sight to be nothing but a disordered kind of existence, at once brief and tragic.

Tse-mo, the man, is much greater than Tse-mo, the poet. We like, many of us, his poetry, because he wrote it. I doubt if there are any who like him, because of his poetry. His personality is his genius. The more of him, therefore, there is in anything he does or says, the more of magical charm it has for us. This is why his prose is so much better than his poetry: there is more of him in it than in his verse. Reading his prose, we become aware, all at once, of the glamour and the unearthly brightness of his personality: his lineaments, the accent of his talk, the rhythm of his speech—its aliveness, at one moment its sinuous retreat into some interesting irrelevancies, at another its victorious return to the main flood of chat, so eager, so ardent, as if nothing matters but chat for chat's sake—they are all there in his prose. His poetry, on the other hand, is one remove from his personality. There is something extraneous about it: it is not a part of, but an excretion, so to speak, from him. Whatever prestige it enjoys is borrowed from his personality. With the passing of the years, as Tse-mo becomes more a memory and less an obsession, his poetry too, I

fear, will lose something of the radiance it now has. I am not sure, now that he has been dead two years, if it hasn't already suffered a little fading.

What is the secret of Tse-mo's personality? Is it physical? Something in that. But physically more impressive and more handsome than Tse-mo, there are literally thousands, who yet have not one tenth of his fascination. His nose is too large, his eyebrows too nondescript, his mouth somewhat over-drawn, and his jaw a little heavy looking, to be really beautiful. No, the secret of his charm lies elsewhere. It is to be found, I think, in his temperament and in his mind. They are the temperament and the mind of a bright, clever child, who can never grow old, who has an insatiable curiosity about the things around him, who makes no distinction between the world of wake and the world of dream, who can never hate anyone, and to whom it never occurs that anybody can really dislike him. Experiences brush him by, they cannot transform him. He plays about with things, as a child his toys. Ideas, the Theory of Relativity, Chandra Bose's discoveries in botany, the Irish Renaissance, Tagore, Liang Chi-chao, Cézanne's paintings, Picasso's drawings, Mei Lan-fang, Kreisler—they all provide him with endless entertainment. His life is a continual round of visits to friends. The places he stays in are mere corridors for his friends to go through. The wonder is that he ever finds time to write as much as he does. What to others would be vexatious interruptions, is to him nothing, but joyous variety; and variety is life to a child.

There are sorrows to be sure, in Tse-mo's life: keen and poignant, like those of a child; but lasting no longer than the morning dew. Pain is often inflicted by him on those he associates with; but the pain is robbed of half its hurt, because the hand that inflicts it is innocent. Like a child who kills birds and pulls out the wings of flies, Tse-mo can also, at times, be very cruel to people, without his knowing it. A creature of impulse, wholly innocent, Tse-mo breaks glasses, scatters flowers, and riots through a brake of brambles, as part of the day's play.

Some say, they see signs of maturity in Tse-mo's latter days. If so, a good thing he died when he did. And what a fairytale death it was! Died in an aeroplane crash, and against a mountain too! A poetic death, a child's life: what better fate can the gods grant to mortal man?

徐志摩¹，一个孩子

雪莱²的爱情故事已经尽人皆知，在维多利亚时代³的人们看来，那是惊世骇俗的。马修·阿诺德⁴的文学评论，无论正确与否，都能引人入胜，但是一触及雪莱和女性的关系，他却变成了一个大傻瓜。但是，时光老人已经为雪莱辩诬，洗清了他身上所有的泥污，把他变成了爱丽儿⁵——一只在花朵与花朵之间飞来飞去的、轻盈而脆弱的蝴蝶，一个在空中飞舞的美好而且天真的生灵。雪莱的《心之灵》，是一曲理想的情人之歌，他爱的并不是这个或那个女人，而是每一个女人。在她身上，无论是手上、脸上或是说话的声音里，他发现了理想美的某种反映。

是的，志摩和女人们的关系就和雪莱完全一样。哪一个女人也不要被徐志摩爱过而自鸣得意，他爱过的只是他内心理想美的幻象。即使只是那种理想在某个女人身上的苍白投影，他也爱。他在许多神龛前烧香并非不忠，倒是忠于理想的本质表现。志摩用情于一个又一个女友，就像晴朗夏日飘忽不定的影子；也像影子全都由太阳引起一样，志摩的情爱也只有一个来源——他理想美的幻象。他永远是这种理想美的忠实信徒，不仅表现在他和女人的关系上，也表现在他的写作里、他和男人的友谊上，甚至表现在他乍看起来杂乱无章、短暂而可悲的一生的异常怪诞之中。

作为人的志摩，要比作为诗人的志摩伟大得多。我们许多人都喜欢他的诗，就因为诗是他写的。我不知道是否有人因为他写的诗而喜欢上他。他的个性就是他的天才。所以，他的一言一行越是富有个性，对于我们来说，就越是富有魅力。这就是为什么他的散文会比他的诗好那么多：他的散文比诗更富有个性。读他的散文，我们能立刻感受到他个性的美和脱俗的光彩。他的面部表情、说话的腔调、语言的节奏（活跃而富有生气，有时会委曲婉转涉及有趣的题外事物，继而又会顺利回归闲聊的中心主流，是那么急切、那么热情，好像什么都不为，只是为了聊聊而已）——这一切在散文中随处可见。他的诗则不然，总是和他的个性保持着距离。诗对于他总有些异己，而不是他的一部分，可以说是他的排泄物。无论享有何等声誉，诗都是他个性的余晖。随着岁月的流逝，志摩变得越来越是个回忆中的人物，人们不再像从前那样对他着迷，他的诗恐怕也会丧失掉一些现今具有的光彩。志摩去世两年了，他的诗是不是已经有点褪色，我说不准。

志摩个性魅力的秘密究竟何在？在于形象吗？有点。但是在形象上比志摩英俊出色的，何止千万，而这成千上万人的魅力也不及他的十分之一。他的鼻子太大，眼眉缺乏特点，嘴巴有点夸张，下颚看来略显沉重，因此很难算得上漂亮。不，他的魅力的秘密在别处——我想，可以从他的气质、他的头脑中找到。那是一个聪明伶俐的孩子的品质和头脑，这个孩子永远也长不大，对周围的一切怀有无穷的好奇，不分辨是清醒的还是梦幻中的世界，不懂得憎恨任何人，也不曾想过任何人会不喜欢他。人生的经历擦身而去，未能改变他。他与人间事物游戏，像孩子之于玩具。各种主张、相对论⁶、钱德拉·波斯⁷的植物学新发现、爱尔兰的文艺复兴⁸、泰戈尔⁹、梁启超¹⁰、塞尚¹¹的绘画、毕加索¹²的作品、

梅兰芳¹³、克萊斯勒¹⁴——全都给了他无尽的娱乐。他的生活是对朋友无休无止的探访。他所居住的住所，不过是朋友们从中通过的走廊。令人惊奇的是，他总能找到时间写出那么多作品来。工作被打断，对于别人会是讨厌的事情；在他则不然，只不过是愉快的变换花样。对于孩子而言，变换花样就是生活。

不错，志摩的生活中也有烦恼：尖锐而且辛酸，就像孩子的烦恼那样；但是有如朝露，转瞬即逝。他也常使他的亲朋好友遭受痛苦，但是这种痛苦不会造成很大伤害，因为他本无意为害。就像孩子会弄死小鸟、撕掉昆虫的翅膀一样，志摩有时也会对别人非常残酷而不自知。他完全是个容易冲动、天真无邪的孩子，有时会摔碎杯子、乱扔花朵、在刺藤丛中喧哗笑闹，这都是嬉戏的一部分。

有人说，他们在志摩的后期看到了成熟的迹象。果真这样，他倒死得其时。而他的死，又多么像个童话！飞机失事，而且撞到了山上！死得富有诗意，活得像个孩子：神明还能给凡人安排出更好的命运吗？

[第11期，1934年3月15日]

THE SYCIP BROTHERS (薛氏兄弟)

The name SyCip does not sound like a Chinese surname, does it? Nevertheless the SyCips are Chinese, as any one in the Philippines will tell you. Vicente L. Del Fierro, writing in a recent issue of The Herald Mid-Week Magazine on the occasion of Mr. Alfonso Z. SyCip's being elected president of the Manila Chinese Chamber of Commerce, tells us that "the members of the present generation of SyCips owe their honoured name that they enjoy to their late lamented father Jose Zarate Sy Cip" (or 薛清习 in Chinese), for it is customary for a Chinese in the Philippines to take the name together with the surname of his father as his surname, hence SyCip.

The old Mr. Sy Cip, according to Del Fierro, "had been looked upon as an exemplary businessman by foreigners and Filipinos alike and he had impressed the same cardinal virtues in his children. Thus today we find the SyCips, specially the two most famous living members of the clan, Alfonso and Albino, highly respected by all elements in the business world in the Philippines... they have improved upon their inheritance, and years have added their prestige... The father of the SyCips like all adventurous sons of Cathay came here [Manila] when he was only twelve years old" from the Island of Amoy, Fukien. The Chinese women who owned and managed factories half a centuries ago, even among our overseas, could perhaps be counted on one hand, and the mother of the SyCip brothers was one of them.

However, it would be a mistake to think the SyCip brothers are businessmen and little else. If they were, perhaps their names would not appear here. Indeed, there are men of greater wealth and influence than they in Manila, but there is something they do which earns them the goodwill of the Chinese community and makes them popular. They both try to serve the Chinese community, each in his own way.

Alfonso is the third son of old SyCip. "Born in 1883, he saw the first light of day under the shadows of Binondo church," not far from which now he sits in his office on Juan Luana Street. But he has made a large circuit in the meanwhile. Taken back to China by his father at seven, he was soon sent to study in Foochow. On his return to the Philippines, he went to work in Cebu, where he found his knowledge of English, learned in the missionary school in the capital of Fukien, highly useful during the early years of the American rule. Presently he was offered a better job by a Manila firm, which he served a while before he established a business of his own.

But in Cebu or Manila, he is ever ready to lend a helping hand to those in trouble. If the trouble is among the Chinese, he is their peace-maker. If misunderstanding arises between the Chinese on the one hand and the Filipinos or the government on the other hand, then he is sure to be found among the unofficial diplomats of the Chinese community to straighten out the case. In other words, he is the type of Chinese leader produced by centuries of village life—the elder of the clan.

"In all his dealings," again to quote Del Fierro, "he has always carried his head high, but not haughtily." He speaks few words, but does a lot.

Albino, many years his junior, is more agile, and one even suspects that there is some sort of tempestuousness in his character. Being sent in his teens to study in the United States, he has acquired something of the modern tempo. While he closely cooperates with his brother in the work of an elder to the Chinese community, it is in another field of service, where his talent and training are best employed to serve his compatriots in the Philippines, e.g. the fight against the Bookkeeping Law, which was passed by the Philippine legislature admittedly to cripple the Chinese business enterprises. For his training as a lawyer was brought into full play, when he and two other delegates of the Chinese business community went to Washington to lobby against the Bill, and when they planned to take the teeth out of it.

But there are certain similarities between the two brothers. Although they do not have any connection with any institutional religion, they possess a very strong moral outlook. From his statement on the lesson to be learned from the present business depression, published in *The Critic*, January 25, one may gain some insight of Albino's moral outlook, while Alfonso includes in his plans for the Chinese Chamber of Commerce, the restoration of "old Chinese honesty."

Their large-mindedness expresses itself not only in services they render to their fellowmen, but also in their desire for cordial relations between the Chinese on the one hand and the Filipinos and even the Japanese on the other. They have an optimism that China will eventually pull through and emerge from the present crisis a strong, united nation, which we who live in China seldom have. It is perhaps this optimism that carries them through their hard work. Hard workers all who know them will admit they are. And nothing illustrates this so well as Alfonso's closing remark to his interviewer: "Just write enough. I don't talk. I work."

薛氏兄弟¹

薛习（SyCip），听起来不像是中国人的姓，是吧？尽管如此，SyCip一家倒全都是中国人，这在菲律宾是众所周知的事实。维森特·费罗就阿尔丰索·薛习当选马尼拉中华商会主席一事，在最近一期《先驱周刊》发表的文章告诉我们，“薛习家现今一代的成员之得以享有他们光荣的姓氏，要感谢他们已故的父亲薛清习”，菲律宾华人习惯于把父亲的姓和名并用为姓，于是便有了“薛习”这样一个姓。²

据费罗说，“外国人和菲律宾人都认为，薛清习老先生是一位模范商人，而且把他的基本美德传给了他的子女。因此，今日的薛习家人，尤其是这一家族最著名而仍然健在的两位成员——阿尔丰索和阿尔宾诺——受到了菲律宾商界全体高度的尊敬……他们青出于蓝而胜于蓝，他们的声望与时俱增……像所有富于冒险精神的华夏儿女一样，薛氏兄弟的父亲来到这里〔马尼拉³〕时只有12岁”，他来自福建的厦门岛。早在半个世纪以前就能开办和经营工厂的中国妇女，甚至在我们的海外华侨中间，都是屈指可数的，而薛氏兄弟的母亲⁴就是她们中间的一个。

然而，如果以为薛氏兄弟仅仅是商人，那就错了。如果他们确实仅仅是商人，他们的名字也就不会出现在这里了。事实上，比他们更有钱、更有影响力的人在马尼拉是有的。但是，他们是做了一些事情才赢得了华人社会的敬重，才受到了人们欢迎的。他们二人都在努力为华人社会服务，各人以各人自己的方式。

阿尔丰索是老薛清习的第三个儿子。他“1883年出生在碧农多教堂附近”，离他目前设在胡安路阿纳大街的办公室不远。但是在这几十年间，他已经转过了一大圈。他7岁时被父亲带回中国，不久便被送到福州去读书。再回到菲律宾以后，他曾到宿务⁵去打工。到了那里他才发现，从福建省会的教会学校学到的英语知识，在美国统治的初年非常有用。不久，他就在马尼拉一家企业获得了更好的职务，并干了一段时间。继而，他就创办了自己的企业。

但是无论在宿务或是在马尼拉，他都乐于向遇到麻烦的人随时伸出援助之手。如果麻烦发生在华人之间，他就会出面充当和事佬。如果是在华人和菲律宾人或政府之间出现了误会，他肯定会是华人社会非正式外交官中的一员，去设法解决问题。换句话说，他是中国千百年农村生活所产生的那种领袖——宗族长老。

“在处理各种事情时，”还是用费罗的话来说，“他的头总是抬得高高的，但是并不傲慢。”他说话不多，办事可不少。

阿尔宾诺，比他小许多岁，也比他机敏，人们甚至怀疑在他的性格里有一点狂暴的成分。他在十几岁时就被送到美国去学习，身上有种现代气质。虽然在充当华人社会长老的工作方面，他和哥哥密切合作，但是他的才智和所受教育，却是在另一个领域内为自己同胞服务时得到了最好的发挥，比如说，反对《簿记法》的斗争。不可否认，菲律宾立法机构通过这个法律，就是为了打击华商企业。当他和另外两名华商代表一道前往华盛顿，为反对这一法案而进行游说时，当他们计划着废除其中的不良条款时，他作为律师所受的教育，就有了充分的用武之地。

但是两兄弟之间也确实存在着若干相似之处。虽然他们和任何一种制度化的宗教都没有任何关系，但是他们都有很强的道德观念。从阿尔宾诺就应该从目前的经济萧条中汲取何种教训而发表在《评论》1月25日一期上的言论，就可以对他的道德观获得一个深入的认识。阿尔丰索则把恢复“古老的中国诚信”纳入了他为中华商会制定的工作计划之中。

他们心胸开阔，不仅表现在他们对自己同胞的服务上，也表现在对于华人和菲律宾人——甚至和日本人——建立和睦关系的愿望上。他们全都乐观地相信，中国一定能够渡过目前的危机⁶，最终成为一个富强统一的国家——这倒是生活在中国国内的我们少有的乐观。也许正是这样一种乐观信念在支持他们勤奋工作。所有认识他们的人都会承认他们工作勤奋。能够说明这一点的最好实例，莫过于阿尔丰索结束访谈的那句话：“写点儿就够了，我不空谈，我要工作。”

[第12期，1934年3月22日]

CHOU TSO-JEN (周作人): IRON AND GRACE

Ways quiet as a mouse, never raising his voice above a whisper, almost old-womanish in his gait, Mr. Chou has yet that something aloof about him — is it coldness or well-mannered contempt? — which keeps men sufficiently at a distance, for him to see them as an amused spectator. His very gentleness in the outward ceremonies of conversational address is a sort of barrier to any warm intimacy with him. That shaking of the bullet-shaped head up and down, as he laughs, or rather as he makes his smile audible, is an invitation to be confidential, but not to be free and easy, with him. We cannot imagine it possible for anyone to treat him cavalierly. His always is our respect, when we first meet him: with enemies, this respect changes to fear; with friends, it leads to an intimacy at once fraternal and charitable, but cordial—never!

Mr. Chou's study, where he works and meets his guests, is the exact picture of the man. Neat, with everything in its proper place, not a speck of dust anywhere. A sort of Japanese elegance on wall and floor. A dainty exclusiveness, with nothing superfluous in the way of chairs, tables or ornaments. Just a few cushions here and there to give the room an air of comfort. And then, the books. How well they are kept behind glass-cases, and what a choice variety—from books on the psychology of sex to books on Greek religion, in Chinese, Japanese, English, and Greek. Pervading the whole room, there is an atmosphere of quiet studiousness, redolent of happy hours spent in reading and in pleasant chats on men and books.

The remoteness of Mr. Chou's house from the centre of things in Peiping does not encourage callers, but the few who do call are always welcome: they are, if not old friends, ardent admirers, who usually go to see him for some special advice about writing, or for just a chat. In most cases, it's the callers who do the talking, and it's Mr. Chou who listens. Conversation is carried on in a low key. There is no argument, hence no eloquence. The talk winds in and out, about this and about that—just a caressing touch, and then, it's off again to something else: nothing is allowed to engross the attention to the extent of becoming an object of passionate discussion. Enthusiasm is out of place: there is only the dry light of curiosity about everything.

And how very human and very small the world appears in Mr. Chou's eyes! In his writings, he avoids the great questions that divide mankind into hostile parties. What he loves to dwell on are the little

things, the "little, nameless, unremembered acts," that endear this most impossible of all possible worlds to us. Hence his cultivation of that gentle art of essay-writing—not of the Macaulay sort, with its open Forum atmosphere and its clangorous emphasis, but of the Elia kind, with its unconscious, and therefore charming, solipsisms and its quiet tone. Mr. Chou's essays resemble nothing so much as gossiping, carried to a fine art. He has the rare knack of transmuting the precious nothings of a man's life into golden chit-chat. He achieves the significant, via the insignificant. In his very human garden, cabbages are more glamorous than roses. And as we read him, we become almost persuaded that flies can sometimes be more interesting than thoughts on...

Providence, Foreknowledge, Will and Fate—Fixed fate, free will, foreknowledge absolute.

He restores us to a sense of our proper "indignity": sippers of tea, sippers of wine, and sippers of life, like the flies of an idle, summer day, and just like the flies too, sippers with grace, sippers with "not too much."

There is another side to Mr. Chou, which we must not forget. There is a good deal of iron in him. Those biting lips of his, crowned by a brush moustache, suggest determination. He seldom cares to mix himself up with anything, but when he does, woe betide the person who crosses his path! Swiftly and surely, he strikes his enemy—only one clean, bold stroke is enough. How neatly, and with what artistry, for instance, did he dispose of Mr. Ching Li-pin (经利彬), President of the Girls' College (女子学院) in Peiping! The secret, perhaps, of Mr. Chou's success in everything practical he undertakes to do, is his knowing clearly just what he wants, and—what is more important—his awareness of his limitations. At Committee Meetings, few are the words he says, but what he says goes home: and this, because everything has been well thought out beforehand, and there is no shilly-shallying. Never fussy, always imperturbably calm, he conveys to us the idea of a person, who is happy indeed to be allowed to remain in his unbuttoned moods, but who is equally happy, when there is a storm ahead.

A storm! The very word suggests the sea, and the sea suggests ships. By a strange irony of fate, Mr. Chou, the essayist, was once upon a time actually a naval cadet! But really, it isn't so very strange, after all. What thing more graceful than an ironclad, cleaving her way through the sea? Well, Mr. Chou is exactly like an ironclad in this: he has the grace of iron!

周作人¹：铁优雅

周先生，不声不响的，说话的嗓音从不高于耳语，行走的姿态几乎像是老妪，却有一种孤芳自赏的气概——是冷漠呢还是有礼貌的轻蔑？这足以拒人于千里之外，容他自得其乐地从旁观赏。他言谈举止所表现的彬彬有礼正是对于任何亲密接触的某种屏障。而在发笑或笑出声来的同时，那子弹头式的脑袋上下摆动，却是可以亲近的表示，但也不可随便造次。很难想象有谁能够漫不经心地对待他。初次见面，他受到的总是尊敬。在敌人，这种尊敬会变成恐惧；在朋友，这种尊敬会导致亲近，可以亲善友好如兄如弟，却永远也不会热情！

他在书斋里工作、会客，他的书斋可以说是屋如其人——整洁，一切东西都摆放在合适的位置，所有的地方都一尘不染。墙壁和地板有种日式的雅致；桌椅和摆饰没有一件多余，有种独一无二的韵味。这里一个靠垫，那里一个靠垫，就平添了一份舒适。还有那些书，在玻璃书橱里码放得多么整齐，经过精心挑选，从有关性心理的著作到论述希腊宗教的典籍，中文、日文、英文、希腊文，不一而足。整个房间弥漫着宁静的、好学不倦的气氛，使人想到埋头阅读和评书论人的娓娓交谈中度过的欢乐时光。

周先生的住宅远离北平的中心地区，这成了访客稀少的原因。但是为数不多的来客，总会受到欢迎。这些来客，不是老朋友，便是热诚的崇拜者，通常是来为写作寻求建议的，或者只是为了聊天。在大多数情况下，总是来客谈话，周先生倾听。交谈都在低沉的声调中进行，没有争论，也就没有雄辩。谈话会绕来绕去，谈谈这，说说那，刚一接触某个话题，便又立刻转向别处，决不允许把注意力集中到引发热烈讨论的任何话题。热情是谈不上的，有的只是对于各种事物纯粹的好奇。

在周先生看来，这个世界是多么富有人性而又多么渺小！在写作时，他总是避免那些使人类分裂成敌对营垒的重大问题。他喜欢花较大篇幅来写一些小事，写一些“没人知道、没人记得的琐事”，从而使我们对那一切可能世界里最不可能的天地也都关心起来。就这样，他养成了那种温和的散文写作艺术——不是麦考利²那种带有公开论坛气氛和响亮加重语气的风格，而是伊利亚³那种不知不觉因而引人入胜的唯我哲学和闲散情调。周先生的散文简直是把闲谈发展成了艺术。他有一种极其难得的本事，能把一个人生活中可贵的琐事变成闲聊时的含金话语。他能借助无足轻重的题材写出意味深长的文章。在他非常富有人性的园圃里，白菜要比玫瑰更加美丽动人。读他的散文会使我们相信，苍蝇要比有关于“天道、预见、意志和命运……”⁴之类的思想更有意思。他在恢复我们本来的“无尊严”意识；饮茶，饮酒，啜饮生命，就像无聊夏日里的苍蝇一样，也就像那些苍蝇一样，啜饮得很有风度，啜饮得“中庸适度”。

我们不该忘记，周先生还有另外一面，在他身上还有不少铁的因素。他那双紧抿的嘴唇和嘴唇上的八字胡，都使人想到坚定果断。他很少介入各种是非纠纷，但是，一旦介入，就该挡着他的那个人倒霉了！他对敌人的打击既快且准——只消干脆的狠狠一击就够了。对付北平女

子学院院长经利彬⁵的那一击就是一例，多么利落，多么漂亮！周先生做什么事情都能够无往不胜的秘诀，也许就在于清楚地知道他要的是什么，更重要的还在于知道他自己能力的限度。在委员会的会议上，他很少说话，但是凡有议论都能言必有中；这是因为事事都经过深思熟虑，不会犹豫不决。他从不大惊小怪，永远沉着冷静，给人的印象是，他这种人，逍遥自在时高兴，面对风浪时也高兴。

风浪！提起风浪，令人想到海洋；提起海洋，又令人想到舰艇。因缘际会，周先生这位散文作家，还确实曾经是一名海军军官学校的学员！但是，说起来又并非那么奇特，还有什么能比一艘铁甲战舰在海上乘风破浪更加优雅动人呢？不错，周先生正好就像一艘铁甲战舰——他有铁的优雅！

[第13期，1934年3月29日]

DR. ROBERT LIM (林可胜), A SCIENTIST

Dr. Lim is perhaps better known abroad than in China. Among Chinese who write in learned foreign journals, Dr. Lim easily tops the list. His contributions to physiology, since his eighteenth year, when he was a medical student in Edinburgh University, must be reckoned by the hundreds, but they are purely technical, and are such that only specialists would care to read them. They do not deal with physiological questions from the broad, philosophic point of view, like the way Verworm writes on *The Cell*, Pavlov on *Reflex Action*, or Sherrington on *The Integrative Action of the Nervous System*. This fact makes Dr. Lim a physiologist's physiologist, and not a layman's physiologist.

As with his writings, so with his mind: it is that of a scientific specialist, to whom nothing exists but what can be scientifically stated, and no truth valuable but what can be experimentally proved. It is not so much that he is not interested in things outside his line, as that he finds them irrelevant—superstitions, as he calls them. Literature, political science, philosophy—to him, they are just the playthings of the mind, but nothing to be serious about. Indeed, a certain bemused arrogance is evident in him towards studies, other than scientific. In this respect, he differs markedly from other Chinese scientists, such as Dr. V. K. Ting, Dr. Li Chi, and Dr. Chao Yuan-jen, who so often blaze such brilliant trails behind them in fields, outside their own. With Dr. V. K. Ting, for instance, it wouldn't surprise us in the least, if, getting up one fine morning, we were to find him famous as the author of (say) the *History of Political Prostitution*. As for Dr. Chao Yuan-jen, all things are possible with him, be they ingenious, original, and out of the way. In other words, Dr. V. K. Ting & Company are more to be described as savants than scientists. A scientist, pure and simple, is a very rare bird in China. We believe Dr. Lim is the only genuine instance of one.

Dr. Lim is at present Head of the Department of Physiology in Peking Union Medical College. Besides this, he is also Managing Editor of the *Chinese Journal of Physiology*.

So much in love is Dr. Lim with his work, that he is hardly out of his laboratory, morning, noon and night. There is scarcely one idle moment. His fingers are either dissecting animals for his experiments, or busy writing out the results of his researches on the endocrine glands, on metabolism, or on the hundred and one problems connected with digestion. He has his lunch in his office, and sometimes he even sleeps there. In every sense of the word, his office

is his home. We see a profusion of papers there, numberless charts and stacks of physiological journals: no place, apparently, for small talk, and idle curiosity.

In appearance, Dr. Lim looks very much like an army officer. Solidly built, somewhat below the average height, with a face which means business and shows bull-dog determination, Dr. Lim is yet the most pleasant of companions, outside his office. He is game for any lark. He can drink like a fish, and dance like an angel. He has a passion for golf, and loves to take a hand at mahjong. And he is one of those very rare persons, who are not only good losers, but—what is more difficult—good winners.

[No. 14; Apr. 5, 1934]

林可胜博士¹，一位科学家

林可胜博士在国外比在国内更为人熟知。在为外国知识性刊物撰稿的华人作者中，林博士名列前茅。从他18岁在爱丁堡大学学医的那一年算起，有关生理学的文稿，已写了好几百篇，而且纯粹是专业性质的，只有专科医生才愿意去读。他写那些文章并不是从哲学的观点泛论生理问题，就像维尔沃姆²写《细胞》、巴甫洛夫³论《反射作用》、谢灵顿⁴阐述《神经系统的整合作用》。这就使他成了一名生理学家中的生理学家，而不是门外汉的生理学家。

他的头脑也像他的文章一样。在这位科学专家看来，不能加以科学说明的事物就不存在，不能以实验证明的真理就没有价值。对专业以外的事物与其说他不感兴趣，还不如说他认为那些东西都无关紧要——如他所说，都是些迷信。文学、政治学、哲学，在他看来，只不过是思想上的玩物，都不值得认真。事实上，在对待其他学科的态度上，他确实显示出一种难以解释的傲慢，而不是科学的态度。在这一方面，他迥然不同于另一些中国科学家，如丁文江博士、李济博士⁵和赵元任博士，他们常常能在本专业以外的领域做开路先锋。以丁文江博士为例，如果某天清晨起床，我们发现他是（比如说）《政治卖淫史》的作者而名声大噪，我们是丝毫也不会感到惊讶的。而对于赵元任博士，什么样的事情全都可能，只要是巧妙、独创而且出人意表。换言之，丁文江博士之流，更适合于被称为博学之士，而不能算是科学家。纯粹的、单纯的科学家，在中国是稀有品种。我们相信，林可胜博士是货真价实的仅有一例。

林博士现在是北京协和医学院生理系的主任，同时也是《中国生理学杂志》的总编辑。

林博士深爱他的工作，几乎从不离开他的实验室，无论是清晨、中午还是夜晚，难得有一分钟清闲。他的手不是在为各种实验解剖各种动物，就是忙着撰写内分泌腺、新陈代谢或是有关于消化的101个问题的

研究报告。他常在办公室里吃午餐，有时还在那里睡觉。从任何一种意义上说，他的办公室就是他的家。我们在那里能看到大量的文件、数不清的图表、一叠叠堆放着的生理学杂志：显而易见，完全没有闲谈聊天和放置无用摆饰的空间。

从外表看来，林博士非常像一名军官——身体结实，略矮于常人身高，有一副公事公办的面孔和斗牛犬般果断的表情。然而在办公室外，林博士又是一个和蔼可亲的伙伴，开得起任何玩笑。他能像鱼一样豪饮，像天使一般善舞。他爱打高尔夫球，也喜欢搓搓麻将。他属于那种极其难得的一类人：不仅输得起——更可贵的是——也赢得起。

[第14期，1934年4月5日]

LIANG YU-CH'UN (梁遇春), A CHINESE ELIA

My last recollection of Yu-ch'un was a chat I had with him on Milton in my study. Three days afterwards he died. Just 26 years of age. A few days later, his little daughter died. He leaves a widow and one child.

A short life and gentle! Quiet in manner, dress and speech, Yu-ch'un somehow sticks more in one's memory than many others who are out to make an impression. Not in the least bit showy. In a crowd, he just hides himself in anonymity and smiles. In a company of two, he makes no effort to be heard. Contradiction is indicated by avoidance rather than by denial. The absence of vehemence in him is not a matter of nurture, but of nature. Modesty itself is modest in him. There are some who are modest with a vengeance: their modesty is so self-conscious and so painful. But with Yu-ch'un, his modesty is the least obtrusive thing about him: it constitutes his greatest charm. It is a modesty which does not rebuke, but puts one uncommonly at ease with oneself. The proof of this lies in those restful silences which occur when one converses with him. Whereas with others, one feels terribly fidgety and nervous, when there is a pause in the conversation; with Yu-ch'un, on the contrary, to be silent is to rest awhile, in order to talk all the better later on, *reculer pour mieux sauter*. The result is, one never tires after a long tête-à-tête with him. There is no constraint, no striving after a point, no showing off —just a folding of the hands, as it were, to see the Mondays and Tuesdays of life go by.

Yu-ch'un wears no mask. He is just himself. And that "self" is a very ordinary self, with this difference: the ordinariness does not try to pass off for something extraordinary. The usual run of people would do anything rather than be ordinary. Yu-ch'un, on the other hand, is not afraid of being ordinary: this is his title to distinction.

To look at him, Yu-ch'un is just one of the crowd of persons that one can see any day in a crowded street. There is nothing distinctive about his features, except perhaps a certain puzzled look on his face, when he listens to one's talk. This puzzled look is very flattering to one's vanity, as it implies a certain intellectual superiority in the speaker over the listener, who seems to have to listen so hard to understand. But, in reality, Yu-ch'un takes in everything at once. This puzzled look is deceptively complimentary.

Besides the above trait, there is another which makes Yu-ch'un

likeable—a slight stammer in his speech. There are some defects, which are either formidable or ludicrous. Cyrano de Bergerac's nose, for example, is ludicrous, and Cromwell's wart formidable. But neither Cyrano de Bergerac's long nose nor Cromwell's ugly wart makes the owners of them likeable. A stammer, however, belongs to that small, but select, class of physical defects, that endear the possessors of them to one's liking. Not a little of Charles Lamb's likeability in actual life is due to his stammer. Indeed, is not a good deal of the winsomeness of the Essays of Elia due to the liberal use of parentheses in them? And what is a parenthesis but a stylistic stammer?

The mention of Elia reminds one of the many similarities that one can note between Lamb and Yu-ch'un. It is a well-known fact that Yu-ch'un is a great admirer of Lamb. He is one of the few Chinese who can really relish the Essays of Elia. This gravitation towards Lamb is an expression of affinities between them. For one thing, Yu-ch'un, like Lamb, is a great reader, but not of the omnivorous sort: he browses only in certain chosen meadows—Berkeley, among the philosophers; Defoe, among the novelists; Lytton Strachey, among the biographers; and Lamb, Hazlitt, and Montaigne, among the essayists. As one comes across Burton and Browne and Shakespeare again and again in Lamb's essays, so also Yu-ch'un's favourites turn up all over his writings, not so much in direct quotations, as in odd fancies and humours and in certain refinements of expression.

Yu-ch'un has not written much. A collection of essays (春醪集) and a few translations comprise all he ever did. But his influence remains in the subtle note of urbane intimacy that meets one in some essays of the best among present-day authors.

[No. 15; Apr. 12, 1934]

梁遇春¹，中国的伊利亚

记得我见遇春最后一面，是在我的书房里和他谈论弥尔顿。三天后，他便去世了，年仅26岁。又过了几天，小女儿也随他去了。他丢下了孤儿寡妻。

短暂的生命，高尚的一生！作风低调、衣着朴素、少言寡语的遇春，不知为什么，倒比言行张扬的人更加令人难忘。没有一丝想要炫耀的念头，置身于人群之中，他总是力图避人耳目而隐身在笑容背后。二人相对，他从不主动说话。遇到分歧，他会回避而不是反驳。柔而不刚，不是他的修养，是他的天性。他太谦虚了，连谦虚之态都深藏起来。有些人谦虚得过火：他们的谦虚很不自然，很费劲。但是说到遇春，他的谦虚则很自然，构成了他那非凡的人格魅力。那是一种不加指

责而只会使人感到无比自在的谦虚。最好的证明就是和他交谈时会出现的那些静默间歇。和别人交谈而遇到停顿时，人们往往会感到非常地紧张不安；和遇春在一起，却恰恰相反，交谈中的沉默是休息片刻，以便随后谈得更尽兴，是所谓后退一步以便跳得更远。其结果是，和他进行长时间的亲密交谈也不会感到疲倦。没有拘束，没有争执，没有卖弄——就好像只是两手抱在胸前，看着周一、周二……一天天的生活从身边过去。

遇春从不戴面具，他就是他自己。而那个“自己”非常平凡，不同的只是，他的平凡无意冒充某种不凡。一般人绝不甘平凡，遇春却不然，他不怕平凡，这正是他值得称道之处。

让我们来看看他吧，他只是拥挤的大街上日常所见的一个普通人。他的相貌没有什么特点，只是在听别人讲话时可能会流露出一种困惑的神色。这种困惑的神色，会使说话人的虚荣心感觉到某种满足，因为这意味着说话人在智力上的些许优越，似乎听话人必须仔细用心听才能听懂。其实，什么东西遇春都是一听就明白了，困惑的表情不过是容易引起错觉的一种谦恭姿态。

除了上述特点，遇春还有个可爱的特点——就是说话时有点口吃。世上有一些缺陷，不是可怕，便是可笑。例如，西拉诺·德·贝尔热拉克²的鼻子，就很可笑；克伦威尔³的肉疣，就很可怕。不过，贝尔热拉克的长鼻子和克伦威尔难看的肉疣，都不能使它们的主人显得可爱。但是，口吃属于情况特殊的生理小缺陷，却可以使得口吃的人惹人喜爱。查尔斯·兰姆在实际生活中惹人喜爱，很大程度上是由于他口吃。事实上，《伊利亚随笔集》引人入胜的魅力，不正是由于在文章中大量使用插入语吗？而那些插入语，不正是文体上的口吃吗？

提到伊利亚，就会使人们想起兰姆和遇春之间的许多相似之处。如所周知，遇春非常崇拜兰姆，他是真正能够欣赏《伊利亚随笔集》的少数国人中的一个。兰姆之能够对他产生很强的吸引力，正是同气相求的表现。比如说，遇春像兰姆一样，也是一个大书迷，但并不是什么书都读，他只是有选择地阅读——哲学家中的贝克莱⁴，小说家中的笛福⁵，传记作家中的雷顿·斯特雷奇⁶，散文作家中的兰姆、黑兹利特⁷和蒙田⁸。就像人们在兰姆的作品中一而再地读到伯顿⁹、布朗¹⁰和莎士比亚，遇春所喜爱的作家也一而再地出现在他的作品中，直接引用较少，大多为离奇的幻想和幽默语，以及某些精巧的措词。

遇春著述不多，就是一部散文集（《春醪集》）和几本翻译作品而已。但是他的影响，仍然可以从当代作家某些杰出散文的恳挚亲切的气息和清新淡雅的笔调中辨认出来。

TAN KA KEE (陈嘉庚), MERCHANT AND IDEALIST

The most characteristic thing about Tan Ka Kee is his courage. He made his fortune, because he would never say die; and now that he has lost it, these are still his watch words. Four years ago, he was one of the richest Chinese in the South Seas; but today, he is in such reduced circumstances that he has to live on his monthly salary. However, even now he is not down-hearted and crest-fallen. He is still looking forward to the time when his fortune may be completely recouped. In his autobiographical sketch written for The Eastern Miscellany, he chose as his title: "Fear of Failure Is Shameful!" (畏惧失败才是可耻)

Tan Ka Kee's rise to fame and success has been a rapid one. He was born in a well-to-do but by no means wealthy family in a village near Amoy. In his early teens, he went to Singapore and joined the business of his father. Later on, however, he established himself first as a rice merchant and then as a planter of rubber. The rubber business grew steadily as the years went by, so that by the time when he was forty, he was already a multi-millionaire. Then the great war came, and it almost threw him out of business. But somehow he managed to pull through and at the end of the war, he was actually richer than he had been before. He bought more rubber plantations and also established many agencies both in China and abroad for the sale of his manufactured products. He conceived the idea of founding a university in Amoy in his forty-seventh year. He extended at first the invitation to Mr. Wang Ching-wei who was at that time in the south to become the president of the university, but the latter declined and Dr. Lim Boon Keng was appointed in his stead in 1921, when the university was formally declared open.

In 1925, the slump in the rubber market began to be felt, and Mr. Tan was forced to cancel his plan of donating three libraries in Amoy, Foochow and Shanghai respectively. This he still regrets and it is considered by him in his autobiographical sketch as the greatest disappointment in his life. When the Tsinan Incident occurred in the spring of 1928, Mr. Tan became one of the leading spirits in the South Seas of the boycott movement. This aroused the ire of the Japanese who began to push with added force their dumping policy of rubber goods in the South Seas. Mr. Tan's business thus suffered and four years later, he was forced to sell out all of his properties and estates.

According to his own calculation, nearly half of his fortune was

spent for educational purposes. To the Amoy University alone, he gave nearly five million dollars. Besides that, he is also the founder and chief benefactor of a primary school and a middle school in his native village. Mr. Tan is a firm believer in education. In spite of the fact that he is practically bankrupt now, he is still doing his best to help Amoy University raise funds among the oversea merchants. Mr. Tan realises the truth that man does not live by bread alone. Money to him is only means to an end, namely that service to one's fellow men. He is a merchant, to be sure, but he is by no means mercenary. On the contrary, he is an idealist—an idealist who is undaunted by unfavourable circumstances. At present he may be down, but he certainly is not out!

[No. 16; Apr. 19, 1934]

陈嘉庚¹，有理想的商人

陈嘉庚最鲜明的个性特征，就是他非常勇敢。他当初之所以能致富，就是因为他永不言败；如今他丧失了家产，在这一点上他依旧不变。四年前，他是南洋最富有的华人之一；如今已拮据到不得不依靠月薪维持生活。然而，即使时至今日，他也没有垂头丧气。他依旧期待着他的财产失而复得的那一天。他为《东方杂志》写过一篇自传性文章，就选择了这样一个题目：“畏惧失败才是可耻”。²

陈嘉庚的功成名就，只经历了一个快速的过程。他出生在厦门附近乡村一户算不得富有的小康人家，十几岁便到新加坡跟随他父亲学做买卖去了。但是他自立门户，却是从经营米业开始的，之后成了一名成功的橡胶种植商。橡胶业一年年地发达起来，到了40岁，他就已经身价数百万了。这时，（第一次）世界大战爆发了，战争几乎使他脱离了他的产业和营生。但他总算是渡过了难关，到了战争结束时，他实际上比战前更加富有了。他收购了更多的橡胶种植园，还在中国国内和国外开设了许多经销产品的销售机构。在47岁那一年，他想到要在厦门创办一所大学。起初，他曾邀请当时正在南方的汪精卫先生担任校长，但遭到了婉拒。1921年，厦门大学正式宣告成立时，便聘用了林文庆医生担任校长。

1925年，橡胶市场的萧条初露端倪，陈先生不得不取消了分别给厦门、福州和上海赠建一座图书馆的计划。他为此抱憾至今，在（《东方杂志》）那篇自述中他认为，这是生平最令他扫兴的一件事。1928年春，济南惨案³发生后，他成了南洋抵制运动中的领袖人物。这种表现激怒了日本人，他们开始在南洋更猖獗地推行橡胶产品的倾销政策。陈先生的生意受到重创，四年后他被迫卖掉了所有的动产和不动产。

据他自己估算，他将近一半的财产都花在了教育事业上。单是厦门大学，他就捐赠了将近五百万美元。而且，他还是家乡农村一所小学和

一所中学的创办者和主要资助人。陈先生对教育的重要性坚信不疑。尽管如今的他几近破产，他却仍然尽其所能帮助厦门大学在海外侨商中筹集资金。陈先生懂得这样一条真理，人不能只靠面包生活。在他看来，钱只是一种达到目的的手段，那就是为同类服务。他确实是个商人，但是他绝不唯利是图。恰恰相反，他是个理想主义者——一个身处逆境却毫不气馁的理想主义者。目前，他可能不太顺利，但是绝没有出局！

[第16期，1934年4月19日]

DR. Y. T. TSUR (周诒春)

To many men Dr. Y. T. Tsur is a stern master at school and a beloved friend in life. It seems that his strict discipline of the students in school has laid the foundation of a friendship with them which becomes more and more enriched later in life. At school he was shunned and avoided; today he is much sought after. From his personality radiates a warmth which is not often known among the closest of friends.

As dean and later as president of Tsing Hua College he took his task seriously. He had an ideal in education and tried his best to give it expression. At first the students did not all understand him but gradually learned to grasp his conception of education. He not only enforced discipline but also took great interest in extra-curriculum activities of his students. His American training was so thorough that he even went so far as to introduce the idea of junior fraternities. But his work was not fully appreciated until he was suddenly forced to resign from the presidency because of political manipulations in other quarters. It was a sad day when he left for the faculty and students as well as for himself. For he loved his work as an artist loves his art. He had given his whole self to it and looked upon it not as a job but rather a medium of expression of an ideal. By force of circumstances he turned over the administration of the college to his successor, but at heart he never forgot his first love nor did Tsing Hua forget him. One of his concerns in life is how to unite the graduates of Tsing Hua to be an organized power for good in society. For this purpose he has taken more interest perhaps, in the promotion of Tsing Hua clubs than its alumni. Indeed, he is the soul and moving spirit of it all. Somehow through the long list of names of men who have occupied the presidency of Tsing Hua since its establishment in 1910, his name stands out as the one which is affiliated with the college and its alumni in a particularly affectionate way.

He loves drinking and enjoys wine tremendously. But he would not drink alone. It is seldom that one can find such a powerfully persuasive person with the wine cup at dinners. Now-a-days it is bad for his health if he should drink, but when he sits down at a table and enjoys the company, to the four winds with the doctor's order. He would drain his cup with you one after another the while telling you that he knows he is going to have a bad headache all the next day. So he goes along. He has a headache every day and he has his drinks with his friends every evening. He likes wine and enjoys comradeship.

But life is not worth anything if he is not kept busy. From

morning till night he toils and works on some scheme which will meet a social need or solve a social problem. He may talk to you as if he were a pessimist beyond redemption, but his own activities are always prompted by unblenching idealism. As a matter of fact, he is today a hard worker who does not get paid for it. In Peiping or in Shanghai he is the most effective public citizen wherever he is found. He cannot be said to be rich or even well-to-do, but he is most lavish in digging into his own pocket in order to induce a millionaire to make a contribution to a worthy cause.

Proud as a Lucifer, he never tolerates an act which injures his dignity. Such an insult he would not take even from his closest friend. He is humble in admitting his own mistakes when his attention is directed to them in a friendly way, but even in his fifties he would have none of the foolishness which hurts his pride.

The trouble with him is that he takes life too seriously for present-day China. In spite of his manifold experiences in life he is altogether too conscientious. He took to teaching again recently and his students complained that his lectures were too substantial and the assigned readings were too long at first. But he persisted and talked to the students like a father, and they were later educated to the right point of view. He was also offered a post in the government within the last year but the outline of program which he presented as a condition of his acceptance of office scared his immediate superior, and the appointment did not materialize.

He is wiser today through his many disappointments. But where he excels others whom we revere is that he has regained his romanticism in life through his disillusion. In other words, he has got hold of what may be called the "second wind" and the strength of his personality is irresistible.

[No. 17; Apr. 26, 1934]

周诒春博士¹

在许多人心目中，周诒春博士是学校里的严师、生活中的良友。他在学校里对学生的严格训练似乎为他们后来在生活中日渐加深的友谊奠定了基础。当年在学校时，人们会躲闪他、避开他；如今他却成了人们追求的对象。从他的身上常散发出一种在最亲密的朋友之间也不常见的热情。

他在清华学校担当教务长，后来出任校长，工作都极其认真。他对教育抱有理想，并为实现理想而竭尽全力。起初，学生们并不全都理解，但是经过一段时间也就逐渐懂得了他的教育理念。他并不单纯只抓

课堂纪律，还很关心学生们的课外活动。美国的教育对他影响至深，他把组建学生联谊会的做法也引进来了。但是直到他突然由于其他方面的政治倾轧而被迫离职时，他的工作才得到了充分的赏识。他离职的那一天，对于他领导下的教职员、他的学生和他自己，都是可悲的一天。因为他爱他的工作，就像艺术家之爱艺术。他在工作中投入了全部身心，他并不是把工作看成一个职业，而看成为实现他心头理想的一种手段。迫于形势，他把学校的行政管理交给了继任，但是在他内心深处却从来也不曾忘记他的“初恋”，清华也没有忘掉他。他生平关心的大事之一，就是把清华的毕业生联合成一支永远的有组织的社会力量。他为此而大力提倡成立各种清华社团，他在这方面的兴趣也许超过了其他清华毕业生。事实上，他是这一切的灵魂和策划人。反正，自从1910年清华成立以来，²在担任过校长的一长串名单上，他的名字是以一种独特的、充满感情的方式和这个学校及其毕业生们联结在一起的。

他爱喝酒，非常爱喝，但是他不会自斟自饮。在酒桌上，很少能够发现这么能言善辩的人。最近一个时期，再喝酒就会损害他的健康，但是，当他在餐桌旁坐下来，愉快地和朋友们在一起时，他就会把医嘱抛到九霄云外，一边告诉你他知道第二天一整天都会头痛不已，却一边和你一杯接一杯地把酒喝光。他就这样一天天度过，每个白天都头痛，每个夜晚却都和朋友们在一起推杯换盏。他喜欢酒，也喜欢交友。

但是，如果他不是不断地忙碌，生命便没有价值。从早到晚，他总是在为什么计划而辛勤劳动着，以满足某种社会需要或是解决某个社会问题。他可以像个无可救药的悲观主义者那样对你说话，支持他实际活动的却是无畏的理想主义。今日的周诒春，实在是一名勤奋工作而尚未获得补偿的劳动者。在北平或是在上海，无论在什么位置上，他都是一名颇有影响的公众人物。他说不上富有，甚至算不得小康，但是为了劝导一名百万富翁拿出钱来赞助一项有意义的事业，他会毫不吝惜地掏自己的腰包。

他为人高傲，绝不容许任何一点有损他尊严的事情，哪怕这种侮辱来自他的挚友。如果有人以友好的方式指出了他的过失，他也能谦虚地承认错误，但是甚至到了五十多岁的年纪，他也不愿让任何蠢事来玷污他的清高。

他的麻烦在于，在现今的中国，他对待生活的态度显得过分严肃。尽管有着复杂曲折的人生经历，他处事为人还是太较真了。最近，他又重登讲坛，而他的学生一开始总是抱怨他的课内容太多，布置的阅读材料又太长。但是他不为所动，而是像父亲一样和学生们谈心，他们后来也终于接受了正确的观点。去年，他本来是有机会担任政府职务的，但是他作为接受任命条件而提出的工作大纲吓坏了他的顶头上司，拟议中的任命便以流产告终。

经历过多次的挫折，他已经变得聪明一些。但是，使他和我们尊敬的其他人相比而胜出一筹的，是在经历过种种的幻灭之后，他又恢复了对待生活的浪漫主义精神。换句话说，他又恢复了元气，他的人格魅力是不可抗拒的。

KU MENG-YU (顾孟余)

Among the political lights of today, there is one who does not get very much publicity and who cares very little for it. Noted among the Kuomintang Reorganizationists as the tactician and now Minister of Railways, Ku shuns the limelight rather than seeks for it. That is the way with all tacticians, as, e.g., Colonel House behind President Wilson. A man who loves silence rather than speech. You might call on him and after an exchange of greetings, there might be a dead silence of three minutes with absolutely no sense of obligation on his part to break it. It suggests peace of mind and mental calm. But as an ordinary human being usually cannot stand staring at another person for more than three minutes, every time it is the caller who breaks it. Meanwhile, he has surveyed you inside and out; and his answers, short and sharp, leave you a little ashamed of your garrulity.

That does not mean Ku never waxes eloquent. It is reported that during the Hankow regime, Ku was the one who alone could hold his own against Borodin in a debate of political and economic analysis of present-day China. For Ku is by profession a professor of economics and former dean of the Peking National University. The way to induce him to talk is to make a ghastly blunder on an academic question which appeals to his essentially professorial type of mind. Then it is that he will let loose his tongue and present you with arguments "A," "B" and "C," developing them with a clear and succinct logic, and more occupied in showing the reasons for his opinions than in the opinions themselves. This type of academic analysis he sometimes applies to his visitors, too. For as a result of interviewing the many callers on the ministry, he has evolved a perfect theory about the form and composition of Chinese interviews. He says Chinese interviews are usually divided into four parts. Firstly, the weather. Secondly, reminiscences on old associations and common friends. Thirdly, comments on current politics. And fourthly, the real business of the call. He says the first three parts usually take half an hour or so, and the last part usually takes five minutes. Thus you could picture him counting the minutes and different stages of the conversation while an interviewer showers him with brilliant remarks on the Sino-Japanese foreign policy or the latest political tangle. That suggests a sort of dry academic humour, and his laughter, too, is also a dry intellectual laughter, never boisterous and never emotional.

Ku is never noted for physical energy. He shuns committee meetings and takes regular afternoon naps. Naturally of a weak constitution, his hygiene is essentially of the negative character,

aiming at conservation of energy rather than stimulating the blood circulation, in accordance with the Chinese orthodox theory of hygiene, and in direct contradiction to the Western idea of sport. A comparatively tall man for a Chinese, thin, and wearing spectacles and a well-trimmed moustache, he looks more a college professor than a prosperous minister. And he is destined to shine more in the secret sessions of the privy council than on the political pulpit. Certainly he can never shine on a mountain hike.

His mind is a strange combination of Western training and Chinese temperament. For he never gets into rage and ruffles his hair as you could easily imagine Lloyd George doing so while pacing about in his study. He also would not go to work like a Lloyd George or an American Senator who could sit in a continuous session of twenty-four hours. He has plans and objectives that he silently works for, but he need not be in a hurry to carry them out. He would leave them alone if the present moment is not propitious. These plans and objectives would then be tucked away somewhere back in his head, and he recovers the same equanimity as if he had never intended to carry them out. That is his weakness, a typically Chinese weakness. But he has a German-trained and essentially modern mind, a mind which has received the scientific discipline. And he sticks to certain principles, some of which are highly un-Chinese. One of them is his keeping clear of all relatives, for none of them has received a political job under his aegis. It is again that cool professorial mind working, as dispassionate as if he were writing an academic thesis or dissecting a bad piece of composition.

What is going on in his mind now nobody knows, except his wife. Many people say that Ku would never have become an active revolutionist had it not been for his revolutionary wife. He has too much of the professor in him. But there again, nobody knows what is going on in Madame Ku's mind, for there is another person who does not get much publicity and who cares very little for it.

[No. 18; May 3, 1934]

顾孟余¹

在今日中国政界众多要人中，有一位很少受到公众关注，他自己也并不介意。国民党改组派的出谋划策之士、现任铁道部部长的顾孟余，从不追求公众关注，倒是刻意避免抛头露面。那是多数谋士的为官之道，比如说，就像威尔逊总统²背后的豪斯上校³。他喜欢沉默，不爱说话。你可以去拜访他，但是，寒暄过后，很可能就会出现一个三分钟之

久的冷场，而他绝不会意识到他有打破这种尴尬局面的义务。这表示他神宁气静、沉着镇定。但是普通人一般都忍受不了把别人狠狠地盯上三分钟，所以每次都是来客打破沉默。就在这段时间里，他已经把你里里外外全都观察了个透。他的回答简短而犀利，会使你为自己的唠叨感到有点儿惭愧。

那并不意味着顾孟余从不施展他的雄辩口才。据报道，武汉政府时期，在一次有关于当时中国政治经济形势分析的争论中，他曾单枪匹马舌战鲍罗廷⁴。因为顾孟余是经济学教授，曾在国立北京大学任经济系主任之职。要想让他开口说话，只消在学术性问题上犯一个愚蠢的错误，就能触动他本质上教授型的头脑。这时，他就会打开话闸，向你提出他的论点一、论点二、论点三，然后再用明确、简洁的逻辑加以展开。他专注于阐明理由往往更甚于阐明意见本身。有时，他也把这种学术性分析应用到来访的客人身上。由于接见过许多到部里来的访谈者，他对中国式访谈的形式和内容构成推演出了一套完善的理论。他说，中国式的访谈通常可以分成四个部分：第一，先谈谈天气；第二，怀念一下老同事和共同的朋友；第三，议论议论时政；第四，说明来访的真正原因。他说，前三部分通常要占半个小时左右，最后一部分，也就五分钟。这样，你就可以想象，来访者在滔滔不绝地讲中日外交政策和最近的混乱局势的时候，他却在计算着已经进行了多少分钟、到了谈话的第几个阶段。这使人想到一种不动声色的学院式幽默，他的笑，也是一种不动声色的、理性的笑，从不发出喧闹的声响，从来不动感情。

顾孟余从不以体能著称。他总是回避委员会，要睡每天必睡的午觉。他天生体质较弱，他的保健方法主要是消极的，只在于保存体能，而不是促进血液循环。这符合中国传统的养生之道，却和西方的运动观念相抵触。作为一个中国人来说，他身材较高，体态清瘦，戴着眼镜，有一撮修剪整齐的胡髭，看上去更像是大学教授，而不像个官运亨通的部长。他注定了更适合于在智囊团的秘密会议上焕发光彩，而不是在政治讲坛上频频亮相。当然了，他绝不可能在徒步山地旅行中出人头地。

他的头脑是西方教育和中国气质的奇妙结合。因为，你可以很容易想象到劳合·乔治⁵一边在书房里来回踱步，一边勃然大怒，挠着头发，而顾孟余却绝对不会。他也不会像劳合·乔治或是美国参议员那样坐在会议桌前连续开24小时的会。他有自己为之默默工作的计划和目标，但是他没有急于完成的必要。如果当时觉得并不顺手，他也可能把这些计划和目标搁置一边，完全置诸脑后，他仍能处之泰然，就像从来也没有想过要将其实现一样。这是他的弱点，典型的中国式弱点。但是他有一颗受过日耳曼教育、本质上现代的新式头脑，一颗受过科学训练的头脑。他坚守一定的原则，有些是极其非中国式的原则。其中之一，就是不和亲属交往，没有一个亲属曾因他的照顾谋得一官半职。这也是他那颗教授型头脑在起作用，一点儿不动感情，就像是在写一篇学术论文，或是在分析一部糟糕的作品。

除了他的妻子，他的脑子里此刻在想什么，谁也不知道。有许多人说，如果没有一个革命的妻子，顾孟余无论如何不会成为一个积极的革命派。他骨子里有太多的教授成分。但是，同样，也没有人会知道顾太太的脑子里此刻在想什么，因为她也很少抛头露面，而且对此也很不在

乎。

[第18期，1934年5月3日]

GEORGE T. YEH (叶公超)

There is no English equivalent to the Chinese term ming shih (名士) just as there is no Chinese equivalent to the English word "gentleman." "Aesthete" seems as near as one can possibly get in English to a correct translation of the term ming shih, in the light of that illuminating chapter on "The Aesthetic Type" in Osbert Burdett's book *The Beardsley Period*. But the word "aesthete" is apt to bring to mind the lilies and languors of an Ernest Dowson, anemic and emaciated; while a ming shih, on the other hand, may be even brawny, full-blooded, of the earth, earthy like(say) Dr. Johnson or Prof. George T. Yeh.

Prof. Yeh's appearance is impressive and almost majestic. He is a six-footer, of a heavy build, swarthy and handsome. He has broad shoulders, a carrying voice, a jaw just on this side of squareness, and walks with a perceptible swagger. In spite of his aestheticism, he looks an athlete all over. We are told that he played tennis wonderfully well during his salad days. But we might guess the fact even without being told of it; for anyone who has conversed with Prof. Yeh will know how skilfully he can "keep the ball rolling" in conversation.

Indeed, he is one of those remarkable talkers who have at command more than one conversational style. Epigram and small talk are equally his fortes. But he is at his best in the digressive style, whether it be the freely associational manner of Mrs. Nickleby or the rambling allusiveness of Charles Lamb of whom, by the way, Prof. Yeh has a towering admiration. Like Johnson, he does not suffer interruption gladly, particularly interruption from a youngster whose role is to cock his ears and listen. I still remember my first talk with him in his charming study five years ago. I was a self-conscious jackanapes then; flushed with a grandiose sense of my own importance and primed with borrowed wit and wisdom, I tried desperately to get in a word edgewise to make a display. After having made several futile attempts to put a spoke on Prof. Yeh's conversational wheel, I had at last the good sense to give up the attempt as impossible and sink back in Prof. Yeh's comfortable sofas (the most comfortable sofas in Tsing Hua), and sip Prof. Yeh's famous Pu-er (普洱) tea and allow Prof. Yeh to spin on without let or hindrance his reams and reams of interesting talk. Literature forms the staple of his talk of course; but one can never draw a line at anything in his "dialogue" which ranges over the whole encyclopaedia—everything under the sun and something above it.

Prof. Yeh suffers as a lecturer from the defects of his qualities as a

talker. His lectures are without programme or outline, trusting all to improvisation and mother-wit. His lectures upset all our preconceived notions of what lectures should be. They are full of surprises and shock tactics; and this unexpectedness constitutes not the least of their charms. They abound in brilliant aperçus and profound asides but lack in system and organisation. Although they are so invigorating that one should ask for nothing better, yet dull students whose besetting virtue is note-taking and who come to class with the sincere hope to have their empty heads crammed with well-ordered facts, are apt to find them baffling. But then, so much the worse for dull students! What cares Prof. Yeh for them? He is all for educating a few individuals at the expense of the whole class.

Prof. Yeh is a literary free lance. He is too broad-minded to belong to any one clique or make common cause with any one faction. Like Mr. Yuan-ning Wen, he keeps himself abreast of every latest tendency in art and literature. Both are dilettantes or amateurs in the best sense of the words. I have often compared them to two reeds through which every prevailing wind of doctrine blows into exquisite music. In this respect, they are diametrically opposite to that single-hearted humanist Prof. Wu Mi who, a doctrinaire among his dilettantish colleagues, seems to invert the moral of Aesop's famous fable and suffer from the self-consciousness of a fox with a tail. All the same, these three professors are the three musketeers in the Department of Foreign Languages and Literature of Tsing Hua: Yeh suggests Porthos even in physical appearance; Wu, at once moralistic and romantic, certainly reminds us of Aramis; and Wen with his urbanity and resourcefulness resembles not a little Athos. Et D'artagnan?

Prof. Yeh is a first-rate essayist and critic. He had encouraged essay-writing long before it came into vogue and has perhaps the largest collection of English essays in China. His recent critical papers are especially interesting; e.g. the distinction he draws between impressions as the data of criticism and impressionism as the methodology of criticism, is probably of permanent validity. In spite of his overbearing presence and his uproarious laughter which possesses all the sinister qualities of the Whistlerian "Ha! Ha!" he is at bottom very shy, very sensitive and fastidious, not unlike the man he loves so much—Charles Lamb.

[No. 20; May 17, 1934]

英文里没有一个词能和中文的“名士”完全对应，就像中文里没有一个词能和英文的gentleman对应一样。在英文里能够找来最接近“名士”翻译的，似乎只有aesthete一词，根据是奥斯伯特·伯德特²所著《比尔兹利³时期》一书“审美型”一章所描绘的那种人。但是这个词容易使人想起厄内斯特·道森的百合和倦怠，憔悴、无精打采；名士则不然，可以十分健壮，精神旺盛，富于人间烟火味，就像（比如说）约翰逊博士或是叶公超教授那样凡俗。

叶教授一表人才，甚至可以说仪态威严。他身高六英尺，体态结实，皮肤黝黑，相貌英俊。他肩膀宽阔，嗓音洪亮，下颌略显方正，走路时昂首阔步。尽管具有名士气质，他整体看来却像是运动场上的一条好汉。据说，少不更事时，他可是个网球高手。其实，没有人说我们也能猜得到，因为任何一个和叶教授交谈过的人都会知道，他能多么巧妙地使谈话像滚球一般继续下去而不断。

事实上，他非常健谈，谈话方式也不止一端。妙语连珠和寒暄闲谈，他都擅长。他表现得最为出色的，是谈话时偏离主题：不论是尼克贝太太⁴的自由联想，还是查尔斯·兰姆的东拉西扯、引经据典。附带说一句，叶教授对兰姆崇拜得无以复加。像约翰逊一样，他也不喜欢被别人打断话头，尤其不喜欢被只有资格竖起耳朵恭听的年轻人打断。我还记得五年前在他那令人愉快的书房里，第一次和他谈话时的情景。那时，我还是个有点儿腼腆又有点儿顽皮的年轻人，自以为了不起而激动得面色绯红，满肚子借来的诙谐和智慧。我费尽心机，力争插嘴以一展才华。我好几次试图在叶教授的讲话车轮中插入一根辐条，却徒劳无功，最终知趣地放弃了这种无望的尝试，把身体深埋进叶教授家舒适的沙发（清华最舒适的沙发），呷着叶教授家著名的普洱茶，听任叶教授把他有趣的长篇大论无所障碍地一直讲下去。文学当然是他谈话的主轴，但是谁也无法为他“对话”中提到的事物划出界线，他的谈话涉及百科全书的所有范围——太阳底下的一切，外加太阳之上的一些话题。

叶教授作为讲师的品质受到了健谈者品质缺陷的影响。他讲课没有教案或大纲，全凭即兴发挥和天资。他的讲课完全推翻了我们对于何谓讲课的固有观念。他的讲课充满了意外和突如其来的策略，而这种出人意料的特点却丝毫不能构成他课堂的魅力。他的课上充满了睿智的洞见和深刻的题外话，但是缺乏系统和条理。尽管他的课听着起劲，学生应该别无他求，但是资质较差的学生常有的优良品质就是在课堂上做笔记，他们来上课是真诚地希望给空白的头脑装填进有条不紊的知识。他们听到这样的课就会感到困惑。然而，更糟的是，叶教授根本不在意这样的学生，他为了教好少数学生而不惜牺牲其他学生。

叶教授是一个文学上自行其是的人，他思想过于开阔而不可能从属于任何小团体，也不可能和任何派别合作。像温源宁先生一样，他也紧跟艺术和文学的最新发展情况。他们两人全都是最佳意义上的票友或业余文艺爱好者。我常把他们比作两根芦苇，每一阵流行的理论劲风都能从中吹奏出优美的音乐。在这方面，他们都和一心一意的人文主义者吴宓教授正好相反。在业余爱好文艺的同事们中间，比较教条的吴教授似乎把伊索著名寓言的寓意颠倒过来了，他知道自己是有尾巴的狐狸⁵而感觉别扭。尽管如此，这三位教授仍然是清华外国语言文学系里的三剑客

6：叶，甚至连长相都会使人想起波尔朵斯；吴，既道学又很浪漫，确实使我们联想到阿拉密斯；而温，由于他的温文尔雅、足智多谋，就非常像阿多斯了。那，达达尼昂呢？

叶教授是第一流的随笔作家和评论家。随笔流行之前很久，他就在提倡这种写作了。他的英文随笔藏书数量在中国也许是最多的。他最近的评论文章尤为引人关注，例如，他在作为评论素材的印象和作为评论方法的印象主义之间作出的区分，就很可能永远正确。尽管他有些盛气凌人，那震耳欲聋的笑声具有惠斯勒⁷式的“哈！哈！”的阴险品质，他实际上是个相当腼腆、敏感的人，又极挑剔，不能不说正像他热爱至深的那个人——查尔斯·兰姆。

[第20期，1934年5月17日]

DR. LIM BOON KENG (林文庆)

By profession, Dr. Lim Boon Keng is a doctor; by inclination, a scholar; by reputation, a business man; and by accident, an educationalist. In reality, he is neither a doctor, a scholar, a business man, nor an educationalist: his real profession is to be a celebrity. He would like—just to be well known. If he can be well known as a theologian, well and good; if as a doctor, well and good also; but the great thing with him is to be well known, everything else is ancillary to that. Nothing he does, but is a peg for him to hang up his name upon. Nothing he writes, but is a sort of advertisement for himself. "And when he opens his mouth, let no dogs bark!"

I believe it was Lord Brougham who first said that the aim of education was to make a man know something of everything, and everything of something. In an essay *On Reading*, in *The Pleasures of Life*, a book very much read 40 years ago, Lord Avebury tried to translate into practice the first half of Lord Brougham's dictum, by drawing up a list of the hundred best books, ranging from the Bible, the Koran, to Gilbert White's *Natural History of Selborne*. I cannot swear Dr. Lim has read all through Lord Avebury's hundred best books, but I have a sneaking suspicion he would like people to think that he has done so. Maybe he has, maybe he hasn't. But this I know—"everything of something" he has not compassed, not even in medicine, which he has studied as a profession. The result is an hors d'oeuvres sort of mind—a smattering of everything: a hotch, composed of a bewildering variety of things. Ask Dr. Lim about Confucius, and he could hold forth for the length of an hour-glass, trotting out all the choice commonplaces he has culled from Legge; but after he has done so, we may be comfortably sure, he has said all—and, perhaps, more than he knows upon the subject. Ask him about earthworms, and he would at once detail to us the researches he has made on them, long years back. And parasitic plants? Why, of course, they are his hobby. It seems Dr. Lim has everything, which King Solomon had, except the wisdom, and—shall I also add? —the knowledge.

As with his mind, so also in his relationships with people: he has a nodding acquaintance with everybody; but friends, none! It is not in his nature to cling to anything for long. He is essentially a nomad. And nomads can either have leaders or followers, but not equals. Now friendship exists only among equals. Since Dr. Lim is a nomad and aspires to be a leader, it obviously follows that he can only have followers; and followers, it is well known, are very apt to degenerate into sycophants. A person would be more than human, who could

resist the heady wine which sycophants pour out daily for him to drink. Dr. Lim is certainly not such a person. His entourage can only aggravate the itch which is already in him—the desire to be well known.

It is a misfortune for which Dr. Lim is not responsible that he should have been made President of Amoy University. I hear he is not appreciated there. I know there are places in Shanghai which would suit him perfectly: I refer to the cabarets. With his dapper little figure, his restless eyes, and his fine beard which hides a multitude of sins, Dr. Lim's thin voice, discoursing on philosophy and God and Mammon, would not be unwelcome, coming in between the rattle of the wine-glasses, the inane talk of the dancing-girls, and the syncopation of the orchestra.

[No. 22; May 31, 1934]

林文庆医生¹

林文庆医生，论职业，是一名医师；讲兴趣，是一位学者；谈声誉，是一个商人；出于偶然，还成了教育家。实际上，他既不是医师，也不是学者，既不是商人，也不是教育家。他真正的职业，是努力成名。他想要的，就只是出名。如果作为神学家能够出名，那很好；如果作为医师能够出名，也很好。对于他来说，最重要的是出名，其余的一切全都是次要的。他做事情，无非是钉一颗挂钉，以便挂上他的大名。他写文章，无非是为自己做一个广告。“他把嘴张开的时候，所有的狗都不许乱叫！”²

我相信是布鲁厄姆勋爵³第一个说过，教育的目的在于使人通百艺而专一长。《生活的乐趣》是40年前很多人读过的一本书，在《论读书》一文中，埃夫伯里勋爵⁴曾试图把布鲁厄姆名言的第一部分付诸实践。他拟定了一份100部名著的书目，从《圣经》、《古兰经》到吉尔伯特·怀特⁵的《塞尔伯恩博物志》，应有尽有。我不能保证林医生通读了埃夫伯里勋爵所选的名著，但是我却暗自怀疑，他是希望人们以为他都通读过了的。也许他通读过，也许没有。但是有一点我是知道的——专一长，他并没有做到，甚至未能全面掌握作为专业攻读过的医学。其结果是，一种“餐前开胃小吃”式的头脑——对于一切事物都一知半解，一种繁杂得令人头晕的知识大杂烩。你向林医生请教有关孔夫子的问题，他可以讲上个把小时理雅各⁶著作里的陈词滥调。等他说完了，我们可以确信，他已经说出了他所知道的全部——也许，比他所知道的全部还要多。问他有关蚯蚓的问题，他立刻就会对我们详细叙述好多年以前他对蚯蚓做过的研究。还有寄生植物？嗨，当然，那是他的业余爱好。林医生好像什么都有，所罗门王⁷有的他都有，只是除了智慧和——要不要我再补充一点？——知识。

他的人际关系就像他的头脑一样，和每个人都是点头之交，而朋友，却一个也没有！对于任何事物的长久执著都有违他的本性。他实质上是一个游牧民。游牧民中只有首领或随从，不存在平等的成员，而友谊只存在于平等的友人之间。既然林医生是个游牧民，而且期望成为首领，他显然就只能拥有追随者。而追随者，如所周知，是很容易堕落成为谄媚之徒的。只有具备超人品质的人才抵抗得了谄媚之徒每天灌给他的醉人烈酒，而林医生肯定不是这种人。他周围的那些人只能又加强他心中既有的渴望——但求出名的渴望。

不幸的是，林医生居然会被任命为厦门大学校长，尽管这不该由他自己负责。我听说，他在那里不受欢迎。我知道，上海有些地方对于他倒是再合适不过，我指的是那些歌舞表演的夜总会。林医生那矫健活泼的小个子，永远转动着的眼珠，那一副遮掩着许多罪过的美髯，谈论着哲学、上帝和财神的尖细嗓音，夹杂在玻璃酒杯的碰撞声、舞女们愚蠢的谈话和管弦乐队的切分音之间，未尝不受欢迎。

[第22期，1934年5月31日]

DR. LIM BOON KENG, ONCE MORE

The China Critic has much pleasure in printing the following spirited defence of Dr. Lim Boon Keng, written in reply to the pen-sketch of him, which appeared in our last issue. —Wen Yuan-ning.

Editor,
The China Critic

Sir: —The so-called "intimate portrait" of Dr. Lim Boon Keng, for which one of your contributing editors is responsible, is, to my mind, one of the most scurrilous diatribes ever inflicted on the reading public. May I enquire what special qualifications the writer possesses for pretending to offer us an "intimate" picture of Dr. Lim, and what grounds he has for his startling generalisations?

It is doubtless correct that Dr. Lim is "by profession... a doctor; by inclination a scholar, by reputation a business man; and by accident an educationalist." But for what reasons is he "neither a doctor, a scholar, a business man nor an educationalist"? Far be it from me to indulge in any verbal quibbling, but unless there have been some recent fundamental changes in the meanings of English words which have escaped my notice, it would appear that Dr. Lim is all that your contributing editor denies him to be, whether your C.E. chooses to consider the broad or the narrow significance of those descriptive names. Are Dr. Lim's Edinburgh and Cantab. medical degrees, for instance, entirely meaningless? True, he is not in active practice, but that fact does not make him any the less a medical man—he is, in fact, a B.M. and C.M. of those British universities. The bald statement that "his real profession is to be a celebrity," seems to be a gratuitous insult hurled at the head of a person who, your contributing editor is doubtless aware, will not, and cannot, trouble to hit back at this specimen of the cheapest of cheap jibes. A man is a "celebrity" or otherwise according to what he has or has not done; and as it would appear that your C.E. has been specially well-informed regarding the manner and extent that Dr. Lim has sought notoriety, perhaps he will be good enough to substantiate his indictment with facts—not "sneaking suspicions," hear-say or personal opinion, for my enlightenment and that of others.

Your C.E. also declared that "nothing he does, but is a peg for him to hang his name upon. Nothing he writes, but is a sort of advertisement for himself..." Would the fact that Dr. Lim gave up a lucrative medical practice, as well as other businesses, in Singapore, in exchange for a comparatively insignificant competence as head of

Amoy University count for nothing in the eyes of your C.E., or will the latter even suggest that the very same fact goes to support his imputation of an ulterior motive?

Anent the saying of Lord Brougham's, I submit that, like most epigrams, it is fallacious if one pushes it to logical extremes, as your C.E. obviously is doing. Individual tastes and opinions naturally and necessarily differ in a variety of things, and what Lord Avebury thought to be the best books 40 years, or more, ago, may not be similarly regarded by humbler folks, and in this generation. So it seems to me neither relevant for your C.E. to confess being unable to "swear Dr. Lim has read through Lord Avebury's hundred best books," nor at all warranted for the former to avow a "sneaking suspicion that he [Dr. Lim] would like people to think that he has done so." May I ask what are the grounds for the "sneaking suspicion" that are substantial enough to justify the slashing attack upon a man couched in words like these: "It seems Dr. Lim has everything which King Solomon had, except the wisdom; and—shall I also add? —the knowledge"? And why should not the suspicion be an honest instead of a "sneaking" one? If Dr. Lim is, to speak plainly, such a humbug, as your well-informed C.E. would have one believe from the tenour of his supposed "intimate" pen-portrait, is it fair to ask that he should know and heed what a long-deceased member of the English nobility with leisure and literary tastes thought and said half a century ago?

But surely "the most unkindest cut of all" is your C.E.'s firm conviction that the "everything of something" of Lord Brougham's, Dr. Lim "has not compassed, not even in medicine, which he has studied as a profession." It is highly probable that since Dr. Lim took up the Presidency of Amoy University thirteen years ago, he has not kept himself abreast of the developments of medical science—as is the case with even many a practitioner actively engaged in his profession. It is certainly a demand which even extraordinary genius can hardly fulfil, to require Dr. Lim, as your hyper-critical C.E. would do, a knowledge of everything there is to know about his profession. Is there any scientist, any savant, or any other learned person bold enough to pretend that he knows everything of the subject of his special study—unless the same be a quack? Perhaps, your C.E. as a journalist (I presume that is his profession) knows all there is to know about his trade, so he exacts the same high qualifications of everybody else.

Then, again, your C.E. comes out with the jewel of wisdom which apparently Dr. Lim and everybody else lack. I gather that the former has made an exhaustive study of nomads, and nomad life to declare so emphatically what has never appeared to be realised by the majority of the people, or has hitherto escaped the observation of folks less lynx-eyed than he. "Nomads can either have leaders or followers, but

not equals," we are told. Therefore, Dr. Lim being a nomad, has no equals, but only followers, who are necessarily sycophants, whose whisperings have turned Dr. Lim's head—and ergo, Dr. Lim's place is in the cabarets! Devastating logic indeed! With regard to the above revelations about nomads, one gathers that nomad tribes and states—as the Mongols, for instance—are nothing but a hierarchy of dizzy proportions, the number of ranks and titles corresponding to the number of their population—there being no equals. If the undersigned may offer a suggestion, it is that your learned C.E. publish for the edification of this abysmally ignorant world his revelations about the nomads and their social hierarchy.

To conclude, your C.E. paints such a vivid picture of Shanghai's cabarets, that if only for the experience, Dr. Lim would do well to go to the haunts of the night-owls, and trip the light fantastic toe. For which, apparently, there is no more competent guide than your "admirable Crichton."

With apologies for the space I have taken, I request that you will be good enough to give this entire letter the same publicity that you have given your C.E. for what I and most people will consider—unless your C.E. substantiates fully his allegations against Dr. Lim—a most dastardly and cowardly attack on a gentleman. Honourable journalism demands and allows fair-play, and the deliberate aspersions should not in fairness be allowed to pass, and thereby be admitted in default of a challenge. I am in no way connected with Dr. Lim, and hold no brief for him; but as an Overseas Chinese who has read your review both abroad as well as here, I think it is only fair that a man's character should not be so outrageously and publicly assailed unless there are reasonable grounds therefor, —which is nothing more and nothing less than what I am asking.

Yours faithfully,
F. T. WANG

Shanghai, June 1.

[No. 23; June 7, 1934]

林文庆医生之二

《中国评论周报》非常高兴能刊载以下这篇为林文庆医生竭力辩护的文章，此文是对于本刊上期所载相关速写的回应。——温源宁

《中国评论周报》编辑先生：

你们某个编辑撰写的所谓林文庆医生的“亲切写真”，在我看来是读者大众所能读到的最下流的诽谤之一。我是否可以求教：这位作者具有

怎样一种特殊的资格而能够假装着来为我们描绘一幅林医生的“亲切”画像，他又根据什么发表了他那些令人吃惊的议论？

林医生，“论职业，是一名医师；讲兴趣，是一位学者；谈声誉，是一个商人；出于偶然，还成了教育家”，这毫无疑问是正确的。但是，凭什么理由说他“既不是医师，也不是学者，既不是商人，也不是教育家”呢？我并不想对措辞吹毛求疵，但除非是英语词汇的语义近来发生了我未能注意到的根本性改变，否则林医生正好就是你们的撰稿编辑试图否认的那几种人，不论他在使用那些描述性名称时是选择了它们广义的还是狭义的含义。难道，举例说，林医生在爱丁堡和剑桥获得的医学学位就完全毫无意义？不错，他目前没有行医，然而这一事实丝毫也不能改变他作为医生的资格和身份——事实上，他是英国那两所大学的医学学士和外科硕士。用那样毫不掩饰的言辞说“他真正的职业，是努力成名”，是对于这样一位先生的无端侮辱。你们的撰稿编辑显然知道，这位先生是不会费心反驳这种卑劣侮辱当中最卑劣的谩骂的。一个人之所以是“名人”抑或不是，取决于他做了些什么、没做什么。由于你们的编辑对林医生谋求成名的方式和范围似乎是了如指掌，也许他可以用事实来支持他的指控——而不是“暗自怀疑”、道听途说或个人意见，以消释我和别人的心头疑问。

你们的编辑还声称，“他做事情，无非是钉一颗挂钉，以便挂上他的大名。他写文章，无非是为自己做一个广告……”。林医生放弃了他在新加坡赢利颇丰的诊所和其他商业营生，来换取厦门大学校长这样一个比较而言无足轻重的职位，在你们编辑的眼里是不是也算不得什么？抑或他甚至会暗示，这样的事实正好支持他林医生有阴暗动机的诋毁呢？

关于布鲁厄姆勋爵的那句话，我认为，像大多数名言警句一样，如果被推到逻辑的极端——你们的编辑显然在这样做——就会成为谬误。对不同的事物，不同的人自然而且必然会有不同的感受、不同的见解。埃夫伯里勋爵在四十多年前认为是优秀读物的书¹，在我们这一代的一般人心目中未必会被同样看重。所以在我看来，你们的编辑承认他不能“保证林医生通读了埃夫伯里勋爵所选的名著”既毫不相干，也绝对不能证明他“暗自怀疑，他〔林医生〕是希望人们以为他都通读过了的”一说能够成立。我是否可以询问“暗自怀疑”的根据何在？那样的根据将能充分证实隐含在下列文字中的杀伤性攻击：“林医生好像什么都有，所罗门王有的他都有，只是除了智慧和——要不要我再补充一点？——知识。”为什么不老老实实、光明正大地怀疑，而要“暗自”怀疑？如果林医生果真是个骗子，说得直接点儿，就像你们那位消息灵通的撰稿编辑希望别人循着他的“亲切写真”所引导的思路去相信的那样，去要求这样一个人知道并注意到一个过世已久、既有闲暇又有文学素养的英国贵族成员半个世纪以前的所思和所言，这公平吗？

然而，“最缺乏善意而伤人感情的话语”是贵刊撰稿编辑坚信林医生并未掌握布鲁厄姆勋爵所说的“专一长”，“甚至未能全面掌握作为专业攻读过的医学”。非常可能的是，林医生在十三年前担任了厦门大学校长的职务以来，未能及时跟上医学的发展——许多甚至是正在行医的人士也是如此。就像贵刊那位极尽挑剔之能事的撰稿编辑所做的那样，要求林医生掌握他本专业既有的“全部”知识，这是一个非凡的天才也难以满足

的要求。有任何一名科学家、一名博学之士，或是任何其他学者——除非他真是个骗子——敢于佯称掌握了他所研究学科的全部知识吗？也许，贵刊的撰稿编辑作为一名新闻工作者（我假定这是他的职业），知道他那一行的全部知识，所以才会对别人提出同样高的资质要求。

然后，还是贵刊这位撰稿编辑，一定具有林医生和其他所有人显然都不具备的非凡智慧。我猜测，这位编辑对游牧民族和游牧生活定是进行过深入广泛的研究，才会以如此肯定的语气宣布大多数人还未意识到，或是迄今为止目光不如他锐利的人们观察所忽略的现象。他告诉我们，“游牧民中只有首领或随从，不存在平等的成员。”因此，既然林医生是游牧民，他就没有平等的朋友，只有追随者，而追随者都必然是阿谀谄媚之辈，他们的悄声耳语会使得林医生头晕目眩——因此，林医生的位置，应在伴有歌舞表演的夜总会！真是令人震惊的逻辑！根据上述关于游牧民族的说法，人们就会推断，游牧部落和国家——比如蒙古人——只不过是令人迷惑、大小不等的人群所构成的等级组织，等级和称号则和他们人口的多少相称——完全没有平等的成员。如果笔者可以建议，我就要建议，为了给愚昧的世界以启迪，请贵刊那位有学问的撰稿编辑公开发表他揭示游牧民族及其社会等级的学识。

最后，贵刊撰稿编辑描绘了一幅上海伴有歌舞表演的夜总会的生动图画，以至于林医生即使是为了体验，最好也到那些夜猫子出没的场所去走走，并且移步起舞。显然，有关此道，最胜任的向导莫过于贵刊这位“令人钦佩的克赖顿”。

为占用贵刊篇幅表示歉意的同时，我请求贵刊能够慷慨允许此信全文刊出，就像贵刊撰稿编辑得以刊出他那篇评论一样；而他那篇文章，我和大多数人都认为是——除非这位编辑能为他对林医生的指责提供充分的证据——对一位正人君子最卑鄙、怯懦的攻击。值得尊敬的新闻工作要求而且允许公平竞争，蓄意的诽谤且不容反驳就公平而论就不得通过。我和林医生没有丝毫的瓜葛，也无意为他辩护；但是，作为一名在海外和在这里阅读过你们评论的华侨，我以为，一个人的人格，若无合理的根据，便不该受到如此无礼而公开的侮辱，这才合理——而这正是我现在所要求的。

您忠诚的

F. T. 王

6月1日于上海

MISS HUANG LU-YING (黄庐隐)

An eighteenth century wit said of Madame de Staël that since there were no women geniuses, it would be a mistake to call her a woman. Although one would hesitate to call the late Miss Huang a woman genius, yet her friends would, I am sure, agree with me that by temperament she was every inch a man, in spite of the fact that she was one of the most feminine persons in appearance.

I do not wish of course to pose as an authority on the nature of women; but to my mind, one of the distinctly feminine characteristics is the possession of a matter-of-fact mind. Their lives are ordered by expediency, seldom by any definite ideals. Unlike men, who on the whole are more romantic in nature, they seldom lose themselves in the wilderness of fruitless speculations. They do not like to dally with new ideas; and for this reason, they have been rightly called the most conservative elements in society.

But no one would ever dream of calling Miss Huang a conservative! On the contrary, her life was but one long adventure. She broke many social conventions, not because she had a weakness for shocking the sensibilities of the sober-minded, but because she was earnestly convinced that righteousness was on her side. Many persons, it is true, would call her stubborn. In fact, she herself knew that stubbornness was one of her weaknesses. In her novel *The Friend on the Seashore*, she said of her heroine, whom everyone would recognise to be herself, that she was oftentimes extremely foolhardy. Such self-insight is indeed extremely rare! Be that as it may, Miss Huang's stubbornness is by no means of the erratic sort. She was stubborn not in the sense that a spoilt child is stubborn, but in the sense that a religious fanatic is. She dared to be herself, because she had the courage of her convictions. She knew that in living according to her ideals, she could never be wrong. What did the criticism of others matter, therefore, so long as she was sure that she was guided by the true light?

The true light, in this case, was none other than love—love not as an innocent pastime or as the satisfaction of one's physical nature, but as a religion, as life itself. She sacrificed everything for love, first by marrying a man who already had a wife, later by marrying, after the death of her first paramour, a man who is at least ten years younger than herself. She quarreled with her mother, and was disowned by her family, all because that to her, love was all.

To those who do not know her personally, Miss Huang will perhaps always be remembered as a writer of no mean ability; but to

her friends, she will always remain in their memory as a woman who lived and died for love.

[No. 24; June 14, 1934]

黄庐隐女士¹

一位18世纪的文士谈到斯塔尔夫夫人²时曾诙谐地说，既然没有女性天才，那么称她为女人就是个错误。虽然人们对于把已故的黄女士称为女天才会感到犹豫，但是我相信，她的朋友们会赞同我的看法——就气质而论，她的每一寸都是男人，尽管从外表来看，她又是最为女性的女人之一。

我当然不想假装是个评判女人天性的权威，但是在我心目中，拥有实事求是的头脑应该是最显著的女性特征之一。她们对待生活往往是随遇而安，而不是根据确定的理想有意安排。和男人不同，男人大体说来天性都较为浪漫，她们却很少会在毫无结果的沉思的荒原中迷失方向。她们不喜欢玩弄新思想，所以她们被称作社会上最保守的分子，这是正确的。

但是没有人会想到要称黄女士为保守分子！恰恰相反，她的生活简直就是一部长篇历险记。她打破过许多社会惯例，并不是因为她有那种癖好，存心要冲击头脑冷静人士的敏感神经，而是因为她真诚地相信正义在自己这边。真的，许多人都会说她固执。事实上，她自己也知道，固执是她的一个弱点。她在小说《海滨故人》中谈到女主人公时说，她常常极其鲁莽，而每个人都会认出那说的就是她自己。这样一种自知之明实在是极其罕见！尽管如此，黄女士的固执绝不属于乖僻的那种。她的固执不是宠坏了的孩子的那种固执，而是宗教狂热分子的固执。她敢于做她自己，是因为她有坚持信念的勇气。她知道，按照自己的理想去生活，她绝不可能错。所以，只要她确定自己是在真正的明光指引下，别人指责又有什么关系呢？

真正的明光，在这里，不是别的，而是爱——爱，不是一种天真的娱乐，不是对于生理本性的满足，而是一种宗教，是生活本身。她为爱牺牲一切：最初是嫁了一个有妇之夫；后来，第一个情夫死后，又嫁了一个比她至少小十岁的男人。她和母亲争吵，被逐出家门，都因为对于她来说，爱就是一切。

对于不认识黄女士的那些人，她也许永远会被当作一个颇有才华的作家；但是她的朋友们总会记得，她是一个为爱而生、为爱而死的女人。

[第24期，1934年6月14日]

MR. JOHN WONG-QUINCEY (王文显)

Tsing Hwa has seen many changes both of men and aims. From being a Middle School to prepare boys for the States, it has become a National Chinese University. From being an institution to teach boys to talk good Yankee English, and to look smart in foreign clothes, it has become a workshop to turn men and women into chemists, engineers, etc., etc. But through all these changes, there is one person in Tsing Hwa who has not changed—that person is none other than Mr. Wong-Quincey. He is a fixture there. Without him, Tsing Hwa will not be Tsing Hwa. With him, Tsing Hwa, in spite of all the transformations it has gone through, will still be Tsing Hwa, in the same way that Jack with baby's bibs will still be the same Jack with beard and moustache.

Mr. Wong-Quincey has been consecutively Professor, Dean, Vice-President and Acting President of Tsing Hwa College. Since Tsing Hwa's status has been raised to that of a University, Mr. Wong-Quincey has become Chairman of the Department of Foreign Languages and Literature. It speaks much for his ability and prestige, that there has never been any trouble in his Department during all these years of "storm and stress." Whatever one may say about Mr. Wong-Quincey's teaching, this thing one must admit about him: he is all that a Chairman should be at a meeting. There is no fuss, no meandering about in irrelevant talk. All discussion is made to lead to some sort of decision. And when the meeting is over, one always has the feeling that something has been done.

As a teacher, Mr. Wong-Quincey is not a person who can inspire love or devotion in his pupils towards him. Admiration and respect he evokes in them. No student ever goes to see Mr. Wong-Quincey merely for talk's sake: a student only calls on him to talk business. And when the business is done, that's the end of the matter. There is no lingering, no wish to prolong the minute into the hour. The student goes away feeling relieved; and, I daresay, Mr. Wong-Quincey, too, feels relieved that something uncomfortable has been gone through and done with.

Mr. Wong-Quincey is one of the most impulsive and enthusiastic men I have ever known. But his impulsive and enthusiastic side never shows up in the lecture-room. There he is perfunctory and phlegmatic: he almost gives one the impression of a presbyterian clergyman going through the funeral service. There is a sense of weary effort, and monotonous constraint. When the hour-bell strikes, Mr. Wong-Quincey is glad to go away; and, I think, his students, too, reciprocate

his feelings in the matter.

Nothing out of the way in Mr. Wong-Quincey's personal appearance or ways. If we laugh at him at all, it is because he is so normal, so very correct in his conformation to everything that a good citizen ought to be. In fact, he is irritatingly normal. He is hygienically clean, in both the physical and moral sense. He is blameless as a husband. He is conscientious as a teacher. He is punctilious in all that relate to his duties as a senior member of the Tsing Hwa staff. He loves gardening. He is a good tennis player. He is a good shot. He takes an interest in football. He wears pants in summer, and long gowns in winter. He smokes a pipe. There is nothing outrageous in his house. Everything about him is as it should be. And yet, why is it that his friends poke fun at him behind his back? I think the answer is to be found in his plays.

A few years ago, one of Mr. Wong-Quincey's plays, *She Stoops to Compromise*, was produced in Peking. The farce was excellent, the technique was perfect, the acting was good. There was not one dull moment in the whole play. Altogether it was a brilliant success. Everything that hard work and dramatic scholarship and ingenuity could do to make the play a good show was in *She Stoops to Compromise*. But when the applause was over, and the lights were out, and we were out once again in the open street, rushing about for our cars and our rickshaws, why was it that there arose in many of us a feeling of resentment, almost against the author? Is it not because Mr. Wong-Quincey has given us everything in *She Stoops to Compromise*, except the one thing needful—the something human? Yes, we miss that; and missing that, we are dissatisfied with Mr. Wong-Quincey. Success, respect, admiration may all be his due; but we shall sometimes pay him back with laughter, so long as he lacks the human touch.

[No. 25; June 21, 1934]

王文显先生¹

清华在人事和办校方针两个方面都经历了许多变化。现在，清华已经从一个留美预备中等学校，变成一所中国国立大学；已经从一个培养男孩子说一口漂亮美国英语、穿一身得体西装的机构，变成一座把男女学生造就成为化学家、工程师等等的工作坊。但是在发生了所有这些变化的过程中，在清华却有一个人始终没有改变，那正是王文显先生。他始终在清华任教。没有他，清华就不成为清华。有了他，不管经历了多少变化，清华依旧是清华——就像系着围嘴的婴儿杰克到长出满

脸胡髭仍将是杰克一样。

王文显先生历任清华学校教授、教务长、副校长和代理校长。清华升格为大学后，他当上了外国语言文学系的系主任。很可以说明他的能力和威望的是，在那些动荡的年月，他的系里从来没有出现过任何麻烦。不管人们对王文显先生的教学可能说些什么，但是必须得承认：他是会议上最理想的主席——不小题大做，不东拉西扯、唠唠叨叨的；所有的讨论全都引向某种决议。会议过后，人们总会有一种毕竟做了点事情的感觉。

作为教师，王文显先生不是会在学生中间引起喜爱或热爱的那种人，他得到的是钦佩和尊敬。没有一个学生只是为了闲聊几句而去找他，去找他总是要谈正事。正事谈完了，拜访也就结束了。没有依依不舍的拖延，没有把一分钟延长为一小时的愿望。学生离开时会觉得如释重负；我敢说，王文显先生也一样如释重负：不舒服的事情总算做完了，终于完事了。

王文显先生是我所见过最容易冲动、最富于热情的那种人。不过，他容易冲动、富于热情的一面，从不在课堂上表现出来。课堂上的他例行公事、平淡冷静，给人的印象就仿佛是长老会²的牧师在主持葬礼。那种感觉是，疲倦的努力、单调的拘束。下课的钟声敲响，王文显先生便欣然离去。他的学生，我想，也是同样的感受。

王文显先生在外表和举止方面都毫无异乎常人之处。如果我们真要笑他，那是因为他过分正常，一个好公民所应该做到的一切，他都做得无比正确得体。事实上，他正常得令人讨厌。他的身心全都卫生洁净。作为丈夫，他无可指摘；作为教师，他尽心尽责；作为清华教职工队伍资深的一员，他对职责攸关的一切全都小心谨慎。他喜好园艺，网球打得很好，是个射击能手，对足球也有点兴趣。他夏天穿短裤，冬天着长袍。他抽烟斗。在他家里，没有任何出格的事情或东西。和他相关的一切，全都中规中矩。那么，为什么他的朋友要在背后开他的玩笑？我想，答案可以从他的戏剧中找到。

几年前，王文显先生的戏剧《委曲求全》³在北平演出。这是一出精彩的闹剧，技巧无可挑剔，演得也很到位。整出戏没有一刻沉闷乏味。整个演出非常成功。辛苦努力、戏剧学识和别出心裁，凡是有助于演出成功的一切，《委曲求全》全都具备。但是，掌声过后，灯光熄后，当我们又来到大街上，涌向各自的汽车、人力车，为什么许多人都感到不满，几乎是对作者的不满？是不是因为在《委曲求全》中，王文显先生给了我们一切，唯独缺少必要的那一点——人情味？是的，我们想念那个。由于我们想念那点人情味，我们就会对王文显先生感到不满。成功、尊敬、钦佩，都是他应得的，但是只要他缺少了那点人情味，我们有时也会对他报以大笑。

MR. CHU CHAO-HSIN (朱兆莘)

Mr. Chu was for many years *Chargé d'affaires* in London. Before that, he was Consul-General in San Francisco. From London he was promoted as Minister to Italy. From the latter place, he came back home, first as Commissioner of Foreign Affairs in Canton, then concurrently as Vice-Minister of Foreign Affairs at Nanking. With the retreat from Hankow of the Kwangsi party, with which he was allied, he retired for a time to Nanyang. The last we heard of him was his dying in Canton, after eating snakes, in an entertainment given by him to some foreign friends. A strange death for a strange man!

Mr. Chu is comfortably stout. Whether he is a gourmet, we don't know; but he, at any rate, looks as if he is a gourmand. Of medium height, inclined to be ruddy in his complexion, with a face which suggests great satisfaction with himself and the world, Mr. Chu is a good instance of an *homme moyen sensuel* turned diplomat.

There are faces so sour that they suggest vinegar: looking at them makes one's nose wet with perspiration. Then again, there are faces so refined, so mature, and so sparkling with well-bred *bonhomie*, that they bring to one's mind good old Burgundy. Mr. Chu's face conjures up beer—a kindly drink, bourgeois, common, "of widest commonalty spread," incapable of making one wild with frenzy or enthusiasm, but of marvellous potency in producing that state of dull numbness in the mind, when shame, truth, lies, justice, righteousness and honour lose all distinctions, and when earth and sky and past and present become blended together, tinged with that feeling of smug satisfaction with oneself, which Browning has expressed so well in *Pippa Passes*:

The year's at the spring
And day's at the morn;
Morning's at seven;
The hill-side's dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven—
All's right with the world!

When one talks of diplomats, one usually thinks of cynical worldlings, immaculately dressed, full of subtle cunning at the Council board, scintillating with *bon mots* at social gatherings, irresistible to ladies, thoroughly insincere, but insincere in the grand style, charming with a seductiveness which deceives no one, brilliant as glass and just as brittle. Now Mr. Chu is none of these things. He is no dandy. He is

not charming. He is not brilliant. He says the most commonplace things in the most commonplace way. He may be astute, but he never allows his astuteness to deviate into profundity. Imperturbably bland, not afraid of repeating the same old stale jokes for the hundredth time, constantly doing the wrong things at the right moment, Mr. Chu may not be a diplomat after one's own heart; but considering the impossible position of China in the years that Mr. Chu was representing her, must one not admit that nobody else would have done any better under the circumstances? It's all very well to poke fun at Mr. Chu's gaucheries at dinner-parties and at Geneva; but really, must those things be accounted sins against the Holy Ghost in a diplomat?

I like to think of Mr. Chu, the man. There is such a Rabelaisian inclusiveness in his likes and dislikes, that it's difficult not to have a soft spot for him. Mr. Chu is, in word and in deed, a democrat. I can't think it possible for him to turn up his nose at anything, and anybody. He is all affability to those who want his help. And to those who don't need his help, he is always kind. Most welcome is the heartiness with which he greets a person. He is not out to over-awe anybody. He puts on no side before the meanest of menials. For this reason, it would not surprise me to learn of some people despising Mr. Chu; but it would certainly grieve me much, if any one were to tell me he didn't like Mr. Chu.

[No. 27; July 5, 1934]

朱兆莘先生¹

朱兆莘先生在伦敦任驻英代办多年，在此之前是驻旧金山总领事。他从伦敦升任驻意大利公使，后从意大利回国，初任外交部特派广东交涉员，后来在南京兼外交部政务次长。随着他所依附的桂系撤出汉口，他在南洋隐退了一段时日。有关于他最后的消息是，他在款待外国友人的宴会上吃了蛇肉，死在广州。真可谓奇人奇死！

朱先生肥胖适度。他是不是美食家，我们不知道，但是，无论如何，他看上去是个爱吃爱喝的人。他中等身材，面色近乎红润，仿佛显示着对自己和世界都极为满意。他是普通人转变成为外交官的成功一例。

人的面孔，有些是酸的，会使人们联想到醋，看见的人会鼻尖冒汗。也有一些面孔是那么优雅、那么成熟、那么彬彬有礼、和蔼可亲，会使人们联想到冒着泡泡的陈年勃艮第葡萄酒²。朱先生的面孔使人想到的是啤酒那种温和的饮料，中产阶级、普通人和“广大民众”都喝，不会让人狂乱，也不会让人兴奋得发狂，却有一种奇妙的功能，使人头脑麻

木。这时，羞耻、真理、谎言、公道、正义和荣誉都不再有区别，天和地、过去和现在混为一谈，并有一点自我满足的陶醉感，就像勃朗宁³在《皮帕走过》中表达得那么好的：

一年正值春光，
一天正在早上；
早上正是七点，
露珠还在山岗；
云雀展翅飞翔，
蜗牛爬在树上；
上帝稳坐天庭，
人间妥帖安详。

人们谈到外交官，总认为都是些愤世嫉俗的俗物，穿着打扮无可挑剔，会议桌上诡诈狡黠，社交聚会中字字珠玑、光彩照人，让夫人小姐们难以抗拒，完全谈不上真诚，却也伪善得冠冕堂皇，富有诱惑的魅力却欺骗不了任何人，像玻璃一样闪光，也像玻璃一样容易破碎。朱先生却不是这样的俗物。他不是花花公子，不那么富有魅力，也不那么闪光。他以最平常的方式讲述最平常的事情。他可能有点狡猾，但是他不会让狡猾逸进深渊。他沉着冷静，不害怕把陈旧的笑话重复上一百遍，总是在正确的时候做错事。朱先生可能不是一个称心如意的外交官，但是考虑到朱先生代表中国时中国的艰难处境，我们难道不应该承认，在那样一种条件下谁也不可能做得更好？人们尽可以嘲笑朱先生在宴会和日内瓦会议上的笨拙表现，但是说句老实话，难道真就应该把那些事情看成外交官冒犯圣灵的不恕之罪吗？

我喜欢思考朱先生的为人。他喜爱和厌恶的东西中有着那么多拉伯雷⁴式的粗野幽默和尖刻讽刺，无所不包，很难让人不对他有一份好感。朱先生无论言行都是一个民主派。我不能想象他会任何事情、任何人不屑一顾。对需要他帮助的人，他和蔼可亲；对不需要他帮助的人，他也很友善。最受人欢迎的一点的是，他能待人以诚。他不会存心威慑任何人；在最低贱的仆人面前，他也从不摆架子。由于这种原因，当我得知有些人看不起朱先生时，我不会觉得意外。但是，如果有人告诉我他不喜欢朱先生，我倒必定会感到非常伤心。

[第27期，1934年7月5日]

DR. WELLINGTON KOO (顾维钧)

Whenever one thinks of Dr. Wellington Koo, one also somehow instinctively thinks of stars. So splendid have been his achievements as a diplomat, that to recount them, one must perforce begin with wonder and end up with praise. His friends may discern in him many other desirable qualities besides that of brilliance. His foes may detect "slipperiness" as an ingredient in everything he does. But friends and foes must alike admit that China cannot have a better diplomat to represent her cause abroad than Dr. Koo.

The future Minister of Foreign Affairs qualified himself as a doctor of Political Science in Columbia University by The Status of Aliens in China. Considering the age of the author when it was written, it would be unfair to expect ripeness of scholarship in that dissertation; but it is a book distinguished on every page by the persuasiveness of its arguments and the excellence of its tone. Excellence and persuasiveness—are they not the great gifts of Dr. Koo throughout his career?

Dr. Koo's rise to fame has been meteoric. He began his début in politics as Secretary to the Cabinet in May 1912. From then up to the present, he has held all the highest posts that a diplomat can dream of—Minister at Washington (1915-1920); delegate to the Paris Peace Conference (1918-1919); Chinese representative on the Council of the League of Nations; Minister to London (1920); since 1922, several times Minister of Foreign Affairs; and now, Chinese Minister to France. And once, Dr. Koo was Acting Premier for a few months.

As the Chinese delegate to the Paris Peace Conference, Dr. Koo made himself well-known as a dignified and skilful champion of China's rights. His adroit handling of the Lincheng incident, as Minister of Foreign Affairs, was the best possible solution of an ugly affair. And recently, the graciousness and cleverness with which he conducted himself at Geneva have helped to reinforce that opinion of him as a "wily diplomat" which the world has formed since the Paris Peace Conference. The Chinese Talleyrand is not an inappropriate nickname for Dr. Koo.

In appearance and bearing, Dr. Koo is everything that a diplomat ought to be. Rather short in stature, well-made, with a face on which Time has written no wrinkles, Dr. Koo is sartorially perfect. Elegant in manner and in speech, Dr. Koo always says the right things in the right place. He is the last person that one can catch hold of unawares. He is never in *négligé*, so to speak, either in word or in deed. He is all there in what he does or says. Behind that elegant exterior, and that

bland face, works a mind that for finesse and subtlety has no equal in China.

[No. 29; July 19, 1934]

顾维钧博士¹

无论什么时候想起顾维钧博士，人们都会情不自禁地联想到星星。作为一名外交官，他的成就是如此辉煌，要逐一加以列举，人们必然会从惊讶开始而以赞美结束。他的朋友们会在他身上看到出色的才华以外许多美好的品质，他的敌人则会在他做的所有事情中觉察到“圆滑”这样一个因素。但是朋友和敌人全都会承认，在国外代表中国利益的外交官，再也不可能有比顾博士更好的了。

在哥伦比亚大学时，这位未来的外交部长曾以《外人在华之地位》一文获得政治学博士学位。考虑到作者当时执笔的年龄，期望在那篇论文里看到学术上的成熟就不公平了；但是，其论证之说服有力，其笔调之无可挑剔，却使得全文熠熠生辉。无可挑剔、说服有力——难道不正是贯穿顾博士终身事业的天然禀赋？

顾博士声誉隆盛之迅速有如星月腾空。他1912年5月出任内阁秘书²开始其政治生涯，直到如今，凡是外交官梦寐以求的最高职位他都已经得到了：驻华盛顿公使（1915—1920）、巴黎和会代表（1918—1919）、国联理事会中国代表、驻伦敦公使（1920），并自1922年以后多次出任外交部长，而现在是驻法国公使³。一度，顾博士还做过几个月代理国务总理。

出席巴黎和会时，顾博士以身为既有尊严又有才干的中国权益捍卫者而闻名于世。而作为外交部长，对于临城劫车案⁴精明而灵活的处理，实在是一桩丑事最好的解决办法。近来，他在日内瓦的雅范和机敏，都有助于增强巴黎和会以来他被世界公认为“足智多谋外交家”的名声。“中国的塔列朗⁵”，对于他来说，倒不能不说是个恰当的绰号。

从仪表和举止看，顾博士具备了外交官应该具备的一切。他身材略矮，肢体匀称，脸还未曾被时光老人刻画上皱纹，衣着十分得体。他言谈高雅，举止脱俗，总能在合适的场合说合适的话。几乎不可能在言行上让他措手不及。他的一言一行，可以说，从不马虎随便，总是全神贯注的。在那高雅的外表和不苟言笑的面孔背后，活跃着的是一颗智谋和精明程度在中国都无与伦比的头脑。

[第29期，1934年7月19日]

MR. LIANG LONE (梁龙)

Mr. Liang hails from Kwangtung, but in built he looks like a Shantung man. Rather tall for a Chinese, well-made, with a face which shows obstinacy and endurance, he is cut more for a military, than a diplomatic, career. His movements are not, what one would call, graceful: they have the jerkiness and the forcefulness of the German goose-step. For the rest, it would be a waste of time to try to find winsomeness in his person, or eccentricity in his behaviour. In short, Mr. Liang looks every inch a man, without any of those feminine qualities, which a typical diplomat is supposed to be heir to.

Mr. Liang pays very little attention to his outward appearance. He dresses very carelessly—not with that carelessness, which is at once artistic and nonchalant, but with that sort of carelessness, which is the fruit of mere untidiness. So little pains does he take to look smart that he has been seen, not once, but oftentimes, in evening dress with white socks!

But Mr. Liang amply compensates for his lack of the outward comeliness of form by his determination and his grit. One glance at him is enough to convince one that Mr. Liang is a man who is out to succeed in whatever he undertakes to do. And he has succeeded with the naturalness of the expected. Every move of his has been a promotion. He began his official career by first attaching himself to Lin Chang-min, who got him appointed as high advisor in the Tariff Conference, held in Peking in 1925. After the collapse of that conference, he bobbed up as judge in the Shanghai Provisional Court. Next, his real opportunity to be a diplomat came when he went with General Chiang Tso-pin as chargé d'affaires in the Chinese Legation in Berlin. Last year, he got what he wanted, and what he deserved, by being appointed minister to Czecho-Slovakia!

It's at present too early in the day to pass judgement on Mr. Liang as a diplomat. In Geneva during the recent Manchurian crisis, he has been given no leading part to play, to show the sort of stuff he is made of. But one can have no doubt that in the routine of diplomatic business, Mr. Liang is an assiduous worker. One can't conceive of anything brilliant that he can do. For work which requires labour and endurance, one can't imagine anybody more suitable than Mr. Liang. And after all, brilliance is alright for once in a while; what is more necessary is the capacity for taking infinite pains in the humdrum routine of diplomatic practice. That obstinate tuft of hair which sticks out at the crown of Mr. Liang's head is at once a sign and a symbol—a sign of obstinacy in sticking to his guns, and a symbol of endurance

and strength which refuses to be beaten by anything—not even by ridicule.

[No. 30; July 26, 1934]

梁龙先生¹

梁龙先生是广东人，但是身板更像山东人。作为中国人，他算得上是高个子，身材匀称，一副倔强坚韧的面孔，更适合于从军而不是做外交工作。他的行动举止完全谈不上人们所说的优雅，倒具有日耳曼鹅式步伐²的痉挛和力度。至于别的，要从他身上找出一点儿招人喜爱之处，或是从他的行为中发现怪异之处，全都是浪费时间。简言之，梁先生看来是个十足的男人，没有一星半点儿的女性品质，而一个典型的外交官却似乎应该有点才是。

梁先生对他的外表毫不讲究。他对穿着漫不经心——不是那种既有艺术家风度又若无其事的漫不经心，而是邋里邋遢的漫不经心。他不愿意费劲把自己打扮得体面些，以至于不是一次两次，而是常常，人们会看见他一身晚礼服配着白袜子。

但是梁先生的果断和勇气充分弥补了他缺乏优雅仪表的不足。只消看一眼梁先生，就能使人相信他是一个无论做什么事都打定主意努力做好的人。他一直都很成功，就像不出所料那样自然。他的每一次调动都是一次升迁。他的仕宦生涯始于依附林长民³。1925年，关税会议在北京举行，由于林长民的关照，他被任命为高级顾问。会议以失败告终后，他突然当上了上海临时法院的庭长。后来，得以成为一名外交官的真正机会，来自于追随蒋作宾将军⁴出任驻柏林中国领事馆代办。去年，他如愿以偿，也得其所应，被任命为驻捷克斯洛伐克公使！

现在要对身为外交官的梁先生作出任何评判全都为时过早。在最近东三省危机⁵期间，身在日内瓦的他并没有得到扮演任何领导角色的机会，还不足以显示他的能力。但是人们大可不必怀疑，在常规的外交事务方面，梁先生是一名刻苦勤奋的实干家。人们想象不出他能做出什么辉煌之举，但对于那些需要苦力与持久力的工作，人们也想象不出比他更合适的人选。毕竟，能够以耀眼的才华出一下风头只是偶一为之，更为必不可少的是不辞辛苦处理好枯燥乏味常规外交工作的能力。支棱在梁先生头顶上的那一簇头发，既是他的标志，也是他的象征——是坚持立场、不屈不挠的标志，也是即使受嘲笑也要坚忍顽强和无所畏惧的象征。

[第30期，1934年7月26日]

DR. WU LIEN-TEH (伍连德)

Dr. Wu was born in Penang in 1879. At the age of 17, he won the coveted Queen's scholarship of the Straits Settlements. For the next six years after that, he studied in Emmanuel College, Cambridge. There he distinguished himself by taking First Class Honours in the Natural Science Tripos. I believe he was the first Chinese to have that distinction. So well, indeed, did he do in the examinations, that long years afterwards (in 1920), he was still remembered by his contemporaries as the brilliant "Tuck"—the Cantonese pronunciation of the last word of his Christian name. From Cambridge, he went to Brompton Hospital as house physician. Next, he studied in the Liverpool School of Tropical Medicine, after which he took up postgraduate work successively in Paris, Halle, and Baltimore.

His studies abroad over, Dr. Wu set up practice for a short while in the Straits Settlements. Since then, he has been continuously at work in China, as Director and Chief Medical Officer of the Manchurian Plague Service, and latterly as Director of the National Quarantine Service and North-East Plague Prevention Service.

Dr. Wu first attracted the world's attention by the magnificent and merciful work he did in stamping out the fury of the last great Manchurian plague. For that, he was given the M.D. honoris causa of his Alma Mater. Foreign governments were not slow to heap honours on him. A mere enumeration of these honours will give one a measure of the high estimation in which Dr. Wu is held as a doctor in Preventive Medicine by the world. But we refrain from doing so.

What we are interested in is Dr. Wu as he is at home among friends. Dr. Wu in his library is very different from Dr. Wu as he appears on public platforms. Some who have heard Dr. Wu address a meeting may remember him as a dull and impressive speaker: his learning is masked by banalities. Others who see Dr. Wu among young ladies at a tea-party may think of him as a clumsy entertainer, whose attempts at witticisms are as comical as the witticisms are obtuse: they are just like fire-crackers which cannot possibly go off. What we like best is to find Dr. Wu seated in a chair which he has bought in some second-hand shop, surrounded by musty old magazines and second-hand books, talking about this picture and that plaque, while his hands fondly handle a Sung vase or some precious relic of the past. Then his face lights up; and we know we are standing before a man, who is not only a great doctor but a great lover of that which can give the highest quality to our moments as they pass—great Art.

Let us leave Dr. Wu at that: not a clever man, but one who has

something better than cleverness—the capacity for hard work, which almost amounts to genius.

[No. 31; Aug. 2, 1934]

伍连德博士¹

伍博士1879年出生在槟榔屿²。他17岁时获得海峡殖民地³备受艳羡的女皇奖学金，随后的六年就读于剑桥大学以马内利学院。他在那里由于获得自然科学荣誉学位考试的一级荣誉而引人瞩目。我相信，他是获得这种荣誉的第一个华人。他的考试成绩非常好，很多年以后（1920年）他的同龄人依然记得那个才华出众的“达”——他的教名最后一个字的广东话发音。离开剑桥后，他来到布朗普顿医院担任住院医师。之后，他曾在利物浦⁴热带医学院进修，之后又先后在巴黎、哈雷⁵、巴尔的摩⁶读研究生。

留学生活结束后，他在海峡殖民地开业行医，但是为时不长。以后，他便一直在中国工作，曾任东三省防疫事务总管理处处长和总医官，后来任全国海港检疫管理处处长和东北防疫事务处处长。

伍博士第一次引起全世界的注意，是由于他阻断最近一次在中国东北肆虐的疫情而取得的辉煌无比、功德无量的业绩。他的母校为此而授给他医学博士学位，外国政府也争相颁赠各种荣誉。只要列举一下这些荣誉，伍博士作为一名防疫医务专家在世界上受到的尊敬就可见一斑。但是我们没有这样做。

我们感兴趣的还是在家里与朋友们共处的伍博士。书房里的伍博士和出现在公众舞台上的伍博士迥然不同。听过伍博士大会发言的人也许会记得他是一个枯燥乏味而又令人难忘的演讲者：他的学识都遮掩在陈词滥调里了。在茶会上看到伍博士置身于年轻女士中间的人，则可能认为他娱人乏术、举止笨拙，想要诙谐却显得笨拙，就像一只只点不响的炮仗一样。我们最喜欢看见他坐在从旧货店里买来的椅子上，周围堆着发霉的过期杂志和旧书，手里摩挲着一只宋代花瓶或是别的什么珍贵古物，嘴里谈论着这幅图画、那方匾额。这时的他容光焕发，我们会意识到我们正站立在这样一个人面前：他不仅仅是一位伟大的医生，而且，还是赋予我们度过的分分秒秒以极高品质的伟大艺术的爱好者。

关于伍博士就谈到这里吧：他不是一个聪明人，但是他具有超越聪明的某种内涵——几近天才的勤奋工作的能力。

[第31期，1934年8月2日]

DR. LIU FU (刘复)

Generally speaking, philologists are pedants who are about as interesting as the musty languages they study. The late Dr. Liu was a philologist, but he was also one of the rare exceptions to this rule. In fact, to his friends and acquaintances, he was always "the charming fellow"; and it was only with difficulty that they were reminded of the fact that he was not only a brilliant essayist and a great talker, but also the author of scholarly treatises on such subjects as Chinese grammar and comparative phonetics.

Dr. Liu first came to fame in the pages of *La Jeunesse*, a monthly edited by Mr. Chen Tu-hsieu. Together with Dr. Hu Shih and others, he advocated that *Pai-hua* or the vulgate tongue should be adopted as the written language. He went abroad to study in 1918, and six years later returned with a doctor's degree from Paris. From that time until his death, he had been teaching at Peita (National University in Peiping), occupying a China Foundation research chair in philology and phonetics.

Dr. Liu had many avocational interests. Though he was kept busy constantly by teaching and research, he nevertheless found time to cultivate many hobbies not usually associated with a man of his donnish temperament. He gained a wide circle of readers not only by his translations from the French, but also by his humorous verses and essays on topics ranging from Western folk-lore to Chinese operas. He planned also to write a biography of Szai Ching Hua (赛金花), the prostitute who saved the population of the old capital from being decimated by the allied troops during the boxer rebellion. As a satirist, he was of no mean ability. In an article of his entitled "Amitabha Tai Chih-tao" (阿弥陀佛戴传贤), he gently made fun of the president of the Examination Institute and upbraided him for his superstitions and his proposal to put to a stop to all archaeological excavations. Finally, he was also very much interested in the art of photography, to which he had written a most useful guide.

His death was caused by relapsing fever, contracted by him on his trip to Suiyuan. The trip was taken with the purpose of studying the dialect of that province, which was to form a part of his philological studies. He died as a martyr to science, and it is for this reason that his friends and colleagues at Peita have decided to found a scholarship to honour and to perpetuate his memory.

Dr. Liu was survived by his wife and two daughters. Like the true scholar that he was, he had a great contempt for money. To his family, therefore, he left practically nothing except his books.

刘复博士¹

一般说来，语言学家都是迂阔的老夫子，差不多就像他们所研究的发了霉的语言一样无趣。已故的刘博士是一位语言学家，但他却是这一规律罕见的例外。事实上，在他的亲朋好友看来，他倒总是一个“招人喜爱的家伙”，得要费点劲才能让他们想到，他不仅是个出色的散文家、了不起的演说家，还是一位关于汉语语法和比较语音学之类的学术论文的作者。

刘博士最初是在陈独秀先生编辑的《新青年》月刊上开始出名的。他和胡适博士与其他人一起提倡采用白话即通俗语言作为书面语。1918年他出国留学²，六年后带着博士文凭从巴黎归来。从那时起直到逝世，他始终在国立北京大学教书，还是“中基会”³语言学和语音学研究员。

刘博士有许多业余爱好。虽然教书和研究工作已经忙得不可开交，但他还是有办法找出时间来培养了许多通常和他那种学究气人物不太相干的爱好。他翻译法文作品，发表幽默的打油诗，散文随笔从西方民俗到中国戏曲无所不谈，这为他赢得了为数众多的读者。他还打算为在义和团运动时期从八国联军的杀戮下拯救过不少老百姓的名妓赛金花写一部传记。作为讽刺作家，他也不是等闲之辈。在一篇题为《阿弥陀佛戴传贤⁴》的文章中，他温和地取笑了一下那位考试院院长，批评他的迷信和意欲停止所有考古发掘的主张。最后，他对摄影也很感兴趣，在这方面他还写了一本很有实用价值的入门指南。

他在前往绥远⁵的旅途中感染了回归热而病逝。那次旅行，是为了语言学研究而到那里去考察当地方言。他是献身科学的烈士，因此他在北大的朋友和同事决定设置一笔奖学金，以表达对他的敬意和永久纪念。

刘博士遗下了他的寡妻和两个女儿⁶。作为一名真正的学者，他生前对钱极为轻视。所以，他留给家人的除了书，就几乎别无所有了。

WANG TEH-LIN (王德林), "A FIGHTING BULL"

Of our national heroes who led the Volunteers against the Japanese invasion of Manchuria in 1932, only few are now left in the field. Among those who remain we may mention only two: the "Little White Dragon," a former brigand chief, and General Wang Teh-lin, the self-styled "fighting bull."

Wang Lin who later came to be known as Wang Teh-lin was born in the valley of River Chi (沂水), Shantung, where Confucius longed to have his bath. His parents died early, and in his teens he was looked upon as a good-for-nothing loafer in his village. However, he was soon found among the more adventurous elements migrating from Shantung to Manchuria in the 90's and later owning a timber mill in Shanchakou (now Tungning), eastern Kirin. It was here that an important episode happened to him which changed Wang Lin the lumber mill owner into Wang Teh-lin who shines forth now as a lone star among the Volunteer leaders.

A few years before the Boxer Uprising, the Russian influence, if not dominant was already keenly felt in Manchuria; and over the hills of Shanchakou, as elsewhere along the Chinese-Russian border, Chinese and Russian frontier guards jointly searched the hills for bandits every winter. It so happened that six bandits were stopping at Wang Lin's lumber camp and were peacefully making themselves at home, when suddenly appeared not far from the camp the Russian guards. The outlaws, seeing that it was too late to escape, put up a desperate fight and killed several Russians. Half of their own number were killed and the others fled. The Russian guards reached the camp, shot down four or five mill hands and lined up the rest to face the firing squad. The Chinese soldiers hearing the shots hurried up the hills and were there just in time to save the innocent lumber jacks. All the while Wang Lin was returning to his camp from the city where he had collected accounts from his clients. In the camp he found his nephew—his sister's son, to be exact—among the dead, and he vowed vengeance.

In the spring he sold his mill and moved to Vladivostok, where he was known to the Chinese as a hard worker, a peaceful and honest man. But soon the number of drunken Russian guards who were drowned in the port or otherwise mysteriously disappeared was, so the story goes, on the increase. It did not take the Russians long to cast suspicion on this new comer, and one morning Wang Lin found

himself arrested by the Russians who were quite determined to do away with him. But the Chinese population of Vladivostok was agog, and many Chinese firms of good reputation were willing to bail him out. The Russian authorities, in order to pacify the Chinese merchants and labourers, sent him to the Russian consul in Changchun. After three months' investigation, the consul found no evidence against him and set him free. Clad in autumn clothing he braved the Manchurian mid-winter weather and walked from Changchun back to Vladivostok. Then came the Boxer Uprising, and after the tumult which it created, we find Wang Lin and a score or so of his followers hunting in the woods along the highway between Vladivostok and Kirin city. They plundered and sometimes killed Russian travellers. And true to the traditions of outlaws, Wang Lin was always generous to the poor. The Russians pressed the Chinese authorities to exterminate the gang, but Wang Lin and his followers were always too fleet for the halfhearted Chinese soldiers and it was not until some time after one Russian official had been attacked that they were cornered and driven to a desperate fight. Five or six of Wang Lin's men were killed and the Chinese commanding officer desiring to end the trouble once for all—officially at least—got some villagers to verify that Wang Lin was among the dead. So Wang Lin was dead, and Wang Teh-lin was merrily carrying on his Robin Hood activities.

In 1915 due to a combination of factors, including the notorious Twenty-One Demands, Wang and his followers were incorporated into the Kirin regular army. He was made a major and his followers, over four hundred in number, formed a battalion. And for sixteen years he and his men led soldiers' humdrum life, with the occasional excitement in suppressing the bandits.

Then came the September 18 Incident. Two provinces were lost in as many days. It was a time of bewilderment to the local authorities. While they deliberated on what they should do, the Japanese lost no time in making further survey of eastern Kirin where they planned to build a railway of great strategic importance connecting Changchun to a northeastern Korean port. The surveyors came to south of Tunhua and came dangerously near the headquarters of Wang Teh-lin. His guards signalled to the Japanese to stop and shot and killed one of them when they ignored the guards' commands. The matter was referred by the Japanese to the garrison commander in Tunhua, and Major Wang was summoned. He went and he stuck to his gun. When the Japanese representative remarked to Major Wang's superior that Chinese military men were unreasonable, he spanked the Japanese on the cheek and retorted that there was no one in the world so unreasonable as the Japanese military who occupied two Chinese provinces without slightest provocation. He left with his bodyguards

before any one else in the meeting grasped the full significance of the act.

By hook and crook the Japanese won over his superior who tried to persuade Major Wang to board the same train and go to the Kirin city. But he was too shrewd for the Japanese, and this was his reply: "After old Marshal Chang's train was bombed by the Japanese, who is safe to travel by train?" With these words he ended his allegiance to his former superior, and a few days later he captured Tunhua by a surprise night attack. What he did after that is too well known to call for repetition here. Suffice it to say that at one time he had under him between 100,000 and 200,000 men, although by the early part of 1933 his forces dwindled to 50,000-60,000 and he, as so many other Volunteer leaders, had to flee to Russia. In the following summer he came back to China by way of Europe and the South Seas. He stopped at Hongkong and with the promise of some material help by Canton back he went to assume his command of his forces without so much as touching Shanghai.

He is daring and quick in decision. A man of over fifty years old, he still lives a strenuous life. He is a simple man, but his tall and squarely built stature looks impressive; indeed there is something of a fighting bull in him. It was in Canton that he remarked: "I am a fighting bull, and I know only how to fight." To fight he certainly knows, for even as this is being written the news dispatches from Manchuria indicate that several districts in eastern Kirin have once more fallen into his hands and Chinese flags are proudly waving in that small corner of the territory that has been for centuries China's.

[No. 33; Aug. 16, 1934]

王德林¹，“武牛”

在1932年率领东北救国军抵抗日本侵略的民族英雄中，现在只有为数很少的几位还在坚持战斗。我们只能提到其中两位：一位是原先的胡匪头子“小白龙”，另一位是自称“武牛”的王德林将军。

王德林原名王林，出生在山东沂水流域，沂水就是孔夫子想浴乎其中的那条河。他小时候父母双亡，到了十几岁，村里人都认为他是个游手好闲没出息的孩子。但是在（19世纪）90年代，他很快成了闯关东的一员，后来在吉林东部的三岔口（现在的东宁）²开办了一家木材厂。正是在这个地方发生的一起重大事件，使得木材厂主王林变成了王德林——如今救国军诸领袖中独自放射光芒的一颗明星。

义和团运动爆发以前，俄国人的势力在东三省，即使还没占据主导

地位，也已经能够深切地感觉到了。三岔口山上也像中俄边境的其他地方一样，两国的边防兵每年冬天都要联合巡山，搜索盗匪。有一次，六个匪徒来到王林的伐木场，并没有动刀动枪，就像到了自己家里一样。突然，俄国边防兵在伐木场附近出现，匪徒们眼看着来不及逃走，便殊死抵抗，打死了几个俄国兵。他们自己也死亡半数，其他三个逃走了。后来，俄国兵来到伐木场，开枪打死了四五个伐木工，又把其余的人排列成行将行枪毙。听到枪声的中国士兵赶上山来，刚好来得及救下那些无辜的伐木工。与此同时，进城收账的王林正在往回走。他回到伐木场，发现他的外甥——准确地说，他姐姐的儿子——也在死难者之列，便立誓报仇。

第二年春天，他卖掉了厂子，迁居海参崴。在当地的华人中间，人们都知道他工作勤奋、为人和气、待人诚恳。但是据说，很快，喝醉酒淹死在港口或是以别种方式神秘失踪的俄国边防兵就多了起来。不久，俄国人就怀疑到这个新来的中国人身上。一天早晨，王林被俄国人抓走，他们下定决心要除掉他。但是，海参崴的华人群情激昂，许多声誉良好的华商店主愿意花钱保释他。俄国当局为了安抚华商和华工，就把他交给了长春的俄国领事馆。经过三个月的调查，领事馆未能发现任何不利于他的证据，便把他放了。他穿着秋天的衣服，冒着东三省隆冬的严寒，从长春步行回到海参崴。紧接着爆发了义和团运动，骚乱过后，人们发现王林带着二十来号人在海参崴和吉林之间沿路的森林里打猎。他们抢劫，有时也杀害俄国旅人。但是，王林恪守绿林传统，以所劫钱财周济穷人。俄国对中国当局施加压力，要求他们剿灭这股土匪。但是，王林和同伙总比心不在焉的中国士兵跑得快，直到一名俄国军官遇袭后，他们才被逼上绝路，进行了殊死搏斗。王林有五六个部下被打死了，中国士兵的指挥官想要就此了事——至少如此公开表示——便找来几个村民证实王林也在死者之列。于是，王林其人就此死掉，而王德林却高高兴兴地继续开展他的罗宾汉³活动。

1915年，由于多种原因，包括臭名昭著的“二十一条”⁴在内，王德林及其部下编入了吉林的正规军。他的部下有四百余人，组成了一个营，他任营长。除了偶尔清剿土匪的兴奋，他和部下度过了十六年枯燥乏味的兵营生活。

接着，九一八事变爆发了。在相同的天数内，两个省相继失守。地方当局惶然不知所措，他们还在考虑如何应对的时候，日本人却在紧锣密鼓对吉林东部进行进一步的勘察，准备修建一条具有重大战略意义的铁路，把长春和朝鲜东北部一个港口连接起来。勘察队来到敦化⁵以南，临近王德林的指挥部，情况非常危险。他的卫兵示意日本人不要继续前进，他们却对命令置之不理，卫兵便开枪打死了一个日本人。日本人把事情提交给敦化的驻军司令，王营长被召见。他去了，并坚持自己的立场。当日本代表对王营长的长官指称中国军官不讲理时，他抽了日本人一耳光，并反驳说世界上还没有人像日本军队那样不讲理地无缘无故就占领了中国的两个省。在场的人还没来得及捉摸透这一行为的深远意义，他已带着卫兵扬长而去。

日本人择手段收买了王营长的长官，长官试图劝他乘坐同一列火车到吉林城去。但是，对于日本人来讲，王德林是太精明了一点，他的

回答是，“自张大帅所乘的火车为日本人所炸之后，⁶谁敢再坐火车？”说完这句话，他对前长官的忠诚就不复存在了。几天以后，他一夜奇袭，占领了敦化。之后的事迹已经广为人知，就无须赘述了，只消说，他的部队一度达到了十几万人——虽说1933年上半年缩到五六万人，而他也像其他救国军领袖一样不得不逃亡到俄国。第二年夏天，他才经由欧洲和南洋回国。他在香港稍事逗留，得到广州方面提供物资支援的许诺，便又回去率领部队了，甚至不曾在上海靠岸。

他勇敢而果断，50岁出头，仍然干劲十足。他为人淳朴，高大魁梧的身材给人深刻印象。他身上确实有一种类似好斗公牛的精神。他在广州时曾经说过，“我是只武牛，只会打仗。”他当然会打仗，甚至就在撰写本文的时刻，来自东三省的通讯称，他又控制了吉林东部几个区，中国国旗正在世代代属于中国的那一小块土地上空骄傲地飘扬着。

林 幽

[第33期，1934年8月16日]

DR. V. K. TING (丁文江)

In Lord Willingdon's opinion, Dr. Ting is one of the most brilliant men he has ever met. This is high praise coming from such a quarter, especially when one thinks of the galaxy of talented men that Lord Willingdon has known, —the late Earl of Balfour, Lord Morley, Viscount Bryce, etc., etc.: they are all minds of the first calibre, and their activities are as varied as they are distinguished. But this praise is no less than the truth. A few minutes' talk with Dr. Ting will soon convince one that his is a mind of no mean order: its shortcomings are as obvious as are its excellences: they are the shortcomings and excellences of a very clever mind, a very brilliant mind. But is it a great mind? Here there is room for differences of opinion.

Dr. Ting's mind is the kind that produces the Home University Library and the Cambridge Manuals of Science. It is not the kind that can produce a *Novum Organum*. Its characteristics are agility and a receptiveness to facts, but not to ideas. Its faults are cocksureness and a certain imperviousness to the other man's point of view. It loves to range at large in search of facts of all kinds: it never stays at home to chew and digest the facts into generalizations. Such a mind can, therefore, be interesting only for what it has, and not for what it is: and what it has is God's plenty—a Curiosity Shop containing all sorts of odds and ends, from statistics about the equipment of the Chinese army to the way that T'ang poetry should be recited. In other words, one should go to Dr. Ting as to an encyclopaedia—to gain correct information: but for wisdom—well, it's perhaps better to consult some one who knows less, maybe, than Dr. Ting, but some one who dreams and contemplates more than he does—to the kind of person who can produce a *Novum Organum*.

Dr. Ting's fondness for facts as facts engenders in him a certain impatience with dreamers and prophets and all that sort of people that Tolstoy loves. This impatience is typical of a man of action: and Dr. Ting is nothing, if not that. He is one of the greatest men of action that China has at the present day. The pity is that he has been taken so long for what he is not—a scholar. He has none of the hesitations and second thoughts of a scholar. What he thinks, he does: what he does, he thinks. He is as unerring as a compass as to the way he should go. This capacity for action is backed up by another quality in him which qualifies him to be a first-class administrator—a sleepless passion for details. As Mayor of Shanghai, he has given us a foretaste of what he can do as an administrator. We are sure, any work which will call forth his administrative abilities will always be distinguished

by commonsense and usefulness.

Dr. Ting's personal appearance answers exactly to the kind of person he is: a short, robust body, with eyes which show agility and decision; and a moustache which means business and no nonsense!

A new fanaticism is now abroad. And the missionary of this new fanaticism is Dr. Ting, who cries in the wilderness of machine-guns and factories: What does it profit a man to gain his soul, and lose this brave new world of coal and iron and sky-scrapers and talkies?

(According to the Gospel of Saint H. G. Wells)

[No. 34; Aug. 23, 1934]

丁文江博士¹

卫灵敦勋爵²认为，丁博士是他见过的最杰出人物之一。这是很高的赞誉，尤其是考虑到这位勋爵所认识的才俊精英可谓灿若星河——已故贝尔福伯爵³、莫利勋爵⁴、布赖斯子爵⁵等等，全都是一流的人才，他们的活动多种多样、出类拔萃。但这个赞誉仍然恰如其分。和丁博士交谈几分钟就会相信，他的才智卓然超群。他的优点和缺点都十分明显：那是非常聪明、非常有才华的头脑的优点和缺点。至于这个头脑是不是伟大，这就有所争议了。

丁博士的头脑是能够创作出《家庭大学丛书》⁶和《剑桥科学与文学文丛》⁷的头脑，不是写得出《新工具》⁸之类著作的头脑。其特性是敢于接受事实，难于接受观念；毛病是过分自信，听不进别人的意见。这样的头脑喜欢到处去搜罗各类事实，从不留在家里加以咀嚼、消化和概括。因此，这种头脑的有趣之处仅仅在于它“有”什么，而不在于“是”什么。他头脑里的东西实在是多——就像个古玩店，各种各样，零零碎碎，从中国军队装备的统计数据到吟诵唐诗的方法，无所不有。换句话说，人们去找丁博士就像去查百科全书——为的是获得正确的信息资料，但是要获得智慧，也许最好还是请教知识可能不如他丰富，却比他爱幻想、爱深思的另一种人——写得出《新工具》的那种人。

丁博士喜爱就事论事，这种偏爱使他对幻想家和预言家、对托尔斯泰⁹所喜欢的那些人，全都有点不耐烦。这种不耐烦是实干家所特有的，而丁博士可以说什么也不是，就是个实干家。他是今日中国最伟大的实干家之一。可惜，长时间以来他一直被错误地理解为一位学者。他缺乏学者的犹豫和深思熟虑。他想什么就做什么；做什么就想什么。对于他应该走的路，他总像罗盘一样准确无误。这种行动能力的背后，又有另一种使他能够成为第一流管理人员的品质，那就是不懈地追求和把握细节的热情。他出任上海市长¹⁰的表现就已经让我们多少领略了他的行政能力。可以肯定，凡是能够显示他行政才能的工作，他都会合情合理、讲求实效、出色地完成。

丁博士的长相和他的为人完全相符：个子略矮，身体敦实，外加一

对透露着机敏和果断的眼睛；一撮八字胡似乎在说：多干实事、少说废话！

目前，国外出现了一种新的狂热运动¹¹，丁博士已经成了这种新型狂热主张的传教士。他在机关枪和现代工厂的荒原中大声疾呼：得到灵魂而失去一个煤、铁、摩天大厦和有声电影的勇敢新世界，对于人来说能有什么好处？（据《圣徒赫伯特·乔治·威尔斯的福音》¹²）

[第34期，1934年8月23日]

THE LATE MR. KU HUNG-MING (辜鴻銘)

Many must have been intrigued by that charming portrait of The Philosopher in Somerset Maugham's *On A Chinese Screen*. A philosopher, all the world over, is usually a dull withered thing, —an orange sucked dry: a day spent in such company can only be memorable for its boredom. But with Somerset Maugham's Philosopher, it is possible to pass days, nay weeks, without in the least knowing what it is to be bored. There is just enough grace and just so much mordant wit in him to make conversation with him a matter of excitement rather than of wisdom. Somerset Maugham's Philosopher is, of course, none other than Ku Hung-ming. And the most distinctive thing about him is that he is no philosopher—no philosopher, that is, in the sense of a person who thinks first, and lives afterwards. Ku Hung-ming has a passion for dainty living; and thought with him is sought after only because it lends colour and dignity to life. Ku Hung-ming is first and last a worldling, but with this distinction—a worldling who thinks. His Confucianism, his monarchism, and his queue are mere decorations to a life that consumes itself in the sheer joy of living. That worn cadaverous frame of his is the victim, not of thought, but of desire and wit and beauty and an inordinate wish to be different from others.

In his life-time, Ku Hung-ming had already become legendary. Now that he is dead, there is a danger that he may pass into fable. Our purpose here is to prevent this by showing him as he really is. And what he really is, is not so very different from many other people, whom one meets daily at the present day. Ku Hung-ming is only a picturesque instance of a person who is born a rebel.

That ostentatious display of his queue is very symptomatic of the whole man. He is cross-grained: he lives by opposition. What the commonalty accepts, he rejects. What the commonalty likes, he dislikes. What the commonalty idolises, he despises. To be different from others is his joy and pride. Because it is the fashion to have no queue, he retains his. If everybody else has a queue, I am sure Ku Hung-ming would be the first person to have his cut. It is the same with his monarchism. It is not a matter of principle with him, but of a desire to be exceptional. Republicanism is the craze: therefore, he hates it. He flaunts his monarchism, as a dandy his cravat. Indeed, in things intellectual and spiritual, it is no inaccurate description of Ku Hung-ming to call him a dandy. As a dandy spends his days and nights

over his dress, Ku Hung-ming takes infinite pains to be different from others, in his ideas and manner of living.

Ku Hung-ming is witty. But his wit turns invariably upon a paradox. Now the essence of a paradox is that it should surprise by the opposition of its ideas to common notions. Here again, Ku Hung-ming shows up the quality of his mind—a mind that lives by resistance to what is generally accepted.

Again, his championship of Confucianism is another expression of his wish to be different from others. A few years ago, it used to be the correct thing among the intelligentsia to look upon Confucianism as a tedious set of obsolete rules about the conduct of life. This is a good enough reason why Ku Hung-ming should be a Confucianist. What others discard, he champions. But the last person to be a Confucianist is Ku Hung-ming. He is more native to Chuang-tze and Taoism, than to Confucianism.

A rebel who preaches monarchism; a romantic who accepts Confucianism as his philosophy of life; an autocrat who is proud to wear the sign of slavery—the queue: it is this contradiction in Ku Hung-ming that makes him one of the most interesting figures in modern China.

[No. 35; Aug. 30, 1934]

已故的辜鸿铭先生¹

对于萨默塞特·毛姆²所描述的《中国剪影》³中那篇“哲学家”迷人的肖像，许多人肯定都很着迷。哲学家，在全世界，通常都是枯燥乏味、干瘪皱缩的人，就像被吮吸干了的橙子。和这样的人在一起呆一天，只能由于令人厌烦而难以忘怀。可是，和毛姆笔下那位哲学家在一起呆几天，不，甚至呆几星期，也不会感觉到丝毫的厌烦。那是由于他身上有足够的魅力和那么多尖锐刻薄的诙谐，使得和他谈话与其说是智慧的启迪，不如说是令人高兴的事。萨默塞特·毛姆笔下的那位哲学家，当然，不是别人而正是辜鸿铭。他身上最明显的一点是，他并不是哲学家——就是说，他不是先思想后生活的那种哲学家。辜鸿铭有追求舒适生活的热情，而思想之所以值得他去探索，只是因为能够给生活增添色彩和尊严。辜鸿铭是一个彻头彻尾的俗人，与众不同的在于——是个有思想的俗人。他的儒家思想、他的君主制思想、他的辫子，对于他在纯粹的享乐中度过的生活，只不过是些装饰而已。他那枯槁疲惫的身躯并不是用脑过度的结果，而是欲望、机谋、耽美和无节制地追求与众不同的愿望的牺牲品。

辜鸿铭在生前就已经成了传奇人物，如今他死了，恐怕还会变成神话人物。我们写这篇文章的目的，只是要展示一个真实的他，以避免这

样的事情发生。而真实的他，和我们现今每天遇到的许许多多的人，并没有很大不同。辜鸿铭只是个天生叛逆的生动例子。

他有意卖弄自己的辫子，是他整个为人的特征。他脾气倔犟，以对抗为生。大众接受的，他拒绝；大众喜爱的，他厌恶；大众崇拜的，他鄙视。与众不同就是他的乐趣和骄傲。因为剪掉辫子成了时尚，所以他偏要保留。如果别人都留着辫子，我敢说，他就会成为第一个剪辫子的人。关于他的君主制思想，情况也完全一样。对于他来说，这不是一个原则问题，只是由于他希望与众不同。共和制风靡一时，因此，他痛恨共和制。他夸耀君主制，就像花花公子夸耀他的领结。其实，从才智和精神方面称辜鸿铭为花花公子，倒也未必不准确。就像花花公子夜以继日把时间花费在穿着打扮上，辜鸿铭则是为了与众不同而在思想观念和生活方式上煞费苦心。

辜鸿铭谈吐诙谐，但是他的诙谐都建立在矛盾之上，而矛盾的实质就是看法跟一般观念相反，使人感到意外。在这个问题上，辜鸿铭又一次显示出他那头脑的特性——惯于对抗大众思想。

同样，他对儒家学说的维护，也是追求与众不同愿望的又一表现。几年前，知识分子都把儒家学说看成是一套有关生活准则的令人厌烦的陈腐教条。这就足以成为辜鸿铭采取儒家立场的理由了。别人摒弃什么，他就拥护什么。但是，最不可能成为孔门信徒的却是辜鸿铭。他天生更是个道家人物。

一个宣扬君主制的叛逆者、一个把儒家学说当作人生哲学的浪漫主义者、一个拖着奴役标志的辫子而自傲的独断独行的人——正是辜鸿铭身上这种自相矛盾的特性，使他成了现代中国最有趣的人物之一。

[第35期，1934年8月30日]

MR. WU LAI-HSI (吴赉熙)

"There are not seven, but eight, wonders of the world: I am the eighth," says Mr. Wu Lai-hsi; and looking at him, one smiles and, wishing to be polite, inwardly assents to what is after all a very modest assertion of a fact. Tall and thin as a bamboo-stick, with his head looking more like a mop than anything else, Mr. Wu would be noticeable in any company. But those big ears of his, which stick out at right angles to his head, make him indeed a wonder and a delight to look at. Any visible tendency in the beholder, however, is at once checked by the sentiment of *memento mori* which the big black eyes, set in a very cavernous pair of sockets, inspire—eyes which seem to converse with the skies, and to see things, which no mortal has either seen or heard of.

The ascetic and other-worldly appearance of Mr. Wu is emphasized still more by his negligence in dress. It almost seems as if Mr. Wu does not know what he puts on. His clothes hardly deserve to be called clothes: they look more like... well, I really don't know what they look like.

This indifference of Mr. Wu to his appearance is the outward expression of a mind forever voyaging through strange seas of—thought? yes, but let me add, of beauty too. I have said a little while ago that his eyes seem to see things, which no mortal has either seen or heard of. When I say that, I don't mean it to be metaphorical: I mean it to be an exact description of a fact. For if there is one characteristic which stands out very prominently in Mr. Wu's make-up, it is this restless search of his for I know not what unearthly beauty and what saving knowledge. Those fierce, dreamy eyes have caught sight of some Belle Dame sans Merci perhaps, —some romantic vision of an impossible ideal. If the vision had been constant, it might have held Mr. Wu down to one single line of activity, which would best give expression to that ideal; but being inconstant, it has fired him with all the ardour of inspiration, without any of the thoroughness which comes from constancy. The result is that Mr. Wu jumps about from one thing to another, doing everything well, but not well enough to be excellent. For instance, to have heard him play on the violin is to make one regret that he doesn't play it now. Maybe, the vision which lured him once to do so never comes to him now: so the violin is forsaken, and he remains in memory only a good amateur, but not a musician. As with his violin-playing, so with his other activities; he does well enough to make one regret, but never so well to make him a master.

For a good many years, Mr. Wu has taken to Chinese porcelain as his hobby and his life-work. He has been very happy at it, and visitors to his house have caught his infection. No delight can be greater than spending an afternoon with Mr. Wu, talking about ceramics. To see him handle porcelain is to have an education in the art of love: nothing can be finer and tenderer. One can only hope that in this the vision will not desert him. But alas! one can never tell; for recently, the familiar porcelain vases are no longer to be seen in Mr. Wu's drawing-room: their places are usurped by scroll-portraits of some of the ruling princes of the Ts'ing dynasty.

But whatever the whirligig of Mr. Wu's taste and fancies, one thing, I am sure, will never change: his honesty and kindness to friends. There may be better, and cleverer, people than Mr. Wu, but there cannot be a better, and a more honest, friend.

[No. 36; Sep. 6, 1934]

吴贻熙先生¹

“世界上有八大奇观而不是七大奇观²，我就是那第八个。”吴贻熙先生这样说。看着他，你准会笑，为了礼貌，嘴上不说，心里会同意，这毕竟是对事实很得体的承认。吴先生高而瘦，像一根竹竿，脑袋更像个拖把，在任何人中间都很容易辨认出他来。但是，他那两只大耳朵，和脑袋成直角向外支棱着，确实使他成为奇人，而且看上去很有趣。然而，见到他的人要作出任何明显反应的意向，都会立刻被深陷在眼窝中的一双又大又黑的眼睛唤起的死亡征兆的情绪所制止——那双眼睛似乎在和上天交流，能看见凡人没有看见过也没有听说过的东西。

吴先生那副超凡脱俗的苦行僧似的相貌，更由于他的不修边幅越发显得突出。吴先生似乎都不知道他穿的是什么。他的衣服实在不配叫作衣服：那样子倒像是……哎，我也实在不知道像是什么东西。

吴先生对外貌的这种漠不关心，实际是他心灵的外在表现，他的心灵永远航行在陌生的海洋上——思想的海洋吗？不错，但是我要加上，还有美的海洋。我方才说过，他的眼睛似乎能够看见凡人所不曾见过也不曾听说过的东西。我那样说，并不是在用比喻，而是在准确地描述事实。因为，如果说吴先生的性格中有个十分明显的特征，那就是这种无休无止地寻求——我不知道是一种什么样的——非尘世的美和救赎知识。他那双热烈、恍惚的眼睛或许已经看见某个“无情的妖女”³——某种难以实现的理想的浪漫幻影。若是那个幻影恒定不变，就有可能使吴先生从事某一种活动，以充分表达那种理想；但是那幻影并不恒定，激发了他全部的灵感，却不曾有只能来自恒定的彻底性。其结果就是，吴先生便在一件又一件事情之间跳来跳去，做什么事都做得挺好，但是总也不能好到无可挑剔。例如，听过他拉小提琴就会为他现在不再拉而感到遗

憾。也许，曾经诱使他那样做的幻影现在不再出现了，于是他放弃了小提琴，他至今在人们记忆中便仍然只是个优秀的业余提琴手，而不是一个音乐家。他在其他方面也像拉小提琴一样，做什么都能做得好到使人遗憾他不再做了，却不能好到使他成为大师。

曾经有好多年，吴先生喜爱中国瓷器成癖，而且这还成了他的终身事业。他乐此不疲，来到家里的客人也会被他感染。用整个下午的时间与吴先生谈论瓷器，最大的乐事莫过于此。看他摩挲那些瓷器，就是在学习爱的艺术；没有什么能比他对瓷器更加细心、更加温柔了。人们只能希望，在这一方面，他内心的那个幻影不要离他而去。但是，谁都说得不准。最近，他的起居室里那些熟悉的瓷瓶不见了，取而代之的是清代某些当权王公的卷轴画像。

但是，不管吴先生的兴趣爱好变成什么，我肯定，有一点永远不会改变，那就是他对朋友的诚恳和善良。可能会有比吴先生更好、更聪明的人，但却没有比吴先生更好、更诚恳的朋友了。

[第36期，1934年9月6日]

MR. WU CHIH-HUI (吴稚晖)

Mr. Wu Chih-hui has often been compared to the great Dr. Johnson. Indeed, Mr. Wu is in many ways not unlike the author of the Rambler himself.

To begin with, Mr. Wu, like Dr. Johnson, is remarkable for his looks—remarkable of course not in the sense of handsomeness of a well-groomed person, but in the sense of being uncouth and yet that very uncouthness has become an attraction in itself. The "rollings of his huge frame" and the extremely careless manner in which he dresses himself do not repel us, for the simple reason that we have come to accept them as natural with him. For without these characteristics, Mr. Wu would cease to be himself. Besides, God has made him what he is, and we mortals should never question the wisdom of a Being greater than ourselves.

Of Dr. Johnson's capacity for talk, practically every schoolboy has been told. Similarly: Mr. Wu is justly famous as a conversationalist. He, too, loves "to fold his legs and have his talk out." Macaulay said of Dr. Johnson that "when at a loss for good reasons, he had recourse to sophistry; and when heated by altercation, he made unsparing use of sarcasm and invective." The same is true of the veteran Kuomintang leader. Moreover, although Mr. Wu has a spontaneous sense of humour, it is seldom as subtle as that of the compiler of the Dictionary of the English Language. In fact, it may be said that Mr. Wu's humour is of the unconscious kind. It is the humour of a Benvenuto Cellini, who provokes laughter unintentionally and is a dispenser of fun in spite of himself.

Dr. Johnson was a Tory, and Toryism, as somebody defined it, is less a political than a social creed. "Its rockbottom principle is the acceptance of the state of life unto which, in the language of the catechism, it has pleased God to call us." In this sense, however, Mr. Wu is not, and can never be, a Tory. He is, on the contrary, a Whig, nay, a radical revolutionist. He is well known not only for his atheism, but also for his anarchistic convictions. It must be said, however, that the years have brought him wisdom, and he is now more moderate at least in his views of politics. He has in fact become an ardent supporter of the Kuomintang government, and may yet follow in the foot-steps of General Chiang Kai-shek and become also a pillar of the Southern Methodist Church.

吴稚晖先生¹

吴稚晖先生常被比作那位了不起的约翰逊博士²。确实，吴先生在许多方面也都和这位《漫步者》的作者十分相似。

首先，吴先生和约翰逊博士一样也以相貌闻名。当然，相貌之闻名并不是因为衣冠楚楚、潇洒英俊，而是由于土气。然而，那种土气本身已经变成一种魅力。他那“硕大身躯的一摇一摆”，他那不修边幅，都不会令我们厌恶，因为我们已经把这些看成他自然而然的一部分。没有这些特点，吴先生就不再是他自己了。何况，上帝已经把他造就成这个样子，我们这些凡夫俗子永远也不该怀疑一个比我们伟大得多的神明的智慧。

约翰逊博士的口才，是每一个小学生都听说过的。同样，吴先生也正以健谈享有盛誉。他同样喜欢“盘起腿来发表长篇大论的演说”。麦考利曾经说，约翰逊博士“在找不到正当的理由时就会诉诸诡辩；在争论得兴起时也毫不吝惜冷嘲热讽和破口叫骂”。这位国民党的元老也不相上下。此外，尽管吴先生有一种自然的幽默感，却很难能像那位《英语辞典》编纂者那样含蓄。其实，可以说，吴先生的幽默属于不自觉的那种。那是一种切利尼³式的幽默，并不刻意逗人笑，而人们不由自主会觉得好笑。

约翰逊博士是一名托利党人⁴。托利主义，就像有人说过的那样，与其说是政治主张，还不如说是一种社会信仰。“其根本原则是接受我们身处其中的生活现状，用教理问答手册的语言说就是，如系天意。”从这种意义上说，吴先生不是，也绝不可能是一名托利党人。恰恰相反，他是一名辉格党人⁵，岂止，甚至是一名激进的革命党人。他不仅仅是个著名的无神论者，还是一个尽人皆知的无政府主义者。不过，应该说，经历过的风霜给他带来了智慧，他至少在政治观点上已经变得温和了。事实上，他已经成为国民党政府的热情支持者，可能还会追随蒋介石将军的步武，成为基督教监理会⁶的中坚信徒。

[第37期，1934年9月13日]

MISS KU ZING-WHAI (顾静徽)

The other day I was listening to a heated discussion on the subject of women's education—what an age-old topic! I call it primitive, for to think at a time when women's position in the society has been more or less established that there should still be doubts as to the advisability of educating your daughter or sister. However, doubt exists, even among women themselves, although they only whisper it among themselves. Well, the consensus of opinion is, that higher education is not necessary for women, because they very seldom make use of it. One person held the view that he had known a woman biologist who went to teach English all her life long, and another Master of English Literature who got married and did not know how to rear her children. The absurdity of the contention is not for this column to refute. But to come back from my digression. The point is how this controversial conversation led me to see how very few men of that type knew women like Ku Zing-whai.

That Zing-whai and I should become fast friends is rather strange. She and I never went to school together (as if having the same Alma Mater gives the affinity between friends). Her scholastic interest is quite different from mine; she buries herself among figures, bottles, plates whose very nature is alien to me! We did, however, share an apartment together for six or eight weeks when, in our exile student days, I did the cooking and she the dish-washing. I liked her then not because she could wash thoroughly or because she let me take my afternoon nap immediately after my lunch. The fact that one could so like her in such a short time is a recommendation itself.

Zing-whai is a native of Kating, a small town off the Shanghai-Nanking Railway, a small town that, nevertheless, boasts of its progressiveness. She distinguished herself in Chinese in the Kiangsu Provincial Normal School at Soochow, that scenic spot where old-time-beauty once thrived with old-time-scholar! Zing-whai was the youngest in her class, but one of the most brilliant. Later she went to Utopia College to prepare herself for going abroad. It was there that she stood out definitely as a future physicist and mathematician. She was graduated from Cornell University. Yale gave her her Master's degree, and the University of Michigan made her a full-fledged Doctor of physics. Her scholastic record was flawless. She is now connected with the Academia Sinica in the department of physics.

But Zing-whai as a person is even more lovely. Short in stature, yet embodying such a great mind, quiet, unpretentious, she moves among her friends a helper and comforter. Her spirit of sympathy is

unimpeachable. Her friends can always go to her with their tales of woe and be sure that she'll give a ready and listening ear. That is her primary character, her interest in others. That is also true liberalism—always have room for other people's opinion. She does not like talking for the sake of talking, which most men [perhaps the writer means women!] find amusing and thrilling. Yet she has a sense of humour which most people lack.

You see, if only my friends who discussed so hotheadedly over the question of women's education had gone, instead of to the cabarets and members of women's clubs, to intelligent women to find the achievement of an educated woman, how much wasteful conversation could have been saved. But then, what will there be for them to talk about?

[No. 38; Sep. 20, 1934]

顾静徽女士¹

一天，我在听取有关妇女教育问题的讨论——多么古老的话题啊！我称之为原始，想想看，在妇女的社会地位已经或多或少确立的时代，居然还会怀疑对你的女儿或姐妹进行教育是否可取！然而，怀疑确实存在，甚至存在于妇女自己中间，虽然她们只是私下里悄声低语。不错，人们都认为，妇女无须接受高等教育，因为她们很少使用受教育所获得的知识。有人说，他认识一位学生物的女士，却去教了一辈子英语；还认识一位英国文学硕士，结婚后竟不知道怎样带大她的孩子。这种争论的荒谬不是本栏所要驳斥的，言归正传。我要说的是，这种有争议的讨论使我意识到，认识顾静徽这类女人的人实在太少了。

静徽和我能成为莫逆之交是相当奇怪的。我和她从不曾一同上过学校（好像同一个母校就会在朋友之间形成亲密的关系）。她的学术兴趣和我的完全不同，她埋头在数字、瓶子和盘子之间，我对此则一窍不通！但是，在出国留学的日子里，我们确实曾在一套公寓房内住过六个或八个星期，我做饭，她洗碗。那时候我喜欢她并不是因为她洗碗干净，也不是因为她肯让我一吃完午饭就去睡午觉。能有人在这样的时间内就这么喜欢她，这一事实本身就是值得称道的。

静徽是嘉定人。嘉定在沪宁铁路线上，虽然是一个小城，却以进步自豪。她在苏州读江苏省立师范学校时，中文成绩出类拔萃。苏州是一个景色秀丽的地方，曾经才子辈出，佳人如云！静徽在班上年龄最小，却是最出色的学生之一。后来她进大同学院，为出国留学做准备。在这个学院里，她以确定无疑的未来物理学家和数学家的前景脱颖而出。她毕业于康奈尔大学，取得了耶鲁大学的硕士学位，密歇根大学则培养她成为了合格的物理学博士。她的学业记录无可挑剔，现在任职于中央研究院物理研究所。

但是静徽的为人更加可爱。她身材娇小，才智高超，文静而不矫揉造作。和朋友们相处时，她乐于助人、善于安慰。她的同情精神毋庸置疑。朋友们随时可以来找她诉说自己的伤心事，而她，总有倾听的耐心。那是她的主要特点，即她对别人的关心。那也是真正的宽容大度——总有容纳别人意见的心胸。她不喜欢为了谈话而谈话，那是大多数人（或许作者指的是女人！）都觉得有趣和令人兴奋的事情。然而，她有大多数人所缺乏的幽默感。

你瞧，要是那些为了妇女的教育问题讨论得那么起劲的人不是去看歌舞表演和妇女俱乐部的会员，而是去找有才智的女士，就会发现受教育妇女的成就，就能节省多少无聊的废话呀。但是，到了那个时候，他们还有什么可谈呢？！

[第38期，1934年9月20日]

MR. YANG PING-CH'EN (杨丙辰)

From whichever angle one looks at him, Mr. Yang Ping-ch'en is a remarkable man. He is remarkable for his dress. He is remarkable for his looks. And he is remarkable for his ways. If Dante were to be alive now to rewrite his Divine Comedy, he would have to create a new place for Mr. Yang; for Mr. Yang belongs neither to Heaven, Purgatory, Hell, nor Limbo. He is too good for Hell; not innocent enough for Limbo; all too human for Heaven; and too utterly devoid of divine grace, ever to hope for redemption in Purgatory. Mr. Yang is a genus in which there are no species. He is a kingdom all to himself.

The first time I saw Mr. Yang was ten years ago. What took my eye then, still takes my eye now is—his tall Gladstonian collar, his blue double-breasted coat, his broad, dusky face and his shock of wiry hair. He has not changed during all these years. He never looked young in 1924, and he doesn't look young now; but he certainly doesn't look old—just like his collar, never clean perhaps, but not exactly dirty—a bit dubious in colour, that's all.

Mr. Yang has a sturdy figure. Of medium height, with a body made to stand the wear and tear of life, and not for show, Mr. Yang gives one the impression of a man, who does not know what it is to be tired. After ten hours of hard work and a strenuous game of mahjong, he looks just the same as when he first gets out of bed. It is not that he is ever healthy or fresh. It is that he never knows what it is to be ill.

In dress, Mr. Yang is anything but particular. Of some, it may be said that they are made for their clothes and not their clothes for them. In Mr. Yang's case, his clothes are neither made for him, nor he for them. So they be big enough, any clothes will do for him. Indeed, Mr. Yang cannot be said to wear his clothes: he just flops into them. For this reason, the most suitable attire for him to be in would have been the Chinese long gown; but for some ultra-mundane reason, Mr. Yang seldom puts on Chinese clothes; he invariably dons foreign clothes which have a dim resemblance to those made in the nineteenth century in Germany.

The most interesting feature in Mr. Yang's whole make-up is, of course, his physiog. It is like something which has strayed into the modern age from a period before there was any light. A broad face, a receding forehead, big, heavy jaw-bones, a small nose, and eyes which twirl and twirl and never rest. A smile, which looks more like a grin. Dusky in colour. Hair, which no matter how often it is cut always appears much too long and moppy. Withal, though, a very lovable face—a face which would inspire liking in children; a face which

shows a little shrewdness and not a little naivety; a face which may cause some merriment in the beholder perhaps, but one in which loyalty and good fellowship are writ large.

Mr. Yang's specialty is German literature. But he spends just as much time in philosophy as in literature. One may find it hard to believe, but logic is also one of his pet subjects. Now he is actively engaged in literary criticism by running almost single-handed a magazine, which is called Literary Criticism (文学批评).

But Mr. Yang is at his best when he talks about ghosts and magic and the by-ways of Buddhistic lore. His face, his gestures and his credulity have then a charm, that even a beautiful, clever woman cannot rival. But is this not because Mr. Yang is himself a charming ghost?

[No. 39; Sep. 27, 1934]

杨丙辰先生¹

无论从哪个角度看，杨丙辰先生都是一个出奇的人物。他的穿着出奇，相貌出奇，作风也出奇。如果但丁还活着，要重写他的《神曲》，就得给杨先生开辟一片新的境地；因为杨先生既不属于天国、炼狱、地狱，也不属于地狱边境²。对于地狱，他未免太良善了；对于地狱边境，他又不够纯洁；对于天国，他有过多的凡人气味；又完全没有受到神的眷顾而难以指望到炼狱里去获得救赎。杨先生是属内无种，自成一界³。

我第一次见到杨先生是在十年前。当年吸引我注意，如今依然吸引我注意的，便是他那格莱斯顿式的高领圈⁴，双排扣蓝色外套，宽阔、黝黑的脸膛和令人震惊的铁丝般的头发。这么多年过去了，他一点儿也没有改变。1924年的时候，他看上去并不年轻，现在看也不年轻，却也实在不显老——就像他的领圈，也许从来就没有干净过，却也不能算脏，只不过颜色有点难说就是了。

杨先生体型健壮、中等身材，生就一副经得起生活磨难而不是为了让人观赏的体格。杨先生给人的印象是，从不知疲倦为何物。在辛苦工作十个小时，又打了场紧张的麻将牌之后，他看上去就跟刚刚起床的状态一样。这并不是说他永远健康或精力充沛，只是他从来不知道什么叫生病。

在衣着方面，杨先生从不讲究。有些人，可以说，是为了衣服而生，而不是衣服为他们而做。杨先生的情况是，既不是衣服为他而做，也不是他为衣服而生。只要衣服够大，他随便穿什么都行。其实，不能说杨先生是穿衣服，他是扑到衣服里面去的。因此，最适合他的衣服就该是中式长衫了。但是由于某种超俗的原因，杨先生很少穿中式服装。他经常穿的西装，有点像19世纪德国裁缝做的那种。

杨先生最有趣的特点，当然还是他的面相。他那副相貌就好像是宇

宙洪荒、混沌无光时候的产物由于迷路而误入我们的时代——宽阔的脸庞、向后倾斜的额头、宽大粗重的下巴、小鼻子、转来转去不肯停歇的眼睛；还有与龇牙咧嘴无异的微笑、黝黑的肤色、不管剪得多勤都显得太长太乱的头发。虽然如此，他却有一副十分可爱的面孔——招孩子们喜欢的面孔，显得有点精明而又相当天真的面孔，让人见了也许觉得好笑但显然看得出诚恳和友善的面孔。

杨先生的专业是德国文学，但是他花在哲学上的功夫并不少于文学。人们也许难以置信，但是，逻辑也是他偏爱的学科之一。目前，他正热衷于从事文学批评，几乎是单枪匹马地在主持一个叫做《文学批评》的杂志。

但是，杨先生最拿手的却是谈鬼论怪、大讲佛教的旁门左道。那时，他的面孔、他的手势、他的深信不疑，就有一种迷人的魅力，那种魅力甚至冰雪聪明的佳人也难以匹敌。这不正是因为，杨先生本身就是一个迷人的幽灵吗？

[第39期，1934年9月27日]

DR. FUNG YU-LANG (冯友兰)

He is the historian of Chinese philosophy. I say this without doing any injustice to Dr. Hu Shih who has to his credit the famous Outline History of Chinese Philosophy, a brilliant but lop-sided work. Now Dr. Hu has been so many things that it would puzzle the most hard-boiled of pigeon-holing critics if he were called on to classify him. Well, to other people other excellences, let us give the palm to Dr. Fung as a historian of Chinese philosophy.

Don't suppose that Fung's magnum opus (A History of Chinese Philosophy) is such pleasant reading as Hu's Outline History. By no means. It is, among other things, written in an exceedingly uncouth style and dull with the dullness that is born, as Horace Walpole says, of taking pains. This is more a misfortune than a fault. Fung seems to have been so much possessed by his historical sense that he has lost some other useful senses, e.g. the sense of humour and the sense of style. But then, his book can do without these graces. It is written primarily by a scholar for scholars, and all scholars, it goes without saying, pay homage to the cult of Dryasdust. Fung has succeeded in clarifying many issues hitherto confused and giving complete portrayals of all types of philosophy. No one has more details at his command and no one has more command over his details. In his humble and homespun way, he is of the kin of Burnets and Zellers, Windelbands and Erdmanns.

I have heard that Fung stammers a good deal. Does that explain his peculiarly hesitating and non-conducting written style? Perhaps the style is the man, perhaps not, I have not had the privilege of listening to his lectures on philosophy, and I imagine that with "omm-jectives" and "summ-jectives" constantly dinning into the ear, they cannot possibly be very stimulating. But I seem to be mistaken. Students who have listened to him told me that he can take advantage of his stammer to score a point or lay an unctuous emphasis. If he tells a joke in the class, the students to a man wait in breathless suspense for the final point; and when he has at last triumphantly passed through the rolling fire of repeated sounds and reached the much waited-for point, the whole class breaks into a hearty laughter as much out of relief as out of mirth.

Fung is rustic in appearance, dishevelled and slattern. The scholar is written legibly all over him. His ruddy face with its smooth forehead and engaging smile would be cherubic but for a suspicion of the beard about the chin and a pair of powerful glasses. His eyes look so deep behind the glasses that it gives one the feeling of falling down

to the bottom of a pit to look at them. It is said that he is not above playing a little school politics. We sincerely hope that he plays with a neater hand than he writes.

[No. 40; Oct. 4, 1934]

冯友兰博士¹

他是中国哲学史家，我这样说对胡适博士并没有什么不公。胡博士写有著名的《中国哲学史大纲》，那是一部出色的著作，然而却略有偏颇。如今的胡博士已经是多重荣誉集于一身的名流，最实事求是的分类评论家要来给他归类，也会惶然不知所措。那么，让别人去得到荣誉，就让我们把中国哲学史家的桂冠送给冯博士吧。

不要以为冯博士的大作（《中国哲学史》）会像胡博士的《哲学史大纲》一样好读。不，绝不好读。除了别的原因之外，它的文体极其笨拙，也像沃尔浦尔²所说的那样费尽心思而枯燥。这更应该说是一种不幸，而不是一种过失。冯博士似乎具有太强的史学意识而丧失了其他诸如幽默感和文体意识之类有益的自觉。但是，这部著作没有这些优点也行。这主要是学者写给学者读的一部著作，而所有学者对学究气自是存有敬意的。冯博士成功地澄清了许多一向混淆不清的问题，对各种类型的哲学进行了完整的描述。没有人能掌握更多的具体资料，也没有人能更好地驾驭这些资料。他谦虚而朴实的风格与伯内特、泽勒、文德尔班和厄尔德曼之类的哲学家相差无几。³

我听说冯博士口吃得厉害。不知这是不是导致他文笔曲折婉转而不直截了当的独特风格的原因？或许文如其人，或许未必。我未尝有幸听过他的哲学课，但我想象着“omjective”和“summ-jective”⁴之声不绝于耳，这样的声音听上去索然寡味。不过，我好像是错了。听过他讲课的学生告诉我，他能利用口吃来为自己选用适当的措辞或是突出某个容易被忽略的重点。如果他在课堂上讲一个笑话，所有的学生都会屏住呼吸静待最后的结局。当他结结巴巴、一个字音重复了多次而终于说出了大家一直期盼着的结局时，全班人就会由于可笑，也由于悬念落实，而哄堂大笑。

冯博士外表质朴、头发蓬乱、不修边幅，浑身上下学者气十足。他那红润的脸庞、光洁的额头、再加上迷人的微笑，若不是下颏长了些胡须、鼻梁上架着一副大框眼镜，看上去就是个胖乎乎的娃娃脸。镜片后面那双深邃的眼睛，看上去让人顿觉如坠深渊。有人说他未必就不会玩点儿学校政治，我们诚恳地希望他玩起来能比写文章利索些。

[第40期，1934年10月4日]

LIU TIEH-YUN (刘铁云)

Based on an article by his nephew, Dr. D. K. Lieu, in "The Jen Chien Shih." — Editor.

If you stand by any roadside bookbooth and run your eyes over the titles, you will as likely as not catch the name of a popular novel, The Travelogue of an Old Man (老残游记). But the book is popular not only among hardly literate readers of cheap fictions, it has also gained the admiration of the literati, and many a close observer admires the accuracy with which he painted what was future to him but past to us. For instance, he predicted that there would be boxer uprising in the north and revolution from the south. His calculation of the ten "heavenly stems" and the twelve "earth's branches" in this connection is just a matter of language, the language in which he cloaked his shrewd observations and with which he spoke intelligently and convincingly to the people of his time. A book of such popularity will at once put the author on a sound financial basis in America, but in China, Liu Tieh-yun, the author of this popular novel, did not, we suspect, get a single cent out of it.

To the curio collectors, Tieh-yun was well known as a good collector, but he was greater than both a novelist and an antique connoisseur, in that he was an ardent advocate of the new regime. He was exiled to Sinkiang where he died, because he cast his lot with the Paohuangtang to fight against the reactionary power of the Empress Dowager in hope that by restoring Emperor Kwang Shu to power the new regime might get a fair trial. He was among the pioneers who advocated a thorough study, and a whole-hearted introduction, of the Western culture to cure China's ills. And curiously enough he was also a pioneer among the antique collectors who first paid some attention to the antique bones and tortoise shells, whose inscriptions have, when deciphered, thrown no small amount of light to China's ancient history. His passion for his antiques, however, was among the causes of his death. Tuan Fang, one of the highly influential Manchu officials, saw his collection, took a fancy to one article and tried to buy it cheap. At first he refused, and then he thought the better of it and presented it to Tuan Fang as a gift. But having been offended, Tuan Fang was among the first to cause his exile.

Tieh-yun came from a well-known family, and his father was for many years a military commander in Honan, who cooperated with the famous Tseng Kuo-fan in suppressing the Nien Rebellion in Shantung, Anhwei and Honan, which came close upon the heel of the Taiping

Rebellion. When retired, he came to live in Huaian, Kiangsu. He and his older son were among the strong advocates of the introduction of Western science and culture. His older son, Tieh-yun's elder brother, began to study French at the age of 30 with some Catholic fathers. Tieh-yun became very much interested in his elder brother's study of foreign books, especially mathematics and medicine.

He belonged to the type of Chinese, who were aptly described by Han Wu Ti as "scholars who kick rather than accept the rein," and he never tried to compete for degrees in the government examinations. However, Chang Han-sien, governor of Shantung and an old friend of the family, knows Tieh-yun well and gave him a job in his yamen. But because of his advocacy of the new regime he was, as all advocates of the new regime then were, accused of being a traitor, and he had to resign from his post. He next went to see Li Hung-chung, another old friend of the family, who, treating Tieh-yun like a nephew, sharply rebuked him for his boldness that earned him the title of a traitor and asked him how he was to get any promotion thereafter. This drew out the following reply: "Truly I have earned the nickname 'traitor', but I am young and have but little to my credit, so I am only a little traitor. But you, my uncle, are old and have much to your credit, and you are accused of being 'the old traitor'. If I could only follow your footsteps, what is there to stop me from climbing to the top rung of the official ladder?"—a reply which brought a smile upon Li Hung-chung's sullen face.

Tieh-yun did not take to journalistic writing for the advocacy of the new regime, he would rather speak to the influential officials to convince them of its necessity. Seeing that the officials at empress Dowager's court were but faint-heartedly flirting with anything new, he joined the Paohuangtang with the tragic result already mentioned. However, there is something heroic about his advocacy of the new regime. When the government decided to build the Tientsin-Pukow railway and was in need of land to build the station and jetty in Pukow, he freely donated several hundred mou of his land there for the purpose.

[No. 41; Oct. 11, 1934]

刘铁云¹

根据刘铁云之侄刘大钧博士发表在《人间世》上的文章编译。——编者

如果你立足在路边的售书摊旁，放眼浏览那些书名，就很可能看

到这样一本畅销小说：《老残游记》。这本小说不仅受到识字不多的廉价小说读者群的欢迎，而且，也赢得了文人学士的钦佩。许多仔细的评论家于作者描绘对于他尚未发生、对于我们已成过去的一些事件之准确，大加赞赏。例如，他曾经预言，义和团将起事于北方，而革命将来自南方。在这一方面，他对十“天干”、十二“地支”的推断，只是一个措辞问题。在这种措辞里隐藏着他敏锐的观察，他机敏而有说服力地对同时代人所讲的也是这一类措辞。一本这样受欢迎的书，要是在美国，立刻就会使作者置身于殷实的富户之列；但是在中国，我们相信，这部畅销小说的作者刘铁云不曾因此获过得一分钱的收入。

在古玩收藏这一方面，铁云是个非常著名的行家。然而，他不只是小说家和古董鉴定家，他还是新政的热诚拥护者。他被流放到了新疆，并且死在那里，因为他把自己的命运和保皇党联结在一起反对慈禧太后的反动政权，希望光绪帝重掌大权，能让新政得到一次公平审判。他也是主张认真学习、诚恳引进西方文化以疗救中国痼疾的先驱之一。奇怪的是，他还是最早给予甲骨以关注的古物收藏先驱之一，而甲骨上的刻痕经过解读，对了解中国古代历史有着突出的贡献。然而，他对古董的癖好，也成了他的死因之一。端方²，一位权倾一时的满族官员，见到他的藏品，看中了其中一件，打算低价买下。起初他拒绝了，后来经过考虑，他还是把它作为礼物送给了端方。但是，已经被得罪了的端方，成了导致他流放的为首官员中间的一个。

铁云出身于名门世家，父亲是在河南为官多年的武将，曾经和著名的曾国藩³联手镇压山东、安徽和河南等地紧随太平天国之后的捻军⁴之乱。他父亲卸任后，居住在江苏淮安，他和他的长子都强烈主张引进西方科学和文化。他的长子，即铁云的长兄，30岁开始跟天主教神甫学习法文。铁云对长兄读的外国书非常感兴趣，尤其是对数学和医学。

他是汉武帝所描述的“泛驾之马，驭弛之士”，从来没有参加过科举考试。然而，山东巡抚张翰仙⁵是他家的老朋友，很了解铁云，给他在衙门里安排了一个差事。但是由于他拥护新政，像所有的新政拥护者一样，他也被指控为汉奸，不得不辞去职务。接着，他去拜见他家另一位老朋友李鸿章⁶。李鸿章待铁云如待子侄，狠狠训斥了铁云一顿，批评他因狂妄大胆而赢得了一顶汉奸的帽子，责问他今后还能指望有什么升迁。他答道，“小侄被骂为汉奸，事诚有之。然小侄年幼，办事尚少，仅一小汉奸耳。老年伯勋绩卓著，外间亦呼为汉奸，是乃老汉奸矣。小侄但能步老伯后尘，岂惧不能上进乎？”——这个回答令李鸿章阴沉的脸上露出了笑容。

铁云不喜欢利用新闻写作鼓吹新政，他更愿意去游说有权势的官员，让他们晓得有必要实行新政。鉴于慈禧太后的朝廷官员对任何新事物采取的都只是怯懦的摇摆态度，他加入了保皇党而导致了上文提到的悲惨结果。然而，他在拥护新政方面曾有豪壮的表现。当政府决定铺设津浦铁路，在浦口需要车站和码头用地时，他慷慨捐献了好几百亩自己的土地。

CHANG TAI-YEN (章太炎)

Largely based on an article by Tsao Chu-chen in "Jen Chien Shih" —Editor.

Chinese Philistines who in their talks are fond of discussing the merits of present day writers are not infrequently heard waxing enthusiastic about Chang Tai-yen and comparing him to the literary luminaries of the Tang and Sung dynasties, such as Han Yu (韩愈) and Su Tung-po (苏东坡) or his contemporary like Liang Chi-chao. But that would be an insult to a man who regarded the belles lettres of the Wei (one of the three kingdoms) and Chin dynasties alone as comparable to that of the later period of Chow dynasty worthy to be imitated by later writers but decried the masters of the Tang and Sung dynasties as too much tied down to the teaching of the Confucian ethics to express themselves freely, or too boastful and loose in their reasoning or too vulgar. A certain editor wrote him in the last years of the Ching dynasty desiring to obtain his permission to print certain essays of his in a collection of fifty contemporary writers, and this elicited a reply from him that he would rather throw his writing into wastepaper basket than see it appear side by side with that of the other men of letters of that time. In 1914, when he was imprisoned by Yuan Shih-kai in the then Peking, he wrote on May 23 to his family, and among other things he said: "After my death, the Chinese culture is done for!"

What a proud and haughty man to have written like that. But justly he may well be proud. He is among the very foremost scholars of Chinese classics. His special contribution in this field is the explanation of the "borrowed" uses of words through similar pronunciations. Among his students are Chien Xuan-tong and Hwang Chi-kang, two of the leading students of phonetics in China today. His imprisonment by Yuan Shih-kai led him to study Buddhism, and to produce a commentary on one chapter of Chuang Tse and three essays on human nature, all in light of Buddhism. The latter group of essays was regarded by his ardent supporters as having eclipsed all the writings of the Sung and Ming philosophers on this subject.

But to others Chang Tai-yen is sometimes spoken of in jest as one who is a bit "off his nut." By the end of Ching dynasty Kang Yiu-wei was regarded by Liang Chi-chao and his other disciples as a sort of pope to the Confucians; they even expected heavenly signs to confirm this honor which they did to their leader. It also gave rise to the rumor that Kang Yiu-wei was plotting to become an emperor. When one of Chang's friends asked him if he had heard anything about Kang plotting to become an emperor, he answered: "What I heard is that he

wants to be a pope, not an emperor. But honestly it is nothing unusual for a man to think of becoming an emperor one day. What is most unreasonable is that he wants to be a pope." This at a time when he was serving at a viceroy's yamen in Wuchang, when the Ching dynasty still showed no sign of tottering down! The eulogical scrolls he wrote and sent to funerals of Li Yuan-hung and Sun Yat-sen were anything but complimentary to those in power. Who but one who is a little bit off his nut would think of behaving like that?

[No. 42; Oct. 18, 1934]

章太炎¹

取材于《人间世》上曹聚仁的一篇文章。²——编者

在中国，不时可以听到，有些喜欢议论时下作家成败得失而又并不在行的附庸风雅之辈，对于章太炎的热情正在升高，他们把他和唐宋大家的韩愈、苏东坡等人或是他的同辈梁启超相比。而这样一种类比对于这样一位学者不啻侮辱，因为他认为，只有魏晋文章才能和东周诸子相比，才配成为后世作家楷模，而批评唐宋大家过分拘泥于儒家伦理说教而不能言所欲言，或是立论说理过分夸张而不够严谨或是流于庸俗。清代末年，有一位编书人曾经写信给他，希望能得到许可把他的若干篇文章，收进一个当代五十家文集。回答是，宁愿把他的文章扔进字纸篓，也不愿看到它们和当时其他人的作品排列在一起。1914年，被袁世凯囚禁于北京，5月23日，他写信给家人，其中有这样一句：“我死后，中国文化也将告终！”

能够写出这样一句话的人该是多么傲慢自大！但是平心而论，他有理由自傲。他是中国经籍出类拔萃的学者之一。他在这一领域的特殊贡献，是对文字同音假借的阐释。在他门下，有钱玄同、黄季刚这样的学生，他们是今日中国声韵学的两大学者。被袁世凯囚禁，导致他对佛学的研究，并以佛理注疏《庄子》一章³，撰写探讨人性的文章三篇。在他热诚的支持者看来，他这三篇，使宋、明两代同一论题的所有著述相形失色。

但是在别人看来，有时被以玩笑的口吻称作“疯子”。清代末年，康有为被梁启超辈学生奉为孔教教主，他们甚至期望上天垂象肯定他们对这位领袖的尊崇。于是便有谣言，说康有为密谋称帝。章氏一个友人问他，是否听说康氏有密谋称帝的活动。他回答道，“我只听说他想当孔教教主，而不是想当皇帝。但是，老实说，一个人想在某天当上皇帝，未必就是非分之想；最不可思议的，倒是想当教主。”这时他正在武昌供职于总督衙门，大清朝尚未显示出动摇迹象！而他为黎元洪和孙中山所撰挽联，又都不是对于权势人物的恭维。若不真是有点疯了，谁会想到如此这般行事？

MR. TENG H. CHIU (周廷旭)

Mr. Chiu is one of those artists, whom Nature tries her best to wean from their love of Art. She has made him look anything but an artist. Any one may very well take him for a banker. His comfortable proportions, his broad plump face, his quietness, his decorous manner of attiring himself, his slow movements, his soft purring voice, his engaging smile, —all are qualities which one would expect in one's banker: they do not inspire enthusiasm, but they certainly breed confidence. Now, one does not go to a banker to be rapt off the earth: that would mean panic, and panic is not a desirable state to be in, when one is considering financial questions. But one would be disappointed in an artist who, instead of communicating to one the feeling of transport (to use a Longinian expression), only loads one with the feeling of confidence. At the first contact with Mr. Chiu, it is just this feeling of disappointment that one feels. But it would be wrong to allow this feeling to persist. For if ever there is an artist in China, Mr. Chiu is certainly such a person. He has the body and appearance of a banker, but the soul and temperament of an artist. A slightly better acquaintance with Mr. Chiu will at once reveal to one, all the traits of a genuine artist in him.

For one thing, he has the essential simplicity of an artist. His contact with the world is naked and direct. He has nothing up his sleeve. By this, I don't mean to insinuate that his mind is simple. There is all the difference in the world between a simple mind and the sort of simplicity I have in view. By the "essential simplicity of an artist," I mean that intense and undivided allegiance of an artist to his Art, which brooks no second love. He sees everything through the medium of his Art. He jealously keeps the medium transparent and pure, so that no secondary considerations either of money or of material advantages will warp his vision of the world. He glories in the lust of the eyes and the pride of life. His wish, in the words of Sir Philip Sidney, is to make the too much loved earth more lovely still. To possess such a simplicity of vision is the sine qua non of an artist. Mr. Chiu has it. That he is not conscious of it stamps him all the more as an artist born, and not made.

Mr. Chiu is one of the few Chinese, who have seriously studied Western Art. Like all serious students, he has wisely decided to learn to walk, before attempting to fly. He has not tried to startle by any innovation, either in technique or design; but neither has he, on the other hand, tried to capture attention by bad workmanship, which in art circles is often euphemistically called "personal eccentricities."

Mr. Chiu has studied for many years in America, England, and Paris. His academic record has been most brilliant. The Creswick Prize of 1926, and the Turner Gold Medal of 1929 from the Royal Academy, London, are a few among the many signal distinctions, with which he has been honoured. He is a prophet not without honour, save in his own country. The reason for this, of course, is because Mr. Chiu hasn't got the gift of the gap. To be a successful artist in China, it is not only necessary to paint well, but it is even more necessary to talk well...about one's own pictures!

If I am asked, what are the qualities which characterize Mr. Chiu's pictures, I would answer, —refinement of eye, and sensitiveness of hand. They are not, perhaps, the qualities which can make one enthusiastic. But what of it? Enthusiasm for Mr. Chiu's pictures will come later when, with perfect mastery of his technique, he will have learnt to put more boldness into his brush.

[No. 43; Oct. 25, 1934]

周廷旭先生¹

有时候大自然会千方百计迫使一些艺术家放弃对艺术的爱，周先生就是这样一位艺术家。大自然赋予他一副什么都像就是不像艺术家的相貌。任何人都很有可能把他看成一个银行家。比例匀称的身材、胖胖的圆脸、文静的仪表、得体的衣着、从容的举止、轻柔低沉的嗓音、招人喜爱的笑容——这都是人们期望于银行家的品质：这一类品质不能激发热情，却肯定有助于产生信任。人们去找银行家并不是为了寻求魂飞天外的感受：魂飞天外意味着惊恐，而惊恐正是考虑财务问题时不希望出现的状态。如果一个艺术家不能给人以心神荡漾的体验（借用朗吉努斯²式的表达），而只能给人以信任，人们定会感到失望。第一次和周先生接触时所能感觉到的，正是这样一种失望。但是如果让这种失望持续下去可就错了，因为，如果中国真有个艺术家的话，那便是周先生。他有银行家的身体和相貌，却有艺术家的灵魂和气质。对周先生稍许熟悉一点，立刻就会看出他身上真正的艺术家所有的特质。

举例说，他有着艺术家本质上的单纯。他和世界的接触毫无掩饰、直截了当。他没有任何隐瞒。我这样说并不是暗示他头脑简单。在头脑简单和我心目中的那种单纯之间，有着天壤之别。我所谓“艺术家本质上的单纯”，是指艺术家对艺术那种强烈的专一的忠诚，不容许另有所爱。他通过艺术这个媒介来看待一切，并很戒备地保持着这个媒介的纯洁和透明，以免有关金钱或是物质利益的次要考虑歪曲了他对世界的看法。他为眼中的渴望和生命的自尊而骄傲。他的愿望，用菲利普·锡德尼爵士³的话说，就是使这个被喜爱得过分的世界变得更加可爱。具有这样一种单纯的洞察力，是一个艺术家的必要条件，周先生就具备。他具备但并

不自知，就更加显得他是个天生的艺术家，不经造作。

只有少数的中国人严肃认真地研究过西方艺术，周先生便是其中一个。像所有严肃认真的学生那样，他明智地决定先学走，再学飞。他并没有试图以技巧或是构思的标新立异惊世骇俗，也没有用艺术圈内常被委婉地称为“个人癖好”的粗制滥造哗众取宠。

周先生曾在美国、英国和巴黎学习多年，学习成绩非常出色。他曾经获得许多大奖，1926年的克雷齐克⁴奖和伦敦皇家学院1929年的透纳⁵金质奖章，只是其中的两项。他同样也是受尊敬的先知，除了在他自己的国度。其所以如此，是因为周先生未能具有能说会道的禀赋。在中国，一个成功的艺术家，不仅要画得好，甚至更要说得好……要善于为自己的作品自吹自擂！

如果有人问我周先生的画有什么特点，我就会回答：观察细致，画法灵巧。这样的特点，也许还不足以激发人们的热情。那又有什么关系？随着技法的日趋纯熟，他下笔会更加大胆，那时为周先生的画而掀起热潮的时机就会来到。

[第43期，1934年10月25日]

CHEN T' UNG-PE (陈通伯)

Thin, of medium height, with a sallow complexion, Mr. Chen is obviously made more for indoor, rather than for outdoor, work. Off the chair, he is not himself. On the chair, he is in his element, either for talking, reading, teaching, or (I am tempted to say) for fighting. His sedentary habit has moulded his body into a question mark. This is not noticeable when he sits down, but the moment he stands up, the weight of his head seems too much for his spinal chord to support: hence the pronounced stoop.

There seems to be nothing remarkable in Mr. Chen's appearance. But his is a face which, once seen, is not easily forgotten. There is something sinister about it, the more so when it is writhed into smiles. It always gives one the impression of a withdrawing of something somewhere. Is it the withdrawing of claws or of fangs? Or is the withdrawing more in the nature of the retreat of a tiger into its lair? I don't know, but somehow I would rather have Mr. Chen's scowl than his smile.

There is magic in Mr. Chen's large eyes. Well set in a sharply chiselled face, crowned by hair which is parted in the middle, his eyes eat their way through everything and everybody. Even when the eyelids are droopy and tired, the eyes are always clear and bright. There seems to be every virtue in them, —penetration, intelligence, quickness, wit. But there is no kindness. Faults are only seen as faults. Accompanying the diagnosis, there may be laughter, but it is the derisive laughter of satire, not the kindly laughter of humour. So it is that, when Mr. Chen's eyes light on one, they make one uncomfortable and inexpansive: one feels that to unfold oneself in such company would be dangerous. Most often, therefore, one shuts oneself up before him; and one takes away from his presence only the memory of his clear and beautiful, but unkind, eyes.

Mr. Chen is most happy and at his best in the silent company of his books. And what a company. His catholicity of interest is reflected in the multitude and the variety of his books. There are books on all kinds of subjects under the sun. What is more, Mr. Chen reads them. Very few of his books are any good from the bibliophile's point of view. Mr. Chen is not interested in beautiful bindings and beautiful printing. This explains why it is that so many of his books are second-hand. He buys books to read, and not to look at. Although his wide reading shows the catholicity of his interest, it does not, however, give evidence of a catholic mind. Like his three favourite authors, —Jane Austen, H. G. Wells, and Anatole France, —Mr. Chen certainly has a

good deal of "sense and sensibility" in what he does and says, but like them, too, there is also a good deal of "pride and prejudice" in his view of persons and things.

Besides reading, Mr. Chen finds his pleasure and ease in writing and translating. Most of his writings are in the nature of criticism. This is as one would expect. His forte is to analyse and satirize. With what ineffable lightness and clarity he does it! There is first the sinister smile, —the luring of the subject into the tiger's lair. And when he has sufficiently played with the subject, he gobbles it up, with a sneer or a laugh. To vary the figure, Mr. Chen's critical method always reminds me of a cat on a lawn playing about with a mouse on a cold, bright day in mid-winter. It's beautiful and cold to look at, and it always ends up in murder as a fine art.

Mr. Chen is, at present, Dean of the College of Arts of Wu-Han University. He runs the College with such good sense that it is now reputed to be the best of its kind in China. This should occasion no surprise, as in all those qualities of moderation, clear-headedness, and commonsense, which a good administrator ought to have, Mr. Chen is a shining example. For this reason, I should be happy to have Mr. Chen as my boss in any administrative work I have to do, but I should certainly not like to have him as my only companion in a desert island.

[No. 44; Nov. 1, 1934]

陈通伯¹

陈先生体形消瘦、中等身材、面色苍黄，显然天生不是户外工作的料，只适合做室内工作。一离开椅子，他就不是他了。一坐上椅子，他就百事可为，可以说话、读书、讲课，我甚至想说，还可以打上一架。他这种久坐不起的习惯已经把他的躯体塑造成了一个问号。他坐着的时候还不惹眼，但是，只要一站起来，他的头就显得太重，难以为脊柱所支持，于是便形成了明显的弯曲。

陈先生的相貌似乎没有什么特别之处，但是他的脸却叫人见过一次就终生难忘。脸上有点凶相，尤其是想笑的时候，给人的印象是要把什么东西收到什么地方去。是收缩利爪，还是收缩毒牙？或者本质上更像是老虎后退到洞穴中去？我不知道，但是我宁愿看见陈先生横眉怒目也不愿意看见他笑。

陈先生具有魔力的一双大眼睛，端正地镶嵌在见棱见角的脸上，头顶上的头发从中间分开，锐利的目光可以看透一切事物和一切人。甚至在眼皮疲倦下垂的时候，眼睛也总是清澈明亮依旧。眼神里好像各种优点都有——洞察力、理解力、敏捷、机智，但缺乏善意。缺点总是被看

作缺点。有时，伴随着审视也会有笑声，不过，那是讥讽的嘲笑，不是出于幽默善意的笑。所以，陈先生的眼光落到一个人的身上，就会让人觉得不自在、不舒畅；让人觉得和陈先生这样的人在一起时敞开胸怀会有危险。因此，人们在他面前十有八九是把自己封闭起来，从他身边带走的，只是对于他那双眼睛的记忆：清澈、漂亮，却缺乏善意。

陈先生最开心的时候是和他的书默默相伴的时候。那是怎样一种相伴啊！他的兴趣之广反映在他的藏书数量之大、种类之多上：世间一切课题一应俱全。而且，陈先生是读书的。从藏书家的观点看来，他的那些书一概乏善可陈。陈先生对漂亮的装订和精致的印刷全都不感兴趣，这就是为什么他会有那么多二手书的原因。他买书是为了“读”，而不是为了“看”。虽然他的博览群书能够表明他兴趣的广泛，但是却不能表明他心胸宽阔。就像他喜爱的三位作家——简·奥斯汀²、威尔斯和阿纳托尔·法朗士³一样，陈先生在他的所言所行中也确实很有一些“理智与情感”。但是，在他对人对事的看法中，也像他们三位一样，也掺杂着不少“傲慢与偏见”。⁴

在读书之外，陈先生还从写文章和翻译的活动中找到乐趣和消遣。他的文章大多属于评论性质，这是人们可以料想得到的。他擅长于分析和讽刺，文笔是那么轻松明快，实在是语言所难以形容！首先是那阴险的微笑——把目标引进虎穴，玩弄够了之后，发出一阵冷笑或是狂笑，再把它一口吞掉。换一种说法，陈先生的评论方法总会使我想起严冬晴朗而寒冷的一天，一只猫在草地上跳来跳去戏耍一只老鼠的情景。看起来既有趣又冷酷，结果都不外乎是以艺术的形式完成一次凶杀。

陈先生目前是武汉大学文学学院院长。他主持学院很有见地，这个学院现在已经成为中国同类院校之佼佼者。这并不出人意外，因为一个优秀管理人员应有的品质——稳健、清醒、常理——在陈先生这样一位光辉的典范身上无不具备。因此，在我必须做的任何行政工作中若有陈先生这样的领导，我会非常高兴，但是我确实不希望在一个荒岛上只有他和我作伴。

[第44期，1934年11月1日]

SUN DA-YU (孙大雨)

Of personal beauty, Da-yu is no star. One does not think of him as another Wen Fei-ching (温飞卿), but as another Ho Tsu (贺铸), of whom his contemporaries used to say that he was the "king of devils" (鬼头). Ho Tsu lived in the Sung dynasty; his lyrics were known principally for their wistful and nostalgic quality; he sang of willow trees at twilight and of partings at dawn; he makes us hear the dripping of autumnal rains and wakens in us memories of our own longings in idleness. When we read Da-yu's poems, we get also the same feeling. His poems do not give us a feeling of exhilaration, instead, they invariably leave us a bit sad and dissatisfied with the world.

But, lest it be understood that Da-yu is a pessimist by conviction, let me hasten to add that he is in fact one of most cheerful persons that I have ever met. To those who do not know him intimately, he may appear a bit proud and satisfied with himself. In reality, however, his aloofness is due merely to his shy and retiring nature which is apt to manifest itself in the presence of strangers. Unlike most Chinese whose ability to control their emotions is proverbial, Da-yu would blush and behave awkwardly when he feels embarrassed. He is by no means "thick-skinned," and his sensitiveness not infrequently leads him to quarrel even with his best friends. But, at heart, he is good-natured—sometimes, even to a fault. That, one may say, is his essential weakness; for in the society of highway robbers and petty politicians, his good nature is liable to be prevailed upon and made a tool of.

Da-yu is a hedonist. He likes to surround himself with beautiful things and enjoy life to the fullest extent. He has a passion especially for well-printed books. In his student days, he used to spend practically all his monthly allowances on them, until today he has probably the finest collection of books in the English language in China. He is in his best element sitting in his own library, handling the rare and fine editions as if they were his loving children. To see him in such moments is a revelation indeed.

Besides his poems in Chinese, Da-yu has also translated Sun Kuoting's treatise on Chinese calligraphy (孙过庭书谱) into the English language. He has just finished his translation of Cellini's autobiography, and is at present engaged in rendering Shakespeare's King Lear into Chinese.

Da-yu is now married. Would his marriage make him more contented with life and inspire him to greater heights in poetry, and

would it kill the spark in him and make him into another of those fatheaded bourgeoisie, whom he so much despises? This is what all his friends would like to know, but at present cannot tell. And who knows but that Da-yu may yet surprise them!

[No. 45; Nov. 8, 1934]

孙大雨¹

就仪表而言，大雨绝不是明星。人们不会认为他是另一个温飞卿²，却会认为是另一个贺铸³。贺铸被同时代人称为“鬼头”，生活在宋代，他的词以惆怅、怀旧著称。他咏叹薄暮烟柳、拂晓离别；他让我们聆听秋雨滴落，唤醒我们记忆中无聊赖的思绪。我们读大雨的诗也会有相同的感受。他的诗不能给我们以欢快振奋的感觉，却总会勾起一些哀愁和对世界的不满。

但是，为了不把大雨理解为笃定的悲观主义者，我要赶紧补充说一句，他是我所认识的最愉快的乐天派之一。在所知不深的人看来，他似乎有点骄傲自满。然而事实是，他的冷漠孤傲只是由于生性羞怯，尤其是在陌生人面前。不像大多数善于控制感情的中国人，当大雨感觉到尴尬时，就会面红耳赤、手足无措。他绝不是个“皮厚”的人，由于敏感甚至和最要好的朋友吵起架来，也不是不常见的事情。但是实质上，他是个好脾气的人——有时候甚至脾气好得过分。人们也许会说，那是他的本质弱点；因为在这强盗横行、政客充斥的社会里，他的好脾气会被利用成为别人的工具。

大雨是一名享乐主义者，他喜欢坐拥美好事物，充分享受生活。他酷爱印制精美的书籍。在学生时代，他把每个月的零用钱几乎全都用来买书。直到今日，他的英语书籍可谓是中国最上乘的藏品。坐在自己的书房里，摩挲着那些善本，就像抚弄他自己挚爱的孩子，他会有一种得其所哉的感觉。看到这种时刻的他，真能启人神思。

除了用中文写诗，大雨还曾把孙过庭⁴论述中国书法的《书谱·卷上》译成英文。他刚译完切利尼的自传，目前正在把莎士比亚的《李尔王》⁵译成中文。

大雨现在结婚了。他的婚姻是会使他对生活更加满意，并且鼓舞他在诗歌领域攀上新的高峰，还是会扑灭他心灵的火花，使他成为又一个他自己所鄙视的愚钝的中产阶级分子呢？这是他所有的朋友都想知道而目前无法预言的。谁知道呢，也许大雨会使他们全都大吃一惊！

[第45期，1934年11月8日]

LIANG CHUNG-TAI (梁宗岱)

I have never met anyone who is so irrepressibly cheerful as Chung-tai. His cheerfulness is sometimes distressingly alarming. Even if he knows for certain that doom is impending over him, he will, I am sure, still pass his days with gay unconcern: he will be thinking so much of the little bit of sunshine left over to him, that he will forget all about the great masses of shadow and darkness on the other side of the picture. Of that range of sentiment, which is gathered up in the words carved on the tomb of the Cardinal in the Capuchin church at Rome,

PULVIS ET UMBRA ET NIHIL,

Chung-tai is a stranger. The fact is, Chung-tai is hopelessly in love with life. With him, it is heaven to be alive. It is enough for him that he breathes. He smiles his way through life. We smile, many of us, because we have nothing better to do, but Chung-tai smiles as if that is the best possible thing he can do.

This cheerful temperament of his is expressed in his face, which is either wreathed in smiles, or drawn out taut, as of one who is eager to gobble up everything that life has to offer, and to echo back with smacking lips the words of the Almighty: "And behold, it is good!" The sharpness of his features and his staring eyes suggest an intelligence, which thirsts to explore the countries of the mind. But the moist lips and the flush of health on his face imply a certain decided aptness for sporting "with the tangles of Neaera's hair," and for long dwelling in that world, which the ancient Greeks peopled with Pan and Dionysius and satyrs, and which the Hebrews allotted to the sons of Belial.

Chung-tai has got the physique of an athlete. Of average height, and tending towards the spare side, he may pass any day for a Marathon runner. In actual fact, he is a splendid walker. He prides himself, with an appalling exaggeration, which is all the more amusing for being wholly unconscious, on being able to walk faster than a motor-car, or (is it possible?) than an aeroplane. He loves swimming too; and I hesitate to say what he thinks of his own prowess in this respect, but in any case it must, I feel sure, defy the limitations of reality. However, the pains he takes by means of Sandow exercises and what nots, to keep himself in trim, are truly worthy of a Y.M.C.A. saint.

Chung-tai loves to argue. With him, to argue seems almost like being engaged in some violent exercise, when hands, legs, body, head and eyes participate. This physicality is especially noticeable when he walks: it then becomes just as difficult to keep up with his pace as it is

with the rapidity of his talk. The more heated the argument, the quicker he walks. He screams, he gesticulates, he kicks the air. In a room, the same thing happens. The subject of argument may be nothing more dangerous than a discussion on the relative merits of Longfellow and Tennyson as poets. One never can guess the explosive nature of any subject, until one talks about it with Chung-tai. Any innocent theme might fire the train. For this reason, it is very exhausting to talk with him. A talk never remains a talk with him for long: it always ends up in a battle.

Chung-tai's chief interest is literature. And his gods are T'ao Yuan-ming, Paul Valéry, Montaigne, Shakespeare, Racine, and Pascal. Their works, he is never tired of reading. He reads aloud Valéry's poems with so much gusto and unction, that one readily imagines oneself listening to a crusading sermon by a fanatic on the deceitfulness of the flesh and the devil.

Valéry's motto *Faire sans croire*, Chung-tai endorses as his own. But I think the motto is not a true description of Chung-tai's philosophy of life. He does not, it is true, believe in God, and Progress and Immortality. But he certainly does believe in himself, in the sweetness of life, the delights of literature, and the desirability of women. If any one, after a long immuration in some severe studies, should forget what it is to be alive, he should look at Chung-tai to know what that means. If any one for some reason or another should fail in desire, he should see the fire in Chungtai's eyes and the quiver of passion in the moist lips to catch some heat to warm up his own waning interest in the world of the five senses. For I have never in my whole life come across any man, who is so much alive, so full of passion for all the glory of this world of the ears, the eyes, the touch, the taste and the smell, as Chung-tai. So long as he is alive, so long will I believe that passion, and poetry and life are good things—nay, the best things that man can have before he goes to his long home.

[No. 46; Nov. 15, 1934]

梁宗岱¹

像宗岱那样开心得不能自己的人，我还从来没有遇见过。那种开心有时会使人担忧：即使他知道即将大祸临头，我相信，他也还会无所忧虑地过他的开心日子。他会非常看重给他剩下的一点阳光，能够把另一侧的重重阴影和黑暗完全忘个干净。对于镌刻在罗马嘉布遣会²红衣主教墓上的铭文“尘土，阴暗，虚无”所表达的那种伤感情绪，宗岱可是完全陌生的。事实是，宗岱对于人生热爱得如痴如狂。在他看来，活着就是

置身天堂，能够呼吸也就心满意足。他一路欢笑度过人生。我们许多人的笑，是因为没有更好的事情可做，但是宗岱的笑，仿佛认为那是他能做的最好的事情了。

他欢快乐天的秉性，都从他的脸上流露出来。他那张脸不是笑成一朵花，就是拉长绷紧，像是急着要把生活所呈现的一切全都吞咽下去，再用哑巴得山响的嘴唇重复着上帝那句话：“看，很好！”他那棱角分明的相貌和凝视的眼神透露出聪慧，渴望着对心灵世界作深入的探索。然而，他那湿润的双唇和健康的晕红脸色，又暗示着一种坚决的能力来摆弄“尼爱拉³纠缠难解的头发”，来长久盘桓在古希腊人与牧神、酒神和森林之神居住又被希伯来人划给了堕落天使后裔的那个世界⁴。

宗岱有运动员的体格。中等身材，体态偏瘦，随时都可能被认为是马拉松运动员。而实际上，他很能走路。他常以夸张得吓人的口气说他走路比汽车甚至比飞机还要快（可能吗）——由于不是存心地夸张，所以越发好笑，而他却引以为自豪。他还喜爱游泳，我不敢说他觉得自己在这方面技能如何，但是无论如何，我相信，那一定是超过了实际的能力。然而，他为了保持身体健美按照山道⁵健身法之类勤奋锻炼所下的功夫，倒不愧为一位基督教青年会的圣徒。

宗岱喜欢辩论。他辩论起来，几乎就像剧烈运动，手、腿、头、眼和身体全都参与其中。这种身体特征在他走路时表现得尤为明显，这时要跟上他的脚步就像要跟上他说话的速度一样困难。辩论愈是激烈，他就走得愈快。他会尖声高叫、大作手势、跺脚踢腿。即使是在室内，情况也一样。辩论的主题很可能并不比朗费罗⁶和丁尼生⁷这两位诗人的长处更危险。至于哪一个话题具有爆炸性，不到和宗岱讨论的那一刻，你是不会知道的。任何一个单纯的问题都有可能点燃导火索。因此，和他谈话会累得你精疲力竭。和他谈话，时间一长就不成其为谈话了，到头来总是以吵架告终。

宗岱的兴趣首先在文学。他心目中的神明是陶渊明、保罗·瓦莱里⁸、蒙田、莎士比亚、拉辛⁹和帕斯卡¹⁰。对他们的作品，他是百读不厌。他朗诵瓦莱里的诗篇，兴致勃勃、津津有味，人们很容易想象是在听一个狂热的传教士就肉欲和邪念的欺骗性发表征战的布道演说。

瓦莱里的格言“为而弗信”，也成了宗岱自己的格言。但是我觉得这条格言并不是宗岱人生哲学的真实描述。他确实并不相信上帝、进步和永生。但是他肯定相信的，是他自己，是人生之甜美、文学之怡情、女人之可爱。如果有人由于钻研某种艰深的学问长时期闭门苦读而忘掉了什么是生活，去看看宗岱，就能懂得生活是什么了。如果有人由于某种原因而缺乏欲望，就应该去看看宗岱眼睛里的火焰和湿润双唇的激情颤动，借点热量来升温对这感官世界逐渐冷却的兴趣。因为我这一生还从来没有遇到过任何人能像宗岱那样充满生命活力，那样充满对这视、听、嗅、味、触可感世界的动情热爱。只要他活着，我就相信激情、诗和生活全都是好东西——岂止如此，应该说是人在回到最后的归宿以前所能得到的最好的东西。

HSU SHEH-YU (舒舍予)

Among the readers of the contemporary Chinese literature, the name Hsu Sheh-yu is seldom heard, but with his nom de plume "Lao Sheh" (老舍) it's quite a different story. Among his better known works are "Lao Chang's Philosophy" (老张的哲学), his maiden effort which, though written years ago, is still "going strong" in sales, and "Po's Birthday"(坡的生日), a work modestly appraised by himself as "comparatively satisfactory." The author himself likes it because, as he puts it, "I like children. Although I am a middle-aged man, I still retain, to some extent, the innocence of my childhood."

The speech he delivered to the students of the Tsing-tao Municipal Middle School and published in The China Times some time ago, was largely autobiographical, because the topic he was requested to speak on was "My Experience in Writing," so we have here the opportunity to look at, not his intimate portrait, but his self-portrait, which will be far more satisfactory.

"When I was a child," he began, "I had no special talent. In the 'private school' of the old days, I was often beaten by the teacher. When I entered a 'new school,' because of my previous study of the classics, my record in Chinese was comparatively better. In spare time I still kept on reading the classics. I entered a normal school for my secondary education, and I paid more attention to education and Chinese classics than any other subject. If there were government examination for the graduating classes as we have now, surely I would not be able to pass these examinations...."

"I love old poetry too," he continued, "when the poems are 'plain like our daily language.' I love botany and I love to plant flowers...."

"When I was young, I was not a good 'mixer' and I often laughed at people's doing with scorn, sarcastic laugh. But when I left school to work, then I realized that I hadn't been always right...."

"When I was 25, I taught in the Nankai Middle School," Lao Sheh was now coming to his experience in writing, "most of my colleagues were fond of writing stories, and I wrote one too. That was twelve years ago.... I discovered then that I had the talent to 'crack jokes,' which was inborn and not acquired. Half of the merit in my writing is due to my fluent tongue...." Mr. Hsu is certainly right, for he is one of the few writers who write really good Pekingese mandarin.

"At 27, I went to England, which changed my ideas radically. Had I remained in China, I would never have thought of taking fiction writing seriously...." But to England he went, and young China ought to feel grateful about it.

舒舍予¹

在当代中国文学的读者群中，很少人听说过舒舍予这个名字，但是提到他的笔名老舍，情况就不一样了。在他知名的作品中，有《老张的哲学》，他的处女作，至今仍在畅销。还有《小坡的生日》，他自己谦称“比较满意”。作者自己喜欢，据他说，是因为“我喜欢孩子。虽然我已是中年人，但在某种程度上，还保留着童年的天真”。²

他在青岛市立中学对学生们所讲，前不久刊登在《中国时报》上的那篇演讲，基本上是自传性的，因为请他讲的题目是“我的写作经验”³，于是我们有机会在这里看到的，就不是“亲切写真”，而是他的“自画像”，可以令人满意的程度会远大于前者。

“我小时候，”他开始道，“并没有什么特殊才能。老早读私塾时，常挨老师打。进了新学堂，由于以前读过古文，成绩就比较好了一些。有闲空功夫，我会继续研读古文学。我受的中等教育，是在一所师范学校，和其他科目相比，我更偏重教育和古文。如果有现在这种国家统一毕业考试，我一定会通不过……”

“我也喜欢古诗词，”他继续说，“如果那些诗‘明白如同日常说话’。我喜欢植物学，我喜欢栽花……”

“年轻时，我不善于交际，常用轻蔑的冷笑嘲笑别人做的事情。但是当我离开学校开始工作，我才意识到我并不总是正确……”

“25岁那一年，我在南开中学教书，”接下去他谈到他的写作经验，“我的同事大都爱写小说，我也写了一篇。那是12年前……这时我才发现，我有说笑话的才能，这是与生俱有，而不是后天获得的。我写作的长处，一半要归功于流畅的语言。……”舒先生说得十分正确，因为他是能用纯正北京官话写作的少数作家之一。

“27岁，我到了英国，我的思想发生极大的改变。如果留在国内，我永远也不会想到要认真对待小说写作……”但是，他到了英国，年轻的中国应该感谢他能有此行。

MR. EUGANE SHEN (沈有乾)

Self-effacement is not necessarily a virtue. With many people, it is simply a pose—a pose intended to be ironical and mocking; in other words, an understatement carried to absurdity, so that its thin veil of disguise may be easily, as it is meant to be, penetrated. There are cases, to be sure, to which the above does not apply. With Mr. Shen, for instance, one feels that self-effacement cannot be anything but genuine. He has no desire to impress others; because he of all men truly possesses a sense of humour. The ability to see himself as others see him helps him to realize that to clamour for attention is merely to lend oneself to ridicule. In the company of strangers, or even of friends and acquaintances, Mr. Shen is always the good listener. In fact, one has seen him sitting through a feast for hours on end without uttering a single word.

It must not be understood that Mr. Shen is a poor talker. On the contrary, he could be very eloquent, when he is excited, which, however, he seldom is. At school, he was well known as a debater and orator. He also took part in theatricals, and was a member of the college glee club. According to the theory of Dr. Adler, a man who possesses a natural defect has a tendency to over-compensate it by developing the corresponding faculty so that he eventually becomes superior in just that respect in which he was originally inferior. When he was young, Mr. Shen was a hopeless stammerer. Whether, like Demosthenes, his later penchant for success in public speaking and amateur dramatics is a proof of Dr. Adler's thesis or not is of course a question which we cannot discuss here. But the fact that he finally trained himself to speak without strain or difficulty definitely shows that he must have a very strong power of will.

Pursuing this psychological discussion, learned scholars could undoubtedly draw the conclusion also that Mr. Shen's sense of humour is in reality a sort of compensation or defense mechanism for his feeling of natural inferiority. That of course may be so. Readers of *The Analects* can bear out my statement that Mr. Shen's humorous writings are almost without exception most delightful reading. In fact, I have no hesitation to say that he and Lao Sheh are two of the best humourists that China has produced in recent years.

Mr. Shen is a professor at National Chekiang University. His forte is statistics and symbolic logic; he has contributed articles on the former subject to many learned journals abroad, and he has also invented a system of notations for symbolic logic all his own, which has won the praise of the late Mrs. Ladd-Franklin and even Dr.

Sheffer, whom Bertrand Russell in *Principia Mathematica* calls the Einstein of symbolic logic.

Primarily, Mr. Shen's fame rests on his studies in experimental psychology—the subject which he professes at Chekiang. However, so far he has not written any book on psychology, although he has already published a volume on the theories of modern logistics. The reason for this is not far to seek, as we have said at the beginning, Mr. Shen is a very modest man.

[No. 48; Nov. 29, 1934]

沈有乾先生¹

谦逊未必就是美德。对于许多人来说，那只是一种姿态——一种意在嘲讽的姿态；换句话说，一种自我贬抑的陈述，由于自贬到了荒谬的程度，那层故意自贬的薄纱，也就很容易如所预期地那样被看透。的确，有些情况和以上所述并不相符。沈先生就是一例，人们觉得他的谦逊就不可能不真诚。他并不想惹人注意，而他偏偏有一种真正的幽默感。能够像别人看自己那样来看自己，使他意识到，招人注意只能引来讥嘲。与陌生人在一起，甚至与朋友和熟人在一起，沈先生总是一个理想的倾听者。事实上，有人就曾经看见沈先生在一次宴会上一言不发，一连静坐了几个小时。

不能以为沈先生就不善言辞。恰恰相反，一旦激动起来，他也可能口若悬河，只是他很少激动。在学校时，他曾以擅长辩论和演说闻名。他还参加过戏剧演出，而且是合唱队队员。根据阿德勒医生²的理论，一个有先天缺陷的人往往喜欢过分补偿来发展相应的能力，以便在原本处于劣势的方面最终占据优势。沈先生年轻时，口吃得厉害。至于他后来对公开演讲和业余演出的爱好——像狄摩西尼³一样——是否印证了阿德勒的理论，当然不是我们在这里所能讨论的问题。但是，他终于把自己锻炼得言谈自如、毫无障碍，却足以表明他必定具有非常坚强的意志。

按照这种心理学讨论，有见识的学者一定也会得出以下结论，即沈先生的幽默感其实是对于他先天缺陷自卑感的补偿或防卫机制。当然，那是可能的。《论语》⁴的读者会证实我的说法：沈先生的幽默作品几乎无一例外地都很有趣。事实上，我可以毫不犹豫地，他和老舍是中国近年来最优秀的幽默作家。

沈先生目前是国立浙江大学的教授。他的专长是统计学和符号逻辑学。他一直在给国外许多学术刊物撰写统计学文章，还为符号逻辑学发明了一套自己的符号体系，并为此而赢得了已故莱德-富兰克林夫人⁵甚至谢佛博士⁶的赞誉——罗素在《数学原理》一书中把谢佛博士称为“符号逻辑学的爱因斯坦”。

沈先生的声誉，首先建立在他对实验心理学的研究之上——那也是他在浙江大学教授的学科。但是，到目前为止，他还从来没有写过一本

有关心理学的著作，倒已经出版了一卷现代逻辑学理论的书。其原因也不难找，我们在本文一开始就说过，他是一个非常谦虚的人。

[第48期，1934年11月29日]

MR. SHENG CHENG (盛成)

Mr. Sheng has told us all about himself in his book *Ma Mère*. But that was long ago. Lots of things have happened to him since then. He has married, and is now as fond a father as any of us. From being one of the taught, he has now become a teacher for many years among his own people. As private secretary of Chang Chi, he has had a taste of what it is like to be an official. Within the short space of two years, he has seen his country surrender Manchuria, and stage one of the most heroic fights in history in Shanghai. These things have not happened without having their traces on him. If he were to re-write his autobiography now, it would have to be a little different from before. But we doubt whether he'll ever do such a thing. We shall instead do it for him, —not in detail, for which we are not competent, but in the rough, which anybody who has spoken with him and shaken him by the hand can do.

Mr. Sheng looks his age, —the right side of forty. He has a few grey hairs, but his appearance and carriage are those of a man whom Time has only touched up with a light and leisurely hand. He is rather thin and tall, with a slight stoop in his gait. Restless and very much awake, he is most himself when he talks. Then it seems as if he is on the stage. He dramatises what he thinks. It almost appears as if his gestures and bodily movements are more expressive of what he wants to say than the torrent of words that tumble out of his mouth. Is it economics he is talking about? There is certainly logic and a good deal of sense in what he says. But what has the rightness or wrongness of a dramatic persona's economic views got to do with his acting? If the acting is good, we let the economic views take care of themselves. So also with Mr. Sheng. We attend to his expressive gestures and movements when he talks about economics, but we ignore his economics. Is it about Mallarmé, Romain Rolland and André Gide he is excited about? We are impressed by his excitement, but we very soon forget all he has to say about those idols of his. The acting is the thing.

This dramatic quality of Mr. Sheng's character is especially borne out by the manner he reads poetry. It is dramatic rather than recitative. In other words, we get a better idea of what he is reading by looking at him, than by listening to him. The modulations of his voice, his gestures and the swift changes of expression on his face, are those of an actor of poetry, and not of a reader of poetry.

This dramatic quality in Mr. Sheng would lead us to infer that his is a complex character. But strange to say, our first impression of him

is of a naive person. His exuberant manner, his buoyancy, and his apparently reckless flow of words are undoubtedly responsible for this impression. But this impression is wrong. Mr. Sheng is a man of the world. He has been through much, and he has seen much and what is more, he has profited much from his experiences. The mind that directs that reckless flow of words is not reckless; it is very sensitive to atmosphere and persons. When it scents danger, it can shut itself up as effectively as an oyster. The flow of words may still go on, but as the ocean round a shut oyster. We get words and words, but not Mr. Sheng Cheng.

What is the real Sheng Cheng like? We don't exactly know. But this we know: he is neither so bad as his enemies make him out to be, nor so good as his friends imagine. He is like fire: its essence is to burn and to give warmth. Doesn't Mr. Sheng do that by his tremendous enthusiasm for causes, —good, bad and indifferent?

[No. 49; Dec. 6, 1934]

盛成先生¹

盛先生在他所著《我的母亲》一书中，把自己的情况全都给我们讲过了。不过，那已经是很久以前了。从那以来，他又经历了很多事情。他已经结婚，现在像我们中的任何人一样，也是个疼爱孩子的父亲了。他从一个受教育的学生变成自己国家的教师也已经多年。作为张继²的私人秘书，他也领略了一点为官的滋味。在短短两年之内，他已经看到自己的国家放弃了东三省，并在上海开展了一场历史上无比英勇的战斗³。这些事情的发生在他的心灵留下了深刻的印迹。如果他现在重写自传，一定会和以前有所不同。但是我们怀疑，他是不是会重写传记。我们将代他来做这件事情——不可能详细，我们也胜任不了；但是粗略的概述，任何一个与他说过话、握过手的人都能写。

盛先生的长相和年龄相当——四十出头，有几丝白发，但是他的容貌和仪态都表明，时光老人只是随意、轻轻触摸了他一下。他身材高而相当瘦，走起路来有点驼背。他生性好动，非常清醒，说起话来最有精神，就像登上了舞台。他能把所想的像演戏似地表演出来，好像他的手势和肢体动作都要比滔滔不绝从他嘴里说出来的话语更能传情达意。他是在谈经济学问题吗？他所谈的确实合乎逻辑、合乎情理。但是，一个剧中人的经济观点的是与非和他的表演又有什么关系呢？只要他表演得好，那他的经济观点如何就无所谓了。对于盛先生，情况也是这样。我们注意到他谈论经济问题时富于表现力的手势和动作，但是我们并不关心他的经济观点。他谈得那么激动的是马拉梅⁴、罗曼·罗兰⁵、安德列·纪德⁶吗？我们对他的兴奋有深刻印象，但是很快就会忘记他为他那几个偶像都说过什么。重要的是表演。

盛先生身上的戏剧特点尤其在他读诗的方式上显得更加突出，那更像是演戏而不是朗诵。换句话说，我们看着他比支着耳朵听更能理解他读了些什么。他嗓音的抑扬顿挫、手势和面部表情的迅速变化，全都属于诗歌表演者，而不属于诗歌朗诵者。

盛先生身上的这种戏剧性特点，会让我们觉得他的个性比较复杂。但是说来奇怪，他给我们的第一印象却是一个天真幼稚的人。给我们形成这种印象的，显然是他那充满活力的态度、轻松愉快的样子和滔滔不绝的话语。但是这样的印象是错误的，盛先生可是个老于世故的人。他经得多，见得广，并且从阅历中受益无穷。指导那滔滔不绝话语的头脑并不鲁莽，对环境、对人感觉都很灵敏，一旦嗅到了危险的气息，就会像牡蛎一样立刻把自己密闭起来。滔滔不绝的话语还会继续下去，但是，那就像一只闭合牡蛎周围的大海。我们得到的是话语，而不是盛成先生。

真正的盛成究竟是什么样的？我们知道得并不确切。但是，我们知道：他既不像他的敌人所描绘的那样坏，也不像他的朋友所想象的那样好。他像一团火，火的本质是燃烧，是发热。无论是好事、坏事或平庸的事情，盛先生不都是以他极大的热情在燃烧、在发热吗？

[第49期，1934年12月6日]

LIU HAI-SOU (刘海粟) & LI CHING-HUI (黎锦晖)

Mr. Li Ching-hui is a writer of popular songs, while Mr. Liu Hai-sou is the president of a fine arts academy. That they are both "artists" is no reason for putting them on the same canvas; the reason is rather that they are alike in one respect, namely they are two of the most misunderstood persons today. They have been called charlatans and impostors, and in the case of Mr. Li, he has also been stigmatized as an immoralist. To be sure, the latter epithet was applied to Mr. Liu too once, but that was the time when the employment of female models in art schools was considered most shocking. Since then, people have learned to be more lenient in their judgment and have come to see that undraped female forms do not necessarily awaken in us ungodly desires but may in fact be objects of beauty. The people who upbraided Mr. Liu for his offence against morality have now forgiven him. He no longer calls forth moral indignations; whatever unfavourable criticisms that have been levelled against him at present come instead from the ranks of those who are suffering not so much from having a moral conscience as from an esthetic one. No one takes any notice of the imperfections of Liu as a man, but as an artist, not a few have taken him severely to task.

In the case of Mr. Li Ching-hui, however, he has never enjoyed any such change of fortune. From the very beginning of his career till today, he has been shunned by society as a person vulgar and depraved beyond the hope of redemption. He not only has written songs that appeal especially to maid-servants and cabaret girls, but also has the bad taste of permitting his wife and daughter to act in the films. The self-appointed guardians of public morals flock to see the girl-choruses trained by him, and are grieved to see that the young should be exposed to the temptations which they themselves find to be so irresistible. They shake their hoary heads, and lick their parched lips—and come home with the determination that such exhibitions of womanly charms should be banned, in the interest of social ethics and their own peace of mind.

Musicians also have heaped abuses upon Mr. Li, and have found many faults with his compositions. But in spite of all that, Mr. Li is as popular as ever. The reason is of course not far to seek. Although he employs the technique of Western music, his tunes are essentially Chinese. He is not content with copying others—that is why he has been called an ignoramus and an upstart by the other musicians in

China.

Like Li, Liu Hai-sou also believes that the traditional art of painting in China has an intrinsic value which may not be inferior to that of the West. His attempt at combining the good qualities of the two forms of art in his own paintings may not be successful, but they are at least not unnoteworthy. He may not deserve emulation, but he certainly does not deserve calumny and abuse. They should at least be given a chance!

[No. 50; Dec. 13, 1934]

刘海粟¹和黎锦晖²

黎锦晖先生是通俗歌曲作曲家，刘海粟先生则是一所美术学院的院长。他们都是“艺术家”这一点，并不能成为把他们相提并论的理由。要说理由，他们在一个方面有相似之处：他们是当今受误解最深的两个人。他们都被人们叫做骗子，而黎先生还被说成是道德败坏之人。当然，后一顶帽子也曾给刘先生戴过一次，那是在艺术学校雇用女模特的做法还被认为是伤风败俗的时候。自那以来，人们在评判这样的问题上已经学得宽容了，认识到一丝不挂的女性形体并不一定会勾起我们的淫荡欲望，而确实可以成为审美的对象。曾经严厉斥责刘先生道德败坏的人们现在都已经原谅他，他不会再激起人们的道德愤慨。加之于他的批评，现在并非来自道德良知的谴责，而是来自审美需求得不到满足。再没有人去注意刘先生其人的瑕疵，倒是颇有人对作为艺术家的他严加责备。

但是黎锦晖先生还从来没有遇到这种运气的转变。从他出道之日至今，人们一直把他当作粗俗下流、堕落得不可救药的人而避之唯恐不及。他不仅创作特别吸引女佣和歌舞女郎的歌曲，而且还有听任他的妻子和女儿参与拍摄电影的不良趣味。那些自封的公众道德卫士成群结队来看他排练的女子歌舞团的演出，为年轻人竟然也受到他们自己都非常难以抗拒的诱惑而感到悲痛。他们摇着白发苍苍的脑袋，舔着发干的嘴唇回到家，并下定决心：女性魅力的这样一种展示必须禁止，才能维护社会道德的利益和他们自己心境的安宁。

音乐家也对黎先生骂不绝口，并对他的音乐作品吹毛求疵。尽管如此，黎先生依然受到欢迎。原因当然也不难寻找。他虽然采用了西方音乐的技巧，曲调却是中国式的。他不满足于模仿别人——这就是别的中国音乐家说他不学无术、自命不凡的缘故。

和黎锦晖一样，刘海粟也相信，中国的传统绘画艺术自有其不低于西方绘画的内在价值。他试图把两种艺术形式的优点在自己的绘画中揉合起来的努力，可能还不成功，但是，至少是值得关注的。他也许不值得仿效，但是，也不该受到诽谤和辱骂。至少，应该给他们一个机会。

MR. LI SHIH-CH'EN (李石岑)

The late Mr. Li Shih-ch'en was well known as a teacher of philosophy. Personally, however, I like to think of him more as a poet than as a philosopher, that is to say, more as a man of feeling than as a man of intellect.

To instill poetry into philosophy could of course be done, but it is by no means within everyone's reach. Only such first rate geniuses as Dante and Goethe are capable of it. For, in one sense, philosophy is opposed to poetry, or, at least, to the spirit which underlies all poetry. No one perhaps has ever better understood the distinction between the two than Plato. In *The Republic*, he made Socrates address Glaucon thus: "Yes, my dear Glaucon, for great is the issue at stake, greater than it appears, whether a man is to be good or bad. And what will one be profited if under the influence of honour or money or power, aye, under the excitement of poetry, he neglects justice and virtue?" Plato is a rationalist through and through, in his opinion poetry, appeals solely to the "spirited" and the "emotional" part of our nature; its guiding principle is "pleasure and pain" and not virtue and justice. Poets are only enamoured with their senses and the sorry play of the shadow-images on the walls of the cavernous regions, described so eloquently by Plato in his allegory. Ignorant of "the true existence of things," they are apt to mistake their private delights and pleasures for beauty itself.

But, be it understood, such indictment is only directed against false poetry; for, as Plato elsewhere said, true poetry, which is the discernment of absolute beauty, is equivalent to philosophy itself. Unfortunately, true poetry is difficult as it is rare, and its cultivators and devotees are few. Among these, the late Mr. Li could not be numbered, for he was too much of a sensualist to be a lover of absolute beauty, and too much of a seeker of pleasure to be a lover of wisdom. He was a student of philosophy, yes, but only per accidens. Philosophy was only one of the many splendid garments which he sometimes put on; its pursuance gave him pleasure, but one doubts if it ever gave him genuine satisfaction or wisdom. His Casanovesque proclivities, which, alas, are only too well known, often stood in his way and made it impossible for him to realize, as Plato did, that the craving for physical union is only a manifestation of our love of immortality, to achieve which truly, one has to "pass from one fair form to all fair forms, from fair forms to beautiful deeds, from beautiful deeds to beautiful conceptions, until from beautiful conceptions comes the knowledge of beauty supreme."

Mr. Li's favourite philosophers are Nietzsche, Guyau and Bergson. For these thinkers gave him a justification for what he believed and acted on instinct. The sowing of wild oats, with him, is only the conscientious and consistent application of the doctrines of *élan vital* and the "Will to Power." The taking of virginity gave him a sense of his own vitality, and incidentally confirmed also Guyau's teaching that the good man is the man who could not contain himself, and is eternally over-flowing with the energy of life. Unfortunately, society being what it is, could not bring itself to appreciate the strange doings of the race of Supermen, and for this reason, Mr. Li has been branded by it as a scamp and a rascal.

But, then, as I have said before, one must do Mr. Li justice. Mr. Li has been more sinned against than sinning; the irregularities of his life, deplorable though they may be, are nevertheless not inexcusable, if we were to judge them from the point of view of Spinoza's God. What he did are neither good nor bad, but simply necessary, because he only acted according to his nature, which is that of a man too much in love with the pleasures of the senses to have any concern for virtue and justice. He is beyond good and evil, as all true followers of Nietzsche should be. But like Nietzsche he too is not a philosopher, but a rhapsodist. Had he lived longer, he might have written a collection of dithyrambics, worthy to be ranked with *Also Sprach Zarathustra*. As he died too soon, however, he has only several textbooks and manuals on the history of philosophy to his credit.

[No. 51; Dec. 20, 1934]

李石岑先生¹

已故的李石岑先生是一位著名的哲学教授。然而就我个人而言，我更愿意认为他是诗人而不是哲学家，也就是说，更是个有感情而不是有智力的人。

把诗注入哲学，当然可行，却不是人人力所能及，只有但丁和歌德这样第一流的天才才能做到。因为，在一定意义上，哲学和诗是对立的，或至少和诗的基本精神是对立的。或许，没有人比柏拉图²更懂得两者之间的区别了。在《理想国》中，他让苏格拉底³对格劳孔⁴这样说：“不错，亲爱的格劳孔，一个人是善是恶关系重大，要比表面上看到的重大。如果一个人受到荣誉、财富或是权力的影响，甚或是在诗的煽动下而忽略了正义和美德，对他能有什么好处？”柏拉图是一个彻头彻尾的理性主义者；在他看来，诗，只能诉诸我们本性中活泼和感情的部分，其指导原则是“快乐与痛苦”，而不是美德和正义。诗人只迷恋于他们的感觉和洞壁上柏拉图在寓言中描述得十分生动的那种拙劣的投影。

他们对“事物的真实存在”一无所知，就容易把个人的欢乐和快感错以为是美本身。

但是，应该明白，这种批评所针对的只是伪诗；因为柏拉图在另一个场合说，真诗是对绝对的美的领悟，等同于哲学本身。不幸的是，真诗难作而且罕有，真诗的作者和爱好者都为数极少。而在这少数人中，已故的这位李先生不能不算一个。他过分耽溺于感官享受而不会热爱绝对美，过分热衷于寻求欢乐而难以成为一名爱智者。他是个哲学的研究学者，没错，但是完全出于偶然。哲学只是他有时会穿在身上的诸多华丽外衣中的一件。对哲学的探求给他带来快乐，但是人们怀疑哲学是否带给他过真正的满足或智慧。他那广为人知的卡萨诺瓦⁵式的癖好，常常对他构成障碍，使他难以像柏拉图那样认识到，渴望肉体结合只是我们向往不朽的一种表现；而要实现不朽，人们确实就不得不“从一个美好形体转向尽可能多的美好形体，从美好的形体到美的行为，从美的行为到美的理念，直到从美的理念获得对于崇高美的认知”⁶。

李先生喜爱的哲学家是尼采、居约⁷和柏格森⁸，因为这三位思想家给了他依据本能所信、所做的正当理由。放荡的行为，就他而言，只是在自觉而始终一贯地实践“生命的冲动”和“权力意志”的学说。占有童贞可使他意识到自己的生命活力，同时也顺便证实了居约所教导的，好人就是无法控制自己、永远泛溢出生命活力的人。不幸的是，目前的社会还无法欣赏“超人”类的怪诞行径，因此李先生便被斥为无赖和流氓。

但是，我在前面已经说过，人们也应该公正地对待李先生。李先生在更大程度上是被冒犯了的而不是冒犯者。他生活中的不正当行为，虽然可耻，然而，从斯宾诺莎⁹的“上帝”看来，却并不是不可原谅的。他的所作所为非善非恶，而只是出于需要，因为他完全按照本性行动，这种本性过分贪恋感官享乐而毫不顾及美德和正义。他是超越善恶的，就像所有真正的尼采信徒一样。但是就像尼采一样，他也不是个哲学家，而是一个狂热分子。如果能活得更长久一些，他很可能会写出堪与《查拉图斯特拉如是说》¹⁰媲美的充满激情的文章。然而，他英年早逝，只编写了几本哲学史的教科书和手册。

MR. S. G. CHENG (程锡庚)

Mr. Cheng is now Special Commissioner for Foreign Affairs in North China. No more suitable person could possibly have been appointed for that difficult post. Mr. Cheng for the last ten years has done many things, but he has never throughout that time forsaken his interest in the study of the foreign relations of China. The Manchurian crisis has elicited a few short, but highly enlightening, articles in the Chinese press on special aspects of that Japanese adventure. What is more, his knowledge of Foreign Affairs is not derived, like 99 per cent of our Foreign Office officials, only from the reading of dailies between the last snores of early morning and breakfast, but is the provident harvest of a mind that not only studiously garners its facts from dull memoranda and worm-eaten tomes, but weighs and considers them for ready use in the "plots and marshalling of affairs." He is what Bacon would call a "full man,"—one who has the humour of a scholar and the aptness of a practical man "in the judgment and disposition of business."

Mr. Cheng was born at Chinkiang (镇江), Kiangsu, in 1894. He is a graduate of Kiangnan Provincial College (江南高等学堂), Nanking, and is a Chu Jen (举人 = M.A.), by Imperial examination. From 1914-1919 he was in the London School of Economics. The number of Chinese students who have studied, or rather registered themselves as students, in the London School of Economics is legion; but few, very few, have come out of that institution with a degree. Mr. Cheng is a brilliant exception. He is a D.Sc. in Economics of London University.

When Mr. Cheng was still studying in England, the Oxford University Press brought out a book of his, entitled *Modern China: A Political Study* that for the dignity of its tone, the charming cynicism of its general outlook, and the beauty of its simple and forceful English style has not its fellow among English books written by Chinese. One would not read it now for the facts it contains: these have long been dated by events that have happened since its publication. But one can still read it with profit for its wisdom: its reasonableness, not so much of argumentation as of temper, and its fine detachment, which is due more to clear thinking than to any moral sense in him, are qualities that are conspicuous by their almost invariable absence in political treatises, ancient or modern.

For a Chinese, Mr. Cheng is rather tall. He is inclined to be fat. He walks slowly, but jerkily, with his nose up in the air. His face tends to be on the heavy side. The eyes are clever eyes: they have as much sharpness in them as depth. There is a touch of grey in the hair. And

in the suave manner and suave voice, there is more than a suspicion of condescension and well-bred contempt towards the rest of Adam's progeny. The upward direction of the indentures where the lips meet is expressive of a habit of caustic speech and derision. Perhaps, the most comprehensive formula to describe the sort of man Mr. Cheng is would be to say that he is a Chinese Prussian gentleman!

[No. 52; Dec. 27, 1934]

程锡庚先生¹

程先生现任外交部驻华北特派员。被委任如此艰巨的任务，他是再合适不过的人选了。近十年来，程先生做过许多事情，但是从不曾放弃对于中国外交关系的研究。东三省危机促使他就日本这次冒险行动的若干方面，在中文报纸上发表了几篇字数不多却极发人深省的文章。更值得一提的是，他的外事知识，并不像我国百分之九十九的外交官员那样仅仅来自于晨盥乍停、早餐未进时的报纸阅读，而是有心人未雨绸缪的收获。他不仅孜孜不倦地从枯燥乏味的备忘录和虫蠹蛀蚀的鸿篇巨制中收集和积累资料，而且还从策划和处理现实事务的角度加以衡量和考虑，以备不时之需。他是培根²可以称为“完满”的那种人：在具体事务的判断和处置方面，不乏学者的幽默而又具有实干家的敏捷。

程先生1894年出生于江苏镇江，毕业于南京江南高等学堂，经乡试而成为举人（相当于硕士）。1914至1919年间，就读于伦敦经济学院。当时就读于伦敦经济学院，或者该说是在那里注册入学的中国留学生为数极多，但是只有极少几个取得了学位。程先生是个出色的例外，他是伦敦大学的经济学博士。

程先生尚在英国留学时，牛津大学出版社就出过他的一本书，题为《现代中国政治研究》，语调庄重，总体观点愤世嫉俗，文体简洁有力，在中国人写的英语著作中鲜有其匹。现在，我们不会为了查考某些事实再去翻阅它，此书出版以来又发生过许多事情，事实已经陈旧。但是，我们仍能够从书中的智慧受益：那种植根于性情而不是论辩的合理，来源于思路清晰而不只是道德观念的超脱，都是他的著述明显的特质，这在古往今来的政论中几乎是从来没有的。

作为中国人，程先生的个头略高，身体开始发胖，走起路来速度不快，一颠一颠地，鼻孔朝天。五官不甚精致，眼睛是聪明人的眼睛，深沉而且敏锐。头发有点灰白。在他温文尔雅的举止和温文尔雅的谈吐中，暗含着对于其他亚当子孙³不只是一星半点的傲慢和文雅得体的轻蔑。那嘴角边向上翘起的皱纹，表明他出言刻薄、喜爱讥嘲的习惯。也许，要描述程先生这种人，可以概括为这样一句话，他是一个中国的普鲁士绅士。⁴

注释

吴宓先生，学者和君子

1 吴宓（1894—1978）中国学者、诗人、教育家。字雨僧，陕西泾阳人。1911年入清华学堂（1912年改名清华学校）中等科，1916年毕业于清华留美预备学校高等科（1928年改名清华大学）。1917年赴美国留学，攻读新闻学；1918年改读西洋文学，毕业于弗吉尼亚大学英文系，获文学学士学位；又入哈佛大学研究生院比较文学系，获硕士学位。对19世纪英国文学尤其是浪漫主义诗人作品的研究有过不少论著。1921年回国，任教于南京高师和国立东南大学文学院，讲授世界文学史等课程。在东南大学与梅光迪、柳诒徵一同主编1922年创刊之《学衡》，于新旧文化取径独异，别成一派。他撰写了“中国的新与旧”、“论新文化运动”等论文，采古典主义，抨击新体自由诗，主张维持中国文化遗产的应有价值，尝以“中国的白璧德”自任。离开东南大学后到东北大学、清华大学外文系任教授。1925年任清华学校研究院主任。1930年游学欧洲，又在牛津大学和巴黎大学修学年余，所学极博。1941年被教育部聘为首批部聘教授之一。1943年至1944年代理西南联大外文系主任，1944年秋到成都燕京大学任教，1945年9月改任四川大学外文系教授，1946年2月任武昌华中大学（现华中师范大学）外文系主任。1947年1月起主编《武汉日报》文学副刊一年。1949年4月飞重庆任相辉文法学院外语教授，兼任梁漱溟主持的北碚勉仁文学院文学教授，入蜀定居。1950年4月两院相继撤销，进入新成立的四川教育学院，9月又随校并入西南师范学院，在历史系（后到中文系）任教。1978年病逝。著有《吴宓诗集》、《文学与人生》、《吴宓自编年谱》等，遗有《吴宓日记》。

2 歌德（Johann Wolfgang von Goethe，1749—1832）德国诗人、剧作家、思想家。深受莱辛、卢梭和斯宾诺莎的影响，和席勒交谊深厚，青年时期为狂飙运动的主要人物。政治上反对封建割据，渴望德意志统一，主张自上而下的社会改革。著有小说《少年维特的烦恼》和不朽的诗剧《浮士德》等。

3 这句话的原文是意大利语，林语堂认为此话出自但丁，待考。

4 《学衡》，综合性刊物。1922年1月在南京创刊，月刊，后改为双月刊。吴宓主编，主要撰稿者有梅光迪、胡先骕等。曾反对新文化运动和白话文运动，介绍西方古典文学，所发表的文章均用文言文。1933年7月停刊，11年间共出版79期。现代文学史上，把这个杂志的主要撰稿者称为“学衡派”。

5 白璧德（Irving Babbitt，1865—1933）美国文学评论家、教师，新人文主义美学创始人之一。是浪漫主义、现实主义和自然主义的坚决反对者。主张文学恢复以“适度性”为核心的人文主义传统，以“人的法

则”来反对“物的法则”，其作用是给人以道德的知识。认为自然主义的倾向（包括浪漫主义、批判现实主义等思潮）只服从“物的法则”，会牺牲美的全部含义，应该加以否定。艾略特和桑塔亚那都曾经是他的追随者，后来却成为他的批判者；而吴宓始终是他忠实的学生。著有《新拉奥孔》、《卢梭与浪漫主义》、《批评家与美国生活》等。

6 道森（Ernest Christopher Dowson，1867—1900）19世纪末英国颓废派的杰出诗人，曾积极参加颓废派作家集团的“吟诗俱乐部”，崇拜爱伦·坡、波德莱尔和斯温伯恩。著有《诗集》、《装饰》等。

7 波德莱尔（Charles Baudelaire，1821—1867）法国现代派诗人。他摒弃了后期浪漫主义的矫揉造作，表现了一个没有宗教信仰的诗人对万事万物真实意义的探索。使他声名狼藉的诗集《恶之花》，也是他的杰作。他的文学和艺术批评文章分别结集为《浪漫主义艺术》和《美学管窥》。晚年贫病交迫，去世后其影响与日俱增。欧美象征主义诗人都自称是他的继承者。

8 瓦莱里（Paul Valéry，1871—1945）法国诗人、评论家、思想家。他最欣赏的诗人是爱伦·坡和马拉美，与马拉美过从甚密。1917年因发表了五年才完稿的长诗《年轻的命运女神》而一举成名。1920年出版《旧诗集存》，1922年出版《幻美集》，脍炙人口的《海滨墓园》就是其中一首。他在这首诗里对存在与幻灭、生与死进行了反思，是他最富有哲理也最抒情的一首诗。

9 维吉尼亚·伍尔夫（Virginia Woolf，1882—1941）英国女作家，婚前姓斯蒂芬。对小说形式的创新有过独特的贡献，是“意识流”手法的创始者，也是当时最优秀的评论家之一。著有小说《远航》、《夜与日》、《雅各的房间》、《黛洛维夫人》、《奥尔兰多》、《海浪》等，长篇论文《一间自己的房间》。在写完《幕与幕之间》后，精神病复发，投河自杀。

10 奥尔德斯·赫胥黎（Aldous Huxley，1894—1963）英国作家，神秘主义者。著有《针锋相对》、《猿与本质》和《感觉之门》等。

11 荷马（Homer，约公元前9世纪—前8世纪）古希腊诗人，专事行吟的盲歌手。相传为著名史诗《伊利亚特》和《奥德赛》的作者。关于荷马是否确有其人、他的生存年代以及两部史诗的形成，争论很多，构成欧洲文学史上所谓的“荷马问题”。

12 维吉尔（Virgil，公元前70—前19）古罗马最伟大的诗人。他的声誉主要来源于其著作《伊尼特》。这部民族史诗记述了罗马传说中开国者的故事，并且宣称罗马负有在神意指导下教化世界的使命。

13 但丁（Dante Alighieri，1265—1321）意大利诗人，中古到文艺复兴的过渡时期最有代表性的作家。代表作《神曲》广泛反映中世纪后期意大利的社会矛盾，大胆谴责教皇和僧侣的贪婪专横。《帝制论》主张政教分离，反对教皇干预政治。《论俗语》主张意大利应有标准的民族语言，对意大利民族语言的统一有重大贡献。

14 弥尔顿（John Milton，1608—1674）英国诗人、政论家。1640年

至1660年间发表政论多篇，捍卫民主，反对专制，其中重要的有《论出版自由》和《为英国人民声辩》。1649年任克伦威尔共和政府的拉丁文秘书，1652年双目失明，仍继续任职。王政复辟后被迫隐居，先后写成三部重要长诗：《失乐园》、《复乐园》和《力士参孙》。《失乐园》用《圣经》故事塑造了叛逆者撒旦的英雄形象。

15 拜伦（George Gordon Byron，1788—1824）英国浪漫主义诗人，出身贵族，学生时代即深受启蒙思想影响。1809年至1811年游历西班牙、希腊、土耳其等国，受各国人民反侵略、反压迫斗争的鼓舞，开始创作长诗《恰尔德·哈罗尔德游记》，表达对封建专制压迫的憎恨、对自由民主的向往。长诗的前两章于1812年出版，拜伦便一举成名。后来又写了一系列叙事长诗《异教徒》、《海盗》、《莱拉》、《该隐》、《曼弗雷德》和《唐璜》等，影响遍及全欧，给整个浪漫主义文学时代打上了他的烙印。

16 《恰尔德·哈罗尔德》，即拜伦的自传体长诗《恰尔德·哈罗尔德游记》。

马君武

1 马君武（1881—1940）广西桂林人，中国教育家、翻译家、学者、社会活动家，广西大学创建人之一。早年就读于桂林体用学堂。1900年入广州法国天主教会所办丕崇书院学法文。1901年入上海震旦学院，同年冬赴日本京都大学读化学。1905年8月第一批加入同盟会，和黄兴、陈天华等人共同起草同盟会章程，并为《民报》撰稿。1906年回国，任上海中国公学教习。1907年赴德国，入柏林工业大学学冶金。首次翻译《共产党宣言》纲领，在《民报》上发表。1911年武昌起义爆发后回国，作为广西代表参与起草《临时政府组织大纲》和《中华民国临时约法》，并任南京临时政府实业部次长。1912年出任国会参议员。1913年二次革命失败，出国，再赴德入柏林大学。1916年获工学博士回国，恢复国会议员职。1917年7月南下广州参加孙中山护法运动，任广州军政府交通部长。1921年任孙中山非常大总统总统府秘书长，并一度任广西省省长。1924年和冯自由、章炳麟等人发表宣言，反对国民党改组和联俄、联共、扶助农工等三大政策。同一年，任上海大夏大学首任校长。1925年出任北洋政府司法总长、教育总长，被国民党第二次全国代表大会开除党籍。1928年参与创办省立广西大学，曾三任广西大学校长。1931年九一八事变后，马君武作诗《哀沈阳》两首，讽喻张学良。1940年8月1日，在桂林病逝。

2 麦加（Mecca）是伊斯兰教的第一圣地。这里是借用其引申义。

3 农学，当为化学；工学，当为冶金学。

4 其实，中山先生的这个头衔Dr.和林文庆的Dr.一样，也是“医生”，因为他不曾获得过博士学位。这里仍按习惯译为博士。

5 弥勒约翰，即约翰·穆勒。

赵元任

1 赵元任（1892—1982）语言学家，翻译家。字宣仲，一作宜重。清代著名文学家、诗论家、史学家赵翼（1727—1814）之六世孙。江苏武进人，生于天津。1910年，以第二名的成绩考取清华学堂“庚子赔款”留美官费生，同年秋与胡适同入康奈尔大学，主修数学。1914年夏，获两学会荣誉奖，同年获理学士学位。毕业后又在康奈尔大学修读哲学，后转哈佛大学，1918年获哲学博士学位，翌年任康奈尔大学物理学讲师。1920年初向康大请假一年，回国任清华学校心理学和物理教授。1921年入哈佛大学习语音学，翌年发表自行创制的罗马字拼音式，同年任哈佛大学哲学系讲师，教授中文。1923年升任该校中文系教授，兼任清华学校研究院国学门导师。1924年赴英，转法、比、德、瑞士等国，再回法国。1925年与刘半农一家结伴回国，任清华国学研究院导师。后加入陈寅恪等人组成的国语统一筹备会，后与刘半农、钱玄同、林语堂等人组成“数人会”，议定“国语罗马字拼音法式”。1926年正式从事语音研究。1927年起，赴苏、浙、粤等地调查方言，灌录唱片二千余张。1928年冬，国语统一筹备会易名教育部国语统一筹备委员会，任部聘委员。同年任中华教育文化基金会董事，兼任北平师范大学音乐系教授。1929年任中央研究院语言历史研究所第二组专任研究员兼主任。1934年迁居南京，历任中央研究院评议员、国语推行委员。抗日战争爆发后，辗转前往檀香山，任夏威夷大学教授。1939年被聘为耶鲁大学客座教授。1940年起，任国语推行委员、哈佛大学教授。抗战胜利后，历任美国语言学会会长、加州大学客座教授、中央研究院第一届院士。1963年应聘为香港大学人文组主席顾问。1981年重访大陆，北京大学授予其名誉博士学位。1982年2月病逝于美国马萨诸塞州坎布里奇。有“汉语言学之父”之称。著有《中国语入门》、《现代吴语的研究》、《语言问题》、《中国话的文法》、《新诗歌集》等，译有《一个女人的自传》、《中国音韵学研究》（合译）、《最后五分钟》、《阿丽思漫游奇境记》等。

2 劳伦斯（D. H. Lawrence，1885—1930）20世纪英国最独特、最有争议的作家和诗人之一。生于英国诺丁汉郡，父亲是矿工，母亲当过教员、写过诗。他中学毕业后当过文书和小学教师。很早就喜欢写作。1912年起和一个老师的德国妻子同居，1914年结婚，过着流浪的生活，到过许多国家，多次企图建立脱离现实的、少数人共同生活的理想公社，都以分歧、争吵告终。一生写过10部长篇小说，最伟大的是《虹》和《恋爱中的女人》，在中国最著名的、颇有争议的却是《查泰莱夫人的情人》。在诗歌创作方面，他是意象派的重要一员。《鸟、兽、花》是对诗歌艺术的独特贡献。他的作品揭示了人性中的本能力量，辛辣地批评了现代工业社会。

3 罗素（Bertrand Russell，1872—1970）英国哲学家、数学家、逻辑学家，20世纪声誉卓著、影响深远的思想家之一。在其漫长的一生中，完成了四十余部著作，涉及哲学、数学、科学、伦理学、社会学、教育、历史、宗教以及政治等各方面。他的首要事业和建树是在数学和逻辑领域，对西方哲学产生了深刻的影响。主要著作有《意义与真理的探

究》、《人类的知识：范围和界限》、《数学原理》（与导师怀特海合著）、《物的分析》、《心的分析》、《数学纲要》等。1950年获诺贝尔文学奖。20世纪60年代末出版的三卷本自传，被认为是他的最佳作品。

4 卡罗尔（Lewis Carroll，1832—1898）英国数学家、逻辑学家，原名道奇森（C. L. Dodgson）。他以卡罗尔为笔名所写的两部童话——《阿丽思漫游奇境记》和《镜中世界》——流传极广。两书及其姊妹篇“谐体史诗”《斯纳克之猎》，把所谓“荒诞文学”提到了最高水平。他12岁开始写作，1850年被牛津大学基督学院录取，数学和古典文学成绩超群。1854年期末考试数学第一，后来被任命为数学讲师，直到1881年退休。

5 很像是今日网上文字的先驱： $y = \text{why}$ ， $u = \text{youth}$ ， $\pi = \text{pie}$ ， $2 = \text{tooth}$ 。

这首打油诗可以译作：

我从很久很久以前开始，
却找不到一个押韵的字，
此话之接近真理，就像
 y 之于 $youth$ 饼之于牙齿。

不由自主的皇帝

1 Malgre Lui，法语；不由自主的，由不得自己的。

2 溥仪（1906—1967），爱新觉罗氏，字耀之，号浩然，英文名Henry。祖父为道光帝七子、咸丰帝之弟奕譞，外祖父为荣禄，生父载沣为光绪帝之弟，后继承醇亲王爵位。光绪三十四年冬（公元1908年），光绪帝载湉病重，慈禧太后下令将溥仪养育在宫中。不久光绪帝去世，慈禧太后命溥仪继承皇统，在慈禧去世后登位，年仅三岁。1911年，辛亥革命爆发，次年2月，溥仪退位。1917年7月1日，北洋军队将领张勋发动政变，宣布清朝复辟。仅12天，溥仪再次逊位。1924年11月5日，冯玉祥的军队包围紫禁城，取消皇帝尊号并且限两天内迁出。1925年2月24日，在郑孝胥和日本人的策划下，经东交民巷日本使馆，溥仪化装成商人逃往天津，居住于日租界。1931年九一八事变后，11月，土肥原将溥仪秘密带往沈阳。18日，伪满洲国宣告成立，溥仪出任执政。1934年3月1日，登基称帝，年号康德。1945年8月16日，为苏联红军逮捕。1950年8月，由苏联政府移交中国政府，被关押在战犯管理所。1959年12月4日，根据特赦令被释放。1960年3月，被分配到北京植物园工作。1964年，调到全国政协文史资料研究委员会任资料专员，并担任第四届全国政协委员。后罹患肾癌，因多重器官衰竭医治无效去世。

3 据记载，坐在溥仪身旁的是父亲载沣，哄着哭闹的小皇帝，说：快了，一会就完。

4 原文to have a grand tussle with some of his subjects that kept on kowtowing to him, 其中的tussle, 只能作“扭打, 争斗; 争辩, 争执”理解, 而用在一个四岁娃娃身上实在不可思议。

5 实为12天。

吴经熊

1 吴经熊(1899—1986)诗人、律师、作家、翻译家。字德生, 浙江鄞县人。1920年毕业于上海东吴大学法学院, 获法学学士学位。1921年毕业于美国密歇根大学, 获法学博士学位。1921年任法国巴黎大学法律哲学与国际公法研究员, 1922年任柏林大学哲学与法理学研究员, 1923年任哈佛大学比较法律哲学研究员, 1924年后任东吴大学法学院教授。1935年创办《天下月刊》(T'ien Hsia Monthly)。1939年当选为美国学术院名誉院士。1949年起先后在夏威夷大学、新泽西州西东大学任法学、亚洲学术教授, 1966年定居台湾, 任中国文化学院教授, 1974年任该校哲学研究所博士班主任。以中文、英文、法文、德文写作, 所论多为基督教、中国文学、法律等方面问题。中文著述有《法律哲学研究》、《哲学与文化》、《中国哲学之悦乐精神》等, 英文著述有Juristic Essays and Studies(《法学论丛》)、The Art of Law(《法的艺术》)、From Confucianism to Catholicism(《从儒术到天主教》)、Beyond East and West(《超越东西方》)、Fountain of Justice: A Study in Natural Law(《正义之源泉》)、Justice Holmes: A New Estimate(《霍姆斯法官新评价》)等多种。在英汉互译两方面均有很深造诣, 汉译英以《英译〈老子道德经〉》和《唐诗四季》为代表作, 英译汉曾以《圣咏译义初稿》震动中国译界。

2 惠特曼(Walt Whitman, 1819—1892)美国最伟大的诗人之一, 是使美国诗歌有别于传统英诗的创始先驱。其诗作描写了美国劳动阶层的生活, 表达了强烈的民主主义精神, 对中国新诗的形成与发展产生过重大影响。著有收入其一生所作全部诗篇的《草叶集》。

3 王尔德(Oscar Wilde, 1854—1900)爱尔兰作家、诗人、剧作家。19世纪末英国唯美主义运动的代表人物, 倡导“为艺术而艺术”。著有喜剧《认真的重要》、《少奶奶的扇子》和长篇小说《道林·格雷的肖像》。

4 白哲特(Walter Bagehot, 1826—1877), 英国经济学家、政论家、《经济学家》主编, 所著《英国宪法》(1867)是广为传诵的名著。

5 指东吴大学, 是由美国基督教差会监理会1900年创建的教会大学。1915年于上海创设的东吴大学法学院闻名全国, 法学界曾有“南东吴, 北朝阳”之说。

6 霍姆斯(Oliver Wendell Holmes, 1841—1935)美国著名法律史学家和法律哲学家。曾任美国联邦最高法院大法官达30年之久, 认为“法律的生命并非逻辑而是经验”, 以主张司法克制而闻名。

7 格莱斯顿 (William Ewart Gladstone, 1809—1898) 19世纪英国最伟大的政治家, 英国自由党领袖, 曾四次出任首相。著有《国家及其与教会的关系》、《荷马和荷马时代研究》。

高君珊女士

1 高君珊 (生卒年不详) 教育学家, 福建长乐人。曾留学美国哥伦比亚大学。1930年当选为中国科学社唯一一位女性理事, 并捐款在科学社内设立了影响很大的“高女士纪念奖金”。曾担任中国科学社北美分会的联络人, 著有《学校之视察与指导》等。

2 安阿伯, 美国密歇根州东南部城市。

3 1933年 2月21日上午, 上海塘山路1250号正泰橡胶物品第一制造厂蒸缸爆炸, 涂光油起火, 焚毙、压死81人, 伤120余人, 损失10余万元, “可谓上海空前之惨剧”。

胡适博士, 一位哲人

1 胡适 (1891—1962) 现代著名学者、诗人、历史学家、文学家、哲学家。安徽绩溪县上庄村人。原名嗣糜, 学名洪骅, 字希疆; 后改名胡适, 字适之, 笔名天风、藏晖等。5岁启蒙, 受过9年私塾教育。1904年, 到上海进新式学校, 接受《天演论》等新思潮, 并开始在《竞业旬报》上发表白话文章, 后任该报编辑。1906年考入中国公学, 1910年考取“庚子赔款”第二期官费生赴美国留学, 于康奈尔大学先读农科, 后改读文科。1915年入哥伦比亚大学研究院, 师从唯心主义哲学家杜威, 接受了杜威的实用主义哲学思想。回国后, 任北京大学教授, 加入《新青年》编辑部, 撰文反对封建主义, 宣传个性自由、民主和科学, 积极提倡“文学改良”和白话文学, 成为新文化运动的重要人物。1920年至1933年, 主要从事中国古典小说的研究考证, 同时也参与一些政治活动, 并一度担任上海公学校长。抗日战争初期, 出任“国防参议会”参议员, 1938年被任命为中国驻美国大使。1942年任行政院最高政治顾问, 1946年任北京大学校长。1949年寄居美国, 致力于《水经注》的考证等工作, 后去台湾。1957年出任“中央研究院”院长。1962年, 在酒会上突发心脏病去世。著有《中国哲学史大纲》(上卷)、《白话文学史》(上卷)和《胡适文存》等。

2 奥古斯都 (Augustus, 公元前63—公元14) 古罗马第一位皇帝 (公元前27—公元14), 凯萨的甥孙及养子。原名盖约·屋大维 (Gaius Octavius), “奥古斯都”是元老院对他所奉的尊号。这里所谓“奥古斯都式额头”, 用中国传统的语言可表述为“天庭饱满”。

3 契诃夫 (Anton Pavlovich Chekhov, 1860—1904) 俄国剧作家、短篇小说家。早年在莫斯科学医, 并在那里开始写作。他的短篇小说无论数量还是质量, 在俄国都是首屈一指的。他风格独具的剧本如《海鸥》、《万尼亚舅舅》、《三姊妹》和《樱桃园》, 已经是世界戏剧作品宝贵的遗产。

4 海克尔 (Ernst Heinrich Haeckel, 1834—1919) 德国博物学家, 达尔文主义支持者。提出生物发生律, 为生物进化论提供了有力的证据。著有《人类发展史》、《生命的奇迹》等。

5 此处的赫胥黎疑为英国著名生物学家、达尔文进化论最杰出的代表 T. H. Huxley (1825—1895), 他认为人类和大猩猩的脑部解剖具有十分的相似性, 也认为生命来自于无生命物质, 与文中所说的“人就立刻变成了非常简单的动物而不难理解”比较符合。

6 约翰·斯图尔特·穆勒 (John Stuart Mill, 1806—1873) 英国哲学家、历史学家、经济学家、逻辑学家、实证论者和功利主义者。著有《逻辑体系》(严复译本为《穆勒名学》)、《政治经济学原理》、《论自由》(严复译本为《群己权界论》)、《功利主义》等。

7 philosophe (哲人), 请注意此词与 philosopher (哲学家) 的不同, 其原本是指18世纪以狄德罗、卢梭和伏尔泰为代表的那些启蒙思想家和哲学家, 了解了他们便了解了这个词的含义。

8 伏尔泰 (Voltaire, 1694—1778) 法国启蒙思想家、作家、哲学家。原名弗朗索瓦-马利·阿鲁埃 (François-Marie Arouet)。主张开明君主制, 信奉洛克的经验论, 两次被捕入狱, 后来被逐出国。著有《哲学书简》、哲理小说《老实人》、悲剧《扎伊尔》和其他历史著作等。

9 达兰贝尔 (Jean le Rond D'Alembert, 1717—1783) 法国数学家、物理学家、启蒙思想家、哲学家。他所提出的力学原理后被称为“达兰贝尔原理”。曾任《百科全书》副主编, 著有《哲学原理》、《力学原理》等。

10 霍尔巴赫 (Paul Henri Dietrich d'Holbach, 1723—1789) 法国启蒙思想家、哲学家、无神论者、唯物主义的著名阐述者, 狄德罗《百科全书》主要撰稿人之一。著有《被揭穿了了的基督教》、《社会体系》和最受欢迎的《自然体系》。

11 爱尔维修 (Claude Adrien Helvétius, 1715—1771) 法国哲学家、辩论家, 启蒙时期法国思想家小组的资助者。他从享乐主义的观点强调肉体的感受, 对伦理学宗教基础的攻击及其放肆的教育理论使他闻名于世。著有哲学名作《论精神》, 在《论人的理智能力和教育》一书中宣称教育有解决人类问题的无限潜力。

12 狄德罗 (Denis Diderot, 1713—1784) 法国文学家、哲学家。由于主编《百科全书》并在哲学、伦理学、戏剧、美学理论、文艺批评、小说、科学思辨及政治学诸领域作出杰出贡献而成为启蒙时期的文化巨人。著有哲学著作《对自然的解释》、《达兰贝尔和狄德罗的谈话》, 小说《修女》、《宿命论者雅克和他的主人》、《拉摩的侄子》, 剧本《私生子》、《一家之主》和文艺理论《论戏剧诗》、《演员的是非谈》、《画论》等。

13 杰里米·边沁 (Jeremy Bentham, 1748—1832) 英国功利主义哲学家、经济学家、法学家。著有《谬误集》、《审判证据原理》、《新逻辑体系》和《义务学》等。

冯玉祥

1 冯玉祥（1882—1948）中国国民党爱国将领，著名民主人士。字焕章，安徽巢县人。行伍出身，曾任北洋陆军第十六混成旅旅长、第十一师师长，陕西、河南督军及陆军检阅使等职。1924年在第二次直奉战争中发动北京政变，改所部为国民军，任总司令兼第一军军长。1926年9月，当国民革命军攻抵武汉时，在五原誓师，宣布所部集体加入中国国民党。1927年5月在西安就任国民革命军第二集团军总司令，曾参与蒋介石和汪精卫的反共活动。1928年起，因利害冲突举兵反蒋，先后爆发蒋冯战争和中原大战。九一八事变后积极主张抗日。1933年5月与中国共产党合作，在张家口组织察哈尔民众抗日同盟军，任总司令。1936年到南京任国民政府军事委员会副委员长。抗日战争爆发后，任第六战区司令长官，旋被蒋撤职。抗日战争胜利后，继续采取与中国共产党合作的立场，与李济深等发起成立中国国民党革命委员会。1946年出国考察水利，1948年回国准备参加新政治协商会议筹备工作，在黑海因轮船失火遇难。

2 张作霖（1875—1928）北洋奉系军阀首领。字雨亭，奉天海城人，土匪出身。1916年起任奉天督军、东三省巡阅使等职，在日本帝国主义支持下长期盘踞东北。1924年打败直系军阀后，控制北洋军阀政府。1926年称安国军总司令，次年4月杀害共产党人李大钊等，6月自称“中华民国陆海军大元帅”。1928年6月同蒋介石作战失败，退回东北。由于未能满足日本人的全部要求，所乘火车经过沈阳西郊皇姑屯时被日军预埋炸弹炸死。

3 王正廷（1882—1961）字儒堂，浙江奉化人。天津北洋大学预科毕业，曾任湖南高等学校教员。1905年留学日本，在日本加入同盟会。1908年又留学美国耶鲁大学，获文学硕士学位。回国后在基督教青年会工作。武昌起义时任湖北都督府外交副主任；民国成立后，任唐绍仪内阁工商次长兼代总长、参议院副议长；后专任上海青年会全国协会总干事。1916年袁世凯死后，复任参议院副议长。第二次国会解散后，率议员赴广州，参加护法运动。1918年代表护法政府赴美，接洽参加欧战事宜。次年任巴黎和会全权代表。1922年任“鲁案”善后督办，10月任外交总长兼代国务总理。1924年任北洋政府外交总长、财政总长及关税会议委员长。1928年后曾任国民政府外交部长、驻美大使。

4 徐谦（1871—1940）字季龙，安徽歙县人。清末进士，曾任翰林院编修。辛亥革命后发起组织国民共进会，后与同盟会联合组成中国国民党。曾任段祺瑞内阁司法次长、孙中山大元帅府秘书长、国民党中央执行委员会常委。1933年福建事变中任“中华共和国人民革命政府”最高法院院长，1937年抗日战争爆发后任国民政府国防委员会委员。

5 吴佩孚（1874—1939）北洋直系军阀首领。字子玉，山东蓬莱人。清末秀才。1906年为北洋陆军曹錕部管带，1917年升至陆军第三师师长。1922年直奉战争后，先后任两湖巡阅使、直鲁豫巡阅使。1923年残酷镇压京汉铁路工人大罢工，是二七惨案的罪魁。1924年第二次直奉战争中失败，1926年又和张作霖联合进攻冯玉祥部国民军。同年，被北

伐军打败，逃至四川依附地方军阀。九一八事变后，蛰居北平。抗日战争爆发后，曾拒绝出任伪职。1939年病逝。

6 段祺瑞（1865—1936）北洋皖系军阀首领。字芝泉，安徽合肥人。1889年天津武备学堂毕业后，留学德国学习军事。1896年协助袁世凯创办北洋军，曾任江北提督等职。1912年至1916年历任北洋政府陆军总长、参谋总长、国务总理。袁世凯死后，在日本帝国主义支持下，以国务总理把持北洋军阀政府。1920年被直系军阀曹锟、吴佩孚打败下台。1924年直系政权垮台，被奉系和冯玉祥推为北京临时政府执政。1925年召开善后会议，抵制国民会议。1926年屠杀北京爱国群众，造成三一八惨案，同年4月又被冯玉祥驱逐下台。1933年被蒋介石迎居上海，1936年病逝。

7 曹锟（1862—1938）北洋直系军阀首领。字仲珊，直隶天津人。天津武备学堂毕业。后投靠袁世凯，曾任北洋军第三师师长、直隶督军兼省长、川粤湘赣四省经略使。1919年被推为直系军阀首领，任直鲁豫三省巡阅使。在1922年第一次直奉战争中打败张作霖，控制北方政局。次年逼总统黎元洪下台，又以五千银元一票收买国会议员，被选为“大总统”，世称“贿选总统”。1924年第二次直奉战争中，被所部第三军总司令冯玉祥囚禁。1926年获释，初居开封，后寓居天津。

8 阎锡山（1883—1960）字百川，山西五台人。日本陆军士官学校毕业。1911年辛亥革命后任山西都督，长期盘踞山西。1927年9月起投靠蒋介石。1930年，与冯玉祥等出兵反蒋，失败后逃至大连。1931年又被蒋任命为太原绥靖公署主任。抗日战争期间，消极抗日，积极反共。抗战胜利后，积极参加反人民内战。1949年3月逃离太原。1960年病逝于台湾。

9 指1933年国民革命军第十九路军在福建发动的抗日反蒋事变。1932年5月，在上海抗击日军的十九路军被蒋介石调往福建从事反共内战。1933年11月20日，该部将领蔡廷锴、陈铭枢、蒋光鼐等联合国民党内李济深等反蒋派，在福州成立抗日反蒋的“中华共和国人民革命政府”。1934年1月，在蒋介石的进攻下失败。

徐志摩，一个孩子

1 徐志摩（1896—1931）诗人。名章垿，初字櫟森，后改字志摩。浙江海宁人。留学欧美，先后在美国哥伦比亚大学、英国剑桥大学攻读政治、经济，获硕士学位。1921年开始写诗。1922年回国后，历任北京大学、清华大学、大夏大学、中央大学等校教授，并参与主编《诗刊》、《新月》等文学期刊。1931年因飞机失事去世。“新月派”代表诗人，对中国新诗的发展有重大影响。著有诗集《志摩的诗》、《翡冷翠的一夜》、《猛虎集》、《云游》，散文集《落叶》、《巴黎的鳞爪》、《秋》，小说集《轮盘》等。

2 雪莱（Percy Bysshe Shelley，1792—1822）英国伟大的浪漫主义诗人，世界文学史上第一位通过诗歌鼓吹社会主义理想的社会主义诗人，

也是最优秀的抒情诗人之一。《心之灵》是他所写的著名长诗之一，文中说它“是一曲理想的情人之歌”，那“理想的情人”便是雪莱自己。此外的杰作还有哀悼济慈的《阿多尼》、抗议暴政的《暴政的假面游行》和鼓吹大同思想的《普罗米修斯的解放》等。

3 英国著名的维多利亚女王（Queen Victoria，1819—1901）在位的时代（1837—1901），一些英国史家称“维多利亚时代”为英国历史上的“黄金时代”。产生于这一时期的英语作品称“维多利亚时代文学”，主要代表作家有诗人勃朗宁、丁尼生，评论家阿诺德，小说家狄更斯、勃朗特、艾略特、哈代等。

4 马修·阿诺德（Matthew Arnold，1822—1888）英国维多利亚时代优秀诗人、评论家。主要贡献在于指出当时浪漫主义诗歌中的弊病，并为褊狭的英国文化引入了欧洲大陆的影响。他认为诗要反映时代的要求，须有观察广阔和复杂的生活景象、追求道德和智力的“解放”的精神。

5 爱丽儿，莎士比亚戏剧《暴风雨》中善良活泼的小精灵。法国传记作家莫洛亚记述雪莱生平的一部评传，便以《爱丽儿》为书名。

6 爱因斯坦（Albert Einstein，1879—1955）提出的关于物质运动与时间、空间关系的理论，修正了牛顿以来对时间、空间、引力三者互相割裂以及运动规律永恒不变的看法。

7 钱德拉·博斯（Jagadis Chandra Bose，1858—1937）印度植物生理学家、物理学家，发明测定活动机体对外界刺激反应的仪器，研究无线电波的准光学性质，改进金属检波器。著有《活体及非活体的反应》等。

8 19世纪末至20世纪20年代爱尔兰文学人才辈出的现象，与政治上强烈的民族主义和对爱尔兰盖尔语文学遗产重新燃起的兴趣密切相关。这一运动的中心人物是著名的爱尔兰诗人、剧作家叶芝（William Butler Yeats，1865—1939）。

9 泰戈尔（Rabindranath Tagore，1861—1941）印度孟加拉语诗人，著有《心中的向往》、《金帆船》、《缤纷集》、《收获集》、《梦幻集》、《刹那集》和《奉献集》，抒情诗集《吉檀迦利》的英译本为他赢得了1913年的诺贝尔文学奖。1915年受封为爵士，1919年放弃了这一称号，以抗议阿姆利则惨案。他的长篇小说中最著名的是《戈拉》。他还是印度一流的画家。1924年访问中国时，徐志摩曾为他担任翻译。

10 梁启超（1873—1929）中国近代维新派领袖、学者。字卓如，号任公，又号饮冰室主人，广东新会人。曾和其师康有为一起倡导变法维新，是为“康梁变法”。戊戌政变失败后逃亡日本。辛亥革命后，以立宪党为基础建立进步党，拥护袁世凯，出任袁政府司法总长。1916年又策动蔡锷组织护国军反袁，后又组织研究系，与段祺瑞合作，出任财政总长。五四时期，反对“打倒孔家店”，曾提倡文体改良的“诗界革命”和“小说界革命”。晚年在清华讲学，其著作合编为《饮冰室合集》。

11 塞尚（Paul Cézanne，1839—1906）法国画家，后期印象派代表。认为绘画的目的是对形、色、节奏、空间的探索，企图借助色彩的配合而不依赖明暗效果表现体积等。毕生追求表现形式，对运用色彩、造型有新的创造。代表作有《玩纸牌者》、《圣维克图瓦山》等，有“现代绘画之父”之称。

12 毕加索（Pablo Picasso，1881—1973）20世纪最有创造性、影响最为深远的西班牙画家、雕塑家，立体主义画派主要代表。一生画法和风格迭变，其作品对西方现代艺术有深远影响。代表作有油画《格尔尼卡》、宣传画《和平鸽》等。晚期制作了大量铜版画、雕塑和陶器等，亦有杰出成就。

13 梅兰芳（1894—1961），京剧演员。名澜，字畹华，原籍江苏泰州，生于北京。出身京剧世家，工青衣，兼演刀马旦。对京剧旦角的唱腔、念白、舞蹈、音乐、服装、化妆等各方面都有所创造发展，形成了自己的艺术风格，世称“梅派”。曾先后赴日、美、苏等国进行文化交流。抗日战争期间留居香港、上海，在敌伪统治下蓄须明志，拒绝演出，表现了民族气节。新中国成立后，历任中国京剧院院长、中国戏曲研究院院长、中国文联副主席、中国剧协副主席等。

14 克莱斯勒（Fritz Kreisler，1875—1962）奥地利小提琴家、作曲家。曾在世界各地旅行演出，纳粹执政后入法国籍，1943年入美国籍。毕生致力于演奏和创作。代表作有小提琴曲《维也纳随想曲》、《中国花鼓》等。

薛氏兄弟

1 阿尔丰索（Alphonso SyCip，1883—1969）薛家在菲律宾已经发展成为很有影响的一个大家族，他们的企事业活动遍及全球。在温源宁撰写这篇短文以后，阿尔丰索还有更值得称道的表现：抗日战争爆发后，阿尔丰索积极支持中国政府抗日。偷袭珍珠港后，日军于1942年1月占领马尼拉，阿尔丰索和弟弟阿尔宾诺及女婿等家人都和当地的华人显要一道被拘。他被认定有罪而被宣判死刑，他当即激动地抗辩：“我只是帮助了亟需帮助的同胞，如果情况相反，你们日本人也会这样做！”被假释后，他携带家人逃到了北部，躲避在一个小岛上。二战结束后，他回到马尼拉，先后创立了参与战后重建事业的国际建设公司和1948年与菲航合并的商务航空公司，并连续多年当选为中华商会主席。1969年逝世于马尼拉。

阿尔宾诺（Albino SyCip，1887—？）1913年，成为菲律宾第一位华人律师，创办了菲律宾的China Bank，并有“银行业泰斗”之称，也当选过中华商会主席。他的子女也都各有出色成就：马尼拉陷落时，三子华盛顿正在美国读会计学博士学位，听说父亲被日本人所杀便报名参加美军；后来从事密码破译工作，所获情报之一，曾对确认日本海军大将山本五十六的座机和航行计划从而导致其机毁人亡的成功战斗行动作出了重要贡献。

薛清习有一个女儿嫁给了林语堂的一个兄弟，温源宁很可能是通过林语堂而认识了薛氏兄弟。

2 SyCip家人在用汉字书写姓名时，在菲律宾也仍然是以单独一个“薛”字为姓。例如，马尼拉有个律师Alex SyCip，显然也是SyCip家成员，这位律师见诸媒体的汉语姓名为薛育立。但是出现在英语文件中时，SyCip的发音仍然读作/ˈsiːsɪp/。

3 马尼拉，菲律宾首都，全国最大港市和政治、经济、文化中心。在吕宋岛西岸，临马尼拉湾。1571年，西班牙人到此建立城堡，成立了殖民地政权。1762年至1764年被英国占领，1832年对外贸易开放。1898年美西战争后被美军占领，成为美在菲的行政中心。1942年被日本占领，1945年被美军收回。1946年起成为正式独立的菲律宾的首都。

4 薛清习的妻子，名叫“玉兰”。

5 宿务岛在菲律宾米沙鄢群岛中部。宿务则是宿务岛东岸的一个港口城市，为菲律宾最大城市之一，也是个繁荣的港口，国内货运量居第一位，国际贸易仅次于马尼拉。

6 本文写于1934年。九一八事变后，日本帝国主义对中国的侵略得寸进尺，步步紧逼。

周作人：铁的优雅

1 周作人（1885—1967）现代散文家、诗人、文学翻译家。原名櫟寿，字星杓；后改名奎绶，自号起孟、启明（又作岂明）、知堂等，笔名仲密、药堂；晚年改名遐寿。浙江绍兴人，鲁迅的二弟。1901年入南京江南水师学堂，1906年东渡日本留学，1911年回国后在绍兴任中学英文教员，1918年任北京大学文科教授。五四时期任新潮社主任编辑，参加《新青年》的编辑工作，参与发起成立文学研究会，发表了《人的文学》、《平民文学》、《思想革命》等重要理论文章，从事散文、新诗创作并译介外国文学作品。他的理论主张和创作实践在社会上产生过很大影响，成为新文化运动的重要代表人物之一。“五四”后，作为《语丝》周刊的主编和主要撰稿人之一，写了大量散文，风格平和，清隽幽雅。在他的影响下，20世纪20年代形成了包括俞平伯、废名等作家在内的散文创作流派。第一次国内革命战争失败后，思想渐离时代主流，主张“闭户读书”。30年代提倡闲适幽默的小品文，沉溺于“草木虫鱼”的狭小天地。1937年卢沟桥事变发生后，北平沦陷，便颀颜事故。1945年以叛国罪被判刑入狱，1949年出狱，后定居北京，在人民文学出版社从事日本、希腊文学作品的翻译和写作有关回忆鲁迅的著述。著有散文集《自己的园地》、《雨天的书》、《泽泻集》、《谈龙集》、《谈虎集》、《永日集》、《看云集》、《夜读抄》、《苦茶随笔》、《风雨谈》、《瓜豆集》、《秉烛谈》、《苦口甘口》、《过去的工作》、《知堂文集》，诗集《过去的生命》，小说集《孤儿记》，论文集《艺术与生活》、《中国新文学的源流》，论著《欧洲文学史》，文学史料集《鲁迅的故家》、《鲁迅小说里的人物》、《鲁迅的青年时代》，回

忆录《知堂回想录》等，另有译作多种。

2 麦考利 (Thomas Babington Macaulay, 1800—1859) 英国政治家、演说家、历史学家。其父曾任塞拉利昂总督。1830年代表威尔特郡进入国会。1832年国会讨论“改革法案”时，雄辩地支持国会改革，被认为是演说家时代的主要人物。在国会里支持废除奴隶制、出版自由、印度人在法律面前平等等。1847年落选后埋头《英国史》的写作，这部书使他成为辉格党历史学派的创始人之一，并获得了不朽的声誉。

3 伊利亚 (Elia)，查尔斯·兰姆 (Charles Lamb, 1775—1834) 的笔名，英国著名散文作家和评论家。其父为伦敦法学院执事索尔特的机要文书，兰姆早年曾废寝忘食阅读索尔特的藏书。7岁入小学，与柯勒律治结下了终身友谊。15岁离开学校，1792年在东印度公司任职员，1825年退休。1807年与胞姐玛丽合编的《莎士比亚故事集》出版。1820年新创刊的《伦敦杂志》开始刊登“伊利亚”的散文，兰姆本人也在文学方面达到了最高成就。这些散文几乎都是自传体。《伊利亚随笔集》于1823年出版，续集《伊利亚后期随笔集》于1833年出版。1796年姐姐玛丽精神病发作杀死母亲，从此由他照顾姐姐，两人感情很好。

4 引自弥尔顿的《失乐园》。

5 经利彬 (1895—1958) 医学家。字燧初，上虞驿亭人。早年留学法国里昂大学，获理学及医学博士学位，任助教。归国后任北平大学农学院教授兼生物系主任，为我国生命科学研究的先驱。后改任北平女子学院、中山大学教授。1934年任北平研究生院生物部部长兼研究生所主任。1937年北平沦陷，只身随研究生院前往昆明，继任该院动物研究所所长兼中国医药研究所所长及云南大学生物系教授。1946年去台湾任台湾省卫生局局长，因不善官场应酬卸任。1958年在台湾逝世。一生著述甚丰，较有影响的有《脊椎动物之脑量》、《金鱼鳍及鳞之复生》、《槐实之生理作用》等，与人合著《滇南本草纲目》、《卫生学》等。

林可胜博士，一位科学家

1 林可胜 (1897—1969) 中国生理学家，新加坡名医林文庆之子，有“中国生命科学之父”之称。8岁即被送往英国读书。入爱丁堡大学医学院后，一战爆发，曾服兵役，在军医院任外科医助。战后复学，1919年毕业，获内科医学士和外科医学士学位。1920年获哲学博士学位，留校任讲师。1923年，作为美国罗氏基金会研究员赴芝加哥大学从事研究。1924年，获科学博士学位。同年回国，任北京协和医学院生理学教授兼系主任，成为该学院第一位华人教授，执教直至1937年，学术成就蜚声国内外。1928年至1930年任中华医学会会长，并建立中国生理学会，创办《中国生理学杂志》。1933年抵抗日军入侵的喜峰口战役就曾率领救护队亲赴战地。七七事变后，把家眷安顿在新加坡，只身重返武汉，组织并主持中国红十字会救护总队。后在贵阳图云关设救护总站，派出一百多个救护队分赴各战区，对救治战伤作出了重大贡献。1940年陈嘉庚回国视察，对他尽心尽职的精神十分敬佩，主动允诺为他的救护总队每月捐助一万元。1942年至1944年，随远征军赴缅，任史迪威的军

医总监，多次受到嘉奖。抗战胜利后，1947年，将各军事医学院校及战时卫生人员训练所改组为国防医学院，任院长，同时筹建中央研究院医学研究所。1948年，蒋介石拟任其为卫生署署长，坚辞不就。1949年5月赴美，任教并指导医学科学研究，为美国科学院院士。1969年因食道癌逝世于牙买加金斯顿。

2 维尔沃姆 (Verworm) 待考，可能拼写错误。世界上最著名的细胞学家是菲尔绍 (Rudolf Virchow, 1821—1902)，德国病理学家、人类学家、政治家，细胞病理学院创始人。

3 巴甫洛夫 (Ivan Petrovich Pavlov, 1849—1936) 苏联生理学家，创立高级神经活动学说，提出条件反射的概念，因对消化生理的研究获1904年诺贝尔医学奖。

4 谢灵顿 (Sir Charles Scott Sherrington, 1857—1952) 英国生理学家。在中枢神经系统生理学方面有重要贡献，1932年与阿德里安一同获得诺贝尔生理学或医学奖。所著《神经系统的整合作用》是一部生理学的经典著作。

5 李济 (1896—1979) 人类学家，中国考古学之父。字济之，湖北钟祥人。1918年清华学校毕业后赴美留学，1923年获哈佛大学哲学博士。1926年主持山西西阴村新石器时代仰韶文化遗址的发掘，成为第一位挖掘考古遗址的中国学者，揭开了中国现代考古发掘的序幕。1928年至1937年，主持震惊世界的河南安阳殷墟发掘，使殷商文化由传说变为信史，并由此将中国的历史向前推移了数百年。1929年中央研究院历史语言研究所考古组成立后，长期任该组主任。历史语言研究所迁往台湾后，曾任该所所长。

梁遇春，中国的伊利亚

1 梁遇春 (1906—1932) 散文作家，翻译家。福建闽侯人。笔名秋心。1922年考入北京大学预科，1928年毕业于英文系后留校任助教。后随温源宁教授赴上海暨南大学任教师。1930年，温重返北大，梁亦跟随回校，任英文系图书馆管理员兼助教。在《骆驼草》周刊上发表的散文清新隽永、耐人吟味，后来均收入《春醪集》。译有外国文学作品二十余种，主要有《英国小品文选》、《英国诗歌选》(英汉对照)、《荡妇自传》、《老太婆的故事》、《红花》、《吉姆爷》等。

2 西拉诺·德·贝尔热拉克 (Savinien Cyrano de Bergerac, 1619—1655) 法国作家，以戏剧创作闻名。代表作有悲剧《阿格里皮娜之死》和喜剧《受人愚弄的学究》。逝世后发表的《月球上的国家和帝国的趣史》和《太阳上的国家和帝国的趣史》，英语合译成一本《日月旅行》，是科幻小说的先驱。

3 克伦威尔 (Oliver Cromwell, 1599—1658) 英国17世纪资产阶级革命领袖。1649年处死国王查理一世，成立共和国。1653年建立军事独裁统治，自任“护国主”。为争夺殖民地，曾对荷兰、西班牙和葡萄牙作战，得胜后确立了英国的海上霸权。

- 4 贝克莱 (George Berkeley, 1685—1753) 英国唯心主义哲学家, 曾任爱尔兰南部克洛因地区基督教新教主教。他反对霍布斯、斯宾诺莎和瓦尼尼等人的无神论和唯物主义, 提出“存在即被感知”的主张, 宣称外界事物只是“感觉的组合”。著有《视觉新论》、《人类知识原理》等。
- 5 笛福 (Daniel Defoe, 1660—1731) 英国小说家、报刊撰稿人。早年以写政论和讽刺诗著称, 反对封建专制。晚年开始发表冒险小说, 《鲁滨逊漂流记》是其代表作。
- 6 雷顿·斯特雷奇 (Lytton Strachey, 1880—1932) 英国文学评论家、传记作家。《维多利亚女王传》、《维多利亚女王时代四名人传》是他的杰作。
- 7 黑兹利特 (William Hazlitt, 1778—1830) 英国散文作家、评论家和传记作家。著有《有关英国诗人的演讲》、《论英国喜剧作家》、《席间闲谈》、《拿破仑生平》和《詹姆斯·诺思科特谈话录》等。
- 8 蒙田 (Michel de Montaigne, 1533—1592) 法国思想家、散文作家。出身新贵族, 当过15年文官, 后来辞官回乡, 闭户读书, 有时也出游。他把读书心得、旅途见闻、日常感想记录下来, 日积月累, 形成《随笔集》三卷。文体和风格对法国文学甚至对英国文学都有极大影响。
- 9 罗伯特·伯顿 (Robert Burton, 1577—1640) 英国圣公会牧师、学者、作家。著有《忧郁的剖析》, 以内容广博而闻名于世。
- 10 布朗 (Sir Thomas Browne, 1605—1682) 英国医生、作家。以日记体的沉思录《一个医生的宗教信仰》为世人所知。

陈嘉庚, 有理想的商人

1 陈嘉庚 (1874—1961) 爱国华侨领袖。福建同安 (今厦门) 人。长期侨居新加坡, 经营橡胶业, 热心兴办文化教育公益事业。1910年在新加坡参加同盟会。1911年任福建保安会会长, 曾募款资助孙中山从事革命活动。1913年至1920年, 先后在集美创办中小学和师范、水产、航海、农林、商科等学校。1919年在新加坡创办南洋华侨中学。1921年在厦门创办厦门大学。1938年在新加坡创立“南侨总会”, 领导南洋华侨支持祖国的抗日战争。1940年组织南洋华侨回国慰劳视察团, 回国慰劳抗战军民。太平洋战争爆发后避居印尼。日本投降后, 创办《南侨日报》, 从事爱国民主运动。1949年出席中国人民政治协商会议第一届全体会议。历任中央人民政府委员、全国政协副主席、全国人大常委会委员、国家侨委委员、中国侨联主席等职。

2 《东方杂志》, 近代中国历史最久的大型综合性杂志。1904年在上海创刊, 徐珂、杜亚泉、陶惺存、钱智修、胡愈之、李圣五等先后任主编, 由商务印书馆出版。初为月刊, 第17卷起改为半月刊, 第44卷又改为月刊。抗日战争时期先后迁至长沙、香港、重庆出版。1948年12月停刊, 共出44卷。《畏惧失败才是可耻》一文载于《东方杂志》1934年4月号。

3 济南惨案，亦称“五三惨案”，即1928年日本帝国主义在济南制造的惨案。2月，宁汉合流后的国民政府决定继续“北伐”，攻打奉系军阀。4月，日本出兵山东，侵占济南。5月1日北伐军进入济南，3日起日军开始向北伐军大举进攻，以重炮轰击济南城。蒋介石下令北伐军撤出济南。日军在济南奸淫掳掠，屠杀中国军民数千人，并公然违反国际惯例，将南京政府山东特派交涉员蔡公时等17名外交人员捆绑、毒打后杀害。惨案激起了中国人民新的反日浪潮，迫使日军于次年撤出济南。

周诒春博士

1 周诒春（1883—1958）教育家。字寄梅，安徽休宁人。1904年上海圣约翰大学毕业后赴美留学，先入耶鲁大学，继入威斯康辛大学。1909年回国，1912年任南京临时政府外交秘书。1912年10月，北京清华学堂改名清华学校，监督改称校长，唐国安为第一任校长，周诒春为第一任副校长。但是唐国安在任不到一年便告病故，临终立下遗嘱，举荐周诒春为校长。1919年为参议院议员。后历任北京中孚银行经理、整理财政委员会秘书长、关税特别会议委员会专门委员等职。1925年至1928年任中美文化教育基金保管委员会常务董事，创立北京图书馆，1933年任燕京大学代理校长，1935年任国民政府实业部次长，1945年后任农林部长、卫生署长。1948年南京解放前夕赴香港，1950年回国。1956年为政协全国委员会特邀代表。1958年在上海病逝。

2 清华大学的前身清华学堂成立于1911年，是清政府建立的留美预备学校。

顾孟余

1 顾孟余（1888—1972）原名兆熊，字梦渔，后改孟余，笔名公孙愈之。1905年入北京译学馆。1906年赴德国留学，入莱比锡大学习电机工程，旋入柏林大学攻读政治经济学，加入中国同盟会。1911年回国参加武昌起义。1916年任北京大学文科教授兼文科德文系主任，继而任法科经济系主任兼教务长。1925年任广东大学校长。1926年1月当选为中国国民党第二届中央执行委员，7月任中央政治会议委员，10月任中山大学委员会副主任。1927年当选为中央政治委员会委员、国民政府委员、国民党中央宣传部部长。1931年12月当选为国民党第四届中央执行委员。1932年3月任铁道部部长。1935年11月当选为国民党第五届中央执行委员，12月任中央政治委员会秘书长，并任交通部长。1938年7月当选为国民参政会第一届参政员。抗日战争爆发一年后，日本首相近卫文麿于1938年12月发表对中国招降声明。汪精卫在河内见此电文后，决定按与日方的约定声明响应，即把声明电稿交陈公博等携往香港，准备找顾孟余商量后，交林柏生在香港发出。顾见此电稿，坚决反对，认为汉奸决不可当，此电决不能发。1941年任中央大学校长。1942年任三民主义青年团中央团部指导员，9月派为高等考试典试委员长。1945年当选为国民党第六届中央执行委员。1948年2月为国民政府顾问，5月被任命为行政院副院长，未就。1949年4月迁居香港。1969年去台湾，

1972年6月病逝于台北。

2 威尔逊 (Thomas Woodrow Wilson, 1856—1924) 美国第28任总统 (1913—1921), 民主党人, 领导美国参加第一次世界大战, 倡议建立国际联盟并发表了他称之为“世界和平纲领”的“十四点”方案, 获1919年诺贝尔和平奖。

3 豪斯 (Edward Mandell House, 1858—1938) 美国外交家, 原系富商, 支持威尔逊当选总统, 任总统顾问。第一次世界大战期间出使英、法、德等国, 协助总统起草著名的“十四点和平纲领”等文件和演说稿, 为出席巴黎和会的美国代表团成员。

4 鲍罗廷 (Mikhail Markovich Borodin, 1884—1951) 苏联人, 原名格鲁森伯格 (Markovich Grusenbergr)。1903年加入俄国社会民主工党。1919年出席第三国际第一次代表大会, 后参加第三国际工作。1923年来中国, 任第三国际驻华代表、苏联驻广东革命政府代表, 并任国民党政治顾问, 帮助改组国民党、促进国共合作。1924年1月参加国民党第一次全国代表大会, 协助起草大会宣言并帮助孙中山筹组黄埔军校。1926年在处理“中山舰事件”、“整理党务案”中, 对蒋介石采取妥协退让政策。1927年被武汉国民党中央解除顾问一职。回国后历任劳动人民委员、塔斯社代理负责人。后从事外文出版工作。1949年被捕, 1951年死于劳动营。1956年平反。

5 劳合·乔治 (David Lloyd George, 1863—1945) 英国首相 (1916—1922)、自由党领袖, 曾任财政大臣, 率先实施社会福利政策。第一次世界大战中组成战时联合内阁, 出席巴黎和会, 承认爱尔兰独立。

叶公超

1 叶公超 (1904—1981) 外交家、书法家。名崇智, 字公超, 广东番禺人。1918年入天津南开中学。1920年赴美留学, 毕业于麻省赫斯特大学后, 转赴英国, 研究西洋文学。1924年获剑桥大学硕士学位, 又赴法国巴黎大学研究院研究。1926年回国, 任北京大学英文系讲师。1927年参与创办新月书店, 同年任暨南大学外国文学系主任、图书馆馆长, 并兼吴淞中国公学英国文学教授。1928年3月《新月》创刊, 与胡适等参与编辑。1929年任清华大学外文系教授。1935年复任北京大学英文系讲师。1937年抗日战争爆发, 随校南迁。1938年5月任西南联合大学外文系主任。1941年任中国国民党中央宣传部国际宣传处驻马来亚专员。1942年奉委为国际宣传处驻伦敦办事处处长, 1946年返国。1947年3月任国民政府外交部参事兼欧洲司司长, 7月任外交部常务次长。1949年1月任外交部政务次长, 3月代理部务, 5月任外交部部长。后去台湾。1981年11月病逝于台北。著有《中国古代文化生活》、《英国文学中之社会原动力》、《叶公超散文集》等。

2 奥斯伯特·伯德特 (Osbert Burdett, 1885—1936) 英国传记作家、文艺评论家, 所著《比尔兹利时期》(The Beardsley Period: An Essay in Perspective) 一书于1925年出版。

3 比尔兹利 (Aubrey Beardsley, 1872—1898) 英国插图画家, 继王尔德之后唯美主义运动的突出代表人物。1891年在威斯敏斯特艺术学校上过几个月夜校。1893年为托马斯·马洛礼子爵的《亚瑟王之死》画插图, 1894年任新创刊《黄面志》的艺术编辑和插图作者, 为王尔德的剧本《莎乐美》(1894) 所作插图使他名震遐迩。其画风深受新艺术曲线风格和日本木刻的粗犷特点影响, 但画中女性明显的肉感使批评家和公众吃惊。之后为新杂志《卷心菜》的主要插图作者。

4 尼克贝太太, 19世纪英国现实主义文学代表狄更斯 (1812—1870) 小说《尼古拉斯·尼克贝》中的人物。

5 《伊索寓言》中《没尾巴的狐狸》故事讲的是一只狐狸逃脱时挣断了尾巴, 便劝说其他狐狸也把尾巴割掉, 以免得他自己难为情; 他的诡计当然被揭穿了。

6 三剑客, 法国作家大仲马著名长篇小说《三剑客》(即《三个火枪手》) 中的人物, 即波尔朵斯、阿拉密斯和阿多斯; 达达尼昂是小说的主人公。

7 惠斯勒 (James Abbot McNeill Whistler, 1834—1903) 美国画家。长期侨居英国, 主张“为艺术而艺术”, 以夜景画、肖像画和版画闻名。作品有油画《白衣少女》、《艺术家的母亲》及铜版画《威尼斯风景》等。

林文庆医生

1 林文庆 (1869—1957) 福建海澄人, 生于新加坡。1887年获英女皇奖学金, 入英国爱丁堡大学医学院。1892年获内科学士和外科硕士学位, 之后香港大学又授予其名誉法学博士学位。1893年回新加坡行医, 同时积极传播中国传统文化。1897年与友人合办《海峡华人杂志》与“好学会”。为了在华侨中推广普通话, 首先在自己家里开办普通话学习班。1906年访问巴达维亚中华会馆, 劝说华侨采用华语作为共同语言, 并负责开办了五所学校。他兴趣广泛, 而且多有建树。1896年试种从南美洲引进的树胶, 开办树胶种植园, 被陈嘉庚称为“马来亚树胶之父”。早年在英国便与孙中山相识, 1900年曾帮助营救在新加坡被捕的日本朋友宫崎寅藏。1906年2月, 孙中山到新加坡组织同盟会分会, 他欣然入会。1912年初, 应孙中山邀请, 到南京任临时政府内务部卫生司司长、总统保健医生。孙中山辞去临时大总统职后, 返回新加坡继续行医。1921年4月, 陈嘉庚创办厦门大学, 首任校长上任不久辞职, 陈嘉庚聘他继任。1926年, 厦门大学成立国学研究院, 林自兼院长。1929年完成《离骚》英译, 由英国汉学家翟理斯和印度诗人泰戈尔作序出版。1930年兼任上海出版的英文《民族周刊》主编。1957年1月1日病逝于新加坡。殡葬之日, 新加坡政要均亲临吊唁, 各族人民前往执绋者不计其数。主要著作有《从内部发生的中国危机》、《东方生活的悲剧》和《新的中国》等。

2 这句话是模仿《威尼斯商人》第一幕第一场中Gratiano的台词“And

when I ope my lips let no dog bark!”。

3 布鲁厄姆勋爵 (Henry Peter Brougham, 1778—1868) 英国大法官兼上院议长、辉格党政治家、改革家、演说家。带头创办伦敦大学——英国第一所非教派的高等教育机构，并曾参加创办《爱丁堡评论》。他曾提出1820年民众教育法案，继续发表反对奴隶制的演说，提倡实行议会改革。在19世纪20年代，设立了“有益知识传播协会”，旨在使工人阶级能买到廉价的图书。后封男爵。1830年到1834年任大法官兼上院议长期间，曾主持多次重大法律改革，大大加快了平衡法诉讼程序，鼓励通过建立郡法院的立法，强使1832年的议会改革法案在上院通过。19世纪40年代，力主废除对进口谷物征税的《谷物法》。1848年法国发生巨大变化期间，企图获得法国公民资格，未果。在法国戛纳度过了最后30年的大部分时光。布鲁厄姆马车是他设计的马拉的四轮车。

4 埃夫伯里勋爵 (Lord Avebury, 1834—1913)，即卢伯克爵士 (Sir John Lubbock, 1st Baron of Avebury) 英国银行家、博物学家。在《史前时期》和《文明起源与人的原始状态》两书中创造了“旧石器时代”和“新石器时代”两个术语。他两度当选下院议员，并任伦敦大学副校长 (1870—1880)。著有《昆虫的起源与变态》、《英国的野花》、《蚁、蜂和黄蜂》和《论动物的意识、本能和智能》。

5 吉尔伯特·怀特 (Gilbert White, 1720—1793) 英国博物学家、牧师。所著《塞尔伯恩博物志及古迹》一书为英国第一部有关博物学的名著。

6 理雅各 (James Legge, 1814—1897) 原名詹姆斯·莱格，华名理雅各。英国苏格兰汉学家。1837年在希格伯利神学院读神学，翌年加入伦敦会。1839年由该会派至马六甲布道，任该会在当地所办的英华书院院长，兼管教会出版事务。1843年，随书院迁至香港。为便于传教，立志深造汉语、翻译中国典籍。著作甚丰，对西方汉学界所作的最大贡献是他英译的四书、五经等书，总名为《中国经典》。此套书原计划出七卷，后只出五卷。卷一《论语》、《大学》、《中庸》；卷二《孟子》；卷三《书经》、《竹书纪年》；卷四《诗经》；卷五《春秋》、《左传》。此五卷并非理雅各独力之作，于1861—1886年间在香港陆续出版。西方汉学家们给予理氏以很高的评价，认为《中国经典》的问世“标志着汉学史上一个新纪元”，“理雅各的译作是对汉学研究空前伟大的贡献”。在中国翻译史上，他无疑是一位有重大影响的外籍译家，对于中外文化交流，客观上作出了很大贡献。

7 所罗门王 (King Solomon, ?—约公元前932) 以色列国王 (约公元前972—约前932)。大卫之子，加强国防，发展贸易，以武力维持统治，使犹太民族的发展达到鼎盛时期。以智慧著称。

林文庆医生之二

1 参看本书《林文庆医生》第二段。

2 克赖顿 (James Crichton, 1560—1582) 苏格兰学者、演说家，以

其哲学修养、记忆力、语言技巧和辩论才能而被称为“令人钦佩的”学者。1582年供职于曼图亚公爵宫廷，遭温琴佐·贡扎加亲王之嫉而被杀。文中是在讽刺的意味上使用这一称呼。

黄庐隐女士

1 黄庐隐（1898—1934）女作家。原名黄淑仪，又名黄英，笔名庐隐，福建闽侯人。毕业于慕贞女子中学后，应安徽安庆省立安徽女师附小校长舒畹荪之邀请，任体育教员。1919年秋，入北京女子高等师范学校为国文系旁听生，半年后改为正式生。1923年毕业后至安徽宣城中学教书。1926年秋，任上海大夏大学女生指导员（舍监）兼大夏大学附中国文教员。在校时曾加入妇女励志会。1927年春赴北京，任教于北师大附中。加入中国青年党。1930年任上海工部局女中国文教员。1934年5月病逝于上海。其作品多表现青年的爱情追求和苦闷彷徨，有反封建倾向，从一定角度反映了五四时代气息。文笔流利而凄婉。著有《海滨故人》、《曼丽》、《灵海潮汐》、《象牙戒指》、《玫瑰的刺》等。

2 斯塔尔夫人（Madame de Staël，1766—1817）法国女作家、法国浪漫主义文学先驱、文艺理论家、广交文坛名流的沙龙主人。原名Anne Louise Germaine Necker，著有《论文学》、《论德国》及小说《黛尔非娜》、《高丽娜》等。

王文显先生

1 王文显（1886—1968）剧作家，中国现代戏剧的重要先驱。字力山，江苏昆山人。曾入天津北洋大学，后赴英国留学，获伦敦大学文学士学位。曾任中国驻欧洲财政委员，《中国评论周报》编辑。1915年归国后任清华学校教务长。1922年4月暂行兼代清华学校副校长。1925年任清华大学外国文学系主任。1927年在美国哈佛大学师从戏剧理论家贝克教授学习编剧。次年回国，在清华外文系主讲外国戏剧、近代戏剧等课程。又在北京大学、北京师范大学、辅仁大学任教，培养了洪深、李健吾、曹禺等一批现代戏剧人才。

据清华外文系徐士瑚校友回忆，“西洋戏剧由系主任王文显教授讲，他曾用英文写过两出三幕剧《委曲求全》与《北京政变》（又名《梦里京华》）和五个独幕剧。后来李健吾译成中文，由某出版社出版了《王文显先生戏剧选》。1934年由健吾导演，曾在东城青年会礼堂与清华同方部各演出过一次《委曲求全》。王师讲这门课，他从古希腊、罗马戏剧讲起，通过中世纪的宗教剧，把重点放在17、18、19三个世纪的英、法、德、意、挪威等国的大戏剧家身上。对莎士比亚，他仅作了简要的介绍，因为他准备在四年级必修课《莎士比亚》堂上再细讲。对于法国大悲剧家拉辛与大喜剧家莫里哀，以及德国大戏剧家莱辛、席勒，意大利大喜剧家哥尔多尼，挪威大现实主义戏剧家易卜生以及英国戏剧大师萧伯纳等等，王师都作了详尽阐述。王师还指定我们读了莫里哀的《吝啬鬼》、易卜生的《傀儡家庭》，对两剧王师都作了详尽的分析。”

2 长老会，基督教新教加尔文宗的教会之一。因主张由教徒推选长老与牧师共同治理教会而得名。16世纪产生于苏格兰。主要分布在英美等国。鸦片战争后传入中国。

3 《委曲求全》写的是学校，暴露和讽刺了军阀统治下中国教育界的黑暗现实。

朱兆莘先生

1 朱兆莘（1879—1932）字鼎青，广东花县人。17岁考取秀才，次年补授廪生。肄业于广州西村广雅书院，后被选送至北京京师大学堂优级师范馆学习，因成绩优异，被钦赐为举人。1907年被选派美国学习，先后获得商务财政学士学位和法政硕士学位。1912年冬，膺选为国会美洲华侨代表回国。1913年加入中国国民党，被选为参议院议员，旋又被推为参议院外交委员会主席、宪法起草委员会委员。是年1月至7月，兼任北京大学商科主任、总统府秘书、谘议等。1914年1月，袁世凯宣布解散国会，被褫各种职务，遂前往厦门，任鼓浪屿会审公堂堂长，后返北京，进行律师事务活动。1916年国会恢复，仍任国会议员。1917年2月，任江苏特派交涉员。同年夏，任大总统府秘书。1918年3月，任驻美国旧金山总领事。1920年9月，调任中国驻英公使馆一等秘书。1921年2月，任驻英使馆代办使事。迭次担任国际联盟理事会和万国禁烟会议的中国代表。1925年3月，任驻意大利全权公使。1927年7月，宣告脱离北京政府；8月任国民政府外交部政务次长；同年6月任广东省政府委员。九一八事变后，任特种外交委员会委员。1932年12月11日以误食蛇羹中毒逝世。

2 勃艮第葡萄酒，法国名葡萄酒，出产在法国中东部勃艮第地区。

3 勃朗宁（Robert Browning，1812—1889）英国维多利亚时代最杰出的诗人之一，善于使用戏剧独白来写富于感染力的叙事诗，并进行细致的人物心理描绘。1826年读了雪莱的抒情诗集，受到巨大影响，从而决定了他的生活道路。1835年出版诗剧《帕拉塞尔萨斯》而大受欢迎，1841年至1846年间写了许多小诗集，其中包括《皮帕走过》和《卢雷亚》，以后又发表了《圣诞夜和复活节》、《男人和女人》、《指环和书》等。勃朗宁不同于当代浪漫派诗人，对大自然不感兴趣，而公开宣称对人的兴趣更大。

4 拉伯雷（François Rabelais，约1483或1494—1553）法国作家、人文主义者。代表作为《卡冈都亚和庞大固埃》（中译本名《巨人传》），取材于通俗的传奇文学、笑剧、骑士故事及古典作品和意大利的文学作品，大量运用文艺复兴时期的法语，以及从粗俗的戏谑到深邃的讽刺等多种喜剧成分，涉及内容极其广泛，反映了文艺复兴时期新兴资产阶级的思想要求。

顾维钧博士

1 顾维钧（1888—1985）外交家。字少川，江苏嘉定（今属上海市）

人。上海圣约翰书院毕业。1912年获美国哥伦比亚大学博士学位。曾任北洋政府驻美国公使。1919年参加巴黎和会，力争收回山东权益。次年任驻英国公使。1922年后任北洋政府外交总长、国务总理、财政总长。1931年后任国民政府外交部长，驻法、英、美等国大使。1945年出席旧金山会议，任中国代表团首席代表，参与起草《联合国宪章》。1957年后任海牙国际法庭法官、副庭长。1967年后定居美国。著有《顾维钧回忆录》。

2 内阁秘书，大总统英语秘书兼国务总理秘书。

3 北洋政府时，中国在海外的全权外交代表，除派驻苏联的是大使，在美国、英国和法国等西方国家均为公使。

4 临城劫车案，又称“津浦路大劫案”，指1923年发生在津浦铁路山东境内的火车被劫事件。5月6日凌晨，以土匪孙美瑶为首的“山东救国自治军”千余人于津浦线临城和沙沟站间拦劫一列特别快车，劫持中外乘客百余人，其中外国人26名。当时的北洋政府迫于外交压力与孙美瑶部谈判并达成和平解决协议。6月25日被劫人员全部获释。

5 塔列朗（Charles Maurice de Talleyrand-Périgord，1754—1838）法国外交部长（1797—1799）、外交大臣（1799—1807，1814—1815）、驻英大使（1830—1834）。拿破仑称帝后，秘密勾结沙皇亚历山大一世反对拿破仑（1808）。后受路易十八任命出席维也纳会议（1814—1815），分化同盟国，为法国积极谋求利益。

梁龙先生

1 梁龙（1893—？）外交官。字云从，广东梅县人。毕业于英国剑桥大学，曾任国民政府外交部条约委员会委员、上海临时法院庭长、大理庭庭长、国立北京政法学校校长等。1924年2月任国立广东大学法学院院长。1928年10月派驻德国使馆任一等秘书。1933年外交部调驻捷克使馆代理一等秘书。1934年10月任驻捷克使馆代办。1939年7月任驻罗马尼亚特命全权公使。1942年4月任外交部欧洲司司长。1945年3月任驻瑞士特命全权公使。1946年8月任驻捷克特命全权公使。

2 日耳曼鹅式步伐，纳粹德国军队正步走的走姿。

3 林长民（1876—1925）字宗孟，福建闽侯人，林徽因之父。1902年留学日本，研究政治经济学。1909年回国，任福建省谘议局秘书长。武昌起义后到上海，赞助革命。南京临时政府成立时，为福建省代表，后任南京参议院秘书长。1912年参与组织共和党，次年被选为众议院议员，任秘书长。共和党与其他保守党派合并为进步党后，任政治部部长。1917年任段祺瑞内阁司法总长。1919年著文反对巴黎和会，偏袒日本。1920年游历欧美，1923年归国，任北京政府宪法起草委员会委员。1925年11月郭松龄通电反对张作霖而改称东北国民军时，入郭幕，参与反张，兵败身死。

4 蒋作宾（1884—1941）字雨岩，湖北应城人。1905年留学日本，加入同盟会。1908年日本士官学校步兵科毕业，回国任保定军官速成学校

教官。次年，调陆军部军衡司任职，1911年升司长。武昌起义后去九江，任军政府参谋长。南京临时政府成立，任陆军部次长。1915年称病辞职，被袁世凯幽禁于北京西山。次年袁死，出任参谋本部次长。1917年出国游历，1919年回国，参加驱逐湖北督军王占元。1921年被推举为湖北省总监。1922年至1925年奔走于江、浙、津、京间，为广州国民革命政府协调各方面关系。南京国民政府成立后，历任政府委员及军事委员会委员、驻德公使、驻日大使、内政部长、安徽省政府主席等职。

5 指九一八事变后日本对中国的入侵、对中国东北三省的侵占。

伍连德博士

1 伍连德（1879—1960）公共卫生学家、医学史家、中国检疫防疫事业的先驱。字星联，广东香山（今中山）人，出生于马来西亚北部的槟榔屿。1896年留学英国剑桥大学以马内利学院（今译伊曼纽尔学院）学医。1902年获医学士学位，1903年获医学博士学位。1904年底回槟榔屿，开业行医。1907年受清政府直隶总督袁世凯邀请，任天津陆军军医学堂副监督。1911年4月世界鼠疫会议在沈阳举行，任中国首席代表和大会主席。1910年至1911年和1920年至1921年，东北各地鼠疫流行期间，为鼠疫防治作出卓越贡献。1912年，南京临时政府设立东三省防疫事务总管理处，任处长兼总医官。1915年建立中华医学会，任书记并兼《中华医学杂志》总编辑。1916年任黎元洪总统特医及京汉、京张、京奉、津浦四条铁路总医官。1918年任北京政府中央防疫处处长、北京中央医院院长。1919年1月代表外交部到上海监督焚烧鸦片。1920年去美国约翰·霍普金斯大学进修学校卫生和公共卫生。1922年受奉天督军张作霖委托，在沈阳创建东北陆军医院。1926年创办哈尔滨医学专门学校（哈尔滨医科大学前身），任校长。1927年国际联盟卫生处聘其为该处中国委员，并授予“鼠疫专家”称号。出席国际联盟在印度召开的第七次远东热带病学会，被选为副主席。1931年代表南京国民政府出席国际联盟卫生会议；在上海主持召开第一届检疫学术研究会。1937年4月任中华医学会公共卫生学会会长。1937年八一三事变后，被迫举家重返马来西亚。1960年1月病逝于马来西亚槟榔屿。著有《论肺型鼠疫》、《鼠疫概论》、《中国医史》等。

2 槟榔屿，马来西亚西北部岛屿。

3 英国以前在马六甲海峡沿岸的殖民地，包括槟榔屿、新加坡、马六甲和附近小岛。

4 利物浦，英格兰西部港口城市。

5 哈雷，德国城市。

6 巴尔的摩，美国马里兰州中北部港口城市。

刘复博士

1 刘复（1891—1934）诗人、翻译家、语言学家、“五四”新文化运动的先驱之一、中国语言及摄影理论奠基人。原名寿彭，后改名复，字半农，江苏江阴人。出生于知识分子家庭，1911年曾参加辛亥革命，1912年后在上海以向“鸳鸯蝴蝶派”报刊投稿为生。1917年到北京大学任法科预科教授，并参与《新青年》杂志的编辑工作。积极投身文学革命，反对文言文，提倡白话文，提倡分段、句读，使用新式标点符号，并首创“她”、“它”两字。1920年到英国伦敦大学的大学院学习实验语音学，1921年夏转入法国巴黎大学，专攻语言学。1925年获得法国国家文学博士学位，所著《汉语字声实验录》，荣获法国“康士坦丁·伏尔内语言学专奖”，是我国第一个获此国际大奖的语言学家。1925年秋回国，任北京大学中国文学系教授，讲授语音学。1934年在北平病逝，《世界日报·国语周刊》、《青年界》等刊物出了纪念专辑。蔡元培、鲁迅、周作人、钱玄同、赵元任、黎锦熙、张恨水等数十人写了悼念文章。著有《半农杂文》及诗集《扬鞭集》，采编的民歌集《瓦釜集》，专著《中国文法通论》、《四声实验录》等。

2 此说有误。据蔡元培所撰《故国立北京大学教授刘君碑铭》，“……决游学欧洲。九年，赴英吉利……”；周作人所撰《故国立北京大学教授刘君墓志》载，“九年，教育部派赴欧洲留学……”。即刘复教授1920年始出国留学。

3 “中基会”，全称为“中华教育文化基金会”（China Foundation for the Promotion of Education and Culture），成立于1924年，负责保管并支配美国第二次退还的庚子赔款余额，用以促进中国的教育与文化事业。后更名为“中华教育文化基金会”。该会曾于1932年至1937年间与北京大学合作设立研究特款，作为聘请研究教授、添购图书及仪器等用途。

4 戴传贤，即戴季陶（1890—1949）名传贤，号天仇，浙江吴兴人。早年留学日本，参加同盟会，辛亥革命后追随孙中山。1924年任国民党中央宣传部长。1925年参加西山会议派活动，发表《孙文主义之哲学基础》、《国民革命与中国国民党》等文章，歪曲孙中山学说的革命内容，反对共产党和工农运动，为蒋介石发动反革命政变制造舆论。1927年南京国民政府成立后，历任国民政府委员、考试院院长，长时期为蒋介石的谋士。1949年2月在广州自杀。

5 绥远，旧省名，在中国北部。1914年置绥远特别区，1928年改设省，所辖范围相当于今内蒙古自治区鄂尔多斯市、巴彦淖尔市及呼和浩特市、包头市等地。1954年撤销，并入内蒙古自治区。

6 此说有误。据蔡元培所撰《故国立北京大学教授刘君碑铭》，“……妻朱惠，长女育厚，男育伦，次女育敦……”；周作人所撰《故国立北京大学教授刘君墓志》载，“……夫人朱惠，生子女三人，育厚、育伦、育敦”。即刘复教授所遗并非只是两个女儿。

王德林，“武牛”

1 王德林（1873—1938）抗日爱国将领。山东沂南人。早年组织义军抗击沙俄军队，后被吉林督军收编，任营长驻防延吉地区。九一八事变后，王德林率部举起抗日义旗，在共产党员李延禄的帮助下，1932年2月在延吉成立“中国国民救国军”，担任总指挥。之后，在吉林、黑龙江等广大地区，屡屡重创日伪军，被誉为“救国军常胜将军”。国民党曾派人争取其反共，他坚持不分党派共同抗日。1932年11月，日军纠集重兵“进剿”救国军，国民党政府坐视不救，1933年1月无奈率部退入苏联境内，5月转道回国，继续从事抗日救亡运动，筹组抗日武装。1935年中国共产党领导成立东北抗日联军，曾提名其任总司令，因疾病缠身未能就任。1938年12月病逝。

2 三岔口，现属黑龙江，在绥芬河以南，延吉以北。

3 罗宾汉，英国传说中啸聚绿林、劫富济贫的侠盗首领。

4 “二十一条”，日本帝国主义妄图独占中国的秘密条款。1915年1月18日由日本驻华公使日置益当面向袁世凯提出。共有5号，分为21条。袁世凯为了换取日本对他复辟帝制的支持，除对第五号条款“中国政府须聘用日本人为政治、财政、军事顾问……”声明“容日后协商”外，均予承认。由于中国人民反对，日本的侵略要求未能实现。

5 敦化，在吉林省延边朝鲜族自治州西北部、牡丹江上游，邻接黑龙江省。

6 1928年张作霖败退东北，所乘火车途经沈阳西郊皇姑屯车站时，被日本关东军埋设的炸弹炸成重伤，当日身亡。

丁文江博士

1 丁文江（1887—1936）地质学家、地质教育家、中国地质科学的奠基人。字在君，江苏泰兴人。早年留学英国格拉斯哥大学。辛亥革命前一年，曾到云南东部作地质考察旅行，搜集古生物和地层标本，准备论文。毕业后回国。1913年任民国政府工商部矿政司地质科科长，筹备创设地质研究所。1913年秋研究所开学，又前往云南作地质考察，约一年。1916年地质科扩为地质调查局，不久改为地质调查所，任所长五年。1921年北票煤矿公司成立，任总经理。1919年随北京政府特派员梁启超赴欧洲考察，并列席巴黎和会。1922年创立中国地质学会，两度担任会长。根据云南的考察所得写了新的论文提交给格拉斯哥大学，被该校授予博士学位。1926年被北京政府任命为东南五省联军总司令孙传芳直辖的“淞沪商埠督办公署总办”。1927年北伐军进入上海，被通缉，曾在大连躲避，后任北京大学地质系教授。中央研究院总干事杨杏佛被暗杀后，院长蔡元培聘其为继任总干事。1935年应铁道部长顾孟余之邀赴湘南考察，不意煤气中毒，遽尔长逝。著有《动物学教科书》，与他人合著地理著作若干；所遗地质考察材料，编成《丁文江先生地质调查报告》。

2 卫灵敦勋爵（Freeman Freeman-Thomas, 1st Marquess of Willingdon, 1866—1941）英国政治家、英属加拿大总督（1926—

1931)、英属印度总督(1931—1936)。1926年作为中英庚子赔款顾问委员会副主席率团来华,参加中英双方庚款会议。其间,丁文江曾就是否出任淞沪商埠督办公署总办一职向其请教。

3 贝尔福伯爵(Arthur James Balfour, 1848—1930)英国保守党领袖、首相(1902—1905)、外交大臣(1916—1919)。1917年发表“贝尔福宣言”,支持犹太复国主义。1922年封伯爵。如今的以色列就是根据他设计的蓝图建立的。

4 莫利勋爵(John Morley, 1st Viscount Morley of Blackburn, 1838—1923)英国政治家、历史学家、传记作家。曾任爱尔兰事务大臣、印度国务大臣和枢密院长。著有《伏尔泰》、《卢梭》、《狄德罗与百科全书派》、《论妥协》、《政治与历史》、《文学研究》、《克伦威尔》和《伯克传》等,并主编过《评论双周刊》和《佩尔美尔街日报》。

5 布赖斯子爵(James Bryce, 1838—1922)英国政治家、外交家和历史学家。历任外交国务大臣、兰开斯特公国大臣和商务大臣,1905年任爱尔兰事务大臣,1907年至1913年任驻美大使。著有三卷本《美利坚共和国》,1914年封子爵。

6 《家庭大学丛书》,全称是Home University Library of Modern Knowledge,系20世纪初期纽约Henry Holt & Company出版社推出的知识丛书,普及性质,作者都较权威。

7 《剑桥科学与文学文丛》,全称是The Cambridge Manuals of Science and Literature,系20世纪初期纽约G. P. Putnam's Sons出版社推出的普及性入门丛书。

8 《新工具》,书名,弗兰西斯·培根未完成的主要著作《伟大的复兴》的第二部分。原文为拉丁文,1620年出版。相对于亚里士多德以演绎逻辑为主的《工具论》,培根称他的这部提出新方法(归纳法)的著作作为《新工具》。

9 托尔斯泰(Leo Tolstoy, 1828—1910)俄国作家、改革家、道德思想家。《战争与和平》和《安娜·卡列尼娜》是他最伟大的两部杰作。71岁时写了最后一部长篇小说《复活》。其作品和现实主义创作方法对世界文学有巨大影响。

10 “淞沪商埠督办公署总办”,相当于上海市市长。

11 据胡适《丁文江的传记》,“狂热运动”疑指“苏俄的共产”。丁文江把“为全种万世而牺牲个体一时”当“宗教信仰”,“极热忱地希望苏俄成功”。

12 赫伯特·乔治·威尔斯(Herbert George Wells, 1866—1946)英国小说家、新闻记者、政治家、社会学家、历史学家。尤以其创作的《时光机器》、《隐形人》、《星际战争》等科幻小说和《世界史纲》而闻名。他当然不是“圣徒”,他的言论也不是宗教上的“福音”,但阐述了他对社会现状和人类未来的思考。

已故的辜鸿铭先生

1 辜鸿铭（1856—1928）学者。名汤生，自号汉滨读易者，字鸿铭，福建同安（今属厦门）人。出生于马来亚华侨世家，少年时便随父布朗赴英国留学，先后在欧洲各国获得十余种学位。通数国语文，曾为张之洞幕僚，清末官外务部左丞。辛亥革命后任教于北京大学。政治态度极为保守，推崇孔孟学说，反对新文化。著有《读易堂文集》、《春秋大义》（即《中国人的精神》）等，译有《痴汉骑马歌》，并以西文介绍儒家经典，将《论语》、《中庸》等译为英文。

2 萨默塞特·毛姆（William Somerset Maugham, 1874—1965）英国小说家、文艺评论家。因洞察而怀疑人类的善良与智力，作品基调愤世嫉俗。著有长篇小说《人性的枷锁》、《月亮和六便士》、《大吃大喝》和《刀锋》等，其短篇小说尤脍炙人口。

3 毛姆原书出版于1922年，中译本有《在中国屏风上》（湖南人民出版社，1987年）；《天堂之魔——毛姆传》（中国文联出版社，1987年）将此书译为《中国一览》，《辜鸿铭文集》（海南出版社，1996年）则将该书译为《中国剪影》。

吴赉熙先生

1 吴赉熙（1881—1951）爱国华侨。祖籍广东潮安，1881年生于新加坡。17岁赴英国入读于剑桥大学，以17年时间将所有学科几乎读竟，取得医学博士及许多其他学位。34岁时经西伯利亚返国回到北京。曾创北京第一份英文报纸，初名Peiping Daily News，后改名Peking Chronicle，自任社长兼主编。在遂安伯胡同29号成立南洋华侨俱乐部，为华侨免费提供食宿，密切了华侨与祖国的关系。抗日战争时期，经济力量虽不出众，但为了支持抗战，倾囊捐助。兴趣广泛，是栽培月季花的专家、小提琴演奏家、自然保护主义者，还是文物鉴定和收藏家。1951年去世后，所藏瓷器、青铜器、字画等由其子无偿捐献给国家。

2 七大奇观，古代世界七种著名建筑物和雕刻品的总称，最早由公元前3世纪的旅行家昂蒂帕克提出，即：埃及金字塔、巴比伦空中花园、以弗所阿尔忒弥斯神庙、奥林匹亚宙斯神像、哈利卡纳苏摩索拉斯陵墓、罗得岛太阳神巨像、亚历山大灯塔。

3 15世纪法国诗人阿兰·夏蒂埃（Alain Chartier）最著名的一首诗就题为La Belle Dame sans Merci，据说英文译者为乔叟。英国诗人济慈也有一首诗以此为题，有人译为“冷酷的妖女”。

吴稚晖先生

1 吴稚晖（1865—1953）原名，后名敬恒，字稚晖，江苏武进人。清光绪举人。1901年留学于日本东京高等师范学校，次年与蔡元培等人发起成立上海爱国学社。1905年加入同盟会。1907年，与张静江、李石曾在巴黎组织世界社，发行《新世纪》，宣传革命。1915年，与李石曾

等发起组织留法俭学会，1921年任里昂中法大学校长。1924年起任国民党中央监察委员、国防最高会议常委等。1948年当选为中央研究院院士。1949年去台湾。著有《吴稚晖先生合集》。吴稚晖关心教育，认为“无音可读”是汉字的缺点。早在1895年，他便为不识字的妻子草创了一种“豆芽菜”字母。1913年1月，担任国语读音统一会会长；2月，召开全国读音统一会，主持制定注音字母。

2 约翰逊（Samuel Johnson，1709—1784）英国作家、评论家、散文作家和辞书编纂者。编有《英语辞典》、《莎士比亚集》，作品有长诗《伦敦》、《人类欲望的虚幻》等。《英语辞典》收词4万，以词义精确和文学引语丰赡著称，质量超过以往所有的英文辞典，成为辞书编撰史上永久的丰碑。他之所以出名并不仅仅因为他的作品，还由于谈吐机智隽永、语言强劲有力。下文提到的《漫步者》是他在1750年至1752年独自编写和发行的一份双周刊，主要涉及道德和宗教主题。

3 切利尼（Benvenuto Cellini，1500—1571）意大利雕刻家、金匠，除雕塑外也从事金币、奖牌等金属制品的制作。在法国和意大利都有重要地位，代表作有《帕尔修斯》雕像，并有《自传》问世。

4 托利党，英国政党，形成于17世纪70年代末，代表土地贵族和高级教士利益。至19世纪中期，成为保守党的建党基础。托利（Tory），原指爱尔兰歹徒，即反英游击队成员，这是辉格党对于反对党的贬称。

5 辉格党，英国政党，1679年至1682年间在国会中形成，代表工商业资产阶级利益。19世纪中叶与其他资产阶级政党合并成为自由党。辉格（Whig），原指苏格兰强盗，这是托利党对于反对党的贬称。

6 基督教监理会，基督教会之一支。18世纪约翰·卫斯理在英国圣公会内开展恢复其活力的运动，是为循道派。后来在圣公会内立会，是为循道宗。随移民传入美国，南北战争期间由于对蓄奴制态度不同而分裂成南北两支，至1939年又合并。Southern Methodist Church在中国境内从事传教活动时，自称“监理会”。

顾静徽女士

1 顾静徽（1900—1983）物理学家、物理教育家，中国近代史上第一个物理学女博士。江苏嘉定人。1923年在上海大同大学考取留学美国公费生。1926年毕业于美国康奈尔大学文理学院。1928年获美国耶鲁大学硕士学位。1931年获美国密歇根大学物理博士学位。回国后，历任大同大学、唐山交通大学（平越）、广西大学等校物理学教授。1937年至1939年，在德国柏林威廉皇家物理研究所（战后改为蒲朗克研究所）任研究员。1947年至1949年任国立编译馆编纂，曾参加《中国物理学辞典》的编纂工作。新中国成立后，任北京钢铁学院教授、物理教研室主任、中国物理学会北京分会第一至第七届副理事长。专长低温物理学和光谱学，在诸所大学任教中培养了一批优秀人才，国际知名物理学家吴健雄就是她的学生。主要论文有《铬钾矾在低温下的斯塔克效应及其热能和磁能的关系》、《对称三原子光带系的强度分布》、《二氧化碳的

吸收光谱》等。

杨丙辰先生

1 杨丙辰(1892—1966)又名震文,河南南阳人。1913年考取省公费留德,入柏林大学,1918年归国,历任北京大学德文教授,清华大学教授、河南大学校长。作为中国德语文学学科的开山祖,兼及北大、清华两大学统,曾为张威廉、商承祖、冯至、季羨林、杨业治、田德望等人师长。他的重要贡献还表现在翻译上,所译包括莱辛、席勒、歌德、豪普特曼和其他德国诗人的作品,影响颇大。他还翻译过里尔的《德国民族的性格》、费希特的《对德意志国民的演讲》以及《汤若望传》、《洛莱神女》、《火焰》等。他的经历,大致可分为两段,1918—1949年和20世纪50—60年代。归国之初,地位与名声都很不差,胡适任北大英文系主任,他是北大德文系主任;校长蔡元培曾为他翻译的德国剧本作序。但是,到了30年代,据李长之说:“他不擅长于做一个精明强干的事业家,当他一遇到现实生活,就仍显出他是一个书生来。他的性情也不近人情,他也没有兴趣去做一个运用手腕的人。他的心太好,他有的是正义、正气,可是他不耐烦,也不能够应付恶人。倘若人们不怕正义,或者正气,当然杨先生是这个鬼蜮世界上的失败者。所以他在两个大学,都受排挤了。”1949年后,居然连教职都丢了。有人说,是因为“杨丙辰还是那样不通人情世故,解放战争就要胜利了,他的同乡某人拉他加入什么党派,他觉得无所谓,答应了”。据黄鸿森先生了解,1949年后被管制,到1956年才进入北京编译社从事德文翻译。60年代初某日,在北京景山附近的食品店里,张中行碰到杨丙辰,杨氏正在那里排队买高价点心。杨老师把学生拉到一边,低声对他说:“要设法买这个吃。不能不活着,身体要紧。”在学生辈中,李长之对他的敬重始终如一。现在谈论李长之的文章,几乎都要强调:“李长之早年学生物,后来受清华大学德国文学教授杨丙辰影响,改学哲学,在当时文学批评领域能够占有一席之地,与他的哲学功底大有关系。”李长之也并不讳言而撰有《杨丙辰先生论》,甚至在“其恩师……被剥夺了发表文章的自由时,李长之往往在刊发自己的翻译作品时多署一个笔名,以便偷偷接济年迈而已无力糊口的老师”。据北京编译社同事宋宁先生说,杨先生过世于1966年,“文化大革命”正开展得如火如荼之际。

2 据《神曲》,地狱边境是基督降生前未受洗的儿童和好人的灵魂所居之处。

3 genus、species、kingdom在这里都是自然科学分类的范畴,尤其在生物学界。如生物之分为动物、植物两大kingdom,这里的kingdom,不是“王国”,而是“界”。

4 请参考本书《吴经熊》一文注释7。在史书上不难看见他的画像,这可以帮助我们了解什么叫做“格莱斯顿式的高领圈”。

冯友兰博士

1 冯友兰（1895—1990）哲学家、哲学史家。字芝生，河南唐河人。1915年入北京大学文科中国哲学门。1919年赴美留学，获哲学博士学位。回国后历任中州大学、中山大学、燕京大学、清华大学哲学教授。抗战期间，任西南联合大学哲学系教授兼文学院院长。1947年任清华大学校务会议主席。1952年起任北京大学哲学系教授，中国科学院哲学社会科学部委员，第二至四届全国政协委员，第六、七届全国政协常委。20世纪30年代初出版两卷本《中国哲学史》，把中国哲学史分为“子学时代”和“经学时代”，肯定了传统儒学的价值。40年代写《新理学》、《新事论》、《新世训》、《新原人》、《新原道》、《新知言》，以程朱理学结合新实在论，构建其“新理学”体系。新中国成立后著有《中国哲学史新编》等，论著编为《三松堂全集》。

2 沃尔浦尔（Horace Walpole, 4th Earl of Orford, 1717—1797）英国作家、鉴赏家、收藏家。著述颇丰，以英国第一部哥特式小说《奥特朗托堡》和可以概观当时社会政治情况、风俗情趣的三千多封书信闻名。

3 伯内特（John Burnet, 1863—1928）苏格兰古典主义者，认其对柏拉图的研究闻名。泽勒（Eduard Zeller, 1814—1908）德国哲学家。文德尔班（Wilhelm Windelband, 1848—1915）德国哲学家、新康德主义弗赖堡学派的创始人。厄尔德曼（Johann Eduard Erdmann, 1805—1892）德国哲学家、心理学家。

4 模仿冯友兰对于“objective”（客观）和“subjective”（主观）带有河南口音而又有点口吃的发音。

刘铁云

1 刘铁云（1857—1909）清末小说家。名鹗，字铁云，别署洪都百炼生，室名抱残守缺斋，江苏丹徒人。通数学、医术、水利等学。1888年至1895年，先后入河南、山东巡抚幕府，帮办治黄工程，成绩显著。亦曾兴办实业，鼓励“洋为中用”。1897年，应伦敦福公司之聘，任筹采山西矿产经理。后又曾参与拟订河南矿务机关豫丰公司章程，并为福公司筹划开采四川麻哈金矿、浙江衢严温处四府煤铁矿，成为外商之买办与经纪人。八国联军入侵北京时，向俄军贱价购得所掠太仓储粟，设平糶局赈济饥民。1908年，被诬以私散仓粟及为外人在浦口购置产业，遣戍新疆，次年病死。所著《老残游记》是晚清谴责小说的代表作。生平喜金石碑帖，著有《铁云藏龟》和《铁云藏陶》，是甲骨文最早收藏者之一。胡适曾概括刘鹗的一生，称其“有四件大事：一是河工，二是甲骨文字的辨认，三是请开山西的矿，四是购买太仓的米来赈济北京难民”。

2 端方（1861—1911）清末大臣、金石学家。满洲正白旗人，托忒克氏。字午桥，号斋。曾任陕西按察使、护理陕西巡抚。后擢升湖北巡抚，署湖广总督。再迁江苏巡抚，署两江总督。1905年与载泽等出国考察政治，次年归国，上《欧美政治要义》，建议预备立宪，以抵制革命。同年任两江总督。1909年移督直隶，因在东陵拍摄慈禧葬仪被摄政王载沣免职。1911年起用为川汉、粤汉铁路督办大臣，率军入川镇压保

路运动，在资州被起义士兵所杀。著有《端忠敏公奏稿》、《甸斋吉金录》等。

3 曾国藩（1811—1872）清末洋务派、湘军首领。原名子城，字伯涵，号涤生，湖南湘乡人。道光进士。曾任内阁学士兼礼部侍郎等职。从唐鉴、倭仁讲习理学。1853年初为对抗太平天国，以在籍侍郎身份在湖南办团练，旋扩编为湘军。次年发布《讨粤匪檄》，攻击太平天国。率兵出省作战，夺取武昌和田家镇。1855年在湖口、九江被打败，退守南昌。次年因太平天国发生“杨韦事变”，再陷武昌。1858年占九江，令李续宾率湘军主力攻三河，被歼灭。旋以曾国荃吉字营为基础，扩充实力。1860年升两江总督，授钦差大臣，督办江南军务，节制苏、皖、赣、浙四省军务。主张“借洋兵助剿”。1862年为协办大学士，派李鸿章到上海，左宗棠入浙江，会同“常胜军”、“常捷军”夹攻太平军，并派曾国荃围攻天京（今南京）。1864年7月攻陷天京。次年奉命督办直隶（今河北）、山东、河南三省军务，镇压捻军，后战败回两江总督任。与李鸿章、左宗棠创办上海江南制造局、福建马尾船政局等军事工业。1868年授武英殿大学士，调任直隶总督。1870年查办天津教案，惩办民众，对外妥协，受到舆论谴责，回任两江总督。后病死南京。有《曾文正公全集》。但刘大钧原文所写为“曾国荃”，而非“曾国藩”。

4 捻军，太平天国时期活动于北方的农民起义军。原称捻子（今称捻党）。每一股谓“一捻子”，分布于苏、鲁、豫、鄂、皖一带，以皖北为活动中心。成员主要是农民、手工业者、盐贩和游民。以抗粮、抗差、打富济贫等为斗争方式。1853年太平天国北伐军经过安徽、河南，捻党纷纷响应，从此展开大规模武装斗争。1855年张乐行召集各路捻军首领会盟，被推为盟主。1857年与太平军陈玉成、李秀成等会师，接受太平天国领导。此后捻军转战豫、皖、苏、鲁、鄂各省，屡败清军。1862年陈玉成牺牲后，张乐行受清军围攻，次年初被俘牺牲。1864年太平军赖文光推为捻军首领，整编军队，采用流动战术，易步为骑。次年在曹州高楼寨击杀僧格林沁。1866年于河南分为东西两路活动，1868年初东捻军在扬州附近失败。西捻军为援救东捻军，经山西、直隶（今河北）至山东北部，1868年在茌平徒骇河边覆没。捻军坚持战斗十六年，活动范围达八省，有力配合了太平天国和北方各地人民的斗争。

5 张翰仙（生卒年不详）名汝梅，字翰仙。历任山西右江道、山西按察使、陕西布政使。1897年山东巨野教案后，继李秉衡任山东巡抚。抵任后主张持平办理民教纠纷，清政府责其弹压无力，遂革职。

6 原文拼写为Li Hung-chung，疑为Li Hung-chang之误，按。李鸿章（1823—1901）清末洋务派、淮军首领。字少荃，安徽合肥人。道光进士。1853年在籍办团练抵抗太平军，1858年入曾国藩幕。1861年编练淮军，次年在外国侵略者支持下进攻太平军，升任江苏巡抚。1866年继曾国藩任钦差大臣，节制各军专办镇压捻军事务。1870年继曾国藩任直隶总督兼北洋大臣，掌管清廷外交、军事、经济大权。从60年代起开办近代军事工业，先后设立江南制造局、轮船招商局、开平煤矿等洋务事业。利用海关税收购买军火和军舰，扩充淮军实力，建立北洋海军。在对外交涉中主张妥协。1876年与英国签订《烟台条约》，1885年与

法国订立《中法新约》。中日甲午战争中避战求和，签订《马关条约》。1896年签订《中俄密约》。1900年八国联军侵占北京后，被任为议和全权大臣，与庆亲王奕劻代表清政府于次年签订《辛丑条约》。著有《李文忠公全集》。李鸿章与刘父成忠有年谊。

章太炎

1 章太炎（1869—1936）原名学乘，字枚叔，后易名炳麟。因反清而慕顾绛（顾炎武），改名绛。浙江余杭人，清末民初思想家，史学家，朴学大师，民族主义革命者。出生书香门第，受祖父章鉴及外祖朱有虔民族主义熏陶。1890年遵父亲章睿（古文经学家）遗命入杭州诂经精舍，师从俞樾、谭献等。1898年春，应张之洞邀赴武汉办报。戊戌后，仍遭通缉，避祸台湾，任《台湾日日新报》记者。1899年夏赴日本，与梁启超等修好，回上海参与《亚东时报》编务。1900年后，严复等在上海组“中国议会”以挽救时局，章应邀参加。1902年再次逃亡日本，寓梁启超《新民丛报》馆。1903年发表《驳康有为论革命书》，指斥清帝，为邹容《革命军》作序，遂发生“苏报案”，入狱三年。1906年赴日本参加同盟会，继任《民报》主笔。著有《文始》、《新方言》、《国故论衡》、《齐物论释》等。开汉语言文字学、经学、文学、及哲学心理学现代化研究先河。辛亥后，1912年2月任南京临时政府枢密顾问。同年冬任袁世凯政府东三省筹边使。1913年回上海，6月与汤国黎结婚。二次革命败后，章觉袁世凯包藏祸心，1913年8月进京，欲与袁理论，袁不见，乃至新华门大骂，遂遭袁囚禁。1916年6月袁死，恢复自由。7月参与护法运动，任海陆军大元帅府秘书长。1918年离开广州。1920年拥护联省自治。1922年讲学上海，但反对国民革命军北伐。1927年南京国民政府成立，章不合作。晚年主张读经。1935年，在蒋介石资助下，于苏州开设章氏国学讲习会，并出版学刊《制言》。撰《教学弊论》批评教育体制，主张回归民间办学和书院教育。1936年6月14日因鼻窦癌卒于苏州锦帆路寓所。

2 1934年《人间世》第11期“今人志”专栏，曹聚仁撰《章太炎先生》。

3 当为《齐物论释》。

周廷旭先生

1 周廷旭（1903—1972）中国油画先驱，福建厦门人。14岁时就读于伦敦传教士协会在天津创办的英中学院。1920年毕业后出国留学，先在哈佛大学学习艺术史和考古学，随后进入波士顿艺术博物馆美术学院学习绘画艺术。1923年赴欧，先在法国著名的巴黎美术学院，翌年移居英国，就读于伦敦大学。1925年进入英国皇家美术学院，在名师指导下进行系统严格的西方艺术学习。1930年作为优才生毕业后到大英博物馆工作，从事中国艺术研究一年余。随后花了将近十年的时间到世界各地旅游、写生和创作。1942年在纽约最著名的诺德勒画廊成功地举办了来美后的第一次个展。他的油画风格是在欧洲印象主义和现代强调个性表现

的思潮发展基础上形成的，去掉了学院派的繁琐细节模写，追求色彩的单纯化，强调平面的构成，使用大块面的分割，结合外光的点彩和东方的线描，给人以清新宁静、和谐愉悦之感。1972年1月在格拉斯顿伯利去世。2003年华盛顿州州长骆家辉签署文件，把2月14日定为全州的“周廷旭日”(Teng Hsiok Chiu's Day)，以表示对这位美籍华人艺术家的尊重。

2 朗吉努斯(Dionysius Cassius Longinus, 约213—273)古希腊新柏拉图主义哲学家、修辞学教师、文学批评创新作品《论崇高》的作者。从修辞学角度研究“崇高体”，认为崇高风格的因素有“掌握伟大思想的能力”、“强烈深厚的热情”、“修辞格的妥当应用”、“高尚的文辞”以及“庄严而生动的布局”。

3 菲利普·锡德尼爵士(Sir Philip Sidney, 1554—1586)英国诗人、廷臣、军人。作品有传奇故事《阿卡迪亚》、牧歌短剧《五月女郎》、十四行组诗《爱星者和星星》以及文学评论《诗辩》等。

4 克雷齐克(Thomas Creswick, 1811—1869)英国风景画家。艺术评论家罗斯金很推崇他的画作。

5 透纳(Joseph Mallord William Turner, 1775—1851)英国风景画家。擅长水彩画，融合油画与水彩技法，追求光与色的效果。主要作品有《运输船的遇难》、《迪埃普港》及《雨、蒸气和速度》等。

陈通伯

1 陈通伯(1896—1970)文学评论家、翻译家。名源，字通伯，笔名西滢，江苏无锡人。1912年春，经表舅吴稚晖介绍赴英国爱丁堡中学求学，毕业后入爱丁堡大学，后转伦敦大学攻读政治经济学。1921年毕业，获博士学位。1922年应蔡元培之邀回国，任北京大学外文系教授、系主任。1924年在胡适的支持下，与徐志摩、王世杰、周鲠生、杨振声等13人创办《现代评论》周刊，主编该刊《闲话》专栏，发表杂文，反对以鲁迅为代表的左翼文艺运动，与鲁迅爆发多次笔战。1929年任武汉大学教授兼文学院院长。1940年由吴稚晖推荐，当选为国民参政会参政员。1941年任中央文化协会会长。1946年经胡适推荐，出任国民政府常驻联合国教科文组织代表。1966年夏定居英国伦敦。著有《西滢闲话》、《西滢后话》，译有屠格涅夫的《父与子》和《梅立克短篇小说集》、《少年维特之创造》等。

2 简·奥斯汀(Jane Austen, 1775—1817)英国女作家。以善于描绘中产阶级家庭生活著称，著有长篇小说《傲慢与偏见》、《爱玛》、《理智与情感》和《曼斯菲尔德花园》等。

3 阿纳托尔·法朗士(Anatole France, 1844—1924)法国小说家、文艺评论家。关心社会问题，后逐渐倾向社会主义，1921年加入法国共产党，同年获得诺贝尔文学奖。主要作品有《希尔维斯特·波纳尔的罪行》、《现代史话》(4卷)。《西滢闲话》中有《法朗士先生的真相》和《再谈法朗士》两文。据徐志摩说，陈氏的文章学法朗士“有

根”。

4 不妨以他对鲁迅的评价为例。据他说：“鲁迅先生一下笔就想构陷人家的罪状。他不是减，就是加，不是断章取义，便捏造些事实。他是中国‘思想界的权威者’，轻易得罪不得的。”“他的文章，我看过了就放进了应该去的地方……”（1926年1月30日《晨报副刊》）“我觉得他的杂感，除了《热风》中二三篇外，实在没有一读的价值。”（1928年6月初版《西滢闲话》）

孙大雨

1 孙大雨（1905—1997）诗人、翻译家、莎士比亚研究专家。原名孙铭传，字守拙，号子潜，浙江诸暨人。在上海读初中时，即积极参加1919年的“六三”爱国运动，并编辑学生刊物《学生呼》。自1919年发表诗作，1922年考入清华学校高等科，与朱湘（子沅）、饶孟侃（子离）、杨世恩（子惠）合称“清华四子”。后来四人都加入了新月社，又称“新月四子”。1926年入美国新罕布什尔州的达特茅斯学院主修英文文学，1928年赴耶鲁大学研究院专攻英文文学。回国后，1930年至1957年，历任武汉大学、北京师范大学、北平大学女子文理学院、北京大学、国立青岛大学、浙江大学、暨南大学、中央政治学校、复旦大学等校教授。20世纪20年代，曾在《新月》上发表格律体新诗多首，在纽约时曾把孙过庭《书谱序》译为英文，1935年发表在英文月刊《天下》上。新中国成立后，致力于英文文学教学、翻译及研究工作。他一生翻译有莎士比亚戏剧八部，数量不多，但质量颇高。他首先运用自己创建的音组理论翻译莎剧，以汉语音组对应莎剧原文的五音步抑扬格，力求导旨而传神。除莎译外，还有部分屈原诗英译，中国汉唐古诗英译和部分英文名诗汉译，分别收录在《屈原诗选英译》、《古诗文英译集》和《英诗选译集》等译作中。

2 温飞卿（？—866）唐诗人、词人。名庭筠，原名岐，字飞卿，太原人。文思敏捷，精于音律。仕途不得意，官止国子助教。其诗辞藻华丽，多写个人遭际，于时政亦有所反映。词多写闺情，风格秾艳。现存词六十余首，在唐词人中数量最多，大都收入《花间集》。因其相貌丑陋而被冠以诨号“温钟馗”。

3 贺铸（1052—1125）北宋词人。字方回，号庆湖遗老，卫州人。曾任泗州、太平州通判，晚年退居苏州。好以旧谱填新词而改易其调名，谓之“寓声”。其词风格多样，善于锤炼字句，又常运用古乐府及唐人诗句入词。内容多写闺情离思，也有嗟叹功名不就、纵酒狂放之作。又能诗文。其相貌丑陋，人称“鬼头”。

4 孙过庭（生卒年不详）唐书法家、书法理论家。字虔礼，以字行。官率府录事参军。工正、行、草，尤以草书擅名。宋米芾以为“凡唐草得二王法，无出其右”。今存其垂拱三年（公元687年）撰书的《书谱卷上》（即《书谱序》），阐述正草二体书法，见解精辟，为书文并茂的书法理论著作。

梁宗岱

1 梁宗岱（1903—1983）诗人、翻译家。字菩根，广东新会人。1921年加入文学研究会，1923年入岭南大学文科学习。1924年起先后在瑞士、法国、德国、意大利学习文学和语言。留法期间，结识了法国象征派诗歌大师保罗·瓦莱里，并将其诗作译成中文，寄回国内刊在《小说月报》上，使法国大诗人的精品首次与中国读者见面。1931年回国，先后在北京大学、清华大学、南开大学、重庆复旦大学任教。1945年与人合办广西西江学院。新中国成立后任中山大学、广州外语学院（现广东外语外贸大学）教授。其诗以间接暗示的手法歌咏爱情，表现心灵与自然的和谐，诗意幽深隽永。著有诗集《晚祷》、《诗钞1958—1962》、《芦笛风》，论文集《诗与真》、《诗与真二集》，译著《水仙辞》、《交错集》、《莎士比亚十四行诗》、《罗丹论》、《蒙田随笔》等。

2 嘉布遣会，正式名称为“嘉布遣小兄弟会”，是天主教方济各会的一支，1525年由马特奥创立。

3 尼爱拉，通常是古罗马诗人用来称呼情人的名字，在弥尔顿那首“伟大的短诗”《利西达斯》中就有此词。缘自维吉尔的《牧歌》第三首中仙女的名字。

4 即我们这个现实世界，前半句是希腊神话的说法，后半句是基督教《圣经·旧约》的典故，或出自弥尔顿的《失乐园》。

5 山道（Eugen Sandow，1867—1925）德国人，世界健美运动奠基者。系统地奠定了健美训练方法与审美标准。

6 朗费罗（Henry Wadsworth Longfellow，1807—1882）19世纪美国著名诗人。曾任哈佛大学近代语言教授。《人生颂》和《群星之光》是他广为传诵的两首诗，长篇叙事诗《伊凡吉林》使他声望日增，以芬兰史诗《卡勒瓦拉》为蓝本写出的《海华沙之歌》是他艺术性最高的作品之一。还曾翻译但丁的《神曲》。

7 丁尼生（Alfred Tennyson，1809—1892）英国诗人。重视诗的形式完美、音韵和谐、辞藻华丽。1850年被封为桂冠诗人。主要诗作有《夏洛蒂小姐》、《尤利西斯》、组诗《悼念》和《国王叙事诗》等。20世纪初，评论家认为他的不少诗矫揉造作、浅薄、华而不实，过去对他的评价过高。晚近，评价又趋公允，承认《尤利西斯》为不朽杰作，《悼念》是维多利亚时代的代表作。

8 请参考本书《吴宓先生，学者和君子》一文注释8。梁宗岱是瓦莱里的长诗《水仙辞》的译者，他的翻译曾受到作者的指点，译文也同样蒙眬、优美、动听。

9 拉辛（Jean Baptiste Racine，1639—1699）法国诗人、剧作家、法国古典主义悲剧代表作家之一。曾任路易十四宫廷史官。多利用古希腊、罗马历史传说，暴露宫廷贵族的腐败残暴。主要作品有诗剧《安德

罗马克》、悲剧《爱丝苔尔》和《菲德拉》等。

10 帕斯卡 (Blaise Pascal, 1623—1662) 法国数学家、物理学家、哲学家、散文家、概率论创立者之一。提出密闭流体能传递压力变化的帕斯卡定律，写有哲学著作《致外省人书》、《思想录》等，对法国散文发展有很大影响。

舒舍予

1 舒舍予 (1899—1966) 本名舒庆春，笔名老舍，字舍予，原姓舒舒觉罗氏，出生于北京贫苦的旗人家庭。一岁半丧父，襁褓之中的老舍家曾遭八国联军意大利军人劫掠，婴儿老舍因为一个倒扣在身上的箱子幸免于难。九岁得人资助始入私塾。1913年，考入京师第三中学，后因经济困难退学。同年考取公费的北京师范学校，1918年毕业。先后任京师公立第17高小兼国民学校校长、北京市北郊劝学员、天津南开中学教员、北京一中教员。在此期间，老舍深受五四运动影响。1921年起，在北京基督教伦敦会缸瓦市堂的英文夜校学习并参加宗教服务。1922年，受洗成为基督徒。1924年秋，赴英国，在伦敦大学任华语讲师，讲授中国官话和古典文学。阅读了大量英文作品，开始文学创作。1926年，在《小说月报》发表长篇《老张的哲学》。1929年夏，离英，途经新加坡并滞留半年，在华侨中学任教，创作以新加坡为背景的小说《小坡的生日》。1930年春，返回北京。先后任教于济南的齐鲁大学和青岛的山东大学。看到第一次国内革命战争失败后的国家状况，创作长篇《大明湖》。1936年写出《骆驼祥子》。1937年，“七七事变”后，离别家小奔赴国难。1938年初，中华全国文艺界抗敌协会于武汉成立，被推为常务理事和总务部主任，以团结抗日为题材创作了大量作品，其中的代表作为《四世同堂》。1946年3月接受美国国务院邀请赴美讲学。在美国写完了《四世同堂》第三部及长篇《鼓书艺人》。1949年12月，应周恩来委托文艺界之邀回到北京。曾任政务院文教委员会委员、中国文联副主席、中国作协副主席、全国人大代表、政协全委会常委、北京市政府委员、北京市文联主席等职。自1950年起，老舍写了一些歌颂新中国的作品，以话剧《龙须沟》为代表。1956年到1957年，创作话剧《茶馆》，再次为老舍赢得国际声誉。1966年“文化大革命”运动期间遭受攻击和迫害。8月24日，老舍独自出走到北京城西北角外太平湖畔，当日深夜，自沉于太平湖，时年67岁。

2 老舍原话作：“可是我对这本小书仍然最满意，不是因为别的，是因为我深喜自己还未全失赤子之心——那时我已经三十多岁了。”（引自老舍《我怎样写〈小坡的生日〉》）

3 下文中的演讲内容据英文翻译，老舍演讲中文原稿见1934年12月15日《刁斗》第一卷第四期。

沈有乾先生

1 沈有乾 (1899—?) 心理学家、逻辑学家、统计学家。字公健，江苏

吴县人。早年就读于北京清华学校，后赴美深造，获斯坦福大学博士学位。回国后先后在光华大学、浙江大学、暨南大学和复旦大学教授逻辑学、心理学和统计学。20世纪40年代再次赴美，曾任联合国秘书处考试与训练科长和纽约市立大学皇后学院教授等，并为中华职业教育社主持过研究部的工作。著有《心理学》、《教育统计学》、《论理学》、《现代逻辑》、《初级理则学纲要》、《实验设计与统计方法》等。他是20世纪中国心理学和逻辑学研究的先行者之一，对弗洛伊德的精神分析学说、怀特海和罗素的数理逻辑学说均有独到的见解。还曾致力于小品文与随笔写作，作品散见于《新月》、《论语》、《宇宙风》、《西风》、《西书精华》等刊物，“以题材广泛、文笔简练、充满机智和幽默著称”。还著有《西游记》。

2 阿德勒 (Alfred Adler, 1870—1937) 奥地利精神病学家、心理学家。建立了个体心理学体系，设计了支持性心理治疗方法。个体心理学认为，人的主要动机是为至善而奋斗，也可变成为自尊而奋斗，从而成为对自卑感的过分补偿。著有《个体心理学实践与理论》、《神经症体质》、《理解人性》等。

3 狄摩西尼 (Demosthenes, 公元前384—前322) 古希腊雄辩家、民主政治家。曾领导雅典人民进行近三十年的反对马其顿入侵的斗争，发表《斥腓力》等演说。他是克服了口吃、咬字不清等先天缺陷而掌握了雄辩术的。

4 《论语》，这里指的并不是那部儒家经典，而是一份文艺半月刊。1932年9月创刊于上海，林语堂、陶亢德、郁达夫、邵洵美等先后主编。1937年8月因抗日战争爆发而停刊。1946年12月复刊，至1949年5月停刊。先后共出177期。提倡“幽默”及“语录体”文学，发表抒写“性灵”的小品文、掌故丛谈等。

5 莱德-富兰克林夫人 (Mrs. Christine Ladd-Franklin, 1847—1930) 美国心理学家、逻辑学家、数学家、物理学家、天文学家。以对“色视觉”理论作出的贡献闻名。早年研究逻辑学，曾通过介绍“反逻辑学”把三段法的推理变为一种“前后矛盾的三分法”。著有《逻辑代数学》、《色觉之性质》及《颜色基色论》等。

6 谢佛 (Henry Maurice Sheffer, 1882—1964) 美国逻辑学家。数理逻辑学里的重要概念、逻辑算子“谢佛束” (Sheffer Stroke) 就是出于他之手。罗素为《数学原理》以及维特根斯坦的《名理论》 (即《逻辑哲学论》) 写序时，也曾提到谢佛的这个贡献。

盛成先生

1 盛成 (1899—1996) 作家、翻译家，为中法文化交流作出卓越贡献。江苏仪征人。早年自上海震旦大学读法语预科，后曾到长辛店铁路见习所学习、当车务工人。1919年当选为长辛店京汉铁路工会十人团联合会会长，积极参加五四运动。不久，被派往上海参加全国各界联合会，旋赴法国勤工俭学，以高等理科硕士学位毕业于蒙彼利埃大学。后

应邀到巴黎大学主讲中国科学课程，1928年加入法国文人协会。20世纪30年代初回国后历任北京大学、广西大学、中山大学、兰州大学教授，中华书局编辑等职。抗日战争初期，参加救亡运动，曾任上海市各界救亡协会国际宣传委员会总干事、武汉中华全国文艺界抗敌协会常务理事。通晓英、法、意大利语，并谙马来语。1979年到北京语言学院任教授。主要译作有巴尔扎克的《村教士》、刘鹗的《老残游记》（中译法）以及但丁、瓦莱里作品多种。著有法文作品《我的母亲》和法文诗集《秋心美人》等。

2 张继（1882—1947）原名溥，字溥泉，直隶沧县人。日本早稻田大学毕业。1905年加入同盟会。辛亥革命后任同盟会交际部主任、第一届国会参议院议长。1924年反对孙中山联俄、联共、扶助农工的政策，提出“弹劾共产党案”，参与西山会议派活动。1927年后任司法院副院长、立法院院长、国史馆馆长等职。著有《张溥泉先生全集》及《补编》。

3 指一二八抗战，中国军队抗击侵华日军进犯上海的作战。1932年1月28日午夜，蓄谋侵占上海的日本帝国主义向闸北中国守军发动突然进攻。驻守上海的第十九路军奋起反抗。在中共领导下，各界人民积极支援前线。五万守军浴血奋战月余，使日军伤亡逾万，三易司令官，四次增兵，总兵力增至九万。国民党政府未继续增派援兵。3月1日，守军腹背受敌，被迫撤退。2日淞沪陷落，3日停火。后经英、美、法、意等国调停，5月5日国民党政府与日本签订了丧权辱国的《淞沪停战协定》。

4 马拉梅（Stéphane Mallarmé，1842—1898）法国诗人，象征派代表。追求在诗中表现“绝对世界”，对法国现代诗歌有深远影响。主要作品有诗篇《牧神午后》和诗剧片段《埃罗提亚德》等。

5 罗曼·罗兰（Romain Rolland，1866—1944）法国作家、社会活动家。坚持人道主义，反对侵略战争。获1915年诺贝尔文学奖。主要作品有小说《约翰·克利斯朵夫》、《母与子》，剧本《群狼》，传记《贝多芬传》等。

6 安德列·纪德（André Gide，1869—1951）法国作家。曾一度宣称信仰共产主义，作品多反映寻求自我与道德的矛盾。获1947年诺贝尔文学奖。主要作品有《蔑视道德的人》、《梵蒂冈的地窖》、《伪币制造者》等。

刘海粟和黎锦晖

1 刘海粟（1896—1994）画家、美术教育家。名槃，字季芳，江苏武进人。1912年创办中国第一所正规美术学校——上海图画美术院（后改名上海美术专科学校），任校长，率先在教学中实行人体模特写生和男女同校学习制度。创办专业杂志《美术》，倡导美术改革。1929年任法国巴黎格朗休克美术研究院研究员。1945年起继任上海美专校长。新中国成立后，历任华东艺术专科学校校长，南京艺术学院教授、院长，上海美术家协会名誉主席。擅长中国画、油画和书法，所作气势雄阔、笔墨酣畅，其黄山题材绘画富于力感，尤能显示艺术个性。有《黄山》、

《海粟国画》、《海粟老人书画集》、《海粟黄山谈艺录》、《刘海粟画语》、《刘海粟艺术文选》、《海粟诗词选》等。

2 黎锦晖（1891—1967）歌舞艺术家、作曲家。字均荃，湖南湘潭人。学生时代广泛接触家乡民间音乐。1912年毕业于长沙高等师范学校。1916年起参加北京大学音乐团活动，1920年应中华书局聘，到上海编国语课本。后主持国语专修学校并主编《小朋友》周刊。为宣传国语和改革学校音乐教育，创作儿童歌舞剧12部和儿童歌舞表演曲24首，音乐选用民歌小调和戏曲曲牌等加以改编。代表作《小小画家》，讽刺陈旧迂腐的读经教育，艺术上有一定成就。1928年至1929年初，率中华歌舞团巡演于东南亚。又创办中华歌舞专科学校，组织明月歌舞团。1936年后在长沙、重庆等地从事抗战文化工作。曾出版抗战歌曲集《中华民族战歌》。新中国成立后在上海电影制片厂工作。

李石岑先生

1 李石岑（1892—1934）哲学家。原名邦藩，字石岑，湖南醴陵人。1912年东渡日本留学。1916年成立丙辰学社，后改名为中华学艺社。1918年与曾琦等在东京发起组织华瀛通讯社。1919年回国后任商务印书馆编辑，主办《民铎》。参加“五四”新文化运动，大量介绍西方哲学流派，并笃信柏格森的生命哲学。后受聘为大夏大学、光华大学、暨南大学哲学教授。1920年与张东荪陪同罗素到湖南讲学，倡言“人生哲学”，强调“我的人生观就是表现生命”（《人格之真诠》）。1927年赴法、英、德等国考察西方哲学。1930年归国后转而推崇“新唯物论”（即辩证唯物主义），指出“新唯物论”代表着哲学的新趋势，“为最正确的方法，因其能把握宇宙发展的全部”（《哲学概论》）。著有《人生哲学》、《中国哲学十讲》、《西洋哲学史》、《哲学概论》等。

2 柏拉图（Plato，公元前427—前347）古希腊哲学家。创办学园，提出理念论和灵魂不朽说，其哲学思想对西方唯心主义哲学的发展影响很大，著有多篇对话和书信。

3 苏格拉底（Socrates，公元前469—前399）古希腊哲学家。认为哲学在于认识自我、美德即知识，提出探求真理的助产术和辩证法。本人无著作，其学说仅见于学生柏拉图和色诺芬的著作。

4 格劳孔（Glaucón，约公元前445—？）柏拉图的兄长、苏格拉底的学生，《理想国》中苏格拉底的主要对话人之一。

5 卡萨诺瓦（Giovanni Jacopo Casanova，1725—1798）意大利冒险家、作家、浪荡公子。当过间谍和外交官，著有自传《我的生平》。“卡萨诺瓦”现在已经用作普通名词，意为“卡萨诺瓦式的人；喜欢在女人们中间厮混的男人；乱搞男女关系的男人”。

6 引自美国作家Edgar Saltus的Historia Amoris: A History of Love Ancient and Modern.

7 居约（Jean Marie Guyau，1854—1888）法国哲学家、美学家、伦理学家。哲学上受唯灵论影响，认为宇宙是已进化过程，生命的创造作

用使宇宙从低级状态发展到高级状态，思想与行动均由生命创造所推动，而艺术与道德是生物过程（即生活）的最高表现。著有《一个哲学家的诗》、《当代美学问题》、《从社会学观点看艺术》、《略论既无义务亦无制裁的道德》等。

8 柏格森（Henri Bergson，1859—1941）法国哲学家。生命哲学和现代非理性主义的主要代表，宣称“生命冲动”就是“绵延”，它是唯一的实在，只能靠与理性相反的直觉来认识实在或“绵延”。获1927年诺贝尔文学奖。

9 斯宾诺莎（Baruch Spinoza，1632—1677）荷兰哲学家、唯理论的代表之一。从“实体”即自然界出发，提出“自因说”，认为只有通过理性认识才能得到可靠的知识。否定超自然的上帝存在，但是又把“实体”叫做“上帝”。著有《神学政治论》、《伦理学》等。

10 《查拉图斯特拉如是说》，尼采著，共四卷。以富有诗意的散文假托波斯圣者查拉图斯特拉（即琐罗亚斯德）向其信徒和各色人等传道以表达其宗教、哲学和伦理道德思想，包括“上帝之死”、“重估一切价值”、“超人”、“永恒轮回”以及非理性的直觉等内容。

程锡庚先生

1 程锡庚（1894—1939）字莲士，江苏镇江人。早岁赴英国伦敦大学留学。后赴法国，入巴黎大学法科。旋又赴美，入哥伦比亚大学从事研究。曾获经济学博士学位。巴黎和会期间以学者资格参加中国代表团。1921年任北京政府外交部条约研究会秘书，曾赴日内瓦国际联盟大会。1923年任财政部秘书、全国财政讨论会专门委员等。1928年派赴巴黎办理中法退还庚款案。1932年任财政部监务署编译处处长。1934年任外交部驻北平特派员。1937年加入北平伪中华民国临时政府。1939年4月在天津英租界被“抗日杀奸团”击毙。著有《现代中国政治研究》（英文）。

2 培根（Francis Bacon，1561—1626）英国哲学家、英语语言大师、英国唯物主义和实验科学的创始人。反对经院哲学，提出“知识就是力量”。著有《论科学的价值和发展》、《新工具》等。

3 据基督教《圣经》，亚当是人类的始祖。所谓“其他亚当子孙”，就是“其他人”。

4 普鲁士人以智慧理性、严谨守时、沉稳庄重著称。

附录

HAN FU-CHU, THE GOOD BULLY OF SHANTUNG

"If Machiavelli were to make a constitution for China, he would have to proceed differently. ... He would assume that the militarists would always bully the civil authorities, but he would make this evil a blessing in disguise, by seeing to it that only good bullies (like Han Fu-chu) became militarists." —Wen Yuan-ning.

In the olden days, a mandarin beloved of the people was often deified and made an object of worship even while he was still living. Travellers to Shantung have brought back the tale that throughout the province, tablets with General Han Fu-chu's name inscribed on them are not infrequently seen on the altars of the temples formerly sacred to the memory of Kwang-ti (关帝)—the god of war—or Confucius. While people elsewhere in China are cursing the misrule of the warlords, those in Shantung are looking upon General Han as an emissary sent by Heaven to rule over them. What then is this man to deserve such respect and popularity?

To begin with, he is a true soldier. Unlike many other warlords, who were graduates of military colleges either here or abroad and who started their careers as commissioned officers, General Han rose from the ranks and is not ashamed of it. He began as a common soldier in the army of General Feng Yu-hsiang, whom he still regards as his superior officer. There is a story that when he was chief of the 6th Division of the Kuominchun Allied Army, he was one day slapped on the face by General Feng for something he said which was not exactly to the latter's liking. Another version of the story has it that he was not only slapped on the face, but even had to kneel down to beg Feng's forgiveness.

But, in spite of the fact that most of Feng's followers were avowed Christians, General Han has always been a staunch defender of the Confucian tradition. He has, for instance, made it compulsory for all school children to read the Four Books. Moreover, every year on the birthday of Confucius, he would go to Chu Fu (曲阜) and offer sacrifices before the image of the sage.

As follower of Confucius, he naturally subscribes to the doctrine of paternalism in politics. In the mandates which he occasionally issues, he would tell the people not only what they should do but also what they shouldn't do. Recently for instance he has forbidden women to curl their hair. Many young girls and concubines of the officials in Shantung were thus arrested and put to prison, and were not released until the General had ordered his bodyguards to have their curled

locks shaved off.

As it might be expected, General Han is also a believer in the Confucian precept that government by superior men is better than government by law. In fact, General Han's words are law in the province of Shantung. When any subordinate of his is found to be guilty of "squeezing," he would order him to be shot without first having sent him to the court for a trial. One day, on one of his inspection tours to the country, he thought that he saw five shabbily dressed persons hiding under a tree. He immediately ordered his car to stop and told his bodyguards to have them shot at the spot. "But why should they be shot?" his bodyguards ventured. "Well," replied the General, "they look to me like bandits." Finally, however, his aid-de-camp suggested that perhaps he had better make sure first. Whereupon he did, and found out that the suspects were only a bunch of workers on the road; and when he saw them, they had just been sitting down under the tree to eat their lunch.

But let it not be inferred that General Han is in the habit of making wrong judgments. On the contrary, he is gifted with the extraordinary ability of seeing persons and things as they really are. The following, for instance, is what he said to a group of officials in Shantung: "You all think of yourselves as having great talents, therefore you refuse to listen to me. But let me tell you, I don't think that the whole bunch of you are worth two coppers. All you can do is to write official letters, to keep books, and above all, to squeeze the poor people. To tell you the truth, China does not really need 'talents' such as yours. The common people, although they haven't had your education, make much better citizens than all of you together."

Herein therefore lies the reason of General Han's popularity. He is a great lover of the common people.

[No. 1; Jan. 4, 1934]

DOLEFUL MEI LAN-FANG

What does it matter that Mei Lan-fang was born on October 22, 1894, and that some of his ancestors were brilliant ornaments of the Chinese stage? Readers of *The Critic*, I suspect, will regard with indifference the fact that the renowned Mei Lan-fang was once known as the "Foremost of the Pear Orchard" and that the ex-Emperor one time made him head of the Ching-Chung Monastery, both designations symbolizing his preeminence as an exponent of China's dramatic art.

Some of our readers may be mildly interested to know that Mei, with the assistance of scholarly friends, built up a library and museum of the Chinese drama from which he drew the inspiration that enabled him to contribute to the literature of the Chinese stage as a playwright. Everybody in China, and many people abroad, need not be reminded that Mei Lan-fang, as Hu Shih once described him, "is an artist with a most thorough training in the old dramatic arts of China," although some may be surprised to know that he is also a painter of considerable ability, and is more than slightly competent as a student of biology, entomology and some other practical and mechanical sciences.

All this hardly merits an article in this column at this time about a person who appears to be conspicuously inconspicuous in his own country whose people had acclaimed him and whose dramatic authorities had rhapsodized about his "expressive eyes," "mobile face," "interpretive smile," "supple waist" and "divine hands."

Four years ago this time Mei Lan-fang was on his way to the most brilliant achievement of his life, at least up to the present. He went to America and, as described by an American critic who witnessed Mei's first performance in New York, he reached "across a barrier of language," besides (to the Americans) the alien conventions and dissonances of the Chinese stage—so far and so effectively that he became the ruling sensation of the American stage that season. American critics outdid their Chinese contemporaries in their boundless praise and appreciation.

Mei Lan-fang's acting was "beautiful as an old Chinese vase or tapestry," possessing "the strange ripeness of centuries." It was "as limpid as a forest pool." Every poem his Chinese admirers had composed to glorify his art was outdone by the American critics in delirious prose. For examples:

"He is a realization of perfection which is more rare and precious than anything a new world can produce. Our imaginations remain prostrate before its delicacy, grace and poetry."

"It is impossible to write of this man without superlatives, nor to look upon his work without a penetrating gratitude for the privilege of having seen him. He conveys more in the turn of a wrist, the swish of a sleeve or an arching of the eyes than do most of our foremost actors in a whole evening of the less subtle and more forthright performances."

"Anybody can realize the perfection, the delicacy, the emotional power of his pantomime. He is the most graceful man seen on the New York stage since Nijinsky was here last. His skill, tempo and agility are incomparable."

"One might run on for a column or two trying to convey to those who haven't seen Mei Lan-fang, his exotic and exciting charm."

And, we might ask, how many of his countrymen at home know

so much about him? But it does not matter. Nor perhaps the fact that Mei Lan-fang is probably better and more affectionately remembered in the United States than any Chinese person who has ever visited that country.

Only recently a columnist for one of the leading newspapers of Los Angeles was in Shanghai. This is a part of what he sent back and was published in his column:

"If I came back to California without having seen Mei Lan-fang, I know I shouldn't be allowed to land. He is one of the most popular actors of any nationality who ever came to Los Angeles.

"I found him in an old hotel on Bubbling Well Road—very much depressed. He belongs in Peiping, which for 700 years has been the artistic center of the Orient. The Japanese cannon silenced its voice. And Mei Lan-fang came sadly away—to Shanghai, which is a great commercial city which favors cabaret girls rather than art.

"Mei Lan-fang said that he intended coming to the Chicago exposition this year, as the beginning of a great American tour. China's troubles stopped it. Now he doesn't know what he will do.

"George Bernard Shaw came to see him in Shanghai and encouraged him to make a tour of Europe; but that is off too, on account of the havoc in China.

"I am not a politician,' he said sadly, 'so I don't know what is the matter with my unhappy country: but it makes my heart very sad.'"

There it is! Among all the personages whose names impinge upon the public mind in China, here is one who is not a politician, which accounts for his inability to know what is the matter with his unhappy country. His heart is sad, but he knows not what to do that might lessen the suffering of his people whom the politicians are so sure they can lead to peace and prosperity. Soon, Mei Lan-fang will come forth from his present retirement and again, as he has many times in the past, employ his art in benefit performances to succor the victims of war, famine and pestilence whom the politicians talk so much about helping while they themselves appear so helpless to prevent the creation of those victims.

E. K. Moy

[No. 3; Jan. 18, 1934]

LIN SHU-HWA, WOMAN NOVELIST

Perhaps in no other period in the history of Chinese literature did women play so important a part as they do at present. Since the New Culture Movement in 1919 women have offered their contribution to the foundation of contemporary Chinese literature. Today we have

Misses Lin Shu-hwa, Ping-ching, Ting Lin, Lu-ying in short story writing; Misses Lin Hwei-ying and Fang Lin-yu in poetry; and Prof. Yuan Chang-yin in drama. These women writers, being intimate with the life of their own circle, reveal another aspect of society, which men may not perfectly understand. Here I choose to discuss Miss Lin Shu-hwa, because it seems to me she divines the life of womankind more than any other woman writer.

Miss Lin has already published two collections of her short stories, "The Flower Temple" and "Woman." In these twenty short stories, what strikes a reader most, I think, is that she chooses her materials from the feminine. Perhaps it is rather a lucky choice; of course, lucky for us to have found in her such a preference, since we might not otherwise understand women as we do now. Through her short stories we see different aspects of woman. "Miss Lee" portrays the melancholy of a middle-aged dean of girls in a secondary school, who has been persuaded to marry, yet refused. "It Is Said So" opens a secret, the love between two girl students, which is suggestive of homo-sexual love. "Laced Pillows" and "After the Tea Party" tell us the attitude or reflection of maidens to love-making, and once contemplated marriage. These are descriptions of women in their maidenhood. Descriptions of married women are also numerous. "After Feast" describes a married woman's conflict of passion and sense of duty to husband. "The Flower Temple" tells the story of a wife trying to test her husband's attitude to her by fun. To her husband she writes an anonymous letter in which she expresses her admiration of him and vaguely proposes a rendezvous with him in the Flower Temple. He goes there after deliberate consideration; to his great surprise the woman he meets is his wife. Here we see a touch of comedy in the story. "Consumption" delineates a dutiful wife who sacrifices her honesty in selling pictures of her imitation of some great painters in order that she can defray her husband's hospital expenses. "A Happy Old Woman" reveals the inner secret of a Chinese large family. The old woman has sons, daughters-in-law, grandsons, grand-daughters-in-law around her. They obey her and the family is under her control, yet there are jealousy and enmity under cover among them as once revealed on the anniversary of her eightieth birthday. In this story we see one of the ironies of life, of which Miss Lin bursts out without any conscious effort. Among her twenty stories it seems to me that "Miss Liu the Junior" and "Yang Ma" are the best. By "best" I mean the writer treats her subject with mastery of style and attains to perfection of art. Miss Liu the Junior, who was lively and intelligent, once led her classmates to expel her one married classmate by means of her piercing satire. Thirteen years afterwards she becomes the mother of several children. Her former liveliness has then entirely

gone, and instead, only dullness of life and symptoms of ill-health appear on her once bright face. "Yang Ma" is the description of a good-natured mother whose son has deserted home to enlist in the army near the Mid-Autumn Festival. She profoundly loves her son and makes a new winter coat for him. Every month she asks for one day's leave of absence, and wanders in the streets under the delusion that she might thus find her son. Having overheard that her son might have gone to one frontier province, she suddenly leaves her master to pursue the futile search for him. Here in these two stories Miss Lin has attained such a perfection that the change of one word or the omission of one detail would ruin their life.

What arrests the reader's attention, I think, is Miss Lin's conception of woman. The main characters of her stories are women; or, if the main character is not a woman, the female character at least wields a great influence behind the scenes. Eighteen characters out of twenty are good women or blameless at least. Complicated and many-sided as feminine nature is, the truth of her conception may be questioned. Yet, if we refrain from inquiring into its truth and approach it from another side, it is very significant in contemporary Chinese literature. She differs from most contemporary writers in depicting the beauty of woman's spirit. Such a beauty gives us freshness and driving force. With this freshness we clear the dusty weariness of our journey; by this force we always happily resume our travel westward after short delays.

By Chien-Chao Fei (费鉴照)

[No. 26; Jun. 28, 1934]

LU TSO-FU (卢作孚)

After his extensive trip in Szechuan, Mr. Chang Kai-ngau in his authoritative and highly interesting statement to the press reveals to the outside world the Szechuanese characteristics of curiosity and eagerness in keeping up-to-date, — the signs of a progressive people, — and incidentally praises the spiritually-socially reformatory movement set on foot by a group of pushing-forward type of men under the leadership of Mr. Lu Tso-fu. Besides being an embodiment of those two characteristics, Mr. Lu possesses that rare and remarkable combination of qualities which makes him a success in no matter what line he works. He is an excellent educator, the foremost industrialist and shipping man in Szechuan, a good mixer in society, an organizer of volunteer expeditions to Tibet, Kokonor, Lololand and other places

bordering on Szechuan and the promotor of a museum, a scientific institute, schools and volunteer groups to defend his native district from being overrun by bandits. And the above-mentioned list by no means exhausts the whole range of his multifarious activities.

It requires volumes to record the many-sided interests and activities of the energetic Mr. Lu, but we shall confine ourselves to relating some of his more remarkable achievements in the shipping business. Entering into the shipping trade about nine years ago with a capital of eight thousand Chungking dollars which he invested in an inland river steam launch, he now commands a fleet of thirty river steamers with assets worth three million dollars. He does away with two deep-rooted and notorious elements in the shipping trade on the Yangtze, — the compradores and the tea-boys, — who infest the foreign steamers on the river so much that they have long been looked upon as necessary evils to shipping companies and scourges to the passengers. His efficiency in running his steamers is as popular with both consignees and passengers as it is much feared by competitive companies.

Significant as his success in handling shipping, his ten years' fight for social reforms is still more far-reaching in consequences. He antedated General Chiang Kai-shek by nine years in his starting a New Life Movement much more profound in ideology and not a little more practical in application than that of the famous General. Obscurity in position, inaccessibility in geographical surroundings and limitation in scope have not prevented Mr. Lu's attempt from being a success. They only succeeded in delaying for a considerable period of time that public recognition of his achievements which he thoroughly deserves. But eventually nothing succeeds like success. Pepei, originally a poor obscure village in the district of Pahsien, and the centre of Mr. Lu's activities, has been universally recognized as a model village. His simple living, his self-sacrificing devotion to duty and his unbounded enthusiasm in reforming deep-rooted social evils are an inspiration to thousands upon thousands of old men and youths, proletarian workers and feudal-minded gentry. Indeed, his influence is so much felt that in every corner of the wide province of Szechuan there are to be found people in masses who look upon him as the leader to lead them on the way to reconstruction, and happier and richer ways of living.

Magnetic and sincere in disposition, persuasive and convincing both in private talk and in public speaking, practising frugality almost to a fault and working more than fourteen hours or more daily, a profound thinker and facile writer, he possesses every qualification which any prospective leader of social reform would envy to have. Yet he prefers to influence his followers and compatriots by example rather than by words and by writings alone. He does not enjoy the

privilege and benefits of a university education; but he has passed through a greater and more useful university, the university of society at large. His highly self-trained mind is wide-awake, ever ready to assimilate new ideas and adopt new methods to achieve his ends. We have no doubt but that his uplifting influence will be sure to make itself felt in China. It is indeed a thing of much interest to watch the unfolding of his career in future.

Chang Hsu-lin

[No. 28; Jul. 12, 1934]

吴宓（号雨生）

世上只有一个吴雨生，叫你一见不能忘。常有人得介绍一百次，而在第一百次，你还得介绍才认识，这种人面貌太平凡了，没有怪样没有个性，就是平平无奇一个面庞。但是雨生的脸倒是一种天生禀赋，恢奇的像一副讽刺画。脑袋形似一颗炸弹，而一样的有爆发性，面是瘦黄，胡须几有随时蔓延全局之势，但是每晨刮的整整齐齐，面容险峻，颧骨高起，两颊瘦削，一对眼睛亮晶晶的像两粒炙光的煤炭——这些都装在一个太长的脖子上及一副像枝铜棍那样结实的身材上。

头既昂起，背又挺直，雨生看来是有庄严气象。他对于自己的学问是有相当的抱负，而他的好友也视他为一位天真淳朴的人物。他为人慷慨豁达，乐为善事，每为人所误会。待人接物，每偏于忠厚，而对于外间之臧否也不能漠然。因此雨生的心灵永是不安的，不是在怅惘咨嗟，便是在发愤著作。他虽极崇拜哥德，但他却未达到哥德所称羨“不慌不辍”（ohne Hast, ohne Rast）的境地，这也如但丁吟着“Io fei giubbetto a me delle mie case”（我把我的厢房当做我的一架刑枷）一样的未能达到这种境地。

世上有一种人，永远不知所谓年少气盛是怎么回事，雨生就是其中一个。虽然已年满四十，他看起来总在三十与百岁之间。他待人以宽，待己却甚严。是信儒道，立儒行的一个人。容貌非常端肃，对事非常认真，守己非常严正。但是仍不能令人望之生畏。

雨生现在清华大学西洋文学系当教授。此外曾主编《学衡》及《大公报文学副刊》，后者到最近才辞职。

雨生的教书，师道可谓无间然，只是在启迪后生的灵感有点缺憾。他照时上课，一秒不差；预备讲义，毫不敷衍。别人也许带了书本将要引用的一段文字念给学生听，雨生却无论那段文字怎样长，非先自背诵上口不可。他的阐扬发挥处是井井有条：甲、乙、丙、丁这样下去。有点干燥，是的，但总不会空疏。他不像另一种教员，说的天花乱坠，结果不知所云，

他所云的都有个内容，或有错误但断不空疏。他总不依违两可，他的是非非常坚确；换言之，就是不怕有固定的意见。关于记问的事实，

尤其是那一类在百科全书及各种类书可以检得的事实，他百无一误。只在见解上面，我们可以抓到他的毛病。在这种地方，雨生露出他的弱点，但是这个弱点，病不在论理不明或者立意不诚，病在他人文主义的立场——而且是白璧德式的人文主义的立场。雨生不幸，坠入这白璧德人文主义的圈套。现在他一切的意见都染上这主义的色彩。伦理与艺术怎样也搅不清。你听他讲，常常莫名他是在演讲文学或是在演讲道德。

雨生办《学衡》，一切立论与胡适正相反。《学衡》明明是大张旗帜以与白话文学反抗，而保守旧有生活的。反抗是失败了，但是其勇气毅力是可嘉的。他编《文学副刊》之勇气毅力也是一样的可嘉，他要叫中国读者注意西洋文学之史实，而不仅摭拾那文学的皮毛。史实、年月、数目，这是多么干燥乏味。现代人所要的是趋时喜新，随波逐流，摭拾这文学潮流上之泡沫草秽——Dowson、Baudelaire、Valéry、Virginia Woolf、Aldous Huxley等等。在现在时代，像雨生那样孜孜叫人研究Homer、Virgil、Dante、Milton雅典文学，就要遭人不齿。

悲哉雨生，你是那样孤芳自赏，不屈不移。更可悲者，是雨生对自身也没有了解。他立论上是人文主义者，雅典主义者；但是性癖上却是彻头彻底一个浪漫主义者。雨生为人坦白无伪，所以此点人人都已看出，只有他自己看不见。人家知道他是崇拜拜伦的，并且曾摹仿Childe Harold写过一篇中文长诗。这种矛盾，让别人看了不自在，他却处之泰然。

每回我想起雨生，就想起他的苦笑的容貌及他清华大学里净朴的书斋及那被他的窗幔演出的外边一片风华浓丽的野景。也许是我自己在痴想，但我常疑心着，如果他肯拉开窗幔，凭眺那野景或是勿再矜持，放心怡情的赏那风华秾丽的一片野景，也许他生活上不至那样不安，而面容上也不至那样苦笑了。

胡适之

适之绰号“胡大哥”并非偶然。梁漱溟多骨，胡适之多肉；梁漱溟庄严，胡适之豪迈；梁漱溟应入儒林，胡适之应入文苑。学者也好，文苑也好，但适之是决不能做隐士的。一人性格，大概难于分类，也大可不必分类。我想六分学者，四分才子，二分盎格罗撒逊留学生，约略可以尽之。也许加了三分学究气，减了三分才子气，适之的应酬可以少一点，学术著作可以丰富一点，但如此便少了一团蔼然可亲之气，而不成其为胡大哥了。这却何苦来！这一股才子气，又被他六分的学究气压下，所以若称之为“风流才子”也不甚适用，因为他的立身行世，也颇谨严，如对冬秀之始终如一，便可看出。然而适之对女子，又不是像梁漱溟、雨生那样一副面孔。在女子前献殷勤，打招呼，入其室，必致候夫

人，这是许多学者所不会而是适之的特长。见女生衣薄，必下讲台为关课室窗户，这是适之的温柔处，但是也不超过盎格罗撒逊所谓“绅士”的范围。用这种体贴温柔于同辈及少辈，“胡大哥”之名便成了。

适之为人好交，又善尽主谊。近来他米粮库的住宅，在星期日早上，总算公开的了。无论谁，学生、共产青年、安福余孽、同乡商客、强盗乞丐都进得去，也都可满意归来。穷窘者，他肯解囊相助；狂狷者，他肯当面教训；求差者，他肯修书介绍；问学者，他肯指导门径；无聊不自量者，他也能随口谈谈几句俗话。到了夜阑人静时，才执笔做他的考证或写他的日记。但是因此，他遂善做上卷书。

今年似是四十四吧？气色虽然不甚红润，不像养尊处优的老爷，但也不像漱溟一般的瘦马相，只有一点青白气色，这大概是他焚膏继晷灯下用功之遗迹。衣服虽不讲究，也不故表名士气。一副相貌，倒可以令佳人倾心，天平是那么高，两眼是那么大，光耀照人，毫无阴险气，嘴唇丰满而常带着幽默的踪影。他的悟力极敏，你说上句他已懂到下句了。笑声不是像岂明的低微，是呵呵式的。

适之所以不能成为诗人就是这个缘故。在他呵呵笑的声中，及他坦白的眼光中，我们看不见他的魂灵深处。他不像志摩，不会有沉痛的悲哀，与热狂的情绪。在那眼光中，我们看出理智的光辉，那兀突不定的嘴唇，也老是闪过机智者会心的微笑。这样是不合做诗的。所以他的散文，也是清顺明畅，像一泓秋水一般，晶澈可爱，却很少波澜曲折，阐理则有余，

抒情则不足。人还是规矩人，所以文也老实。布风说过“文如其人”，正是此意。因此他的思想，也是近于厚重稳健，非近于犀利急进，他的观点是演化的（即所谓历史癖），非革命的（evolutionary, not revolutionary）。在此种地方，最可看出他盎格罗撒逊的素养。丁在君、胡适之都是这一派思想的好代表，于是“高等华人”的徽号便落在他的身上。在普罗作家，甚至在一切急进派作家眼光中，这种绅士气是极讨厌。但是，适之的态度，是极诚恳极负责的。这从他的刊物名称《努力》可以看出来的。他这种态度，使他常傻头傻脑作文章，见要人，向一般急进派所认为根本无望的官僚军阀作劝告，不免太不脱化。然而在这好人极少的中国中，我们不能不承认他是一位不甘自弃的好人，而发生爱惜甚至景仰之意。

适之写的英文，似比他的中文漂亮。

温源宁笔下的——

吴 宓：“吴宓先生，举世无双，见过一次，永生难忘。”

胡 适：“他有什么，就显示出什么；他是什么，就都在那儿了——在他的著作、他的谈吐、他的行为方式中。”

徐志摩：“死得富有诗意，活得像个孩子：神明还能给凡人安排出更好的命运吗？”

梁遇春：“没有一丝想要炫耀的念头，置身于人群之中，他总是力图避人耳目而隐身在笑容背后。”

周诒春：“他可以像个无可救药的悲观主义者那样对你说话，支持他实际活动的却是无畏的理想主义。”

黄庐隐：“她是一个为爱而生、为爱而死的女人。”

丁文江：“丁博士的长相和他的为人完全相符：个子略矮，身体敦实，外加一对透露着机敏和果断的眼睛；一撮八字胡似乎在说：多干实事、少说废话！”

辜鸿铭：“他有意卖弄自己的辫子，是他整个为人的特征。他脾气倔强，以对抗为生。大众接受的，他拒绝；大众喜爱的，他厌恶；大众崇拜的，他鄙视。”

梁宗岱：“他确实并不相信上帝、进步和永生。但是他肯定相信的，是他自己，是人生之甜美、文学之怡情、女人之可爱。”

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成

英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早

在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

序言

这是一本充满了智慧的书。这里面所包含的晶莹智慧，不只是从学的研究得来，更是从生活的体验得来。

读这本书好像是泛舟在时间的洪流之中，一重一重世间的层峦叠嶂、激湍奔涛，都在我们民族和个人的生命中经过。而且这段时间乃是历史上一个极不平凡时代的新序幕，举凡人类中各个集团的冲突，乃至东西文化的磨荡，都集中在这风云际会。

时代的转变愈快，被人们忽略的史实愈多。若当时的人不予以记载，则后起的人更无从知道，无从了解。这种忽略和遗忘都是人类很大的损失，因为在不断的历史的过程中，以往的经验，正是后来的教训。

了解这种意义，才能认识蒋梦麟先生这本书所蕴藏的价值。他生长在这极不平凡时代已经过了七十年了。他从中国学究的私塾到西洋自由的学府，从古老的农村社会到近代的都市文明，从身经满清专制的皇朝到接受革命思想的洗礼，他多年生活在广大的外国人群里面，更不断生活在广大中国人群尤其是知识青年群众里面。他置身于中西文化思想交流的漩涡，同时也看遍了覆雨翻云、沧海桑田的世局。经过了七十华年，正是他智慧结晶的时候，到此时而写他富有哲学内涵和人生风趣的回忆，其所反映的决不是他的一生，而是他一生所经历的时代。

《西潮》这本书里面每一片段都含有对于社会和人生的透视。古人所谓“小中见大”正可于此中求之。其将东西文化相提并论之处，尤其可以发人深省。著者好举平凡的故事，间杂以微妙而不伤人的讽刺，真使我们感到一股敦厚淳朴的风味。这种风味在当今是不容易尝到的了。至于其中的妙语妙喻，不断的流露，正像珍珠泉的泉水，有如粒粒的明珠，连串的喷了上来。

这本书最难达到的境界，就是著者讲这个极不平凡时代的事实，而以极平易近人的口吻写出来，这正像孟邻先生做人处世的态度。若不是具备高度文化的修养，真是望尘莫及的。我何敢序孟邻先生的大著，只能引王荆公两句诗以形容他的写作和生平。诗云：

“看似平常最奇绝，成如容易却艰难。”

1959年12月6日

PREFACE

This volume will try to tell the story of what has happened in China during the last hundred years, from the cession of Hongkong in 1842^[1] to the blitzkrieg of Pearl Harbor in 1941, with emphasis on the latter half of that period. A century is a long time, but of China's more than four thousand years of history it is but a small fraction, less than one fortieth. Yet the change China has gone through in that brief span is unprecedented in her long life. And now more rapid changes on a still larger scale are about to take place.

Since the first exchange of gunfire at Marco Polo Bridge the attention of the world has been drawn to China. The heroic resistance at Shanghai, Taierchuan, and Changsha has evoked sympathy and admiration in the hearts of millions of China's friends throughout the world. The part China is destined to play in the affairs of nations will be of great interest to the world in the period before us. She has been appraised somewhat too high by her well-wishers and somewhat too low by those who do not know her. In either case the interest is there and the fact remains that she has fought almost singlehanded, for eight long, suffering years, a strong enemy sustained by religious-patriotic fanaticism, superior weapons, and efficient organization.

Neither by her friends nor by her own efforts could China be lifted overnight to the level of modern industrialized democracies; nor could she be exterminated by her enemies in a few years or even a few centuries. In the time ahead of us she will become a focus of attention for the world, since future peace—at least one of the major factors of peace—will depend much on a prosperous and strong China.

How is this great country to be made prosperous and strong? The problem must be solved by herself alone. Effective co-operation of friendly Powers will accelerate her success, but she alone must bear the responsibility of making herself worthy to be a leading partner of peace in the world.

China is a nation neither of angels nor of incompetents; she is a

nation of common mortals with feelings, ideas, love and hate, hopes and despair, beauty and ugliness, accomplishments and failings, virtues and vices. It is hoped that the world will not expect from her people more than it does from other ordinary human beings. She has no panacea for all her troubles, nor any magic box by aid of which she can transform herself at will into what she desires to be. Whatever success she has achieved has been paid for with sweat in time of peace and with blood in time of war.

To the question "What is the trouble with China?" the author can only answer that there are a number of troubles waiting for solution in that vast country of teeming millions, more than she will be able to solve in any limited span of time. Some were created by enemies who tried to conquer her, others by herself during the time of metamorphosis; still others have been imposed on her by force of circumstance or as legacies of the past. Some of the more difficult problems have been solved or partially solved during recent years before the war; many others remain to be dealt with in due course of time.

Looking back over the last fifty years which he has personally experienced—over the past hundred years with which he is familiar, and even farther, down the long reaches of China's history which he has been taught—the author has traced to the best of his knowledge the threads of a number of problems, some lying deep in her past, others arising from the rapid changes which caught her unprepared. He has tried to tell, within the limits of discretion, what has happened in China, especially during the last fifty years. For those friends who desire to co-operate with her, with a view to solving some of the difficult problems of a more enduring peace, this moderate volume may be helpful in giving an insight into the life and problems of the Chinese people. For co-operation cannot possibly proceed without mutual understanding. To understand what is actually the background—the mental, emotional, and moral constitution—of the country, is essential for a lasting co-operation.

With the above ideas in mind the author has described ordinary

happenings in some detail so as to acquaint the reader in some measure of intimacy with the mental, emotional, and moral make-up of the Chinese people as revealed through their life in peace and war. As small things often reflect major developments in a country, it is hoped that some sense of the meaning of greater events may be gathered from these apparent trifles of daily life.

CHIANG MONLIN

[1] 此处所称the cession of Hongkong in 1842（1842年割让香港），指1840年第一次鸦片战争后，英国强迫清政府于1842年签订《南京条约》，割让香港岛。1856年第二次鸦片战争后，清政府被迫于1860年签订《北京条约》，割让九龙半岛。1894年中日甲午战争后，英国逼迫清政府于1898年签订《展拓香港界址专条》，强租新界，租期99年，至1997年6月30日结束。

序

《西潮》里所谈的是中国过去一百年间所发生的故事，从一八四二年香港割让起到一九四一年珍珠港事变止，尤其着重后五十年间的事。一个世纪是相当长的一段时间，但是在四千多年的中国历史里，却只是短暂的一个片段，几乎不到四十分之一。不过中国在这段短短的时期内所经历的变迁，在她悠久的生命史上却是空前的，而且更大规模的变化还正在酝酿中。

自从芦沟桥的枪声划破长空，中国的局势已经引起全世界人士的注意。国军在淞沪、台儿庄以及长沙的英勇战绩，已经赢得全球中国友人的同情与钦敬。在未来的岁月中，中国势将在国际舞台上担任众所瞩目的角色。这些年来，爱护中国的人士未免把她估计得过高，不了解中国的人士则又把她估计得过低。无论估计过高或过低，对中国的关切是一致的；而她几乎孤立无援地苦战八年之久，也是无可否认的事实。在这漫长痛苦的岁月中，她与具有优越的武器、严密的组织以及宗教的爱国狂热的强敌相周旋，愈战愈奋，始终不屈。

不论是本身的努力，或者友邦的援助，都不能使中国在旦夕之间达到现代工业化民主国家的水准；但是她的敌人也不可能在几年之内，甚至几百年之内，灭亡她。在未来的岁月中，中国将是举世人士注意力的焦点，因为未来的和平与中国之能否臻于富强是息息相关的。

中国怎样才能臻于富强呢？这个问题必须由她自己单独来解决。友邦的密切合作固然可以加速她的成功，但是她必须独立担负起使自己成为世界和平支柱的责任。

中国既不是一个天神般万能的国家，也不是一个低能的毫无作为的国家。她是一群有感情、有思想的凡人结合而成的国家。他们有爱、有恨；有美、有丑；有善、有恶；有成就、有失败；有时充满希望，有时陷于绝望。他们只是一群平平常常的人，世界人士不能对他们有分外的要求和期望。中国没有解决一切困难的万应灵丹，也没有随心所欲脱胎换骨的魔术。如果她已经有所成就的话，那也是平时以汗，战时以血换来的。

如果有人问：“中国的问题究竟在哪里？”作者只能答复：中国正有无数的问题等待四亿五千万人民去解决，而且不是任何短时间内所能解

决。有些问题是企图征服她的敌人造成的，有些则是蜕变过程中她本身所制造的；另有一些问题是客观环境引起的，也有一些问题则是历史的包袱，有一些比较困难的问题已经在战前几年内解决，或者局部解决，更有许多问题则尚待分别缓急，逐一解决。

回顾作者身经目睹的过去五十年，以及作者所熟悉的过去一百年，甚至追溯到作者所研习过的中国的悠久历史，作者已经就其所知探求出若干问题的线索，有些问题深深植根于过去，有些则由急剧的变化所引起。作者已经力求平直客观地陈述中国过去所发生的变迁，尤其是过去五十年内所发生的事情。对于愿意与中国合作，共同解决妨碍持久和平的若干问题的国际友人，本书或可提供一点资料，帮助他们了解中国人民的生活与问题。合作是勉强不来的，必须彼此相互了解，然后才能合作。欲谋持久的合作，必须先对一国的真实背景有所了解，包括心理、情感，以及道德等各方面。

因此，作者对于日常琐事也往往不厌其详地加以描写，希望藉此使读者对中国人民在战时与平时所反映的心理、情感和道德等，能有比较亲切的认识，日常琐事往往可以反映一个国家的重大变迁，希望读者多少能从作者所记述的身边琐事中，发现重大史实的意义。

蒋梦麟

1943年于重庆

PROLOGUE: FRONTIER CITY

During a world upheaval with bombs dropping from the sky and bursting all around, one is apt to wonder what caused these terrible things to happen.

What has happened in the world in the last decade is not something that merely dropped from the sky. Events have their causes. In the last years of the war, as I cast my mental view beyond the horizons of Kunming, where most of this volume was written, I saw how one event had led to another, with consequent social and political changes. Musing over the past in that scenic city on the Burma^[1] Road overlooking tranquil, historic Kunming Lake, with bomb-shattered houses standing around me like the remnants of Pompeii, the scenes of what had happened during my lifetime unfolded themselves like a dream clearly and vividly before me; and I set pen to paper to put down what I had seen with my own eyes during the last half century of rapid change in the life of my country.

As I began to write we were in the midst of heavy munitions traffic coming in by truck from Burma. The fighting planes of the American Volunteer Group known as the "Flying Tigers" droned over our heads. War profiteers and truck drivers roamed the streets by hundreds and thousands with their pockets full of bank notes, while the price of commodities soared sky-high.

A British friend remarked to a professor of our university that we ought to have controlled prices at the beginning of the war. "Well," said the professor with a tinge of humor, "we will know better in the next war." He went on to remark that if he had had the capital he might have followed the example of the Greek philosopher who cornered olives in ancient Greece in anticipation of a poor olive crop. When the crop failed, he was rich. But the professor had no capital and too little of that sort of foresight, and in addition, too much of patriotism in his way.

After Pearl Harbor came waves of bad news of the Allies.

Hongkong, the Malay States, and Singapore fell one after the other. The enemy headed for Burma. China rushed troops there; they retreated, after a stubborn resistance, through the mountains and swamps of Upper Burma, living on banana roots. They were greatly annoyed by the leeches that dropped on their heads from trees, suckers that hooked onto you and drank your blood. If you tried to tear one off, it carried away in its mouth a piece of your flesh. The best way of getting rid of these nasty parasites was to rub salt on them, but salt there was none. The next best way, in the circumstances, was to slap at them until they gave you up.

Chinese nationals in Burma left by tens of thousands, and made their way back to China by the Burma Road. Enemy planes bombed and machine-gunned them. Three thousand people, men and women, young and old, died on the way. A torrent of refugees flowed along the road into Kunming. Streets were crowded with thousands of distressed people and public buildings were set aside for their temporary lodging. After two or three months they gradually melted into the neighboring provinces; many went back to their native provinces of Fukien and Kwangtung.

The Burma Road, built in eight months by the hands of some eighty thousand farmers, men, women, and children, was now cut at the other end and rendered useless. Kunming, once on the high-way of international traffic, was now an isolated city, and only by air could one travel to India. The Yunnan-Burma Railway, under construction by 250,000 men, was to be finished within twelve months; it was partially built, then suspended. China was cut off from the world, with the enemy on three sides and only the faintest trickle of supplies remaining. In this isolation she held out, fighting for her national existence every inch of the way, until the end of the war.

Let us forget recent history for the moment and look back to the past to see what we can learn from it.

[1] Burma : 缅甸在英国殖民统治时期的旧称，现官方名称为Myanmar。

前言：边城昆明

炸弹像冰雹一样从天空掉下，在我们周围爆炸，处身在这样的一次世界大动乱中，我们不禁要问：这些可怕的事情究竟为什么会发生呢？

过去几十年内世界上所发生的事情自然不是从天上掉下来的。任何事情有它的起因。本书的大部分是二次大战将结束时在昆明写的，当我们暂时忘掉现实环境而陷入沉思时，我常常发现一件事情如何导致另一件事情，以及相伴而生的政治、社会变化。昆明是滇缅公路的终点，俯瞰着平静的昆明湖，城中到处是敌机轰炸后的断垣残壁，很像庞贝古城的遗迹。我在这边城里冥想过去的一切，生平所经历的事情像梦境一样一幕一幕地展现在眼前；于是我捡出纸笔，记下了过去半世纪中我亲眼目睹的祖国生活中的急剧变化。

当我开始写《西潮》的故事时，载运军火的卡车正从缅甸源源驶抵昆明，以“飞虎队”闻名于世的美国志愿航空队战斗机在我们头上轧轧掠过。发国难财的商人和以“带黄鱼”起家的卡车司机徜徉街头，口袋里装满了钞票。物价则一日三跳，有如脱缰的野马。

一位英国朋友对西南联大的一位教授说，我们应该在战事初起就好好控制物价。这位教授带点幽默地回答说：“是呀！等下一次战争时，我们大概就不会这样笨了。”这位教授说：如果他有资本，他或许早已学一位古希腊哲学家的榜样了。据说那位希腊哲学家预料橄榄将欠收而囤积了一大批橄榄。后来橄榄果然收成不好，这位哲学家也就发了大财。可惜我们的教授没有资本，也没有那种未卜先知的本领，而且他的爱国心也不容许他干损人利己的勾当。

珍珠港事变以后，同盟国家节节失利。香港、马来联邦和新加坡相继陷落，敌军继续向缅甸推进。中国赶派军队驰援印缅战区，经激战后撤至缅北的丛林泽地，有时还不得不靠香蕉树根充饥。尤其使他们寝食难安的是从树上落到他们身上的水蛭，这些吸血鬼钻到你的皮下，不动声色地吸走了你的血液。你如果想用力把它拉出来，它就老实不客气连肉带血衔走一口。对付这些吸血鬼最好的办法是在它们身上擦盐，但是在丛林里却又找不到盐。在这种环境下，唯一的办法是用手死劲去拍，拍得它们放口为止。

成千成万的缅甸华侨沿着滇缅公路撤退回中国。敌机沿途轰炸他

们，用机枪扫射他们，三千妇孺老幼就这样惨死在途中。难民像潮水一样沿滇缅公路涌入昆明。街头拥满了家破人亡的苦难人民，许多公共建筑被指定为临时收容所。经过两三个月以后，他们才逐渐疏散到邻近省份；许多人则直接回到福建和广东老家。

八万左右农民以及男女老幼胼手胝足建筑成功的滇缅公路现在已经因另一端被切断而告瘫痪。一度曾为国际交通孔道的昆明现在也成为孤城，旅客只有坐飞机才能去印度。二十五万人加工赶筑的滇缅铁路，原来预定十二个月内完成，但是部分筑成以后也因战局逆转而中止了。中国已与世界各地隔绝，敌人从三方包围着她，只有涓涓滴滴的外来补给靠越过世界驼峰的空运在维持。中国就在这种孤立无援的窘境中坚持到底，寸土必争，直到战事结束为止。

我们且把近代历史暂时搁在一边，让我们回顾一下过去，看看能否从历史中找出一点教训。

PART ONE IN AN OLD EMPIRE

CHAPTER 1 HOW EAST AND WEST MET

Centuries ago certain wise men from the East, following a star, traveled to the land where a religion was born destined in centuries to come to play a great part in the life of Western nations. A religion based upon meekness was adopted in the course of time by these peoples of extreme vigor. This religion of meekness, which teaches "whosoever shall smite thee on the right cheek, turn to him the other also," won its way through the West slowly but persistently by braving Roman lions and enduring hardships, suffering, and persecution. A few centuries later it began to trickle into China with the same meekness.

The Nestorians came to China during the Tang Dynasty (618-905 A.D.)^[1], and the Tang emperors built churches for them. But they did not find China a fertile soil for their religion. Another few centuries passed; the Jesuits found their way into the court of the Ming Dynasty (1368-1643 A.D.)^[2]. They brought with them Western astronomy, which caught the fancy of the Ming emperors.

The Western peoples, meanwhile, with vigorous blood in their veins, not only absorbed the new religion but also created science and made inventions which led to an industrial revolution in recent centuries. As a result they amassed an immense amount of capital, which had to find an outlet in other countries not as yet industrialized. It flowed to the East, first in a trickle, then in torrents, and finally in tides which flooded the Orient and almost swept China off her feet.

China had no trouble with Christianity, nor with any other religion. Only when it was coupled with commercialism supported by gunboats in the middle of the nineteenth century was the religion of meekness seen through Chinese eyes as that of an aggressor. For a religion seen arm in arm with force changes its color, and the Chinese were unable to dissociate the two. This naturally gave rise to the impression that while Buddha came to China on white elephants,

Christ was borne on cannon balls.

Since we were knocked out by cannon balls, naturally we became interested in them, thinking that by learning to make them we could strike back. We could forget for the time being in whose name they had come, since for us common mortals to save our lives was more important than to save our souls.

But history seems to move through very curious ways. From studying cannon balls we came to mechanical inventions, which in turn led us to political reforms; from political reforms we began to see political theories, which led us again to the philosophies of the West. On the other hand, through mechanical inventions we saw science, from which we came to understand scientific method and the scientific mind. Step by step we were led farther and farther away from the cannon ball—yet we came nearer and nearer to it.

The story is a long one, but it all happened in the short span of a hundred years, the dramatic part of it in not more than half a century. I say a hundred years because in 1942 Hongkong was to celebrate its centenary as a British possession,[\[3\]](#) and it was a coincidence that Japan, Britain's former ally, had snatched it from British hands in the previous year by lightning attack. I mention Hongkong without the least intention of rubbing an old sore, only because it will serve as a convenient landmark for the earlier part of China's westernization. As everyone will remember, this group of hilly islands—situated in the south sea not far from Canton, and nests for pirates a century ago—was ceded to Britain in 1842 at China's defeat in the so-called "Opium War." What actually happened was that China, having forbidden the importation of opium, Britain's principal export from India to that country, burned British opium at Canton. Britain retaliated with cannon balls and China lost the war.

Torrents of Western manufactures began to pour in through the subsequent opening, also stipulated under the treaty, of five coastal cities as commercial ports. These cities lay scattered at fairly regular intervals along the coast of the prosperous southern half of the country. Thus new frontiers were formed; China's frontiers had lain

hitherto solely inland, to the north and northwest. This change in China's map was the turning point in her history.

These five seaports—Canton, Amoy^[4] , Foochow, Ningpo, and Shanghai—running from south to north in a chain, served as depots for Western manufactured goods which flowed thence into the richest and most populous parts of the country, the Pearl and Yangtze Valleys. Supported by gunboats the Western merchants squatted like octopuses in the ports, sending their tentacles into the interior of the rich provinces. China, an enormous country larger than the United States, was herself unaware of the penetration and blind to what was bound to happen later on. The life of her millions went its leisurely and contented way from the cradle to the grave without making the least effort toward modernization, while a section of the people began casually to pick up foreign manufactures, whether for use, for pleasure, or out of curiosity.

The gunboat policy of the Western Powers, however, carried with it not only manufactured goods and opium but also the healthy seeds of Western science and culture, which we did not see at the time but which were to germinate years later to the benefit of China—one of the ironies of history.

Meanwhile the westernization of Japan went on by leaps and bounds. Again, China was unaware of it. Half a century later, by 1894, the little Island Empire suddenly loomed large over the horizon of the China Sea, sprang a surprise attack upon the sleeping giant, and bit off a mouthful. The next to go after Hongkong was Formosa^[5] , an island province near the east coast hundreds of times larger than Hongkong. China now began to feel the pinch and rub her eyes in wonder. What was it that was disturbing her sweet dreams?

My original plan was just to write out what I know and feel about my own country. As I have let these mental pictures run their course, one after another, they have developed into a volume something like autobiography, something like reminiscences or contemporary history. Whatever it may be, it is all from the indelible images that unrolled in my mind as clearly and vividly as if they had been printed there only

yesterday. In the rapid march of events I felt myself a tiny cog on the vast whirling wheel.

[1] 唐朝 (618—907) 。

[2] 明朝 (1368—1644) 。

[4] Amoy : 15—16世纪葡萄牙殖民主义者对厦门的称呼。

[5] Formosa : 16世纪葡萄牙殖民主义者对台湾的称呼。

CHAPTER 2 VILLAGE LIFE

I came into the world as the youngest of five children, four boys and a girl, in a well-to-do family in a small village. The night before I was born my father dreamed of a bear coming to our house, the sign of a male baby. The next day the good omen came true: the spirits of our forefathers in heaven presented another son to the family.

Before my eldest brother was born, Father had dreamed of receiving a bouquet of orchids. So the child was named Orchid. My second brother was named Peach for the same reason. Naturally I was called Bear. As for my sister and third brother, Father had no dreams. My name was afterward changed from Bear to Unicorn when I registered at Chekiang College, because of events in the schools.

I was born a war baby, for the year in which I came into the world saw Britain cut off Burma from Chinese control; and the Sino-French War had just ended the previous year, by which China lost her suzerainty over Indo-China^[1] to France. The peeling of dependencies off China was a prelude to further invasion by foreign Powers. For China kept dependencies to serve as buffer states, not for exploitation. She never interfered with their internal administration.

When the peel was gone, germs began to make inroads into the orange. However, people in China were not aware of it. These wars on the southwest frontiers were far away and mere ripples on her vast ocean. The villagers were the least concerned—in their profound isolation they gave less attention to such news than they would to ghost stories. Yet China drew a part of her defense forces from among just such villages, not interested in war.

When I came to know the little world around me I noticed that people spoke more realistically of the Taiping Rebellion, which had destroyed a part of the village some thirty years before. The chief of the elders of the Chiang clan, a carpenter by trade, had once joined the rebels. He told us many stories of pillage and atrocities committed by the Taipings,^[2] of which he himself had been guilty. To listen to

these horrors often made a chill run all over my body. Yet of the international wars of recent years people talked only casually, utterly unconcerned. There were fabulous stories of victory—simply amusing, in a sense tragic, as one thinks of them in after years. For the fact was that while Chinese troops made a good showing in some engagements, the conclusion was complete defeat.

The spearhead of modern invention had not yet penetrated to the villages and they lay there, secret, primitive, and calm, as our ancestors had founded them some five hundred years before. Yet the people were not idle. The farmers had to plow, sow, and reap; the fishermen to cast their nets in the canals; the women to spin, weave, sew; the traders to buy and sell; the craftsmen to make their beautiful articles; the scholars to read aloud, memorize the Confucian classics, and take civil examinations.

There were hundreds of thousands of such villages in China, varying only in size and mode of life according to topographical and climatic differences. The traditions, family ties, and trades which held them together were more or less the same. A common written language, common ideals of life, a common culture and system of civil examinations bound the whole country into a single nation known as the Chinese Empire.

Together with the large cities and centers of trade, these hundreds of thousands of villages in China kept the country supplied with food, goods, scholars, soldiers, and the rank and file of officials of the government. So long as they remained untouched by modernization, China would remain the same; if she could have built fences round the treaty ports they might have remained the same for centuries to come. But the tide of westernization refused to be contained within the treaty ports. It made itself felt in the immediate surroundings, extending gradually along waterways and highways. Villages and towns near the five invaded cities or along communication lines were the first to succumb. Like transplanted trees feeding on China's rich soil, branching off and multiplying fast, the modern influence extended in the course of some fifty years far into the interior.

The village of the Chiangs was one among many spread—with intervening spaces of one or two miles of luxuriant rice fields—over the alluvial plain formed by the Chien-tang River. This is well known for its scenery, both in the upper part and in the lower section near the mouth where the famous bores of Chien-tang make their impressive seasonal sweep in from the sea. The high, abrupt front of the tidal bore is of a grandeur to over-shadow Niagara Falls. Down the valley, through the centuries, the river slowly laid its rich earth, building its shores farther and farther into Hangchow Bay. On the newly formed shores people erected temporary enclosures to hold the brine from which common salt is made. A large quantity of salt was produced every year, supplying the needs of many millions.

After a number of years, as the shores were further extended, the salt would begin to exhaust itself and dikes would be built along the drying land at some distance from the water. The embanked land was now ready for pasturing. After a long period it was capable of growing cotton to feed the domestic looms, or mulberry trees to nourish silkworms. It was probably still another half century before it could be turned into rice fields. For plenty of water is needed for growing rice, and it takes time to build reservoirs and a network of canals for irrigation. And the land takes time to mature.

The village of the Chiangs, by the time I came to it, was situated about twenty miles from Hangchow Bay. Around it were endless chains of villages, large and small, running in all directions—southward to the mountains, northward to the sea, and east and west to towns and cities all connected by miles of footways or canals. The genealogy of the Chiangs tells us that our first ancestors immigrated to the Yuyao district from Hueichow, a mountainous region where the famous river finds its source. They came presumably to reclaim the then newly formed land. In my own time an ancient embankment was still visible in front of our clan temple, the Temple of the Four No's, popularly known as the "Temple Facing the Embankment."

Perhaps the reader would like to know what is meant by the "Four No's." They mean to see no evil, hear no evil, speak no evil, do

no evil. The sets of three monkeys with hands covering their eyes, ears, and mouth, respectively, that one finds in Oriental bazaars exemplify them—the fourth being left out for obvious reasons. These moral precepts came from the Confucian classics. Moral ideas were driven into the people by every possible means—temples, theatres, homes, toys, proverbs, schools, history, and stories—until they became habits in daily life. This was one of the ways by which China attained social stability: governing the life of the people by moral bonds.

During the long centuries of history the population of China had expanded from its northern beginnings to the south, first to the Yangtze Valley, then to the Pearl River Valley, and finally to the mountainous regions of the southwest. The fertile soil of the south and the devastation caused by flood from the incorrigible Yellow River, as well as by invasions of warlike tribes from outside the Great Wall, together with the natural expansion of the race, all contributed to cause repeated southward movements of the Chinese people. It was following in the wake of such a movement that my ancestors came to stay here on the shores of Hang-chow Bay.

Our family tree owes its existence to a sprout of a royal family planted in consequence of a feud somewhere in the lower Yellow River Valley some three thousand years ago. That tract of land was called "Chiang," the ancient name for a species of aquatic grass (*Hydropyrum Latifolium*). The modern name of this plant is Chiao-pei; used as a vegetable it tastes somewhat like bamboo shoots. The country was probably so called because of the luxuriant growth of the plant in those regions. My first ancestor in the Chiang line was made the first feudal lord to rule over that land toward the end of the twelfth century B.C. He was Pei-ling, third son of Prince Regent Chow-kung of the Chow Dynasty, and his descendants took Chiang as their family name.

In the third century A.D., during the period of the Three Kingdoms, one of our ancestors appears in history. His name was Chiang Wen and he lived in the Yangtze Valley. This shows that the Chiangs living south of the Yangtze had already migrated from the

Yellow River region by the third century. From our first ancestor down to the present day all the names in the direct line have been recorded in our genealogy. How authentic they are I cannot tell, for their lives were so obscure that verification is not easy, but this much we can say: all the Chiangs settled in the areas south of the Yangtze are of the same origin. How far we can trace back accurately to this origin we don't know, but it is certain that all the Chiangs living in the province of Chekiang find their common ancestral tree in Hueichow.

I am of the seventeenth generation in the ancestral line. The first settlement of our village by the Chiangs, more than five hundred years ago, came toward the end of the Yuan or Mongol Dynasty. During these five centuries, under two foreign dynasties[3] and one Chinese, the Chiangs saw the fall of the Mongols, the rise and fall of the Mings and the Manchus, and the Taiping Rebellion which almost overthrew the latter. During these changes they lived, worked, and retired to their graves in the same manner and in the same village. Dynasties came and went, but the village of the Chiangs remained the same.

During the Taiping Rebellion a few houses were burned by the rebels. The people ran into the mountains, but as soon as peace was restored they all came home like bees to the hive. In my childhood some of the ruins still stood to tell the story of the war.

When the Ming Dynasty fell at the hands of the Manchus, I was told by the villagers, people were not aware of it until the edicts of the new regime reached the villages. There was a play going on in one of the near-by village theatres when they were informed that they lived under a new dynasty. Perhaps the only forcible change in the life of my clansmen was the edict ordering the people to wear a queue and forbidding the male population to dress in the Ming style. Resentment was so great that men wore the Ming costume, to their graves; it was a common saying of our clan that "men surrendered but women did not; the living did, but the dead did not." The practice persisted in some cases until the downfall of the Manchu Dynasty[5] in 1911, when the Republic was established—a period of two centuries and a half.

Our village consisted of only some sixty households, with a

population of about three hundred. It was one of the smallest among many villages, surrounded by a canal on three sides. On the south side a footway paved with granite slabs ran along it, leading across bridges to neighboring villages and towns. The canal was but part of a network connecting with large rivers which in turn led to such far-flung cities as Hangchow, Soochow, and Shanghai.

Although the village was small, it commanded easy communication by both land and water. Bridges spanned the canals and weeping willows grew luxuriantly on the banks. Fish, shrimps, eels, and turtles were abundant. Here and there one would find anglers taking their ease in the shade of the willows. Oxen could be seen walking in leisurely fashion round the water wheels to propel the chain of paddles which brought fresh water through a long trough to the fields. Miles of wheat fields in the spring and rice fields in summer gave one the feeling of living in a land of perpetual verdure. Swallows shuttled back and forth in the blue sky above a sea of rippling green, while eagles floated high above, circling around the village in search of little chicks.

Such was the background of my childhood and the environment of my clansmen. They lived there for more than five centuries with little change in life. Nature was kind to them. The land was fertile. Floods and droughts were not frequent. Rebellions or wars in the country at large did not disturb them more than once or twice during those long centuries; they lived in peace and contentment in a world by themselves, with little distinction between the very rich and the very poor. Sufficient rice, cotton, silk, fish, meat, bamboo shoots, and vegetables kept the people warm and well fed.

Morals, beliefs, and customs remained unchanged in Chinese villages through centuries of dynastic changes, in peace or war. For the villagers the world was good enough and no improvement was needed. Life alone was unstable, but consolation could be found in the transmigration of the soul. At death the soul was said to leave the body and enter that of a baby then being born. Indeed, in my own time I have seen convicts on the way to execution who shouted to the

spectators that after eighteen years they would be young men again. What a consolation!

Our villagers said that a bad or sinful man's soul would be degraded to become a poor man, a horse, or a pig, or even split into minute parts to be insects or worms, according to the degrees of sins he had committed. The soul of a good or virtuous man would be promoted to a higher station in the next life.

What was sinful or virtuous had of course its accepted standards. The highest of all virtues was filial piety; the greatest of all sins was adultery. Filial piety kept the Chinese family intact and chastity kept the Chinese race pure. Respect for the elders, faithfulness to friends, loyalty to the sovereign, honesty in word and deed; kindness and sympathy to the poor, the infirm or sick, all were regarded as virtuous behavior. Usury, treachery, lying, cheating, and the like were among sinful acts. Denunciation of a person whose conduct one disapproved often took the form of telling him that he would become a dog or a pig in his next life.

In business dealings verbal promises were as good as gold. On the whole, people were honest and trustworthy. Any person found to cheat would be surely tabooed by the whole community.

Marriages were not the business of the parties concerned; the parents of both parties made the match. As a rule, men married at twenty and women at eighteen. The men usually remarried if their wives died, while women of well-to-do families generally remained widows if they survived their husbands. These unfortunates were regarded as most virtuous—Imperial posthumous honors were conferred upon them.

The local government of the village was a fully self-governing body without outside interference. It was a government by elders of the clan with the Ancestral Hall as its seat. "Elders" does not mean elderly men. They might be young but represented the oldest living generations in the ancestral line. They were obligated to see that the ceremonies of ancestral worship were properly performed and were entrusted with the duties of arbitration in case of dispute among the

clansmen. No one was allowed to go to law without first going through arbitration. To "open the gate of the Ancestral Hall" meant to summon an arbitration court of the elders. Anyone in the village could go there to observe the proceedings. Candles and incense burned before the tablets of the ancestors and everyone felt that their spirits watched invisibly from the ethereal realm. Before these ancestral spirits the parties concerned must speak the truth, nothing but the truth. Generally they did.

For the arbitrators, fairness was the motto. Public opinion in the village was also a very important factor, of which all parties concerned were conscious, and there was also the public opinion of neighboring villages. No elders would dare to defame the Ancestral Hall with unfair judgments. Thus disputes were usually fairly settled in this way. No lawsuit was necessary.

There were, in fact, few cases of dispute which needed arbitration by "opening the gate of the Ancestral Hall," for people regarded this as a matter of weight, to be resorted to only in a case of grave importance. Disputes were usually settled by informal arbitration before the gate of the hall.

Scholars and the gentry had a strong voice in the local government. They also participated in cases of arbitration and the making of rules and regulations for the village. They formed inter-village committees to settle disputes and look after the common welfare of neighboring villages.

Land taxes were brought by owners of land to the district or hsien treasury, about twenty miles from the village. No tax collectors ever visited us. People never felt the influence of the state—it was a common saying that "Heaven is high above and the Emperor is far away."

Public worship other than ancestral, such as worship in Buddhist temples or temples of deified persons, national heroes, or local gods that had grown out of legends, was a matter of individual concern. Anyone might worship in any or all of these places; there was no religious restriction or persecution. Your gods are as good as mine. If

the Christians had allowed their Christ to sit beside Chinese gods in Chinese temples, I am sure that the villagers would have worshiped Him just as reverently as they did other gods.

Superstition grows out of the credulity of simple folk—it rolls like a snowball growing as it rolls along. Thus it is that superstitions gather through centuries of accumulation.

As I have said, the villagers believed in the transmigration of the soul. This does not seem to reconcile with the idea that there are spirits traveling about with lightning speed in the ethereal realm. Soul and spirit, however, were two different things: the soul transmigrated, but the spirit remained in space. The spirit of a great man lives eternally in the invisible realm, while that of a common man evaporates and dwindles, disappearing entirely with the course of time, or rather when it is entirely forgotten. The spirit moves with instant speed anywhere it wills. It may live in the Ancestral Hall or in its grave as it chooses. This is perhaps one reason why the Chinese are always willing to spend large sums on elaborate tombs and palatial ancestral halls.

My people always see things in relation to man. If spirits and gods wandered about in an unseen world without relation to, or contact with, living man, people would not see any use for them and would hardly believe they existed. Yes, they have images and tablets sitting in the shrines. But these sacred things, however awe-inspiring, do not step down and talk to them except in dreams. There must be something more active or lively. This was found in mediums, in automatic writing, or in the interpreting of dreams.

If someone was thinking of a departed friend or a dead relative, he could invoke the spirit to come to him through a medium, who was always a woman from some far-distant place. When the spirit called for approached, she would contract her ears three times as the signal of arrival of the invisible guest. This contraction of the involuntary muscles of the ear was something ordinary people could not do and this made them believe in the medium much more. She usually spoke through her throat like a cat's purr, so that the words uttered could be

interpreted to suit the wishes of the listeners. When she had traced out something more definite in the course of conversation, she would purr more distinctly, to the amazement of the audience.

False or true, it served as a comfort to the hearts of living relatives. I still remember how thrilling it was when my dead mother conversed with me through a medium half a century ago.

Automatic writing is of a higher order. It was generally practiced by the educated class. Two persons were needed to hold the ends of a horizontal bar with a long wooden pin attached at the middle, which wrote on a tray of sand. A god or the spirit of some famous personage, it was believed, could be invoked to write. The device—not unlike a Ouija board—could be asked to predict future events. It might foretell a bumper crop in the coming year, or an impending famine, or peace, or war. One could ask almost any question. Poems were written by operators who did not know how to compose a poem; names of persons present unknown to the writers might be written out on the sand. It was all done through the subconscious as any person who knows about psychology can explain.

Mediums invoked only spirits of departed relatives or friends; automatic writing might invoke the gods as well. In dreams both might come voluntarily, uninvited. I heard numerous interpretations of dreams which I do not remember now, except for one instance. One of my great-granduncles went to Hangchow to take the civil examinations for the second degree. In his examination cell (where candidates remained for many hours) he saw in a dream a hand of enormous size stretch into the room through the window. This was interpreted to mean that, since it was the greatest hand he had ever seen, he was to head the list of successful candidates. And the good omen came true when the results of the examination were made known.

Gods, dead friends, relatives, or spirits might enter one's dreams to convey their wishes, requests, or warnings. A dead mother might request her son to repair her tomb. A dead father might demand paper money from his son. A good imitation of paper money was always

burned at funerals; it was supposed to accompany the dead for use in the world to which they go.

A tragic coincidence happened in our village about which people talked for years after. Ah Yi, a young farmer, was to take his rice by boat to a neighboring town. Early in the morning he was found sitting on a bench in a somber mood, very rare for a farmer. To inquiry he replied that in his dreams the previous night his dead mother had warned him not to go near water. What could it mean? He was a good swimmer.

At dusk he brought his junk home and shoved the boat toward the landing with his bamboo pole. He joked with his friends on the bank that his danger was over, and laughed heartily. Suddenly his feet slipped and he plunged into the canal, where he struggled for a moment but went under. Friends dived for him but could not find him. After half an hour he was pulled out, cold and stiff, from the entangling roots of an aged willow tree that grew by the water.

People said it was the water ghost that hid him there. Perhaps it was a water monkey that nested in the roots. Several good swimmers drowned near that spot. Often the villagers saw the "water ghost" sitting on the bridge near by in the moonlight, staring at the moon. It plunged into the water as soon as it saw people approaching.

Illusions, hallucinations, dreams, nightmares, imaginings, wishful thinking, coincidence, rumors—every kind of inexplicable phenomenon of mind or nature, all contributed to swell the snowball. And time kept it rolling.

Medicine in the village was, of course, primitive. We had to go miles to see herb doctors in the bigger towns. For ordinary illness or certain more serious cases Chinese medicine is very effective. But in many serious ailments the old medicine is useless or even dangerous.

I myself have been twice at the point of death and was in each case saved by herb medicine, without which I would not be here writing these chapters. On one occasion I had been ill for many months and was reduced to emaciation. A famous herb doctor

specializing in children's diseases saved me. On another occasion I contracted diphtheria and was treated by a Chinese throat specialist. He pricked my throat with a needle all over the affected part and then sprayed it with some kind of white powder. I do not know what it was, but my throat felt cool and soothed as after smoking a mentholated cigarette.

That part of my throat was relieved, but the case developed other complications. My tonsils swelled to the size of goose eggs, my cheeks puffed up like a balloon, and I could hardly swallow even liquid food. My nose kept bleeding as if I should bleed to death. Finally I could barely breathe and only a faint hope was left. While my life hung by a thread my father said that he would try to "treat a dead horse like a live one." This was a Chinese proverb meaning that if the horse is ready to die anyway, it is worth trying the most extreme methods to save it. He dug into old medicine books, in which he found a prescription for a case showing similar symptoms. Several heavy doses were taken. The first brought immediate relief; in an hour or two I felt much better. By the next morning my tonsils had dwindled, and after a week or so I could take regular meals.

I have seen with my own eyes broken legs healed by ancient methods, while colds, sore eyes, coughs, and rheumatism were effectively cured by herbs.

Chinese doctors discovered long ago an antismallpox "vaccine" taken from the human body. They used a kind of herb that had once been inserted into the nostrils of an affected child. Putting it into the nose of a normal child gave the latter what was usually a very much milder form of the disease. There were some cases of mortality among the hundreds thus "vaccinated," for I often heard of a death here and there. My father preferred modern vaccination to the old Chinese method. All the children in our family and many of our relatives were vaccinated by the modern method without a mishap.

We did not know how to cure malaria in our village. We let it run for some weeks or even months until it stopped of itself. There were no malignant cases in our locality and while it might sap the energy of

the affected person it was not fatal. When quinine powder was brought in by missionaries or merchants from Shanghai, people found great relief in Western medicine.

Some of our clansmen believed in the healing power of the supernatural. They prayed in a temple and took a pinch of ashes from the incense burner as a panacea for all diseases. It was a sort of psychological treatment and did cure in some cases where psychology could play its part.

In the gardens of our house each month of the year was presided over by the chief flower of that month. Camellias were for the First Moon—first month of the year in the lunar calendar, corresponding approximately to the Western late January and early February. In the Second Moon almond blossoms took over the reins of government in the flowery kingdom. Peach blossoms were for the Third Moon, roses for the Fourth, pomegranates for the Fifth, lotus for the Sixth, Feng-hsian (*Impatiens balsamina*) for the Seventh, Kwei-hua (*Osmanthus fragrans*) for the Eighth, chrysanthemums for the Ninth, Fu-yung (*Hibiscus mutabilis*) for the Tenth, Shuei-hsian (*Narcissus tazetta*) for the Eleventh, and La-mei (*Chimonanthus fragrans*) for the Twelfth, the last month of the year. Each plant was represented by a particular goddess whom we all loved dearly.

The most popular seasonal flowers were the peach blossoms of spring, lotus in the summer, and osmanthus and chrysanthemums in autumn. In season, the villagers all joined in admiring these beauties of nature.

Festivals brought much enjoyment to both children and grownups alike. The most important was the New Year Festival which began near the end of the old year—on the twenty-third of the Twelfth Moon—when the Kitchen God took leave and went to heaven to report to the Supreme God the year's happenings in the household.

The Chinese believed in polytheism. But above all deities was the Supreme God who controlled them all. It was an anthropomorphic idea that He reigned over the ethereal realm like the Emperor of China. Other gods were his ministers, governors, and magistrates.

The Kitchen God was entrusted by the Supreme God with charge of the household. Naturally he had to report to Him at the end of the year. The Kitchen God was a vegetarian and was therefore treated with a vegetarian dinner before leaving for heaven. Everybody had to be very careful during the year in word and deed, since bad as well as good things were reported. Both the sending-off and the welcome-home ceremonies consisted of dinners for the family, burning of paper money, and firecrackers.

New Year's Eve was celebrated by a family banquet in which every member must participate. If some member was absent, he or she would be assigned a seat in absentia. Candles burned all night until the next morning and most of the grownups sat up through the night to watch the coming of the New Year. Next morning, on the first day of the year, the family worshiped Heaven and Earth. Candles, incense, paper money, and firecrackers were necessary parts of the ceremony.

The Lantern Festival, part of the New Year celebration, began on the thirteenth and ended on the eighteenth of the First Moon, which was also the end of the New Year Festival. Artistic lanterns—horses, rabbits, butterflies, dragonflies, mantis, cicada, lotus, anything one could think of—adorned the houses and the streets of the towns. We used to go to large towns to see the lantern parade; their streets were thronged with merry-makers.

There were other important festivals, such as the Dragon Festival in the Fifth Moon, the Moon Festival in the Eighth Moon, and the like. The Dragon Festival was celebrated by a boat race with all the boats decorated to look like dragons. The Moon Festival was enjoyed quietly and poetically—after a banquet we took a walk in the bright night and looked at the rabbit on the full, silvery autumn moon in a starless, moonlit sky.

Parades were popular, with hundreds of people participating and thousands watching. They were always religious in character: some god was to make an inspection trip around the villages. An image of the deity was carried in a carved, artistically decorated sedan chair, preceded by pennants, flags, floats, bands of music, monster dragons,

men on stilts, and so forth.

Dragon dances were performed in the public squares of every village as the parade passed by. The men on stilts danced in theatrical roles in the crowded streets. Monstrous flags with fantastic designs of the dragon, tiger, or lion, each carried by dozens of people and supported by lines of rope in front and rear, were indeed a great sight. They moved up the highway among the fields like the sails of the Spanish Armada on a sea of rippling green. It was said that the idea originated during the old days when pirates from the Japan Sea wrought havoc among the people.

Traveling theatres made visits to the villages during festivals or birthday celebrations of deities, or on other important occasions. Each performance started about three o'clock in the afternoon and continued until the next morning with an intermission for supper. A frantic sounding of the gong served as a prelude to let country folk know that the play was starting. Plays were mostly based on historical episodes; the people learned history from the theatre. At the end of each play the moral lesson was invariably brought out. So it served a triple purpose: to teach history and morals as well as to entertain.

The roles of women were played by men, as in Shakespearean times in England. The actors painted their faces in fantastic designs of various colors to differentiate symbolically among virtuous and vile, honest and sneaky, the great and the mean, the stern and the kind. Thus one whose nose was painted white was either treacherous, cunning, mean, or clownish. In daily life we referred to such a person as "white-nosed." A red face suggested a character which was candid or virtuous in some way, but always kind. The "black face" was generally severe and stern. We often called a man who behaved sternly "black-faced," while "red-faced" meant a man who acted kindly or generously. The tradition of symbolic face painting still persists to the present day in Chinese classical dramas.

Such was the world of my childhood. It has been passing rapidly into history. The intrusion of foreign manufactures began the process; invasion from the West, whether by ideas or gunboats, hastened it;

modern science, invention, and industry are to give the finishing touch.

[1] Indo-China : 法属印度支那, 源自法文“Indochine”, 通常指曾经是法国殖民地的亚洲东南部地区, 包括今日的越南、柬埔寨、老挝三国。在本书中亦特指越南。

[2] An uprising which started in the south in 1851, capitalizing peasant discontent, and swept over most of the country until crushed with foreign help several years later. (作者原注)

[3] foreign dynasties : 指蒙古族和满族分别建立的元朝和清朝。

[5] Manchu Dynasty : 清朝 (Qing Dynasty) 。

CHAPTER 3 EARLY SCHOOLING

Education was a family affair. Boys were prepared for the Imperial civil examinations, or for business, in the family school. Girls were tutored separately. Children of poorer families which could not support a teacher were destined to be illiterate.

There was generally one teacher to a dozen pupils, taught individually. There were no blackboards or classes in the school. The teacher was usually serene, sitting the whole day at his desk from early in the morning to sunset. The pupils did likewise. As clocks were very rare then, there was none in the school. In winter, when the day was short, lessons after dark were given by the dim light of a vegetable-oil lamp. Time was measured by a sun dial. On a cloudy or rainy day you had to guess your time. Often you missed the mark by an hour or two, but it did not matter much, for the lessons were given individually.

I was sent to school at the age of six, the traditional school age. But my actual years were only five and a month or so, since with us your age is called "one"—that is, you are in your first year—when you are born. The ordinary desk was a bit too high for me, so that my chair had to be raised by a wooden stand to bring me level with the desk. My tiny feet were thus left dangling from the seat.

I was given a textbook: *San-tze-ching*, or the "Classics of Three Characters." It is so named because each sentence contains three words, and it was rhymed so as to be easier for children to remember. After fifty-odd years I am still able to recite a great part of it. It starts with the following passage—I give a literal translation:

Man is originally

Endowed with a nature which is all-good.

And therefore by nature people are all alike.

It is practice that makes the divergence.

If they are not properly taught,

Their nature will be thwarted.

The all-good in human nature is the starting point of the Confucian philosophy of life and education, which exercised a strong influence upon the French Encyclopedists of the eighteenth century.

I understand what it means now, but of course I didn't then.

I must tell how I hated the school! After a short time, noticing that the attention of the teacher was not on me, I climbed down quickly from the chair and ran like a dog that has broken from its chain back home to my mother's lap.

"Why do you come home, my child?" asked my mother in surprise.

"The school is no good, the teacher is no good, and the book is no good," I replied.

"Aren't you afraid of your teacher? He may come and get you," said my mother kindly.

"I'll kill the teacher! I'll burn the school!"

My mother didn't send me back to school that day, nor did the teacher come.

Early the next morning my nurse woke me, spoke many kind words to me, and persuaded me to go to school again. From childhood I responded to kind words only; no coercion ever did any good. It was the gentle reasonableness of my nurse that made me go back voluntarily.

I took to school my own rattan chair, which was very light. A servant followed me and put it on the stand to match the height of the desk. The teacher made no remark and acted as if nothing had happened, but I noticed several schoolmates making faces at me. I hated them but pretended not to see them. I climbed up on the chair and sat there without resting place for my poor feet. More lessons were given, in the same book. I read very loud, as was required in the old type of school, repeating the meaningless text again and again till

every word was learned by heart. When the sun shone directly above our heads it was midday. The teacher ordered me to go home for lunch. Immediately after lunch I went back to school and kept on learning the same thing till sunset.

Day in and day out, there was no change in the curriculum. When I finished one textbook another meaningless one came in turn. It was memory and patience that we were training.

We were taught the "three P's" in reading: presence of mind, presence of eye, and the presence of lips. The first means concentration, a requisite for doing any work well. The second is important because by it one gets a clear impression of the ideographic letters, with the various arrangements of fine and intricate strokes in each letter. The third is attained by reading a passage aloud several hundred times; the words then fall from the lips fluently, thus relieving the burden of the memory. We were warned not to commit words to memory by artificial means, because then we would not retain them. If we stumbled in reciting a passage we were ordered to read it over again one or two hundred times more—if the teacher was not in a good humor you would probably receive in addition, without warning, a crack on the skull. Often when the day was over some boys left school with lumps on their scalps.

Discipline and obedience were aimed at without regard for the interest of the pupil. Sundays were unknown. We had half holidays in the afternoon on the first and fifteenth day of each lunar month. In addition, we had during the year several full holidays on festival days, such as the Dragon Festival and the Moon Festival. A comparatively long vacation came about New Year's time. It started on the twentieth^[1] day of the Twelfth Moon and lasted till the same day of the First Moon of the new year, and was called the New Year vacation.

As several years went by, I grew older and learned by heart quite a number of characters. My teacher then began to explain the meaning of the text and studying grew to be less drudgery. From the Confucian classics I began to understand a little of the way to be a righteous man. It began with the culture of the person, then went on

to the fulfillment of duties to the family, to the state, and finally the world. I did not appreciate its full significance until much later.

In the earliest years school was indeed a prison to me. The difference was that in a real prison the inmates have little hope, while in school the pupils had hopes for a bright future. Had not all the famous scholars and statesmen gone through years of suffering in schools? It was through suffering that men became great, we were told to believe. The path was difficult but it was the only road to success.

"If you have tasted the bitterest of the bitter you will become the greatest of the great."

"The Son of Heaven^[2] honors the scholar. While everything else is of a lower order, learning is the highest of all."

"Do not envy others who possess the sword; you have a pen that is mightier."

These common sayings spurred me on the road of learning as the odors of an early spring in the air spur a sluggish horse to green pastures. Otherwise I should have dropped my schooling and taken to business in Shanghai. Ideals, hopes, and will power are the most important factors in shaping one's life. If education fails in these, the emphasis in modern methods upon the interest of the pupil is but a trifling thing. Interest is an important factor in education only when it is subordinated to inculcation of ideals.

It seemed tedious and foolish in the old Chinese schools to commit the classics to memory. But there was the advantage that in later years one could go to memory to find ready references for the conduct of life. In a static society where the world moved very slowly and the rules of conduct would need little modification, it seems to me that the old Chinese method of teaching and learning was quite adequate for the needs it filled. Only, in a country school like mine it ran to the extreme, giving unnecessary hardship to the pupils. I wonder how many promising boys were scared away before they began to realize the importance of learning.

There were no sports or physical exercises in any form in my

school. The boys were forbidden to run fast; they must walk slowly and be dignified. Right after lunch we were required to practise calligraphy. Young life seemed to be practically squeezed out of us.

Nevertheless, the boys found their own way to satisfy their play instincts. When the teacher was absent we would take over control of the school. Sometimes desks were taken to form a platform on which a play could be staged. Chairs and stools would be used as stage properties. Sometimes we played blindman's buff. On one occasion, while I was serving as the "blind," the teacher returned and all the others slipped away. As I caught an easy prey I felt something strange—it was the teacher. The shock was so terrifying that as I write it reels in my senses as vividly as if it had happened yesterday.

In the spring, when school was over in the afternoon, we flew kites. We made our own. Some took the form of a monster centipede, others a gigantic butterfly. At night we would send into the sky along the kite string a chain of lanterns, numbering usually five, seven, or nine. The smaller boys played with smaller kites, generally in the shape of a dragonfly, a swallow, or an eagle. The "swallows" were the most ingenious; they usually went by pairs, tied to the two ends of a slip of bamboo balanced on the kite string, and danced up and down in the currents of air like a pair of feathered playmates. Once I saw several swallows darting around such a pair, seeking their company.

In summer we played with other boys in the village during the starry evenings. The fireflies in the air looked like moving stars. Some of us preferred to listen to the stories told by some elder of the village. With a big palm-leaf fan in his hands to chase away annoying mosquitoes, and a teapot by his side, the elder would give his account of historical personages, dynastic changes, and past happenings in the village.

About two hundred and fifty years ago [he would begin], when the Ming Dynasty was overthrown by the Manchus, the whole country was in turmoil, but our forefathers living in this village still enjoyed peace. Later on, the Imperial Edict reached our village ordering all male persons to cut their hair according to the Tartar fashion and to wear a queue.^[3] Men were terrified and women wept. Barbers came to the village to enforce the

order. They had Imperial sanction, if anyone should disobey, to punish the culprit by cutting off his head instead of his hair. No one preferred his hair to his head. Since a man could not retain both his head and his hair, he would stretch his head and let the barber do his job of haircutting and queue braiding. We have got used to it now, but my! it must have looked funny then...

This was a bit of history we learned outside of school.

Again, a bit of local anthropology:

Tens of thousands of years ago our far-distant ancestors had tails like the monkey. The man-monkey's tail gradually turned yellow as he grew older. When nine out of the ten segments of his tail had turned yellow, he knew he was about to die. Then he would crawl into his cave and die there. As years went by, his tail dropped. This is why we have no tails now. But you can find at the end of your backbone where it was broken off.

Here is a story about pugilism:

In front of a rice shop a small boy was stationed to sell rice. He amused himself by picking up pinches of it and throwing them swiftly back into the basket. On one occasion a monk came to beg for rice. Instead of giving him some, the boy threw a few grains of it right in his face. To his surprise he saw that the grains had pierced the man's skin. The monk made a polite bow with his hands pressed together palm to palm, saying "Namo Amita Buddha" [Hail, Great Buddha!], and went his way.

Seven days later a pugilist came to the town. By now the boy was looking rather pale. "What's the matter with you, my boy?" asked the pugilist. When he was told the story of the monk he said, "Ah, that monk is the most famous pugilist of our time. You have insulted him. You have received from his bow the terrible internal wounds which will bring you to death in forty-nine days. I have medicine for your cure, but you must run away and not meet him again. He will come again after forty-nine days. Get a coffin, put some bricks in it, and pretend that you have died."

The monk did come, and asked for the boy. When he was told of his death, he sighed and said, "What a pity!" At his request he was led to see the coffin. Running his fingers over the top of it, he muttered, "Namo Amita Buddha." After he had gone the coffin was opened and it was found that all the bricks in it were cracked.

We boys pricked up our ears and listened attentively to these stories; they were one of the sources of my extracurricular education. I could retell many like them if space would allow.

I had several teachers, one after another, in my school. One of them was a kindly rustic scholar who had failed to pass the Imperial civil examinations for the First Degree, despite many attempts, and had to content himself with teaching in a family school. He had a round, moonlike face, was short and stout, and his bespectacled eyes looked habitually over the heavy brass rims of his glasses. His grey mustache hung bristling from his upper lip and he wore no beard. After he had taken egg soup at dinner, yellow particles would be seen adhering to the tips of his unclipped mustache. He was an encyclopedia of endless stories. But his literary style was rather poor; this is why, I presume, he failed repeatedly in the examinations; though he was an endless fountain of witticism. I think his memory in certain respects must have been bad, for he always forgot to carry with him either his umbrella or towel or fan when going back to the school after paying a visit to his friends. Necessity taught him finally to make an inventory of the articles he brought with him: pipe, umbrella, towel, and fan. When about to leave he would repeat, "Pipe, umbrella, towel, and fan." Even in winter, when no fan was needed, he would continue to mention it in his list, sometimes realizing that he had brought no fan with him, but at other times trying to find it, to the great amusement of both friends and pupils.

My mental scope was thus limited to what I learned from the Confucian classics and what the teachers and elders told me. I memorized quite a few of the classics and also had a rich store of stories. My early education, therefore, consisted chiefly of memory work. Yet I was fortunate to have been born and to live in the country, where nature offered plenty of instruction. Once I noticed that some beetles which lived on a large soap tree—so named because we used its nuts for soap—had on their heads horns like those of a deer. These looked exactly like the thorns that grew at the tips of the twigs of the tree. The beetles, I was told, were born of the tree and therefore looked like their mother. Somehow I felt suspicious. I reasoned that if a tree was capable of giving birth to beetles, they would in turn be capable of laying eggs that would be the seeds for the tree. That not being the case, I felt there must be some other reason for the

remarkable likeness. I found it when I saw a bird feeding on insects in the tree without noticing the deer-horned beetles near by. The horns were therefore imitations of the thorns of the tree, for protection from the birds.

On the banks of the canal there grew candle trees, so called because the oil from the nuts is good for making candles. In the winter months the farmer would tie a few straws around the trunk of the tree, which he took off in the spring and burned. It was a common belief that by virtue of this act a magic force would kill the parasites. The fact was that if you tied enough straw around the trunk the parasites laid their eggs in the straw, and by burning it you destroyed the eggs, thus preventing them from propagating. It was no magic.

There were many such instances of naïve nature study in my childhood. The two above mentioned are, I think, enough for illustration.

Thus there were three sources of the education I received in my childhood. The first was the study in school of the Confucian classics, which served as guidance to moral conduct as well as a foundation to the future study of modern social sciences. The second was the storytelling which was to prepare the way for an appreciation of modern literature. The last was the innocent nature study which later served as a stem on which the buds of modern science could be grafted. Had I been born in a crowded city, resembling—on a smaller scale, minus electricity and wide streets—the East Side of New York or London, I would have missed the all-important training of nature. The whole course of my life might have been different. For the natural endowment of sense perception, observation, curiosity, and reasoning that are in every child and indispensable to life in a modern world might have been altogether smothered by the all-memory traditional training of my early youth.

I must confess that I did not apply myself to study as earnestly as some of my schoolmates, for I did not like to memorize but to see, touch, and reason. My teachers took this as a misfortune or curse of my disposition.

I loved to play and listen to storytelling. I liked to inquire into things to a degree disgusting to the elders. I took delight in watching frogs catch locusts in the rice fields and geese and ducks swimming in the canal. I enjoyed seeing the bamboos grow and flowers blooming, and loved to make kites and fly them. All these propensities were regarded by my teachers as a curse and I myself believed it must be so. But it is an irony of fate that the curse happened to turn out a blessing to me in later years, and the blessings my teachers bestowed upon some of my schoolmates have turned out to be curses. For some have died of consumption and others became bookish scholars, incapable of adjusting themselves to a changing environment when the tides of westernization swept over China.

[3] That is, the hair was trimmed across the front of the head, and the long queue worn behind.（作者原注）

CHAPTER 4 FAMILY INFLUENCE

During the plastic years of childhood and adolescence, family influence upon youth is indeed formative. Bad as well as good habits acquired during this period are difficult to eradicate in later years. On the whole the influence exercised upon me by my family was good and wholesome.

My father was a small landowner and a shareholder in some native banks in Shanghai. My grandfather had left him fairly well off and his mode of living was always simple so that the family never had uneasiness about financial matters. Father was an honest and generous man, respected by the people of the village in particular and surrounding districts generally. He was frugal in private life but very generous toward public affairs, contributing liberally to benevolent organizations.

He would not say anything with intent to deceive and his words were accordingly trusted by those who came in contact with him. He believed in feng-shui, the spirits of wind and water, and in fortunetelling and therefore—with a sort of fatalism—that a man's life was predetermined by supernatural forces. However, he also believed that by virtuous conduct and clean thinking one could make these forces respond by bestowing blessings upon oneself as well as one's family; thus the predetermined course of life would gradually shift its ground to a better course. His moral influence upon me was really great. The only regret I have is that I have fallen far short of his good example.

My mother was a cultured and beautiful woman. My childhood memories of her have become somewhat vague. I recall that she could play the harp and sing to it—one of the songs she loved most still lives in my memory. It was about a buried harp whose owner had deserted her. Clink, clink, clink, the harp sang to herself that her lover had not yet kept his promises to come back to her. She waited and waited in vain. She remembered how happy they had been when they sang

together. Now she was buried on the shady side of crumbling walls. The autumn wind was blowing, the grass fading, and the white clouds deepening. A near-by stream flowed under a broken bridge and no one ever passed by that place. Only gloom and loneliness reigned.

Someone remarked that it was an ill omen that such a beautiful young lady as my mother should like to sing such a sad song.

The drawing room where she played her harp looked out under a giant camphor tree. A canal wound its way around the other side of the bamboo grove which served as a fence. A crêpe myrtle, an osmanthus, and an orange tree struggled for such sunlight as the wide spread of the aged camphor could spare. There she could hear birds singing and fish splashing. At sunset the level beams pierced through the grove and cast the shadows of bamboo leaves dancing on the window screens. The walls were hung with landscape paintings and works of well-known calligraphers. Her lacquered harp, inlaid with jade, lay on a long redwood stand with legs carved in the phoenix motif.

The drawing room was kept as it was for many years after her death. A painted likeness of her hung in the middle of the wall. But Mother was no more! The harp, veiled in dark satin velvet, lay alone on the same stand in the same room. How could I help feeling that I was like that buried harp whose song she used to teach me to sing?

My mother died young. I saw her in her coffin in a beautiful embroidered jacket and skirt, wrapped in a long scarlet satin cape down to her feet. There was a hood attached to the cape. Her face alone was exposed. A large pearl shone on her forehead against the red background of the hood.

My stepmother was a very able woman and she was kind to people, but my relation with her was rather unhappy. She did not live long, and Father never married again.

My grandfather had been the manager of a Shanghai bank. During the time of the Taiping Rebellion (1851-1864) he put up a money stand in the native city of Shanghai. This grew later into a

small money exchange shop which in turn developed into a native bank—a concern with unlimited liability, making loans on credit. When Mexican silver dollars were introduced into China as auxiliary currency to taels, the foreign money gained popularity among the people. Counterfeit pesos increased in proportion to the widening circulation of the money. By clinking two dollars on their fingers the bankers could tell the bad from the good. But Grandfather beat them all; he could tell by merely glancing at them.

Unfortunately in the prime of life he suffered a leg injury; the leg had to be amputated and he died of blood poisoning. To my father, at the age of twelve or thereabouts, he left some seven thousand taels, at that time considered a big fortune. This helpless orphan was looked after by his future father-in-law, who was a local scholar. By sound investment and careful economy the property grew, in the course of some thirty years, to the value of seventy thousand taels.

This bit of family history will show the reader that some Western influence must in early days have crept into the family.

Father had an inventive mind. He loved to make plans or designs and direct carpenters, blacksmiths, coppersmiths, farmers and basket makers to carry them out according to specifications. He built houses, made experiments in raising silkworms and planting mulberry trees, manufactured guns (of a type already obsolete in the West), and made many other things according to his fancy. Finally he conceived the bright idea of building a "steamboat" without steam. Father occasionally went to Shanghai to look over his business. He took a rowboat from the village to Ningpo, where he boarded a paddle-wheeled steamer for Shanghai. "It took us three days and two nights to Ningpo in a rowboat," he would say, "and only one night from there to Shanghai by the steamer, while the distance is ten times farther." So he made a sketch of how a miniature paddle-wheel boat might be made.

Carpenters and boatbuilders came. The carpenters were instructed to make paddle wheels, the boatbuilders to build a boat according to my father's plan. A month passed and the boat began to take shape.

On the day when the tiny "steamer" was to be launched many visitors came and their mouths gaped in admiration for the wonderful invention. Now the boat was on the canal near our house. Two husky fellows were employed to turn the wheels by a wooden handle. The watching crowd stirred with excitement as the boat started to plow slowly through the water. Presently it began to gather momentum and went faster. When it reached approximately the speed of a rowboat, it refused to accelerate further despite the efforts of the crew. The passengers gesticulated as if helping the boat to go faster. Some even lent their arms to the handle and helped to turn the wheels. But the boat was very stubborn and held to the same speed.

Father made several modifications in the paddle wheels, hoping to increase the speed. All attempts failed. The worst of it was that when the boat went for some distance, weeds and water plants gathered on the wheels and at length even the handle refused to pump. "We have to give all credit to the foreigners who made steamboats," said Father with a sigh.

The "steamer" finally reverted to a rowboat. But it was too heavy to row. Years after, we found it rotting on the banks of the canal, the green moss growing thick on its hull. Even when it failed, however, Father never gave up the idea of making a further attempt until he was told the story of Watt and his boiling kettle. Then he began to see that there was something deeper than appeared in the thing itself. From that time on he was heart and soul for giving his boys a modern education which would some day enable them to learn the foreigners' "tricks" in making wonderful things.

This is an example of how China began to venture on the road to westernization. However, in human relations Father never seriously advocated the foreigners' ways. "The foreigners are as honest, reasonable, and hard working as we Chinese," he would say. He never saw anything beyond that. Neither did he see any objection to his boys learning their ways and manners.

My teacher, on the other hand, was opposed to Father's ideas. "The artifice in making clever things," he would say, "would have a

degrading influence on morals. Haven't our sages told us so?" He believed that good morals could only be kept on a high level by living a simple life. Uncle King, my mother's brother, held the same view. He wrote his ideals of life on a piece of red paper which he posted on the wall near his desk: "Burn a stick of incense early in the morning. Be thankful to Heaven, Earth, the Sun, the Moon, and Stars. There shall be no traitors to usurp the power of the ruling dynasty, nor disobedient sons to worry their parents. Everywhere there shall be bumper crops of rice. Then why shall I worry even if I am poor?"

Uncle King was an old scholar. He had passed the civil examinations for the First Degree in his early years. He always carried a long pipe, longer than a walking stick, and one heard him constantly knocking its brass bowl on the brick floor. There were no wrinkles on his forehead in his old age, an indication of peace, health, and contentment. He was so gentle that I never saw him in a temper. He spoke slowly but distinctly and never let unkind words cross his lips.

CHAPTER 5 TROUBLE BREWING

It was customary during the New Year days for vendors to come to the village to sell pictures, some depicting important or thrilling happenings in the country, others showing theatrical performances. During one New Year vacation the attention of the children was drawn to a set of pictures which were rather novel to them. The multicolored scenes showed the Sino-Japanese War of 1894. One was of a naval battle in the north China Sea. One of the Japanese battleships had struck several large pottery jugs filled with gunpowder, which exploded and set the ship on fire, and it was sinking. There were in the picture hundreds of such jugs floating on the sea. In another picture Japanese prisoners of war were seen locked in chains, and some kept in cages. A great victory for China! It existed only on paper, but we children believed it. As I grew older I began to understand that China had been defeated, that we had lost Formosa, that our navy had been destroyed by the Japanese, and Korea torn away. Within a short span of nine years China had lost three dependencies: first Indo-China, then Burma, and now Korea.

One summer day as the sun was setting a farm helper was seen running breathlessly out of my father's study. He had heard a bell ring there without seeing anyone to cause the sound. To him it must be a ghost. But it was the clock striking seven in the evening.

From time immemorial the villagers had been getting their fire by striking a steel blade on flint. Someone brought a few boxes of matches from Shanghai. The grownups were delighted with this easy method. The children loved the firefly glow obtained by scratching a match on the palm in dark corners. It was called "self-coming light" or "ocean light" because it came from across the sea.

Clocks were unnecessary—for what is the use of keeping exact time in a village? What difference would it make to be two or three hours too late or too early? The country folk counted their time in days and months, not in minutes or hours. Matches were a luxury—

had we not got along nicely with our steel blades and flints? But when we came to kerosene it was a different proposition. This made night as brilliant as day. There was a world of difference between this and the dim light of a vegetable-oil lamp.

The Standard Oil Company, known as Meifoo, was the torchbearer that was leading China out of the "dark ages" to modernization. People kept matches and clocks as curiosities but kerosene as a necessity. But if kerosene was a necessity, wasn't the telegraph a necessity to take the place of a foot messenger, and steamboats to take the place of rowboats or sailboats? And so it went.

Few could grasp the significance of one tiny segment of the vast circle. While we played innocently with clocks and matches and enjoyed our kerosene lamps, we never realized that we were toying with a fire that would some day set all China aflame. These were the signs of an impending volcanic eruption which destroyed peace and order first in my village and others like it and eventually in the whole country.

Christian missionaries played their part in introducing foreign manufactures into the interior. Braving hardship, disease, and personal danger, they went to almost every hamlet in the land to save the souls of the heathen Chinese. As a matter of course they took kerosene, cloth, clocks, soap, etc., with them into the interior. People in general were more interested in these things than in the gospel; they opened up a new horizon of wants for the Chinese people. A market for foreign goods was thus created unintentionally by missionaries whose real purpose was to preach the gospel of Christ.

I do not mean that the missionaries were chiefly responsible for the growth of modern commercialism in China. But they played their part—a considerable part, for they penetrated the vast country to every corner. The major role, of course, was played by the merchant ships and gunboats of the Western Powers. It was the Christian missions coupled with gunboats that forced the old literary and agricultural China on the road to modern industrial and commercial life.

With my own eyes I saw the growth of a new class of compradors—middlemen between the Chinese and foreign merchants—and their satellites, and the dying of the old class of literati which I was about to join and from which I eventually sneaked away. The foreign merchants brought their goods to seaports such as Shanghai, Tientsin, and others. Through Chinese compradors they were distributed to cities in the interior and from there to the towns and villages. People were attracted by the easier and larger sums of money they could make. The more enterprising and fortunate entered the new business of dealing directly or indirectly in foreign goods. Some became very rich and many others well to do. The less fortunate were left behind, to go on tilling their land or to remain in their old trades. As the land was less remunerative and the old trades fast deteriorating in the face of foreign competition, the old economic structure began rapidly to break down. Naturally a number of people were thrown out of economic gear. These unfortunates, jealous of the newly rich and either dissatisfied with their old occupations or deprived of them, became desperate. The flood was surging against the water gate—the autumn flood, symbolic of the turmoil that was to banish peace from my village.

One autumn afternoon as I was running in the fields I heard the frantic sounding of a gong. As the crier approached our village, I heard his cry that the dike had broken through and the flood was coming. I ran back home as fast as I could and told everyone I met on the way.

Everyone got busy at once. We got ready boats, wooden bathtubs, or anything that would float, waiting for the calamity to arrive. Some even chose tall trees for their future abode. None of us slept well that night. The next morning the flood entered our gate and the spearhead of water glided like a giant serpent into our courtyard. By noon, children had begun to row in bathtubs in the hall.

The dike was repaired with sandbags and the Tsao-ao River ceased to overflow. The flood stayed in our village and surrounding districts for about a week, then gradually emptied into the lower lands

and disappeared through the rivers into the sea, and all the crops with it.

After a week or so, late in the afternoon a large boat was seen plying toward our village with many people aboard. It docked near our house and they began to disembark. As a precaution we closed our gates. They stormed the main gate with heavy granite slabs and finally it crashed down like an avalanche. The crowd forced their way in. The leader, muscular and heavy built, with his queue round the top of his head, came into the courtyard with his followers after him. He shouted, "We are hungry and want to borrow rice." The crowd joined in chorus. They searched the barn but did not touch it; they wanted to "borrow." Finally, through the mediation of a neighboring farmer, several bushels of rice were "loaned" to them and they embarked with it and sailed away. This was the first intimation of troubles to come.

One incident after another of the same kind but of more serious nature happened in neighboring villages. It started with "borrowing" but ended in robbing. It spread like fire and the scant government forces in the country could not stop it. Moreover, robbery of foodstuffs was not liable to capital punishment and only capital punishment could have checked it, at least temporarily.

The thing dragged on till winter and then the first robbery of a felonious nature took place in the village of the Suns. The victim was a Mr. Sun who owned a prosperous lumber business in Shanghai. His father had amassed a fortune in that port by doing construction work for foreign "hongs" or companies.

It was a cold winter night and everybody had gone to bed early to keep warm. Someone noticed through the window against the background of darkness a column of torchlights moving along the highway toward the village of the Suns. As the lights came near the village a volley of shots was heard. It was bandits. They forced open the gates of Mr. Sun's house and seized all the treasure they could carry—valuable fur coats, silver pieces, jewels, etc. They took Mr. Sun, tied him to the end of a long bamboo pole, and thrust him into the canal. People found him the next morning by pulling up the pole.

Waves of robbery spread through the villages. Overnight the peace and tranquility that the villagers had been enjoying for centuries vanished. Night after night we could not sleep in peace. My father bought revolvers and outmoded guns from Shanghai. All of us, including children, began to practise shooting. Even the birds had no peace, for we took them as our living targets. We went to bed by turns, some keeping a night watch. When we heard dogs barking we fired a few shots in the air as a warning to bandits, real or imaginary; to save ammunition we often mixed firecrackers with gunshots.

This sort of thing could not go on indefinitely. Reluctantly my father gathered together the members of his family and moved to Shanghai.

Meanwhile, during the two years previous to our move I had continued my education at a neighboring provincial city. When I was still studying at the family school, my father asked me one day whether I would like to enter business as a career or prepare for government service. My two elder brothers had both decided for the latter. Father said he would like me to think it over carefully before coming to a decision.

The honor of service to the state had attracted young people for generations. It was only natural that I should be strongly inclined to it. On the other hand, the life of the newly rich, who could enjoy the luxury of the many new and ingenious imported manufactures, was also a temptation. The choice between honor and wealth was more or less contingent upon the ideas and ideals already instilled into one's mind.

I had been told that the people of China fell into four classes. The highest and governing class was the scholars. Next in order came the farmers, who supplied the people with food. The artisans—the third class—manufactured goods for the use of the people. The last were the traders, who transported goods from where there was plenty to where there was a scarcity. Each class had its function to perform in society, but the scholars were the governors of all. So, theoretically speaking, if philosophers were not to be kings, they were at least to be ministers

of the state. As there was no hereditary aristocracy in China, the scholars were aristocrats not by birth but by personal endeavor. It was proverbial that a *Hsiu-tsai*, or person possessing the First Degree by having passed the Imperial civil examinations for that initial degree, was an embryo prime minister to the Imperial Court. Then why should I go into business, which later in life would exclude me from the class of the learned aristocracy?

Thus my mind was set to learning. Of course I understood only vaguely what it meant; to me it was only a steppingstone to something higher up. There were many farmers in our village. There were also a number of businessmen who traded in Shanghai and brought back many interesting things: penknives, whistles, rubber balls, dolls, popguns, watches, and the like. As regarded the artisans, an elder of our clan was a carpenter, as also were his sons. A distant uncle was a silversmith who made rings, bracelets, and trinkets to adorn the ladies of the villages. Of the scholars, another uncle—my mother's brother—was one. He had passed the First Degree but stopped short of the other two. There were carved panels with golden inscriptions hanging high in our Ancestral Hall and tall flagpoles standing before it in honor of clansmen who had been successful in the examinations. I remember that one day the magistrate of our hsien came to a neighboring village to probe a murder case. Did I not see the golden button at the top of his red-tasseled hat, and the string of beads round his neck? Did I not see how his sedan chair was lined with green felt and borne by four persons—each wearing a tall black cone-shaped hat, like a gigantic ice-cream cone, with a feather tilting from the pointed top; and how, as he proceeded in his chair, a pair of gongs kept sounding to announce the presence of His Excellency and that the people must show respect? He was the governor of our district and had, as it were, power over our lives and fortunes. What stuff was he made of? A scholar.

Yes, I knew what a scholar was and the advantage of being one. He might climb up, rung by rung, to the top of the ladder and some day become a very high official, sipping Imperial tea in the majestic palace at Peking. Can the reader blame a village boy like me, whose

steps had never carried him more than a few miles from his own village, for aspiring to be a scholar? My childish mind pondered the Imperial honors which were the scholar's due. I imagined myself growing larger and larger in importance year by year, passing one examination after another from the lowest to the highest, till one day I should be made a high official—much higher than the magistrate—attired in an embroidered gown with a red button on my hat, a long string of beads, and all the other Imperial honors imaginable, coming back home before the eyes of the awe-inspired folk of the village. How wonderful! All these pictures unrolled enticingly. What a bright future lay before me—but only if I applied myself to the study of the classics.

Again, my early schooling, although distasteful to me, had instilled into my mind somewhat vaguely the importance of learning above everything else. Officials of the state were selected through civil examinations and only people who possessed learning could expect to pass them. Officials were honored because learning itself was honored in China.

My own decision was finally to acquire more learning in preparation for the civil examination, to which my father readily agreed. As our family school was inadequate for my further education, I was sent to an advanced school in Shaoshing, the prefectural capital, about forty miles from the village. My two elder brothers had gone there the year before. We went in a small, slender boat, propelled by a long oar pushed by foot power on one side and a short one held by hand as a helm on the other. Along the way I saw on the river banks many pailous standing in rows—pillared arches erected in memory of virtuous widows. River towns appeared at almost regular intervals with their busy traffic on both land and water. We started early in the morning and arrived at the prefectural capital next day in the afternoon after stopping for the night at a large town.

The Sino-Occidental School, as its name implied, offered not only Chinese studies but also courses in Occidental subjects. This was a new departure in Chinese education. Here my mind began to come into contact with Western knowledge, however poorly explained and

superficial. My acquaintance with the West had been limited to imported manufactured articles. A mind filled with gods, goddesses, ghosts, fairies, and timeworn traditions was now setting forth to meet some mental imports from the West.

The first and most surprising thing I learned in this school was that the earth is round like a ball. To me it was decidedly flat. I was dumfounded on being further told that lightning is created by electricity and is not the reflection from the mirror of a goddess; that thunder is a by-product of the same electricity and not the beating of a drum by the god of thunder. In elementary physics I learned how rain is formed. It made me give up the idea that a gigantic dragon showers it from his mouth like a fountain high above in the clouds. To understand the meaning of combustion was to banish the idea of fire gods from my mind. One after another, the gods worshiped by my people melted away in my mind like snowmen under the sun. It was the beginning of what little science I know and the end of animism in me. The habit I had formed in my simple nature study in the village, of observing and reasoning without knowing the significance of it, was carried over into the school. As before, I was quite good in reasoning but deficient in memory, and therefore always ready to give up what I had in memory for new ideas that seemed reasonable.

The major part of the curriculum, however, still consisted of literary studies: Chinese literature, classics, and history. There was a considerable amount of memory work to do. As I was not good at it, my name always appeared in the lower middle of the school examination list. I was mediocre in the school, falling far short of brilliance; this was the opinion of my teachers and so it was my own opinion of myself.

Foreign languages were divided into three sections: English, French, and Japanese. I took English and later also Japanese. My Japanese teacher was a Mr. Nakagawa, from whom I learned a correct pronunciation, English was taught us by a Chinese teacher, and his pronunciation of the language was so incorrect that in later years I had to spend much painful time unlearning it. He started us off wrong

at the very beginning, even mispronouncing the alphabet. An extreme example is the letter Z, which he called "ütsai."

In the school, in 1898, I heard that Kang Yu-wei and Liang Chi-chao, two liberals from south China who had become unofficial advisers to Emperor Kwang-hsü, had succeeded in persuading the Emperor to abolish the civil examinations and establish instead schools along Western lines throughout China. The old scholars were shocked by the news. But the reform was short lived. The Empress Dowager came back into power; Kang Yu-wei and Liang Chi-chao fled to Japan. China was to go on along the old line. When I came home for the vacation I saw the Imperial Edict, printed in bold letters in both the Chinese and Manchu languages on a large yellow paper, posted on the walls in a busy street, ordering the arrest of the two scholar-statesmen. It looked as if the reform were buried forever.

Shaoshing is a city full of historical interest. It was the capital of the ancient kingdom of Yueh (2068-334 B.C.)^[2]. In 494 B.C., during the reign of King Kou-chien, Yueh was defeated by the kingdom of Wu with its capital at Soochow. The king of Yueh adopted a "twenty-year plan" by which, within ten years, he made his country prosperous and populous and in another ten succeeded in training his people in the arts of war. Meantime he discarded all the comforts that belong to a king, taking very coarse food and sleeping on a rough bed while the king of Wu reveled in luxuries. At the end of twenty years, in 473 B.C., King Kou-chien delivered a deathblow at Wu.

This historical episode has been proverbial ever since, serving as an example for all who hope to rise again after a defeat, whether in private enterprise or national affairs. It illustrates patience, courage, endurance, self-denial, and careful planning. I absorbed this lesson in history right on the spot, and no one could help being impressed by it.

Here also the South Sung emperors (1127-1276 A.D.)^[3] made their sojourn when the Tartars had overrun north China and the capital had to be moved to Hangchow. Their Imperial mausoleums could be seen not far from the prefectural capital.

This district, with Shaoshing as its center, supplied lawyers for

the whole country. In every yamen or government office throughout the country, large or small, no business could be carried on without a Shaoshing lawyer. And Shaoshing wines were the best in China. Famous scholars, philosophers, poets, and calligraphers who made history in their respective fields were born and lived in the prefecture of Shaoshing. It contained six districts, of which my own, Yuyao, was one.[4]

Shaoshing was also famous for its beautiful scenery. Winding creeks, bridge-spanned canals, rivers, mirrored lakes, and gentle hills together formed a landscape which scholars and philosophers found congenial.

I studied in Shaoshing for two years. My mental horizon rapidly widened. I was made to understand the significance of the Sino-Japanese War of 1894: Japan's victory over China was due to the former's adoption of Western learning. Emperor Kwang-hsü's reforms were inspired by Japan's success in the war. China was to make her erstwhile enemy her teacher. This was why the school offered a course in the Japanese language.

At the end of two years, when bandits made life in the village untenable, my father took me to Shanghai with the rest of the family. My eldest brother had died a year earlier. Here I was put temporarily in a Catholic school to continue my English study. The instruction was given by a French Brother. The pupils were told to call him "Bladda." As he was a foreigner his pronunciation of the language, I imagined, must be good; it was obviously different from that of the Chinese teacher. For instance, he taught us to say "dat" instead of "zat" and "bladda" instead of "bloder." The reader can imagine what curious English we acquired. But I did not stay long in the school. As there was no suitable school in Shanghai for me to go to, Father sent my brother to learn English from an American lady and made me study under him. He thus acted as a comprador of English teaching. I was much dissatisfied with the arrangement, but my father thought it a very clever scheme because it would save money.

Shanghai by 1899 was a small city with a few thousand arrogant

foreigners. But the city was well governed, with clean, wide streets and electric or gas lights. I thought the foreigners were wonderful. They knew the secret of electricity. They had invented the steam engine and built steamboats. They took the place of my old gods, who had melted away in the face of my instruction in science, and occupied my mind as new ones. At the same time they served as new devils, too, for their arrogance coupled with the clubs of the policemen, frightened me. In the list of regulations displayed at the entrance of a park on the banks of the Huang-pu River, Chinese as well as dogs were forbidden admission. This said much. The foreigner appeared to my mind half divine and half devilish, double-faced and many-handed like Vishnu, holding an electric light, a steamboat, and a pretty doll in one set of hands, and a policeman's club, revolver, and handful of opium in the other. When one looked at his bright side he was an angel; on the dark side he was a demon.

Western civilization, as viewed by the Chinese in China's recent history, has been either one way or the other at different periods or among different groups of individuals. Li Hung-chang saw the importance of the dark and devilish side and built a navy to beat the devil by his own weapons. Emperor Kwang-hsü saw the importance of the bright and godly side and tried to establish a new school system. The Empress Dowager and the Boxers saw the curse of the devilish side and tried to oust the devils with China's own obsolete arms. The trouble was that the god was strong for the very reason that at times he could be devilish; the devil was powerful because at times he could be godly. He was one and indivisible—you had either to take him as a whole or not at all. Was not Japan the example? Make your erstwhile enemy your teacher!

We lived in Shanghai for about two years, and this home, too, we left hurriedly one night when we were informed that the Empress Dowager had sent instructions to viceroys throughout the country to put all foreigners to death. It was 1900 and the beginning of the Boxer War in North China. The "Boxers" were a fanatical cult claiming magical powers; gymnastics formed a part of their program—hence the name by which they became known. They meant to destroy all

foreign manufactured goods and kill every person found in possession of them. They wanted to kill all the foreigners who brought in these terrible things and destroyed their trade. Churches, schools, missionaries, and Christians were all guilty of introducing these poisonous manufactures into China. Get rid of these people by killing them, with swords, knives, magic! Destroy foreign properties by setting them on fire.

The Imperial Court for its own part wanted to destroy all the crazy ideas of foreign origin introduced by Kang Yu-wei and Liang Chi-chao, so that nothing like the reforms of 1898 could happen again. Thus the Boxers wanted to get rid of the manufactured goods and the Empress Dowager and her court wanted to get rid of foreign mental goods; both came from one source—the foreigners. Kill them all! In the beginning of the industrial revolution in England people smashed the machines which destroyed their livelihood. The Boxers went a bit too far. They destroyed the human "machinery" too.

In the south people looked at the foreigner in a different light. They welcomed foreign manufactures but did not understand that it was this very thing that caused the banditry. They put the blame on the obnoxious taxes of the Imperial government and the corruption and incompetence of its officials. So they wanted a revolution.

The people and the Imperial Court in the north were right in holding the foreigners responsible for destroying their trades, but found a wrong solution in smashing the "human machinery." The people of the south had a wrong reason in holding the Imperial government responsible for their plight, but did the right thing in starting a revolution. History seems to consist of a series of accidents, illogical reasoning, and unexpected results, in which the great men appearing on the scene are but the instruments of Fate.

Foreigners cursed banditry in China, but did not know that their own manufactures had caused it in the beginning. In my childhood days we all feared tigers, ghosts, and bandits, but all were imaginary; we only saw them in picture books. Then suddenly the bandit appeared in real life—as if a tiger should dash into your house or a

ghost chase you. Finally we dreaded the bandits and forgot about tigers and ghosts.

[2] 古越国确切纪年说法不一。此处疑作者采纳《史记》的说法：“史载夏少康封庶子无余于会稽，以奉守禹祀，号於越”（约公元前2068年）；周显王三十六年（公元前333年），“楚威王兴兵败越，杀越王无”，“而越以此散”。

[3] 南宋（1127—1279）。

CHAPTER 6 FURTHER EDUCATION

Thus at the age of fifteen I was brought back home by my father. We were afraid that the Boxer War might extend to Shanghai and so returned to the village; but after a short stay, as the bandits became worse, we moved to Yuyao, the district capital, to live. There I was sent to a local school to study English and arithmetic, and studied Chinese under a private tutor.

After a year or so I went to Hangchow, capital of the province of Chekiang. This was the center of the silk industry in China and also one center of the tea trade. Hangchow silk and tea were famous all over the country.

Hangchow is well known for its scenic beauty. To one side of the city the Chien-tang tides rush up from Hangchow Bay. On the other is the West Lake, mirrored against a blue sky with reflections of temples and villas perched on the surrounding hills. The city was known as a paradise on earth. This was the city that Marco Polo adored in his travels, and it was the ancient capital of King Chien-liao, who kept his domain in peace through long years of incessant invasions and wars in China. Here the South Sung made their capital for a hundred and fifty years, and here famous poets and men of letters lived. It is a city rich in historical records and monuments. The Imperial Library was filled with valuable books. It was the right place for young scholars to nurse themselves to grow.

In this city of learning I stumbled accidentally into a backward school, a local Christian academy run by an American missionary. Here I hoped that at least I might learn English well. The atmosphere was far from congenial. The principal was a carpenter by trade; this pious American had been carried to China by his religious zeal. He had done some missionary work in my prefecture before being given charge of the academy. As he taught nothing except the Bible, I did not know how much he knew, and since learning was honored in China the carpenter-teacher evoked secret contempt in the hearts of

his pupils. My English teacher was a man of vulgar manners, a new convert whose soul may have been saved but whose tongue remained distinctly heathen. I had tramped from this school to that trying to find a really good English teacher, but to my great disappointment I was still simply chasing after shadows.

It was compulsory in the academy to attend exercises in the chapel every morning. We sang hymns in Chinese. Sometimes the clever pupils saw fit to render them in paraphrases which gained more popularity among us than the hymns. In spite of Sunday schools and morning exercises my mind was closed tight as a clam against any spiritual foreign elements. Having got rid of its spirits, ghosts, and gods, it was reluctant to admit any new elements of similar nature. And indeed, ever since that time I have remained an agnostic, trying to find immortality rather in this world than in the next. This conforms with the basic teachings of Confucius.

The only respectable buildings on the campus of the academy were the chapel and the residence of the principal. The students lived in cell-like mud sheds, and classes were held there or in the shabby dining hall.

Out of curiosity some pupils liked to loiter around the principal's house. These unwelcome guests were often told to keep away. Usually they obeyed and walked off, but on one occasion a student rebelled and got into a quarrel with a teacher who happened by.

A crowd began to gather. The student accused the teacher of slapping his face and wept to draw the ready sympathy of the mob. The commotion spread like fire and within a few minutes the majority of the student body had joined in demanding the immediate dismissal of the teacher. The demand being refused by the principal, the crowd became enraged and emotions soared to the highest pitch. The principal told them bluntly that if they did not like the school they could leave. In about two hours the whole school walked out.

This marked the end of my education in a missionary school and I had no regret. The sooner I left the better.

One may ask why such a thing should happen, all of a sudden. It was not a mere outburst of ugliness on the part of unruly students. The slap was only a trigger pulled on a loaded gun; the explosive charge is not to be identified with a little missionary academy. This was part of a country-wide student rebellion against school authority. Even a backward missionary school in Hangchow was not exempt.

The rebellion had started in Nanyang College in Shanghai during the previous year. A student had left an inkstand on his professor's chair and the professor had sat on it. His clothes being stained, he got very angry; it was reported to the president and a few suspects were dismissed. There followed a clash between the college authorities and the student body, the latter supported by a number of faculty members. Eventually all the students walked out.

The younger generation was changing, and it was a change from submission to rebellion. Dismayed at the encroachment of foreign powers upon China, people blamed the Imperial Court for it. The students, inflamed and aroused by Dr. Sun Yat-sen's revolutionary propaganda, were ready to strike whenever there might be opportunity and at anything they could get hold of. They delivered their first blows at the school authorities who were handiest to them.

The Provincial College of Chekiang followed suit. A minor fracas between a student and a sedan chair bearer of the Imperial governor who was visiting the college set off the incident. All the students went on strike in consequence and left the college in a body. Many incidents of like nature occurred in other schools, with eventual disruption of a number of institutions of new learning. It spread throughout the country.

The new elements in the country sympathized with the strikes and blamed the authorities for their despotism; the old elements condemned the students in no uncertain terms and sympathized with the school authorities. Whatever one's opinion, few realized that this was the eve of a revolution. From the time of these early student rebellions to the Revolution of 1911 which marked the birth of the Republic of China was only eight short years.

It was the rebellion of the coming intelligentsia against the class of old literati who controlled China, intellectually and socially as well as politically. With the introduction of the theory of evolution—with special reference to the struggle for existence and the survival of the fittest—and other scientific ideas, the mental attitude of the young generation was undergoing a radical change in social and political philosophy. Eighteenth-century concepts of individual freedom encountered the nineteenth-century industrial revolution: freedom in the form of rebellion against established authority, and industrial revolution in the form of imported products which doomed the old trades to decay. China's old structure was crumbling and the new one was yet to be built.

There was a general unrest throughout the country. Poverty, bandits, famine, plague, official corruption, ignorance of world affairs, and the pinch of foreign aggressions—all were contributing factors. The students, the young blood, merely took the lead. It was not an insignificant inkstand, nor the slapped face of a pupil in a missionary school, nor any altercation between a student and a chair bearer that set educational institutions ablaze throughout China.

After leaving the academy our youthful student body organized a school for themselves—the "School of Reforms and Progress." The name was suggested by Chang Pin-ling, one of the famous revolutionary scholars of our time. Our ambition was to make the school as great one day as Oxford or Cambridge. Pretty soon, as was natural, we found ourselves disillusioned. The student body dwindled in the course of half a year to a few elected officers. When these few found no one to re-elect them, they also departed to seek educations elsewhere.

For my part, I registered at Chekiang College, under a new name lest the college authorities find me persona non grata. I took the entrance examination, passed it, and was admitted. The college had just been reorganized after the strike and was the highest institution of learning in the Province of Scholars, as our province was known. Its forerunner had been Chiou Shih Shu-yuan, or the "School for Seeking

What Is Right." It is the proper frame of mind for a scholar to seek what is right, and this was the attitude of Chinese scholars of former generations. This had been a school similar to the Sino-Occidental School of Shaoshing, an old-style Chinese school whose curriculum included some foreign languages and science teaching. As the new subjects grew in importance and were allotted more time it developed into a new type of school and was renamed Chekiang College.

Situated in the provincial capital and maintained by the government, the college served as a center of cultural movements in the province. The curriculum was very similar to that of the Sino-Occidental School, but the courses were more advanced, more various, and better taught, with less sheer memory work. It was a modern school in the making.

I had been trotting along in the dark since entering the school in Shaoshing. My mind always rushed for the place where I caught a glimpse of bewitching light and groped in some other direction when it elusively disappeared. By this time, however, I saw things in much clearer perspective. I had begun to study world history in English. At first it seemed as difficult to understand the doings of other peoples as when one tries to understand the behavior of the masses, but gradually I began to see, albeit dimly, the development of Western civilization. This was of course only in a very general and vague way. But my interest in Western history was aroused and a foundation laid for further study.

Here I was in the midst of intellectual activities. Through reading, lectures, and conversation, my information about China and the world was accumulating. I grew familiar with some forty centuries of China's history, with a fair understanding of the causes, as given by the great historians, of the rise and fall of many dynasties. This served as the basis for a comparative study of Western history later on.

In the field of contemporary history there was plenty of material. The Sino-Japanese War of 1894, of which I had learned from the misleading colored pictures in my childhood; the short-lived reforms of Kang Yu-wei and Liang Chi-chao in 1898, which had taken place

during my stay in the Sino-Occidental School, the Boxer War of 1900, news of which I learned at such close range in Shanghai; and the Russo-Japanese War of 1904 which was even then raging (with China's overwhelming sympathy for Japan)—each and all furnished rich materials for thought and study.

One might study history backward, too: there was the Sino-French War in 1885 in which China lost Indo-China; the Taiping Rebellion (1851-1864) and the ever-victorious army of Generals Gordon and Ward; the Opium War of 1840, as a result of which China lost Hongkong; and if one went farther back there was the coming of the Jesuits during the later Ming and early Ching periods, and the travels of Marco Polo during the Yuan or Mongol Dynasty; still farther back China had relations with the Roman Empire.

Liang Chi-chao's *Young China*, an encyclopedic monthly published in Tokyo, furnished a great variety of materials ranging from short stories to metaphysics and including elementary science, history, politics, biographies, literature, etc. His lucid pen was capable of making people understand almost any subject new or difficult to the reader. This was very important at a time when there was a need to introduce Western ideas into China. His style was clear, persuasive, and easy to follow and therefore very profitable reading for students. I was one among thousands who came under his influence. I think this great scholar did more than anyone else in his time to popularize modern knowledge among the rising generation. His was the fountain of wisdom from which every young man drew to quench his thirst for the new learning.

Politically he stood for constitutional reforms under the reigning dynasty. Meanwhile the revolutionaries were publishing a number of periodicals to sponsor Dr. Sun Yat-sen's radical idea that for China a republican form of government was better than a monarchy and that China must be governed by the Chinese^[2] and not by the corrupt and degenerate Manchus. That published by the Chekiang students in Tokyo was a monthly: *Tides of Chien-tang*. This magazine attacked the reigning dynasty so fiercely that it was barred from the mails, among

other like periodicals, by the postal authorities. But the movement had the sympathy of the Tokyo government and the tabooed periodicals therefore flowed continuously from Japan, where they were published, into the International Settlement of Shanghai where Chinese jurisdiction reached only partially. So Shanghai became a clearinghouse for revolutionary ideas, and from there the literature was smuggled into other cities by sympathizers as well as profit makers.

Chekiang College itself was deluged with pamphlets, magazines, and books of revolutionary propaganda; some depicting the atrocities committed by the Manchus during their invasion of China^[3], others describing their misrule and the unequal treatment of Manchus and Chinese under the existing regime. The students devoured them voluptuously. No power on earth could stop them.

Moreover, concrete examples of Manchu misrule and incompetence could be found just outside the college gate. Within the city walls of Hangchow was a walled city for the Manchus who were stationed there as a garrison to watch over the Chinese. I was warned not to enter it; anyone did so at his own risk. More than two hundred years earlier this city within a city had been set aside exclusively as barracks for the Manchu soldiers in Hangchow. After them their children's children had lived there, nominally as soldiers, for generations until they were killed by the Taipings during the siege of the capital. Intermarriage between Chinese and Manchus was in general forbidden, but Manchus were allowed to marry Chinese women if they preferred, although such marriages were rare. When the civil war was over, a part of the garrison stationed at Chingchow in Hupeh Province was moved to Hangchow to fill the vacancy. Some of these were still living and spoke Hupeh dialect; most of them had died, but their children lived there and still clung to the dialect of their fathers. Thus they were easily detected by the natives of Hangchow. But the third generation had begun to speak the local Hangchow tongue.

They sent ten of their boys to study at the college. These youths

behaved wisely toward the revolutionary movement in the college by pretending not to know of it. One of them, of Mongol origin, actually told me he was in favor of a revolution against the Manchu Dynasty as he was a non-Manchu in spite of being a Manchu "soldier."

These so-called Manchu soldiers were no soldiers at all; they were just the same as civilians. They had families and reared children in the so-called barracks and knew nothing of the arts of war. The only difference was that they lived on government rations and had no occupation. Theirs was a sort of parasitic life, and they degenerated physically, mentally, and morally. They haunted the teahouses on the West Lake, some of them in the fashionable manner carrying a bird in its cage, and people generally kept away from them. They would slap anyone who offended them. These living examples of degeneration, corruption, and arrogance woke hatred and contempt in the hearts of the young students. It was just as effective as revolutionary propaganda, if not more so.

While we got our mental food from Liang Chi-chao, we drew our emotional nourishment from Dr. Sun Yat-sen and his sympathizers. Generally speaking, it is emotion that leads to action when a decisive hour comes; when that hour came in China Dr. Sun, both dreamer and man of action, won a decisive victory over the new literati who stood for constitutionalism.

Such was the general atmosphere of Chekiang College. Similar conditions also prevailed in other institutions. I was interested in all these activities. I liked to get hold of information and to think with the materials thus secured, and also to feel and to act. But nothing carried me away entirely. To play safe I still planned to take the Imperial civil examination, still the only road to a government position except by way of revolution, which seemed long and difficult to me. I was at times timid and shy, at others bold and reckless, and therefore did not trust my own temperament. So I often acted cautiously, feeling my way before making a definite move. Especially at any crossroads, I would consider again and again before coming to a decision. In case of doubt I was apt instead to sit by the roadside and

indulge in daydreams. But once a decision was made I would stick to the end. I made mistakes in life, but never so fatally as to be swept away by the advancing tides.

[2] 此处特指Han Chinese。

[3] 此处China（即汉语中的“中国”一词）指中国古代与蒙古、满等少数民族政权并立的汉族政权；Chinese可特指汉族、汉人。“中国”的这一用法在古代汉语中十分常见，指“我国中原地区或在中原地区华夏族建立的政权”。例如，《史记·孝武本纪》：“天下名山八，而三在蛮夷，五在中国。”又如，《汉书·匈奴传下》：“[伊黑居次]云常欲与中国和亲。”后文亦有表示此含义的China和“中国”，请参考此注。

CHAPTER 7 IMPERIAL CIVIL EXAMINATION

Early one morning, as the time for the civil examination drew near, I started for Shaoshing where the examination was to be held for our district. The luggage man slung his bamboo pole over his shoulder with my suitcase and bamboo basket roped to one end and bedding outfits balancing the other. I followed on his heels. As my luggage swung out of the college gate a teacher who happened to see me smiled and wished me good luck.

After passing through many granite-paved streets and zigzag narrow Hangchow alleys, we came to the banks of the Chien-tang River. I measured my steps along a gangway of narrow, frail planks a quarter of a mile long, with the tides flowing underneath, leading to the waiting ferryboat. The boat was plied by several heavy oars, with the occasional help of sails. It glided along in leisurely fashion. As it could only be controlled by heading against the tide, the slow speed was further reduced and it took us two hours to cross. None of us imagined then that within some thirty years a long steel bridge would span the river, with trains and cars passing over it.

I then took a sedan chair through miles of mulberry groves to a busy trading city, where I embarked for Shaoshing, arriving next morning after a night on the boat, which was packed with passengers like sardines. One had to lie flat and straight; if you tried to move your legs you found your allotted space gone; if you tried to turn on your side there was no space left to lie flat again.

In Shaoshing I got a room with board in a fan maker's family. The place was small and dark and filled with strange odors from certain vegetable oils used to make fans. In the evening I studied by a vegetable-oil lamp which did not give enough light to read small letters without straining one's eyes. We refrained from using kerosene because of the inflammable materials that filled the place. In the dark we could not walk without stumbling over some sort of stuff for

making fans.

The examination began with roll call at the entrance of the Examination Hall at about four o'clock in the morning. The early autumn morning was chilly. A large crowd of literati, several thousand strong and each wearing a red-tasseled hat—without a button—and carrying a lantern gathered around the spacious courtyard. At the entrance to the hall the Prefect sat in stately dignity at a long desk. He wore a red-tasseled hat with a blue crystal button at the top, a black jacket over a deep blue gown, and a chain of beads around his neck. This was his full official attire. With a vermilion pen in his hand he began to call the roll. As he went down the list a man standing by him called out in long-drawn tones the name of each candidate, who promptly sang out at the top of his voice, "Here! So-and-so, the guarantor." Immediately the guarantor sang his own name in acknowledgment of the sponsorship. The Prefect then glanced about quickly to see if anything was wrong and made a red dot above the name with his vermilion pen.

The candidate was then let in. His hat and clothes were searched to see that he carried no notes with him. Anything found written on paper would be confiscated.

The candidates moved on in files to their respective seats, which were numbered, each finding his place accordingly. The names on the examination papers were written on detachable slips to be torn off before the papers were handed in. Each paper was also numbered in a sealed corner, which was not opened until the papers were marked and the successful candidates selected, so as to prevent any possible favoritism. Toward the end of the Manchu Dynasty, when corruption ran rampant in many branches of government office, the Imperial examination system remained independent and free alike of external interference and internal corruption. This was one reason why the degrees conferred were so much honored in China.

Questions were limited to the Confucian classics and this was why a candidate must commit to memory all the texts in the classics. This I had done through years of laborious conning in my country school

and the Sino-Occidental School in Shaoshing. Questions were shown to the candidates by means of cubic lanterns, on the screens of which the questions were written; they were lighted with candles so that the black letters on the white screens could be seen distinctly at a distance. Bearers raised the lanterns high above their heads and carried them up and down the aisles several times, so that none could miss them.

About noon officials went around to check on how far the candidates had gone with their essays and set on each paper a seal at the spot to which the lines had run. At about four in the afternoon cannon began to roar, marking the first call for the collection of papers. The gates were flung open and the band began to play. Candidates who were able to answer the first call handed in their papers and made their way out slowly through the gates with music playing and an anxious crowd waiting. After everyone had made his exit the gates were closed again. The second call was made about an hour later with the same ceremony. The third or final call was made about six, with both cannon and band remaining silent.

We had about a week or ten days to wait for the results of the examination. In the interim there was plenty of time for amusement. Bookstores, large and small, were found everywhere near the Examination Hall. There were chess stands, temporary restaurants with famous Shaoshing wines and delicious dishes at moderate prices, and traveling theatres where we could go and enjoy ourselves.

On the day when the results were to be made public a large crowd waited anxiously in front of a high, spacious wall opposite the entrance of the Examination Hall. Cannon and band announced the moment when the list of names, or rather numbers, of the successful candidates was issued. The numbers were set down in a circular formation instead of in a column, so as to avoid having a top and bottom to the list.

I was pleasantly surprised to find my own number in big black letters among the others in the circle on the enormous oblong paper posted on the wall. To make sure I rubbed my eyes and looked at it

several times. When I was sure they had not deceived me, I elbowed through the packed crowd and hastened back to my lodging house. As I made my way out I noticed a man with an open umbrella which caught on a railing. When he jerked it off the umbrella went upward, looking like a giant artichoke, but in his excitement he kept on running and paid no attention to it.

The second session of the examination came within a few days. Everyone who had passed the first had reason to worry, since some would be eliminated. I was lucky in the second trial. In the list of names which was posted on the wall I found mine somewhere in the middle rows.

The third and final session was merely perfunctory. In addition to an essay we were supposed to write down from memory a section of the "Imperial Instructions in Morals"; in reality each of us had with us a copy of the text, which we were allowed to carry into the Examination Hall and which we copied outright. The Imperial Examiner appeared in person to supervise the final examination. His official title I learned from the inscription on two identical pennants about fifteen feet long which streamed in the air from flagpoles standing symmetrically at either side of the entrance. It read: "The Imperial Vice-Minister of Rites and Concurrently Imperial Examiner of Public Instruction for the Province of Chekiang, etc."

Early in the morning, some days later, I was awakened from slumber by the rapid beating of a tom-tom outside my window. It was an official reporter coming to announce the award of the First Degree—Wu-shen, popularly known as Hsiu-tsai. The official announcement, which was printed in bold block prints on a piece of red paper about six feet by four, read as follows:

His Majesty's Imperial Vice-Minister of Rites and Concurrently Imperial Examiner of Public Instruction for the Province of Chekiang, etc., wishes to announce that your honorable person, Chiang Monlin, is awarded the Degree of Wu-shen and entitled to enjoy the privilege of entering the District Government School as a government scholar.

The "district school" was an empty Confucian temple with one

official in charge who acted as the "government teacher" but in fact never taught anyone or anything. One found, actually, neither school nor teacher; what was called a school was only symbolic. Yet I had to pay the traditional entrance fee of \$100—which I paid only partially, through bargaining.

After the examination the pendulum of life swung back once again to my new education. In a few days I went back to Chekiang College. In leaving, I learned from my landlord that one of my fellow lodgers had complained to him in a rage that the Imperial Examiner was so blind as to pass a man almost illiterate, like me, and neglect him, who possessed great literary merits. Such are the hazards of examinations!

Back at the college I plunged at once into studies again and found myself in the midst of algebra, physics, zoölogy, history, and so on. By way of extracurricular activity I indulged in reading revolutionary literature and discussed contemporary politics with my fellow students. Imperial examination days and Chekiang College were worlds apart! It seemed a transformation overnight from misty, immutable medievalism to the whirlpool of a new revolutionary world. I felt as if what had happened had been a dream.

After two months it was time for the winter vacation. I was called back home by my father to receive congratulations from relatives and friends upon my success. I was now nineteen. My close relatives saw a bright future for me; if the feng-shui of my ancestral tombs were favorable I would go right along, passing the two remaining examinations to receive the highest degree, to the glory of family, relatives, and above all, our ancestors whose spirits were in heaven. My second brother had passed his civil examination a few years before me; he was now a student at the Imperial University of Peking, of which I was to be Chancellor after some fifteen years—unpredictable chance.

An announcement printed on a big piece of red paper like the one I had received in Shaoshing was presented by official reporters, to the beating of a tom-tom, to my relatives and family friends. On the day

of celebration I dressed in a blue satin gown and wore a red-tasseled hat with a silver button on top. Several hundred relatives and friends, including women and children, came to feast for two days. The spacious guesthall was decorated with artistic red lanterns and an orchestra played Chinese tunes. The happiest man there was my father, who cherished the hope that some day his son might become a grand minister at His Majesty's Imperial Court. For my part, I was puzzled. I was torn between two opposing forces, one pulling toward the old and the other toward the new. "What shall I do? What shall I do?" a voice cried out within me.

After three weeks the college reopened for the new session. Once more I swung back again to my studies in the new learning. I stayed for about half a year, leaving before the summer vacation. All the conflicting ideas, as between new and old, constitutional reforms and revolution, buzzing around in this topsy-turvy world of mine, were more than an immature mind could endure. I became restless and often had a fantasy in which, by a sort of somersault, I rocketed high into the air and then whirled down rapidly to the ground, where I burst to bits and was gone forever.

Being born in a family which had a few cases of insanity among my close relatives, I wondered sometimes whether I, too, had inherited a faint streak of instability which might occasionally tip the scale a little in my otherwise well-balanced temperament. I had been told, moreover, by my father and my granduncle that my ideas and actions during childhood had been quite different from those of the rest of the children. I still remember how my granduncle scolded me one day, remarking that when I grew up I would become either a wise man or a rascal; to which, not knowing the meaning quite clearly, I secretly replied to myself that I wanted to be a wise man.

Was I crazy in this crazy world? At least one problem always remained clear in my mind: how to save China from dismemberment by the foreign Powers. Revolutionary ideas were now fast gaining ground in the minds of students throughout the country. As more and more of them joined the movement, the influence of Dr. Sun Yat-sen

grew wider and wider. The days of the reigning dynasty were numbered.

On my part, I longed for a better and more westernized school. For by this time I could see that the wind blew in the direction of westernization, irrespective of whether China had constitutional reforms or revolution. One morning as I passed unintentionally by a passageway where students were forbidden, I met the proctor, who asked me what I was doing there. On the spur of the moment I improvised the story that my mother was ill and had written me to come home.

"That's too bad," he said. "You had better go right away."

I went back to my dormitory, packed up everything, and left the college that same morning. I took a small steamboat, chugging along the Grand Canal, down to Shanghai. There I took the entrance examination for Nanyang College and passed it. This was the year 1904, when the Russo-Japanese War was raging in all intensity for the control of Manchuria^[1] .

^[1] Manchuria : 满洲 , 旧指中国东北一带。

CHAPTER 8 WESTERNIZATION

China was now definitely on the track of westernization, whatever her struggles between old and new, between constitutionalism and revolution. The victory of Japan over Tsarist Russia gave further impetus to her reforms along new or Western lines. By this time about fifty thousand Chinese students had gathered about Tokyo, a center of the new knowledge. In the meantime the government had begun a series of reforms; new educational, military, and police systems were adopted, all copied after the Japanese models. Many believed that the Western systems and institutions which had been assimilated by the Japanese and adapted to Japanese life were more suitable to Chinese conditions than purely foreign forms. That is to say, China was to receive Western civilization via Japan. There were others, however, who held that if she must introduce Western civilization for her rejuvenation, why should she not go direct to the West for it?

I was one of those who believed in the direct route. In spite of the persuasions of friends studying in Japan, I stuck stubbornly to my belief. I entered Nanyang College with a view to preparing myself for American universities. As all the textbooks on Western subjects were in English, it suited me splendidly.

The college had been organized with the advice of Dr. John C. Ferguson, a former American missionary who only recently died in New York, and its preparatory department was run along the lines of an American high school. So it was most convenient as the final step to an American college. There were several American teachers who taught us modern subjects. After two years there I could read English fairly well, although I was still quite deficient in speaking. The language was not taught by phonetic methods and I found my tongue too stiff to follow.

The curriculum was divided into two groups, one of Chinese and the other of Western subjects. I always stood high in both, once

winning honors in the two examinations simultaneously. The principal summoned me and paid me high compliments, to my great satisfaction.

The college was laid out and built according to Western plan; the main building had in its center a clock tower which could be seen several miles away. In front of a row of buildings was a vast football field, green and well kept. Football and baseball were encouraged by the college authorities and games and sports, generally indulged in by the students. Intercollegiate track and field games were held twice a year, with thousands of spectators.

Born physically frail, I began to realize that a healthy body was necessary for a healthy mind. Besides daily exercise and some sports of the lighter kind, I adopted a course of physical culture for myself. Every morning at about six I practised with dumbbells for half an hour, and again for fifteen minutes in the evening before going to bed. I kept this up for three years without interruption and after that time found myself in good health and always in a cheerful mood.

Spender's principles of education—consisting of three elements: the intellectual, moral, and physical—had by now been introduced into China. So to make up my moral education I reviewed some of the Confucian classics and studied the Sung and Ming philosophers and biographies of great men in history, both Chinese and Western, with a view to imitating their conduct. I entered selected parts of their sayings and doings in my diary as I came across those that struck me. Then I did some careful thinking about them, tried to act on them, and watched the results, which were also entered into the diary for further examination.

It was exciting whenever I discovered that Chinese and Western ideas regarding certain matters were similar or almost identical. When they were I knew that in acting in accordance with them I would be guided by a universal truth. When discrepancies occurred I studied them and tried to find out the reasons for them. In this way I unconsciously made a comparative study of morals, or rules of conduct, of East and West. The most important result was that I

learned to differentiate essentials from nonessentials and the fundamental from the superficial in moral ideas.

Henceforth I began to be more positive, more definite, more self-confident in steering my life on troubled waters. For moral ideas are the charts by means of which a life of action is directed.

I began to see the oneness of East and West and appreciate the dictum of Lu Hsiang-shan, a Sung philosopher, that "the sages born of the Eastern sea will have the same mind and therefore the same reason as the sages of the Western sea." I also began to see unity in chaos, for I came to realize that essentials are but few, while to know the similarities, differences, or contrasts among them is to clarify each and all of them. It was the buzzing of trifling things that made you dizzy. So I followed the teachings of Mencius and Lu Hsiang-shan that in learning we must grasp the essentials and neglect the trifles and make our own reasoning power the sole arbiter. Thus I began to establish myself on the solid rock of reasoning instead of traditional beliefs. I felt as if I had stripped off clothes that were altogether too tight and stepped forth naked and free.

However, reason does not exist in a vacuum. I indulged in too much thinking, which led to nothing but disappointment. But the way to right thinking had to start from thinking itself, and learning to think by experience. You cannot teach a person how to think if he does not think at all. My belief here was reinforced in later years in America by reading John Dewey's *How We Think*, to which I owed much.

It is the teaching of the Confucian school that mental culture is the starting point of personal culture, which in turn will serve as the foundation for statecraft. Therefore, in order to save China, save yourself first. So I devoted myself to study and thinking, to physical exercise and to proper conduct. This was, as I understood it, the way to personal culture which would some day serve as the foundation for rendering service to the state.

While I was still at Nanyang College the Imperial Court took a definite step in educational reform by abolishing—in 1905—the

agelong system of civil examinations; by this act the door to the past was closed to the younger generation once and for all. The decree was prompted by the victory of Japan over Russia. To replace the old, a new educational system was inaugurated, modeled after the Japanese, which in turn had been introduced to Japan from the West. China was now surely on the road to westernization.

For some time past Shanghai had been the center of a fugitive cultural movement in China. Harbored in the International Settlement and the French Concession, where Chinese jurisdiction reached to only a very limited extent or so far as international or French authorities might agree, Chinese intellectual and revolutionary leaders made their homes and enjoyed freedom of speech and publication. Here political fugitives and men of radical thought, or those so considered at the time, gathered to discuss, elucidate, and publish their ideas. Life here was comparable to that in one of the old Greek city-states—thinking was free and active.

For my own part, in addition to my training at Nanyang I joined in various activities as a junior member, more by way of learning than active participation. On Saturdays and Sundays I frequented especially Chi-fang, a teashop on Foochow Road where all the students of Shanghai sipped their tea and indulged in lively discussions. No student of those days can forget the unique figure of the king of rogues, or "King Hsu," who was an inseparable part of the teahouse, selling revolutionary literature to the students. He was dressed in shabby Western clothes with a grey greasy cap on his head, his queue being cut. Among his revolutionary wares he included a pamphlet, *A New Treatise on Sex Problems*, which he explained was to catch the attention of the reading public. Nobody ever knew his name or where he lived. Any book on revolution nominally tabooed by the municipal authorities by request of the Chinese government could be secured through him.

In the same year that civil examinations were abolished the Tung Men Huei—the "Revolutionary Union," predecessor of the Kuomintang—was organized by Dr. Sun Yat-sen in Tokyo with several hundred

students joining, and Dr. Sun was elected president. This was the year of the Portsmouth Treaty, signed by Japan and Russia to end the Russo-Japanese War. After this victory over one of the Western Powers Japan was now ready to launch aggression on China. This was a bare ten years before she delivered her famous Twenty-One Demands, and only sixteen years before the Mukden Incident which led to full-fledged war in 1937.

In Shanghai a boycott movement against American goods was proceeding in all intensity as a protest against the passing of the Chinese Exclusion Act by the American Congress. Students and merchants joined in calling from door to door on Chinese shopkeepers, urging them not to sell American merchandise. The shopkeepers tried to get rid of their boycotted goods as fast as possible at very moderate prices and a number of people were happy to buy them at the back door. Mass meetings were held in which fierce speeches against the exclusion act were made. At one of them the speaker stamped on the platform so hard that the sole of his shoe fell off and was flung into the audience while waves of laughter rang through the hall.

Another important incident, in the following year, was the agitation by the gentry of Chekiang and Kiangsu Provinces and the students and merchants of Shanghai against construction of the Soochow-Hangchow-Ningpo Railway by British capital. There were public demonstrations in the form of mass meetings, circular telegrams, and soapbox orations, and subscriptions were opened for shares in the railway with a view to building it with Chinese capital. The line was changed to run via Shanghai, Hangchow, and Ningpo; Shanghai being substituted for Soochow by the curious reasoning that the latter, an inland city, would thus be spared foreign influence, which was bound to increase with a railway. The British gave in as to the route, though the agitation was unsuccessful in obtaining Chinese capital ownership, and the railway was begun the next year.

Students all over China remained quiet in the schools during those years, partly because of their wider interests in activities outside

school and partly because they themselves had wearied of the meaningless troubles they gave the school authorities. Nevertheless, they now turned their attention to the school cooks who prepared food for them. Each student paid six dollars a month for his food in Shanghai; in the interior, three dollars. One could not, therefore, expect very much from the cook, but the students were dissatisfied with what they got. They complained of the coarse rice and the poor quality of meat and vegetables, often demanding additional dishes—generally fried eggs, which were easy to prepare. Eggs were cheap in China then, about fifty or sixty for a dollar. Sometimes the students smashed the plates or bowls or beat up the cooks. No school was free from "strikes in the dining hall" as they were called.

In 1907 a short-lived revolution broke out in Anking, provincial capital of Anhwei. The leader was Hsu Shih-ling, police taotai (chief of police) of that province. He had been a teacher in the Sino-Occidental School in Shaoshing, where I received my early education in Western learning—where I first learned that the earth is round. He was a Chu-jen, the Second Degree awarded through the Imperial civil examinations; had taught in the school for a few years and then gone to Japan to study. Returning to China, he bought the office of taotai with fifty thousand dollars borrowed from friends and was appointed for the province of Anking. With the police under his control, he shot the governor with his own hand and started a coup d'état in the provincial capital. With two personal followers and the police force he occupied the arsenal, training its several cannon on the entrance. Not being adepts in military art, they were unable to make the guns work and soldiers rushed in and arrested him. One of his followers, Chen, was killed in action while the other, Ma, was arrested later.

Ma had been a schoolmate of mine at Chekiang College in Hangchow, and on their way from Japan to Anking he and Chen had stopped in Shanghai, where they came to see me almost every day. They talked at length about the revolutionary movement, which they believed was the only course for China's salvation, and asked me to go to Anking with them; but a cousin of mine, the manager of a native bank, advised me rather to take a trip to Japan. During summer

vacation I took the opportunity of going with a friend to Tokyo, where an exposition was being held. Ma and Chen and I dined in farewell at the I-tse-hsiang Restaurant the evening before my departure, and they also left the next day for Anking, aboard a Yangtze steamer which took them up the river to their fatal destination.

My first experience on an ocean-going steamer was rather thrilling. Everything was novel to me. The flush toilet was a wonder. The Japanese *boysans* (cabin boys) were courteous. We reached Nagasaki the next morning and were impressed with the beautiful scenery in that port. In the afternoon we passed Shimonoseki, well known in China for Li Hung-chang's visit to it and for the peace treaty concluded in 1895 and known by that name. We landed at Kobe and from there took a train to Tokyo, getting off at Shimbashi Station. A friend of mine who was studying in Tokyo took me to a small hotel, the Kimigayokan in the Koishikawa district. The street was unpaved and muddy on that rainy day.

I visited the exposition in Ueno Park dozens of times and was impressed with the industrial development of Japan. In a war museum where prizes of war were shown I was very much ashamed to see the Chinese flags, uniforms, and weapons seized in the Sino-Japanese War and I tried vainly to dodge the eyes that stared at me. In the evening the park was illuminated with thousands of electric lights and the happy populace of Tokyo paraded on the grounds with myriad lanterns in their hands, shouting *Banzai*! They were intoxicated with the victory over Russia two years earlier and still went wild about it. On my part, I stood alone at the top of an imitation hill and watched the parade passing. I was so much moved that tears rolled down my cheeks.

Early one morning, within a week or so of my arrival, the *neisan* or chambermaid brought me a Japanese paper from which I learned of Hsu Shih-ling's revolution in Anking and its failure. I would have been killed if I had gone there with my two friends.

The general impression I had of Japan was very favorable. The whole country was a garden. The people were well dressed, their cities

clean. They were perhaps inwardly conceited, but courteous to strangers. Compulsory education made the general level of the people much higher than in China, and this was perhaps the secret of Japan's becoming a world Power. These were the impressions I carried home after a month's stay.

Pretty soon I began to work hard again at the college. The following year, during the summer vacation, I went to Hangchow to take the Chekiang provincial examination for scholarships to study in America. Having failed, I got a few thousand dollars from my father and prepared to go to California for further study.

第一部 满清末年

西风东渐

差不多两千年以前，几位东方的智者，循着天空一颗巨星的指示，追寻到一个新宗教的诞生地。这个宗教便是基督教。基督教后来在西方国家的生活中占着极其重要的地位。基督教以和平仁爱为宗旨，要求教徒们遇到“有人掌掴你的右颊时，你就把左颊也凑过去”。基督教的教徒经过不断的磨难和挫折，不顾罗马猛狮的威胁和异教徒的摧残迫害，逆来顺受，终于在罗马帝国各民族之间传播开来了。几百年之后，它以同样坚忍的精神慢慢地流传到中国。

景教徒在唐朝（公元六一八——九〇五）时来到中国，唐室君主曾为他们建造了景教寺，但是景教徒的传教成绩却很有限，再过了几百年，在十七世纪中叶，耶稣会教士带着西方的天文学来到中国，终于得到明朝（公元一三六八——一六四三）皇帝的垂青。

在这同时，活力旺盛的西方民族，不但接受了新兴的基督教，而且发展了科学，完成了许许多多的发明，为近代的工业革命奠定了基础。科学和发明渐渐流传到东方，先是涓涓滴滴地流注，接着汇为川流江涛，最后成为排山倒海的狂潮巨浪，泛滥整个东方，而且几乎把中国冲塌了。

中国人与基督教或任何其他宗教一向没有什么纠纷，不过到了十九世纪中叶，基督教与以兵舰做靠山的商业行为结了伙，因而在中国人的心目中，这个宣扬爱人如己的宗教也就成为侵略者的工具了。人们发现一种宗教与武力形影不离时，对这种宗教的印象自然就不同了。而且中国人也实在无法不把基督教和武力胁迫相提并论。慢慢地人们产生了一种印象，认为如来佛是骑着白象到中国的，耶稣基督却是骑在炮弹上飞过来的。

我们吃过炮弹的苦头，因而也就对炮弹发生兴趣。一旦我们学会制造炮弹，报仇雪耻的机会就来了。我们可以暂时不管这些炮弹是怎么来，因为对我们这些凡夫俗子而言，保全性命究竟比拯救灵魂来得重要。

历史的发展真是离奇莫测。我们从研究炮弹而研究到机械发明；机

械发明而导致政治改革；由于政治改革的需要，我们开始研究政治理论；政治理论又使我们再度接触西方的哲学。在另一方面，我们从机械发明而发现科学，由科学进而了解科学方法和科学思想。一步一步地我们离炮弹越来越远了，但是从另一角度来看，也可以说离炮弹越来越近了。

故事说来很长，但是都是在短短一百年之内发生的，而且紧张热烈的部分还不过五十年的样子。我说一百年，因为香港本来可以在一九四二年"庆祝"香港成为"英国领土"的一百周年纪念，但是这也是历史上偶然的一件事，英国的旧盟邦日本却在前一年以闪击方式把香港抢走了。我提到香港，决不是有意挖旧疮疤，而是因为香港在中国欧化的早期历史上，恰恰是现成的纪念碑。大家都知道，香港这群小岛是中国在所谓"鸦片战争"中失败以后在一八四二年割让给英国的。这次战争的起因是中国继禁止鸦片进口之后，又在广州焚毁大批鸦片。鸦片是英国由印度输出的主要货物，于是英国就以炮弹回敬中国，中国被击败了。

一八四二年的中英条约同时规定中国的五个沿海城市开放为商埠。这就是所谓"五口通商"。大批西方商品随着潮涌而至。这五个商埠以差不多相似的距离散布在比较繁盛的中国南半部，为中国造成了与外来势力接触的新边疆。过去中国只有北方和西北那样的内陆边疆，现在中国的地图起了变化，这转变正是中国历史的转折点。

这五个商埠——广州、厦门、福州、宁波和上海——由南向北互相衔接，成为西方货品的集散地，舶来品由这五个口岸转销中国最富的珠江流域和长江流域各地。

西方商人在兵舰支持之下像章鱼一样盘踞着这些口岸，同时把触须伸展到内地的富庶省份。中国本身对于这些渗透并不自觉，对于必然产生的后果更茫无所知。亿万人民依旧悠然自得地过着日子，像过去一样过他们从摇篮到坟墓的生活，从没有想到在现代化的工作上下工夫。一部分人则毫不经心地开始采用外国货，有的是为了实用，有的为了享受，另一些人则纯然为了好奇。

但是，西方列强的兵舰政策不但带来了货品和鸦片，同时也带来了西方科学文化的种子。这在当时是看不出来的，但是后来这些种子终于发芽滋长，使中国厚蒙其利——这也是历史上的一大讽刺。

这时候，日本也正以一日千里之势向欧化的途程迈进，中国对此却毫无所觉。半世纪以后，这个蕞尔岛国突然在东海里摇身一变，形成了

一个硕大的怪物，并且在一八九四年出其不意地咬了东亚睡狮一大口。中国继香港之后又丢了台湾。这只东亚睡狮这时可真有点感到疼痛了，茫茫然揉着惺忪的睡眼，不知道究竟是什么扰了它的清梦？

我原先的计划只是想写下我对祖国的所见所感，但是当我让这些心目中的景象一一展布在纸上时，我所写下的可就有点像自传，有点像回忆录，也有点像近代史。不管它像什么，它记录了我心目中不可磨灭的景象，这些景象历历如绘地浮现在我的脑际，一如隔昨才发生的经历。在急遽递嬗的历史中，我自觉只是时代巨轮上一颗小轮齿而已。

乡村生活

我出生在一个小村庄里的小康之家。兄弟姊妹五人，我是最小的一个，三位哥哥，一位姊姊。我出生的前夕，我父亲梦到一只熊到家里来，据说那是生男孩的征兆。第二天，这个吉兆应验了，托庇祖先在天之灵，我们家又添了一个儿子。

我大哥出生时，父亲曾经梦到收到一束兰花，因此我大哥就取名梦兰。我二哥也以同样的原因取名为梦桃。不用说，我自然取名为梦熊了。姊姊和三哥诞生时，父亲却没有梦到什么。后来在我进浙江高等学堂时，为了先前的学校里闹了事，梦熊这个名字入了黑名单，于是就改为梦麟了。

我出生在战乱频仍的时代里。我出生的那一年，英国从中国拿走了对缅甸的宗主权；出生的前一年恰恰是中法战争结束的一年，中国对越南的宗主权就在那一年让渡给法国。中国把宗主权一再割让，正是外国列强进一步侵略中国本土的序幕，因为中国之保有属国，完全是拿它们当缓冲地带，而不是为了剥削他们。中国从来不干涉这些边缘国家的内政。

这情形很像一只桔子，桔皮被剥去以后，微生物就开始往桔子内部侵蚀了。但是中国百姓却懵然不觉，西南边疆的战争隔得太远了，它们不过是浩瀚的海洋上的一阵泡沫。乡村里的人更毫不关心，他们一向与外界隔绝，谈狐说鬼的故事比这些军国大事更能引起他们的兴趣。但是中国的国防军力的一部分却就是从这些对战争不感兴趣的乡村征募而来的。

我慢慢懂得一些人情世故之后，我注意到村里的人讲起太平天国革命的故事时，却比谈当前国家大事起劲多了。我们乡间呼太平军为长毛，因为他们蓄发不剃头。凡听到有变乱的事，一概称之为长毛造反。大约在我出生的三十年前，我们村庄的一角曾经被太平军破坏。一位木匠出身的蒋氏族长就参加过太平军。人们说他当过长毛的，他自己也直认不讳。他告诉我们许多太平军掳掠杀戮煮吃人肉的故事，许多还是他自己亲身参加的。我看他的双目发出一种怪光，我父亲说，这是因为吃了人肉的缘故。我听了这些恐怖的故事，常常为之毛骨悚然。这位族长说，太平军里每天要做祷告感谢天父天兄（上帝和耶稣）。有一天做祷告以后，想要讨好一位老长毛，就说了几句“天父夹天兄，长毛夺咸

丰"一套吉利话。老长毛点头称许他。他抖了，就继续念道："天下打不通，仍旧还咸丰。""妈"的一声，刀光一闪，从他头上掠过。从此以后，他不敢再和老长毛开玩笑。

这样关于长毛的故事，大家都欢喜讲，欢喜听。但是村里的人只有偶然才提到近年来的国际战争，而且漠不关心。其间还有些怪诞不经的胜利，后来想起来可怜亦复可笑。事实上，中国军队固然在某些战役上有过良好的表现，结果却总是一败涂地的。

现代发明的锋芒还没有到达乡村，因而这些乡村也就像五百年前一样地保守、原始、宁静。但是乡下人却并不闲，农人忙着耕耘、播种、收获；渔人得在运河里撒网捕鱼；女人得纺织缝补；商人忙着买卖；工匠忙着制作精巧的成品；读书人则高声朗诵，默记四书五经，然后参加科举。

中国有成千上万这样的村落，因为地形或气候的关系，村庄大小和生活习惯可能稍有不同，但是使他们聚居一起的传统、家族关系和行业却大致相同。共同的文字、共同的生活理想、共同的文化和共同的科举制度则使整个国家结为一体而成为大家所知道的中华帝国。（我们现在称中华民国，在辛亥革命以前，欧美人称我们为中华帝国。）

以上所说的那些成千成万的村庄，加上大城市和商业中心，使全国所需要的粮食、货品、学人、士兵，以及政府的大小官吏供应无缺。只要这些村镇城市不接触现代文明，中国就可以一直原封不动，如果中国能在通商口岸四周筑起高墙，中国也可能再经几百年而一成不变。但是西洋潮流却不肯限于几个通商口岸里。这潮流先冲激着附近的地区，然后循着河道和公路向外伸展。五个商埠附近的，以及交通线附近的村镇首先被冲倒。现代文明像是移植过来的树木，很快地就在肥沃的中国土壤上发芽滋长，在短短五十年之内就深入中国内地了。

蒋村是散布在钱塘江沿岸冲积平原上的许多村庄之一，村与村之间常是绵延一两里的繁茂的稻田，钱塘江以风景优美闻名于世，上游有富春江的景色，江口有著名的钱塘江大潮。几百年来，江水沿岸积留下肥沃的泥土，使两岸逐步向杭州湾扩伸。居民就在江边新生地上筑起临时的围堤截留海水晒盐。每年的盐产量相当可观，足以供应几百万人的需要。

经过若干年代以后，江岸再度向前伸展，原来晒盐的地方盐分渐渐消失净尽，于是居民就在离江相当远的地方筑起堤防，保护渐趋干燥的

土地，准备在上面蓄草放牧。再过一段长时期以后，这块土地上面就可以植棉或种桑了。要把这种土地改为稻田，也许要再过五十年。因为种稻需要大量的水，而挖池塘筑圳渠来灌溉稻田是需要相当时间的，同时土地本身也需要相当时间才能慢慢变为沃土。

我童年时代的蒋村，离杭州湾约有二十里之遥。围绕着它的还有无数的村庄。大小大小，四面八方都有，往南一直到山麓，往北到海边，往东往西则有较大的城镇和都市，中间有旱道或河汊相通。蒋氏族谱告诉我们，我们的祖先是从小迁到奉化暂驻，又从奉化迁到余姚。余姚是钱塘江的发源地，我们的祖先到余姚来，可能就是为了开垦江边新生地。在我幼年时，我们蒋氏家庙的前面还有古堤岸的遗迹，那家庙叫做“四勿祠”，奉祠宋朝当过御史的一位祖先，他是奉化人，名叫蒋岷。然而一般人却惯叫“陟塘庙”，因为几百年前，庙前横着一条堤塘。

读者或许要问：什么叫“四勿”呢？那就是《论语》里的非礼勿视、非礼勿听、非礼勿言、非礼勿动四句话。我们玩具店里所看到的三只猴子分别蒙起眼睛、耳朵、嘴巴，就是指这回事。至于为什么没有第四只猴子，因为那三只猴子坐着不动，就可以代表了。但是我们那位御史公却把这四勿改为勿欺心、勿负主、勿求田、勿问舍，人称之为四勿先生。这些自古流传下来的处世格言是很多的。我们利用一切可能的方法，诸如寺庙、戏院、家庭、玩具、格言、学校、历史、故事等等，来灌输道德观念，使这些观念成为日常生活中的习惯。以道德规范约束人民生活是中国社会得以稳定的理由之一。

几千年以来，中国的人口从北方渐渐扩展到南方，先到长江流域，继至珠江流域，最后到了西南山区。中华民族一再南迁的理由很多，南方土地肥沃、塞外好战部落入侵，以及人口的自然繁殖都有关系，且从宋朝以后，黄河一再泛滥，更使人们想念江南乐土。我的祖先在早期就由北而南，由南而东，最后终于在杭州湾沿岸定居下来。

蒋姓的始祖是三千多年前受封的一位公子王孙。他的名字叫做百龄，是代周成王摄政的周公的第三个儿子。他在纪元^[4]前十二世纪末期被封在黄河流域下游的一块小地方，他的封地叫做“蒋”，他的子孙也就以蒋为氏了。蒋是茭白古名。那块封地之所以定名为蒋，可能是那一带地方茭白生长得特别繁茂的缘故。

在三国时代，也就是公元第三世纪，我们的一位祖先曾在历史上露了脸。他的名字叫蒋琬，住在长江流域南部的湘乡，从蜀先主入蜀。诸葛亮称他是社稷之才。这证明住在长江以南的蒋姓子孙，在第三世纪以

前就从黄河流域南迁了。从我们的始祖起到现在，所有嫡系子孙的名字，在我们的族谱上都有纪录可考。至于确实到什么程度，我却不敢说，因为他们的生平事迹很少有人知道，考证起来是很困难的。但相传江南无二蒋，所以我们至少可以说一句：住在长江以南所有姓蒋的都是同宗同支的。究竟可以正确地追溯到多远，我们可不知道了。不过我们确切知道：住在浙江省境的蒋姓子弟，都在徽州找到了共同的宗脉。

我在宗谱中从迁余姚的始祖传到我为第十七世。蒋姓首先定居在我们村里的是五百多年前的，那是元朝末年的事。这五百多年之中，两个朝代是外来民族建立的，一个是汉族自己的王朝，蒋姓一族曾经看到元朝的没落、明朝和满清的兴衰，以及几乎推翻满清的太平天国。朝代更换了，蒋村却依然故我，人们还是照常地过活、做工，最后入土长眠。

太平军到了村子里，村中曾经有几所房子焚毁，留在村子里的老弱有被活活烧死的，有一处大门口残存的石阶上留有红斑，据传说是某位老太婆在此烧死时所流的血。大多数的老百姓都逃到山里躲起来，但是战事一平定，大家又像蜜蜂回巢一样回到村里。在我童年时代，村里还可以看到兵燹以后留下来的残垣断瓦。

村里的人告诉我，满洲人推翻明朝的消息，一直到新朝廷的圣旨到了村里时，大家才知道。清帝圣旨到达村里时，邻村还正在演社戏呢！改朝换代以后，族人生活上的唯一改变是强迫留辫子，同时圣旨严禁男人再穿明朝式样的衣服。大家敢怒不敢言，但是死后入殓时，男人还是穿明朝衣冠。因此我们族中流行着一句话："男投（降）女不投，活投死不投。"就是说男人投降，女人却不投降，活人投降，死人却不投降。一些人一直维持这个办法到一九一一年清室覆亡、民国建立为止，中间经过两百五十年之久。

我们村上只有六十来户人家，人口约三百人，是个很小的村庄。它的三面环绕着河汊，南面是一条石板路，通往邻近的村庄和城镇。小河汊可以通到大河，再由大河可以到达杭州、苏州和上海等大城市。

蒋村虽然小，水陆交通却很便利。河汊上随处是石桥，河的两岸则满是绿柳垂杨。河中盛产鱼、虾、鳊、鳙、龟、鳖。柳荫之下，常有人悠闲地在垂钓。耕牛慢慢地踱着方步，绕着转动牛车，把河水汲到水槽再送到田里。冬天是连阡穿陌的麦穗，夏天是一片稻海，使人生四季长青之感，麦穗和稻穗随着微风的吹拂，漾起一片涟漪，燕子就在绿波之上的蓝空中穿梭翱翔。老鹰忽高忽低地绕村回旋着，乘老母鸡不备的时

候就俯冲而下，攫走小鸡。

这就是我童年时代的背景，也是我家族的环境。他们安定地在那里生活了五百多年，他们很少碰到水灾或旱灾，在这漫长的几百年中也只不过遇上一两次的变乱和战争。他们和平而满足地生活在他们自己的世界里，贫富之间也没有太大的差别。富饶的稻谷、棉花、蚕丝、鱼虾、鸡鸭、蔬菜使人民丰衣足食。

几百年来，不论朝代如何更换，不论是太平盛世或战祸频仍，中国乡村里的道德、信仰和风俗习惯却始终不变。乡下人觉得这个世界已经很不错，不必再求进步。生命本身也许很短暂，但是投胎转世时可能有更大的幸福。人死以后，据说灵魂就离开肉体，转投到初生的婴儿身上。我自己就亲眼看到过绑赴刑场处决的罪犯，对围观的群众高喊："十八年之后又是一条好汉！"这是何等的达观！

我们村子里的人说：一个坏人或作孽多端的人，死后要转世为穷人，或者变马变猪，甚至灵魂支离割裂，变为蚊蝇小虫。好人善士的灵魂转世时则可以享更高的福禄。这些都是随佛教而来的印度传说而被中国道教所采用的。佛教本身，倒不大理会这些事。

善恶当然有公认的标准。"万恶淫为首，百善孝为先。"孝道使中国家庭制度维系不堕；贞操则使中国种族保持纯净。敬老怜贫、忠信笃敬也被认为善行。重利盘剥、奸诈谎骗则列为罪行。斥责恶行时常骂人来生变猪变犬。

商业往来讲究一诺千金。一般而论，大家都忠实可靠。欺诈的人必然受亲朋戚友一致的唾弃。

婚姻是由媒妁之言、父母之命决定的。通例是男子二十而娶，女子十八而嫁。妻子死了，丈夫大概都要续弦，中上之家的女人如果死了丈夫，却照例要守寡。守寡的可怜人算是最贞节的，死后皇帝还要给她们建贞节牌坊。这种牌坊在乡间到处可以看见的。

村里的事全由族长来处理，不待外界的干涉。祠堂就是衙门。"族长"不一定是老头子，也可能是代表族中辈份最高一代的年轻人。族长们有责任监督敬先祭祖的礼仪遵奉不渝，族人中起了争执时，他们还须负责加以评断。没有经过族长评理以前，任何人不许打官司。族长升堂审判叫做"开祠堂门"，全村的人都可以来参观。祖宗牌位前面点起香烛，使得每个人都觉得祖先在天之灵就在冥冥之中监视似的，在祖先的面前，当事的两边不能有半句谎话。一般而论，说老实话的居多。

仲裁者力求做得公平。自然，村中的舆论也是重要的因素，还有，邻村的舆论也得考虑。族长们如果评断不公，就会玷污了祠堂的名誉。因此，争执多半在祠堂里得到公平的解决，大家用不到上衙门打官司。

实际上真需要"开祠堂门"来解决的事情并不多，因为大家认为"开祠堂门"是件大事，只有特别严重的案子才需要这样做。一般的纠纷只是在祠堂前评个理就解决了。

读书人和绅士在地方上的权威很大。他们参加排难解纷，也参加制定村里的规矩，他们还与邻村的士绅成立组织，共同解决纠纷，照顾邻近村庄的共同福利。

田赋由地主送到离村约二十里的县库去，粮吏从来不必到村里来。老百姓根本不理睬官府的存在，这就是所谓"天高皇帝远"。

除了崇拜祖先之外，大家要信什么就信什么。上佛寺、拜神仙、供关公、祭土地，悉听尊便。没有宗教限制，也没有宗教迫害。你信你的神，我拜我的佛，各不相涉，并且还有把各式各样的神拼在一起大家来拜。这就是通常所称的"道教"。如果基督徒肯让基督与中国神并供在中国庙宇里，我相信村里人一定会像崇拜其他神佛一样虔敬崇拜基督。

一般老百姓都是很老实的，人家说什么，他们就相信。迷信就是在这种背景下产生的，而且像滚雪球一样越滚越大，几百年积聚下来的迷信，当然是非常可观了。

我提到过村里的人相信灵魂轮回之说。这似乎与散鬼游魂之说互相矛盾的。不过，凡关于鬼神的事，我们本来是不甚深究的，几种矛盾的说法，可以同时平行。据说灵魂与鬼是两回事。灵魂转入轮回，鬼则飘游宇宙之间。伟人圣哲的鬼就成了神，永远存在于冥冥之中，凡夫俗子的鬼则逐渐飘散消逝，最后化为乌有。鬼能够随心所欲，随时随地出现。它可以住在祠堂里，也可以住在坟墓里，高兴怎么样就怎么样。我国不惜巨资建造富丽堂皇的坟墓和宫殿式的祠堂，大概和这些信仰不是没有关系的。这种鬼话各地皆有，虽各有不同，但大体是一致的。

中国人对一切事物的看法都不脱人本位的色彩。如果鬼神与活人之间毫无关系或毫无接触，那末大家就不会觉得鬼神有什么用处，或许根本就不会相信它们真的存在。寺庙祠堂里固然有神佛的塑像，也有祖宗的灵牌，但是这些偶像或木主虽然令人望之生畏，却不能走出神龛直接与生人交谈，除非在梦中出现。人们需要更具体、更实际的表现，因此就有了巫婆、扶乩和解梦。

如果一个人怀念作古了的朋友或去世的亲戚，他可以请一位巫婆把鬼魂召了来。当巫婆的多半是远地来的女人。被召的鬼魂来时，巫婆的耳朵就会连续抽搐三次。普通人是不能控制耳朵的肌肉的，巫婆的耳朵能够自己动，使得大家相信它的确有鬼神附体。她说话时，压着喉咙像猫叫，因此她讲的话可以由听的人随意附会。如果巫婆在谈话中摸清了对方的心思，她的话也就说得更清楚点，往往使听的人心悦诚服。

真也好，假也好，这办法至少使活着的亲戚朋友心里得点安慰。五十年前，我自己就曾经透过巫婆与我故世的母亲谈过话，那种惊心动魄的经验至今还不能忘记。

扶乩可比较高级了，扶乩的人多半是有知识的。两个人分执一根横木条的两端，木条的中央接着一根木棒，木棒就在沙盘里写字。神佛或者名人的鬼魂可以被请降坛，写字赐教。扶乩可以预言未来，可以预言来年的收成，也可以预告饥荒，甚至和平或战乱，几乎什么问题都可以问。完全不会作诗的也能写出诗来。写的人也能写出素昧平生的人的名字。懂一点心理学的人大概都能解释，这是一种潜意识的作用。但是有好几位外国留学的博士学士，到如今还是相信扶乩。有一位哈佛大学毕业生，于抗战期间任盐务某要职，扶乩报告预言，推测战局，终被政府革职。

巫婆只能召至去世的亲戚朋友的鬼魂，扶乩却能召唤神佛。在做梦时，鬼魂和神佛都能自动地来托梦。我听过许多关于做梦应验的事，但是多半不记得了。我记得一个圆梦的例子是这样的：我的一位曾叔祖到杭州去应乡试，俗称考举人，他在考棚里梦到一只硕大无比的手伸进窗子。因为他从来没有见过这样大的手，这个梦就被解释为他将独占鳌头的征兆。放榜时我的曾叔祖居然中试第一名，俗称解元。

神佛、死去的亲戚朋友或者精灵鬼怪可能由托梦提出希望、请求或者警告。一位死了的母亲可能要求她儿子给她修葺坟墓。死了的父亲可能向儿子讨纸钱。死人下葬时总要烧点纸钱，以备阴间使用。

我们村里发生过一件事，好几年以后，大家谈起来还是娓娓不倦。一位叫阿义的青年农夫预备用船载谷子进城市。那天早上，他坐在家发呆，人家问他为什么，他说前一晚他死去的母亲来托梦，警告他不要走近水边。他的游泳技术很高明，他猜不透这个梦究竟是什么意思。

黄昏时，他安然划着船回到家，用竹篙把船拢了岸。他对站在岸上的朋友开玩笑，说他自己的危险总算过去了，说罢还哈哈大笑。突然间

他足下一滑就跌进河里去了。挣扎了一阵子，他就沉入水底。朋友们赶紧潜水去救，但是到处找不到。半小时后他被拖上来了，但是已经手足冰冷，一命呜呼。原来他跌入河中以后，手足就被水边的一棵陈年老柳的盘根缠住了。

大家说他是被水鬼抓下去的，或许那是一只以柳树根作窝的水猴子。好几个游泳技术很好的人都在那个地方淹死。村里的人常常看到那个"水鬼"在月光下坐在附近的桥上赏月。它一看到有人走近就扑通一声钻到水里去。

各式各样无法解释的现象都使迷信的雪球越滚越大，错觉、幻象、梦魇、想像、巧合、谣言都是因素。时间更使迷信愈积愈多。

村中的医药当然也很原始。我们得走好几里路才能在大镇里找到草药医生，俗称"草头郎中"。对于通常的病痛或者某些特殊的病症，中国药是很有效的。但是对于许多严重的病症，草药不但无效而且危险。

我自己曾经两次病得奄奄一息，结果却都给草药救起了。有一次病了好几个月，瘦得只剩皮包骨，结果是一位专精儿科的草药医生救了我的命。另一次我染了白喉，请了一位中国的喉科专家来医治。他用一根细针在我喉头附近刺了一遍，然后敷上一些白粉。我不知道那是什么东西，只觉得喉头凉爽舒服，很像抽过一支薄荷烟的感觉。

喉头是舒服一点了，病状却起了变化。我的扁桃腺肿得像鹅蛋那末大，两颊鼓起像气球，我甚至连流质的食物都无法下咽。鼻子一直出血不止，最后连呼吸也感到困难了。正在奄奄一息的时候，我父亲认为只有"死马当作活马医"了。于是他就在古老的医书里翻寻秘方，结果真地找到一剂主治类似症候的方子。我吃了好几服重药。头一剂药就发生验效，一两个小时之后，病势居然大有起色。第二天早晨我的扁桃腺肿消了许多，个把星期以后饮食也恢复正常。

我曾经亲眼目睹跌断的腿用老法子治好，伤风咳嗽、风湿和眼睛红肿被草药治好的例子更是多不胜数。

中医很早以前就发现可以从人体采取一种预防天花的"瘡苗"，他们用一种草药塞到病婴的鼻孔里，再把这种草药塞到正常儿童的鼻孔里时，就可以引起一种比较温和的病症。这样"种了痘"的孩子自然不免有死亡，因此我父亲宁愿让孩子按现代方法种牛痘。我们兄弟姊妹以及许多亲戚的子弟都用现代方法种痘，而且从来没有出过毛病。

我们村子里的人不知道怎样治疗疟疾。我们只好听它自生自灭地流

行几个礼拜，甚至好几个月。我们村子附近总算没有发现恶性疟疾，患了病的人虽然伤了元气，倒还没有人因此致命。后来传教士和商人从上海带来奎宁粉，叫做金鸡纳霜，吃了很有效，于是大家才发现了西药的妙用。

村里有些人相信神力可以治病。他们到寺庙里焚香祝祷，然后在香炉里取了一撮香灰作为治疗百病的万应灵丹。这是一种心理治疗，在心理学应用得上的时候，也的确能医好一些病。

我家的花园里，每月有每月当令的花，阴历正月是茶花，二月是杏花，三月桃花，四月蔷薇，五月石榴，六月荷花，七月凤仙，八月桂花，九月菊花，十月芙蓉，十一月水仙，十二月腊梅。每种花都有特别的花仙做代表。

最受欢迎的季节花是春天的桃花、夏天的荷花，秋天的桂花和菊花。季节到来时，村里的人就成群结队出来赏花。

过年过节时，无论男女老幼都可以高兴一阵子。最重要的年节，通常从十二月二十三日开始。灶神就在这一天上天报告这一家一年来的家庭琐事。

中国人都相信多神主义的，在道教里，众神之主是玉皇大帝。据说玉皇大帝也有公卿大臣和州官吏卒，和中国的皇帝完全一样。玉皇大帝派灶神监视家庭事务，因此灶神必须在年终岁尾提出报告。灶神是吃素的，因此在它启程上天时，大家就预备素斋来祭送。灶神对好事坏事都要报告，因此大家一年到头都谨言慎行。送灶神和迎灶神时都要设家宴、烧纸钱、放鞭炮。

除夕时，家家都大鸡大肉地庆祝，叫做吃年夜饭。吃年夜饭时，家庭的每一个分子都得参加。如果有人远行未归，也得留个空座位给他。红烛高烧到天明，多数的大人还得“守岁”，要坐到子夜以后才睡。第二天早晨，也就是正月初一早晨，一家人都参加拜天地。祭拜时自然又免不了点香烛、焚纸钱和放鞭炮。

新年的庆祝节目之一是灯节，从正月十三开始，一直到正月十八，十八以后年节也就算结束了。灯节时家家户户和大街小巷到处张灯结彩。花灯的式样很多，马、兔、蝴蝶、蜻蜓、螳螂、蝉、莲花，应有尽有。我们常常到大城市去看迎灯赛会，街上总是人山人海。

五月里的端午节和八月里的中秋节也是重要的节日。端午节有龙舟比赛。庆祝中秋节却比较安静，也比较富于诗意——吃过晚饭后我们就

在月色下散步，欣赏团圆满月中的玉兔在月桂下捣药。

迎神赛会很普遍，普通有好几百人参加，沿途围观的则有几千人。这些场合通常总带点宗教色彩，有时是一位神佛出巡各村庄。神像坐在一乘木雕的装饰华丽的轿子里，前面由旌旗华盖、猛龙怪兽、吹鼓手、踩高跷的人等等开道前导。

迎神行列经过时，掉狮舞龙就在各村的广场上举行。踩高跷的人，在街头扮演戏剧中的各种脚色。一面一面绣着龙虎狮子的巨幅旗帜，由十来个人扛着游行，前前后后则由绳索围起来。这样的行列在旷野的大路上移动时，看来真好威风呀！这种举大旗游行的起源，据说是明代倭寇入侵时老百姓以此向他们示威的。

碰到过年过节，或者庆祝神佛生日，或者其他重要时节，活动的戏班子就到村庄上来表演。戏通常在下午三点钟左右开始，一直演到第二天早晨，中间有一段休息的时间，以便大家吃晚饭。开演时总是锣鼓喧天，告诉大家戏正在开始。演的戏多半是根据历史故事编的，人民也就从戏里学习历史。每一出戏都包括一点道德上的教训，因此演戏可以同时达到三重目的：教授历史、灌输道德、供给娱乐。

女角是由男人扮演的，这是和莎士比亚时代的英国一样。演员涂抹形形色色的脸谱象征忠奸善恶。白鼻子代表奸诈、狡猾、卑鄙或小丑。在日常生活中我们也常常指这一类人为白鼻子。红脸代表正直、忠耿等等，但是红脸的人心地总是很厚道的。黑脸象征铁面无私。这种象征性的脸谱一直到现在还被各地国剧所采用。

这就是我的童年的环境。这种环境已经很快地成为历史陈迹。这个转变首由外国品的输入启其端，继由西方思想和兵舰的入侵加速其进程；终将由现代的科学、发明和工业化，完毕其全程。

[4] 本书中的“纪元”指公元纪年，与“公元”混用。

童年教育

在我的童年时代，没有学校，只有家塾。男孩子在家塾里准备功课应付科举或者学点实用的知识以便经商，女孩子不能和男孩子一道上学，要读书就得另请先生，穷苦人家的子弟请不起先生，因此也就注定了当文盲的命运。

一位先生通常教数十位学生，都是分别教授的。家塾里没有黑板，也不分班级。先生从清晨到薄暮都端端正正地坐在那里，学生们自然也就不敢乱蹦乱跳。那时候时钟是很难见到的。家塾里当然没有钟。冬天白昼比较短。天黑后我们就点起菜油灯，在昏暗的灯光下念书，时间是靠日晷来计算的。碰到阴天或下雨，那就只好乱猜了。猜错一两个小时是常事，好在书是个别教授的，猜错个把钟头也无所谓。

我在六岁时进家塾，一般小孩子差不多都在这个年岁"启蒙"的。事实上我那时才五岁零一个月的样子，因为照我家乡的算法，一个人生下来就算一岁。家塾里的书桌太高，我的椅子下面必须垫上一个木架子之后我才够得上书桌，因此我坐到椅子上时，两只脚总是悬空的。

我最先念的书叫《三字经》，每句三个字，而且是押韵的，因此小孩子记起来比较容易。事隔六十多年，我现在还能背出一大半，开头几句是："人之初，性本善。性相近，习相远。苟不教，性乃迁。"性善论是儒家人生哲学和教育原理的出发点，这种看法曾对十八世纪的大光明时代的法国学派产生过重大的影响。

虽然我现在已经懂得什么叫"性本善"，在当时却真莫名其妙。

我恨透了家塾里的生活。有一天，我乘先生不注意我的时候，偷偷地爬下椅子，像一只挣脱锁链的小狗，一溜烟逃回家中，躲到母亲的怀里。

母亲自然很感意外，但是她只是慈祥地问我："你怎么跑回家来了，孩子？"

我答道："家塾不好，先生不好，书本不好。"

"你不怕先生吗？他也许会到家里来找你呢！"母亲笑着说。

"先生，我要杀了他！家塾，我要放把火烧了它！"我急着说。

母亲并没有把我送回家塾，那位先生也没有找上门来。

第二天早上，奶妈喊醒了我，对我说了许多好话，总算把我劝回家塾。从童年时代起我就吃软不吃硬。好好劝我，要我干什么都行，高压手段可没有用。经过奶妈一阵委婉的劝谏，我终于自动地重新去上学了。

我带着一张自备的竹椅子，家里一位佣人跟着我到了家塾，把竹椅子放到木架上，使我刚好够得着书桌。先生没有出声，装作不知道我曾经逃过学，但是我注意到好几位同学对着我装鬼脸。我讨厌他们，但是装作没有看见。我爬上椅子坐在那里，两只脚却悬空挂着，没有休息的地方。我的课也上了，书却仍旧是那本《三字经》。我高声朗诵着不知所云的课文，一遍又一遍地念得烂熟。等到太阳不偏不倚地照到我们的头上时，我们知道那是正午了。先生让我们回家吃午饭，吃过饭我马上回到家塾继续念那课同样的书，一直到日落山才散学。

一日又一日地过去，课程却一成不变。一本书念完了之后，接着又是一本不知所云的书。接受训练的只是记忆力和耐心。

念书时先生要我们做到“三到”，那就是心到、眼到、口到。所谓心到就是注意力集中，不但读书如此，做任何事情都得如此。眼到对学习中国文字特别重要，因为中国字的笔划错综复杂，稍一不慎就可能读别字。所谓口到就是把一段书高声朗诵几百遍，使得句子脱口而出，这样可以减轻记忆力的负担。先生警告我们，念书不能取巧强记，因为勉强记住的字句很容易忘记。如果我们背书时有些疙瘩，先生就会要我们一遍又一遍地再念，甚至念上一两百遍。碰上先生心情不好，脑袋上就会吃栗子。天黑放学时，常常有些学生头皮上带着几个大疙瘩回家。

不管学生愿意不愿意，他们必须守规矩，而且要绝对服从。我们根本不知道什么叫礼拜天。每逢阴历初一、十五，我们就有半天假。碰到节庆，倒也全天放假，例如端午节和中秋节。新年的假期比较长，从十二月二十一一直到正月二十。

在家塾里念了几年之后，我渐渐长大了，也记得不少的字。这时先生才开始把课文的意思解释给我听，因此念起书来也不再像以前那样吃力了。从四书五经里，我开始慢慢了解做人的道理。按照儒家的理想，做人要先从修身着手，其次齐家，然后治国、平天下。其中深义到后来我才完全体会。

在最初几年，家塾生活对我而言简直像监狱，唯一的区别是：真正监狱里的犯人没有希望，而家塾的学生们都有着前程无限的憧憬。所有

的学者名流、达官贵人不是都经过寒窗苦读的煎熬吗？

"吃得苦中苦，方为人上人。"

"天子重英豪，文章教尔曹。万般皆下品，惟有读书高。"

"别人怀宝剑，我有笔如刀。"

这些成语驱策着我向学问之途迈进，正如初春空气中的芳香吸引着一匹慵懒的马儿步向碧绿的草原，否则我恐怕早已丢下书本跑到上海做生意去了。理想、希望和意志可说是决定一生荣枯的最重要的因素。教育如果不能启发一个人的理想、希望和意志，单单强调学生的兴趣，那是舍本逐末的办法。只有以启发理想为主、培养兴趣为辅时，兴趣才能成为教育上的一个重要因素。

在老式私塾里死背古书似乎乏味又愚蠢，但是背古书倒也有背古书的好处。一个人到了成年时，常常可以从背的古书里找到立身处事的指南针。在一个安定的社会里，一切守旧成风，行为的准则也很少变化。因此我觉得我国的老式教学方法似乎已足以应付当时的实际需要。自然，像我家乡的那个私塾当然是个极端的例子，那只有给小孩子添些无谓的苦难。我怕许多有前途的孩子，在未发现学问的重要以前就给吓跑了。

在我的家塾里，课程里根本没有运动或体育这个项目。小孩子们不许拔步飞跑，他们必须保持"体统"一步一步慢慢地走。吃过中饭以后，我们得马上练字。我们简直被磨得毫无朝气。

话虽如此，小孩子还是能够自行设法来满足他们嬉戏的本能。如果先生不在，家塾可就是我们的天下了。有时候我们把书桌搬在一起，拼成一个戏台在上面演戏，椅子板凳就成了舞台上的道具。有时候我们就玩捉迷藏。有一次，我被蒙上眼睛当瞎子，刚巧先生回来了，其余的孩子都偷偷地溜了，我轻而易举地就抓到一个人——我的先生。当我发现闯了祸时，我简直吓昏了。到现在想起这件事尚有余悸。

春天来时，放了学我们就去放风筝，风筝都是我们自己做的。风筝的形式不一，有的像蜈蚣，有的像蝴蝶。夜晚时，我们把一串灯笼随着风筝送到天空，灯笼的数目通常是五个、七个或九个。比较小的孩子就玩小风筝，式样通常是蜻蜓、燕子或老鹰。"燕子"风筝设计得最妙，通常是成对的，一根细竹片的两端各扎一只"燕子"，然后把竹片摆平在风筝绳子上。送上天空以后，一对对的"燕子"随风摆动，活像比翼双飞的真燕子。有一次，我还看到好几只真的燕子在一只"燕子"风筝附近盘

旋，大概是在找伴儿。

满天星斗的夏夜，村子里的小孩子们就捉萤火虫玩儿。有些小孩子则宁愿听大人们讲故事。讲故事的大人，手中总是摇着一柄大蒲扇，一方面为了驱暑，一方面也是为了驱逐纠缠不清的蚊子。口中衔旱烟杆，旁边放着小茶壶，慢条斯理地叙述历史人物的故事、改朝换代的情形，以及村中的掌故。

大人告诉我们，大约二百五十年前，清兵入关推翻了明朝，盗贼蜂起，天下大乱，但是我们村中却安谧如恒。后来圣旨到了村里，命令所有的男人按照满洲鞑子的发式，剃去头顶前面的头发，而在后脑勺上留起辮子。男子听了如同晴天霹雳，女人们则急得哭了，剃头匠奉派到村子里强制执行，他们是奉旨行事，如果有人抗旨不肯剃头，就有杀头的危险。留头究竟比留发重要，二者既然不可兼得，大家也就只好乖乖地伸出脖子，任由剃头匠剃发编辮了。当然，后来大家看惯了，也就觉得无所谓，但是初次剃发留辮子的时候，那样子看起来一定是很滑稽的。

.....

从这位讲故事的长者口中，我们总算学到了一点历史，那是在家塾中学不到的。此外，我们还得到一点关于人类学的传说。故事是这样的：

几万年以前，我们的祖先也像猴子一样长着尾巴。那时的人可说介于人与猿猴之间。人猿年岁长大以后，他的尾巴就渐渐变为黄色。人猿的尾巴共有十节，十节中如有九节变黄，他就知道自己快要死了。于是他就爬到窑洞里深居简出，结果就死在窑洞里面。再经过几千年以后，人的尾巴掉了，所以现在的人都没有尾巴，但是尾巴的痕迹仍旧存在。不信，你可以顺着背脊骨往下摸，尾巴根儿还是可以摸得到的。

下面是一则关于技击的故事：

一位学徒在一家米店前卖米。在没有生意的时候，这位学徒就抓着米粒玩儿，他一把一把地把米抓起来，然后又一把一把地把米掷回米筐里。有一天，一位和尚来化米，那位学徒不但没有拿米给和尚，反而抓了几颗米掷到和尚脸上。想不到那几颗米竟然颗颗深陷到和尚的皮肉里面去了。和尚似乎不生气，反而向那位学徒深深一鞠躬，双手合什，念了一声"南无阿弥陀佛"就走了。

七天之后，一位拳师经过村里，他看到米店学徒脸色苍白，就问学徒究竟是怎么回事。学徒把和尚化米的事说了，拳师听了不禁摇头叹

息："啊呀，你怎么可得罪他呢？他是当今武林首屈一指的人物呀！他在向你鞠躬的时候，你已经受了致命的内伤，不出七七四十九天，你就活不成了！幸好我还有药可以给你医治，不过你要赶快躲开，永远不要再撞上这位和尚。四十九天之后他还会再来的。赶快备口棺木，放几块砖头在棺材里，假装你已经死了入殓待葬就是了。"

四十九天之后，和尚果然又来找学徒了。人们告诉他学徒已经死了。和尚叹口气说："可怜！可怜！"和尚要看看棺材，大家就带他去看，他用手轻轻地把棺盖从头至尾抚摸一遍，念了一声"南无阿弥陀佛"就走了。和尚走了之后，大家打开棺盖一看，里面的砖头已经全部粉碎。

小孩子们全都竖起耳朵听这些故事，这些故事就是我们课外知识的主要来源之一。

我们家塾里的先生，前前后后换了好几个。其中之一是位心地仁厚然而土头土脑的老学究。他的命运多舛，屡次参加府试都没有考上秀才，最后只好死心塌地教私塾。他的脸团团如满月，身材矮胖，一副铜框眼镜老是低低地滑到鼻梁上，两只眼睛就打从眼镜上面看人。他没有留须，鼻子下面却养着一撮蓬松的灰色胡子。碰到喝蛋花汤的日子，他的胡子上常常挂着几片黄蛋花。他的故事多得说不尽，简直是一部活的百科全书。但是他的文才很差，我想这或许就是他屡试不中的缘故。不过人很风趣，善于笑谑。他在有些事情上非常健忘，看过朋友回到家塾时，不是忘了雨伞，就是丢了扇子。老是这样丢三落四究竟不是事，于是他就把他出门时必带的东西开了个清单：烟管、雨伞、毛巾、扇。每当他告辞回家时，他就念一遍："烟管、雨伞、毛巾、扇。"冬天不需要带扇子的时候，他也照样要按清单念扇子。有时候他也记得根本没有带扇子出门，有时却仍然到处找扇子，他的朋友和学生就在暗中窃笑。

我童年时的知识范围，可以说只局限于四书五经，以及私塾先生和村中长辈所告诉我的事。我背得出不少的古书，也记得很多的故事，因此我的童年教育可以说主要的是记忆工作。幸而我生长在乡村，可以从大自然获得不少的知识 and 启发。有一次，我注意到生长的皂荚树上的甲虫头上长着鹿角一样的角，这些角和枝上的刺长得一模一样，人家告诉我，这些甲虫是树上长出来的，因此也就和母体长得很像。不过我总觉得有点相信不过。我心里想，如果一棵树真能生下甲虫，那末甲虫产下的卵也就应该可以作皂荚树的种籽了。甲虫卵既然种不出皂荚树，那么甲虫的角和皂荚树的刺这样相像一定另有原因。后来我看到一只鸟在皂

荚树上啄虫吃，但是这只鸟对于身旁长着鹿角的甲虫却视而不见。于是我恍然大悟，原来甲虫的角是摹拟着刺而生的，目的是保护自己以免被鸟儿啄死。

河汉的两岸长着许多柏树，柏子可以榨油制蜡烛，因此柏树的土名就叫蜡烛树。冬天里农夫们用稻草把树干裹起来，春天到了，就把稻草取下烧掉。一般人相信，这种办法可以产生一种神秘的力量杀死寄生虫。事实上这件事毫无神奇之处，只要我们在树干上扎上足够的稻草，寄生虫就只好在稻草上产卵，烧掉稻草等于毁掉虫卵，寄生虫也就无法繁殖了。

在我童年时代里，这类对自然的粗浅研究的例子很多，举了前面的两个例子，我想也就够了。

由此可见我的童年教育共有三个来源。第一是在私塾里念的古书，来自古书的知识，一方面是立身处世的指针，另一方面也成为后来研究现代社会科学的基础。第二个知识来源是听故事，这使我在欣赏现代文学方面奠定了基础。第三个知识来源是对自然的粗浅研究，不过在这种粗浅研究的根基上却可以移接现代科学的幼苗。如果我生长在草木稀少的大城市里，那我势将失去非常重要的自然训练的机会，我的一生可能完全改观。每一个小孩子所具备的感受力、观察力、好奇心和理解力等等天赋，都可能被我童年所受的全凭记忆的传统训练所窒息。

我得承认，我并没有像某些同学那样用功读书，因为我不喜欢死记，我愿意观察、触摸、理解。我的先生们认为这是我的不幸、我的个性上的祸根。

我喜欢玩，喜欢听故事。我喜欢打破砂锅问到底，使大人感到讨厌。我喜欢看着稻田里的青蛙捉蚱蜢，或者鹅鸭在河里戏水。我欣赏新篁解箨。我的先生认为这些癖好都是祸根。我自己也相信将来不会有出息。但是命运是不可捉摸的，我的这些祸根后来竟成为福因，而先生们认定的某些同学的福因结果都证明是祸根。那些好学生后来有的死于肺病，有的成为书呆，在西化潮流横扫中国时无法适应日新月异的环境而落伍了。

家庭影响

童年时代和青春时代的可塑性最大，因而家庭影响往往有决定性的作用。这时期中所养成的习惯，不论好坏，将来都很难根除。大致说来，我所受到的家庭影响是良好而且健全的。

我的父亲是位小地主，而且是上海当地几家钱庄的股东。祖父留给父亲的遗产相当可观，同时父亲生活俭朴，因此一家人一向用不着为银钱操心。父亲为人忠厚而慷慨，蒋村的人非常敬重他，同时也受到邻村人士的普遍崇敬。他自奉俭约，对公益事业却很慷慨，常常大量捐款给慈善机构。

他从来没有说过一句存心骗人的话，因此与他交往的人全都信任他的话。他相信风水和算命。同时他又相信行善积德可以感召神明，使行善者添福增寿，因此前生注定的命运也可以因善行而改变。我父亲的道德人品对我的影响的确很大，我唯一的遗憾是没有好好学到父亲的榜样。

我的母亲是位很有教养而且姿容美丽的女人。我童年时对她的印象已经有点模糊了。我记得她能够弹七弦古琴，而且能够抚琴幽歌。她最喜欢唱的一支歌，叫做“古琴引”，词为：音音音，尔负心。真负心，辜负我，到如今。记得当年低低唱，千千斟，一曲值千金。如今放我枯墙阴，秋风芳草白云深，断桥流水过故人。……切切，冷冷清清，……切切，冷冷清清。

有人说：像我母亲那样青春美貌的妇人唱这样悲切的歌，是不吉利的。

母亲弹琴的书斋，屋后长着一棵几丈高的大樟树。离樟树不远的地方种着一排竹子，这排竹子也就成为我家的篱笆。竹丛的外面围绕着一小河。大樟树的树荫下长着一棵紫荆花和一棵香团树，但是这两棵树只能在大樟树扶疏的枝叶之间争取些微的阳光。母亲坐在客厅里，可以谛听小鸟的啭唱，也可以听到鱼儿戏水的声音。太阳下山时，平射过来的阳光穿过竹丛把竹影子投映在窗帘上，随风飘动。书斋的墙上满是名家书画。她的嵌着白玉的古琴则安放在长长的红木琴几上，琴几的四足则雕着凤凰。

她去世以后，客厅的布置一直保留了好几年没有变动。她的一张画

像高悬在墙的中央。但是母亲已经不在！她用过的古琴用一块软缎盖着，仍旧放在红木琴几上。我有时不禁要想像自己就是那个饮泣孤幽幽低诉的古琴。

我母亲去世时还很年轻。我看到母亲穿着华丽的绣花裙袄躺在棺里，裙袄外面罩一个长长的红绸披风，一直盖到足踝，披风上缀着大红的头兜，只有她的脸露在外面，一颗很大的珍珠衬着红头兜在她额头发出发闪闪的亮光。

我的继母是位治家很能干的主妇，待人也很有和气，但不久也去世，此后父亲也就不再续弦了。

我的祖父当过上海某银庄的经理。太平天国时（一八五一——一八六四）祖父在上海旧城设了一个小钱摊，后来钱摊发展为小钱庄，进而成为头等钱庄。这种钱庄是无限责任的机构，做些信用贷款的生意。墨西哥鹰洋传到中国成为银两的辅币以后，洋钱渐渐受到国人的欢迎。后来流通渐广，假币也跟着比例增加，但是钱庄里的人只要在指尖上轻轻地把两块银元敲敲，他们就能够辨别那个是真，那个是假，我祖父的本领更使一般钱庄老板佩服，他一眼就能看出哪个是真的，哪个是假。

不幸他在盛年时伤了一条腿，后来严重到必须切去，祖父也就因为血液中毒辞世。父亲当时还只有十二岁左右，祖父给他留下了七千两银子，在当时说起来，这已经是一笔相当大的遗产了。父亲成了无告的孤儿，就归他未来的丈人照顾。由于投资得当，调度谨慎，这笔财产逐渐增加，三十年之后，已经合到七万两银子。

从上面这一点家庭历史里，读者不难想像我的家庭一定在早年就已受到西方的影响。

父亲很有点发明的头脑。他喜欢自己设计，或者画出图样来，然后指示木匠、铁匠、铜匠、农夫或篾匠按照尺寸照样打造。他自己设计过造房子，也实验过养蚕、植桑、造枪（照着西方一种过时了的式样），而且按着他的想像制造过许多别的东西。最后他想出一个打造“轮船”的聪明办法，但是他的“轮船”却是不利用蒸汽的。父亲为了视察业务，常常需要到上海去。他先坐桨划的木船到宁波，然后从宁波趁轮船到上海。他常说：“坐木船从蒋村到宁波要花三天两夜，但是坐轮船从宁波到上海，路虽然远十倍，一夜之间就到了。”因此他就画了一个蓝图，预备建造一艘具体而微的轮船。

木匠和造船匠都被找来了。木匠奉命制造水轮，造船匠则按照我父

亲的计划造船，隔了一个月，船已经造得差不多。小"轮船"下水的那一天，许多人跑来参观，大家看了这艘新奇的"轮船"都赞不绝口。"轮船"停靠在我家附近的小河里，父亲雇了两位彪形大汉分执木柄的两端来推动水轮。"轮船"慢慢开始在水中移动时，岸上围观的人不禁欢呼起来。不久这只船的速度也逐渐增加。但是到了速度差不多和桨划的船相等时，水手们再怎样出力，船的速度也不增加了。乘客们指手划脚，巴不得能使船驶得快一点，有几位甚至亲自动手帮着转水轮。但是这只船似乎很顽固，始终保持原来的速度不增加。

父亲把水轮修改了好几次，希望使速度增加。但是一切努力终归白费。更糟的是船行相当距离以后，水草慢慢缠到水轮上，而且愈积愈多，最后甚至连转都转不动了。父亲叹口气说："唉！究竟还是造轮船的洋人有办法。"

那条"轮船"最后改为普通桨划的船。但是船身太重，划也划不动。几年之后，我们发现那条船已经弃置在岸上朽烂腐败，船底长了厚厚的一层青苔。固然这次尝试是失败了，父亲却一直想再来试一下，后来有人告诉他瓦特和蒸汽机的故事，他才放弃了造船的雄心。他发现除了轮船的外表之外，还有更深奥的原理存在。从这时候起，他就一心一意要让他儿子受现代教育，希望他们将来能有一天学会洋人制造神奇东西的"秘诀"。

这个造轮船的故事也正是中国如何开始向西化的途程探索前进的实例。不过，在人伦道德上父亲却一直不大赞成外国人的办法。固然也认为"外国人倒也同我们中国人一样地忠实、讲理、勤劳"，但是除此之外，他并不觉得外国人有什么可取的地方。话虽如此，他却也不反对他的孩子们学习外国人的生活方式和习惯。

我的先生却反对我父亲的看法。他说："奇技淫巧'是要伤风败俗的。先圣以前不就是这样说过吗？"他认为只有朴素的生活才能保持高度的道德水准。我的舅父也持同样的看法。他用一张红纸写下他的人生观，又把红纸贴在书桌近旁的墙上："每日清晨一支香，谢天谢地谢三光。国有忠臣护社稷，家无逆子闹爷娘，……但愿处处田稻好，我虽贫时也不妨。"

我的舅父是位秀才，他总是携带着一根长长的旱烟杆，比普通的手杖还长。他经常用烟管的铜斗敲着砖地。他在老年时额头也不显皱纹，足见他心境宁静，身体健康，而且心满意足。他斯文有礼，我从来没有看到他发脾气。他说话很慢，但是很清楚，也从来不骂人。

山雨欲来风满楼

新年里常常有些小贩到村子里卖画片，有些画的是国家大事，有的则是戏中情节。有一年新春假期里，有一套新鲜的图画引起小孩子们的浓厚兴趣。这套五彩图画绘的是一八九四年（甲午年）中日战争的故事。其中有一张画的是渤海上的海战场面^[1]，日本舰队中的一艘军舰已被几罐装满火药的大瓦罐击中起火，军舰正在下沉。图中还画着几百个同样的大瓦罐在海上漂浮。这种瓦罐，就是当时民间所通用的夜壶，夜间小便时使用的。另一幅画中则画着一群带了铐链的日本俘虏，有的则关在笼子里。中国打了大胜仗了！自然，那只是纸上的胜仗，但是我们小孩子们却深信不疑。后来我年纪大一点以后，我才知道我国实际上是被日本打败了，而且割让了台湾，我们的海军被日本消灭，高丽也被日本抢走了。短短九年之内，中国已经相继丧失了三个承认中国宗主权的外围国，最先是越南，继之是缅甸，现在又丢了高丽。

一个夏天的傍晚，一位临时雇工气喘如牛地从我父亲的书房里跑了出来。他说在书房里听到一阵叮当的声音，但是房里找不到人影。他说那一定是鬼在作怪。后来一追究，原来是时钟在报时。

从无可稽考的年代起，乡下人一直利用刀片敲击火石来取火，现在忽然有人从上海带来了几盒火柴。大人们对这种简便的取火方法非常高兴。小孩们也很开心，在黑暗的角落，手上火柴一擦，就可以发出萤火虫一样的光亮。火柴在当时叫“自来火”，因为一擦就着；也叫“洋火”，因为它是从外洋运进来的。

时钟实际上并无必要，因为在乡村里，时间算得再准也没有用处。早二三个钟头，迟二三个钟头又有什么关系？乡下人计时间是以天和月做单位的，并不以分成小时来计算。火柴其实也是奢侈品——用刀片火石不也是一直过得很好吗？至于煤油，那可又当别论了，煤油灯可以把黑夜照得如同白昼，这与菜油灯的昏暗灯光比起来真有天渊之别。

美孚洋行是把中国从“黑暗时代”引导到现代文明的执炬者。大家买火柴、时钟是出于好奇，买煤油却由于生活上的必要。但事情并不到此为止。煤油既然成为必需品，那末，取代信差的电报以及取代舢舨和帆船的轮船又何尝不是必需品呢？依此类推，必需的东西也就愈来愈多。

很少人能够在整体上发现细微末节的重要性。当我们毫不在意地玩

着火柴或享受煤油灯的时候，谁也想不到是在玩火，这点星星之火终于使全中国烈焰烛天。火柴和煤油是火山爆发前的迹象，这个“火山”爆发以后，先是破坏了蒋村以及其他村庄的和平和安宁，最后终于震撼了全中国。

基督教传教士曾在无意中把外国货品介绍到中国内地。传教士们不顾艰难险阻、瘴疠瘟疫甚至生命危险，遍历穷乡僻壤，去拯救不相信上帝的中国人的灵魂。他们足迹所至，随身携带的煤油、洋布、钟表、肥皂等等也就到了内地。一般老百姓似乎对这些东西比对福音更感兴趣。这些舶来品开拓了中国老百姓的眼界，同时也激起了国人对物质文明的向往。传教士原来的目的是传布耶稣基督的福音，结果却无意中为洋货开拓了市场。

我不是说传教士应对中国现代商业的成长负主要责任，但是他们至少在这方面担任了一个角色，而且是重要的一角，因为他们深入到中国内地的每一角落。主角自然还是西方列强的商船和兵舰。基督教传教士加上兵舰，终于逼使文弱的、以农为本的古老中国步上现代工商业的道路。

我曾经目睹买办阶级的成长以及士大夫阶级的没落。我自己也几乎参加了士大夫的行列，但是最后总算偷偷地溜掉了。所谓买办阶级，就是本国商人和外国商人之间的中国人。外国商人把货运到上海、天津等通商港埠，这些货品再通过买办，从大商埠转销到各城镇村庄。买办们在转手之间就可以大笔地赚钱，因此吃这一行饭的人也就愈来愈多。事业心比较强、际遇比较好的人，纷纷加入直接间接买卖外国货的新行业。有的人发大财，有的人则丰衣足食。际遇比较差的可就落了伍，有的依旧种田耕地，有的则守在旧行业里谋生。田地的出息有限，旧行业在外国竞争之下又一落千丈，于是旧有的经济制度很快地就开始崩溃了。结果是一大群人无可避免地失了谋生糊口的机会。这些不幸的人，一方面嫉妒新兴的暴发户，一方面又不满于旧日的行业，或者根本丧失了旧有的职业，结果就铤而走险。曹娥江大潮正在冲激着水闸，象征着即将破坏蒋村安宁的动乱正在奔腾澎湃。

一个秋天的下午，我正在田野里追逐嬉戏，忽然听到一阵紧急狂骤的锣声。敲锣的人一面狂奔着，一面高喊堤塘已经冲塌了，洪水正向村中漫过来。我拼命跑回家里，并把这消息告诉路上所碰到的一切人。

大家马上忙作一团。我们赶快准备好船只、木浴盆，以及所有可以浮得起来的东西，以便应付即将来临的灾难。有的人则决定爬到大树上

去暂避。第二天早晨，洪水已经冲进我家的大门，水头像巨蟒一样奔进院子。到了中午时，小孩已经坐上浴盆，在大厅里划来划去了。

堤塘缺口终于用沙包堵住，曹娥江也不再泛滥了。洪水在我们村里以及邻近村庄停留约一星期，然后慢慢退到低地，最后随江河入海，同时卷走了所有的稻作。

大约一星期以后，一只大船在傍晚时分载着许多人向我们村庄划过来。这只船在我家附近停下，船上的人也纷纷离船上岸。我们为防意外，赶紧闭起大门。他们用大石头来捣大门，最后终于排闥而入。领头的人身材魁伟，显然孔武有力，辫子盘在头顶上。他带着一伙人走到天井里，高喊："我们肚子饿，我们要借粮。"其余人也就跟着呐喊助威。他们搜索了谷仓，但是没有马上动手搬；他们要"借"。最后经过隔壁一位农人的调停，他们"借"走了几担谷子以后，就回船启航了。这是随后发生的一连串变乱的首次警号。

性质相近然而比较严重的事件，接二连三地在邻村发生。开始时是"借"，随后就变质为抢劫。抢劫事件像野火一样到处蔓延，乡间微薄的官兵武力根本无法加以阻遏。而且抢粮食不能处以极刑，但是在那种情势下，恐怕只有极刑才能加以遏止，至少暂时不至如此猖獗。

"借粮"的事件一直延续至那年冬天。不久之后，杀人掳掠的暴行终于在孙庄首次发生。被害的孙君在上海有一片生意兴隆的木行。孙君的父亲曾在上海承包"洋行"的营造工程而发了大财。

那是一个凛冽的冬夜，孙庄的人很早就躲到被窝去了。有人从窗子里发现黑暗中有一队火把正从大路上向孙庄移动。火把临近孙庄时，大家听到一阵枪声。强盗来了！强盗冲开孙家的大门，抢走了孙家所有的金银财帛——名贵的羊裘皮袄、金银器皿、珍珠宝石，无一幸免。他们并且掳走了孙君，把他绑在一根长竹竿的顶端，然后又把他压到河底。第二天孙家的人拖起竹竿才发现他的尸体。

抢劫的风潮迅速蔓延到各村庄。几百年来乡村人们所享受的和平与安宁，一夜之间丧失殆尽。我们没有一夜能够安稳地睡。我父亲从上海买来了手枪以及旧式的长枪。大家开始练习放枪，小孩子也不例外。我们拿鸟雀当活靶，因此连鸟雀都遭了殃。我们轮班睡觉，值班的人就负责守夜。一听到犬吠，我们就向空放枪警告盗匪，自然有时是虚惊，有时却的确把强盗吓跑了。为了节省弹药，我们常常在枪声中夹带些爆仗。

永远这样紧张下去究竟不是事。父亲最后无可奈何地带了一家大小搬到上海住下来。

我们搬家之前的两年内，我曾在绍兴继续我的学业。我还在家塾里念书的时候，父亲曾经问我将来愿意做生意还是预备做官。我的两位哥哥都已经决定步入仕途。父亲要我决定之前，仔细考虑一番。

做官可以光宗耀祖，几百年来，年轻人无不心向往之。自然我也很希望将来能做官。在另一方面，新近发财的人可以享受新颖奇巧的外国货，这般人的生活也是一种强烈的引诱。名利之间的选择，多少与一个人思想中所已灌输进去的观念和理想有点关联。

我听人家说，我们中国人分为士、农、工、商四个阶级。虽然每一阶级在整个社会里都有特定的任务，士大夫都是统治阶级，因此也是最尊荣的一级，依照亚里士多德的主张，哲学家当为国王，所以我们可以说，哲人、学士如果做不到帝王，至少也应该是公卿、宰相。中国的贵族阶级除极少数例外，都不是世袭的，而是由于本身努力达到的。俗语说：秀才为宰相的根苗。如果我去经商，那么将来不就与功名无缘了吗？

因此我决心续求学问。自然，我当时对学问的意义并不十分了解；我只觉得那是向上层社会爬的阶梯。在我们村子里，农、工、商三类人都不稀罕。种田的不必说了，商人也不少。好多人在上海做生意，从上海带回来很多好玩的东西：小洋刀、哨子、皮球、洋娃娃、汽枪、手表等等，多不胜数。至于工匠，我们的一位族长就是木匠，他的儿子们也是的。一位远房叔叔是银匠，专门打造乡村妇女装饰的指环、手镯、钗簪之类。至于读书的人，那可不同了。凡是族人之中有功名的，家庙中都有一面金碧辉煌的匾额，举人以上的家庙前面还有高高的旗杆，悬挂他们的旗帜。我还记得有一天县太爷到邻村查办命案，他乘坐一顶四人扛抬的绿呢暖轿，红缨帽上缀着一颗金顶，胸前挂着一串朝珠。四名轿夫每人戴着一顶尖锥形的黑帽，帽顶插着一根鹅毛。暖轿前面有一对铜锣开道，县太爷所经之处，老百姓就得肃静回避。他是本县的父母官，我们老百姓的生命财产都得听他发落。他的权势怎么来的？读书呀！

于是我知道了读书人的地位，也知道做一名读书人的好处。他可以一级一级地往上爬，甚至有一天当了大官，还可以在北京皇宫里饮御赐香茗呢！像我这样的一位乡下孩子，足步向未逾越邻近的村镇，他希望读书做官应是很自然的事。我幼稚的心灵里，幻想着自己一天比一天神气，功名步步高升，中了秀才再中了举人，中了举人再中进士，终于有

一天当了很大很大的官，比那位县知事要大得多好多，身穿蟒袍，腰悬玉带，红缨帽上缀着大红顶子，胸前挂着长长的朝珠，显显赫赫地回到故乡，使村子里的人看得目瞪口呆。这些美丽的憧憬，在我眼前一幕幕展开，我的前程多么光明呀！只要我能用心熟读经书就行了。

我的童年教育虽然枯燥乏味，却也在我的思想里模模糊糊地留下学问重于一切的印象。政府官吏都是经过科举选拔的，但是只有有学问的人才希望金榜题名。官吏受人敬重，是因为学问本身在中国普遍受人敬重的关系。

因此我最后决定努力向学，准备参加科举考试。父亲自然欣然同意，家塾的教育是不够的，因此父亲把我送到离村约四十里的绍兴府去进中西学堂，我的两位哥哥则已先我一年入学。我们是乘条又小又窄的河船去的。小船的一边是一柄长桨，是利用脚力来划的，另一边则是一柄用手操纵的短桨，作用等于船舵。沿岸我们看到许多纪念烈女节妇的牌坊。沿岸相隔相当的距离就有一个比较热闹的市镇。我们一大早动身，中途在一个大镇过了一夜，第二天下午就到了府城。

顾名思义，中西学堂教的不但是我国旧学，而且有西洋学科。这在中国教育史上还是一种新尝试。虽然先生解释得很粗浅，我总算开始接触西方知识了。在这以前，我对西洋的认识只是限于进口的洋货。现在我那充满了神仙狐鬼的脑子，却开始与思想上的舶来品接触了。

我在中西学堂里首先学到的一件不可思议的事是地圆学说。我一向认为地球是平的。后来先生又告诉我，闪电是阴电和阳电撞击的结果，并不是电神的镜子里发出来的闪光；雷的成因也相同，并非雷神击鼓所生。这简直使我目瞪口呆。从基本物理学我又学到雨是怎样形成的。巨龙在云端张口喷水成雨的观念只好放弃了。了解燃烧的原理以后，我更放弃了火神的观念。过去为我们所崇拜的神佛，像是烈日照射下的雪人，一个接着一个溶化。这是我了解一点科学的开端，也是我思想中怪力乱神信仰的结束。我在乡村里曾经养成研究自然的习惯，我喜欢观察，喜欢说理，虽然有时自己根本就不知道其中的深意。这种习惯在中西学堂里得到继续发展的机会。我还是像过去一样强于理解而不善记忆，凡是合理的新观念我都乐于接受，对记忆中的旧观念则弃如敝屣。

中西学堂的课程大部分还是属于文科方面的：中国文学、经书和历史。记忆的工作相当多，记忆既非我之所长，我的考试成绩也就经常在中等以下。我在学校中显得庸庸碌碌，较之当时头角峥嵘的若干学生，显有逊色。教师们对我的评价如此，我自己也做如是观。

校中外国语分为英文、日文、法文三组。我先选修英文，后来又加选日文。我的日文教师是中川先生，我从他那里学到了正确的日文发音。英文是一位中国老师教的，他的英语发音错得一塌糊涂，后来我千辛万苦才算改正过来。他一开始就把我们导入歧途，连字母发音都咬不准。最可笑的是他竟把字母z念成"乌才"。

一八九八年，我在学校里听到一个消息，说是光绪皇帝听了康有为和梁启超的话，已经决定废科举，办学校。这使老一辈的学人大惊失色。但是康、梁的维新运动有如昙花一现，不久慈禧太后再度垂帘听政，康有为和梁启超亡命日本。中国又回到老路子，我放假回到乡村时，看到大街的墙上张贴着黄纸缮写的圣旨，一面是汉文，一面是满文，写的是通缉康、梁的命令。看起来，维新运动就此寿终正寝了。这个维新运动，以后叫做戊戌政变^[5]，是中国近代思想史的一个转折点。虽不为革命党人所乐道，而历史的事实却不能因政见不同而抹杀的。我记得梁氏逝世的消息传到南京以后，蔡子民先生和我两人曾在中央政治会议提请国民政府明令表扬其功业。适值胡展堂先生为主席，一见提案，面孔涨得通红，便开口大骂。于是我们自动把提案取消了事。

绍兴的名胜古迹很多，它原是古代越国的都城。越王勾践在纪元前四九四年被以苏州为京城的吴王夫差所击败。勾践定下"二十年计划"，卧薪尝胆，生聚教训，终于在纪元前四七三年击败骄奢淫逸的吴王夫差，复兴越国。

勾践卧薪尝胆、雪耻复国的故事，差不多已经成为家喻户晓的格言。这则历史教训使一切在公私事业上遭受挫折的人重新燃起希望，它说明了忍耐、勇气、刻苦和详密计划的重要性。我在勾践卧薪尝胆的故址领受这个历史教训，自然印象特别深刻。

南宋（纪元一一二七——一二七六）的高宗也曾在绍兴驻节。当时金兵南侵，宋康王渡江南迁，京城也从开封迁到杭州，离绍兴府城不远，还有南宋皇帝的陵寝。

绍兴师爷是全国皆知的。全国大小衙门，几乎到处有绍兴师爷插足，绍兴老酒更是名震遐迩。绍兴府更出过许多历史上有名的学者、哲学家、诗人和书法家。绍兴府包括八个县，我的故乡余姚便是其中之一县。

绍兴的风景也很有名，这里有迂回曲折的小溪、桥梁密布的小河、奔腾湍急的大江、平滑如镜的湖泊，以及蜿蜒起伏的丘陵，山光水色使

学人哲士留连忘返。

我在绍兴读了两年书，知识大增。我开始了解一八九四年中日战争的意义：日本战胜我国是吸收了西洋学术的结果。光绪皇帝的维新运动是受了这次失败的刺激。中国预备学敌人的榜样，学校里有日文课程就是这个道理。

在绍兴的两年学校生活结束以后，乡村里盗警频仍，使我们无法再安居下去。于是父亲带了我们一家迁到上海。我的大哥已在搬家的前一年亡故。到了上海以后，我暂时进了一家天主教学校继续念英文，教我们英文的是一个法国神父。我心里想，这位英文先生既然是外国人，发音一定很准确。他的发音与我过去那位中国先生确乎迥然不同，过去那位先生把"兄弟"念成"布朗德"，现在的法国先生却教我们念"布拉达"。后来我才发现那不是英国音或美国音，而是法国音。不过我在这个天主教学校里的时间不久。因为一时找不到合适的学校，父亲就让我二哥到一位美国太太那里学英文，二哥又把学到的英文转授给我，因此二哥就成为学英文的"掇客"了。我对这办法很不满意，但是父亲认为这是很聪明的安排，因为这样可以省钱。

上海在一八九九年前后还是个小城，居留的外国人也不过三四千，但是这些洋人却都趾高气扬，自视甚高。市政倒办得不错，街道宽大清洁，有电灯，也有煤气灯。我觉得洋人真了不起，他们居然懂得电的秘密。他们发明了蒸汽机，又能建造轮船。他们在我的心目中已经成为新的神，原先心目中的神佛在我接受科学知识之后已经烟消云散了。但是有时候他们又像是魔鬼，因为他们不可一世的神气以及巡捕手中的木棒使我害怕，外滩公园门口挂着一个牌子写着："犬与华人不得入内"。犬居华人之上，这就很够人受的了。在我的心目中，外国人是半神半鬼的怪物，很像三头六臂的千手观音，三只手分别拿着电灯、轮船、洋娃娃，另外三只手分别拿着巡棍、手枪、鸦片。从某一边看，他是天使；从另一边看，他却是魔鬼。

中国人对西方文明的想法总不出这两个极端，印象因人而异，也因时而异。李鸿章看到西方文明丑恶狰狞的一面，因此决定建立海军，以魔鬼之矛攻魔鬼之盾。光绪帝看到西方文明光明和善的一面，因此想建立新式的学校制度。慈禧太后和义和团看到可憎的一面，想用中国的陈旧武器驱逐魔鬼。麻烦的是这位怪物的黑暗面和光明面是不可分的。它有时像是佛法无边的神，有时又像狰狞凶残的魔鬼，但是它凭藉的力量是相同的。我们要就不接受西方文明，要接受就得好坏一齐收下。日本

就是一个很好的榜样。没办法，我们只好向我们过去的敌人学习了。

我们在上海住了将近两年。有一天晚上，我们听说慈禧太后已经命令各省总督把所有的外国人一齐杀光。于是我们连夜举家迁离上海，那是一九〇〇年的事，也就是义和团战争的开始。义和团的人自称能用符咒对付刀枪子弹，拳术也是训练节目之一。因此，义和团有拳匪之称。他们预备破坏一切外国制造的东西，同时杀死所有使用外国货的人。他们要把运进这些可恶的外国货而阻绝他们生路的洋人统统杀光。把这些害人的外国货介绍到中国来的教会、学校、传教士、基督徒都罪无可逭。用刀剑、法术把这些人杀光吧！放把火把外国人的财产统统烧光！

朝廷本身也想把康有为、梁启超介绍进来的外国思想一扫而光，免得有人再搞什么维新运动。义和团要消灭物质的外国货，而慈禧太后则想消灭精神上的外国货。不论是物质上的或者精神上的，反正都是外国货，都是外国人造的孽。杀呀！杀光外国人！工业革命开始时，英国人曾经捣毁了威胁他们生活的机器。义和团做得更彻底，他们要同时破坏血肉构成的“机器”。

南方的人对外国人的看法稍有不同，他们欢迎外国货，他们不觉得外国货是盗匪的起因，他们认为毛病在于清室的苛捐杂税以及官吏的腐败无能。他们要革命。

北方的老百姓和朝廷，认为外国人杜绝了他们的生路，那是对的。但是他们想藉破坏血肉构成的“机器”来解决问题却错了。南方的人认为朝廷本身的腐败是苦难唯一的原因，想不到更大的原因是洋货进口。推理是错了，但是展开革命的行动却是对的。历史似乎包括一连串的意外事件、不合逻辑的推理和意想不到的结果。历史上的风云人物似乎不过是命运之神摆布的工具而已。

外国人咒骂中国的盗匪，殊不知盗匪正是他们自己的货品所引起的。在我的童年时代里，大家都害怕老虎、鬼怪和强盗，但实际上并没有真的老虎、鬼怪或强盗。我们只在图画书中看到这些东西。忽然之间，强盗在实际生活中出现了，好像是老虎冲进你的居室，也像是鬼怪在你背后紧追不舍。最后我们所惧怕的是强盗，老虎和鬼怪却都被遗忘了。

[1] 甲午海战发生在黄海海域。

[5] 此处应为“戊戌变法”，亦称“百日维新”。“戊戌政变”是指以慈禧太后为首的守旧派势力向以光绪帝为首的维新派势力发动的政变。

继续就学

在我十五岁的时候，父亲又带我回到故乡。我们怕义和团之乱会蔓延到上海，因此就回到乡下去住。在蒋村住了不久，乡下土匪愈闹愈凶，又迁到余姚城里，我在余姚县里的一所学校里念英文和算术，另外还请了一位家庭教师教中文。

大概一年之后，我到了杭州。杭州是浙江的省会，也是我国蚕丝工业的中心和五大茶市之一。杭州的绸缎和龙井茶是全国闻名的。

"上有天堂，下有苏杭"，杭州的风景更是尽人皆知。城东南有杭州湾的钱塘大潮；城西有平滑如镜的西湖，湖边山麓到处是古寺别墅。马哥·李罗游记中就曾盛道杭州的风景。杭州是吴越和南宋的故都，南宋曾在这里定都一百五十年之久，因此名胜古迹很多。墨人骚客更代有所出。湖滨的文澜阁收藏有四库全书及其他要籍，正是莘莘学子潜心研究的好去处。

我在这个文化城中瞎打瞎撞，进了一所非常落伍的学校。校长是位木匠出身的美国传教士。我以为在这所教会学校里，至少可以学好英文，事实上却大谬不然。这位传教士抱着一股宗教热忱来到中国，在主持这所教会学校之前，曾经在我的故乡绍兴府传过教。因为他只教《圣经》，我也摸不清他肚子里究竟有多少学问。在我们学生的心目中，士、农、工、商，士为首，对木匠出身的人多少有点轻视。我的英文教师更是俗不可耐的人物。他入教不久，灵魂也许已经得救，但是那张嘴却很能够使他进拔舌地狱。我为了找位英文好教师，曾经一再转学，结果总使我大失所望。

在这所教会学校里，学生们每天早晨必须参加礼拜。我们唱的是中文赞美诗，有些顽皮的学生就把赞美诗改编为打油诗，结果在学校里传诵一时。虽然我也参加主日学校和每天早晨的礼拜，我心灵却似紧闭双扉的河蚌，严拒一切精神上的舶来品。我既然已经摆脱了神仙鬼怪这一套，自然不愿再接受类似的东西。而且从那时起，我在宗教方面一直是个"不可知"论者，我认为与其求死后灵魂的永恒，不如在今世奠立不朽根基。这与儒家的基本观念刚好符合。

校园之内唯一像样的建筑是礼拜堂和校长官舍。学生则住在鸽笼一样的土房里，上课有时在这些宿舍里，有时在那间破破烂烂的饭厅里。

大概是出于好奇吧，学生们常常喜欢到校长官舍附近去散步。校长不高兴学生走进他的住宅，不速之客常常被撵出来。有一次，一位强悍的学生说什么也不肯走开，结果与一位路过的教员发生冲突。

围观的人渐聚渐多。那位学生说先生掴他的耳光，同时放声大哭，希望引起群众的同情。这场纷扰遂即像野火一样波及全校。学生会多数决议，要求校长立即开革那位打人的教员。校长断然拒绝学生的要求，群众的情绪愈涨愈高。校长冷然告诉学生说：如果他们不喜欢这个学校，就请他们卷铺盖。不到两个小时，全体学生都跑光了。

我所受的教会学校教育就此结束。但我毫不后悔，我巴不得早一天离开这个学校。

或许有人要问：为什么这样的事会突然发生呢？其实这不只是学生桀傲难驯的表现而已，那耳光不过是导火线。这类事件也绝不局限于这所小小的教会学校，学生反抗学校当局已经成为全国的普遍风气。

一年以前，上海南洋公学首先发生学潮。一位学生放了一瓶墨水在教授的坐椅上，教授不注意一屁股坐了上去，弄得全身墨迹。教授盛怒之下报告了校长，接着几个嫌疑较大的学生被开除。这引起了学生会和学校当局之间的冲突，学生会方面还有许多教授的支持。结果全体学生离开学校。

年轻的一代正在转变，从驯服转变为反抗。一般老百姓看到中国受列强的侵略，就怪清廷颡顼无能；受到国父革命理论熏陶和鼓励的学生们则热血沸腾，随时随地准备发作。首当其冲的就是学校当局。

浙江省立高等学堂接着起了风潮。起因是一位学生与来校视察巡抚的一名轿夫发生齟齬，结果全校罢课，学生集体离开学校。类似的事件相继在其他学校发生，卒使许多学府弦歌中辍。学潮并且迅速蔓延到全国。

思想较新的人同情罢课的学生，斥责学校当局过于专制；思想守旧的人则同情学校当局，严词谴责学生。不论是同情学生或者是同情学校当局的，似乎没有人体会到这就是革命的前夕，从学生初闹学潮开始，到一九一一年辛亥革命成功、中华民国诞生为止，其间不过短短八年而已。

这种反抗运动可说是新兴的知识分子对一向控制中国的旧士大夫阶级的反抗，不但是知识上的反抗，而且是社会的和政治的反抗。自从强调物竞天择、适者生存的进化论以及其他科学观念输入中国以后，年轻

一代的思想已经起了急剧的变化。十八世纪的个人观念与十九世纪的工业革命同时并临：个人自由表现于对旧制度的反抗；工业革命则表现于使中国旧行业日趋式微的舶来品。中国的旧有制度正在崩溃，新的制度尚待建设。

全国普遍显现扰攘不安。贫穷、饥谨、瘟疫、贪污、国际知识的贫乏以及外国侵略的压力都是因素，青年学生不过是这场战乱中的急先锋而已，使全国学府遍燃烽火的，不是一只无足轻重的墨水瓶，不是一个在教会学校里被刮了耳光的学生，也不是一次学生与轿夫之间的齟齬而已。

我们离开那所教会学校以后，我们的学生会自行筹办了一个学校，取名"改进学社"。这个名称是当时著名的学者章炳麟给我们起的。这位一代大儒，穿了和服木屐，履声郭橐，溢于堂外。他说，改进的意思是改良、进步。这当然是我们愿意听的。我们的妄想是，希望把这个学校办得和牛津大学或者剑桥大学一样，真是稚气十足。但是不久我们就尝到幻灭的滋味。不到半年，学生就渐渐散了，结果只剩下几个被选担任职务的学生。当这几位职员发现再没有选举他们的群众时，他们也就另觅求学之所去了。

我自己进了浙江高等学堂。我原来的名字"梦熊"已经入了闹事学生的黑名单，因此就改用"梦麟"注册。我参加入学考试，幸被录取。当时的高等学堂，正当罢课学潮之后重新改组，是一向有"学人之省"之称的浙江省的最高学府。它的前身是求是书院。"求是"是前辈学者做学问的一贯态度。求是书院和绍兴的中西学堂有很多相似的地方，课程中包括一些外国语和科学科目。后来新学科愈来愈见重要，所占时间也愈来愈多，求是书院终于发展为一种新式的学校，同时改名为浙江高等学堂。

这个学堂既然办在省城，同时又由政府负担经费，它自然而然地成为全省文化运动的中心。它的课程和中西学堂很相似，不过功课比较深，科目比较多，先生教得比较好，全凭记忆的工作比较少。它已粗具现代学校的规模。

我自从进了绍兴的中西学堂以后，一直在黑暗中摸索。看到东边有一点闪霎的亮光，我就摸到东边；东边亮光一闪而逝以后，我又连忙转身扑向西边。现在进了浙江高等学堂，眼前豁然开朗，对一切都可以看得比较真切了。我开始读英文原版的世界史。开始时似乎很难了解外国人民的所作所为，正如一个人试图了解群众行动时一样困难。后来我才慢慢地了解西方文化的发展。自然那只是一种粗枝大叶而且模模糊糊的

了解，但是这一点了解已经鼓起我对西洋史的兴趣，同时奠定了进一步研究的基础。

在浙江高等学堂里所接触的知识非常广泛。从课本里，从课外阅读，以及师友的谈话中，我对中国以及整个世界的知识日渐增长。我渐渐熟悉将近四千年的中国历史，同时对于历代兴衰的原因也有了相当的了解。这是我后来对西洋史从事比较研究的一个基础。

近代史上值得研究的问题就更多：首先是一八九四年使台湾割让于日本的中日战争，童年时代所看到的彩色图画曾使我对它产生错误的印象；其次是一八九八年康有为和梁启超的维新运动，那是在中西学堂读书时所发生的；再其次是一九〇〇年的义和团战争，我在上海时曾经听到许多关于义和团的消息；然后是一九〇四年的日俄战争，我在杭州念书时正在进行。每一件事都有丰富的资料足供研究而且使人深省。

我们也可以用倒卷珠帘的方式来研究历史：一八八五年的中法战争使中国丧失了越南；^[1]太平天国始于一八五一年而终于一八六四年，其间还出现过戈登将军和华德将军的常胜军；一八四〇年鸦片战争的结果使中国失去了香港：如果再往上追溯，明末清初有耶稣会教士来华传教，元朝有马哥·孛罗来华游历；再往上可以追溯到中国与罗马帝国的关系。

梁启超在东京出版的《新民丛报》是份综合性的刊物，内容从短篇小说到形而上学，无所不包。其中有基本科学常识，有历史，有政治论著，有自传，有文学作品。梁氏简洁的文笔深入浅出，能使人了解任何新颖或困难的问题。当时正需要介绍西方观念到中国，梁氏深入浅出的才能尤其显得重要。梁启超的文笔简明、有力、流畅，学生们读来裨益非浅，我就是千千万万受其影响的学生之一。我认为这位伟大的学者，在介绍现代知识给年轻一代的工作上，其贡献较同时代的任何人为大。他的《新民丛报》是当时每一位渴求新知识的青年的智慧源泉。

在政治上，他主张在清廷主持之下进行立宪维新。这时候，革命党人也出版了许多刊物，宣传孙中山先生的激烈思想。中山先生认为共和政体胜于君主立宪，同时他认为中国应由中国人自己来统治，而不应由腐败无能的满洲人来统治。浙籍学生在东京也出版了一个定名《浙江潮》的月刊。这个杂志因为攻击清廷过于激烈，以致与若干类似的杂志同时被邮政当局禁止寄递。但是日本政府却同情中国留学生的革命运动，因此这些被禁的杂志仍旧不断地从日本流入上海租界。因此上海就成为革命思想的交易所，同情革命的人以及营求厚利者再从上海把革命

书刊走私到其他城市。

浙江高等学堂本身就到处有宣传革命的小册子、杂志和书籍，有的描写清兵入关时的暴行，有的则描写清廷的腐败，有的则描写清廷对满人和汉人的不平等待遇。学生们如饥似渴地读着这些书刊，几乎没有任何力量足以阻止他们。

事实上，清廷腐败无能的实例，在校门之外就俯拾即是。杭州城墙之内就有一个满洲人住的小城，里面驻扎着监视汉人的“旗兵”。两百多年前，政府特地划出这个城中之城作为驻扎杭州的“旗兵”的营房。这些旗兵的子子孙孙一直就住在这里，名义上仍旧是军人。满汉通婚原则上是禁止的，但是满人如果愿意娶汉人为妻是准许的，实际上这类婚姻很少就是了。太平军围城时，杭州的旗人全部被杀。内战结束以后，原来驻扎湖北荆州的一部分旗兵移驻杭州，来填补空缺。这些从荆州来的旗人当时还有健在的，而且说的是湖北话。虽然他们多数已经去世，但是他们的子女仍旧住在那里，而且说他们父辈所说的方言。道地杭州人很容易察觉这些旗人的湖北口音。但是从第三代开始，他们就说杭州的本地方言了。

当时的浙江高等学堂里有十名旗人子弟。这几位青年人对学校中的革命运动装聋作哑，应付得很得当。其中一人原是蒙古人的后裔，他甚至告诉我，他也赞成革清朝的命，因为他虽然是旗“兵”，却不是满人。

这些所谓旗兵，实际上绝对不是兵；他们和老百姓毫无区别。他们在所谓“兵营”里娶妻养子，对冲锋陷阵的武事毫无所知。唯一的区别是他们有政府的俸饷而无所事事，他们过的是一种寄生生活，因之身体、智力和道德都日渐衰退。他们经常出入西湖湖滨的茶馆，有的则按当时的习尚提着鸟笼到处游荡，一般老百姓都敬而远之。如果有人得罪他们，就随时有挨揍的危险。这些堕落、腐化、骄傲的活榜样，在青年学生群中普遍引起憎恨的鄙夷。他们所引起的反感，比起革命宣传的效果只有过之而无不及。

我们从梁启超获得精神食粮，孙中山先生以及其他革命志士，则使我们的革命情绪不断增涨。到了重要关头，引发革命行动的就是这种情绪。后来时机成熟，理想和行动兼顾的孙中山先生终于决定性地战胜主张君主立宪的新士大夫阶级。

这就是浙江高等学堂的一般气氛。其他学校的情形也大都如此。我对这一切活动都感兴趣。我喜欢搜求消息，喜欢就所获得的资料加以思

考分析，同时也喜欢使自己感情奔放，参加行动。但是我常常适可而止。为求万全，我仍旧准备参加科举考试。除了革命，科举似乎仍旧是参加政府工作的不二途径，并且我觉得革命似乎遥遥无期，而且困难重重。我有时候非常胆小而怕羞，有时候却又非常大胆而莽撞，因此我对自己的性格始终没有自信。所以我的行动常常很谨慎，在采取确切的行动之前，喜欢先探索一下道路。尤其碰到岔路时，我总是考虑再三才能作决定。如果犹豫不决，我很可能呆坐道旁，想入非非。但是一旦作了决定，我必定坚持到底。我一生犯过许多错误，但没有犯不可挽回的错误，所以没有让时代潮流把我卷走。

[1] 1885年，中法签订《中法新约》（即《中法会订越南条约》），中国正式放弃对越南的宗主权。

参加郡试

郡试快到了。一天清早，我从杭州动身往绍兴去，因为我们那一区的郡试是在绍兴举行。行李夫用一根扁担挑起行李走出校门，我紧紧地跟在他的后面。扁担的一端系着一只皮箱和一只网篮，另一端是铺盖卷。走到校门口，碰到一位教师，他向我微微一笑，并祝我吉星高照。

穿过许多平坦的石板路，又穿过许多迂回狭窄的小巷，我们终于到了钱塘江边。渡船码头离岸约有一里路，我小心翼翼地踏上吱吱作响的木板通过一条便桥到达码头。渡船上有好几把笨重的木桨，风向对时也偶然张起帆篷。船行很慢，同时是逆水行驶，所以整整化了两个小时才渡过钱塘江。当时谁也想不到三十年之后竟有一条钢铁大桥横跨宽阔的江面，桥上还可以同时行驶火车和汽车。

上岸以后雇了一乘小轿。穿过绵亘数里的桑林，到达一个人烟稠密的市区，然后转船续向绍兴进发，船上乘客挤得像沙丁鱼。我们只能直挺挺地平躺着睡，如果你缩一缩腿，原来放腿的地方马上就会被人占据；如果你想侧转身睡一下，你就别想再躺平。

在船上过了一夜，第二天早晨到达绍兴。寄宿在一个制扇工匠的家里，房间又小又暗，而且充满了制扇用的某种植物油气味。晚上就在菜油灯下读书，但是灯光太暗，看小字很吃力。我们不敢用煤油灯，因为屋子里到处是易燃的制扇材料，黑暗中摸索时还常要摔跤。

考试开始时，清晨四点左右大家就齐集在试院门前，听候点名。那是一个初秋的早晨，天气相当冷。几千位考生挤在院子里，每人头上戴着一顶没有顶子的红缨帽，手里提着一个灯笼、一只考篮。大厅门口摆着一张长桌。监考官就是绍兴知府，昂然坐在长桌后面。他戴着蓝色晶顶的红缨帽，穿着深蓝色的长袍，外罩黑马褂，胸前垂着一串朝珠。那是他的全套官服。他提起朱笔顺着名单，开始点名。他每点一个名，站在他旁边的人就拖着长腔唱出考生的名字。考生听到自己的名字以后，就高声答应："有！某某人保。"保的人也随即唱名证明。监考官望一眼以后，如果认为并无舛错，就用朱笔在考生名字上加上红点。

考生点名后就可以进考棚了。他的帽子和衣服都得经过搜索，以防夹带，任何写了字的纸头都要没收。

考生鱼贯进入考棚，找出自己的位置分别就座。座位都是事先编好

号码的。考卷上有写好考生姓名的浮签，缴卷时就撕去浮签。考卷的一角另有弥封的号码，录取名单决定以后才开拆弥封，以免徇私舞弊。清末时，政府各部门无不百弊丛生。唯有科举制度颇能保持独立，不为外力所染。科举功名之所以受人器重，大概就是这个缘故。

考试的题目不出四书五经的范围，所以每个考生必须把四书五经背得烂熟。我在家塾里以及后来在绍兴中西学堂里，已经在这方面下过苦功。题目写在方形的灯笼罩子上，白单子上写着黑字，灯笼里面点着蜡烛，因此从远远的地方就可以看得很清楚。提灯笼的人把灯笼擎得高高的，在考生座位之间的甬道上来回走好几次，所以大家都不会看漏题目。

将近中午时，办事人员开始核对考生的进度，每一份考卷的最末一行都盖上印子。下午四点钟左右，炮声响了，那是收卷的第一次讯号。大门打开，吹鼓手也呜呜啦啦开始吹奏起来。考生缴了卷，在乐声中慢慢走出大门，大门外亲戚朋友正在焦急地等待着。缴了卷的人完全出来以后，大门又重新关上。第二次缴卷的讯号大约在一小时以后发出，同样鸣炮奏乐。第三次下令收卷则在六点钟左右，这一次可不再鸣炮奏乐。

考试以后，我们要等上十天、八天，才能知道考试结果。因此放榜以前我们可以大大地玩一阵。试院附近到处是书铺，我常碰到全省闻名的举人徐锡麟，在书铺里抽出书来看。我认识他，因为他曾在绍兴中西学堂教算学。想不到不出数年，他的心脏被挖出来，在安徽巡抚恩铭灵前致祭，因他为革命刺杀了恩铭。街头巷尾还有象棋摊子，棋盘两边都写着“观棋不语真君子，落子无悔大丈夫”两句俗语。街上有临时的酒楼饭馆，出售著名的绍兴酒和价廉物美的菜肴。一毛钱买一壶酒。醉蚰、糟鸡、家乡肉，每盘也只要一毛。如肯费三四毛钱，保管你买得满面春风，齿颊留香。城里有流动的戏班子，高兴的时候，我们还可以看看戏。

放榜的那一天，一大群人挤在试院大门前一座高墙前面守候。放榜时鸣炮奏乐，仪式非常隆重。榜上写的是录取考生的号码，而非姓名。号码排成一圆圈，以免有先后次序的分别。

我发现自己的号码也排入圆圈，列在墙上那张其大无比的长方形榜上，真是喜出望外。号码是黑墨大字写的，但是我还是不肯相信自己的眼睛，连揉了几次眼，发现自己的号码的的确确排在榜上的大圈圈内，这才放了心。连忙挤出人群，回到寄宿的地方。在我往外挤的时候，看

到另一位考生也正在往外跑。他打着一把伞，这把伞忽然被一根栅栏钩住，他一拖，伞就向上翻成荷叶形。可是这位兴奋过度的考生，似乎根本没有注意他的伞翻向天了，还是匆匆忙忙往前跑。

几天之后，举行复试。复试要淘汰一部分人，所以初试录取的还得捏一把汗。复试时运气还算不错。放榜时，发现自己的名字列在居中的某一行上。

第三次考试只是虚应故事而已。除了写一篇文章以外，名义上我们还得默写一段《圣谕广训》（皇帝训谕士子的上谕）；但是我们每人都可以带一册进考场，而且老实不客气地照抄一遍。这次考试由学政（俗称学台）亲自莅场监考。试院大门口的两旁树着两根旗竿，旗竿上飘着长达十五尺的长幡，幡上写的就是这位学台的官衔。记得他的官衔是：“礼部侍郎提督浙江全省学政……”

再过几天之后，我一大早就被窗外一阵当当小锣惊醒。原来是试差来报喜。我已经考取了附生，也就是平常所说的秀才。试差带来一份捷报，那是一张大约六尺长，四尺宽的红纸，上面用宋楷大字写着：

“贵府相公某蒙

礼部侍郎提督浙江全省学政某考试录取余姚县学附生”

所谓“县学”只有一所空无所有的孔庙，由一位“教谕”主持，事实上这位“教谕”并不设帐讲学，所谓“县学”是有名无实的。按我们家庭经济状况，我须呈缴一百元的贽敬，拜见老师，不过经过讨价还价，只缴了一半，也并没有和老师见过面。

当讨价还价正在进行的时候，父亲恼怒了说，孔庙里应该拜财神才是。旁边一位老先生说，那是说不得的。从前有一位才子金圣叹，因为讥笑老师，说了一句“把孔子牌位取消，把财神抬进学宫”的话，奉旨杀了头。临刑前这位玩世不恭的才子叹道：“杀头至痛也，圣叹于无意中得之，岂不快哉。”

郡试以后，又再度回到浙江高等学堂，接受新式教育。我离开绍兴时，房东告诉我，一位同住在他店里的考生愤愤不平地对他说，学台简直瞎了眼，居然取了像我这样目不识丁的人，其意若曰像他那样满腹经纶的人反而落第，真是岂有此理。我笑笑没说什么，考试中本来不免有幸与不幸的！

回到学校以后，马上又埋头读书，整天为代数、物理、动物学和历

史等功课而忙碌，课余之暇，又如饥似渴地阅读革命书刊，并与同学讨论当时的政治问题。郡试的那段日子和浙江高等学堂的生活恍若隔世。静定的、雾样迷的中世纪生活，似乎在一夜之间就转变为汹涌的革命时代的漩涡。我像是做了一场大梦。

两个月以后，寒假到了。奉父亲之命回到乡间，接受亲戚朋友的道贺。那时我是十九岁，至亲们都希望我有远大的前程，如果祖坟的风水好，很可能一步一步由秀才而举人，由举人而进士，光大门楣，荣及乡里，甚至使祖先在天之灵也感到欣慰。二哥已早我几年考取了秀才，那时正在北京大学（京师大学堂）读书。当时的学生们听说京师大学四个字，没有不肃然起敬的。想不到十五年之后我竟为时会所迫承乏了北京大学的校长职务。回想起来，真令人觉得命运不可捉摸。

在绍兴时曾经收到一份捷报，不久，试差又用一份同样以红纸写的捷报，敲着铜锣分向我家乡的亲戚家属报喜。开筵庆祝的那一天，穿起蓝绸衫，戴了一顶银雀顶的红缨帽。好几百亲戚朋友，包括妇孺老少，齐来道贺，一连吃了两天喜酒。大厅中张灯结彩，并有吹班奏乐助兴。最高兴的自然父亲，他希望他的儿子有一天能在朝中做到宰相，因为俗语说：“秀才为宰相之根苗”。至于我自己，简直有点迷惘。两个互相矛盾的势力正在拉着，一个把我往旧世界拖，一个把我往新世界拖。我不知道怎么办。

在乡间住了三个星期，学校重新开学，我又再度全神贯注地开始研究新学问。在浙江高等学堂再逗留了半年光景，到暑假快开始时，又离开了。满脑子矛盾的思想，简直使尚未成熟的心灵无法忍受，新与旧的冲突，立宪与革命的冲突，常常闹得头脑天旋地转，有时觉得坐立不安，有时又默坐出神，出神时，会觉得自己忽然上冲霄汉，然后又骤然落地，结果在地上跌得粉碎，立刻被旋风吹散无踪了。

我的近亲当中曾经发现有人患精神病，我有时不禁怀疑自己是否也有点神经质的遗传。父亲和叔祖都说过，我小时候的思想行动本来就与常儿不同。我还记得有一天伯祖骂我，说我将来如不成君子必成流氓。虽然不大明白这话的意思，但是我心里想，一定要做君子。

这个世界的确是个疯狂的世界，难道我也真的发了疯吗？至少有一个问题在脑子里还是很清楚的：那就是如何拯救祖国，免受列强的瓜分。革命正迅速地在全国青年学生群中生根发展。投身革命运动的青年学生愈多，孙中山先生的影响也愈来愈广。清室覆亡已经近在旦夕了。

我渴望找个更理想、更西化的学校。因为这时候已经看得清楚：不论立宪维新或者革命，西化的潮流已经无法抗拒。有一天早晨，无意中闯进禁止学生入内的走廊，碰到了学监。他问有什么事，我只好临时扯了个谎，说母亲生病，写信来要我回家。

"哦！那太不幸了。你还是赶快回家吧！"学监很同情地说。

回到宿舍，收拾起行李，当天上午就离开学校，趁小火轮沿运河到了上海。参加上海南洋公学的入学考试，结果幸被录取。那是一九〇四年的事。为争取满洲控制权的日俄战争正在激烈进行。

西化运动

虽然新旧之争仍在方兴未艾，立宪与革命孰长孰短亦无定论，中国这时已经无可置疑地踏上西化之路了。日本对帝俄的胜利，更使中国的西化运动获得新的鼓励，这时聚集东京的中国留学生已近五万人，东京已经成为新知识的中心。国内方面，政府也已经开始一连串的革新运动，教育、军事、警政都已根据日本的蓝图采取新制度。许多人相信：经过日本同化修正的西方制度和组织，要比纯粹的西洋制度更能适合中国的国情，因此他们主张通过日本接受西洋文化。但是也有一班人认为：既然我们必须接受西洋文明，何不直接向西洋学习？

我是主张直接向西方学习的，虽然许多留学日本的朋友来信辩难，我却始终坚持自己的看法。进了南洋公学，就是想给自己打点基础，以便到美国留学。这里一切西洋学科的课本都是英文的，刚好合了我的心意。

南洋公学开办时，采纳了美国传教士福开森博士的许多意见。南洋公学是交通大学的前身，交通大学附近的福开森路，就是为纪念这位美国传教士而命名的。南洋公学的预科，一切按照美国的中学学制办理，因此南洋公学可说是升入美国大学的最好阶梯。学校里有好几位讲授现代学科的美人。在校两年，在英文阅读方面已经没有多大困难，不过讲却始终讲不好。学校教的英文并不根据语音学原理，我的舌头又太硬，始终跟不上。

课程方面分为两类，一类是中国旧学，一类是西洋学科。我在两方面的成绩都还过得去，有一次还同时侥幸获得两类考试的荣誉奖。因此蒙校长召见，谬承奖勉。

校舍是根据西洋设计而建筑的，主要建筑的中心有一座钟楼，数里之外就可以望见。有一排房子的前面是一个足球场，常年绿草如茵，而且打扫得很整齐。学校当局鼓励学生玩足球和棒球，学生们对一般的运动也都很感兴趣。

我生来体弱，进了南洋公学以后，开始体会到要有高深的学问，必须先有强健的体魄。除了每日的体操和轻度的运动之外，还给自己定了一套锻炼身体办法。每天六点钟光景，练习半小时的哑铃，晚间就寝前再练一刻钟。继续不断地练了三年，此后身体一直很好，而且心情也

总是很愉快。

包括德、智、体三要素的斯宾塞教育原则这时已经介绍到中国。为了发展德育，就温习了四书，同时开始研究宋明的哲学家以及历代中外伟人的传记，希望借此学习他们的榜样，碰到认为足资借鉴的言行时，就把它摘录在日记本上。然后仔细加以思考，试着照样去做，同时注意其成绩。这些成绩也记载在日记上，以备进一步的考核。

每当发现对某些问题的中西见解非常相似、甚至完全相同时，我总有难以形容的喜悦。如果中西贤哲都持同一见解，那末照着做自然就不会错了。当发现歧见时，就加以研究，设法找出其中的原因。这样就不知不觉地做了一项东西道德行为标准的比较研究。这种研究工作最重要的结果是学到了如何在道德观念中区别重要的与不重要的，以及基本的与浮面的东西。

从此以后，对于如何立身处世开始有了比较肯定、比较确切、也比较自信的见解，因为道德观念是指导行为的准绳。

我开始了解东西方的整体性，同时也更深切地体会到宋儒陆象山所说的"东海有圣人出焉，此心同，此理同。西海有圣人出焉，此心同，此理同"的名言。同时开始体会到紊乱中的统一，因为我发现基本道理原极有限，了解这些基本道理之间的异同矛盾正可以互相发明，互相印证。使我感到头晕眼花的只是细微末节的纷扰而已。孟子和陆象山告诉我们，做学问要抓住要点而舍弃细节，要完全凭我们的理智辨别是非。于是我开始发展以理解为基础的判断能力，不再依赖传统的信仰。这是思想上的一次大解放，像是脱下一身紧绷绷的衫裤那样舒服而自由。

但是，理解力也不能凭空生存。想得太多，结果除失望外一无成就，这样是犯了孔子所说的"思而不学"的毛病。当然，导向正确思想的途径还是从思想本身开始，然后从经验中学习如何思想。你不可能教导一个根本不用脑筋的人如何去思想。后来我留美时读到杜威的《我们如何思想》，使我的信念更为加强。

儒家说，正心诚意是修身的出发点，修身则是治国、平天下的根基。因此，我想，救国必先救己。于是决心努力读书、思考，努力锻炼身体，努力敦品励行。我想，这就是修身的正确途径了，有了良好的身心修养，将来才能为国服务。

在南洋公学读书的时候，清廷终于在一九〇五年采取了教育改革的重要步骤，毅然宣布废止科举。年轻一代迷恋过去的大门从此关闭。废

科举的诏书是日本战胜帝俄所促成的。代替科举的是抄袭自日本的一套新教育制度。日本的教育制度是模仿西方的。追本溯源，中国的新教育制度仍旧来自西方。中国现在总算不折不扣地踏上西化的途程了。

在这以前，上海曾经是我国革命分子文化运动的中心。中国的知识分子和革命领袖，躲在上海公共租界和法租界，可以享受言论自由和出版自由。政治犯和激烈分子在租界里讨论，发表他们的见解，思想自由而且蓬勃一时，情形足与希腊的城邦媲美。

我自己除了在南洋公学接受课本知识之外，也参加了各式各样的活动，但是学习的性质居多，谈不到积极工作。到礼拜六和礼拜天时，常常到福州路的奇芳茶馆去坐坐。那时候，上海所有的学生都喜欢到"奇芳"去吃茶，同时参加热烈的讨论。茶馆里有一位叫"野鸡大王"的，每日在那里兜售新书，他那副样子，去过"奇芳"的人没有一个会忘记的。他穿着一身破烂的西装，头上戴着一顶灰色的满是油垢的鸭舌头帽。他专门贩卖革命书刊给学生，他的货色当中还包括一本叫《性学新论》的小册子，据他解释，那只是用来吸引读者的。谁也不知道他的名字。吴稚晖先生说，他知道他是谁，并告诉了我他的名字，我却忘记了。我们也不晓得他住在什么地方。任何革命书刊都可以从他那里买得到。这些书，因租界当局应中国政府之请，在名义上是禁止贩卖的。

科举废止的同一年，孙中山先生在东京组织同盟会，参加的学生有好几百人，中山先生被选为主席。这一年也就是日本和俄国签订《朴茨茅斯条约》，结束日俄战争的一年。日本在击败西方列强之一的俄国以后，正蠢蠢欲动，预备侵略中国。十年之后，日本向中国提出著名的二十一条要求，十六年以后，发动九·一八沈阳事变，最后终于在民国二十六年与中国发生全面战争。

当时，上海正在热烈展开抵制美货运动，抗议美国国会通过排华法案。学生和商人联合挨户劝告中国商店店主不要售卖美国货。店主亟于卖掉被抵制的货品，只好削价脱售，有许多顾客倒也乐于从后门把货色买走。群众大会中，大家争着发表激烈演说，反对排华法案。有一次会中，一位慷慨激昂的演说者捶胸顿足，结果把鞋跟顿掉了。鞋跟飞到听众头上，引得哄堂大笑。

翌年也发生一件重要的事情。江浙两省的绅士同上海的学生和商人联合起来反对英国人投资建筑苏杭甬铁路。示威的方式包括群众大会、发通电、街头演说等等，同时开始招股准备用本国资金建筑这条铁路，路线要改为由上海经杭州到宁波。以上海代替苏州的理由很奇怪，说苏

州是个内陆城市，铁路不经过苏州，可以使苏州免受外国的影响。英国人对路线让步了，铁路也在第二年动工兴建。

那几年里，全国各校的学生倒是都能与学校当局相安无事，一方面是因为他们对校外活动的兴趣提高，另一方面是因为他们对于给学校当局找些无谓的麻烦已经感到厌倦。不过，他们却把注意力转移到为他们做饭的厨子身上去了。当时上海学生的伙食费是每月六块钱；在内地，只要三块钱。因此饭菜不会好到哪里去。但是学生对伙食很不满意，不是埋怨米太粗糙，就是埋怨菜蔬质地太差，因此常常要求加菜——通常是加炒蛋，因为炒蛋最方便。当时鸡蛋也很便宜，一块钱可以买五六十个。有时候，学生们就砸碎碗碟出气，甚至把厨子揍一顿。几乎没有一个学校没有“饭厅风潮”。

一九〇七年，安徽省城安庆发生了一次昙花一现的革命。革命领袖是徐锡麟，我们在前面曾提起他过。他是安徽省警务督办，曾在绍兴中西学堂教过书，我们在前面也曾经提及。（中西学堂就是我最初接触西方学问的地方，我在那里学到地球是圆的。）他中过举人，在中西学堂教过几年书以后，又到日本留学。他回国后向朋友借了五万块钱，捐了道台的缺，后来被派到安庆。他控制了警察以后，亲手枪杀安徽巡抚，并在安庆发动革命。他同两名亲信带了警校学生及警察部队占领军械库，在库门口架起大炮据守。但是他们因缺乏军事训练，无法使用大炮，结果被官兵冲入，徐锡麟当场被捕。他的两位亲信，一名叫陈伯平的阵亡了，一位叫马子夷的事后被捕。

马子夷是我在浙江高等学堂的同学，他和陈伯平从日本赴安庆时，曾在上海逗留一个时期。两个人几乎每天都来看我，大谈革命运动。他们认为革命是救中国的唯一途径，还约我同他们一道去安庆。但是一位当钱庄经理的堂兄劝我先到日本去一趟。那年暑假，就和一位朋友去东京，顺便参观一个展览会。我们离沪赴日的前夕，马子夷、陈伯平和我三个人在一枝香酒楼聚餐话别。第二天我去日本，他们也搭长江轮船赴安庆。想不到一枝香酒楼一别竟成永诀。

初次乘大洋轮船，样样觉得新奇。抽水马桶其妙无比。日本茶房礼貌周到。第二天早晨，我们到达长崎，优美的风景给我很深的印象。下午经过马关，就是李鸿章在一八九五年与日本签订《马关条约》的地方。我们在神户上岸，从神户乘火车到东京，在新桥车站落车。一位在东京读书的朋友领我们到小石川二十三番君代馆住下。东京的街道当时还没有铺石子，更没有柏油，那天又下雨，结果满地泥泞。

我到上野公园的展览会参观了好几十趟，对日本的工业发展印象很深。在一个展览战利品的战迹博物馆里，看到中日战争中俘获的中国军旗、军服和武器，简直使我惭愧得无地自容。夜间整个公园被几万盏电灯照耀得如同白昼，兴高采烈的日本人提着灯笼在公园中游行，高呼万岁。两年前，他们陶醉于对俄的胜利，至今犹狂喜不已。我孤零零地站在一个假山顶上望着游行的队伍，触景生情，不禁泫然涕下。

到日本后约一星期，君代馆的下女在清晨拿了一份日文报纸来，我从报上获悉徐锡麟在安庆起义失败的消息。如果我不来日本而跟那两位朋友去安庆，恐怕我不会今日在此讲"西潮"的故事了。

我对日本的一般印象非常良好。整个国家像个大花园，人民衣饰整饬，城市清洁。他们内心或许很骄傲，对生客却很有礼貌。强迫教育使国民的一般水准远较中国为高，这或许就是使日本成为世界强国的秘密所在。这是我在日本停留一月后带回来的印象。后来赴美国学教育学，也受这些感想的指示。但是国家兴衰事情并不如此简单，让我等机会再谈罢。

不久以后，又开始为学校功课而忙碌。第二年暑假，跑到杭州参加浙江省官费留美考试，结果未被录取。于是向父亲拿到几千块钱，预备到加利福尼亚州深造。

PART TWO AMERICAN YEARS

CHAPTER 9 FURTHER "WEST"

With part of the money my father gave me I bought hats, shoes, clothes, and other necessary things, and a first-class ticket to San Francisco. The rest I converted into American gold dollars at the rate of two Mexican to one. My queue I got rid of at a barbershop. When the barber applied a pair of long scissors to my hair I felt as if I were on the guillotine—a chill stole all over me. With two quick, heavy cuts my queue fell off and I felt as if my head had gone with it. It was given back to me wrapped in paper and I threw it into the ocean on my way to America.

I acquired a doctor's certificate and a passport, based on Section 6 of the immigration law admitting students, and went to the American Consulate General in Shanghai for a visa. This done, I secured my ticket and boarded an American Mail liner for San Francisco. It was late August, 1908. There were about a dozen Chinese students on the same boat. Leaving the shores of my country seemed to cut away the last link that connected me with my earlier life. I was lucky in being a good sailor and was never sick during the twenty-four long days aboard ship. Perhaps this was due to the practice I had had in swinging for several weeks before embarking. I was good at it, for swinging is a Chinese garden pastime.

The liner was much larger and more luxurious than the Japanese steamer I had taken to Kobe the previous year. The most striking thing to me on board was the dancing. Brought up in a society where men and women did not mix freely, I could not at once reconcile myself to it. But after watching it several times I began to appreciate the beauty of it.

On the day of our arrival at San Francisco a port doctor came on board and carefully examined the eyes of Chinese students to see whether any of us had any trace of trachoma.

The first thing I had felt on landing was the power of the state through the instrumentality of the immigration officials and police. I

began to wonder why the people of a republic enjoyed less individual freedom than did the people of China, which was an absolute monarchy. In China we scarcely felt the influence of the state. "Heaven is high above and the Emperor is far away."

We stopped over in San Francisco for a few hours to visit Chinatown. Then two of us who were bound for the University of California were taken to Berkeley by the president of the Chinese Students' Alliance there. In the evening we dined at a restaurant in Berkeley, the Sky Light, on Shattuck Avenue, each paying twenty-five cents for a dinner which consisted of soup, beef stew, and a piece of pie, with bread and butter and a cup of coffee. I took a room at Mrs. Coole's house on Bancroft Way. She was a talkative, elderly lady, very kind to the Chinese students. She told me that I must turn off the light before going out and shut off the water after washing; that I must not throw peanuts into the flush toilet or leave my money on the table; that in leaving the room I needn't lock the door, but if I preferred I might leave the key under the mat. "If you want anything," she said, "you just tell me. I know how a stranger must feel in a foreign country. Make yourself at home." Then she bade me good night and left the room.

As I had arrived in San Francisco too late to enter the fall session of the university, I had to wait for the next term. Meantime I got a coed of the university to coach me in English at fifty cents an hour. I spent all my time studying English; *I read the San Francisco Chronicle* regularly every morning and subscribed to a weekly magazine, *The Outlook*, for more serious study. By the aid of Webster's *Collegiate Dictionary*, which was always at hand and to which every doubtful word was referred, my vocabulary increased day by day and at the end of four months I could read papers and magazines quite freely.

In the beginning I found myself partially blind, deaf, and dumb so far as the English language was concerned. These difficulties had to be surmounted before I could hope to get along well in the university. By concentration and perseverance the first obstacle was largely overcome in the first four months and it was only a matter of time to

reduce it completely. The second had to be removed gradually by listening to conversations and lectures. It was easier to understand lectures because they were in the form of organized thought and were slower and more distinct in delivery. Conversations were generally wider in range and carried on in a rapid succession of varied or disconnected groups of ideas in which one had difficulty in following the thread of thought. To listen to a play at the theatre was midway between the two.

It was most difficult, however, to overcome the dumbness. First of all, I had been started off wrong from the very beginning in China. The wrong habits were deeply rooted and it took time to dislodge them. In the second place, as I was ignorant of phonetic methods the mere effort to imitate a word did not necessarily lead to a correct pronunciation. For there are wide gaps between the tone uttered and the ear that hears it, and between ear and tongue—the ear does not necessarily catch the right tone, nor does the tongue always follow the ear in reproducing it. Moreover, California was not so hospitable a land socially for the Chinese as to make one feel congenial or at ease; I was always overconscious of this, slow to mingle with others and shy when others tried to approach me. Thus many available social connections were cut off, and as language improves only with intercourse, the improvement in the spoken language was indeed very, very slow. This hampered my participation in discussions, both in the classroom and out of it, when I later entered the university. As a rule I remained mute in class and when a question was put to me responded only by a blush. My professors were very considerate and on no occasion tried to exact an answer. Perhaps they realized my social plight, or excused me simply because I was a foreigner. At any rate, from my examination papers—in most cases above "B" grade—they knew I did my classwork conscientiously in spite of muteness.

Time flew—it was soon Christmas. On Christmas Eve I dined alone at a restaurant with better food than on the first occasion, and a larger bill. After dinner I strolled about the streets watching the happy family gatherings through the windows where curtains were not drawn. Christmas trees, some lighted with tiny electric lights and

some with candles, were everywhere.

With a few Chinese friends on New Year's Eve I went across the bay to San Francisco. From the ferry we could see at a distance, on the other side of the bay, the Clock Tower bejeweled with hundreds of lights. Moving through the crowd to the exit on landing, one heard the player pianos going full tilt for their nickel's worth. As I followed the packed crowd streaming slowly along the main street, flooded with lights, my ears were deafened by toy bugles and rattles. People took particular pleasure in blowing and rattling at the ears of pretty ladies, who returned the compliment good-naturedly with smiles at the merrymakers. Paper streamers floated in the air and were strung around people's necks. Confetti showered on the crowd like many-colored snow. I branched off to Chinatown, where I found throngs admiring the window decorations with their Oriental touch. Firecrackers made you feel that you were celebrating New Year's Eve in China.

When the clock struck midnight people began to shout "Happy New Year!" at the tops of their voices, and to blow horns and shake rattles. More confetti and more streamers. This was my first New Year in America and I was impressed with the good-naturedness of the American crowd and the spontaneous play spirit of the grownups. They were a young race in their merrymaking.

I got back home quite late and pleasantly tired, went to bed, and slept soundly until late in the morning. After breakfast I took a walk in the residential section of Berkeley. The houses on the gentle slopes of the Berkeley hills were surrounded with flower beds and green lawns. Roses were in full bloom in the mild California winter, for Berkeley, like Kunming in China, is blessed with perennial spring.

After the New Year I looked forward to the beginning of the second term of the university in February. With new hopes and vigor I worked hard at my language study. When the term drew near I applied for admission on credits from Nanyang College in Shanghai and was entered in the College of Agriculture, with Chinese as a substitute for Latin.

Here I must explain why I turned to agriculture when my preparation was along literary lines. This was not a happy-go-lucky move as it might have been with many a young student; it had been carefully considered and decided upon in all seriousness. Since China was mainly agricultural, the improvement of agriculture, as I saw it, would bring happiness and prosperity to the largest number of people in China; moreover, I had always taken delight in plants and animals since my early years in the village, where farming was the main current of life. For national as well as personal reasons, therefore, agriculture seemed the most appropriate study to pursue. Another minor consideration was that as I was born a delicate child my health could be improved by having plenty of fresh air in the country.

I took botany, zoölogy, hygiene, English, German, and physical culture for the term—a period of three hours a week for each course except the last, which took six hours. We were told to buy textbooks at a bookstore on College Avenue, so I went to the store and asked, among other things, for so-and-so's *Bo'tany*, with the accent on the second syllable.

"What is it you want?" the sales clerk demanded. I repeated the word with the same accent. He shook his head. "Sorry, haven't got it."

I pointed to the book on the shelf. He smiled and said, "Oh, excuse me, you mean 'botany.'"

I was glad to have the book and also to learn the right pronunciation of the word. Again, we were told to observe certain plants in the botanical garden. Failing to locate the place, I asked a janitor where the 'botanical garden was—with the accent on the first syllable.

"What?" he said. I repeated.

"Oh, oh—you mean the bo'tanical garden," he responded after a moment, enlightened.

I would have liked to swear in good American slang if I had learned any. Years after, when I related the incident to an American friend in Peking, he told me the story of a Frenchman who was asked

what difficulties he found in speaking English. The Frenchman replied with characteristic gesture, "Oh, English is easy—but the *abominable accent!*" pronouncing the last words in French. Indeed, the *abominable accent* has discouraged many a student who has tried to learn English and found himself caught in an intricate maze. Of course there are rules by which one can somewhat steer his way. But there are too many exceptions; often the exceptions are the rule, so that one has to consider each case and acquire them all gradually and with great pains.

I studied botany and zoölogy with great interest. I still remember the jocular remarks of the professor of botany as we were being taught to use the microscope, "Don't think you're going to see through the microscope a fly as big as an elephant. No—you can't see even a section of the fly's leg."

My interest in the observation of nature had its roots in the naïve nature study which, during my school days in China, I carried on outside of school as a sort of diversion after the day's tiresome classical study. My improvised observations years before and my interest in botany and zoölogy now all proceeded from a common source—curiosity. The one great difference lay in the tool used. The microscope is an extension of the eye and enables you to see minute particles which the naked eye can never hope to reach. Use of this tool has led to the discovery of microbes, whose limitless numbers are comparable to the stars—which in turn are studied by another extension of the eye, the telescope. I longed to make a pilgrimage to Lick Observatory to see the world's largest telescope, but for some reason or other did not go. Instead I paid twenty-five cents to look into a telescope on the streets to see the planets and was thrilled to behold silvery Saturn in its shining ring, sailing in the blue sky as I had seen it on a celestial map in school.

I stayed in the College of Agriculture for half a year. One of my friends had meanwhile been urging me to take up some branch of social science instead of a practical science like agriculture. He argued that though agriculture was very important, there were other studies

more vital for China; unless we could solve our political and social problems in the light of modern developments in the West we could not very well solve the agricultural ones. Moreover, my world outlook would be limited, in agriculture, to a practical science and would not embrace anything beyond the narrow scope of that special field.

As I had studied Chinese history as well as the general outlines of Western history, and was familiar with the general development of national strength in various countries at various times, I could very well appreciate my friend's advice. It set me thinking, for I was again at the crossroads and must sooner or later make a final decision. As I have mentioned, I was always careful in making any decision as to a new field which would determine my future course of life.

Early one morning, on my way to a barn to watch the milking, I met a number of fresh-looking youngsters—pretty girls and lively boys—on their way to school. Suddenly an idea struck me: I am here to study how to raise animals and plants; why not study how to raise men? Instead of going to the barn I went up into the Berkeley hills and sat under an old oak tree overlooking beautiful sunlit San Francisco Bay and the Golden Gate. As I gazed into the bay, thoughts on the rise and decline of the successive dynasties in China presented themselves one after another. All of a sudden I saw as if in a vision children emerging like water nymphs from the waters of the bay and asking me to give them schools. I decided to take education as my major, in the College of Social Science.

It was already late in the morning when I rushed down from the hills, went directly to the Recorder's Office to see Mr. Sutton, and asked to be transferred from the College of Agriculture to that of Social Science. After some argument the transfer was granted. In the fall of 1909 I began to take courses in logic, ethics, psychology, and English history, and was thus launched on what became my real college career.

My student life moved along in an atmosphere of intellectual activity. Days and months rolled on smoothly and pleasantly. As the sands of time gathered, so grew my knowledge.

In logic I learned that thinking has its method—that is to say, we must think logically. There is a difference between inductive and deductive thinking. Observation is very important in inductive thinking, so I wanted to practice it. I began to observe the many things I came across on campus or near the university. Why were cows belled? Why do the leaves of the eucalyptus hang vertical? Why are all California poppies yellow?

One morning as I was walking along the slopes of the Berkeley hills I noticed a pipe from which water was flowing. Where did the water come from? I followed up the pipe line, which led me to the source, and rejoiced over the discovery. Quite high on the hills I began to wonder what was on the other side of them. I climbed over one hill after another and found that there were endless hills, higher and higher as I went farther and farther. Finally I gave up and took a path which led down to a number of farmhouses, finding by the way creeks and woods which I enjoyed immensely.

Of course the endless chain of observation running merely from one thing to another could lead only to disappointment. Finally I learned that observation must have a definite object and a definite purpose, not ramble aimlessly. The astronomer observes the stars, the botanist the growth of plants. Later I came to know that there is another kind of observation, a sort of controlled observation called experiment, by means of which scientific discoveries are made.

In the field of ethics I learned that there is a difference between ethical principles and rules of conduct. The principles tell you why certain accepted rules are desirable at certain stages of civilization, while the rules themselves merely exact observance without inquiry into the underlying principles and their relation to modern society.

As life in China was governed by accepted rules of conduct, the inquiry into their underlying principles created storms in my mind. The old moral foundations which we had taken as final truths began to rock as in an earthquake. Moreover my professor, Harry Overstreet, was not the kind of traditional teacher who simply believed in accepted truths and expected his students to do likewise; his searching

mind led me to peer into every crevice in the foundation stones of moral principle. In class there were lively discussions, which I refrained from joining partly because of my deficiency in the spoken language and partly owing to shyness, which grew in me out of a sense of inferiority. For around the year 1909 China was in the darkest period of her recent history and we had very little self-confidence about her future. But I pricked up my ears and listened like an intelligent dog to its master, understanding the meaning but unable to talk.

We were required to read Plato, Aristotle, the Gospel of St. John, and Marcus Aurelius, among other sources. I was impressed with the all-searching mind of the Greeks as revealed through the two Greek philosophers; I felt that while the Confucian classics were richly tinged with moral sense, the Greek philosophers were permeated by all-piercing intellect. This led me later on to a study of Greek history and a comparative study of ancient Greek and Chinese thought. It also led me to understand what an important part Greek thought has played in modern European civilization, and why Greek has been regarded as an indispensable part of a liberal education.

With St. John I began to appreciate the meaning of love as preached by Jesus, stripped of creed and church. It is indeed the highest ideal to "love your enemy." If one could really love one's enemy there would be no enemy.

"Can you love your enemy?" the professor asked the class. There was no answer.

"I can't," the attentive dog yelped.

"You can't?" he smiled.

I quoted Confucius, "Love those who love you, but be fair to your enemy." Upon this he commented, "It's quite sensible, isn't it?" The class made no response. As we dispersed a young American boy came up to me and patted me on the shoulder. "Love your enemy! Tommyrot, eh?"

Marcus Aurelius talked like a Sung philosopher. He meditated and

discovered reason as the measure of all conduct. Translated and put among the Sung philosophers, he could easily have passed for one of them.

Things European or American I always measured with a Chinese yardstick. This is the way that leads from the known to the unknown. To gain new experience based upon and constructed out of past experiences is the way to new knowledge. For example, a child who has not seen an airplane can be made to understand it by reference to the flying bird and a "boat with wings." A child who has not seen a bird or a boat cannot easily be made to understand an airplane. A Chinese student learns to understand Western civilization only in the light of what he knows of his own. The more he knows of his own culture, the better able he will be to understand that of the West. Thus arguing in my mind, I felt that my midnight lucubrations on the Chinese classics, history, and philosophy in school in China were not labor lost. Only because of those studies was I now in a position to absorb and digest Western ideas. My work hereafter, I thought, is to find out what China lacks and take what she needs from the West. And in the course of time we will catch up with the West. With these views I grew more self-confident, less self-conscious, and more hopeful for the future.

My interests among the fields of knowledge were indeed rather broad. I took ancient history, English history, the history of philosophy, political science, and even Russian literature in English translation. Tolstoy absorbed me, especially his *Anna Karenina* and *War and Peace*. I attended many public lectures given by prominent scholars and statesmen and thus heard Santayana, Tagore, David Starr Jordan, Woodrow Wilson—then president of Princeton—and many other scholars. Science, literature, the arts, politics, and philosophy all interested me equally. I heard Taft and Roosevelt. "I took the Panama Canal and let Congress debate about it," said the latter in one of his lectures in the Greek theatre. His emphasis and characteristic gestures still stand out clearly in my memory.

Traditional education in China seemed narrow, but within its

walls one found a diversity of subjects almost encyclopedic. This apparently narrow education, it is not paradoxical to say, furnished the basis for a broad view of knowledge. My diversity of interests probably derived from my past training in that traditional body of thought. The ancient classics contain many branches of knowledge: history, philosophy, literature, political economy, government, war, diplomacy, and the like. They have never been narrow. After the classics, scholars were initiated into even such practical arts as agriculture, irrigation, astronomy, and mathematics. Thus the traditional Chinese scholar was no narrow specialist but had a broad foundation for learning. Moreover, an open-minded search for truth was the aim of Confucian scholars. Their deficiencies seemed to lie in the fact that their knowledge was rather limited to books. Book knowledge can be narrow in another sense.

In school I remember I was given a rhymed book which contained a great variety of subjects, starting with astronomy and geography and going on down to vegetables and insects, including between them such topics as cities, commerce, farming, travel, inventions, philosophy, government, and so on. Rhymes are easier to learn by heart and even at the moment of writing I am still able to recite a great part of that rhymed encyclopedia.

The Berkeley hills with their moss-green oaks and scent-laden eucalyptus, their fields of golden poppies and gardens of crimson roses bathed in smiling California sunshine, served as an ideal nursery for the native sons of the Golden West. I felt ever-grateful to share in the care and protection of my Western Alma Mater, in whose lap her foster son from the ancient Eastern empire was nursed to grow.

In this climate in which there was no very cold winter nor any very hot summer, it was indeed pleasant to live in a sort of perpetual spring for four long, enjoyable years. There was no rain to interrupt outdoor life except for winter showers which turned the grass on the hills green again and washed the roses in the gardens clear as with morning dew. Otherwise no inclement weather interrupted the performances in the Greek theatre, surrounded by its forest of

eucalyptus. Shakespearean plays, Greek dramas, Sunday concerts, and public lectures were given in the open air. Not far away were the athletic fields in which intercollegiate games and track meets took place. Young Apollos strove hard for the fame of their alma mater. Beauty, health, and intellect were cultivated at the same time. *Mens sana in corpore sano*—was this ancient Greece re-enacted?

Almost in the center of the campus stood the campanile towering high above the other buildings. At the main entrance leading to College Avenue was Sather Gate with nude carvings standing out in vivid relief which invoked protests from parents who had daughters at the university. "Let girls see more of these nude figures of boys and they will be cured of their false decency," remarked my professor of ethics. We had Venus and other goddesses of the ancient Greeks in our reading rooms in the old library (later torn down when the new Doe Library was built), but there was no criticism from the parents of boys. When I saw these Greek figures for the first time I wondered why the authorities should put such "indecent" things at the fountain of wisdom. But later I assumed that they were meant to teach the idea of *mens sana*—sometimes translated as "a beautiful mind in a beautiful body." For with the Greeks beauty, health, and wisdom are one and indivisible.

The performance of *A Midsummer Night's Dream* among the oak groves on campus was really a masterpiece of beauty. Youth, love, beauty, and joy of life are all vividly portrayed in the pleasant masquerade.

Greek-letter fraternity and sorority houses were numerous on the campus. I was told what a wonderful life the members enjoyed together, but I had not visited any until on one occasion I was invited on a bargain—I was to vote for members of that fraternity for class president and other officers. They canvassed the whole class from a list; when they came to a classmate who was likely to vote for their opponents they would say "No good!" and mark the name "NG."

I was received with such cordiality as one would remember a lifetime. The vote was cast next day and I kept faithfully to my

promise, for a "Chinaman's" word is as good as gold. I was glad to have made friends with quite a few fellow students during the campaign.

A few days after the election, for some occasion which I don't remember now, a bonfire was made. The glow of the flames lit up the happy faces of the young people. Boys and girls sang, ending each song with college yells. The crackling of the burning logs, the giggles of the girls and the shouts of the boys still echo in my ears. There in the light I came across a fellow student for whom I had cast my vote. To my great surprise his cordiality toward me had already turned to indifference. This is how things go in the world! His kindness to me had been paid for by my vote; the bills being paid, the account was squared—neither owed anything to the other. Thereafter I exchanged no more votes for cordialities and never again voted in college elections.

In the basement of North Hall was a student "co-op," at the entrance of which was a sign which read, "In God we trust, all others pay cash." The most prosperous business in the co-op was the sale of hot dogs at five cents apiece (cash). They tasted fine.

One memorable character on the campus—probably forgotten by my contemporaries but not by me—was the aged janitor of the philosophy building. He was tall and spare, with a very straight carriage. His eyes were deep-sunk in their sockets and his grey eyebrows grew very long, almost covering his eyes, like a Pekingese toy dog. From under his brows one could see him twinkling with friendliness and warmth of heart. We took a mutual liking to each other. After classes and sometimes on Sundays I was a frequent visitor to the basement where he had lived from the time when the university was a small college.

He had been a soldier and fought many battles under the Union flag in the Civil War. He lived in memories of the past and related to me many stories of the war and of his childhood. From him I learned that conditions in America in older days—it is almost a century now—were not very much better than in China then; in some respects worse.

He told me that there had existed in his youth many kinds of money: English pounds, French francs, and Dutch guildens. I heard Lyman Abbott speak of this several years later in New York. Modern sanitation seemed to him nonsense. Once he showed me a roll of toilet paper and said, "Nowadays people die young with these sanitary things. We didn't have any sanitation or what you call modern medicine. Look at me, how healthy I am at my age!" He stood erect like a soldier at attention for me to look at him.

West Point was also a joke to him. "You think they can fight? No! They're puffed up by uniforms and sure know how to dress in a parade. But fighting—no. I can teach 'em. In one battle I killed a whole lot of rebels singlehanded. If they want to learn to fight, let 'em come to me!"

He still harbored a grudge in his heart against the Confederates after these long years. He said he once found a rebel lying wounded after a battle was over and tried to help him. "You know what that crittur did? He fired right at me." He leveled his angry eyes at me steadily as if I had been the culprit. "What did you do?" I ventured. "I shot the beast dead right on the spot," was the reply.

To me this old soldier-janitor was an inseparable part of the university. He thought himself so, too, for he had seen the place grow.

CHAPTER 10 CHINA IN AMERICA

Before the end of October of my first year in America an important change had taken place in China. This was the death, in rapid succession, of the Emperor Kwang-hsü and the Empress Dowager. There were two versions to the story; one was that she died first, whereupon he was murdered by her followers in the fear that he would come back into power. The other was that, near death, she sent a eunuch to Yun Tai—the island palace in the Imperial Chung Hai Park where this strong-willed woman had kept her Imperial consort imprisoned ever since the short-lived reforms of 1898—who informed the Emperor, always in poor health, that Her Majesty the Illustrious Buddha, as she was called, wished him as a favor to take the medicine she sent. According to this version the poor imprisoned Emperor understood the message and obeyed, succumbing to the poison in a short time. The fact was made known to her before she died and she ordered the issue of an Imperial Edict by which the death of the Emperor was announced and his nephew, little Pu-yi, made successor to the throne.

Whatever the truth of it, the unanimous opinion of the Chinese students in Berkeley was that with the death of the "old woman," as the Empress Dowager was disrespectfully called, there would be plenty of trouble in China. It proved to be so. For with a baby Emperor on the throne and his inexperienced father, Tsai Hsun^[1], as Prince Regent, the authority of the Manchu Dynasty fell into meteoric decline until its last vestige was swept away three years later by the Revolution of 1911.

In 1909 I had joined as an editorial writer the *Chinese Free Press*, Dr. Sun Yat-sen's revolutionary organ in San Francisco. One evening in the fall of that year, with my co-editor Liu Chun-yu, I called for the first time on Dr. Sun Yat-sen at a hotel on Stockton Street on the outskirts of Chinatown. My heart throbbed with excitement as we entered. Dr. Sun received us cordially in his room. It was a small room

with a couch, several chairs, and a small desk. There was a wash basin by the window. The curtains were drawn.

Mr. Liu introduced me to the esteemed leader of China's revolutionary movement. His magnetic personality was such as to win the confidence of any who had a chance to meet him. Dr. Sun's ample and majestic forehead and strong dark brows gave signs of a forceful intellect and indomitable will. His clear, inviting eyes revealed his candor of thought and warmth of heart, while his compressed lips and set jaw made people readily understand that he was a man of courage and decision. His general build was muscular and sturdy, giving the impression of strong nerves and steady emotions. In conversation his line of argument was clear and convincing, whether you agreed with him or not; unless you wished to discontinue he would keep on untiringly expounding his theories to you. He spoke slowly but distinctly and one felt behind his words a deep sincerity. He also listened easily yet was not slow to catch essential points.

Later I found him to be an ardent reader of a variety of books, both Chinese and English. He saved all the money he could to buy books. He was a slow reader but had an extraordinary retentive power. Dr. Sun's wide reading gave him a clear understanding of the development of both Chinese and Western civilizations.

He enjoyed jokes—though he seldom jested—laughing heartily when a good one was recounted to him.

He liked fish and vegetables for his meals, but seldom touched meat and preferred Chinese to Western cooking. "Chinese food is the best in the world," he would say.

Dr. Sun was a real democrat. He lectured in the streets of Chinatown in San Francisco. With banners of the Nationalist party streaming in the air, he would stand on the sidewalk and talk to the crowd gathering around him. He understood the psychology of the man in the street and could reduce his own language to the simplest terms. "What is revolution?" he would ask rhetorically. "Down with the rule of the Manchus!" The crowd understood and joined in in chorus. Then he would go on explaining in very simple language why

the Manchus must be done away with and what he would do when a republican form of government was established in China—how many benefits the people would reap from a new regime.

He would often size up an audience to which he was about to speak, choose an appropriate subject, and improvise a suitable discourse, expressing himself with great eloquence. He usually carried the audience with him to the very end. He was always ready to speak for he possessed a remarkable ability to carry it with him.

Dr. Sun's deep understanding of human nature, his intense love of his country and people, and his insight into what China needed in building up her new nationhood gave him unquestioned leadership in the development of young China. Between travels in the southern and eastern states and in Europe he came back every so often to San Francisco, where Liu Chun-yu and I had the pleasure of seeing him whenever he came.

On October 8, 1911, at about eight o'clock in the evening, Dr. Sun came into the editorial room of the *Chinese Free Press* wearing a dark overcoat and a derby hat. He appeared happy, though not in the least excited, as he said calmly that from news he had received through certain sources things seemed to be turning out well—the group of people who had laid plans for revolution in Hankow and Wuchang were ready for action. Two days later news reached San Francisco that revolution had broken out in Wuchang. This was the revolution of October 10, 1911, which eventually overthrew the Manchu Dynasty. On that day the Republic of China was born.

Urgent cablegrams advised Dr. Sun to come back to lead the revolution. He left San Francisco and returned to China by way of Europe. On January 1, 1912, he was inaugurated at Nanking as Provisional President of the Republic, and China entered on a new life.

Under Dr. Sun's guidance, for three consecutive years Liu Chun-yu and I wrote editorials for the *Chinese Free Press*, each of us at first writing one every other day. We supplied these articles to the paper while studying at the university, often burning midnight oil to finish a

piece for the next morning's issue. The university work was by no means light and we felt—especially myself—the burden of this extra labor. After the successful revolution Liu went back to China and I had to bear the brunt of the daily editorial war. Though I felt deeply for the future of my country, the constant practice of writing against my will ultimately killed in me all interest in writing. In the unremitting pressure and rush under which I labored, the quality of production deteriorated and I formed the habit of loose and hurried thinking and careless choice of words. Sometimes my thought flowed reluctantly as water through a clogged pipe, but the words still rushed from my pen like a swarm of aimless wanderers. I was rather exasperated at these unwelcome guests. I would, however, let them go since they filled up the columns.

When I first took the job I found a real pleasure in writing, fitting words to thoughts like coins into a slot machine. Only when I tried to jam all the coins into the slots at once, the machine got clogged and refused to take in the superfluous ones, which spilled all around the floor, so to speak. This is how meaningless words fill space when you are forced to write in a rush.

After my graduation in 1912 I gave up the job and felt a great release. Thereafter I feared writing as a schoolboy would Latin composition. When labor is drudgery and done in a hurry as well, no good work will come of it. The bad habits thus formed were difficult to eradicate for years after.

On the Pacific coast during my college days about fifty thousand Chinese immigrants clustered around the centers in the various cities—Sacramento, San Francisco, Oakland, San José, Los Angeles, and others—with isolated small groups or individuals dotting the smaller towns and villages. These centers were called Chinatowns. Chinatown in San Francisco was the largest of all, with a Chinese population of more than twenty thousand. The main street was originally Dupont Street, but its name was afterward changed to Grant Avenue, for what reason I do not know. Grant Avenue was a very prosperous street. Oriental bazaars, Chinese restaurants known as "chop suey houses,"

fortunetelling stands, gambling houses in the guise of social or literary clubs, and temples for worship of Chinese gods—called "joss houses"—attracted the attention of tourists, sight-seers, and pleasure-seekers. Once a pretty young American told me that she had seen a wonderful thing in an Oriental bazaar—a Buddha sitting in an artichoke; and had eaten bird's nest soup, sharks' fins, and chop suey in a Chinese restaurant. She was much excited over it. Her younger sisters listened with wondering eyes and gaping mouths. "I declare!" said the grandmother, looking over her spectacles while her hands were busy with her knitting.

"How do you eat soup with chopsticks?" a younger sister asked curiously.

"As you do with your soda straws, my young lady," said I. All joined in the laughter.

In small towns my countrymen kept laundry establishments. Day in and day out they washed and washed from dawn till dusk and often late into the night. The reason many American families liked to send their laundry to the Chinese was because hand wash did not wear out the materials as easily as machines. These hard-working sons of the Celestial Empire saved every bit of their earnings by living a frugal life; they slung silver or gold pieces into the savings bags hidden under their beds and made liberal contributions to the cause of Dr. Sun's revolutionary movement or sent money home to support their families and relatives in Canton, thus helping to enrich the villages of their province.

Kwangtung was the richest province of China, not only because the people did prosperous business in Hongkong and elsewhere but because it was the reservoir into which gold trickled from all parts of the world where there were Chinese colonies—Malaya, the Dutch East Indies^[2], the Philippine Islands, North and South America, etc. It was from this province that most of the émigrés from China originally came.

The Chinese working and living in foreign lands, numbering in the millions, were not there to exploit. Rather, their labor has been

exploited. They had no capital other than the flesh and blood they were given in their mothers' wombs. With hard work, frugality, and endurance, they labored like bees carrying their tiny specks of Sweetness from distant flowers to build up honeycombs in China. There was no political power to back them up, and they carried no guns. They helped to build railroads, open mines, raise rubber; in return for their labor they received a few dollars or shillings or rupees or guldens for a day's hard work. Some, to be sure, especially in Singapore and the Dutch East Indies, became rich and owned palatial mansions and villas, living like maharajahs. A number rose to the level of the middle class and owned property. But the rich and well to do were in the minority; the rank and file had to work hard, and only by hard work managed to make a living and put by some savings.

Among the Chinese in America there were neither very rich nor very poor. Most of them were honest, hard-working people. Almost all had some savings to contribute to that great reservoir, the province of Kwangtung. Their mode of life was mainly Chinese. Taking a boat along the Sacramento River, one would see Chinese towns or villages perched on the banks with bold Chinese signboards in front of the shops. One felt as if he were sailing on the Yangtze River or the Grand Canal in China.

I landed once at one of these Sacramento River Chinatowns and stayed with the owner of an asparagus plantation, Tin San, a friend of Dr. Sun Yat-sen. He treated me to tender asparagus, fat and juicy. Thereafter, whenever I had asparagus for dinner I thought of him. He had a cannery for this delicious vegetable, under American brand names. So I often think that some of the American canned asparagus may have been raised and canned by the Chinese. His way of making money was really good and ingenious. He kept places of amusement for his men, arguing that they must have some diversion after the day's work and if he had not established these houses they would go to other places run by his neighbors. He wanted the water to flow into his own gardens, so to speak, to feed his own plants. His plants—or rather dollars—did indeed grow from the voluntary contributions of his men to these amusement places.

The Chinese immigrants in America as well as elsewhere were truly loyal sons and daughters of that Flowery Kingdom. The men wore queues and some of the women even practised foot-binding. In the streets of Chinatown in San Francisco one could find fortunetellers. One such man who was telling a white man's fortune said to him, "Good luck. By and by, plenty of money." A Negro standing by wanted to have his fortune told and was very much pleased to hear the same words repeated to him. Everything would have been all right if the prophet had stopped there. But he went on to say, "By and by, no more black. Like him—" pointing with his index finger at the white man. The Negro instead of being pleased got mad and kicked over the fortuneteller's stand. This was a case where compliments, overdone, become insults.

There were grocery stores selling salt fish, eels, edible snakes, bean sauce, sharks' fins, birds' nests, dried abalones, and other Cantonese stuff brought to America from Canton or Hongkong. Once I went to one of the groceries and tried to buy something. Failing to make the man understand my poor Cantonese dialect, I wrote on paper what I wanted. An old woman standing by saw my writing and being ignorant of the fact that China has only one written language for the whole country, despite her many dialects was surprised and asked, if this Chinese cannot speak Chinese (meaning Cantonese), how can he write it? A group of curious people gathered around me. One who could speak enough mandarin to make me understand asked, "Have you ever been in the provincial capital of Canton?" "No," I replied. "Then where did you do your shopping?" "Shanghai," I laughed, and went away with a bottle of bean sauce and a package under my arm.

Schools in Chinatown still stuck to the old curriculum. Pupils were taught to read aloud the old books just as I had been taught in China. The American schools not far away had no influence on them.

These were the times before the revolution. After that date Chinatown began to change, for China herself was changing—changing rapidly. In the course of a few years the fortunetellers disappeared. The number of queues fast decreased until they were

gone. The young girls stopped their foot-binding. The schools were reformed and adopted a modern curriculum; more children were sent to near-by American schools. Chinatown resisted the influence of its American neighbors but followed in the footsteps of the mother country in reforms and mode of living. These loyal sons and daughters of China!

[1] Tsai Hsun：溥仪父应为醇亲王载沣（Tsai Feng）。此处应为作者笔误。

[2] Dutch East Indies：荷属东印度，指荷兰殖民统治下的印度尼西亚。

CHAPTER 11 NEW YORK

As the years went on my mental horizon extended and I became more and more self-confident. In 1912 I was graduated with honors in education and went to Columbia University in New York City for my postgraduate work.

Here I learned the method and acquired the spirit of scientific research as applied to social phenomena. Among the professors who taught me untiringly, from whom I drew my inspiration and to whom I am greatly indebted, there is one I wish to mention particularly because of his connection with Peking University. He is Professor John Dewey, who taught Dr. Hu Shih and myself at Columbia, and later through his writings, lectures, and personal contacts with contemporary thinkers in China, during his two-year sojourn as visiting professor at the National University of Peking, influenced Chinese educational theories and practice to a great extent. His pragmatism finds its counterpart in the practical Chinese mentality. But he warned us that "if a thing is too practical it becomes impractical."

Of the years at Columbia I shall not speak in detail. They were most enriching. I was now acclimated to America and to the language and could absorb what came within my orbit with less overwhelming effort of adaptation.

In New York I was impressed by the skyscrapers, the rapid circulation of subways and elevated trains, the dazzling lights of moving advertisements on the tops of tall buildings; the theatres, night clubs, hotels, and restaurants; fashionable Fifth Avenue, Greenwich Village, the East Side slums, and so on.

On the social side one found Yankees, Irish, Poles, Italians, Greeks, Jews, all living side by side in a neighborly way, and a few thousand of my own countrymen clustered around Chinatown. In my time there were in the great metropolis five hundred Chinese restaurants catering to the public. The agglomerated cosmopolitan

mass of the city population, with its politicians, gangsters, scholars, artists, financiers, industrialists, multimillionaires, slum-dwellers, and many others, was fundamentally an American product. There is nothing further from the truth than to say, "When you get into New York, you get out of America." America alone is capable of producing such a great, highly industrialized city and vast melting pot. There was little racial friction. For in New York anyone can do anything he likes if he knows how to stay inside the law. Everyone is permitted to go his own way if he observes a certain degree of public decency. Anyone can expound his theories of society and government if he can find an audience.

Liberty within the orbit of the law and freedom of thought and speech within the domain of reason had free play. Great industries, international banking and big business, and the utilization of invention, engineering, and material resources to the fullest extent, all showed the spirit and application of Americanism. In New York one found it in concentrated form. In the midst of this concentration the eye of the observer is easily dazzled by the glaring lights, thus losing sight of Americanism in its normal state as one would see it elsewhere in America.

During the summer vacations I would go to the Adirondacks. One summer, with a few Chinese friends, I went to Rainbow Lake and camped on one of its hilly islets. In the daytime we went boating and fishing on near-by lakes. Our catches were quite rich—pike weighing over ten pounds were among our prizes for a day's work and pleasure. Big fat frogs were found a-plenty around the island on which we camped. I had learned to catch frogs in my village childhood in China and carried the art over to America. A rod, a string, and a hook rounded out of a good-sized needle with a piece of red cloth attached to it were sufficient for frog fishing; the improvised outfit worked wonders. Usually we could catch two dozen of them in an hour. This was more than enough for two delicious meals a day. The people living around the lake had never eaten frogs—they admired our art of frog fishing but at the bottom of their hearts must have thought, "The heathen Chinees is peculiar."

In the evenings we often joined their barn dances to the tune of the fiddle played by the host. One of the songs they all sang, a part of which still lurks in my recollection, runs something like this:

All the hinges are rusty
And the doors are falling down,
The roof lets in sunshine and rain—
And the only friend I have
Is the little yellow dog
On the trail behind the bush.

This reflects the loneliness of a solitary hermitage in the mountain region, but to the city-dwellers it depicted a charming, quiet life.

Sometimes we penetrated into virgin forests where the luxuriant leaves veiled the sky like thick clouds. The junipers growing along the trail gave out their aromatic scent, and we picked fragrant evergreen branches to make pillows which would bring nature to our beds and send out floating odors to sweeten our gentle sleep.

Sometimes we lost our way back in the dense woods. We would listen then for the whistle of a train to lead us to the railroad tracks. Experience taught me later to take a compass when going into the woods.

To go back to city life after staying in the country for some time is really a pleasure. The city looks refreshed when you come back to it; the country seems doubly enchanting if you go there from the city. It is all because of the change, the contrast. When foreigners go to China they are often charmed with the complacent Chinese life and with the scenery. A Chinese in a foreign land is often delighted with its city life. So you frequently find a Westerner more enthusiastic about things Chinese than the Chinese themselves, and vice versa. It is a change, a contrast, which breaks monotony and refreshes the mind. But the intrinsic values of things are not altered by these changes of mental approach.

During my student days in New York Sino-Japanese relations took a turn which left the two countries at loggerheads later on. After some

fifty years of reforms, Japan showed her strength in 1894 by delivering a blow at China. Instead of resentment and enmity, China returned good for evil. The unfriendly act, contrary to expectations, invoked rather the admiration and gratitude of the Chinese people—admiration for Japan's great reforms, accomplished in the short span of fifty years, and gratitude for thus awakening China to her future possibilities. It rekindled the dying flame of hope in China's heart. For some time thereafter she lived under inspiration drawn from Japanese example.

Students went to Japan by thousands every year to study. China's new military, police, and school systems were developed and headed by students returned from Japan. Through Japan, China began to see the significance of Western civilization. The Russo-Japanese War gave further impetus to China's reforms—Japan was held in the hearts of the Chinese as an idol.^[1]

China absorbed Western civilization gradually through her neighbor, but soon realized that the currents flowing in Japan, from which she drank the waters of modern wisdom, had their source in Europe or America. It was a happy coincidence that America returned the Boxer indemnity; China used it to send more students to the United States than she had done before. Students had previously been sent to Europe and America on government scholarships or by private means, but the number was small. Those who returned direct from the West now grew in numbers and began to occupy some of the key positions in government, industry, commercial enterprise, and educational fields. Missionaries, especially American, helped to educate the youth of the country through mission schools.

Thus, culturally speaking, China began to drift away from Japan. The Japanese idol dwindled in Chinese hearts. And the Japanese were not aware of it.

Taking advantage of the first World War, in 1915 Japan suddenly delivered to Yuan Shih-kai's government the famous Twenty-One Demands, enforcement of which would have reduced China to a Japanese protectorate. This rash act grew out of the upset of the

balance of power in the Far East, owing to the preoccupation of the Western Powers with the war and the rapid decline of the military might of Tsarist Russia. It turned China's face once and for all toward the West, and the consequent parting of the ways of the two countries was to change the course of international politics in the years to come. Had Japan been farsighted enough to lend a helping hand to her neighbor in her period of distress, China would have remained a friend. What would have been the effect of this union upon World War II?

While I was in New York the substance of the Twenty-One Demands was allowed to leak out by the Chinese Legation at Washington. It created consternation in all the capitals of the Western Powers. A boycott of Japanese goods spread like wildfire throughout China as a feeble protest, but the Japanese navy was concentrated at important Chinese ports and her armed forces mobilized in south Manchuria and Shantung. On May 7, 1915, four months after the presentation of the demands, Japan sent an ultimatum to Yuan Shih-kai and two days later it was accepted.

By force of circumstances the demands in the course of time dwindled to virtually nothing. But the admiration and gratitude of China were thus turned into fear and suspicion which were to grow in the hearts of her millions. Thereafter, whatever Japan had to say China received with suspicion; whatever she did China watched with fear. The more she professed sincerity, the more China suspected a sinister design behind it.

"Why don't you love us as we love you?" our neighbor would ask. "How can we love you when you make love with the bayonet?" we would reply.

"Why should China play off the Western Powers against Japan?" a Japanese general asked me one day, a few years before the Mukden Incident.

"To maintain the balance of power and thus save China from being swallowed up by you," I replied frankly.

"Japan swallow up China! How could we? It's silly."

"It is not silly, General. Didn't Japan deliver us her Twenty-One Demands during the last war, when the Powers were preoccupied? If those demands had been carried into effect, Japan would be in a position to gobble up all China."

"So, so—?" said the general, as if in surprise.

"Yes, yes," I replied briefly.

[1] 关于日俄战争对当时中国的影响，可以参见雷颐《百年前国人的日俄战争观》：“此前十年的甲午战争使一些先进者感到中国的富强在于维新，但有此认识者毕竟少而又少，而此时的日俄战争再次给国人以强烈刺激，促人猛醒，社会舆论和观念发生了相当大的变化，越来越多的人相信立宪可以富国强兵、可以救亡图存，甚至某些原先反对立宪的守旧人物也转而倾向支持立宪。这样，原本影响不大、只是少数人的立宪活动因此影响大增，迅速高涨，对全国性立宪运动的形成起了有力的推动作用。”

第二部 留美时期

负笈西行

我拿出一部分钱，买了衣帽杂物和一张往旧金山的头等船票，其余的钱就以两块墨西哥鹰洋对一元美金的比例兑取美钞。上船前，找了一家理发店剪去辫子。理发匠举起利剪，抓住我的辫子时，我简直有上断头台的感觉，全身汗毛直竖。咔嚓两声，辫子剪断了，我的脑袋也像是随着剪声落了地。理发匠用纸把辫子包好还给我。上船后，我把这包辫子丢入大海，让它随波逐浪而去。

我拿到医生证明书和护照之后，到上海的美国总领事馆请求签证，按照移民条例第六节规定，申请以学生身份赴美。签证后买好船票，搭乘美国邮船公司的轮船往旧金山。那时是一九〇八年八月底。同船有十来位中国同学。邮船启碇，慢慢驶离祖国海岸，我的早年生活也就此告一段落。在上船前，我曾经练了好几个星期的秋千，所以在二十四天的航程中，一直没有晕船。

这只邮船比我前一年赴神户时所搭的那艘日本轮船远为宽大豪华。船上最使我惊奇的事是跳舞。我生长在男女授受不亲的社会里，初次看到男女相偎相依、婆娑起舞的情形，觉得非常不顺眼。旁观了几次之后，我才慢慢开始欣赏跳舞的优美。

船到旧金山，一位港口医生上船来检查健康，对中国学生的眼睛检查得特别仔细，惟恐有人患砂眼。

我上岸时第一个印象是移民局官员和警察所反映的国家权力。美国这个共和政体的国家，她的人民似乎比君主专制的中国人民更少个人自由，这简直弄得我莫名其妙。我们在中国时，天高皇帝远，一向很少感受国家权力的拘束。

我们在旧金山逗留了几个钟头，还到唐人街转了一趟。我和另一位也预备进加州大学的同学，由加大中国同学会主席领路到了卜技利。晚饭在夏德克路的天光餐馆吃，每人付两角五分钱，吃的有汤、红烧牛肉、一块苹果饼和一杯咖啡。我租了班克洛夫路的柯尔太太的一间房子。柯尔太太已有相当年纪，但是很健谈，对中国学生很关切。她吩咐我出门以前必定要关灯；洗东西以后必定要关好自来水龙头；花生壳决

不能丢到抽水马桶里；银钱决不能随便丢在桌子上；出门时不必锁门；如果我愿意锁门，就把钥匙留下藏在地毯下面。她说："如果你需要什么，你只管告诉我就是了。我很了解客居异国的心情。你就拿我的家当自己的家好了，不必客气。"随后她向我道了晚安才走。

到卜技利时，加大秋季班已经开学，因此我只好等到春季再说。我请了加大的一位女同学给我补习英文，学费每小时五毛钱。这段时间内，我把全部精力花在英文上。每天早晨必读《旧金山纪事报》，另外还订了一份《展望》周刊，作为精读的资料。《韦氏大学字典》一直不离手，碰到稍有疑问的字就打开字典来查，四个月下来，居然字汇大增，读报纸、杂志也不觉得吃力了。

初到美国时，就英文而论，我简直是半盲、半聋、半哑。如果我希望能在学校里跟得上功课，这些障碍必须先行克服。头一重障碍，经过四个月的不断努力，总算大致克服了，完全克服它也不过是时间问题而已。第二重障碍要靠多听人家谈话和教授讲课才能慢慢克服。教授讲课还算比较容易懂，因为教授们的演讲，思想有系统，语调比较慢，发音也清晰。普通谈话的范围比较广泛，而且包括一连串互不衔接而且五花八门的观念，要抓住谈话的线索颇不容易。到剧院去听话剧对白，其难易则介于演讲与谈话之间。

最困难的是克服开不得口的难关。主要的原因是我在中国时一开始就走错了路。错误的习惯已经根深蒂固，必须花很长的时间才能矫正过来。其次是我根本不懂语音学的方法，单凭模仿，不一定能得到准确的发音。因为口中发出的声音与耳朵听到的声音之间，以及耳朵与口舌之间，究竟还有很大的差别。耳朵不一定能够抓住正确的音调，口舌也不一定能够遵照耳朵的指示发出正确的声音。此外，加利福尼亚这个地方对中国人并不太亲热，难得使人不生身处异地、万事小心的感觉。我更特别敏感，不敢贸然与美国人厮混，别人想接近我时，我也很怕羞。许多可贵的社会关系都因此断绝了。语言只有多与人接触才能进步，我既然这样固步自封，这方面的进步自然慢之又慢。后来我进了加大，这种口语上的缺陷，严重地影响了我在课内课外参加讨论的机会。有人问我问题时，我常常是脸一红，头一低，不知如何回答。教授们总算特别客气，从来不勉强我回答任何问题。也许他们了解我处境的窘困，也许是他们知道我是外国人，所以特别加以原谅。无论如何，他们知道，我虽然噤若寒蝉，对功课仍旧很用心，因为我的考试成绩多半列在乙等以上。

日月如梭，不久圣诞节就到了。圣诞前夕，我独自在一家餐馆里吃晚餐。菜比初到旧金山那一天好得多，花的钱，不必说，也非那次可比。饭后上街闲游，碰到没有拉起窗帘的人家，我就从窗户眺望他们欢欣团聚的情形。每户人家差不多都有满饰小电灯或蜡烛的圣诞树。

大除夕，我和几位中国同学从卜技利渡海到旧金山。从渡轮上可以远远地看到对岸的钟楼装饰着几千盏电灯。上岸后，发现旧金山到处人山人海。码头上候船室里的自动钢琴震耳欲聋。这些钢琴只要投下一枚镍币就能自动弹奏。我随着人潮慢慢地大街上闲逛，耳朵里满是小喇叭和小鼗鼓的嘈音，玩喇叭和鼗鼓的人特别喜欢凑着漂亮的太太小姐们的耳朵开玩笑，这些太太小姐们虽然耳朵吃了苦头，但仍然觉得这些玩笑是一种恭维，因此总是和颜悦色地报以一笑。空中到处飘扬着五彩纸条，有的甚至缠到人们的颈上。碎花纸像彩色的雪花飞落在人们的头上。我转到唐人街，发现成群结队的人在欣赏东方色彩的橱窗装饰。噼噼啪啪的鞭炮声，使人觉得像在中国过新年。

午夜钟声一响，大家一面提高嗓门大喊"新年快乐！"一面乱掀汽车喇叭或者大摇响铃。五光十色的纸条片更是漫天飞舞。这是我在美国所过的第一个新年。美国人的和善和天真好玩使我留下深刻的印象。在他们的欢笑嬉游中可以看出美国的确是个年轻的民族。

那晚回家时已经很迟，身体虽然疲倦，精神却很轻松，上床后一直睡到第二天日上三竿起身。早饭后，我在卜技利的住宅区打了个转。住宅多半沿着徐缓的山坡建筑，四周则围绕着花畦和草地。玫瑰花在加州温和的冬天里到处盛开着，卜技利四季如春，通常长空蔚蓝不见朵云，很像云南的昆明、台湾的台南，而温度较低。

新年之后，我兴奋地等待着加大第二个学期在二月间开学。心中满怀希望，我对语言的学习也加倍努力。快开学时，我以上海南洋公学的学分申请入学，结果获准进入农学院，以中文学分抵补了拉丁文的学分。

我过去的准备工作偏重文科方面，结果转到农科，我的动机应该在这里解释一下。我转农科并非像有些青年学生听天由命那样的随便，而是经过深思熟虑才慎重决定的。我想，中国既然以农立国，那末只有改进农业，才能使最大多数的中国人得到幸福和温饱。同时我幼时在以耕作为主的乡村里生长，对花草树木和鸟兽虫鱼本来就有浓厚的兴趣。为国家，为私人，农业都似乎是最合适的学科。此外我还有一个次要的考虑，我在孩提时代身体一向羸弱，我想如果能在田野里多接触新鲜空

气，对我身体一定大有裨益。

第一学期选的功课是植物学、动物学、生理卫生、英文、德文和体育。除了体育是每周六小时以外，其余每科都是三小时。我按照指示到大学路一家书店买教科书。我想买植物学教科书时，说了半天店员还是听不懂，后来我只好用手指指书架上那本书，他才恍然大悟。原来植物学这个名词的英文字（botany）重音应放在第一音节，我却把重音念在第二音节上去了。经过店员重复一遍这个字的读音以后，我才发现自己的错误。买了书以后心里很高兴，既买到书，同时又学会一个英文字的正确发音，真是一举两得。后来教授要我们到植物园去研究某种草木，我因为不知道植物园在哪里，只好向管清洁的校工打听。念到植物园的植物这个英文字时，我自作聪明把重音念在第一音节上，我心里想，“植物学”这个英文字的重音既然在第一音节上，举一反三，“植物园”中“植物”一字的重音自然也应该在第一音节上了。结果弄得那位工友瞠目不知所答。我只好重复了一遍，工友揣摩了一会之后才恍然大悟。原来是我举一反三的办法出了毛病，“植物（的）”这个字的重音却应该在第二音节上。

可惜当时我还没有学会任何美国的俚语村言，否则恐怕“他×的”一类粗话早已脱口而出了。英文重音的捉摸不定曾经使许多学英文的人伤透脑筋。固然重音也有规则可循，但是每条规则总有许多例外，以致例外的反而成了规则。因此每个字都得个别处理，要花很大工夫才能慢慢学会每个字的正确发音。

植物学和动物学引起我很大的兴趣。植物学教授在讲解显微镜用法时曾说过笑话：“你们不要以为从显微镜里可以看到大如巨象的苍蝇。事实上，你们恐怕连半只苍蝇腿都看不到呢！”

我在中国读书时，课余之暇常常喜欢研究鸟兽虫鱼的生活情形，尤其在私塾时代，一天到晚死背枯燥乏味的古书，这种肤浅的自然研究正可调节一下单调的生活，因而也就慢慢培养了观察自然的兴趣。早年的即兴观察和目前对动植物学的兴趣，有一个共通的出发点——好奇，最大的差别在于使用的工具。显微镜是眼睛的引伸，可以使人看到肉眼无法辨别的细微物体。使用显微镜的结果，使人发现多如繁星的细菌。望远镜是眼睛的另一种引伸，利用望远镜可以观察无穷无数的繁星。我渴望到黎克天文台去见识世界上最大的一具望远镜，但是始终因故不克遂愿。后来花了二毛五分钱，从街头的一架望远镜去眺望行星，发现银色的土星带着耀目的星环，在蔚蓝的天空中冉冉移动，与学校里天体

挂图上所看到的一模一样。当时的经验真是又惊又喜。

在农学院读了半年，一位朋友劝我放弃农科之类的实用科学，另选一门社会科学。他认为农科固然重要，但是还有别的学科对中国更重要。他说，除非我们能参酌西方国家的近代发展来解决政治问题和社会问题，那末农业问题也就无法解决。其次，如果不改修社会科学，我的眼光可能就局限于实用科学的小圈子，无法了解农业以外的重大问题。

我曾经研究过中国史，也研究过西洋史的概略，对各时代各国国力消长的情形有相当的了解，因此对于这位朋友的忠告颇能领略。他的话使我一再考虑，因为我已再度面临三岔路口，迟早总得有个决定。我曾经提到，碰到足以影响一生的重要关头，我从不轻率作任何决定。

一天清早，我正预备到农场看挤牛奶的情形，路上碰到一群蹦蹦跳跳的小孩子去上学。我忽然想起：我在这里研究如何培育动物和植物，为什么不研究研究如何培育人才呢？农场不去了，一直跑上卜技利的山头，坐在一棵古橡树下，凝望着旭日照耀下的旧金山和金门港口的美景。脑子里思潮起伏，细数着中国历代兴衰的前因后果。忽然之间，眼前恍惚有一群天真烂漫的小孩，像凌波仙子一样从海湾的波涛中涌出，要求我给他们读书的学校，于是我毅然决定转到社会科学学院，选教育为主科。

从山头跑回学校时已近晌午，我直跑到注册组去找苏顿先生，请求从农学院转到社会科学学院。经过一番诘难和辩解，转院总算成功了。从一九〇九年秋天起，我开始选修逻辑学、伦理学、心理学和英国史，我的大学生涯也从此步入正途。

岁月平静而愉快地过去，时间之沙积聚的结果，我的知识也在大学的学术气氛下逐渐增长。

从逻辑学里我学到思维是有一定的方法的。换一句话说，我们必须根据逻辑方法来思考。观察对于归纳推理非常重要，因此我希望训练自己的观察能力。我开始观察校园之内，以及大学附近所接触到的许许多多事物。母牛为什么要装铃？尤加利树的叶子为什么垂直地挂着？加州的罂粟花为什么都是黄的？

有一天早晨，我沿着卜技利的山坡散步时，发现一条水管正在汨汨流水。水从哪里来的呢？沿着水管找，终于找到了水源，我的心中也充满了童稚的喜悦。这时我已到了相当高的山头，我很想知道山岭那一边究竟有些什么。翻过一山又一山，发现这些小山简直多不胜数。越爬越

高，而且离住处也越来越远。最后只好放弃初衷，沿着一条小路回家。归途上发现许多农家，还有许多清澈的小溪和幽静的树林。

这种漫无选择的观察，结果自然只有失望。最后我终于发现，观察必须有固定的对象和确切的目的，不能听凭兴之所至乱观乱察。天文学家观察星球，植物学家则观察草木的生长。后来我又发现另外一种称为实验的受控制的观察，科学发现就是由实验而来的。

念伦理学时，我学到道德原则与行为规律的区别。道德原则可以告诉我们，为什么若干公认规律切合某阶段文化的需要；行为规律只要求大家遵守，不必追究规律背后的原则问题，也不必追究这些规律与现代社会的关系。

在中国，人们的生活是受公认的行为规律所规范的。追究这些行为规律背后的道德原则时，我的脑海里马上起了汹涌的波澜。一向被认为最终真理的旧有道德基础，像遭遇地震一样开始摇摇欲坠。同时，赫利·奥佛斯屈里特教授也给了我很大的启示。传统的教授通常只知道信仰公认的真理，同时希望他的学生们如此做。奥佛斯屈里特教授的思想却特别敏锐，因此促使我探测道德原则的基石上的每一裂缝。我们上伦理学课，总有一场热烈的讨论。我平常不敢参加这些讨论，一方面由于我英语会话能力不够，另一方面是由于自卑感而来的怕羞心理。因为一九〇九年前后是中国现代史上最黑暗的时期，而且我们对中国的前途也很少自信。虽然不参加讨论，听得却很用心，很像一只聪明伶俐的小狗竖起耳朵听它主人说话，意思是懂了，嘴巴却不能讲。

我们必须读的参考书包括柏拉图、亚里士多德、约翰福音和奥里留士等。念了柏拉图和亚里士多德之后，使我对希腊人穷根究底的头脑留有深刻的印象。我觉得四书富于道德的色彩，希腊哲学家却洋溢着敏锐的智慧。这印象使我后来研究希腊史，并且做了一次古代希腊思想和中国古代思想的比较研究。研究希腊哲学家的结果，同时使我了解希腊思想在现代欧洲文明中所占的重要地位，以及希腊文被认为自由教育不可缺少的一部分的原因。

读了约翰福音之后，我开始了解耶稣所宣扬的爱的意义。如果撇开基督教的教条和教会不谈，这种“爱敌如己”的哲学，实在是最高的理想。如果一个人真能爱敌如己，那末世界上也就不会再有敌人了。

“你们能够做到爱你们的敌人吗？”教授向全班发问，没有人回答。

“我不能够，”那只一直尖起耳朵谛听的狗吠了。

"不能够?"教授微笑着反问。

我引述了孔子所说的"以直报怨，以德报德"作答。教授听了以后插嘴说："这也很有道理啊，是不是?"同学们没有人回答。下课后一位年轻的美国男同学过来拍拍我的肩膀说："爱敌如己！吹牛，是不是?"

奥里留士的言论很像宋朝哲学家。他沉思默想的结果，发现理智是一切行为的准则。如果把他的著述译为中文，并把他与宋儒相提并论，很可能使人真伪莫辨。

对于欧美的东西，我总喜欢用中国的尺度来衡量。这就是从已知到未知的办法。根据过去的经验，利用过去的经验获得新经验也就是获得新知识的正途。譬如说，如果一个小孩从来没有见过飞机，我们可以解释给他听，飞机像一只飞鸟，也像一只长着翅膀的船，他就会了解飞机是怎么回事。如果一个小孩根本没有见过鸟或船，使他了解飞机可就不容易了。一个中国学生如果要了解西方文明，也只能根据他对本国文化的了解。他对本国文化的了解愈深，对西方文化的了解愈易，根据这种推理，我觉得自己在国内求学时，常常为读经史子集而深夜不眠，这种苦功总算没有白费，我现在之所以能够吸收、消化西洋思想，完全是这些苦功的结果。我想，我今后的工作就是找出中国究竟缺少些什么，然后向西方吸收所需要的东西。心里有了这些观念以后，我渐渐增加了自信，减少了羞怯，同时前途也显得更为光明。

我对学问的兴趣很广泛，选读的功课包括上古史、英国史、哲学史、政治学，甚至译为英文的俄国文学。托尔斯泰的作品更是爱不释手，尤其是《安娜·卡列尼娜》和《战争与和平》。我参加过许多著名学者和政治家的公开演讲会，听过桑太耶那、泰戈尔、大卫、斯坦、约登、威尔逊（当时是普林斯顿校长）以及其他学者的演讲。对科学、文学、艺术、政治和哲学我全有兴趣。也听过塔虎脱和罗斯福的演说。罗斯福在加大希腊剧场演说时，曾经说过："我攫取了巴拿马运河，国会要辩论，让它辩论就是了。"他演说时的强调语气和典型姿势，至今犹历历可忆。

中国的传统教育似乎很褊狭，但是在这种教育的范围之内也包罗万象。有如百科全书，这种表面褊狭的教育，事实上恰是广泛知识的基础。我对知识的兴趣很广泛，可能就是传统思想训练的结果。中国古书包括各方面的知识，例如历史、哲学、文学、政治经济、政府制度、军事、外交等等。事实上绝不褊狭。古书之外，学生们还接受农业、灌溉、天文、数学等实用科学的知识。可见中国的传统学者绝非褊狭的专

家，相反地，他具备学问的广泛基础。除此之外，虚心追求真理是儒家学者的一贯目标，不过，他们的知识只限于书本上的学问，这也许是他们欠缺的地方。在某一意义上说，书本知识可能是褊狭的。

幼时曾经读过一本押韵的书，书名《幼学琼林》，里面包括的问题非常广泛，从天文地理到草木虫鱼无所不包，中间还夹杂着城市、商业、耕作、游记、发明、哲学、政治等等题材。押韵的书容易背诵，到现在为止，我仍旧能够背出那本书的大部分。

卜技利的小山上有长满青苔的橡树和芳香扑鼻的尤加利树；田野里到处是黄色的罂粟花；私人花园里红玫瑰在温煦的加州太阳下盛放着。这里正是美国西部黄金世界，本地子弟的理想园地。我万幸得享母校的爱护和培育，使我这个来自东方古国的游子得以发育成长，衷心铭感，无以言宣。

加州气候冬暖夏凉，四季如春，我在这里的四年生活确是轻松愉快。加州少雨，因此户外活动很少受影响。冬天虽然有阵雨，也只是使山上的青草变得更绿，或者使花园中的玫瑰花洗涤得更娇艳。除了冬天阵雨之外，几乎没有任何恶劣的气候影响希腊剧场的演出，剧场四周围绕着密茂的尤加利树。莎翁名剧、希腊悲剧、星期演奏会和公开演讲会都在露天举行。离剧场不远是运动场，校际比赛和田径赛就在那里举行。青年运动员都竭其全力为他们的母校争取荣誉。美育、体育和智育齐头并进。这就是古希腊格言所称"健全的心寓于健全的身"——这就是古希腊格言的实践。

在校园的中心矗立着一座钟楼，睥睨着周围的建筑。通到大学路的大门口有一重大门，叫"赛色门"，门上有许多栩栩如生的浮雕裸像。这些裸像引起许多女学生的家长抗议。我的伦理学教授说："让女学生们多看一些男人的裸体像，可以纠正她们忸怩作态的习惯。"老图书馆（后来拆除改建为陀氏图书馆）的阅览室里就有维纳斯以及其他希腊女神裸体的塑像。但是男学生的家长从未有过批评。我初次看到这些希腊裸体人像时，心里也有点疑惑，为什么学校当局竟把这些"猥亵"的东西摆在智慧的源泉。后来，我猜想他们大概是要灌输"完美的思想寓于完美的身体"的观念。在希腊人看起来，美丽、健康和智慧是三位一体而不可分割的。

橡树丛中那次《仲夏夜之梦》的演出，真是美的极致。青春、爱情、美丽、欢愉全在这次可喜的演出中活生生地表现出来了。

学校附近有许多以希腊字母做代表的兄弟会和姊妹会。听说兄弟会和姊妹会的会员们欢聚一堂，生活非常愉快。我一直没有机会去作客。后来有人约我到某兄弟会去作客，但是附带一个条件——我必须投票选举这个兄弟会的会员出任班主席和其他职员。事先，他们曾经把全班同学列一名单，碰到可能选举他们的对头人，他们就说这个"要不得！"同时在名字上打上叉。

我到那个兄弟会时，备受殷勤招待，令人没齿难忘。第二天举行投票，为了确保中国人一诺千金的名誉，我自然照单圈选不误，同时我也很高兴能在这次竞选中结交了好几位朋友。

选举之后不久，学校里有一次营火会。究竟庆祝什么却记不清楚了。融融的火光照耀着这班青年的快乐面庞。男男女女齐声高歌。每一支歌结束时，必定有一阵呐喊。木柴的爆裂声，女孩子吃吃的笑声和男孩子的呼喊声，至今犹在耳际萦绕。我忽然在火光烛照下邂逅一位曾经受我一票之赐的同学。使我大出意外的是这位同学竟对我视若路人，过去的那份亲热劲儿不知哪里去了！人情冷暖，大概就是如此吧！他对我的热情，我已经以"神圣的一票"来报答，有债还债，现在这笔账已经结清，谁也不欠谁的。从此以后，我再也不拿选举交换招待，同时在学校选举中从此没有再投票。

在"北楼"的地下室里，有一间同学经营的"合作社"，合作社的门口挂着一块牌子，上面写着："我们相信上帝，其余人等，一律现钱交易。"合作社里最兴隆的生意是五分钱一个的热狗，味道不错。

学校里最难忘的人是哲学馆的一位老工友，我的先生同学们也许已经忘记他，至少我始终忘不了。他个子高而瘦削，行动循规蹈矩。灰色的长眉毛几乎盖到眼睛，很像一只北京叭儿狗，眼睛深陷在眼眶里。从眉毛下面，人们可以发现他的眼睛闪烁着友善而热情的光辉。我和这位老工友一见如故，下课以后，或者星期天有空，我常常到地下室去拜访他，他从加州大学还是一个小规模的学校时开始，就一直住在那地下室里。

他当过兵，曾在内战期间在联邦军队麾下参加许多战役。他生活在回忆中，喜欢讲童年和内战的故事。我从他那里获悉早年美国的情形。这些情形离现在将近百年，许多情形与当时中国差不多，某些方面甚至还更糟。他告诉我，他幼年时美国流通好几种货币：英镑、法郎，还有荷兰盾。现代卫生设备在他看起来一文不值。有一次他指着一卷草纸对我说："现代的人虽然有这些卫生东西，还不是年纪轻轻就死了。我们当

时可没有什么卫生设备，也没有你们所谓的现代医药。你看我，我年纪这么大，身体多健康！”他直起腰板，挺起胸脯，像一位立正的士兵，让我欣赏他的精神体魄。

西点军校在他看起来也是笑话，“你以为他们能打仗呀？那才笑话！他们全靠几套制服撑场面，游行时他们穿得倒真整齐。但是说到打仗——差远了！我可以教教他们。有一次作战时，我单枪匹马就把一队叛军杀得精光，如果他们想学习如何打仗，还是让他们来找我吧！”

虽然内战已经结束那末多年，他对参加南部同盟的人却始终恨之入骨。他说，有一次战役结束之后，他发现一位敌人受伤躺在地上，他正预备去救助。“你晓得这家伙怎么着？他一枪就向我射过来！”他瞪着两只眼睛狠狠地望着我，好像我就是那个不知好歹的家伙似的。我说：“那你怎么办？”“我一枪就把这畜生当场解决了。”他回答说。

这位军人出身的老工友，对我而论，是加州大学不可分的一部分，他自己也如此看法，因为他曾经亲见加大的发育成长。

美国华埠

我到美国第一年的十月底以前，中国发生了重大的变故，光绪皇帝和慈禧太后相继去世。关于这件事，在美国的中国学生队里有两种不同的传说：一说慈禧太后先去世，她的亲信怕光绪皇帝重掌政权，于是谋杀光绪皇帝以绝后患。另一说法是慈禧太后临死前派了一名太监到囚禁光绪的瀛台，告诉病弱的光绪帝说：“老佛爷”希望他服用她送去的药，光绪帝自然了解太后的用意，就把药吞服了，不久毒发身亡。慈禧太后驾崩以前，已经接到光绪帝服毒死亡的报告，于是发下圣旨，宣布光绪之死，并由光绪的小侄子溥仪继承皇位。

不论这些说法的真确性如何，在卜技利的中国学生一致认为“老太婆”（这是大家私底下给慈禧太后的译号）一死，中国必定有一场大乱。后来事实证明确是如此。溥仪登基以后，他的父亲载淳出任摄政王。皇帝是个小孩子，摄政王对政务也毫无经验，因此清廷的威信一落千丈，三年以后，辛亥革命成功，清室终于被推翻。

我早在一九〇九年参加《大同日报》担任主笔。这报是孙中山先生在旧金山的革命机关报。那一年的一个秋天晚上，我与《大同日报》的另一个编辑，以后在国内大名鼎鼎的刘麻哥成禺，初次晋谒孙先生。他住在唐人街附近的史多克顿街的一家旅馆里。我进门的时候，因为心情紧张，一颗心怦怦直跳。孙先生在他的房间里很客气地接见我们。房间很小，一张床，几张椅子，还有一张小书桌。靠窗的地方有个小小的洗脸盆，窗帘是拉上的。

刘麻哥把我介绍给这位中国革命运动的领袖。孙先生似乎有一种不可抗拒的引力，任何人如果有机会和他谈话，马上会完全信赖他。他的天庭饱满，眉毛浓黑，一望而知是位智慧极高、意念坚强的人物。他的澄澈而和善的眼睛显示了他的坦率和热情。他的紧闭的嘴唇和坚定的下巴，则显示出他是个勇敢果断的人。他的肌肉坚实，身体强壮，予人镇定沉着的印象。谈话时他的论据清楚而有力，即使你不同意他的看法，也会觉得他的观点无可批驳。除非你有意打断话头，他总是娓娓不倦地向你发挥他的理论。他说话很慢，但是句句清楚，使人觉得他的话无不出于至诚。他也能很安详地听别人讲话，但是很快就抓住人家的谈话要点。

后来我发现他对各种书都有浓厚的兴趣，不论是中文书，或者英文

书。他把可能节省下来的钱全部用来买书。他读书不快，但是记忆力却非常惊人。孙先生博览群书，所以对中西文化的发展有清晰的了解。

他喜欢听笑话，虽然他自己很少说，每次听到有趣的笑话时总是大笑不止。

他喜欢鱼类和蔬菜，很少吃肉类食物。喜欢中菜，不大喜欢西菜。他常说："中国菜是全世界最好的菜。"

孙先生是位真正的民主主义者，他曾在旧金山唐人街的街头演说。头顶飘扬着国民党的党旗，他就站在人行道上向围集他四周的人演说。孙先生非常了解一般人的心理，总是尽量选用通俗平易的词语来表达他的思想。他会故意地问："什么叫革命？"革命就是打倒满洲佬。"听众很容易明白他的意思，因此就跟着喊打倒满洲佬。接着他就用极浅近的话解释，为什么必须打倒满洲佬，推翻满清建立共和以后他的计划怎么样，老百姓在新政府下可以享受什么好处等等。

在开始讲话以前，他总先估量一下他的听众，然后选择适当的题目，临时决定适当的讲话的方式，然后再滔滔不绝地发表他的意见。他能自始至终把握听众的注意力。他也随时愿意发表演说，因为他有惊人的演说天才。

孙中山先生对人性有深切的了解，对于祖国和人民有热烈的爱，对于建立新中国所需要的东西有深邃的见解。这一切的一切，使他在新中国的发展过程中成为无可置辩的领袖。他常常到南部各州、东部各州去旅行，有时又到欧洲，但是经常要回到旧金山来，每次回到旧金山，我和刘麻哥就去看他。

一九一一年十月八日，大概晚上八点钟左右，孙先生穿着一件深色的大衣和一顶常礼帽，到了《大同日报》的编辑部。他似乎很快乐，但是很镇静。他平静地告诉我们，据他从某方面得到的消息，一切似乎很顺利，计划在武汉起义的一群人已经完成布署，随时可以采取行动。两天以后，消息传至旧金山，武昌已经爆发革命了。这就是辛亥年十月十日的武汉革命，接着满清政府被推翻，这一天也成为中华民国的国庆日。

在孙先生的指导之下，我和刘麻哥为《大同日报》连续写了三年的社论。开始时我们两人轮流隔日撰写。我们一方面在加大读书，一方面为报纸写社论，常常开夜车到深夜，赶写第二天早上见报的文章。大学的功课绝不轻松，我们，尤其是我，深感这种额外工作负担之重。成功

以后，刘麻哥回国了，我只好独立承当每日社论的重任。我虽然深深关切祖国的前途，但是这种身不由己的经常写作，终于扼杀了我一切写作的兴趣。我一直在无休无止的压力下工作，而且仓促成文，作品的素质日见低落，而且养成散漫而匆促的思想习惯，用字也无暇推敲。有时思想阻滞，如同阻塞了的水管里的水滴，但是笔头的字还是像一群漫无目的的流浪者涌到纸上。我对于这些不速之客实在生气，但是我还是由他们去了，因为他们至少可以填满空白。

最初担任这份工作时，对于写作的确非常有兴趣，字斟句酌，务求至当。这情形很像选择适当的钱币，使它能投进自动售货机的放钱口。如果你匆匆忙忙希望把一大把钱同时挤进放钱口，机器自然就阻塞了，多余的钱怎么也放不进去，结果就散落一地。一个人不得不在匆忙中写文章，情形就是这样，结果是毫无意义的一大堆文字浪费了篇幅。

一九一二年毕业后，我终于放弃了这份工作，心里感到很轻松。从此以后我一直怕写文章，很像美国小学生怕用拉丁文作文一样。工作如果成为苦差，并且必须在匆忙中完成，这种工作绝无好成绩。这样养成的坏习惯后来很难矫正。

在我四年的大学时期里，约有五万华侨集中在西海岸的各城市，包括萨克拉孟多、旧金山、屋、圣多谢、洛杉矶等，另外还有零星的小群华侨和个人散布在较小的城镇和乡村。华侨集中的区域就叫唐人街或中国城，也称华埠。旧金山的华埠是美洲各城中最大的一个，共有华侨两万余人。主要的街道原来叫杜邦街，后来改称葛兰德路，究竟为什么改，我不知道。葛兰德路很繁华。东方古董铺、普通称为“杂碎馆”的中国饭馆、算命测字的摊子、假借俱乐部名义的赌场、供奉中国神佛的庙宇等等，吸引了无数的游客和寻欢作乐的人。有一个年轻美丽的美国人告诉我，她曾在一家东方古董铺中看到一件非常稀奇的东西——一尊坐在一朵莲花座上的大佛；她还在一家中国饭馆吃过鸟巢（燕窝）、鱼翅和杂碎。她对这一切感到新奇万分，说得手舞足蹈。她的妹妹们都睁着眼睛、张着嘴巴听她。“真的啊！”她的老祖母从眼镜上面望着她，两只手则仍旧不停地织着毛线。

“你用筷子怎么喝汤呢？”一位小妹妹满腹狐疑地问。

“正像你用麦管吸汽水一样吸汤呀！小妹妹。”我代为回答，引得大家大笑。

也有许多华侨开洗衣店。他们一天到晚忙着浆洗衣服，常常忙到深

夜。许多美国家庭喜欢把衣服送到中国洗衣店洗，因为手洗不像机器那样容易损坏衣服。这些来自"天朝"的子孙，节衣缩食省下有限的一点钱，把省下的钱装在袋里藏在床下。但是他们却慷慨地捐钱给孙中山先生的革命运动，或者把钱寄回广东，扶养他们的家人或亲戚，同时使他们的故乡变为富足。

广东是中国最富的省份，一方面是广东人在香港以及其他地方经商发财的关系，另一方面也是因为各地华侨把积蓄汇回广东的缘故。华侨遍布于马来西亚、印度尼西亚、菲律宾及南美、北美各地。各地的华侨多半是从广东或福建来的。

上千万的华侨生活在外国，他们在外国辛勤工作从不剥削别人，相反地，他们的劳力却常常受到剥削。他们除父母所赐的血肉之躯外，别无资本。他们像一群蜜蜂，辛勤工作，节衣缩食，忍气吞声，把花蜜从遥远的花朵运送到在中国的蜂房。他们得不到任何政治力量的支持，他们也没有携带枪炮到外国来。他们帮着居留地的人民筑路、开矿、种植树木，以一天辛劳的工作换回几个美金或先令。不错，有些人，尤其是在新加坡和印度尼西亚，的确发了财，住着皇宫样的大厦和别墅，生活得像印度的土大王，另一些人也跻入中产阶级，买田置产，但是富有的和小康的究竟还是少数。大多数的华侨必须辛勤工作，而且只有辛勤工作才能糊口或稍有积蓄。

在美国的华侨，没有很富的，也没有很穷的。多数都是老实可靠、辛勤工作的人。几乎所有的人都寄一点钱回广东。他们的生活方式主要是中国式的。你如果乘一只船沿萨克拉孟多江航行，你可以看到两岸散布着一些华侨城镇和村落，店铺门前挂着大字书写的中文招牌如"长途粮食"、"道地药材"等类。你可能以为自己是在沿着长江或运河航行呢。

有一天，我曾经在萨克拉孟多江沿岸的一处中国城上岸，访一位芦笋园的主人。这位主人叫丁山，是孙中山先生的朋友，他拿鲜嫩的芦笋招待我，非常肥美多汁，后来一吃到芦笋，我总要想起他。他还有一间制造芦笋的罐头厂，所制的罐头借用美国商标出售。因此我常常想，美国的某些芦笋罐头，可能就是华侨种植和装罐的。他赚钱的办法的确好，而且很巧妙。他为工人开设了许多娱乐场所，他说，工人们辛苦了一天，必须有散散心的地方；如果他不开办娱乐场所，工人们就会找到他的邻居所开的娱乐场所去。他的用意是"肥水不流外人田"。结果到他娱乐场所来玩的人，都贡献了一点"肥水"，他的财产也就愈来愈多了。

在美国以及世界各地的华侨，真不愧为炎黄裔胄。男子留着辫子，

女人甚至还缠足。在旧金山的华侨街头，可以发现卖卦算命的摊子。有一位算命先生告诉一位来算命的白人说："好运道，快快的，大发财。"旁边一位黑人也想算算命，算命先生把同样的话重复一遍，黑人大为得意。如果这位算命先生说到此地为止，自然太平无事，但是他偏偏要画蛇添足，对黑人说："快快地，不再黑，像他——"同时用手指着那位白人。黑人气得一脚踢翻算命摊子，阿谀过分成为侮辱，此即一例。

华侨还有许多杂货店，出售咸鱼、鳗鲞、蛇肉、酱油、鱼翅、燕窝、干鲍以及其他从广州或香港运到美国的货色。有一次，我到一家杂货铺想买一些东西。但是我的广东话太蹩脚，没法使店员明白我要买的东西。只好拿一张纸把它写下来，旁边站着一位老太婆只晓得中国有许多不同的方言，却不晓得中国只有一种共同的文字，看了我写的文字大为惊奇，她问店里的人：这位唐人既然不能讲唐话（她指广东话），为什么他能写唐字呢？许多好奇的人围住我看，有一位稍稍懂点普通话的人问道："你到广州省城去过没有？"我回答说："没有。""那末你过去在那里买东西呢？""上海。"我笑着夹起一瓶酱油和一包货物走了。

唐人街的学校仍旧保持旧式的课程。学生们要高声朗诵古书，和我小时候的情形一模一样。离唐人街不远的美国学校对它们毫无影响。

这是辛亥革命以前的情形。革命以后，唐人街开始起了变化，因为中国本身也在变化，而且是急剧的变化，短短几年之内，算命卖卦的不见了。辫子的数目也迅速减少，终至完全绝迹。青年女子停止缠足，学校制度改革了，采用了新式的课程；送到附近美国学校上学的孩子逐渐增加。唐人街虽然想抗拒美国邻居的影响，但是祖国有了改革，而且在生活方式上有了改变以后，这些忠贞的炎黄裔胄也终于亦步亦趋了。

纽约生活

时间一年一年地过去，我的知识学问随之增长，同时自信心也加强了。民国元年，即一九一二年，我以教育为主科，历史与哲学为两附科，毕业于加大教育学系，并承学校赠给名誉奖，旋赴纽约入哥伦比亚大学研究院续学。

我在哥大学到如何以科学方法应用于社会现象，而且体会到科学研究的精神。我在哥大遇到许多诲人不倦的教授，我从他们得到许多启示，他们的教导更使我终生铭感。我想在这里特别提一笔其中一位后来与北京大学发生密切关系的教授。他就是约翰·杜威博士。他是胡适博士和我在哥伦比亚大学时的业师，后来又曾在北京大学担任过两年的客座教授。他的著作、演讲以及在华期间与我国思想界的交往，曾经对我国的教育理论与实践发生重大的影响。他的实验哲学与中国人讲求实际的心理不谋而合。但是他警告我们说："一件事若过于注重实用，就反为不切实用。"

我不预备详谈在哥大的那几年生活，总之，在那几年里获益很大。我对美国生活和美国语言已感习惯，而且可以随时随地从所接触的事物汲取知识而无事倍功半之苦。

纽约给我印象较深的事物是它的摩天大楼、川流不息的地道车和高架电车、高楼屋顶上的炫目的霓虹灯广告；剧场、影院、夜总会、旅馆、饭店；出售高贵商品的第五街、生活浪漫不拘的格林威治村、东区的贫民窟等等。

在社会生活方面，新英格兰人、爱尔兰人、波兰人、意大利人、希腊人、犹太人等各族杂处，和睦如邻，此外还有几千名华侨聚居在唐人街附近。当时在这个大都会里的中国菜馆就有五百家之多。纽约市密集的人口中龙蛇混杂，包括政客、流氓、学者、艺术家、工业家、金融巨子、百万富翁、贫民窟的贫民以及各色人等，但是基本上这些人都是美国的产物。有人说："你一走进纽约，就等于离开了美国。"事实上大谬不然。只有美国这样的国家才能产生这样高度工业化的大都市，也只有美国才能出现这种兼容并蓄的大熔炉。种族摩擦的事可说绝无仅有。一个人只要不太逾越法律的范围，就可以在纽约为所欲为。只要他不太违背习俗，谁也不会干涉他的私人行动。只要能够找到听众，谁都可以评论古今，臧否时政。

法律范围之内的自由，理智领域之内的思想自由和言论自由在纽约发挥得淋漓尽致，大规模的工商业，国际性的银行业务，发明、机械和资源的极度利用，处处显示美国主义的精神和实例。在纽约，我们可以发现整个美国主义的缩影。我们很可能为这个缩影的眩目的外表所迷惑而忽视美国主义的正常状态，这种正常状态在美国其余各地都显而易见。

暑假里我常常到纽约州东北部的阿地隆台克山区去避暑。有一年暑假，我和几位中国朋友到彩虹湖去，在湖中丛山中的一个 small 岛上露营。白天时我们就到附近的小湖去划船垂钓。钓鱼的成绩很不错，常常满载而归，而且包括十斤以上的梭鱼。我们露营的小岛上，到处是又肥又大的青蛙，我幼时在我们乡下就曾学会捉蛙，想不到到了美国之后居然有机会大显身手。一根钓竿，一根细绳，一枚用大小适度的针屈曲而成的钓钩，再加一块红布就是钓蛙的全副道具了。这些临时装备成绩惊人，我们常常在一小时之内就捉到二十多只青蛙，足够我们大嚼两餐。彩虹湖附近的居民从未吃过田鸡，他们很佩服我们的捉蛙技术，但是他们的心里一定在想：“这些野蛮的中国人真古怪！”

晚上我们常常参加附近居民的仓中舞会，随着主人弹奏的提琴曲子婆娑起舞。我还依稀记得他们所唱的一支歌，大意是：

所有的户枢都长了锈，
门窗也都歪斜倾倒，
屋顶遮不住日晒雨漏，
我的唯一的朋友，
是灌木丛后面的，
一只黄色的小狗。

这支歌反映山区孤村生活的孤独和寂寞，但是对城市居民而言，它却刻画了一种宁静迷人的生活。

我们有时也深入到枝叶蔽天的原始森林里。山径两旁的杜松散发着芬芳的气息。我们采撷了这些芳香的常绿枝叶来装枕头，把大自然带回锦衾之中，阵阵散发的芳香更使我们的梦乡充满了温馨。

有时我们也会在浓密的树林中迷途。那时我们就只好循着火车汽笛的声音，找到铁路轨道以后才能回来。经过几次教训以后，我们进森林时就带指南针了。

在乡下住了一段时间之后，重新回到城市，的确另有一番愉悦之感。从乡村回到城市，城市会显得特别清新可喜；从城市到了乡村，乡村却又显得特别迷人。原因就是环境的改变和鲜明的对照。外国人到中国时，常常迷恋于悠闲的中国生活和它的湖光山色；而中国人到了异国时却又常常留恋外国的都市生活。因此我们常常发现许多欧美人士对中国的东西比中国人自己更喜爱。在另一方面，也有许多中国人对欧美的东西比西洋人自己更喜爱。这就是环境改换和先后对照的关系，改换和对照可以破除单调而使心神清新。但是事物的本身价值并不因心理状态的改变而有所不同。

我在纽约求学的一段时期里，中日关系突起变化，以致两国以后势成水火。日本经过约五十年的维新之后，于一八九四年一击而败中国，声威渐震。中国人以德报怨，并未因战败而怀恨在心。这次战衅反而意外地引起中国人对日本的钦仰和感激——钦仰日本在短短五十年内所完成的重大革新，感激日本唤醒中国对自己前途的乐观。甲午之战可说燃起了中国人心中的希望。战后一段时期中国曾力求追随日本而发奋图强。

每年到日本留学的学生数以千计。中国在军事、警务、教育各方面都采取了新制度，而由留日返国的学生主其事。中国开始从日本发现西方文明的重要。日俄战争更使中国的革新运动获得新动力——日本已成为中国人心中的偶像了。

中国通过她的东邻逐渐吸收了西方文明，但是中国不久发现，日本值得效法的东西还是从欧美学习而来的。更巧的是美国退还了八国联军之后的庚子赔款，中国利用庚款选派了更多的留美学生。在过去，中国学生也有以官费或自费到欧美留学的，但是人数很少，现在从西洋回国的留学生人数逐渐增加，而且开始掌握政府、工商业以及教育界的若干重要位置。传教士，尤其是美国的传教士，通过教会学校帮助中国教育了年轻的一代。

因此，中国与日本的文化关系开始逐渐疏远，中国人心目中的日本偶像也渐行萎缩，但是日本人却并未意识到这种转变。

日本利用第一次世界大战的机会，在民国四年即一九一五年突然向袁世凯政府提出著名二十一条要求，如果中国接受这些要求，势将成为日本的保护国。日本之所以突然提出二十一条，是因为西方列强在战事进行中自顾不暇，同时帝俄军事力量急剧衰退，以致远东均势破坏。中国既受东邻日本的逼迫，乃不得不求助于西方国家，中日两国从此分道

扬镳，此后数十年间的国际政治也因而改观。如果日本具有远大的眼光，能在中国的苦难时期协助中国，那末中日两国也许一直和睦相处，而第二次世界大战的情形也就完全不同了。

驻华盛顿的中国大使馆经政府授意把二十一条要求的内容泄漏了，那时我正在纽约读书。这消息使西方各国首都大为震惊。抵制日货运动像野火一样在中国各地迅速蔓延以示抗议，但是日本军舰已经结集在中国的重要口岸，同时日本在南满和山东的军队也已经动员。民国四年即一九一五年五月七日，也就是日本提出二十一条要求之后四个月，日本向袁世凯提出最后通牒，袁世凯终于在两天之后接受二十一条要求。

后来情势演变，这些要求终于化为乌有，但是中国对日本的钦慕和感激却由此转变为恐惧和猜疑。从此以后，不论日本说什么，中国总是满腹怀疑，不敢置信；不论日本做什么，中国总是怀着恐惧的心情加以警戒。日本越表示亲善，中国越觉得她居心叵测。

我们的东邻质问我们："你们为什么不像我们爱你们一样地爱我们？"我们回答说："你们正在用刺刀谈恋爱，我们又怎么能爱你们？"

九·一八事变前几年，一位日本将官有一天问我："中国为什么要挑拨西方列强与日本作对？"

"为保持均势，以免中国被你们并吞。"我很坦白地回答。

"日本并吞中国！我们怎么会呢？这简直是笑话。"

"一点也不笑话，将军。上次大战时列强自顾不暇，日本不是曾经乘机向中国提出二十一条要求吗？如果这些要求条条实现，日本不是就可以鲸吞中国吗？"

"哦，哦——？"这位将军像是吃惊不小的样子。

"一点不错。"我直截了当地回答。

PART THREE THE NEW CHINA

CHAPTER 12 RAPID CHANGES

In the midst of American mobilization for a European war for the first time in her history, in June, 1917, I left for home with mixed feelings. The last night I spent in Hartley Hall at Columbia my mind was too much occupied to sleep and I lay the whole night in meditation. The hours ebbed away until the early, summer dawn came in at the window through the creeping vines. The morning air was mild and the petals of the roses were dew-laden. Near by, on the granite steps of the library, the Alma Mater was smiling her grave smile as if wishing her foster son Godspeed. As I stood at the window looking out on the familiar scene that had meant so much to me those five years, tears began to well up in my eyes. Was I to be torn away once and for all from the fountain of wisdom, leaving my friends behind? But it was my duty to go home, just as it had been my privilege to come.

In the afternoon I boarded a train at Grand Central for a city in Ohio. As the train crawled out of the station I kept looking back at the waving hands of my American friends, boys and girls, until they were lost to sight.

One friend accompanied me to Ohio to visit with friends of his there, and we were welcomed to the family by its charming hostess. The host had some sort of business in that city. There was no son in the family; the girl was the sunshine in the house. She was an attractive brunette with an oval face, and the warmth that poured from her young heart would endear her to anyone who met her.

We stayed for about two weeks. It was in the midst of registration and draft; the first groups gathered, marched on the streets, and were sent off for training. The sidewalks were thronged with people. Mothers, sweethearts, and friends bade good-by to their soldiers with kisses, tears, and throbbing hearts.

We formed rowing parties on moonlit ponds dotted with islets of gold and silvery lilies. Fireflies twinkled like moving stars. Fish

splashed. The girls sang together—I still remember one of the songs they loved to sing:

The June air is warm and tender.

Why do you hold your petals to display?

Are you afraid someone will

Come and steal your heart away?

The frogs echoed with their ungainly chorus. The girls sang and sang until the breezes of late evening brought a chilly warning. Then we would all go ashore and walk home over the dew-laden grass under the slanting moon.

Time flew and soon the two enjoyable weeks came to an end. I said good-bye to my friends and took a train for San Francisco. When the ocean liner steamed gently out of the Golden Gate I stood on the deck facing east thinking of my friends in New York. Good-bye, my friends! Good-bye, America!

It was still summer in Shanghai. The city had changed much during my absence of nine years. Many streets were wider and better paved. New roads had been built beyond the limits of the Foreign Settlement. Department stores, fashionable hotels, roof gardens, amusement parks, and cabarets had multiplied. Shanghai had caught up with the spirit of New York.

The number of schools had increased manyfold in the city during the years of my absence; all but a few, however, were supported by private or Chinese government sources—these few had been established years before by the international municipal government. I suppose the revenues of the Settlement must have increased a hundred times since these few outmoded schools had been founded decades earlier. But let the Chinese remain ignorant—they would be easier to control and exploit.

The young girls had bobbed their hair and wore short skirts up to their knees in the fashion of the day. No—excuse me—I mean they wore gowns down to their knees, For the dress of the modern Chinese

girl was very sensible. It consisted of a straight piece of silk hanging from the shoulders, longer or shorter according to fashion. This had been originally the Manchu gown, and Chinese girls had adopted it after the downfall of the dynasty some six years earlier.

Here, there, and everywhere on the streets high-heeled shoes adorned the dainty feet of young women. When one heard quick heels tapping the sidewalks one felt at once that the rising generation were radically different from their mother. The old modesty had disappeared. They were also better-developed physically, however, thanks to the modern shoes. In the old days women had practiced foot-binding. The movement to free women's feet, as a part of China's reform program, began around the time of the Russo-Japanese War and went on rather slowly until after the Revolution of 1911. I think the high heels helped to accelerate it, for women were surely more ready to give up the practice of squeezing their little daughters' feet into tiny slippers when they saw others wearing dainty high heels.

Men had dropped their queues but still clung to the long gown. It was funny to see a long gown without a queue. But before long I found myself one of the multitude, for Chinese clothing is more convenient and comfortable. No one can resist the temptation of being comfortable and convenient at the same time—it is a matter of practical common sense.

There were still a few individuals who wore queues, especially among the old men. They did not see any sense in getting rid of it; the queue had grown on Chinese heads for more than two centuries and it would do no harm to have it for a few centuries more. There are always die-hards in any movement.

In America I had measured things American by the Chinese yardstick. Now I reversed the process, measuring things Chinese with the American yardstick, or most likely with a sort of hybrid stick, neither Chinese nor American but something of both, or vacillating between the two.

I pitied the rickshaw coolies who ran for a few coppers, out of breath, their sweating tanned backs turned toward you in the hot

summer sun. It was something inhuman, my American yardstick would say. Once in a while I came across some of the beastly foreigners who kicked them like dogs—but no, in America I never saw a man kick a dog. Blood rushed to my head and I often wanted to kick back at the human beasts, but refrained from venting my noble sentiments when I saw extraterritoriality looming large behind them. Then I reverted to my ancestral patience. "Coward!" the American yardstick would say. "Patience," returned the Chinese stick of my forefathers. Stop using these rickshaws and have more buses and tramways. But what were the poor coolies to do to eke out their meager subsistence? Return to the farms? No, they were surplus farmers. Three ways were open to them: to turn bandit with the strong, petty thieves with the weak, or beggars with the still weaker. Well then, let them pull the rickshaws. Here you are in a vicious circle.

Build up industry, it will give them employment. But industry is impossible without a stable government. A stable government is hardly possible when there are so many surplus farmers in the country, always ready to join mercenary armies and fight for the warlords who pay them or who let them loose to plunder the people. Here is another vicious circle, difficult to break.

There was an improvement in the notice boards of the Settlement public parks. The list of regulations forbidding the entrance of Chinese as well as dogs now displayed the modified clause: "Respectable Chinese only are admitted." At last even the arrogant foreigners had begun to be aware that there was something to be respected rising in China.

So much for Shanghai.

The great eastern seaport and trading center was now connected by rail with Soochow to the west and Hangchow to the south cities both regarded as paradises on earth. The line ran from Soochow farther west to Nanking, connected by a ferry across the Yangtze River; and north through Tientsin to Peking, then capital of the Republic. The southern branch stopped at Hangchow and remained as

yet to be connected with Ningpo.

My home was not very far from Ningpo, native city of Generalissimo Chiang Kai-shek. It is one of the five treaty ports but has never come into any considerable importance as a port, for the rapid growth of Shanghai as one of the great ports of the world overshadowed it. Three lines had ships running between Shanghai and Ningpo nightly, both incoming and outgoing; two of these were British companies and the third the China Merchants Navigation Company. These ships were the models for the steamless paddle-wheel "steamboat" my father had built so many years earlier and failed to make go. My brother and I took a second-class cabin on one of these boats.

There was not much change in the life of the passengers in twenty years. The gangways and decks were packed with human sardines and one could hardly set foot on the floor without stepping on somebody. We went on board about five in the afternoon to occupy our berths. Hawkers came by in great numbers, selling every kind of goods that a household might need, mostly imported manufactures. Fruit sellers brought bananas, apples, and pears on board. My brother and I had an argument. He wanted to buy the partly rotten fruit because it was much cheaper. "No," I argued, "you will pay much more for the doctor's bill."

"Ha, ha! I have been eating rotten pears and apples for years," he said. "They taste better. I have no trouble from them." He picked up a big, partly decayed red apple, bit off the bad parts and ate the rest. I shuddered. He laughed.

Before dawn we passed the fortresses of Ningpo Harbor, which fired a cannon ball that hit and killed a French admiral in the Sino-French War of 1885.

Day dawned. Clamorous voices from the dock rose to my ears. Streams of porters rushed up, fighting for luggage. The slightest negligence would find your possessions removed without permission. My brother and I elbowed down through the packed crowd, closely following our porters lest they walk off with our belongings.

Ningpo was practically the same as it had been nine years earlier. The air was laden with the smell of salt fish. I felt at home with this smell, for salt fish had been a staple food since childhood. Ningpo is a fishing town and large quantities of salt are produced not far away. We followed our porters to the station and found a train waiting to depart for Yuyao, our home city. Along the railroad I saw miles of well-cultivated fields cushioned with rippling rice that flowered in the autumn morning sun, unfolding like a never-ending scroll of landscape painting before the windows of the moving train. The morning air was stimulating and laden with the scent of flowering rice. Oh—this is my homeland!

As the train pulled into the Yuyao station my heart throbbed with excitement. We crossed the river by a long stone bridge built centuries ago. The ebb tide was racing down the river; through the arches of the bridge anglers could be seen casting their lines in the flowing water. The bridge was called Wu-shen, meaning "brave and victorious," because at the bridgeheads some four centuries ago people fought from time to time to defend the city against the invasions of pirates of uncertain origin from the Japan Sea. The Chinese believed they were Japanese, but Japanese historians deny it.

It was late in the morning when we hurried into the courtyard steeped in brilliant autumn sun. My father stood on the granite steps leading to the spacious hall. He was somewhat aged, his hair turning grey; otherwise in good health and splendid spirits. His kind eyes and smiling lips glowed with the tender emotions that flow from the heart of a loving parent. Before him my brother and I bowed three times in respect; the old way of kowtowing on one's knees had, among certain sections of the people, passed into history with the vanished dynasty.

Father had given up his queue but still wore Chinese slippers. He did not say much: silence conveyed much more than words on such an occasion. Then we all entered the hall. Stiff-backed chairs arranged symmetrically along the walls showed little sign of change in his way of living. The couplet panels inlaid with mother-of-pearl shone on the back walls. On the right side one read: "Fishes have greater freedom in

the vastness of the sea," and on the left: "Birds take broader liberty in the wide span of the sky." Between the two panels was a painting of bamboo shadows which seemed to bend in an autumn breeze, all the leaves pointing with the wind. These things all speak of a contented, quiet, and unchanging life.

Behind the hall was a narrow strip of back yard. Miniature mountain scenes set in large rectangular pots brought landscape within the high walls. Tiny temples and pagodas perched on the miniature mountains, and dwarf trees that looked centuries old grew around them. Little monkeys with still smaller babies sitting innocently by their side sat here and there in the quiet recesses of the mountains. They all looked so cute that I wished some of them could grow life sized and jump into my lap. There was a tiny bamboo grove flourishing around a toy pavilion. Goldfish snapping at the air and shrimps stretching out their claws for food all enjoyed undisturbed life in the imitation ponds. All of this led one's mind to nature.

On hearing of my return old Mr. Liu came to call in the afternoon. He had told me stories in my childhood. How we children loved him! That day he recounted many amusing things. He described how the people acted on learning of the successful revolution. All the queues in the city vanished overnight. Young people bought foreign clothes and looked like monkeys in them. And how the short skirts and bobbed hair invaded the city later on! But for him the cutting of the queue that had grown on his head for more than seventy years was sufficient support of the revolution and the Republic. At first he wondered how the world could go on without an emperor sitting upon the dragon throne in Peking, but after some time he was sure that a republic with a president had the same power of maintaining peace and order in the country. At any rate, he said, "Heaven is high above and the Emperor is far away." It was up to the local authorities to do their job of maintaining peace, and they did it well.

When the Taipings had invaded the city some half century before, he said, heads went off shoulders with the queues. Now we lost only our queues and retained our heads. Talking thus, he touched his grey

head with his bony fingers in such a comical way that it made everybody laugh. At dusk, after an early supper, in taking his leave he happened to slip on the steps leading to the courtyard. Someone rescued him, holding him up by the arms. He shook his head and joked, "Three thousand years ago Grandfather Chiang at the age of eighty met King Wen and helped him to build a new kingdom. Now Grandfather Liu at the same age may meet King Nian of the other world and help him to govern his invisible realm." He laughed heartily and went away in good spirits.

Several days later word came that "Grandfather" Liu had passed into the invisible realm. For me, I lost my childhood friend and old companion, and there were no more stories from his endless fountain of wit.

A school which my sister and I had established some fifteen years earlier had been turned into a district government school for girls. A hundred girls or so were studying there. They ran and laughed in the playgrounds and rode high in the air on the swing. A new generation of womanhood was in the making. They played Western tunes on a portable organ; "Swanee River" and "Tipperary" and popular Chinese tunes were wafted through the doors and over the walls.

I stayed at home about a week and then went to the country to pay a visit to the village of the Chiangs. There the children of my childhood had grown to maturity. The grownups of older days had come to old age, their hair turning grey. The old people of days gone by had retired to their graves, except for a few who were still alert, witnessing the turns of fortune in the village.

The village did not look as bad as I anticipated. The banditry of early days had subsided, for people had now adjusted themselves to new trades and many had gone to Shanghai, which was able to accommodate larger numbers as commerce and industry expanded. Change, like birth, gives pain, but after the delivery the mother comes back to her normal state and feels happy with the newly born. Change that China had once hated had come to stay, ever deepening and widening, until she was constantly on the onward march—whither

and for what purpose her teeming millions knew not.

My aunt whom I called the Great Mother had been bedridden for months. She was very happy on seeing me, made me sit by her side and stretched out her feeble hands to touch mine. She told me all about the births, marriages, and deaths which had occurred in the village in the last sixteen years. The world was not the same as before, she said. So many changes and so many new things had come in. Women did not weave and spin any more because foreign cloth was much cheaper, and better too. They had not much to do now; some spent their time in quarrels with their neighbors and others devoted themselves to Buddha. The younger ones went to school. Girls made hair nets and crocheted napkins to be exported to America. There was good money in it, she said. The boys were sent as apprentices to factories and machine shops in Shanghai. They took to new trades and made more money. There was now a dearth of farm hands in the village, but there were no more bandits. Tranquility and peace had come to stay. When dogs barked at night people did not have to be anxious for their safety as they had ten years before.

But something very bad she noticed in the girls and boys who had been in schools. They called the worship of gods a superstition. They said that the burning of paper money before our ancestors was silly. To them there were no kitchen gods. All the images of gods in the temples were only blocks of wood and lumps of clay. They thought these images ought to be flung into the river, so as to banish superstition along with them. They said girls had the same rights as boys. The girls said they had the right to marry by their own choice, and to remarry after a divorce or the death of their husbands. The foot-binding of old days was a cruel and inhuman practice, they said. Foreign pills were much better than Chinese herbs. They said there was no such thing as ghosts or transmigration of the soul. Nothing would be left after death but a heap of chemical compounds. They said the only immortality was to render services to the people and the country.

She shook her head and sighed. "Do they teach these things in

America?" she asked. I smiled. Apparently she did not like my smile. Perhaps she suspected that the crazy Americans were responsible for teaching Chinese boys and girls these silly notions, for she told me that an American missionary lady had come some time earlier to tell her not to worship idols.

A fat black cat leapt up on her bed and began purring around her pillows. "Are there cats in America?" she asked feebly. I said yes, and saw that she was already asleep. I left her with the purring cat whose soft paws rested upon her pillows and touched her cheek.

My niece, who had been listening all the time, ran out after me. She put her tongue between her teeth for a moment and said mischievously, "Grandma is too old for the change." After a month or so the old lady left this crazy, changing world.

I went to visit with another aunt of mine, whom I called Third Mother. She was a strong elderly lady. Her husband, my "Third Father," owned large farms. There were chickens, ducks, geese, and pigs in abundance. My aunt told me the tragedy of a childhood friend of mine who had speculated in gold in Shanghai and incurred heavy losses. He had lost his job and retired to his home village. The year before, he had committed suicide by taking a big dose of opium. His widow and children were destitute and one of the children had drowned in the canal while fishing for shrimp under the big soap tree.

My aunt snatched a big fat capon which struggled and screamed in her hands and dressed it herself. Later a delicious chicken dinner was served, with fish and shrimp in addition.

My uncle told me that people had used chemical fertilizers for cabbages the year before, and these grew to such enormous size that they thought the abnormal growth must contain poison. So they pulled them up and threw them away. But he kept his, bought them cheap from others, and salted them. They were tender and delicious. A wise old man he was.

An old woman who had held me in her arms when I was a baby came to the village to see me. She must have been over ninety and

was partially deaf, yet had walked from her own village some four miles away. She examined me from top to toe and was satisfied to find nothing strange about me. This big boy was once a small, skinny child, she said, and very naughty. He bit his own brother on the knee and left purple marks on it. Then he cried and blamed his brother's knee for having hurt his teeth.

"Do you remember the two brothers who divided their father's property into equal parts when he died?" she asked. They had each got a wing of their father's house and had set a bamboo partition in the middle of the hall, which was thus evenly divided so that each could get an exactly equal portion. One kept a cow in his part and the other retaliated by making his a piggery. They even sawed the boat in two equal halves. The wicked brothers—may the gods curse them! Then there came a fire and turned their house into ashes. Heaven must have eyes.

They sold the lot and a big house of foreign style was later built on it. It belonged to a rich merchant who was in business in Shanghai. When the house was completed she paid a visit to it and got into such a labyrinth of passageways and stairs and doors that she was confused and could not find her way out. She tried the soft chairs and spring beds and was frightened when she sank deep into them. The most curious thing to her was the machine which the owner of the house had brought from Shanghai. When the wheels turned swiftly it lit up bulbs all over the house. The night was as brilliant as day.

The boy who took charge of the machine was the son of her neighbors. He had learned to operate it in Shanghai. She would never have thought that stupid boy could manipulate such an intricate piece of machinery. She stood far away from the swiftly turning wheels lest she be caught and turned into sausage or tough meat balls.

Another curious thing she noticed was that there was no Kitchen God in the kitchen. And the family worshiped no ancestors. The kitchen gods she did not mind so much, but how could a family have no ancestors? The master of the house believed a sort of religion which precluded the worship of other gods. She would not like to

belong to that religion, because she wanted to go to any temple she chose and worship any gods she wanted to. She wondered how a god could be so jealous as to forbid people to worship other gods. She was willing to worship that god, for the man in his temple gave her quinine pills which cured her malaria last summer; but she wanted to bend her stiff knees to other gods also to ask for blessings.

She said she had scarcely enough to eat and often went hungry. My father gave her a monthly allowance in rice as a charity, but since her orphaned granddaughter had come to live with her the small girl ate a portion of it. I pulled out a twenty dollar bill and squeezed it into her hands. She scurried away happily, muttering, "From his childhood I know he is a kind-hearted boy, a kind-hearted boy."

Late one afternoon I made a visit to my mother's tomb. A pair of candles and a bunch of incense sticks were displayed before it. The air was still and streaks of smoke from the incense went straight up in the air. Instinctively I bent my knees to the ground and kowtowed. My childhood memories revived. Everything seemed to have happened only yesterday. I felt as if I were still a child paying respects to my mother. I wished her spirit could welcome me with open arms and caress me. I wished I could curl up on her lap and listen to her soothing lullabies. All my thoughts and feelings reverted to childhood days. My mother had died when I was only seven, so I had not much experience in mother love. Perhaps an imaginary mother was even tenderer and sweeter than a real one. A dead mother could not spank you and would not get cross with you when you were naughty.

From the village I walked some three miles through the rice fields to the railway station, on the banks of a placid lake, the reservoir that irrigated thousands of acres of land. It is surrounded on three sides by mountains famous for berries and bamboo shoots. Here I took a train to the bank of the Tsao-ao River. The railway bridge was uncompleted, for the materials ordered from Germany had been held up by the war. Construction of the railroad to Hangchow had also been suspended. A steamship line supplied the missing link. Most travelers took steamships and left the small boats struggling for

existence.

I arrived at the Chien-tang River late in the afternoon and crossed it in twenty minutes by a steam ferry. The rowed ferryboats of my high-school days had disappeared.

By sunset I found myself in Hangchow, comfortably settled in a hotel overlooking the West Lake. The sun was sinking behind the thunder peaks, casting red, golden, and purple beams up into the sky. On one side the needle-sharp Pao Su Pagoda stood clear on the mountaintop in the evening light, while directly opposite, in the valley across the lake, the squat Thunder Peak Pagoda was silhouetted against the distant shady blue mountains. Tiny pleasure boats dotted the rippling lake. Fish splashed in the water. Birds flew homeward. Villas and temples perched on the mountainside were gradually enveloped by a thin veil of evening mist, leaving only the streams of smoke from their chimneys standing motionless in the still air. An utter peacefulness stole over me. Despite all modernism, the West Lake retained its enchantment as of old.

But things had changed. My reverie was soon broken by the tapping of the high heels which adorned the short-skirted, bobbed-haired young women of fashion parading the lake boulevard. This new section of the city had been during my school days the seat of the Tartar or Manchu garrison. The Revolution of 1911 had razed it to the ground and upon its ruins a new town had been built, with wide streets and ugly-looking buildings in semi-foreign style. In place of medieval barracks, restaurants, theatres, wine-shops, and tea pavilions had sprung up, and an amusement park, all catering to weekend tourists who came by railway from Shanghai. Hangchow had become a tourist center.

Chekiang College, which I had attended years before, was closed and the buildings had been turned into offices for the new governor. The once-palatial yamen of the Imperial governor had burned during the revolution, leaving a vast rectangular space in the heart of the city overgrown with wild plants and grass.

Revolution had come to Hangchow without shedding a drop of

blood. The commanders of the new army met and sent a few pieces of light artillery into the streets in the dark of night. Without firing a shot they forced the Imperial governor of the province to surrender. The army then set his yamen on fire as a symbol of the revolution and the city was lit up with its flames. The Manchu garrison entrenched itself in its own walled city but surrendered after negotiations in which it was promised that no one would be molested. Mr. Kwei Han-hsiang, a Manchu leader, accepted the terms on behalf of the garrison. He was, however, seized by his personal enemies and shot, on the false charge that he was plotting a revolt. It was a case of sheer murder. The newly elected governor, Tang Shuo-chien, a famous old litterateur, was indignant over this cowardly act and threatened to resign, but the matter was patched up until he was called to Nanking to take up the portfolio of Minister of Communications under the presidency of Dr. Sun Yat-sen.

Northeast of the modern town which had replaced the Manchu city, rows of shacks, totaling five hundred rooms, had been erected to house the families of the former garrison. Some had already melted away into the vast ocean of China's multitudes and left their houses vacant. In the course of a few years all the remnants of the once-conquering race had vanished into the common stream of life of the once-conquered. The Manchus were gone forever. Pictures of their lives still linger in my memory, but the stories about them have sunk into folklore. It is left to history alone to tell the rise, decline, and fall of the Manchu Dynasty.

The quaint old teahouses at which I used to sip my tea quietly with the lake view filling the windows had disappeared in the face of the diabolic modernization; only one or two lingered to recall the memories of the good old days. This was the kind of time-mellowed teahouse I still loved to frequent. I would go there and read Tang poems over a cup of Hangchow tea. It took one back to the dear old days.

I have said that the city was the center of the silk industry. Some factories had introduced textile machines, but many of the smaller

establishments still retained the hand looms. A college of engineering had been established in which practical courses in textiles were given. Graduates who had taken courses in mechanical engineering set up small machine shops in the city, with machines run by electricity. The city now had electric light and a telephone system. Hangchow seemed on the eve of industrialization.

I stayed for about a week, visiting many historical sites to refresh my boyhood memories. As I wandered away from the center of commercial activity I found the old life less affected by modernization. The charm of old days still remained intact in the mountain regions and out-of-the-way villages. The monasteries surrounded by tall trees and bamboo groves stood as calmly as they had centuries ago. The life of the monks had undergone little change; they chanted their Buddhist hymns as before. The villagers raised their tea and mulberry leaves as their forefathers had done. A few imported articles were to be seen here and there, but the quantity was negligible. However, the spearhead of future modernization had already reached them—in the schools, where modern textbooks were in use. The mental attitude of the coming generation was changing, under the influence of modern education, in spite of unchanged ways of living. Seeds of new ideas sown in the minds of the young were bound to sprout in the course of time.

CHAPTER 13 WARLORDS

In my youthful days I noticed that civil ranks came invariably above the military. Imperial officers wore buttons of different colors at the tops of their red-tasseled hats. The red button was highest in rank; next came the pink, then dark blue, brilliant blue, white, and finally golden, the lowest. Often my wondering eyes watched a military pink-button, though higher in rank, bowing before a blue-button civil official. It was explained to me that the Imperial system had chosen to put the military under control of the civil in order to eliminate the evils of military dictatorship in the country. Through centuries of history we had learned that when the country came under the control of warlords it was divided into spheres of influence; the authority of the Imperial Court became a mere shadow and peace and order vanished like a bubble. We learned this lesson from the later Tangs. Thus there was a popular saying that "good iron is not to be beaten into nails, and good men are not to be made into soldiers." We were taught to look down upon soldiers. I remember that a man of questionable character in one of our neighboring villages joined the army, and when he came home on leave we used to avoid him like a plague. It was borne in upon us that soldiers were a bad lot, something to be despised, feared, and detested.

On the other hand, when a country sank into military impotence it lost all power of resistance before the onslaught of powerful invaders; thus it was that the Sungs fell into the hands of the Mongols and the Mings into the hands of the Tartars. So we were between the devil and the deep sea. What should be our choice?

China must be saved—saved from powerful invaders by land on the north and by sea from the east and south. What, then, was to be done? Build up a modern army in which modern weapons of war would be employed and soldiers well trained and imbued with patriotism. How could we look down upon soldiers? They were the defenders of the land, the saviors of China from partition by the

Western Powers. Despise them? By no means—we must elevate and honor them, even worship them. Or who would join the army?

Our people began to argue in their minds. As necessity is the mother of invention, we organized a modern army with imported weapons, modern uniforms, and military bands. Once I saw such an army on the march, bugles blowing, drums beating. It was inspiring. I imagined myself grown up and joining them in the march—marching to victory! Meanwhile I found my real self standing among the silent crowd and watching, overwhelmed with joy. It was my first glimpse of a modern army. Yes—we must honor the soldiers and the commanding officers. Hereafter only good men should be made into soldiers. We must depend upon them to regain the past glories of China. In the old armies of yesterday the soldiers wore jackets and carried bows and arrows, or in some cases obsolete guns discarded and sold to China by European countries. How different from the modern army of today!

While I was studying at Chekiang College in Hangchow I saw a former student who had just come back from a military academy in Tokyo on a visit to the college. He was in military uniform, spick and span, carrying a sword in its shining sheath. A future great general of the Chinese army—how our hearts rushed out to him!

There were a number of embryo generals of that kind who came back from Japan and were entrusted with the duty of organizing new armies. In the course of a few years army units had been organized and stationed at various strategic centers in the country. China was armed, armed to defend herself.

Then came the Revolution of 1911. The revolutionary armies were perhaps not so well trained as the government armies, but commanders and men were full of patriotism and ready to sacrifice their lives for their country. The new armies of the government went over, one after another, to Dr. Sun Yat-sen. Within a few months the agelong Imperial regime had vanished like a ghost at the least rustle of leaves into the dark night. Waves of enthusiasm spread far and wide over the country. China was reborn with little regret for the past

and great hopes for the future. Let the Manchus lament their mistake in forming a new army, and let the people be overjoyed by the splendid actions of these modern-trained generals.

But the hour of triumph passed. The candle flickered out in dark streaks of smoke. The generals of the new army had little pity for the Manchus and less love for the revolution; they had tasted power and resolved to keep it. As appetite grows with eating, they longed for larger and higher power, and so fought among themselves for it.

Dr. Sun Yat-sen had returned to China in 1912. After negotiations between the revolutionaries and the Peking government the dynasty agreed to abdicate and the Republic was established. Little Pu-yi was allowed by agreement to retain residence in the Forbidden City, ancient palace of the emperors of China. A constitution was to be drafted, providing for a President and a National Assembly; meanwhile the Provisional Assembly elected Dr. Sun Yat-sen Provisional President of the Republic.

After a short time he resigned in favor of Yuan Shih-kai, who was later elected President by the National Assembly, more or less through coercion and intrigue. Political power again slipped into the hands of the reactionaries. Yuan was a mandarin of the monarchical regime who had begun the training of a modern army. He had fallen into disfavor with the Imperial Court but had been recalled to Peking when the revolution broke out.

Dr. Sun believed that the most important service he could render China was to build railroads; he was content to be at the head of China's national railways and let Yuan Shih-kai hold the reins of government. But he was soon to be disillusioned. When Yuan came into power he knew very well that his strength lay in the army under his control. The National Assembly he regarded as a mere necessary evil; so long as he controlled the army it could prove at worst no more than a nuisance to him. With strong armies behind him the new head of the state usurped all sorts of powers that did not properly belong to the President. He employed methods of intimidation and resorted to the dastardly means of assassination. Politically, he knew the trick of

"divide and rule" and fostered dissension in Dr. Sun's Nationalist, or Kuomintang, camp. He went further and encouraged political parties to multiply, so that the influence of the Nationalist party would be further reduced.

Then he took steps to remove its military power. He first assassinated its political leader, Mr. Sung Chiao-ren, on his way to Peking from Shanghai. Then he removed all the Nationalist military governors of the southern provinces by a stroke of the pen, thus provoking those provinces in order to crush them. Dr. Sun Yat-sen attempted a second revolution, but failed. Yuan Shih-kai had by this time almost the whole country under his military control and took steps to disqualify the Kuomintang members of the National Assembly on account of the "rebellion." With the south crushed his appetite grew; he longed for more power and glory. In 1915, as he was about to proclaim himself Emperor of a new Chinese Empire, the provinces revolted, whereupon he abandoned his monarchical scheme and soon died, broken-hearted.

In 1917 Dr. Sun Yat-sen finally entrenched himself in Canton, hoping to form a nucleus of an army in preparation for a new revolution to dethrone the warlords, only to find himself overthrown in 1929 by the warlord of Canton, Chen Chun-ming. In the next year, however, he succeeded in organizing a new Kuomintang government there, in a reinvigorated Nationalist movement to which the Russians gave some assistance after an agreement between himself and an unofficial Russian adviser. But this was only a beginning. After the death of the ambitious and unscrupulous Yuan Shih-kai the country as a whole remained divided among the warring provinces and political turmoil continued for twelve long years until Generalissimo Chiang Kai-shek unified it in 1928, after the triumph of the Nationalist movement.

For sixteen years after the founding of the Republic China was in the grip of warlords. One civil war after another, often supported by foreign interests, devastated the country, bringing innumerable hardships to the people and paving the way for Japanese aggression.

The cause of revolution seemed to be doomed. Victorious generals, elated, reached for more and more power. Wounded lions and tigers fell in ignominy and with their tails between their legs limped into the foreign concessions or settlements of Tientsin or Shanghai to lick their wounds and wait for opportunities to come back. When opportunity came they sneaked out, entered the arena again, and caused more suffering to the people.

The soldier, who had been once despised and then honored, was now again despised.

CHAPTER 14 INTELLECTUAL AWAKENING

From Hangchow I went to Shanghai, where I entered the Commercial Press—the largest publishing company in China—as one of its editors. Board and lodging were accorded me at the headquarters of the Kiangsu Provincial Education Association, in return for which I served as a member of the executive committee. But I was not yet old enough to be pinned down to a desk and resigned at the end of a year. My financial arrangements with the publishing company were cleared within another year.

Together with friends I began to issue a monthly, *The New Education*, published under the auspices of the National University of Peking and the Kiangsu Education Association. I was editor-in-chief. Six months after its inception the magazine had reached a circulation of ten thousand. Its chief aim was to "develop individuality and attain social progress." Encouragement of liberal ideas as against purely traditional thought was what the monthly stood for.

These were the times immediately after the European war when liberalism and democracy were in vogue all over the world and Wilsonian ideals had caught the imagination of the thinking minds of China. Chinese youth was imbued with the new ideas that came in torrents from postwar Europe and America. Newspapers and magazines devoted large sections to international news and developments. China was beginning to think with the world.

La Jeunesse, a radical magazine launched by Chen Tu-hsiu some years before and then taken up by a group of professors in the University of Peking, was advocating democracy and modern science for the rejuvenation of China. In introducing new elements of thought it was quite natural that they should fiercely attack the old beliefs and traditions. Some contributors even went so far as to cry "Down with the Confucian shops!" While all this evoked strong antagonism from the reading public, the youth of the country caught the spirit of the

intellectual revolt.

In 1918 Dr. Sun Yat-sen came to reside in Shanghai. As we have seen, the government of the young Republic was having its ups and downs and had come partially under the sway of independent warlords. The Kuomintang, or Nationalist, party of Dr. Sun was strongest in the south and here, in 1917, a government was set up, separate from the Peking regime, to maintain the principles for which the revolutionaries had labored and re-established them throughout the country. Now, however, the veteran leader left his southern government in Canton under the control of a Directorate. The political views of its members did not go beyond their noses, a brevity of outlook to which Dr. Sun could not subscribe. So he settled down in Shanghai to work on his plan for the industrial development of China.

His vision carried him far beyond the political squabbles of the time and his plan, if successfully carried into effect, was one which would relieve the poverty of the people, bring prosperity to the country, and put China on the level of modern industrialized nations of the world. According to Dr. Sun, China's industrial reconstruction fell into four categories: clothing, food, shelter, and transportation. All are necessary for the livelihood of the people and with these elements in view he planned the industrial development of the country.

He worked out a system of railroads and highways to cover all important commercial and military routes in the vast territory of China. He planned ports and harbors through which China's future commerce could flow abundantly. He outlined a project for river conservation, irrigation, and reclamation which would feed millions more in the country. He worked out a scheme for the development of natural resources and for the building up of both heavy and light industries. Seeing China far on the road of deforestation, he made plans to reforest great areas of central and north China.

He laid down two principles or categories under which industry was to be developed: (1) that which could be maintained as private enterprise was to be under private ownership, while (2) that which was beyond the capacities of individual citizens to undertake, or

tended to create monopoly, was to be under state ownership. The government was to encourage private enterprise and to protect it by law. Obnoxious taxes must be abolished, the currency system must be improved and unified. Official interference and obstacles must be removed and communications developed to insure an easy flow of trade.

Railroads and highways, river conservation, irrigation, and reclamation, ports and harbors and the like, were to come under state control. The government was also to develop coal and iron resources in Shansi, and establish iron and steel works on a large scale. Foreign capital was to be welcomed and foreign experts employed.

Dr. Sun Yat-sen was the first Chinese statesman to have modern scientific training. His knowledge of scientific data and his mathematical accuracy were amazing. In planning China's industrial development he himself drew up maps and charts and collected his data and checked them carefully. He was familiar with such details as the depths and gradations of the riverbeds and harbors which came under his plan. Once I gave him a map of the Huai-ho Conservancy; he at once spread it on the floor and began to study it seriously. Later it was seen hanging on the walls of his study.

After a careful investigation of the various phases of industrial reconstruction and how they might be dealt with, he wrote it all out in English. Madame Sun Yat-sen did all his typing, while David Yui and I were entrusted to go over the manuscripts carefully. Data were checked over and suggestions gladly considered. Any project that Dr. Sun worked on, political, philosophical, scientific, or whatever, was carried out with great enthusiasm. His broad-mindedness echoed every suggestion or criticism that was offered him.

Because in his views and plans he was ahead of his time he was often exasperated at the shortsightedness of his contemporaries, who frequently dismissed his projects with the proverbial saying, "It is easy to know but difficult to do." From the beginning of his revolutionary movement some forty years earlier he had met with the same stubborn obstacle. So he wrote an essay on "Psychological Reconstruction for

China" in which he advanced the theory that it is difficult to know but easy to do. Here he brought out a significant difference between Chinese and Western thought. The practical-mindedness of his own people often unduly emphasized the difficulties—imaginary or real—that lay in the way of practice, at the cost of neglecting the principles underlying the practice. A mind used to handling abstractions and generalizations and familiar with the process of seeking out the basic principles involved in any problem would find it easy to understand what Dr. Sun Yat-sen had in view. For minds, on the other hand, habitually intent on short-range practical results and impatient of deeper effort it was difficult to appreciate what he stood for. In China, during the declining days of the Imperial regime, men of strong will and determination to carry out reforms were not lacking, but those who perceived underlying causes and could lay plans which would strike at the root of things were rare. Dr. Sun, who possessed a clear understanding of the development of Western civilization as well as vision for the future development of China, could not but appreciate the importance of the kind of knowledge which implies foresight, or seeing beyond immediate needs, and a clear understanding of problems.

Once knowledge of this fundamental sort is secured there is no inherent difficulty in carrying it into effect. The real difficulties lie in discovering it. Indeed, even lacking essential knowledge, if one is willing to follow the direction of those who know, as masons and carpenters follow the architect, he may have no difficulty in executing a complex plan. Thus it is very plain in the field of medicine that to diagnose a case is often more difficult than to apply the cure. A medical student knows well that he must have a grasp of biological sciences such as physiology and anatomy before he is in a position to study medical science, and he has had to learn even more general science, such as physics and chemistry, before studying biological sciences. And each science is the result of centuries of research by men who have loved knowledge. Therefore it is very clear that the process of learning medical science is more laborious than the practice of medicine.

Dr. Sun's practical-minded contemporaries wanted to get things done without taking much interest in studying the underlying causes of conditions in China in the light of knowledge gained from history, sociology, psychology, science, or the like; or making plans for the country accordingly. They branded his plans as visionary and impractical. Unaware of the problems which lay beyond their "practical" mental horizon, they did not realize that their own difficulties usually arose from lack of knowledge, or an insufficient or superficial knowledge of problems—certainly, in any case, not alone from lack of practical ability. What they thought they knew was often limited to immediate personal experience or empirical reasoning. Such knowledge is not only easy to obtain but dangerous as a basis for practice.

To the Western mind these are mere philosophical squabbles of theory and practice, or knowledge and conduct—and what have they to do with revolution and reconstruction in China? Yet Dr. Sun Yat-sen was very serious about it, considering psychological reconstruction the first step to successful reconstruction in other realms, whether political, industrial, or social. "Overpractical becomes impracticable," Professor Dewey said to him. "No one in the West would think that 'to know' is an easy matter."

Amid the revolutionary atmosphere of the intellectual world and my own inspiring contact with Dr. Sun, *The New Education* stood pedagogically for initiative, the needs of children, and much that John Dewey stands for in his *Democracy and Education*. As regarded Chinese principles of education, it stood for Mencius' ideas on human nature: that it is good. Hence education means a proper development of what there is in the child. As a matter of fact, in its main current Chinese education had followed since Confucius the principle that human nature is all-good. The trouble was that as the centuries accumulated, what is good in human nature came to mean certain moral precepts shrouded in age-worn tradition. Thus while in theory it was very modern, in practice it might lead miles away from original principles. "Development of nature" may in fact come to mean mere conformity to traditional morals, and this is what happened in China.

With the introduction into Chinese thought of Rousseau, Pestalozzi, Froebel, and later Dewey, the Mencian principles came into better perspective and shed a more living light. Children of China were to be set free of hard and fast rules of conduct and traditional moral ideas incongruous to modern society. Thus children must be led to think for themselves and helped to solve their own problems in accordance with their needs and not those of grownups. They should be led to an interest in nature and in their environment. In accordance with the principles of child psychology, a child must be treated as such; he is not a little man and must not be stuffed with knowledge only, much less with books. Education should help a child to grow—mentally, physically, and socially.

Such were the lines of thought that guided the policies of *The New Education*. As the reader will easily see, it fell in line with the current revolutionary thought of the country. The intellectual ties between *The New Education*, and the professors and students of Peking University, the whirlpool of intellectual revolt, drew me the next year to that much-troubled institution as professor of education and Acting Chancellor.

CHAPTER 15 PEKING UNIVERSITY AND THE STUDENT REVOLT

If you throw a stone into a body of still water, rings of waves begin to rise and travel farther and farther, ever widening and extending away from the center. In Peking, capital of China during five dynasties and more than ten centuries—the seat of conservatism where the Empress Dowager ruled the country from her dragon throne—stood the oldest modern institution of learning in the country, known as the National University of Peking. It was the only landmark left by Emperor Kwang-hsü's short-lived reforms of 1898. The brief tide of reform had ebbed and vanished into history; only a few scattered shells remained, witness to the vicissitudes of fortune in that placid ancient capital. But the university, in which were clustered the living shells that contained pearls, was destined to make valuable contributions to culture and thought within the short span of one generation.

The man who threw the stone of intellectual revolt into that placid water was Dr. Tsai Yuan-pei, who in 1916 became Chancellor of the university. Dr. Tsai was an eminent scholar of China's ancient culture, but imbued with the spirit of Western scholarship and especially the spirit of free inquiry which prevailed in the Hellenic world. His belief in "knowledge for knowledge' sake," in contrast to the "learning for its practical use" of Chinese thought, had its foundation in a thorough knowledge of ancient Greek culture. His views on knowledge were essentially the same as those of Dr. Sun, but the latter had acquired his outlook from the natural sciences, Dr. Tsai his from a study of Greek philosophy.

This renowned scholar preferred the appreciation of beauty to belief in religion. Here we find an interesting blending of Greek and Chinese culture. The traditional love of nature of the Chinese scholar and the Greek sense of beauty working together in Dr. Tsai's mind resulted in a love for Western sculpture and Chinese carvings; Chinese

landscape painting and Western portraits; both Chinese and Western architecture, and Chinese and Western music. His views on religion were essentially Chinese: religion is but part of morality. He wanted to elevate the moral sense of youth to a higher level by love of beauty. It was an ancient Chinese belief that there is no greater moral force than that of music. Good morals had their foundation in well-balanced emotions, which could only be brought about by the fine arts and music or poetry, which is closely allied to music.

Dr. Tsai had great faith in natural science. He not only trusted it to yield inventions, engineering, and other benefits, but believed it would foster the mental habits of methodical thinking and research which led to the discovery of general truths, the foundation of all true knowledge.

In his younger days his brilliance was less veiled in modesty. When he was principal of the Sino-Occidental School at Shaoshing which I attended in my boyhood, one evening at a banquet, after a few cups of Shaoshing wine, he stood up and announced at the top of his voice that the reforms of Kang Yu-wei and Liang Chi-chao were too superficial, since they retained the Manchu court to lead them. "I, Tsai Yuan-pei, will not do that. Unless you overthrow the Manchus no reforms will be possible!" He shouted it out, raising his right arm over his head.

Dr. Tsai in his early years wrote essays full of brilliant and stimulating ideas contrary to the common practice of writing in the days of civil examinations. My uncle King told me of a strange essay of his which began, "In sex, food, and drinking human desires lie." He handed in his paper to the Imperial examiners after the time limit. The night was getting on to the small hours and the eyes of the examiners were heavy with sleep. His paper was accepted and he passed the examination for the Second Degree—Chu-jen, or the Promoted Scholar. In the following years he achieved the Third or highest degree—Chin-shih, or Advanced Scholar—when still under thirty. He subsequently entered Hanlin Academy, composed of the highest ranking scholars, which has since ceased to exist.

In his later years he was the personification of what is best in a Chinese scholar, with a broad mind open to Western ideas. His eyes, looking over his spectacles, were alert but calm; his speech easy, clear, fluent, and sincere, though often drowned in a monotone. He never let harsh words cross his thin lips, but when he was indignant his utterance was quick, weighty, and concise—as clearly to the point as a judge rendering judgment or a dagger popping out from under soft velvet cotton.

He was of a light build but his movements were steady. His artistic fingers would run deftly through the pages as he read, as if he read by paragraphs, even by pages, his quick sight grasping essential points and his retentive memory keeping knowledge in store. His love of nature and the arts made his emotions tranquil, thoughts lofty, tastes refined, manners sincere and modest, and ways of living simple and retired. His broad-mindedness was as responsive to every shade of opinion, criticism, or suggestion "as a hollow in the mountains that echoes with every vibration of sound."

In such a scholar the government of Li Yuan-hung, then President of the Republic, found a chancellor for the university. Under his administration the institution underwent a radical change. Science was put on an equal footing with literature, which had reigned in the realm of knowledge in China from time immemorial. History, philosophy, and the classics were studied in the light of modern scientific method. The spirit of knowledge for its own sake was encouraged. Scholars of old conservative schools, new schools, and radical schools were all given an equal chance. Old literati with queues hanging down their backs who still retained faith in a monarchical regime sat shoulder to shoulder with men of radical thought, discussing problems, joking and laughing at the same dinner table. Free inquiry into problems, of knowledge, culture, family, social relations, and political systems was found in the classrooms, seminars, and social gatherings.

It was the intellectual life of ancient China of the pre-Ching period or ancient Greece of the times of Socrates and Aristotle re-

enacted. Dr. Tsai was the old, wise Socrates of China, and would have suffered the same fate had he not had sympathizers on a nationwide scale, especially among the Kuomintang members who had a strong hold in Canton. Yet by conservative Chinese and foreigners alike the university was accused of advocating "A-three-ism"—no religion, no government, and no family—just as Socrates was accused by the ancient Greeks of corrupting the souls of young men. No argument could dispel these unfounded suspicions. History alone would disprove them, as it has absolved Socrates.

I have said that Dr. Tsai advocated esthetics as a substitute for religion, and free inquiry as a means of approach to truths. Mr. Chen Tu-hsiu, Dean of the College of Literature, advocated science and democracy as the twin weapons to modernize China. Free inquiry led to freedom of thought. Science sapped the old beliefs. Democracy meant the assertion of popular rights. Meanwhile Dr. Hu Shih, professor of philosophy, worked for a literary revolution by which the language in common use by the people was to replace the classical language as a medium of thought and expression. The colloquial, or common written language, is nearer to the Chinese spoken language and therefore easier to learn, to write, and to understand. It is a better and easier medium for the expression of thought. Its use was to popularize knowledge, hitherto a monopoly of classical scholars. The movement developed a host of young writers throughout the country. After a few years the Ministry of Education made compulsory the use of the vulgate as a medium of instruction in all elementary schools.

The university was an oasis in the intellectual desert of Peking. But the seeds of intellectual revolt grew in that small green spot with remarkable rapidity. Within three years the whole institution was filled with it.

In that vigorous atmosphere of intellectual activity a mental and moral unrest developed among the students. I have related earlier how, under the influence of French eighteenth-century political idealism with its catchwords of Liberty, Equality, and Fraternity, and as a revolt against established authority which the youth of the nation

believed responsible for retarding China's progress and thus inviting the encroachment of foreign Powers, students had gone on strike against their school authorities upon the slightest pretext. This first happened in Shanghai in 1902. The first student revolt had spent itself in the course of a few years and degenerated into strikes against the school cooks. In the end the authorities outwitted the students by handing the management of the kitchens over to the student body. Isolated cases of strikes still persisted for some years. In one instance this ended in tragedy when a dozen students in the provincial high school at Hangchow died of arsenic poisoning which the cooks put in their rice as a revenge. I went to the school after the outrage and found a large number of youths moaning in their beds, while a dozen caskets stood in the open-air gymnasium waiting for relatives to take them for burial.

While the spirit of revolt in the form of school strikes was gradually spending itself, its force turned inward into revolutionary ideas which gained much wider ground outside the schools in the form of a political revolution, resulting ultimately in the downfall of the Manchus in 1911.

The second student revolt burst out suddenly in Peking on May 4, 1919, the eighth year of the Republic. What happened was this. From the peace conference in Paris news reached China that Tsingtao in the Shantung Peninsula, a German-leased port taken from German hands during the war by the Japanese, had been awarded to Japan by the victorious Powers. As China had declared war against Germany, the leased territory should in all justice have been returned to China. The whole nation was indignant over the news. Students in Peking, under the leadership of the National University group, demonstrated against the signing of the Versailles Treaty. Three thousand students held mass meetings and paraded in the streets demonstrating against acceptance of the terms, shouting "Return Tsingtao to China!" "Boycott Japanese goods!" "Down with the traitors!" Banners streamed in the air bearing the same slogans.

The Peking government, despite the efforts of Dr. Sun Yat-sen's

Kuomintang or Nationalist party in Canton and its adherents elsewhere, was still under the thumb of military men and ruled China with a mere semblance of the democracy and parliamentary procedure which the revolution had labored so earnestly to establish. Among its influential high officials were three members of a notoriously pro-Japanese group. Their sympathies were well known. These men—Tsao Ru-lin, Minister of Communication; Chang Chung-hsiang, Chinese Minister of Tokyo; and Lu Chung-yu, another minister—now became the targets of student wrath. The crowd streamed to the residence of Tsao, where secret meetings were supposed to have been going on; they broke in, and combed the house for the three "traitors." Tsao and Lu escaped by the back door; Chang was caught by the mob and badly beaten. Leaving him for dead, the students dispersed, in their retreat smashing everything in sight and setting the place on fire.

Meanwhile, the armed police and gendarmery had thrown a cordon around the house. They arrested some sixty students and sent them to headquarters. The rest—about a thousand strong—followed after, each claiming individually to have been responsible for the outbreak and asking to be arrested. Finally all were put under heavy military guard in the compounds of the Law College of the university.

News concerning the demonstration was strictly censored. Some students outwitted the government, however, by sending a cable through a foreign agency in one of the foreign concessions of Tientsin, and this cable was the sole source of the news that appeared in Shanghai papers on the morning of the fifth.

I was at breakfast on May 5 when the newspapers reached me. On their front pages appeared in bold letters a news item something as follows:

Students in Peking demonstrated against the signing of the Versailles Treaty. Three pro-Japanese high officials—Tsao, Lu, and Chang—were beaten by the students. The residence of Tsao Ru-lin was burned. Several thousand have been detained under heavy armed guard in the Law College of the National University of Peking. Ringleaders were arrested and their state is unknown.

There were no further details.

The whole city was excited by the news. In the afternoon public organizations such as educational associations, chambers of commerce, and provincial and local guilds sent telegrams to the Peking government demanding the dismissal of the three high officials and the release of the students arrested or detained. Through the following day all Shanghai waited anxiously for a reply from the government but there was none. Then the students of the city went on strike, making the same demands as the public organizations, and went forth lecturing on the streets.

Next morning schoolboys and girls went by hundreds from door to door on Nanking Road, the main street of Shanghai, begging the shopkeepers to go on strike. Some in sympathy and others out of fear closed their doors. Many followed suit in imitation of their neighbors. In about an hour's time all the Nanking Road shops were closed as tight as clams. Police interfered but to no avail.

The shop strike spread like fire. By noon all Shanghai was shut. Thousands of people wandered about the streets and traffic was almost blocked. Settlement police became powerless. Boy and girl scouts went out as police to keep order and direct traffic. To see order maintained in the crowded streets by bobbed-haired girl scouts was something novel in the International Settlement of Shanghai. Both Chinese and foreigners wondered why the crowd willingly obeyed the orders of young boys and girls while showing such an ugly temper toward the police.

Within a few days the student strike had grown into a nationwide movement. Shops and commercial houses closed in all the cities near Shanghai. As Shanghai was the center of commerce in the lower Yangtze Valley, these cities were paralyzed when the heart of the great metropolis ceased to beat, and suspended their affairs, not necessarily out of sympathy for the students.

Settlement authorities were alarmed when employees of the water works and the electric company wanted to join the strike. Through the mediation of the chamber of commerce and student representatives they were persuaded to stick to their jobs. The pressure continued for

more than a week and the Peking government finally gave in. The three pro-Japanese officials resigned and all the students were set free.

With country-wide sympathy behind them, students everywhere were intoxicated by their success. Thereafter there was no peace for institutions of learning, or for the government. The students of Peking, having won their victory, continued to agitate against corruption in the government and the old traditions which, they thought, enslaved the minds of young people. They had won over the government because they had national sentiment behind them. Everybody in China would have liked to join the demonstrations and parades against the signing of the Versailles Treaty. The students, who were better organized, more articulate, more impulsive and less hesitant, took the lead and thus plucked at the heartstrings of the nation.

When the pro-Japanese officials had resigned and the students had been released by the government—when the general strike had been called off in Shanghai and elsewhere—the incident was considered closed, for the time being at least. But the university itself became a problem. Chancellor Tsai Yuan-pei, apparently shocked by the violence, had resigned and quietly left Peking. He went first to Tientsin, then to Shanghai, and finally slipped into Hangchow, where he lived in a friend's house on the historic West Lake, surrounded by gentle hills, enjoying nature as a traditional scholar of the old days. Despite repeated persuasions he declined to go back to the university. He said that he had never intended to incite the students to revolt, but that in demonstrating against acceptance of the Shantung clause of the Versailles Treaty they had acted on patriotic impulses which could hardly be condemned. As regarded the university, he thought that thenceforth it would be difficult to maintain discipline, as the students were likely to be intoxicated with the cup of success. Once they tasted power there would be no end to their appetite. This was the stand he took in regard to the student movement. The belief that he was always ready to encourage a student revolt was far from the truth.

Finally he approved my going to Peking to take charge of the university for him. I consented rather reluctantly. With the heavy

responsibilities thus thrust upon me, I went to Peking in July with one of the student delegates. The student body convened in a mass meeting of welcome, and this was the gist of my first speech to them:

Your patriotic motives in the recent demonstrations are to be highly commended. But if you keep on doing this your valuable time will be wasted and the existence of the institution where you drink at the fountain of wisdom will be endangered. A new nation is not made in one day, and certainly not by demonstrations alone. The demonstrations are trifles in comparison with the work you have to do in classrooms, in the library, in laboratories, and in seminars...

After the storm the clouds began to disperse and a clear day emerged. Dr. Tsai returned to his office in September.

The university was again reorganized, on a sounder basis. The office of dean of administration was created to take charge of the business side of the university. Existing offices were modified and systematized into an organic whole. The dean of faculties was responsible for academic affairs. The Academic Council, members of which were elected by the professors with the deans as ex officio members, was the highest legislative body, empowered to pass on university regulations, grant degrees, and enforce discipline among the students. Various executive committees were set up to perform administrative functions. The university was put on a basis of faculty control. Academic freedom, faculty control, and a fearless spirit of searching for truth were the guiding principles in administration. Student self-government was encouraged as a step to democracy.

For seven long years, in spite of intermittent strikes and demonstrations, the university sailed along under full canvas on the rough sea of political turmoil, with men of courage and foresight at the helm. The number of volumes in the library was vastly increased, laboratory equipment much improved. Scholars of international fame such as John Dewey and Bertrand Russell were invited to join the university as visiting professors.

The two Western philosophers contributed their part to the great intellectual movement in China. Dewey directed the young minds of China to the study of educational and social problems in accordance

with the needs of the individual and society. It is true that the very act of thinking of problems in this way led naturally to the creation of other problems which caused trouble in such a static society as that of China in those days. Hu Han-min, a Kuomintang leader, once told me that it was Dewey's teaching that caused unrest in the schools. But he ignored the fact that there were many student strikes under the Imperial regime during prerevolutionary days; as well as the fact that Dewey's teaching, which interested the students in social problems, thus helped the movement against the warlords later on.

It was due to Russell that young minds began to get interested in principles of social reconstruction, which roused them against both religion and imperialism. To the missionaries and members of the British Legation he was an unwelcome guest. He lived in a Chinese hotel and refused to see officials of his own legation. I heard one of them express the view that his coming to China was a matter for regret. In Peking Mr. Russell contracted a serious case of pneumonia and at one time the doctors gave up hope. On his recovery I heard a missionary lady say, "That's too bad." I repeated it to Mr. Russell, who laughed heartily.

During those days of freedom of thought in China just after the first World War, thinking about either social problems or social principles created storms in the thinking mind and waves of emotion in the feeling heart. This prepared the way for the further introduction of Western ideas from postwar Europe. All the "isms" had full play in China. While the intellectuals on the whole moved along the line of Western democracy, a section of them, inspired by the success of the Russian revolution of 1917, were attracted to the ideology of Marxism. Chen Tu-hsiu, editor of *La Jeunesse*, resigning from his deanship at the University of Peking, became the leader of a Chinese Communist movement. The anti-imperialist movement against Japan also prepared the ground for general sympathy among intellectuals for the Russian Revolution. In 1923 the Third International sent Mr. Joffe to Peking to make contact with Chinese intellectuals, and one evening at a dinner given in his honor at the Chih-ying Restaurant in Peking, Dr. Tsai made a speech of welcome in which he said, "The Russian

Revolution has given great inspiration to the revolutionary movement in China."

Russia had repeatedly announced that she was ready to give back to China the Chinese Eastern Railway[2] in north Manchuria, and wished China success in getting rid of both the warlords and the imperialistic Powers that had a grip on the country. This good will of Soviet Russia toward China was welcomed by all the intellectuals as well as by the people as a whole. Among other things, it paved the way for the growth of Communism in China.

Meanwhile, eminent scientists from European and American universities came to guide students in scientific research. A number of periodicals were issued by the faculties as well as by the students. Music and art clubs, athletic associations, library and science associations sprang up in abundance. A society for the study of Marxian theories was established under the leadership of Professor Li Ta-chao. The student army corps, organized some time earlier to give military training to the students, was growing in size. The university gates were flung open to girls—Peking University was the first institution of higher learning in the history of education in China to accept women on an equal footing with men. Faculty and students, immersed in an atmosphere of academic freedom and free inquiry, worked in unison, happy and contented.

The influence of the university was far-reaching. From every intellectual pebble thrown into the waters of ancient Peking waves traveled to every corner of the land. Even the middle schools of the country—the equivalent of American high schools—copied its organization, introducing freedom of thought and opening their doors to girls. Progressive newspapers, magazines, and political parties echoed every movement of the university. In this atmosphere the influence of the Kuomintang revolution extended far and wide, while at the same time the Communist party began to take shape.

The conflicts of the warlords meanwhile roared intermittently around the ancient capital. In one of these internecine wars the gates of Peking were all closed for almost a week. Fighting was going on

some ten miles outside the city. It usually began at nightfall and lasted until dawn. Once we went to watch the artillery fire from the top of Peking Hotel. It was like watching a fire on the other side of a river; you got the entertainment of a bonfire at the expense of others without incurring the risk of being licked by the flames. A crossfire of tracers spanned the earth in the dark night like multitudes of rainbows crossing each other. The roar of cannon set the roof trembling as if in a mild earthquake. From dusk till dawn there was no pause in the fighting. When I went home to bed I could not turn my ears to the pillow, for the thundering of the cannon seemed much louder that way. So I lay flat in bed with my eyes toward the ceiling and noticed that the beautifully painted shades of the electric lights were swinging slightly. Glasses rattled. Wolfy, my German police dog, kept moaning, unable to enjoy her usual peaceful slumber on the floor. As soon as she laid her ear to the floor, she would start, get up, groan, dart for the door, and scratch it violently, thinking that these abominable sounds came from beneath the floor of my bedroom. The next morning I scolded her for being naughty the previous night. She stared at me with guilty eyes. From the breakfast table I called to her but she did not respond. I never saw her again. Presumably she wandered away in search of a land of peace where no mocking devils would pound the ground at night and she could sleep well. But I am afraid she was sorely disappointed.

On one of those days in the besieged city I took a walk with a friend along Shun-ching-men Street. People went about their business as usual, without a trace of excitement. As usual, people were pulling or being pulled in rickshaws. We turned at Hsi-tan Pailou into Hsi-ching-an-chieh and then into Central Park. The yellow enamel tiles of the imposing towers on the Wu Gate of the palace glittered in the slanting autumn sun against the cloudless blue. We chose a spot under the spreading branches of one of the ancient spruces planted there in rows and squares by early Manchu emperors centuries ago. The air was laden with their fragrance and light winds brushed our faces with the soothing odor. We sat at a table listening to the gossip at neighboring tables. People all talked about the war and wondered

which side was going to win and who was going to have Peking as a spoil of war; all seemed to be utterly unconcerned. What is the use of worrying? Peking had seen many wars and vicissitudes of fortune but remained the same, as the towers of the Wu Gate bore silent witness.

"Let's order a fish for dinner and see whether we get it, with the city gates all closed," said my friend.

A waiter came with a fish wriggling in his hand. "How would you like to have it?"

"Two ways. Split it in half—one half fried with sweet-and-sour gravy spread on top; the other half cooked with bean sauce." The fish came. One of the two halves tasted stale.

"Why, one half of the fish was from a dead one," said my friend to the waiter, who bowed and smiled.

"Oh, I see. The fish sailed in over the city wall. The side that hit the ground was dead, while the other was still alive," I said. When the waiter came back again my friend snatched one of the empty wine jars on the table and showed it to him. "What! You have given us an empty jar."

"Sorry." The waiter was smiling. "The liquor has evaporated." He immediately brought us a new one. Of course both were charged to our account.

We went back home at dusk. That night the fighting ceased. I thought of Wolfy. She must have slept in peace somewhere in the city. The next morning we found the government had changed hands. The palace remained the same. The people went about as usual. The city was undisturbed. The gates were flung open, and thousands of people from the country streamed in with vegetables, meat, eggs, and fish. Donkeys, mules, and camels followed in the wake of the pedestrians. Children gathered empty cannon shells and shrapnel from the battleground and sold them in the streets for a few dollars. Out of these shells we made flower vases.

Many people outside the city lost their property, a number of them lost their lives. I lost my Wolfy.

On the whole the losses to property and life in the various war areas during those long, distressing years were negligible. It was the unsettled state of mind, the disruption of communications, the ruined finances, the disturbances of order and upset of administrative machinery of the government—above all, the obstruction of the tranquil flow of blood in the veins of national life—that reduced China to such a paralyzed state that she became an easy prey to the aggressor neighbor. The division of the country made any nationwide constructive plan for the country well-nigh impossible. Unification was what China needed.

I acted for the second time for Chancellor Tsai when he went for a visit to Europe. At this time a letter from Dr. Sun Yat-sen lauded the movements in the university and ended in the following words: "Lead the three thousand disciples to help the cause of revolution."

Dr. Sun did not live to see his hopes come true, but only a few years later his successor, General Chiang Kai-shek, led the Nationalist army sweeping down from Canton to the Yangtze Valley, then to the Yellow River Valley, and finally to Peking, treading the path psychologically prepared for the new Nationalist victory by the revolutionary movements which had started in Peking and permeated the minds of all classes of people in the country.

[2] Chinese Eastern Railway: 中东铁路, 系沙俄根据从中国所获之特权于19世纪末至20世纪初在中国东北地区修建的一条连接俄国西伯利亚和海参崴(符拉迪沃斯托克)的“丁”字形宽轨铁路, 最初称“东清铁路”、“中国东省铁路”, 后来又称“满洲铁路”、“中国长春铁路”等等。1905年9月, 根据沙俄与日本签订的《朴茨茅斯和约》, 该铁路的长春至旅顺口的支线让给日本, 称为“南满铁路”。1931年九一八事变后, 日本侵占中国东北并于次年建立伪满洲国。此后, 中东铁路实际上由日伪与苏联共管。1933年, 中东铁路改称“北满铁路”。1945年8月, 根据中苏有关协定, 北满铁路和南满铁路合并, 改称“中国长春铁路”, 简称“中长铁路”。1952年12月, 中长铁路移交给中国。

CHAPTER 16 YEARS OF TROUBLES

The students after their May 4 victory were indeed intoxicated with the cup of success as Chancellor Tsai, Dr. Hu Shih, and others had predicted. It was beyond their power or any other power in the country to stop, for the root of discontent lay deep in the political, social, and intellectual soil of China. In the schools the students usurped the right of the authorities to engage or dismiss a teacher. Failing to meet their demands, the administration invariably faced a strike. The students struck against teachers who required a severe examination or stood for sterner discipline. They demanded subsidies from the schools for their traveling expenses during spring vacation, or money for student activities. They demanded free copies of the lecture notes (a kind of course syllabus). It was a matter of trying to get as much as possible out of the school in every conceivable way, never thinking of their duties toward it. They were intoxicated with power; their selfishness ran wild. The mere word "discipline" found them with rolling eyes, lips curled, and teeth bared, ready to fall upon you in packs.

Once the senate of the University of Peking passed a regulation that all students must pay for the copies of lecture notes provided by the university. This touched their private pocket. A crowd of several hundred demonstrated against the rule. Chancellor Tsai arrived on the scene and told them that they must obey the university regulations. His words fell upon deaf ears. The mob streamed into the classrooms and offices to find those responsible for the "obnoxious" rule. The Chancellor told them that he alone was responsible.

"You cowards!" he shouted indignantly, rolling his sleeves up to his elbows and shaking his fists in the air. "I'll fight a duel with any one of you who dares. If anyone dares to touch his teachers, I'll knock him down."

The crowd stood in a semicircle in front of him. As the Chancellor moved toward them they stepped back, always keeping at a safe

distance. This quiet scholar, tame as a lamb in daily life, was suddenly transformed into a moral lion.

The crowd dwindled; he walked to his office. About fifty students still waited outside the door demanding the abrogation of the rule. The corridor was packed with spectators curiously looking on. The thing came to a deadlock. The Dean of Faculties, Ku Men-yu, brought about a settlement by promising to see that the assessment of lecture note fees was postponed—indefinitely, of course.

Among the worst agitators, who usually took cover behind the crowd to shout their shrill accusations, I noticed a tall young man, too tall to be hidden by the crowd. I did not know him—he was not among those whose names were later struck from the university register. But a number of years afterward, when I saw him as a puffed-up official, I recognized him at once. His countenance was unmistakable; his shouts still rang in my ears. He had developed into a skillful politician and unscrupulous grafter, and died a rich man a few years after the war.

In another demonstration several years later against myself for refusal to listen to their demands, a number of students closed the gates of the compound and thus shut me in my office. Dr. Hu Shih telephoned to ask whether I would like police to break the siege, but I replied in the negative. The gates were closed for two hours. Those who wanted to leave after their classes clamored from inside, while others who wanted to come in to attend courses echoed without. At length the ringleaders, no longer able to withstand the protests of their fellow students, opened the gates. As I came out of my office a score or two of them followed, vociferously denouncing me. Turning my head, I saw a few at close range. The university senate decided to dismiss those whose names I could remember or afterward ascertained.

Several years later as I was walking on the campus of the Central Aviation School, transferred from Hangchow to Kunming during the war, a fine-looking young officer stepped forward and after a military salute told me that he was a student dismissed from the National

University of Peking. At once I recognized his honest-looking face and fine, strong physique. The ugliness I had seen in his face as he dogged my steps that day of demonstration was all transformed into shining happy eyes and smiling lips. We were happy to see each other. The president of the school told me later that he was one of the best flyers and instructors they had.

These instances are indicative of the fact that the student demonstrations contained all elements. Those who honestly believed in their cause, rightly or wrongly, and were willing to be responsible for what they had done, often turned out to be good citizens, while the sneaky fellows often proved undesirable elements in society.

The students usually took as their target some international problem which the government was not in a position to solve, or had failed to solve to the satisfaction of the people. Thus they always carried with them the sympathy of the country; herein lay their power. As "incidents" grew in number between China and Japan, their demonstrations were naturally interpreted by the Japanese as an anti-Japanese movement. The root of the trouble lay in the Twenty-One Demands and in the Shantung question created by the Versailles Treaty. After the balance of power in the Far East was upset, Japan enjoyed almost exclusive privileges in strangling China. The policy of partitioning China had given way to the Open Door policy, which was fundamentally dependent upon a balance of power; once this balance was kicked over, China had only two alternatives—to submit to the domination of Japan or fight it out alone every step of the way.

So the students fought, first with demonstrations, strikes, and boycotts against Japanese goods, then turning their attack on the government at Peking, which they believed responsible for all evils. When they found nothing internationally or nationally important to fight, they fought the school authorities. The cause lay in the psychological unrest of youth. Once they were aroused to act, it tended to express itself; to repress emotions that ran so high would have been difficult.

A number of student groups, among them the young Communists,

turned their attention to the labor movement and the labor unrest which was then brewing in the treaty ports. Railway and factory workers began to show activity and agitation, which spread like patches of oil. Soon they joined the students in mass meetings and parades. The labor movement was no negligible weapon. With it the Kuomintang government in Canton once devastated Hongkong with a general strike, reducing the British island colony to a commercial and industrial desert, as it were, for eighteen months.

Nationwide anti-British feeling had been provoked in Shanghai on May 30, 1925, when International Settlement authorities gave orders to shoot into a crowd of sympathizers with the labor movement there, gathered on Nanking Road. A few were killed and many wounded. Under the leadership of both the Kuomintang and the Communists a general strike of laborers, merchants, and students followed. Once more Shanghai was a dead city. On June 23 students, workmen, merchants, and soldiers in Canton demonstrated in sympathy against the British. As the crowd passed through the outskirts of the Foreign Settlement the British garrison fired on them. As a result of the firing Hongkong went on a general strike which rendered the British colony a dead city. At the instigation of the students Chinese employees of the British Legation at Peking also went on a sympathetic strike, which left these diplomatic officials without cooks or boys for some time.

After the workers had joined the student movement, the number of demonstrators was increased by thousands. Often one would see a vast motley crowd in the mass meetings or parading on the streets of Peking, shouting slogans and waving banners. In one of these meetings a White Russian, shuddering, remarked that he had seen many such mass meetings in Russia—the sure signs of an impending revolution—and he wondered whether it was safe for him to stay in China.

The workers, like the students, when there was no more important demonstration to make, turned their hostility against their employers. There was little peace for the factories. However, it was

much easier for the central or local government to deal with striking workmen than with students. In many instances they stopped the strikes by force of arms, in some cases simply firing on the strikers with machine guns.

Supposing that this would be an effective way to stop all strikes, the government under Tuan Chi-jui gave orders to train machine guns on a crowd of students gathering around the executive mansion. I had previously been informed that the government had given the order to fire if the students besieged the building, and I warned them of the danger and tried to prevent them from participating; but they formed in lines on the campus, ready to march, and refused to listen to me. No sooner had they approached the entrance of the mansion than bullets rained upon them.

About four o'clock in the afternoon news reached me of the tragedy. At once I rushed to the scene. The open space in front of the official residence of Tuan Chi-jui was literally covered with bodies of young boys and girls. It was difficult to distinguish the dead from the dying. Ambulances came and picked up all who showed any sign of life. About two dozen remained lifeless on the ground. A number died on the way to hospitals and still more lost their young lives on the operating table. We checked with the various hospitals and found that the casualties ran up over a hundred. This did not include those who left after receiving first aid.

This dastardly action of the Tuan Chi-jui government drew a wave of protest from the whole country, and its resultant unpopularity was among the reasons for its later downfall.

Besides the factors I have mentioned, the most important element in making the students so powerful and uncontrollable at this period was the fact that most of them were the sons and daughters of the ruling classes of China. A revolt of students meant, so to speak, a revolt of sons and daughters against their fathers. The most knotty problem a parent had to face was that of a rebellious son or daughter, especially when his children's actions enjoyed the popular support of his neighbors. Workmen were a different proposition; neither their

parents nor relatives held any power in the government or in society. So it was their lot to submit to the whips of policemen or the bayonets of armed forces. Only when they were under the guidance of, or in co-operation with, the students was their power strongly felt.

The student movement was further fortified by the sympathy of teachers within the schools and Kuomintang members and Communists outside of them. Other political forces were also involved. So the movement grew in complexity and magnitude. There were always teachers behind it, from its beginning in 1919. Even during the first student revolt under the Imperial regime there had been teachers behind the movement.

A strike of teachers, to support their demands for payment of arrears of salary owed them by the government at Peking, caused further complications. The poor teachers in the university and in seven other government colleges were very irregularly paid. Often they received only half a month's salary in two or three months. When they demonstrated they could usually squeeze out from a half to one month's salary from the Ministry of Education.

Once several hundred teachers, supported by a still larger number of students, occupied the premises of the Ministry demanding payment of their arrears. The presidents of the eight government institutions went to act as intermediaries. Teachers and students coerced the vice-minister and all the presidents into marching to the presidential mansion to demand their pay. At the exit of the Ministry the vice-minister refused to go any farther on the pretext that it was raining. A student walking beside him opened his umbrella and handed it over, saying brusquely, "Here is an umbrella," and the vice-minister took it from him and marched on reluctantly. The presidents followed grudgingly after. As the crowd approached the entrance of the mansion the gendarmery and police closed the gates. Teachers and students clamored for admittance. Suddenly the gates were flung open and swarms of armed police and gendarmes streamed out with bayonets and rifle butts, stabbing and beating at random. Aged teachers and young girls alike fell into the ditches with hands muddy

and faces bleeding, screaming and crying. The president of the College of Law lay on the ground as if dead. A professor of political science argued with the soldiers as to why they should be so unsympathetic as to insult the hungry teachers. A professor of Chinese literature with a big lump on his forehead, his nose bleeding, shouted at them, "You fight your own people. Why don't you fight the Japanese?"

This professor was taken to the French Hospital, where a former provincial governor was sent by the government to offer its apology. The professor's aged mother was sitting by.

"This boy is my only son. The government almost killed him. I demand the reason why?"

To this the former governor replied, "Never mind, Aunt, I am a good fortuneteller. By looking at my cousin's countenance I can see he has a great future before him. Don't worry, dear Aunt, the government is sorry for the misbehavior of the ignorant soldiers. Aunt, I apologize to you."

The old lady was humored into calmness, while everyone in the room repressed his laughter. The faces of the teachers in their hospital beds all lighted up at this humor in the midst of tragedy.

Thus it went. On another occasion the teachers streamed into the Ministry of Finance, demanding their arrears of salary. All the members of the Ministry sneaked out the back doors, leaving the buildings empty behind them. Once the students, in disapproval of government policy toward a certain foreign Power, forced themselves into the Ministry of Foreign Affairs and smashed the big looking glass and quite a few nice chairs. Students, teachers, and workers all joined in strikes against the government in Peking and the aggressor Powers that encroached upon the rights of China. In bad years not a month passed without strikes of some sort.

To be president of a university in those days was really more than a headache. Funds came from the government only occasionally—usually a year or two in arrears. While students demanded more freedom of action, the government desired order and discipline. For

whatever happened, in or out of the school, the president was responsible. In demonstrations, parades, and riots, he was called upon either to stop one party or to help another. Every time the telephone rang his heart beat against his ribs, and he was rewarded for untiring work only by the grey hair that grew rapidly on his head.

The writer does not speak idly. After setting down the events in these pages he again spent a night of nightmare, seeing at one moment young boys and girls lying dead on the streets of Peking, at another the gendarmery besieging the university and demanding the surrender of ringleaders. Nor, when he started and woke, and lay sleepless with his head upon the pillows, could he shut out by closing his eyes the unfolding pictures of that tragic record.

Sipping tea under a scent-laden spruce in Peking's Central Park, an old scholar made a remark to me which was, I think, typical of those bad days of the strikes.

"Strikes here, there, and everywhere—strikes yesterday, today, tomorrow and every day. Mr. Chancellor, what are you going to do about them? When is the thing going to end? Someone has said that the new spirit is born, but I say the old tranquil spirit is dead!"

第三部 民国初年

急剧变化

我在民国六年即一九一七年六月间离美返国，美国正为有史以来第一次参加欧战而忙着动员。离美前夕，心情相当复杂，那晚睡在哥伦比亚大学的赫特莱楼，思潮起伏，一夜不曾阖眼。时间慢慢消逝，终于东方发白。初夏的曙光从窗外爬藤的夹缝漏进房里。清晨的空气显得特别温柔，蔷薇花瓣上满积着晶莹的露珠。附近图书馆前石阶上的圣母铜像，似乎怀着沉重的心情在向我微笑道别，祝她抚育的义子一帆风顺。我站在窗前伫望着五年来朝夕相伴的景物，不禁热泪盈眶。难道我就这样丢下我的朋友，永远离开这智慧的源泉吗？但是学成回国是我的责任，因为我已享受了留美的特权。那天下午我在中央车站搭火车离开纽约前往俄亥俄州的一个城市。火车慢慢移动离开车站时，我不住地回头望着挥手送别的美国朋友，直到无法再看到这些青年男女朋友的影子时才坐下。

一位朋友陪我到俄亥俄州去看他的朋友。男主人有事进城去了，由漂亮的女主人招待我们。主人家里没有男孩，只有一位掌上明珠。这位黑发女郎明媚动人，长着一张鹅蛋脸，而且热情洋溢，真是人见人爱。

我们在那里住了两星期，正是大家忙着登记应召入伍的时候，第一批新兵正在集合出发，队伍浩浩荡荡经过大街，开往营地受训。街道两旁人山人海，母亲们、爱人们、朋友们纷纷向出征的勇士道别，有的拥吻不舍，有的泪流满面，就是旁观的人也为之鼻酸。

作客期间，我们曾经数度在月明之夜划船游湖。湖上遍布着满长金色和银色水仙花的小屿。萤火虫像流星样在夜空中闪烁。鱼儿在月色下跳跃戏水。女孩子们则齐声欢唱。我还记得一支她们喜欢唱的歌：

六月的空气温暖而清新。

你为什么不肯打开你的瓣儿？

难道你怕会有人

悄悄地偷走你的心？

青蛙们也嘶着粗野的歌喉随声和唱，女孩子唱了一支又接着一支，

直到晚风带来寒意，大家才意识到夜色已深。于是我们弃舟登岸，在斜泻而下的月色中踏着遍沾露珠的草地回家。

时间在不知不觉间飞逝，两个礼拜的愉快生活旋告结束。我向朋友们道别，搭了一辆火车去旧金山。邮船慢慢离开金门海口时，我站在甲板上望着东方，心里念念不忘在纽约的朋友们。再会吧，朋友们！再会吧，美国！

回到上海时还是夏天。离开九年，上海已经变了。许多街道比以前宽阔，也比以前平坦。租界范围之外也已经铺筑了许多新路。百货公司、高等旅馆、屋顶花园、游乐场、跳舞场都比以前多了好几倍。上海已经追上纽约的风气了。

离开祖国的几年之内，上海的学校也增加了好几倍；但是除了少数例外，所有学校的经费都是由私人或中国政府负担的。少数例外的学校是多年以前公共租界当局兴办的。自从这些落伍的学校在几十年前创立以来，租界当局的收入我想至少已经增加百倍。但还是让中国人永远无知无识罢——这样，控制和剥削都比较方便。

年轻女孩子已剪短头发，而且穿起高齐膝盖的短裙，哦！对不起，我说错了，我的意思是指她们穿了仅到膝盖的旗袍，当时流行的式样就是如此。当时中国摩登女子的这种衣服是相当有道理的，从肩到膝，平直无华，料子多半是绸缎，长短随时尚而定。这原是满洲旗人的长袍，于清朝进关时男子被迫而穿着的，满清覆亡以后也被汉家女子采用，因此称为“旗”袍。

到处可以看到穿着高跟鞋的青年妇女。当你听到人行道高跟皮鞋的急骤的笃笃声时，你就知道年轻的一代与她们的母亲已经大不相同了。过去的羞怯之态已不复存在。也许是穿着新式鞋子的结果，她们的身体发育也比以前健美了。从前女人是缠足的。天足运动是中国改革运动的一部分，开始于日俄战争前后，但是在辛亥革命成功以前进展始终很慢。我想高跟鞋可能是促使天足运动迅速成功的原因，因为女人们看到别人穿起高跟鞋婀娜多姿，自然就不愿意再把她们女儿的足硬挤到绣花鞋里了。

男子已经剪掉辫子，但是仍旧没有舍弃长衫，因为大家已经忘记了长衫本来就是旗袍。穿着长衫而没有辫子，看起来似乎很滑稽。但是不久之后，我也像大家一样穿起长衫来了，因为无论革命与不革命，旗袍究竟比较方便而且舒服。谁也不能抵抗既方便又舒服的诱惑，这是人情

之常。

也有一些人仍旧留着辫子，尤其是老年人。他们看不出剪辫子有什么好处。辫子已经在中国人头上养了两百多年，就让它再留几百年也无所谓。任何运动中总不免有死硬派的。

在美国时，我喜欢用中国的尺度来衡量美国的东西。现在回国以后，我把办法刚刚颠倒过来，喜欢用美国的尺度来衡量中国的东西，有时更可能用一种混合的尺度，一种不中不西、亦中亦西的尺度，或者游移于两者之间。

我可怜黄包车夫，他们为了几个铜板，跑得气喘吁吁，汗流浹背，尤其在夏天，烈日炙灼着他们的背脊，更是惨不忍睹。我的美国尺度告诉我，这太不人道。有时我碰到一些野兽似的外国人简直拿黄包车夫当狗一样踢骂——其实我说“当狗一样踢骂”是不对的，我在美国就从来没有看见一个人踢骂过狗。看到这种情形，我真是热血沸腾，很想打抱不平，把这些衣冠禽兽踢回一顿。但是一想到支持他们的治外法权时，我只好压抑了满腔气愤。我想起了“小不忍则乱大谋”的古训。“懦夫！”我的美国尺度在讥笑我。“忍耐！”祖先的中国尺度又在劝慰我。大家还是少坐黄包车，多乘公共汽车和电车罢！但是这些可怜的黄包车夫又将何以为生？回到乡下种田吗？不可能，他们本来就是农村的剩余劳力。摆在他们面前的只有三条路：身强力壮的去当强盗，身体弱的去当小偷，身体更弱的去当乞丐。那末怎么办？还是让他们拖黄包车罢！兜了半天圈子，结果还是老地方。

那末就发展工业，让他们去做工吧。但是没有有一个稳定的政府，工业又无法发展。农村里农夫过剩，只要军阀们肯出钱，或者肯让他们到处掳掠，这些过剩的农夫随时可以应募当兵，在这种情形下，欲求政府稳定势不可得。因此发展工业的路还是走不通。

租界公园门口的告示牌已经有了改进，“犬与华人不得入内”的禁条已经修改为“只准高等华人入内”。甚至一向趾高气扬的洋人，也开始发现有些值得尊重的东西，正在中国抬头。

关于上海的事，暂时谈到此地为止。

上海这个华东大海港和商业中心，现在已经与向有人间天堂之称的苏州和杭州由铁道互相衔接。由上海到苏州的铁路再往西通到南京，在下关渡长江与津浦铁路衔接，往北直通天津和当时的首都北京。上海往南的铁路止于杭州，尚未通到宁波。

我的家乡离宁波不远。宁波虽是五口通商的五口之一，但是始终未发展为重要的商埠，因为上海迅速发展为世界大商埠之一，使宁波黯然无光。宁波与上海之间有三家轮船公司的船只每夜对开一次；两家是英国公司，第三家就是招商局。许多年前我父亲曾经拿这些轮船作蓝本，打造没有锅炉而使用手转木轮的“轮船”，结果无法行驶。我从上海经宁波还乡，与我哥哥搭的就是这种轮船的二等舱。

事隔二十年，乘客的生活无多大改变。过道和甲板上乘客挤得像沙丁鱼，一伸脚就可能踩到别人。我们为了占住舱位，下午五点钟左右就上了船。小贩成群结队上船叫卖，家常杂物，应有尽有，多半还是舶来品。水果贩提了香蕉、苹果和梨子上船售卖。我和哥哥还因此辩论了一场。哥哥要买部分腐败的水果，因为比较便宜。“不行，”我说，“买水果的钱固然省了，看医生的钱却多了。”

“哈，哈——我吃烂梨子、烂苹果已经好几年，”他说，“烂的味道反而好。我从来没有吃出过毛病。”他随手捡起一个又大又红，然而烂了一部分的苹果，咬掉烂的一部分，其余的全部落肚，我耸耸肩膀，他仰天大笑。

天亮前我们经过宁波港口的镇海炮台。一八八五年中法战争时镇海炮台曾经发炮轰死一位法军的海军上将。

天亮了，码头上的喧嚷声震耳欲聋。脚夫们一拥上船拼命抢夺行李。一个不留神，你的东西就会不翼而飞。我和哥哥好容易在人丛中挤下跳板，紧紧地钉在行李夫的背后，唯恐他们提了我们的东西溜之大吉。

宁波几乎与九年前一模一样。空气中充塞着咸鱼的气味。我对这种气味颇能安之若素，因我从小就经常吃咸鱼。宁波是个鱼市，而且离宁波不远的地方就盛产食盐。我们跟着行李夫到了车站，发现一列火车正准备升火开往我的家乡余姚。沿铁道我看到绵亘数里的稻田，稻波荡漾，稻花在秋晨的阳光下发光，整齐的稻田在车窗前移动，像是一幅广袤无边的巨画。清晨的空气中洋溢着稻香，呵，这就是我的家乡！

火车进余姚车站时，我的一颗心兴奋得怦怦直跳。我们越过一座几百年前建造的大石桥，桥下退落的潮水正顺着江流急泻而下。从桥洞里还可以看到钓翁们在江边垂钓。这桥名曰武胜桥，意指英武常胜。因为四百年前当地居民为保卫余姚县城，曾与自日本海入侵的倭寇屡次在桥头堡作战。这些倭寇大家都认为就是日本人。

我们跑进院子时，秋阳高照，已是晌午时分。父亲站在大厅前的石阶上，两鬓斑白，微露老态，但是身体显然很好，精神也很旺健。他的慈祥眼睛和含笑的双唇洋溢着慈父的深情。我兄弟两人恭恭敬敬地向他老人家行了三鞠躬礼。旧式的叩头礼在某些人之间已经随着清朝的覆亡而成为历史陈迹了。

父亲已经剪掉辫子，但是仍然穿着旧式布鞋。他说话不多；在这种场合，沉默胜似千言万语。我们随即进入大厅。直背的椅子靠墙很对称地排列着，显见他的生活方式仍然很少改变。正墙上悬着镶嵌贝壳的对联，右联是“海阔凭鱼跃”，左联是“天空任鸟飞”。对联的中间是一幅墨竹，竹叶似乎受秋风吹拂，都倾向一边。这一切很可以显示一种满足的，安静的，而且安定的生活。

大厅后面有一个小院子，长方形的大盘子里堆砌着山景，因此使高墙的院子里平添山水之胜。小寺小塔高踞假山之上，四周则围绕着似乎已历数百年的小树。山坳里散坐着小小的猴子，母猴的身旁则偎依着更小的小猴，这些微小的假猴显得如此玲珑可爱，我真希望它们能够变成活猴一样大小而跳进我的怀里。小寺小塔之外还有一个小凉亭，亭边长着一丛篁竹。假池子里则有喋喋的金鱼和探螯觅食的小虾。这一切的一切，都使人有置身自然之感。

刘老丈听说我回家了，当天下午就来看我。在我童年时代，刘老丈曾经讲许多故事给我们听，小孩子们都很喜欢他。那天下午，他讲了许多有趣的故事。他告诉我，老百姓们听到革命成功的消息时欢喜得什么似的。城里的人一夜之间就把辫子剪光了。年轻人买了西装，穿起来很像一群猴子。他又告诉我，短裙与短发如何在后来侵入县城。革命以后，他那留了七十多年的辫子居然也剪掉了，可见他对革命和民国仍然是很赞成的，起先他有点想不通，没有皇帝坐龙庭，这个世界还成什么样子？但是过了一段时期以后，他才相信民国的总统，照样可以保持天下太平。他说，反正天高皇帝远，地方治安本来就靠地方官府来维持。民国以来，地方官府居然做得还不错。

他说，五十年前太平军侵入县城时，许多脑袋连辫子一起落了地，现在我们虽然丢掉辫子，脑袋总还存在。他一边说，一边用他皮包骨的手指摸着脑袋，样子非常滑稽，因此引得大家都笑了。那天晚饭吃得比较早，饭后他告辞回家，暮色苍茫中不留神在庭前石阶上滑了一跤，幸亏旁边有人赶紧抓住他的肩膀，搀住他没有跌伤。他摇摇头自己开自己的玩笑说：“三千年前姜太公八十遇文王，我刘太公八十要见阎王

了。”说罢哈哈大笑，兴高采烈地回家去了。

几天之后消息传来，刘太公真地见阎王去了。对我而言，我失去了一位童年时代的老朋友，而且再也听不到这位风趣的老人给我讲故事了。

十五年前左右，姊姊和我创办的一所学校现在已经改为县立女子学校。大概有一百名左右的女孩子正在读书。她们在操场上追逐嬉笑，荡秋千荡得半天高。新生一代的女性正在成长。她们用风琴弹奏《史华尼河》和《迪伯拉莱》等西洋歌曲，流行的中国歌更是声闻户外。

我在家里住了一星期左右，随后就到乡下去看看蒋村的老朋友。童年时代的小孩子现在都已成人长大，当时的成年人现在已经是鬓发斑白的老人。至于当年的老人，现在多已经进入土长眠，只有极少数历经村中沧桑的老人还健在。

村庄的情形倒不像我想像中的那样糟。早年的盗匪之灾已经敛迹，因为老百姓现在已经能够适应新兴的行业，而且许多人已经到上海谋生去了。上海自工商业发展以后，已经可以容纳不少人。任何变革正像分娩一样，总是有痛苦的。但是在分娩以后，产妇随即恢复正常，而且因为添了小宝宝而沾沾自喜。中国一度厌恶的变革现在已经根深蒂固，无法动摇，而且愈变愈厉，中国也就身不由己地不断往前迈进——至于究竟往那里跑，或者为什么往前跑，亿万百姓却了无所知。

我的大伯母已经卧病好几个月，看到我回家非常高兴，吩咐我坐到她的床边，还伸出颤巍巍的手来抚摸我的手，她告诉我过去十六年中谁生了儿子，谁结了婚，谁故世。她说世界变了，简直变得面目全非。女人已经不再纺纱织布，因为洋布又好又便宜。她们已经没有多少事可以做，因此有些就与邻居吵架消磨光阴，有些则去念经拜菩萨。年轻的一代都上学堂了。有些女孩则编织发网和网线餐巾销售到美国去，出息不错。很多男孩子跑到上海工厂或机械公司当学徒，他们就了新行业，赚钱比以前多。现在村子里种田的人很缺乏，但是强盗却也绝迹了。天下大概从此太平无事，夜里听到犬吠，大家也不再像十年前那样提心吊胆。

但是她发现进过学校的青年男女有些事实是要不得。他们说拜菩萨是迷信，又说向祖先烧纸钱是愚蠢的事。他们认为根本没有灶神。庙宇里的菩萨塑像在他们看来不过是泥塑木雕。他们认为应该把这些佛像一齐丢到河里，以便破除迷信。他们说男女应该平等。女孩子说她们有权

自行选择丈夫、离婚或者丈夫死了以后有权再嫁，又说旧日缠足是残酷而不人道的办法，说外国药丸比中国药草好得多。他们说根本没有鬼，也没有灵魂轮回这回事。人死了之后除了留下一堆化学元素的化合物之外什么也没有了。他们说唯一不朽的东西就是为人民、为国家服务。

一只肥肥的黑猫跳上床，在她枕旁咪咪直叫。她有气无力地问我："美国也有猫吗？"我说是的。再一看，她已经睡熟了。我轻轻地走出房间，黑猫则仍在她枕旁呼噜作响，并且伸出软绵绵的爪子去碰碰老太太的脸颊。

我和大伯母谈话时，我的侄女一直在旁边听着。我走出房间以后，她也赶紧追了出来。她向我伸伸舌头，很淘气地对我说："婆婆太老了，看不惯这种变化。"一个月之后，这位老太太终于离开这个疯狂的不断在变的世界。

接着我去拜望三叔母，她的年岁也不小了，身体却很健旺。我的三叔父有很多田地，而且养了许多鸡、鸭、鹅和猪。三叔母告诉我一个悲惨的故事。我的一位童年时代的朋友在上海，做黄金投机生意，蚀了很多钱，结果失了业，回到村里赋闲。一年前他吞鸦片自杀，他的寡妇和子女弄得一贫如洗，其中一位孩子就在皂荚树下小河中捉虾时淹死了。

三叔母捉住一只又肥又大的阉鸡，而且亲自下厨。鸡烧得很鲜美，鸡之外还有鱼有虾。

三叔父告诉我，上一年大家开始用肥田粉种白菜，结果白菜大得非常，许多人认为这种大得出奇的白菜一定有毒，纷纷把白菜拔起来丢掉。但三叔父却不肯丢，而且廉价从别人那里买来腌起来。腌好的咸菜香脆可口，这位老人真够精明。

小时候曾经抱过我的一位老太婆也从村子里来看我。她已经九十多岁，耳朵已经半聋，却从她的村子走了四里多路来看我。她仔仔细细地把我从头到脚端详一番，看我并无异样才安了心。她说，这位大孩子从前又瘦又小，而且很顽皮。他曾经在他哥哥的膝头咬了一口，留下紫色的齿印，结果自己号啕大哭，怪哥哥的膝盖碰痛了他的牙齿。

"你记不记得那两位兄弟在父死之后分家的事？"她问我。两兄弟每人分到他们父亲的房子的一个边厢，又在大厅的正中树了一片竹墙，把大厅平分为二。一位兄弟在他的那一半厅子里养了一头牛，另一位兄弟气不过，就把他的半边厅子改为猪栏来报复。他们父亲留下一条船，结果也被锯为两半。这两位缺德兄弟真该天诛地灭！后来祝融光顾，他们

的房子烧得精光。老天爷是有眼的！

他们把那块地基卖掉了。一位在上海做生意的富商后来在这块地上建了一座大洋房。洋房完工时，她曾经进去参观，转弯抹角的走廊、楼梯和玻璃门，弄得她头昏眼花，进去以后简直出不来。她试过沙发和弹簧床，一坐就深陷不起，真是吓了一跳。最使她惊奇的是屋主人从上海买来的一架机器。轮子一转，全屋子的灯泡都亮了，黑夜竟同白昼一样亮。

管机器的是她邻居的儿子。他是在上海学会开机器的。她做梦也想不到这位笨头笨脑的孩子居然能够拨弄那样复杂的一件机器。她离得远远地看着飞转的轮子，唯恐被卷进去碾成肉浆。

她还注意到另一件怪事：厨房里没有灶神。这一家人而且不拜祖先。厨房里没有灶神，她倒不大在乎，但是一个家庭怎么可以没有祖宗牌位？据说屋主人相信一种不拜其他神佛的教。她可不愿意信这个教，因为她喜欢到所有的庙宇去跑跑，高兴拜哪位菩萨就拜哪位。她倒也愿意拜拜屋主人相信的那位“菩萨”。因为上一年夏天她发疟疾时，那个“庙”里的先生曾经给她金鸡纳霜丸，结果把她的病治好了。但是她希望也能向别的菩萨跪下来叩头，求它们消灾赐福。

她说她穷得常常无以为炊，饿肚子是常事。我父亲已经每月给她一点米救济她，但是她的小孙女死了父母，现在靠她过活，因此吃了她一部分粮食。我拿出一张二十元的钞票塞在她手里。她高高兴兴地走了，嘴里咕嘟着：“从小时候起，我就知道这孩子心肠好，心肠好。”

有一天傍晚，我去祭扫母亲的坟墓，坟前点起一对蜡烛和一束香。没有风，香烟袅袅地升起。我不知不觉地跪倒地上叩了几个头，童年的记忆复活了，一切恍如隔昨。我似乎觉得自己仍然是个小孩子，像儿时一样地向母亲致敬，我希望母亲的魂魄能够张着双臂欢迎我，抚慰我。我希望能够爬到她怀里，听她甜美的催眠曲。我的一切思想和情感都回复到童年时代。母亲去世时我才七岁，因此我对母爱的经验并不多，也许想像中的母亲比真实的母亲更温柔、更亲密。至少，死去的母亲不会打你，你顽皮，她也不会发脾气。

从村子里到火车站，大约有三里路，中间是一片稻田。车站建在一个平静的湖泊岸旁，这个湖叫牟山湖，土名西湖，是一个灌溉好几万亩田的蓄水库。湖的三面环山，山上盛产杨梅和竹笋。我步行至车站以后就搭了一列火车到曹娥江边。铁路桥梁还没有完成，因为从德国订的材

料因第一次世界大战影响迟迟未能到达，所以靠渡船渡江。通往杭州的铁路工程也因缺乏材料停顿了。从此到杭州的一大段空隙由轮船来衔接。多数旅客都愿意乘轮船，因为橹船太慢，大家不愿乘坐，所以旧式小船的生意非常清淡。

傍晚时到达钱塘江边，再由小火轮渡过钱塘江，只花二十分钟。我中学时代的橹摇的渡船已经不见了。

日落前我到了杭州，住进一家俯瞰西湖的旅馆。太阳正落到雷峰塔背后，天上斜映着一片彩霞。一边是尖削的保塔在夕阳余晖中矗立山顶，它的正对面，短矮的雷峰塔衬着葱翠的山色蹲踞在西湖另一边的山坳里。玲珑的游船点缀着粼粼起皱的湖面。鱼儿戏水，倦鸟归巢，暮霭像一层轻纱，慢慢地笼罩了湖滨山麓的丛林别墅。只有缕缕炊烟飘散在夜空。我感到无比的宁静。时代虽然进步了，西湖却妩媚依旧。

但是许多事情已经有了变化。我的冥想不久就被高跟鞋的笃笃声给粉碎了，一群穿着短裙，剪短了头发的摩登少女正踏着细碎的脚步在湖滨散步。湖滨路在我中学时代原是旗下营的所在。辛亥革命铲平了旗下营，后来一个新市区终于在这废墟上建立起来，街道宽阔，但是两旁的半西式的建筑却并不美观。饭馆、戏院、酒店、茶楼已经取代古老的旗下营而纷纷出现，同时还建了湖滨公园，以便招徕周末从上海趁火车来的游客。杭州已经成为观光的中心了。

我在十多年前读过书的浙江高等学堂已经停办，原址现已改为省长公署的办公厅。从前宫殿式的抚台衙门已在革命期间被焚，在市中心留下一片长满野草闲花的长方形大空地。

革命波及杭州时不曾流半滴血。新军的将领会商之后黑夜中在杭州街头布下几尊轻型火炮，结果未发一枪一弹就逼得抚台投降。新军放了把火焚毁抚台衙门，算是革命的象征，火光照得全城通红。旗下营则据守他们的小城作势抵抗，后来经过谈判，革命军承诺不伤害旗下营的任何人，清兵终于投降。旗人领袖桂翰香代表旗下营接受条件。但桂本人却被他的私人仇敌藉口他阴谋叛乱抓去枪毙了。新当选的都督汤寿潜是位有名的文人，对于这件卑鄙的事非常气愤，闹着要辞职。但是这件事总算没有闹僵，后来汤寿潜被召至南京，在临时大总统孙中山先生之下担任交通部长。

旗下新市区的东北已经建了五百间平房，安置旧日旗兵的家属。有些旗人已经与汉人熔于一炉而离开了他们的安置区。几年之后，全体旗

人都失去踪迹，一度养尊处优的统治者已经与过去的被统治者汇为一流了。旗人从此成为历史上的名词，他们的生活情景虽然始终回旋在我的记忆里，但是有关他们的故事已经渐渐成为民间传说。至于清朝的崛起与没落，且让史家去记述罢！

从前的文人雅士喜欢到古色古香的茶馆去，一面静静地品茗，一面凭窗欣赏湖光山色，现在这些茶馆已经为不可抵御的现代文明所取代，只有一两家残留的老茶馆使人发怀古之幽情，这种古趣盎然的茶馆当然还有人去，泡上一杯龙井，披阅唐宋诗词。这样可以使人重新回到快乐的旧日子。

我曾经提到杭州是蚕丝工业的中心。若干工厂已经采用纺织机器，但是许多小规模工厂仍旧使用手织机。一所工业专科学校已经成立，里面就有纺织的课程。受过化学工程教育的毕业生在城市开办了几家小工厂，装了电动的机器。杭州已经有电灯、电话，它似乎已经到了工业化的前夕了。

我大约逗留了一个星期，重游了许多少年时代常去的名胜古迹。离商业中心较远的地方，我发现旧式生活受现代文明的影响也较少。在山区或穷乡僻壤，旧日淳朴的生活依然令人迷恋。参天古木和幽篁修竹所环绕的寺庙仍然像几百年以前一样的清幽安静。和尚们的生活很少变化，仍旧和过去一样诵佛念经。乡下人还是和他们的祖先一样种茶植桑，外国货固然也偶然发现，但是数量微不足道。不过，现代文明的前锋已经到达，学校里已经采用现代课本。在现代教育的影响下，虽然生活方式未曾改变，新生一代的心理却正在转变。播在年轻人心中的新思想的种籽，迟早是会发芽茁长的。

军阀割据

年轻时我注意到文官总比武官高些。朝廷命官红缨帽的顶子分几种不同的颜色。阶级最高的是红顶子，其次是粉红的，再其次是深蓝的、翠蓝的和白色的，最后是金黄的也就是最低的一级。我常常看到戴粉红顶子的武官向阶级比较低的蓝顶子文官叩头，心里觉得很奇怪。据说历朝皇帝深恐武官擅权跋扈，所以特意让文官控制武官。历史告诉我们，国家一旦受军阀控制，必定要形成割据的局面。晚唐的历史就是最好的教训，俗语说："好铁不打钉，好男不当兵。"因此大家都瞧不起军人。记得邻村有一位品行不端的人去当兵，在他告假返乡时，大家把他看做瘟神似的，都远远地避开他。我们有个牢不可破的观念，认为当兵的都是坏人，可鄙可怕而且可憎。

在另一方面，国家的武力如果一蹶不振，碰到外来侵略就毫无能力抵抗了。宋朝亡于蒙古人，明朝亡于满洲鞑靼，情形就是如此。前临深渊，后是魔鬼，我们究将何去何从？

最要紧的是救中国——北方由陆路来的和东南由海道来的强敌都得以应付。那末，怎么办？赶快建立一支装备现代武器的现代化军队吧！士兵必须训练有素，而且精忠报国。我们怎么可以瞧不起军人呢？他们是保卫国土的英雄，是中国的救星，有了他们，中国才可以免受西方列强的分割。鄙视他们，千万不可以——我们必须提高军人的地位，尊敬他们，甚至崇拜他们。不然谁又肯当兵？

大家的心理开始转变了。穷则变，变则通：我们建立了一支现代化的军队，装备外国武器，穿着新式制服，而且还有军乐队。我见过这样的一队现代军队的行军阵容，洋鼓洋号前导，精神饱满，步伐整齐，令人肃然起敬。我看得出神，恍惚自己已经成人长大，正在行列中迈步前进——向胜利进军，我站在静静围观的群众中，心里喜不自胜。这是我首次看到现代的军队。是的，我们必须尊敬士兵和军官。从此以后，只有好男才配当兵。我们必须依赖他们恢复中国过去的光荣。从前的旧式军队中，士兵穿着马甲，佩着弓箭，或者背着欧洲国家废弃不用卖给中国的旧枪。与今天的现代军队比起来真是差得太远了！

我在杭州浙江高等学堂读书时，一位高等学堂的老学生刚从日本士官学校回来探望师友。他穿着崭新的军服，腰旁佩着长剑，剑鞘闪闪发光。这就是中国军队的未来将领，我们无不怀着钦敬的心情热烈地欢迎

他。

许多这样的未来将领正从日本回国，受命组织新军。几年之内新军部队渐次建立，驻在国内各军略要地。中国已经武装起来保卫她自己了。

不久辛亥革命爆发，革命军的训练也许不及政府军那样精良，但是革命的将领和士兵却充满着爱国热情，随时准备为国牺牲。革命号角一响，政府新军相继向孙中山先生投诚。短短几个月之内，统治了中国几百年的满清帝室就像秋风扫落叶般消逝了。全国人民欢欣鼓舞，中国已经获得新生，前途光明灿烂。满清政府训练新军，结果自速灭亡，让他们去自怨自艾吧！让我们为这些受过现代训练的将领的优越表现欢呼！

但是胜利的狂欢不久就成为过去。庆祝的烛光终于化为黑烟而熄灭。新军将领们对满清反目无情，对革命更无所爱。他们已经尝到权势的滋味，绝不肯轻易放弃；而且食髓知味，渴望攫取更大更高的权势，结果你抢我夺，自相残杀起来。

孙中山先生已经在民国元年即一九一二年回国。革命军和满清政府谈判结果。宣统皇帝决定退位，民国接着成立。革命军同意让小溥仪仍旧住在紫禁城里。革命人士准备草拟宪法，成立参议会，选举总统，不久临时参议会选举孙中山先生为中华民国临时大总统。

中山先生不久辞职，让位给袁世凯。后来新选的国会选举袁世凯为总统，不过，那多少是威胁利诱的结果。于是政权又再度落到反动分子的手里去了。袁世凯原来是清朝的官吏，负责训练新军，他一度失宠于清廷，革命爆发后被召回北京。

孙先生认为他对国家所能提供的贡献，最重要的还是建筑铁路，因此他甘愿主持国有铁道而让袁世凯统治国家。但是孙先生不久就觉醒了。袁世凯上台时，他很清楚他的实力在于他所控制的军队。他把国会看做一个惹人讨厌却又无可避免的东西，不过他想，只要他能够控制军队，国会除了给他一点小麻烦外，绝对奈何他不得。这位国家的新元首在强大的军队支持之下，竟然篡窃了许多并不属于总统的权力。他随时威胁恐吓异己，甚至不惜采取卑鄙的暗杀手段。在政治上，他很懂得“分而治之”的那一套，竭力在中山先生的国民党内部制造摩擦。他更进一步鼓励成立许多小政党，企图削弱国民党的势力。

他接着采取步骤来削除国民党的武力。他首先暗杀国民党的政治领袖宋教仁，接着下令解除南方各省所有国民党将领督军职务，企图激起

各省的反抗，然后加以武力扫荡。孙中山先生想发动二次革命而没有成功。这时候袁世凯差不多已经以武力控制全国，于是借口这次“叛变”，预备取消国会中国国民党籍议员的资格。南方被他镇压住以后，他的野心愈来愈大，亟欲攫取更大的权力和尊荣。民国四年他正预备自立为皇帝时，各省纷纷通电反对，因此被逼放弃皇帝梦，旋即忧伤而死。

民国六年（一九一七年），孙中山先生在广州建立根据地，希望在那里成立一支军队的核心，发动新革命而推翻军阀，不料在民国十一年（一九二二年）反被广州军阀陈炯明所推翻。不过翌年孙先生终于在广州成立新政府，国民革命运动声势得以重振。但这仅是一个开端。自从野心勃勃而不择手段的袁世凯死了以后，中国一直四分五裂，各省之间内战频仍，政局扰攘达十二年之久，直到民国十七年（一九二八年）蒋总司令北伐成功，国家才重归统一。

中华民国成立以后，十六年来中国一直掌握在军阀手里。内战一次接着一次发生。这些内战多半还是外国势力怂恿和支持的。内战的结果，国力损耗，民生凋敝，并且为日本侵略铺了路。革命前途似乎黑暗一片。内战中获胜的军阀趾高气扬，野心愈来愈大，不断争取更大的权力。被击败的军阀则夹起尾巴躲在天津和上海的租界里待机再起，机会一来就重启战衅，使人民又增加一场灾祸。

一度被鄙视、后来受尊重的军人，现在又再度被人鄙视了。

知识分子的觉醒

我从杭州到上海以后就进当时最大的书局商务印书馆当编辑，同时兼了江苏省教育会的一名理事，膳宿就由教育会供给。但是年轻人干不惯磨桌子的生活，一年之后我就辞职了。与商务印书馆之间的银钱往来也在翌年清结。

我与几位朋友在国立北京大学和江苏省教育会赞助下开始发行《新教育》月刊，由我任主编。杂志创办后六个月就销到一万份。它的主要目标是“养成健全之个人，创造进化的社会”。

那时正是欧战后不久，自由与民主正风靡全世界，威尔逊主义已引起中国有识之士的注意。中国青年正浸淫于战后由欧美涌至的新思想。报纸与杂志均以巨大篇幅报导国际新闻和近代发展。中国已经开始追上世界的新思潮了。

《新青年》正在鼓吹德先生与赛先生（即民主与科学），以求中国新生。这本思想激进的杂志原为几年前陈独秀所创办，后来由北京大学的一群教授共同编辑。《新青年》在介绍新思想时，自然而然对旧信仰和旧传统展开激烈的攻击。有些投稿人甚至高喊“打倒孔家店”！这些激烈的言论固然招致一般读者的强烈反感，但是全国青年却已普遍沾染知识革命的情绪。

孙中山先生于民国七年移居上海。我们前面已经谈过新诞生的民国的坎坷命运，而且一部分正受着割据各省的军阀统治。中山先生的国民党，最强大的据点是南方和上海。民国六年（一九一七年），国民党成立新政府对抗北京政席，以求维护革命人士所致力原则，并进而推广于全国。当时广州的南方政府是由总裁控制的。若干参加分子的政治见解非常肤浅，孙先生无法同意，乃离粤北上定居沪渚，从事中国实业计划的研究。

他的目光远超乎当时的政治纷争之外，他的实业计划如果顺利实现，可以解除人民贫困，促使国家富强，并使中国跻于现代工业化国家之林。根据中山先生的计划，中国的工业建设分为食衣住行四大类。这些都是人民生活所必需的，孙先生就根据这些因素计划中国的工业建设。

他设计了贯串中国广大领土内所有重要商业路线和军运路线的铁路

网和公路网；他定下发展中国商埠和海港计划；他也定下疏浚河流、水利建设、荒地开垦等的计划大纲。他又设计了发展天然资源和建设轻重工业的蓝图。他鉴于中国森林砍伐过度，又定下在中华华北造林的计划。

他对工业发展规定了两个原则：（一）凡是可以由私人经营的就归私人经营；（二）私人能力所不及或可能造成垄断的则归国家经营。政府有责鼓励私人企业，并以法律保护之。苛捐杂税必须废除，币制必须改善并予统一。官方干涉和障碍必须清除，交通必须发展以利商品的流通。

铁道、公路、疏浚河流、水利、垦荒、商埠、海港等都规定由国家主持。政府并须在山西省建立大规模的煤铁工厂。欢迎外国资本，并将雇用外国专家。

孙中山先生是中国第一位有过现代科学训练的政治家。他的科学知识和精确的计算实在惊人。为了计划中国的工业发展，他亲自绘制地图和表格，并收集资料，详加核对。实业计划中所包括的河床和港湾的深度和层次等细节他无不了如指掌。有一次我给他一张导淮委员会的淮河水利图，他马上把它在地板上展开，非常认真地加以研究。后来我发现这幅水利图在他书房的壁上挂着。

在他仔细研究工业建设的有关问题和解决办法以后，他就用英文写下来。打字工作全部归孙夫人负责，校阅原稿的工作则由余日章和我负责。一切资料数字都详予核对，如果有什么建议，孙先生无不乐于考虑。凡是孙先生所计划的工作，无论是政治的、哲学的、科学的或其他，他都以极大的热忱去进行。他虚怀若谷，对于任何建议和批评都乐于接受。

因为他的眼光和计划超越了他的时代，许多与他同时代的人常常觉得他的计划不切实际，常常引用“知之非艰，行之唯艰”的传统观念来答复他。他对这些人的短视常常感到困扰。当他在四十年前倡导革命运动时，他就曾遭遇到同样的障碍。后来他写了一篇叫《心理建设》的文章，提倡知难行易的学说。中西思想重点不同的地方其中之一就是中国人重应用，而西洋人重理知。中国人重实际，所以常常过分强调实践过程中的困难，有时是实在的困难，有时只是想像的，以致忽视实际问题背后的原理原则。凡是经常接触抽象原则和理论的人，或者熟悉如何由问题中找出基本原则的人，都不难了解中山先生的立论。在另一方面，凡是惯常注重近功实利而不耐深思熟虑的人，可就不容易了解中山先生

的主张了。在清室式微的日子里，中国并不缺乏锐意改革的人，但是真能洞烛病根，且能策定治本计划的人却很少。孙先生深知西方文化的发展过程，同时对中国的发展前途具有远大的眼光，因此他深感超越近功近利的原理原则的重要，他知道只有高瞻远瞩的知识才能彻底了解问题的本质。

只要我们把握这种基本的知识，实践起来就不会有不可解除的困难了。真正的困难在于发见基本的道理。事实上，不但真知灼见的事情，必能便利地推行，而在许多地方，即使所知不深，亦能推行无阻。例如水泥匠和木匠，只要他们照着建筑师的吩咐去做，即使他们不懂得建筑学，也照样能执行复杂的建筑蓝图。医药方面的情况更明显，诊断常常比用药困难，医科学生知道得很清楚，在研究医学之前，他必须对生理学和解剖学先有相当的了解，而在研究生理学和解剖学之前则又得先研究物理与化学等普通科学。每一种科学都是许多为学问而学问的人们经过几百年继续不断研究所积聚的结果。由此可见医学的基础知识之获得比行医远为艰难。

与孙先生同时代的人只求近功，不肯研究中国实际问题的症结所在，希望不必根据历史、社会学、心理学、科学等所得的知识，就把事情办好，更不愿根据科学知识来订定国家的建设计划。因此他们诬蔑孙先生的计划是不切实际的空中楼阁。他们的"现实的"眼光根本看不到远大的问题，更不知道他们自己的缺点就是无知和浅见，缺乏实际能力倒在其次。以实在而论，他们自己认为知道的东西，实只限于浅薄的个人经验或不过根据一种常识的推断。这样的知识虽然容易获得，但以此为实践基础反常常会遭受最后的失败。

在西洋人看起来，这些或许只是理论与实践，或者知识与行为的哲学论争，似乎与中国的革命和建设不发生关系。但是中山先生却把它看得很严重，认为心理建设是其他建设的基础，不论是政治建设、实业建设或社会建设。有一天我和罗志希同杜威先生谒见孙先生谈到知难行易问题，杜威教授对中山先生说："过重实用，则反不切实用。没有人在西方相信'知'是一件容易的事。"

《新教育》月刊，一方面受到思想界革命风气的影响，一方面因为我个人受到中山先生的启示，所以在教学法上主张自发自动，强调儿童的需要，拥护杜威教授在他的《民主与教育》中所提出的主张。在中国的教育原理方面，《新教育》拥护孟子的性善主张，因此认为教育就是使儿童的本性得到正常的发展。事实上孔子以后，中国教育的主流一直

都遵循着性善的原则。不过年代一久，所谓人性中的"善"就慢慢地变为受古代传统所规范的某些道德教条了。因此我们的主张在理论上似很新鲜，实践起来却可能离本来的原则很远很远。所谓"发展本性"在事实上可能变为只是遵守传统教条，中国发生的实际情形正是如此。

自从卢梭、裴斯塔洛齐、福禄培，以及后来的杜威等人的学说被介绍至中国思想界以后，大家对孟子学说开始有了比较清晰的认识，中国儿童应该从不合现代需要的刻板的行为规律中解放出来。我们应该诱导儿童自行思想，协助他们根据他们本身的需要，而不是根据大人的需要，来解决他们自己的问题。我们应该启发儿童对自然环境的兴趣。根据儿童心理学的原则，儿童只能看做儿童；他不是一个小大人，不能单拿知识来填，更不应拿书本来填，教育应该帮助儿童在心智、身体和团体活动各方面成长。

这些就是指导《新教育》的思想原则。读者不难觉察，这与当时国内的革命思想是恰好符合的。《新教育》月刊与北京大学师生间知识上的密切关系，终于使我在第二年跑进这个知识革命的大漩涡，担任了教育学教授，并于校长蔡先生请假时代理校长。

北京大学和学生运动

如果你丢一块石子在一池止水的中央，一圈又一圈的微波就会从中荡漾开来，而且愈漾愈远，愈漾愈大。北京曾为五朝京城，历时一千余年，因此成为保守势力的中心，慈禧太后就在这里的龙座上统治着全中国。光绪皇帝在一八九八年变法维新，结果有如昙花一现，所留下的唯一痕迹只是国立北京大学，当时称为京师大学堂或直呼为大学堂，维新运动短暂的潮水已经消退而成为历史陈迹，只留下一些贝壳，星散在这恬静的古都里，供人凭吊。但是在北京大学里，却结集着好些蕴蓄珍珠的活贝；由于命运之神的摆布，北京大学终于在短短三十年历史之内对中国文化与思想提供了重大的贡献。

在静水中投下知识革命之石的是蔡子民先生（元培）。蔡先生在一九一六年（民国五年）出任北京大学校长，他是中国文化所孕育出来的著名学者，但是充满了西洋学人的精神，尤其是古希腊文化的自由研究精神。他的“为学问而学问”的信仰，植根于对古希腊文化的透彻了解，这种信仰与中国“学以致用”的思想适成强烈的对照。蔡先生对学问的看法，基本上是与中山先生的看法一致的，不过孙先生的见解来自自然科学，蔡先生的见解则导源于希腊哲学。

这位著名的学者认为美的欣赏比宗教信仰更重要。这是希腊文化交融的一个耐人寻味的实例。蔡先生的思想中融合着中国学者对自然的传统爱好和希腊人对美的敏感，结果产生对西洋雕塑和中国雕刻的爱好；他喜爱中国的山水画，也喜爱西洋油画；对中西建筑和中西音乐都一样喜欢。他对宗教的看法基本上是中国人的传统见解；认为宗教不过是道德的一部分。他希望以爱美的习惯来提高青年的道德观念。这也就是古语所谓“移风易俗莫大于乐”的传统信念。高尚的道德基于七情调和，要做到七情调和则必须透过艺术和与音乐有密切关系的诗歌。

蔡先生崇信自然科学。他不但相信科学可以产生发明、机器，以及其他实益，他并且相信科学可以培养有系统的思想和研究的心理习惯，有了系统的思想和研究，才有定理定则的发现，定理定则则是一切真知灼见的基础。

蔡先生年轻时锋芒很露。他在绍兴中西学堂当校长时，有一天晚上参加一个宴会，酒过三巡之后，他推杯而起，高声批评康有为、梁启超维新运动的不彻底，因为他们主张保存满清皇室来领导维新。说到激烈

时，他高举右臂大喊道："我蔡元培可不这样。除非你推翻满清，否则任何改革都不可能！"

蔡先生在早年写过许多才华横溢、见解精辟的文章，与当时四平八稳、言之无物的科举八股适成强烈的对照。有一位浙江省老举人曾经告诉我，蔡元培写过一篇怪文，一开头就引用《礼记》里的"饮食男女，人之大欲存焉"一句。缴卷时间到时，他就把这篇文章缴给考官。蔡先生就在这场乡试里中了举人。后来他又考取进士，当时他不过三十岁左右，以后就成为翰林。

蔡先生晚年表现了中国文人的一切优点，同时虚怀若谷，乐于接受西洋观念。他那从眼镜上面望出来的两只眼睛，机警而沉着；他的语调虽然平板，但是从容、清晰、流利而恳挚。他从来不疾言厉色对人，但是在气愤时，他的话也会变得非常快捷、严厉、扼要——像法官宣判一样的简单明了，也像绒布下面冒出来的匕首那样的尖锐。

他的身材矮小，但是行动沉稳。他读书时，伸出纤细的手指迅速地翻着书页，似乎是一目十行地读，而且有过目不忘之称。他对自然和艺术的爱好使他的心境平静，思想崇高，趣味雅洁，态度恳切而平和，生活朴素而谦抑。他虚怀若谷，对于任何意见、批评或建议都欣然接纳。

当时的总统黎元洪选派了这位杰出的学者出任北大校长。北大在蔡校长主持之下，开始一连串的重大改革。自古以来，中国的知识领域一直是由文学独霸的，现在，北京大学却使科学与文学分庭抗礼了。历史、哲学和四书五经也要根据现代的科学方法来研究。为学问而学问的精神蓬勃一时。保守派、维新派和激进派都同样有机会争一日之短长。背后拖着长辫、心里眷恋帝制的老先生与思想激进的新人物并坐讨论，同席笑谑。教室里，座谈会上，社交场合里，到处讨论着知识、文化、家庭、社会关系和政治制度等等问题。

这情形很像中国先秦时代，或者古希腊苏格拉底和亚里士多德时代的重演。蔡先生就是中国的老哲人苏格拉底，同时，如果不是全国到处有同情他的人，蔡先生也很可能遭遇苏格拉底同样的命运。在南方建有坚强根据地的国民党党员中，同情蔡先生的人尤其多。但是中国的和外国的保守人士却一直指责北京大学鼓吹"三无主义"——无宗教、无政府、无家庭——与苏格拉底被古希腊人指责戕害青年心灵的情形如出一辙。争辩不足以消除这些毫无根据的猜疑，只有历史才能证明它们的虚妄。历史不是已经证明了苏格拉底的清白无罪吗？

我已经提到蔡先生提倡美学以替代宗教，提倡自由研究以追求真理。北大文学学院院长陈仲甫（独秀）则提倡赛先生和德先生，认为那是使中国现代化的两种武器。自由研究导致思想自由；科学破坏了旧信仰，民主则确立了民权的主张。同时，哲学教授胡适之（适）那时正在进行文学革命，主张以白话文代替文言作表情达意的工具。白话比较接近中国的口语，因此比较易学，易懂。它是表达思想的比较良好也比较容易的工具。在过去知识原是士大夫阶级的专利品，推行白话的目的就是普及知识。白话运动推行结果，全国各地产生了无数的青年作家。几年之后，教育部并下令全国小学校一律采用白话为教学工具。

北大是北京知识沙漠上的绿洲。知识革命的种籽在这块小小的绿洲上很快地就发育滋长。三年之中，知识革命的风气已经遍布整个北京大学。

这里让我们追述一些往事。一个运动的发生，绝不是偶然的，必有其前因与后果。在知识活动的蓬勃气氛下，一种思想上和道德上的不安迅即在学生之中发展开来。我曾经谈过学生如何因细故而闹学潮的情形，那主要是受了十八世纪以自由、平等、博爱为口号的法国政治思想的影响，同时青年们认为中国的迟迟没有进步，并且因而招致外国侵略应由清廷负其咎，因此掀起学潮表示反抗。

第一次学潮于一九〇二年发生于上海南洋公学，即所谓罢学风潮。我在前篇已经讲过。几年之后，这种学生反抗运动终至变质而流为对付学校厨子的“饭厅风潮”。最后学校当局想出“请君入瓮”的办法，把伙食交由学生自己办理。不过零星的风潮仍旧持续了十五六年之久。有一次“饭厅风潮”甚至导致惨剧。杭州的一所中学，学生与厨子发生纠纷，厨子愤而在饭里下了毒药，结果十多位学生中毒而死。我在惨案发生后去过这所中学，发现许多学生正在卧床呻吟，另有十多具棺木停放在操场上，等待死者家属前来认领葬殓。

表现于学潮的反抗情绪固然渐成过去，反抗力量却转移到革命思想上的发展，而且在学校之外获得广大的支持，终至发为政治革命而于一九一一年推翻满清。

第二度的学生反抗运动突然在一九一九年（民国八年）五月四日在北京爆发。此即所谓五四运动。事情经过是这样的：消息从巴黎和会传到中国，说欧战中的战胜国已经决定把山东半岛上的青岛送给日本。青岛原是由中国租借给德国的海港，欧战期间，日本从德国手中夺取青岛。中国已经对德宣战，战后这块租地自然毫无疑问地应该归还中国。

消息传来，举国骚然。北京学生在一群北大学生领导下举行示威，反对签订凡尔赛和约。三千学生举行群众大会，并在街头游行示威，反接受丧权辱国的条件，高喊“还我青岛！”、“抵制日货！”、“打倒卖国贼！”写着同样的标语的旗帜满街飘扬。

当时的北京政府仍旧在军人的掌握之下，仅有民主政体和议会政治的外表，在广州的中山先生的国民党以及其余各地的拥护者，虽然努力设法维护辛亥革命所艰辛缔造的民主政制，却未著实效。北京政府的要员中有三位敢犯众怒的亲日分子。他们的政治立场是尽人皆知的。这三位亲日分子——交通总长曹汝霖，驻日公使陆宗輿，和另一位要员章宗祥^[1]——结果就成为学生愤恨的对象，群众蜂拥到曹宅，因为传说那里正在举行秘密会议。学生破门而入，满屋子搜索这三位“卖国贼”。曹汝霖和陆宗輿从后门溜走了；章宗祥则被群众抓到打伤。学生们以为已经把他打死了，于是一哄而散，离去前把所有的东西砸得稀烂，并且在屋子里放了一把火。

这时武装警察和宪兵已经赶到，把屋子围得水泄不通。他们逮捕了近六十位学生带往司令部，其余的一千多名学生跟在后面不肯散，各人自承应对这次事件负责，要求入狱。结果全体被关到北京大学第三院（法学院），外面由宪警严密驻守。

有关这次游行示威的消息，遭到严密的检查与封锁。但是有几个学生终于蒙过政府的耳目，透过天津租界的一个外国机构发出一通电报。这电报就是五号上海各报新闻的唯一来源。

五号早晨报纸到达我手里时，我正在吃早餐。各报的首页都用大字标题刊登这条新闻，内容大致如下：

北京学生游行示威反对签订凡尔赛和约。三亲日要员曹汝霖、陆宗輿、章宗祥遭学生围殴。曹汝霖住宅被焚，数千人于大队宪警监视下拘留于北京大学第三院。群众领袖被捕，下落不明。

除此简短新闻外，别无其他报导。

这消息震动了整个上海市。当天下午，公共团体如教育会、商会、职业工会等纷纷致电北京政府，要求把那三位大员撤职，同时释放被捕或被扣的学生。第二天一整天，全上海都焦急地等待着政府的答复，但是杳无消息。于是全市学生开始罢课，提出与各团体相同的要求，同时开始进行街头演说。

第二天早晨，各校男女学生成群结队沿着南京路挨户访问，劝告店

家罢市。各商店有的出于同情、有的出于惧怕，就把店门关起来了。许多人则仿照左邻右舍的榜样，也纷纷关门歇市。不到一个钟头，南京路上的所有店户都关上了大门了，警察干涉无效。

罢市风声迅即蔓延开来，到了中午时，全上海的店都关了。成千上万的人在街头聚谈观望，交通几乎阻塞。租界巡捕束手无策。男女童子军代替巡捕在街头维持秩序，指挥交通。由剪了短发的女童子军来维持人潮汹涌的大街的秩序，在上海公共租界倒真是一件新鲜的事。中国人和外国人同样觉得奇怪，为什么群众这么乐意接受这些小孩子的指挥，而对巡捕们却大发脾气。

几天之内，罢课成为全国性的风潮，上海附近各城市的商店和商业机构全都关了门。上海是长江流域下游的商业中心，这个大都市的心脏停止跳动以后，附近各城市也就随着瘫痪，停止活动，倒不一定对学生表同情。

租界当局听说自来水厂和电灯厂的雇员要参加罢工，大起惊慌。后来经过商会和学生代表的调停，这些人才算被劝住没有罢工。各方压力继续了一个多星期，北京政府终于屈服，亲日三官员辞职，全体学生释放。

各地学生既然得到全国人士的同情与支持，不免因这次胜利而骄矜自喜。各学府与政府也从此无有宁日。北京学生获得这次胜利以后，继续煽动群众，攻击政府的腐败以及他们认为束缚青年思想的旧传统。学生们因为得到全国輿情的支持，已经战胜了政府。参加游行示威，反对签订凡尔赛和约，是每一个中国人都愿意做的事。学生们因为有较好的组织，比较敢言，比较冲动，顾虑比较少，所以打了头阵，并且因此拨动了全国人民的心弦。

亲日官员辞职，被捕学生释放，上海和其他各地的全面罢课罢市风潮歇止以后，大家以为“五四”事件就此结束，至少暂时如此。但是北京大学本身却成了问题。蔡校长显然因为事情闹大而感到意外，这时已经辞职而悄然离开北京，临行在报上登了一个广告引《白虎通》里的几句话说：“杀君马者道旁儿，民亦劳止，汙可小休。”他先到天津，然后到上海，最后悄然到了杭州，住在一个朋友的家里。住处就在著名的西湖旁边，临湖依山，环境非常优美，他希望能像传统的文人雅士，就此息隐山林。虽然大家一再敦劝，他仍旧不肯回到北大。他说，他从来无意鼓励学生闹学潮，但是学生们示威游行，反对接受凡尔赛和约有关山东问题的条款，那是出乎爱国热情，实在无可厚非。至于北京大学，他认

为今后将不易维持纪律，因为学生们很可能为胜利而陶醉。他们既然尝到权力的滋味，以后他们的欲望恐怕难以满足了。这就是他对学生运动的态度。有人说他随时准备鼓励学生闹风潮，那是太歪曲事实了。

他最后同意由我前往北京大学代理他的职务。我因情势所迫，只好勉强同意担负起这副重担，我于是在七月间偕学生会代表张国焘乘了火车，前赴北京。到了北京大学，初次遇见了当时北大学生，以后任台大校长的傅孟真（斯年），现在台湾任“国史馆长”的罗志希（家伦）。两位是北大“五四”的健将，不但善于谋略，而且各自舞着犀利的一支笔，好比公孙大娘舞剑似的，光芒四射。他们约好了好多同学，组织了一个新潮社，出版了一种杂志，叫做《新潮》，向旧思想进攻。我现在写《西潮》，实在自从“五四”以后，中国本土，已卷起了汹涌澎湃的新潮，而影响了中国将来的命运。然而“五四”之起因，实为第一次世界大战后，欧洲帝国主义之崩溃，以及日本帝国主义的猖狂。所以毕竟还是与西潮有关。

我到校以后，学生团体开了一个欢迎大会。当时的演说中，有如下一段：

“……故诸君当以学问为莫大的任务。西洋文化先进国家到今日之地位，系累世文化积聚而成，非旦夕可几。千百年来，经多少学问家累世不断的劳苦工作而始成今日之文化。故救国之要道，在从事增进文化之基础工作，而以自己的学问功夫为立脚点，此岂摇旗呐喊之运动所可几？当法国之围困德国时，有德国学者费希德在围城中之大学讲演，而作致国民书曰：‘增进德国之文化，以救德国。’国人行之，遂树普鲁士救法之基础。故救国当谋文化之增进，而负此增进文化之责者，惟有青年学生。……”

暴风雨过去以后，乌云渐散，霁日重现，蔡先生也于九月间重回北大复职视事。

北大再度改组，基础益臻健全。新设总务处，由总务长处理校中庶务。原有处室也有所调整，使成为一个系统化的有机体，教务长负责教务。校中最高立法机构是评议会，会员由教授互选；教务长、总务长，以及各院院长为当然会员。评议会有权制订各项规程，授予学位，并维持学生风纪。各行政委员会则负责行政工作。北大于是走上教授治校的道路。学术自由、教授治校，以及无畏地追求真理，成为治校的准则。学生自治会受到鼓励，以实现民主精神。

此后七年中，虽然政治上狂风暴雨迭起，北大却在有勇气、有远见的人士主持下，引满帆篷，安稳前进。图书馆的藏书大量增加，实验设备也大见改善。国际知名学者如杜威和罗素，相继应邀来校担任客座教授。

这两位西方的哲学家，对中国的文化运动各有贡献。杜威引导中国青年，根据个人和社会的需要，来研究教育和社会问题。无庸讳言的，以这样的方式来考虑问题，自然要引起许多其他的问题。在当时变化比较迟钝的中国实际社会中自然会产生许多纠纷。国民党的一位领袖胡汉民先生有一次对我说，各校风潮迭起，就是受了杜威学说的影响。此可以代表一部分人士对于杜威影响的估计。他的学说使学生对社会问题发生兴趣也是事实。这种情绪对后来的反军阀运动却有很大的贡献。

罗素则使青年人开始对社会进化的原理发生兴趣。研究这些进化的原理的结果，使青年人同时反对宗教和帝国主义。传教士和英国使馆都不欢迎罗素。他住在一个中国旅馆里，拒绝接见他本国使馆的官员。我曾经听到一位英国使馆的官员表示，他们很后悔让罗素先生来华访问。罗素教授曾在北京染患严重的肺炎，医生们一度认为已经无可救药。他病愈后，我听到一位女传教士说：“他好了么？那是很可惜的。”我转告罗素先生，他听了哈哈大笑。

第一次世界大战后，中国的思想界，自由风气非常浓厚，无论是研究社会问题或社会原理，总使惯于思索的人们难于安枕，使感情奔放的人们趋向行动。战后欧洲的西洋思想就是在这种气氛下介绍进来的。各式各样的“主义”都在中国活跃一时。大体而论，知识分子大都循着西方民主途径前进，但是其中也有一部分人受到一九一七年俄国革命鼓励而向往马克思主义。《新青年》的主编陈独秀辞去北大文学院院长的职务，成为共产运动的领袖。反对日本帝国主义的运动也促使知识分子普遍同情俄国革命。第三国际于一九二三年派越飞到北京与中国知识分子接触。某晚，北京撷英饭店有一次欢迎越飞的宴会。蔡校长于席中致欢迎词说：“俄国革命已经予中国的革命运动极大的鼓励。”

俄国曾经一再宣布，准备把北满的中东铁路归还中国，并且希望中国能够顺利扫除军阀，驱除侵略中国的帝国主义。苏俄对中国的这番好意，受到所有知识分子以及一般老百姓的欢迎。这种表面上友好表示的后果之一，就是为苏俄式的共产主义在中国铺了一条路。

在这同时，许多留学欧美大学的杰出科学家也纷纷回国领导学生，从事科学研究。教员与学生都出了许多刊物。音乐协会、艺术协会、体

育协会、图书馆协会纷纷成立，多如雨后春笋。教授李守常（大钊）并领导组织了一个马克思主义研究会。当时北京报纸附栏，称这研究会为“马神庙某大学之牛克斯研究会”，不过作为嘲笑之对象而已。马神庙者北京大学所在地也。此时北大已经敲开大门招收女生。北大是中国教育史上第一所给男女学生同等待遇的高等学府。教员和学生学术自由和自由研究的空气里，工作得非常和谐而愉快。

北大所发生的影响非常深远。北京古都静水中所投下的每一颗知识之石，余波都会到达全国的每一角落。甚至各地的中学也沿袭了北大的组织制度，提倡思想自由，开始招收女生。北大发起任何运动，进步的报纸、杂志和政党无不纷起响应。国民革命的势力，就在这种氛围中日渐扩展，同时中国共产党也在这环境中渐具雏型。

军阀之间的冲突正在这古都的附近间歇进行着。在这些时断时续的战事中，北京各城门有一次关闭几达一星期之久。枪炮声通常在薄暮时开始，一直持续到第二天早晨。有一次，我们曾经跑到北京饭店的屋顶去眺望炮火，那真叫做隔岸观火，你可以欣赏夜空中交织的火网，但是绝无被火花灼伤的危险。炮弹拖着长长的火光，在空中飞驰，像是千万条彩虹互相交织。隆隆的炮声震得屋顶摇摇晃晃，像是遭到轻微的地震。从黄昏到清晨，炮火一直不停。我回家上床时，根本不能把耳朵贴着枕头睡，因为这样炮声显得特别响亮。因此我只能仰天躺着睡，让耳朵朝着天花板，同时注意到电灯罩子在微微摇晃。玻璃窗也嘎嘎作响。我有一只德国种的狼犬，名叫狼儿，它被炮声吵得无法再在地板上安睡，一直哼个不停。它的耳朵一贴到地板，它就惊跳起来，哼唧几声之后，它冲到房门旁，拼命在门上抓，它一定以为怪声是我卧房的地板下面发出来的。第二天早上，我骂了它一顿，说它前一晚不该那么捣乱。它似乎自知理屈，只用两只眼睛怯生生地望着我。早餐时我到处找不到狼儿，从此再不见它的踪影。大概它跑出去想找块安静地，夜里不会有恶作剧的魔鬼在地下大敲大擂，好让它安安稳稳地睡觉。不过，我想它大概是很失望的。

有一天，我和一位朋友在围城中沿着顺城门大街散步。老百姓还是照常操作，毫无紧张的样子。拉黄包车和坐黄包车的也与平常毫无异样。我们从西单牌楼转到西长安街，然后又转到中央公园。皇宫前午门谯楼上的黄色琉璃瓦，在夕阳下映着澄碧的秋空闪闪发亮。我们在一颗古柏的浓荫下选了一个地方坐下。这些古老的柏树是几百年前清朝的开国皇帝种植的。有的排成长列，有的围成方形。空气中充塞着柏树的芳

香，微风带着这些醉人的香味吹拂着我们的面庞。我们围坐在桌子旁，静听着邻座酒客的议论。大家都在议论战事，猜测着谁会胜利，谁将入据北京。谁胜谁败，大家好像都不在乎。操心又怎么样？北京已经见过不少的战事，饱经沧桑之后，北京还不是依然故我？沉默的午门谯楼就是见证。

"城门都关了，不知道我们能不能叫个鱼吃吃。"我的朋友说。

堂倌拿了一条活生生的鱼来问我们："先生们喜欢怎么个烧法？"

"一鱼两吃。一半醋溜，一半红烧。"

鱼烧好端上来了，有一碟似乎不大新鲜。

"这是怎么回事？这一半是死鱼呀！"我的朋友质问堂倌，堂倌鞠了一躬，只是嘻嘻地笑。

"哦，我知道了！这条鱼一定是从城墙跳进来的。碰到地的一边碰死了，另一边却仍然活着。"我代为解释。堂倌再度跑过来时，我的朋友从桌上抓起一把空酒壶，翻过来给他看。"怎么！你给我们一把空酒壶呀！"

"对不起，"堂倌笑嘻嘻地说，"酒烫跑了！"他马上给我们重新拿了一壶。当然，两壶酒都记在我们账上。

我们在黄昏时回家。那天晚上，战斗停止了，我又想起狼儿。这一晚，它大概可以在城里找个地方，安静地睡一觉了。第二天早上，我们发现政府已经易手。皇宫依然无恙。老百姓照常过活。各城门大开，成千成万的人从乡下挑着蔬菜、肉类、鸡蛋、鱼虾涌进北京城。小孩子们在战场上捡起废弹壳，以几块钱的代价在街头出售。许多人拿这些炮弹壳制花瓶。

城外有些人家破人亡，我亦失掉了我的狼儿。

一般而言，在这些漫长痛苦的日子里，因战事而丧失的生命财产并不严重。使中国陷于瘫痪而成为邻邦侵略之目标的，实为人心之动荡，交通之破坏，经济之崩溃，以及国民安定生活之遭破坏。国家陷于四分五裂，全国性的建设计划几乎成为不可能。中国当务之急就是统一。

蔡校长赴欧旅行时，我又再度代理北大校长。这时我接到中山先生一封信，对北大的各种运动大加奖誉，最后并勉励我"率领三千子弟，参加革命"。

孙先生可惜未能在有生之年看到他的希望实现，不过短短数年之后，他的继承人蒋总司令，率领革命军从广州北伐，所向披靡，先至长江流域，继至黄河流域，终至底定北京。开始于北京，随后遍及全国各阶层的革命运动，已先为这次国民革命军的新胜利奠定了心理的基础。

[1] 此处应为作者笔误。当时陆宗輿任币制局总裁（1913—1916年任驻日公使），章宗祥任驻日公使。

扰攘不安的岁月

蔡校长和胡适之他们料得不错，学生们在“五四”胜利之后，果然为成功之酒陶醉了。这不是蔡校长等的力量，或者国内的任何力量所能阻止的，因为不满的情绪已经在中国的政治、社会和知识的土壤上长得根深蒂固。学校里的学生竟然取代了学校当局聘请或解聘教员的权力。如果所求不遂，他们就罢课闹事。教员如果考试严格或者赞成严格一点的纪律，学生就马上罢课反对他们。他们要求学校津贴春假中的旅行费用，要求津贴学生活动的经费，要求免费发给讲义。总之，他们向学校索取索取，但是从来不考虑对学校的义务。他们沉醉于权力，自私到极点。有人一提到“校规”他们就会瞪起眼睛，撅起嘴巴，咬牙切齿，随时预备揍人。

有一次，北大的评议会通过一项办法，规定学生必须缴讲义费。这可威胁到他们的荷包了。数百学生马上集合示威，反对此项规定。蔡校长赶到现场，告诉他们，必须服从学校规则。学生们却把他的当耳边风。群众涌进教室和办公室，要找主张这条“可恶的”规定的人算账。蔡校长告诉他们，讲义费的规定应由他单独负责。

“你们这班懦夫！”他很气愤地喊道，袖子高高地卷到肘子以上，两只拳头不断在空中摇晃。“有胆的就请站出来与我决斗。如果你们那一个敢碰一碰教员，我就揍他。”

群众在他面前围了个半圆形。蔡校长向他们逼进几步，他们就往后退几步，始终保持着相当的距离。这位平常驯如绵羊、静如处子的学者，忽然之间变为正义之狮了。

群众渐渐散去，他也回到了办公室。门外仍旧聚着五十名左右的学生，要求取消讲义费的规定。走廊上挤满了好奇的围观者。事情成了僵局。后来教务长顾孟余先生答应考虑延期收费，才算把事情解决。所谓延期，自然是无限延搁。这就是当时全国所知的北大讲义风潮。

闹得最凶的人往往躲在人们背后高声叫骂，我注意到这些捣乱分子之中有一位高个子青年，因为他个子太高，所以无法逃出别人的视线。我不认识他，后来被学校开除的一批人之中，也没有他的名字。若干年之后，我发现他已经成为神气十足的官儿，我一眼就认出他来。他的相貌决不会让人认错，他的叫骂声仍旧萦回在我的耳畔。他已经成为手腕

圆滑的政客，而且是位手辣心黑的贪员，抗战胜利后不久故世，留下一大堆造孽钱。

几年之后，发生了一次反对我自己的风潮，因为我拒绝考虑他们的要求。一群学生关起学校大门，把我关在办公室。胡适之先生打电话给我，问我愿不愿意找警察来解围，但是我谢绝了。大门关闭了近两小时。那些下课后要回家的人在里面吵着要出去，在门外准备来上课的人则吵着要进来。群众领袖无法应付他们自己同学的抗议，最后只好打开大门。我走出办公室时，后面跟着一二十人，随跟随骂着。我回过头来时，发现有几个学生紧钉在我背后。北大评议会决定开除我所能记得的以及后来查出的闹事学生。

好几年以后，我偶然经过昆明中央航空学校的校园。航空学校原来在杭州，战时迁到昆明。忽然一位漂亮的青年军官走到我面前，他向我行过军礼告诉我，他就是被北京大学开除的一位学生。我马上认出他那诚实的面孔和健美的体格。闹学潮时紧迫在我背后所表现的那副丑恶的样子已经完全转变了，他的眼睛闪耀着快乐的光辉，唇边荡漾着笑意。这次邂逅使我们彼此都很高兴。航空学校的校长后来告诉我，这位青年军官是他们最优秀的飞行员和教官之一。

这些例子足以说明学生运动中包含各式各样的分子。那些能对奋斗的目标深信不疑，不论这些目标事实上是否正确，而且愿意对他们的行为负责的人，结果总证明是好公民，而那些鬼头鬼脑的家伙，却多半成为社会的不良分子。

学生们所选择的攻击目标，常常是政府无法解决或者未能圆满解决的国际问题。因此，他们常能获得国人的同情；他们的力量也就在此。中日之间的“事件”日渐增多以后，学生的示威游行常常被日本人解释为反日运动。纠纷的根源在于二十一条要求和凡尔赛和约所引起的山东问题。自从远东均势破坏以后，日本几乎享有控制中国的特权。门户开放政策已经取代瓜分中国的政策。但是门户开放政策必须以均势为基础，均势一旦破坏，中国只有两条路可走——一条路是任由日本宰割，另一条路就是自我振作，随时随地与日本打个分明。

学生们决定奋起作战，起先是游行、示威、罢课和抵制日货，接着就转而攻击北京政府，因为他们认为一切毛病都出在北京政府身上。他们发现没有重要的国际问题或国内问题足资攻击时，他们就与学校当局作对。原因在于青年心理上的不稳。一旦他们受到刺激而采取行动时，这种不稳的情绪就爆发了。想压制这种澎湃的情绪是很困难的。

若干学生团体，包括青年共产党员，开始把他们的注意力转移到劳工运动以及工人的不稳情绪上。沿海商埠的工人正蠢蠢欲动。铁路工人和工厂工人已开始骚动，而且蔓延各地。他们不久就与学生携手，参加群众大会和游行。劳工运动是不可轻侮的武器。在广州的国民党政府，曾以总罢工瘫痪香港，使这个英国殖民地在工商业上成为荒漠，历时十八月之久。

全国性的反英情绪是民国十四年的上海“五卅惨案”激起的。五月三十日那一天，一群同情劳工运动的人在上海大马路（南京路）游行示威，公共租界当局竟然下令向群众开枪，好几个人中弹身死，伤者更不计其数。工人、商人和学生在国民党及共产党领导之下，随即发动全面罢工、罢市、罢课，上海再度变为死城。六月二十三日，广州的学生、工人、商人和军人继起响应，发动反英示威游行。群众行近沙面租界时，驻防英军又向群众开枪。于是香港各界亦开始罢工、罢市、罢课，使香港也变为死城。北京英国使馆的华籍雇员，在学生煽动之下，也进行同情罢工，致使这批英国外交官员很久都没有厨子和听差侍候。

自从工人运动与学生运动彼此呼应以后，游行示威者人数动以万计，北京不时有各色人等参加的群众大会出现，街头游行行列常常长达数里，群众手摇旗帜，高呼口号，无不慷慨激昂。一位白俄看到这种情形时，不觉怵然心惊。他曾经在俄国看到不少这样的集会，他说这是革命即将来临的征兆，因此他担心是否能继续在中国平安住下去。

学生们找不到游行示威的机会时，曾经拿学校当局作为斗争的对象，工人的情形亦复如此。他们找不到示威的对象时，就把一股怨气发泄在雇主的身上。不过，中央政府或地方政府对付罢工工人，可比对付学生简单多了。他们有时用武力来弹压罢工工人，有时就干脆拿机关枪来扫射。

段祺瑞执政的政府显然认为机关枪是对付一切群众行动的不二法门，因此，在一群学生包围执政府时，段执政就老实不客气下令用机关枪扫射。我在事前曾经得到消息，说政府已经下令，学生如果包围执政府，军队就开枪。因此我警告学生不可冒险，并设法阻止他们参加；但是他们已经在校内列队集合，准备出发，结果不肯听我的劝告。他们一到了执政府，子弹就像雨点一样落到他们头上了。

我在下午四点钟左右得到发生惨剧的消息后马上赶到出事地点。段执政官邸门前的广场上，男女学生伤亡枕藉，连伤者与死者都难辨别。救护车来了以后，把所有留着一口气的全部运走，最后留下二十多具死

尸，仍旧躺在地上。许多重伤的在送往医院的途中死去，更有许多人则在手术台上断了气。我们向各医院调查之后，发现死伤人数当在一百以上。这个数目还不包括经包扎后即行回家的人在内。

段祺瑞政府的这种行动，引起全国普遍的抗议，段政府后来终于垮台，此为原因之一。

学生势力这样强大而且这样嚣张跋扈，除了我前面所谈到的原因之外，另一原因是这些学生多半是当时统治阶级的子女。学生的反抗运动，也可以说等于子女对父母的反抗。做父母的最感棘手的问题就是对付桀骜不驯的子女，尤其是这些子女的行为偏偏又受到邻居们的支持。工人们的情形可就不同了；他们的父母或亲戚，既不是政府大员，也不是社会闻人，因此他们命中注定要挨警察的皮鞭或军队的刺刀。只有在学生领导之下，或者与学生合作时，工人才能表现较大的力量。

学生运动在校内享有教师的同情，在校外又有国民党员和共产党员的支持，因此势力更见强大。此外还牵涉到其他的政治势力。故而情形愈来愈复杂，声势也愈来愈浩大。学生运动自从民国八年开始以来，背后一直有教员在支持。就是满清时代的首次学潮，也是教员支持的。

后来教员也发生罢教事件，要求北京政府发放欠薪，情势更趋复杂。北大以及其他七个国立大专学校的教员，一直不能按时领到薪水。他们常常两三个月才能领到半个月的薪俸。他们一罢课，通常可以从教育部挤出半个月至一个月的薪水。

有一次，好几百位教员在大群学生簇拥之下，占据了整个教育部的办公厅，要求发放欠薪。八个国立学校的校长也到了教育部，担任居间调停的工作。教员与学生联合起来，强迫马邻翼教育次长和八位校长一齐前往总统府，要求发薪水。这位次长走到教育部门口时，藉口天在下雨，不肯继续往外走。一位走在他旁边的学生汪翰，马上把自己的雨伞打开递给他，并且很直率地说："喏，这把雨伞你拿去！"于是这位次长只好无可奈何地继续前进，后面跟着八位心里同样不怎么乐意的校长。群众走近总统府时，宪兵、警察赶紧关起大门。教员与学生在门外吵着要进去。忽然大门打开了，大群武装宪警蜂拥而出，刺刀乱刺，枪把乱劈。上了年纪的教员和年轻的女学生纷纷跌到沟里，有的满身泥泞，有的一脸血迹，叫的叫，哭的哭，乱成一片。法政大学校长王家驹像死人一样躺在地上。北大政治学教授李大钊挺身与士兵理论，责备他们毫无同情心，不该欺侮饿肚皮的穷教员。北大国文系教授马叙伦额头被打肿一大块，鼻孔流血，对着宪兵大喊："你们只会打自己中国人，你们为什

么不去打日本人？”

这位马教授后来被送到法国医院诊治，政府派了一位曾任省长的要员前往慰问并致歉意。坐在病榻旁的马教授的老母说：

“这孩子是我的独子，政府几乎要他的命，请问这是什么道理？”

曾任省长的那位要员回答道：“老伯母请放心，小侄略知相法，我看这位老弟的相貌，红光焕发，前途必有一步大运。老伯母福寿无疆，只管放心就是。至于这些无知士兵无法无天，政府至感抱歉。老伯母，小侄向您道歉。”

老太太居然被哄得安静下来，病房里其余的人却几乎笑出声来了。躺在医院病床上的其他教员，也都因为这位要员的风趣而面露笑容。

这件事情总算这样过去了。另有一次，教员们拥到财政部要求发放欠薪，部里的人一个个从后门溜走，结果留下一所空房子。有一次学生们因为不满政府应付某一强国的外交政策，冲进外交部打烂一面大镜和好些精致的座椅。学生、教员和工人联合起来罢工罢课，反对北京政府和侵略中国权益的列强。多事的那几年里，差不多没有一个月不发生一两次风潮，不是罢课就是罢工。

在那时候当大学校长真是伤透脑筋。政府只有偶然发点经费，往往一欠就是一两年。学生要求更多的行动自由，政府则要求维持秩序，严守纪律。出了事时，不论在校内校外，校长都得负责。发生游行、示威或暴动时，大家马上找到校长，不是要他阻止这一边，就是要他帮助那一边。每次电话铃声一响，他就吓了一跳。他日夜奔忙的唯一报酬，就是两鬓迅速增加的白发。

我讲这些话，决不是开玩笑。我记下这些往事以后，又做了场恶梦，有时看到青年男女横尸北京街头，有时又看到宪兵包围北京大学要求交出群众领袖。梦中惊醒之后，辗转反侧无法安枕，一闭上眼睛，一幕幕的悲剧就重新出现。

有一天，我和一位老教授在北京中央公园的柏树下喝茶。这位老教授曾经说过一段话，颇足代表当时扰攘不安的情形。

“这里闹风潮，那里闹风潮，到处闹风潮——昨天罢课，今天罢工，明天罢市，天天罢、罢、罢。校长先生，你预备怎么办？这情形究竟到哪一天才结束。有人说，新的精神已经诞生，但是我说，旧日安宁的精神倒真是死了！”

PART FOUR UNIFICATION

CHAPTER 17 AN EXPERIMENT IN CONSTITUTIONALISM

During the warlord regime one evening the Soviet Ambassador at Peking gave a banquet at the Embassy to leading men of the city. About sixty people were present. When the roast suckling pigs were passed round the table some of the guests looked at the steaming roast and burst into subdued giggles, while out of the corners of their eyes they glanced at the President and Vice-President of the National Assembly, who were among the guests. The contagious giggles spread until the whole table caught them except the two officials, who pulled long faces but remained calm. Finally I saw somebody whisper in the ear of the Soviet Ambassador and he, too, succumbed to the contagion.

The story was this. In the old days when the Dutch Indies needed labor, owners of rubber plantations and mines resorted to getting laborers from China by fraudulent means. By painting a rosy picture of the prospects and offering a sum of money, labor agencies in China enticed workers to cross the sea to the islands and there sold them to the development companies with or without the knowledge of the human goods. These unfortunate people were called "pigs" because they had been sold for money like the meanest livestock.

During the early years of the Republic the irregular practices of certain members of the National Assembly became so notorious and contemptible that people reminiscently called them "pigs," since they were willing to sell themselves to the highest bidder. The great majority of members were upright men, but they were unorganized and therefore powerless to check their fellow members. They, too, were so unfortunate as to be tagged with the epithet. When bad men combine the good must associate; if they do not, it is their own fault and they have only themselves to blame.

The idea of a written constitution for China had been introduced from America. The Constitution of the United States was an

embodiment of ideas and beliefs of the American people and grew out of the life of the people. The Constitution of China was a copy of imported ideas, adopted according to the fancy of those who drafted the document and alien to the habits and ideas of the Chinese.

During the Imperial regime, in the last few years before the revolution, the provincial assemblies representing the gentry class achieved creditable results because their main interests were more or less the same and there was leadership in that class. The Imperial governor of the province had enough prestige to serve as a check to the assembly. Little or no political squabbling went on in the assembly to obscure the larger issues. The bills passed were generally for the welfare of the people of the province. Little or no corruption was known.

In 1912, when Dr. Sun Yat-sen was Provisional President of the Republic at Nanking, the National Assembly showed healthy signs of becoming a modern parliament, for its members represented revolutionary interests and there were revolutionary leaders to guide it. Dr. Sun's prestige as Chief Executive was high. But when the Assembly came under Yuan Shih-kai, trouble began to brew. This autocratic and reactionary President was hated by the revolutionary leaders and the President hated them in turn. With a strong army in his hands he resorted to intimidation, thus setting a very bad precedent for future development of the legislative body. To illustrate the ludicrously bad effect of this technique on the morale of the members, I may relate here an incident which occurred during Yuan's election to the presidency. Photographers covered the event. In those days indoor picture-taking involved the use of flashlight powder, which exploded noisily with a dazzling light. On this occasion, taking it for a bomb explosion, people ran wildly for safety. One member ducked under a table, shouting, "I voted for Yuan Shih-kai!" Quite a few lost their slippers (Chinese masculine footgear is comfortably loose) and were obliged to look for them after the scare was over. The episode ended with the impeachment of the secretary-general for allowing photographers to frighten the Assembly by a "bomb."

Under Yuan's presidency the activity of the half dozen political parties degenerated into mere political squabbling. Party and personal feelings ran high. The Assembly, discredited in the eyes of the people, was finally washed away in the tides of Yuan's maneuvers for a monarchy and the restoration movement of Chang Hsun. These movements failed, however, and the National Assembly was restored. Political power was now divided among the military governors of the provinces, the shadowy central government in Peking having neither prestige nor power to control the Assembly. Through corruption Tsao Kun, a northern warlord, got himself elected President, and the prestige of the national legislative body sank rapidly as subsequent developments led ever downward to new lows of political integrity.

Quite a number of representatives were elected through corruption. Ku Hung-min, a well-known cynical scholar of international fame, told me that during an election he got eight hundred dollars from a man who bought his vote. He took the money but did not go to the polls. Instead he went to Tientsin and spent all the money there. Later, at an international party in the Grand Hôtel de Pékin, Ku got hold of the man and pointing to him said to the gathering, "This man wanted to buy me for eight hundred dollars. Gentlemen, do you think Ku Hung-min is so cheap?"

When undesirable elements came into the Assembly in this manner, even though the number was not large they naturally made it look like an auction house, representation being sold to the highest bidder.

The students of Peking now directed their attack upon the "House of Corruptions." One afternoon several thousand boys and girls surrounded the Assembly and demanded that a certain bill concerning educational measures be deleted from the agenda. There was a clash between the police on duty there and the student body. Some of the students became so incensed that a few days later they smuggled in three bombs from Tientsin intended for the Assembly. They were persuaded not to carry out this violence and the bombs were taken outside the city and thrown into a river. A few weeks later a

fisherman caught one of them and shook it in his hands to find out what was inside. Bang! The bomb went off and carried with it the hands and head of the inquisitive fisherman. Police assumed that it had been dropped there in the days of the revolution and no investigation was made.

Conflicts between the Assembly, and the students continued. The Assembly members tried at first to assert their right as representatives of the people. The students retorted, calling them by their now familiar contemptible name. The Assembly tried to impeach the Chancellor of the National University of Peking; the students retaliated by staging mass demonstrations in which flags bearing the likeness of a pig streamed in the air amid threats to smash the Assembly. Finally the Assembly, conscious of its weakness, declared a truce by letting the universities and students alone. Ku Hung-min, whose cynical views made him contemptuous of students and representatives alike, said to me one day, "You believe in democracy. But to me it is demo-crazy."

If an institution is hated by the public it may still have some grounds to exist; but when it is sniffed and mocked at, even though for the acts of a mere minority, the whole suffers from the inadequacy of the part and goes down together like a sinking boat. So it was with the Assembly in the early phases of constitutional government in China. At length some of the warlords snatched the opportunity to brush it aside as a scrap of paper.

The story of constitutionalism in the days of the warlords had, of course, two sides to it. On the one hand, the warlords wrecked it by intimidation through force and by corruption with money. They had no prestige, no principle, and no policy by which to guide a democratic body. After Yuan Shih-kai, the power of the central government was a political shadow, the real power being divided among the provinces by the warring rulers who set themselves above the law. What they knew was the military strength of their feudal armies. The central government was not a position to have any principle or policy; fundamentally it was worthy neither of support

nor of opposition.

On the other side, most members of the Assembly were little concerned with national interests. Their preoccupations were either provincial or local, or still worse, personal. National interests they conceived only vaguely, and they themselves were therefore not in a position to have any coherent guiding principles or policy on national issues. Consequently no leadership was possible except in matters of local or personal interest. The Chinese people love freedom but were inexperienced in organized democracy—in other words, in constitutionalism. They did not see the importance of it. For China to follow the constitutional pattern of the West without its background was to hitch China's wagon to the Western star. It was small wonder that the experiment failed miserably.

With this failure before his eyes Dr. Sun Yat-sen devised a system of tutelary government as a steppingstone to constitutional government in his plan for an organized democracy for China. According to this scheme the period of national unification was to be followed by what might be called government in a state of tutelage—i.e., government by the Kuomintang—as a transition to the full-fledged constitutional form. And when the Kuomintang came to power in 1927 the tutelary government at Nanking was indeed meant to offset the bad effects of the corrupt National Assembly, which had become a headache to the entire country. During the next ten years the Nationalist party, under the leadership of Generalissimo Chiang Kai-shek, dislodged many a local warlord from the provinces and achieved to a large extent the unification of the country. The danger to national existence brought upon China by the Japanese militarists further intensified the unification.

Unification of the country was a necessary condition to constitutionalism. With respect for the law on the part of governing and governed alike—with the principles laid down by Dr. Sun Yat-sen, and with efficient leadership both in the government and in the National Assembly—China will be on the road to successful constitutionalism and organized democracy.

CHAPTER 18 THE DEATH OF DR. SUN YAT-SEN

Death calls before Victory descends upon my country.

Patriots that come after me will forever think of the tragedy in tears.

The above lines are from a poem by a famous general who was sent to defend China against an invasion of the Tartars in the twelfth century. They apply only too truly to the death of Dr. Sun Yat-sen. The great leader had struggled in the cause of revolution for forty long and strenuous years, and death snatched him away when the nation needed him for its regeneration.

In the spring of 1925 he had been for some months in poor health as a result of his untiring work for the country. Having admitted the Communists to the Kuomintang he went one step further. Seeing China still a divided house and knowing that strength lay in union, in response to an invitation of the northern generals he came from Canton to Peking to discuss a plan to unify the country. On his way north he made a trip to Japan in an effort to convince the Japanese people that a strong and unified China would be beneficial to that country. When he arrived at Tientsin he fell sick. He was carried from that port to the capital, accompanied by Madam Sun Yat-sen. But he was too ill to discuss plans and could only lie in bed. The doctors of the Peking Union Medical College were at their wits' end. Dr. Hu Shih recommended a Chinese herb doctor. Dr. Sun declined to take the Chinese medicine. He said that as a physician himself he knew that an herb doctor might sometimes cure a disease where scientific medicine failed. "A ship without a compass may reach its destination," he said, "while that which has one may not come to port. But I prefer to sail with that scientific instrument." However, he was persistently advised to take the Chinese medicine, and to meet the wishes of his friends he at length consented. But the ship without a compass did not reach port.

Dr. Sun was presently transferred from the Medical College to the

home of Dr. Wellington Koo. This magnificent house, built in the seventeenth century, had once belonged to a famous beauty, Chen Yuan-yuan, wife of General Wu San-kwei of the Ming Dynasty, who surrendered to the Manchus and conducted them inside the Great Wall, so the story goes, in order to rescue the lady from the hands of the bandit leader Li Shih-chung.

On the morning of March 12, 1925, a telephone call from Ma Soo informed me that Dr. Sun was nearing his end. I hastened to his temporary residence. When I entered the chamber Dr. Sun Yat-sen was beyond speech. A moment earlier he had muttered, "Peace, struggle, save China..." These were his last words. We retired to the reception hall and looked at each other in silence. "Is there any chance for the Doctor to recover?" whispered an aged Kuomintang member. All shook their heads, stifling the word upon their lips.

Silence gathered and deepened until one could hear it. Minute melted insensibly into minute. Some leaned against the wall, staring blankly at the painted ceiling. Others sank into the comfortable sofas and closed their eyes. A few tiptoed to the chamber and back without a word.

Suddenly everybody in the hall was alert, listening to sobs barely audible from the bedroom. The faint sounds gave way to a chorus of loud cries—the great leader had passed into history. As we entered the death chamber I saw that Dr. Sun's countenance was serene, as if he were asleep. His son, Sun Fo, was sitting on a bench at the bedside staring into space like a man of stone. Madam Sun bent over the edge of the bed with her face buried in the soft mattress, shaking with sobs that would break one's heart. Wang Chung-huei, standing at the end of the bed, was rocking convulsively, wailing and wiping away his tears with a handkerchief. The elder statesman Wu Chi-huei stood with his hands clasped behind him and tears welling up in his eyes.

As Dr. Sun's body was carried out of the hall covered with a big national flag, Mr. Borodin, the Soviet adviser, said to me sadly that if he could have lived a few years or even a few months longer things would have been very different.

An autopsy made at the Medical College proved that cancer of the liver had caused his death.

Dr. Sun's body lay in state in one of the former palace halls in Central Park. Every day for a week at least twenty to thirty thousand people came to pay their last respects to their leader. The funeral procession, four or five miles long, was joined by all the students from elementary schools up to colleges, and by teachers, government officials, tradesmen, workers, and farmers, a hundred thousand strong.

The casket was placed temporarily in a stone pagoda in Pi-yun Ssu, the Purple Cloud Temple in the Western Hills, about fifteen miles from Peking. This picturesque pagoda was built centuries ago under Tibetan influence, of white marble with a pointed top of gilded bronze. It perches majestically on the south side of Purple Cloud Mountain, surrounded by tall pine trees, and overlooking a sea of whispering pines which sound like waves in the spring breeze and scent the air with their fragrance. The sky was serene. Streams wound their way among the moss-grown rocks. The bells in the eaves of the temple chimed melodiously in the wind.

Dr. Sun, who had lived a life of science and struggle, now rested in peace amid the beauty of art and nature.

.....

CHAPTER 19 THE ANTI-WARLORD CAMPAIGN

Years of student demonstrations and strikes coupled with internecine wars had sapped the strength of the government in Peking. In the provinces the warlords ruled like maharajahs. The power of the overlord in Peking at any one time depended upon the good will and support of the provinces which had easy access to the city. As its roots in the provinces weakened, the tree of power in Peking grew shaky. No sooner had one warlord entered the capital to take over the reins of government—either himself or through a puppet of his creation—than another would conspire to overthrow him and come to power in turn; when public sentiment as revealed in student demonstrations ran high against the regime in power, some other provincial general was always ready to take advantage of it. Through intrigue, civil war, coups d'état, or reshuffled combinations of power, the government changed hands constantly. During my first nine years in Peking I witnessed so many changes that the rapid shift of scene left in my memory only a jumble of disconnected, though vivid, pictures of the tragicomedy. I could imagine myself a pyramid sitting in the Egyptian desert, watching utterly unconcerned the constant coming and going of caravans and listening to the camel bells chiming their sad tunes.

Financial stringency was acute for the Peking government. National revenues were detained by the warlords in the provinces and spent in maintaining their private armies or to enrich their own coffers. A portion of the money that came to the central government, usually through loans from banks at exorbitant interest, had to go to military expenditure to placate the insatiable warlords who supported the government. Salaries, not only of teachers, as we have seen, but also of government employees and of diplomatic officials stationed in foreign lands, were left unpaid for months at a time or even years.

"What is the future of the Peking government?" asked an

American diplomat one day.

"It will dry up like a clam and only the shell will remain," I replied.

The situation grew worse year after year until the last vestige of the public respect due to a government was gone. The students helped to destroy its prestige and the warlords buried it in the Peking dust.

In the meantime the Kuomintang movement in Canton grew in strength by leaps and bounds. It had enjoyed public faith for some time, especially among intellectuals and students, and even won the sympathy of certain enlightened generals of the north—for among the warring northern generals enlightened ones were not lacking. In the basket of rotten oranges it was possible to find a few good ones.

Even after the death of Dr. Sun Yat-sen the spirit of the Nationalist party of China remained undaunted. Dr. Sun's nucleus of an army kept on growing at Huang-pu Military Academy near Canton, of which General Chiang Kai-shek was the president. In the course of a few years General Chiang's newly trained Nationalist troops were ready to deliver a deathblow to the warlords of the north. In 1927 this army of the Nationalist government of the Kuomintang swept northward at lightning speed through the heart of the country to Hankow, and another wing moved along the coast to Hangchow. In a pincer movement the two converged on Nanking, which was made capital of the Nationalist government when the victorious armies entered the city.

That same year, at about the time the Nationalist army started its northern expedition, a notorious warlord, Chang Chung-chang, entered Peking. This renowned leader had the physique of an elephant, the brain of a pig, and the temperament of a tiger. His powerful paws were always ready to snatch at any person he disliked or at any good-looking woman he coveted. I saw him several times in a peace-preserving committee of which I was a member, and felt that he was dangerous even to look at. When I was informed by Sun Pao-chi, ex-premier of the Peking government, that I was on the blacklist, and news reached me in the evening of the execution of Shao Piao-

ping, editor of the newspaper Ching Pao, I began to see the shadows of those powerful claws. Without hesitating I got into the car of Dr. Wang Chung-huei, who happened to call on me, and went directly to the Legation Quarter, where I got a room in the Hôtel des Wagons Lits. Here I stayed for three months and passed my time in studying calligraphy.

There were several others in similar plight; Dr. Chu Chia-hua, professor of geology and now director of the Academia Sinica, was one. Quite a few friends ran in from time to time to visit us. But spending three months in even a de luxe prison was no fun at all. We plotted escape and at length, when the situation was somewhat eased, sneaked out one after another. A very able young lady, the wife of a friend of mine, planned my escape. Acting as my wife she escorted me to the East Station without our being noticed by the police. Every casual look from a stranger startled me, though I remained outwardly calm. Following a stream of passengers I boarded a train to Tientsin and from there went by British merchant liner to Shanghai.

On the boat I met Dr. Chu Chia-hua, who from Shanghai was to proceed to Canton, where he later became president of the Sun Yat-sen University. For my part, I went to Hangchow. As the railway from Shanghai had been cut I reached the city by a roundabout way. At this time, before the Nationalist army commanded by General Ho Yin-chin reached the province, the governor appointed by Peking was attempting to revolt against the northern government and go over to the southern side. I called on him, and he revealed to me his plan for joining the southern camp. He told me that he had sent about a thousand men along the railway to the Kiangsu border, where the line was already cut.

I thought privately that he must be intoxicated with the cup of other people's success, or he would not attempt to fight an enemy at least ten times stronger than himself. I left Hangchow again the next morning by the roundabout route back to Shanghai. Within a few weeks his army was utterly routed by northern forces. When they entered Hangchow he was captured and executed.

Then the tables were turned on the northern warlords and Nationalist forces entered the city. Again I went there. Hangchow welcomed the Nationalist army with open arms. Thousands of spectators lined up along the streets with smiling faces to see the victorious modern-equipped troops march through the city. I stood watching in the crowd with my heart thumping against my ribs in ecstasy. After some sixteen years the good name of a modern army in China was once more established.

In about a year's time, in 1928, General Chiang Kai-shek was ready to launch his northern expedition. The army under his command crossed the Yangtze River and moved along the Tientsin-Pukow Railway with Peking as its objective. When it reached the outskirts of Tsinanfu, capital of Shantung Province, the Japanese—fearing a unified China—moved troops from Tsingtao down along the Tsingtao-Tsinan Railway to that capital under the pretext of protecting their vested interests and the lives and properties of the Mikado's subjects. This was intended to frustrate the unification plan by provoking an "incident," i.e., an open clash between China and Japan. The Japanese army murdered the Commissioner of Foreign Affairs and his staff in Tsinanfu, hoping that China would retaliate.

With foresight and forbearance and a sound strategy, the General saved his army and his hopes of unification by turning the spearhead of his forces away from Shantung, quickly crossing the Yellow River, and marching right on to Peking. The Japanese were thus outwitted and left to fight shadows.

Peking fell when the Nationalist army arrived. The giant of hollow papier-mâché toppled over before the merest breath of wind from the south.

When the Nationalist army entered Hangchow the year before, I had been appointed a member of the provincial government and Commissioner of Education. Thus in Hangchow, capital of Chekiang Province and city of my boyhood days, my experience in government administration began. The provincial government was formed with a council in charge. Before the national government in Nanking was

organized, all the members of the council, with its chairman, were appointed by the supreme commander of the Nationalist army, General Chiang Kai-shek.

Five members of the council acted concurrently as Commissioners of Civil Affairs, Finance, Military Affairs, Reconstruction, and Education. Above the provincial council was a branch council of the central political council of the Kuomintang, of which I was appointed secretary-general. This council was in charge of general policy for the province and gave orders to the provincial government to execute. It was later abolished as conditions in the province gradually settled down.

The provincial government was imbued with the same spirit of reform and reconstruction as the national government of Nanking, whose broader program we shall take up in the next chapter. The provincial reconstruction plan was rather ambitious, but after a revolution it was necessarily handicapped by lack of funds. So it concentrated on building more roads. Within a few years many roads were built—in the capital itself the provincial council ran a pencil through the map of the city and ordered roads to be built accordingly. After two years Hangchow was blessed with many wide streets within the city and roads running along the shores and on the dikes across the West Lake, leading to scenic spots in the Western Hills. A highway linked the city with Shanghai, and this brought many week-end motorists. In the short span of three years everyone noticed how the city had changed. New buildings shot up like mushrooms in the city, around the lake, and in the mountains. The population increased and business prospered.

Many electric plants were set up in local areas. In some rural districts gas pumps were installed to irrigate the rice fields. As Chekiang was the center of silk production, scientific sericulture was started by the government: silkworm eggs were raised scientifically and distributed to the silk producers at cost. The first year strong objections were raised to the new eggs, for the silk producers became suspicious of them under the influence of egg producers who followed

traditional methods. But results speak louder than false propaganda; the second year there was more demand for new eggs than the government could supply.

In order to reform the land tax system a general survey was made of agricultural land in the province, and this continued for many years following. In contrast to the drastic methods adopted by the Communists in their dealing with agrarian problems, these were tackled in Chekiang by the mild means of a general 25 per cent reduction of the land rent paid by the tillers to the owners. As a rule the tenant farmers paid about 25 per cent of their main crop as rent; the reduction lowered this figure to 18.75 per cent.^[1] As the rates of land rent had existed through centuries and the method and basis of calculation varied in different localities, the tenant farmers of some localities were much benefited, while elsewhere the rule for reduction caused great friction between owners and tenants. Lawsuits streamed in to the Land Rent Reduction Commission. There was so much confusion throughout the province that after some years the scheme was finally abandoned. Shen, the moving spirit in rent reduction, was assassinated for causes still undetermined.

Later, a campaign against illiteracy was launched. After some six or seven years the number of short-term schools to teach the reading and writing of the more commonly used characters had increased by thousands alongside the regular elementary schools.

A new experiment was made in the educational system of the province. The National University of Chekiang was organized with the writer as president. The university was not only to take charge of higher education but also to control the public school system in the province. The office of commissioner of education was abolished and the president of the university was made a member of the provincial government. Two other provinces followed suit with their respective university and school systems. After two years of trial, internal troubles and political complications grew in the other provinces, and the whole system was accordingly abolished in 1929 during my term of office as national Minister of Education. Thus the person by whose

hands it was sent to the grave was the one who had nursed it to grow with much work and thought.

I stayed a full year in Hangchow and the next year went back forth between Hangchow and Nanking, where I was appointed Minister of Education of the national government while concurrently holding the presidency of the University of Chekiang. In 1929 I gave up the latter post and stayed in Nanking for another year, when I was forced to resign from the Ministry of Education as a result of disagreement with some of the elder statesmen regarding a question of educational policy.

CHAPTER 20 THE RISE OF THE KUOMINTANG TO POWER

After the fall of Peking the country was once more a political whole. The capital of all China was moved to Nanking and remained there. Peking, meaning "North Capital," was changed to Peiping, "Peace in the North," an old name of the city before it was known to the world.

Peking had been the capital of five dynasties—the Liao, King, Yuan (Mongol), Ming, and Ching (Manchu)—over a period of more than a thousand years, and now ceased to be the capital. But it still remained the center of culture and art. The official dialect or language spoken by many of the educated classes in China in addition to their local dialects, used in broadcasting stations and taught in schools, had its home in Peking.

There were two main reasons why Nationalist China shifted the capital from the Yellow River Valley in the north to the Yangtze Valley in the south. The first was that the revolutionary spirit had permeated the latter area, which was therefore fertile soil where it was easier for the new spirit to take firm root, while the Yellow River Valley was the home of the reactionary warlords. Secondly, the Yangtze Valley was the seat of China's financial power, which could provide the government with necessary funds.

Nanking had been the capital for the Taipings, from 1851 to 1864. When they were dislodged from their last stronghold the city was devastated, and has never recovered its past glories. There were more ruins, wheat fields, vegetable gardens, and orchards than streets with buildings in that walled enclosure. The streets were narrow, rough, and filthy, the electric light no better than vegetable-oil lamps. A foot messenger was often speedier than a telephone call.

In the earlier periods of history this city on the bank of the Yangtze was a center of culture and refinement, especially in the time

of the southern dynasties. Its life of wine, women, and song dwelt in the memories of generations of literary men, poets, and artists. The Ching-huai Canal, connecting lakes of luxuriant lilies, traversed the city crowded with singing houseboats lit up by painted lanterns and lavishly decorated with articles of art. On either bank of the canal, as a boat sailed leisurely by, there unrolled before one's eyes endless rows of restaurants, and rooms elaborately furnished with painted columns and bamboo screens for literary, artistic, or musical entertainments. The air was laden with enchanting tunes and soothing scents that flowed out from behind the bamboo screens.

Such was the city in days of old. But Nanking was of strategic military importance. In every major war in the country this city was destined to suffer devastation. After every conflict its glories passed into memory, and from memory it was rebuilt upon its ruins when peace came. And from the memory of the past, as it was recorded, I have depicted a part of the old life of Nanking.

Since the Taipings, however, it has never recovered its ancient beauty. It is as if the successive restorations were only copies, done by some vulgar artist, of the original picture; after repeated copying the color of the original was lost and only vulgarity remained. From time to time, in periods after the Southern Sung (1127-1276), scholars of puritanic bent or stoic leanings objected to the type of effeminate refinement which grew up along the Ching-huai, now but an empty name with pleasant associations. But we must aver that the wrong lay not in enjoying the refinements of life but in the neglect of work and duty which should go with enjoyment. If there were only work and no play, Jack would be a dull boy. The stoic ways of living which came into vogue with the philosophers of the Sung Dynasty bequeathed to China generations of dull Jacks who knew neither play nor the right sort of work. They killed art, and with art, life. They attacked bad morals, but countenanced that abominable and most immoral institution, the foot-binding of women. Compare with this life in the Tang Dynasty (618-905), when work and play went hand in hand and a healthy civilization shone like the brilliant sun upon all its neighbor nations! Think of the Tang dances (mind you, there was no foot-

binding then), music, sports, poetry, painting, and calligraphy; and then of its great generals and their glorious armies. During the Tang period Chinese civilization reached its zenith. After the Tangs came declining days. In the time of the Northern Sung art persisted but the martial spirit waned, until finally the philosophers of the South Sung with their asceticism and moral speculation killed the arts both of peace and of war.

The Ching-huai Canal still ran through the city of Nanking. The houseboats and the apartments were there, too. But the forms, the quality, and the content were all changed. The refinement of life had disappeared with the flowing waters of the Yangtze, into the Yellow Sea.

When the Nationalist army entered Nanking a new spirit was born—a spirit of reform and reconstruction. Modern science was to revitalize the arts of days past. Upon the debris of the partly ruined city a modern town was built with asphalt roads traversing all sections. Trees were planted and parks designed and developed. Automatic telephones, light, and water were installed. An aerial map was made from the seaplanes of the American gunboats stationed at Nanking. On the basis of this map a new city was planned. The Commission of City Planning, of which the writer was a member in his capacity as Minister of Education, worked for more than a year with an American architect of wide experience in Chinese architectural design in the enchanted city of Peking. The commission planned to retain as far as possible the grandeur and beauty of Chinese architecture together with the convenience and hygienic installations of a modern city.

Old, dilapidated buildings were torn down to make way for new roads and houses. Commerce began to prosper. Modern theatres multiplied to accommodate the growing population. The canal and the lakes were dredged and old temples and other public buildings repaired.

The Central Museum was built to house a part of the treasures from the Palace Museum of Peking, and an underground safety vault

constructed for them, of reinforced concrete, in a hill which would be immune to air bombing. For the directors foresaw the impending Japanese aggressions against the new capital. As the situation in the north grew worse and war clouds hung thick over this side of the Great Wall, the more valuable treasures of Peking were moved by hundreds of trainloads to Nanking, and before the fall of the new capital to the Japanese all had been transported for safekeeping to eaves in the mountains of the interior.

The gigantic steel gate of the museum vault, with its intricate combination locks, was a piece of American ingenuity which humbled the Japanese. As reported from the occupied city, they worked on the locks for several days and finally gave up.

The buildings of the Ministries of Communications and of Railways were of reinforced concrete with modern lighting system ventilation, and conveniences. But their architectural design was altogether Chinese, with enamel tiles, painted columns, artistic windows, and other exterior decoration. These two imposing buildings stood opposite each other on Chung-shan Road, the main artery of traffic in the new metropolis, as monuments to China's old glory adapted to modern needs. Other buildings were planned and designed, but on account of the war they all had to be postponed.

The Sun Yat-sen Mausoleum, with blue enamel tiles and white marble columns, stood on the Purple Mountains outside the city overlooking the hilly valley and the winding Yangtze. Flights of granite steps led up to the tomb of the father of the Chinese Republic. The mountains were reforested with trees from various parts of China. Flowering plants and fruit trees decorated the gentle slopes. An athletic field and stadium with a swimming pool were built at the foot of the mountain.

A new model village was built in the rolling valley. A general plan was first laid out by the government, with roads, drainage, telephone and lighting systems, and school buildings. In the short space of a few years new houses sprang up like mushrooms, with ample space around them for Oriental gardens. Trees grew and plants

flowered; the birds sang and streams flowed. Old ways of living gave place to a new life in which science and art, work and pleasure, nature and human endeavor, went hand in hand.

Such was the nucleus which, it was hoped, would grow and some day transform every corner of the land. It was a modest beginning but had already borne fruit. For the new village movement had within a few years reached a number of cities and their surrounding areas. It was only a matter of time and further economic development for the new villages to change the mode of living of young China.

We could not very well expect that all trouble from the warlords would end with the downfall of Peking. Their seat of government was gone, but their real power was entrenched in the provinces. The country was vast and communications poor. These conditions and the unsettled state of mind in the country afforded them good opportunities to nurse their ambitions. At any favorable moment they were always ready to snatch more power; they lurked in the provinces like germs in the blood, ready to attack when the body weakened. In ten years, from the time his victorious army entered Peking to the eve of the Sino-Japanese War, Generalissimo Chiang Kai-shek had not a day's rest in his effort to unify the country.

Like the Roman generals who bound their ancient empire together by roads, he was not unmindful of the need to build more roads and railways and air lines. With Nanking as a center, highways, railways and airways were made to radiate from the capital to the provinces. A part of the communication system had existed before the Nationalist government came to power; with this as a basis it built new roads to make connections and extensions. Air lines were established to distant cities. From the new capital one could fly to Peking, Kaifeng, Sian, and Lanchow in the north; to Fuchow, Canton, and Kunming in the south; in the west to Hankow, Chungking, and Chengtu.

New railways were built to connect Hankow with Canton and Kowloon, just opposite Hongkong. If the Japanese had not at this time started trouble in Manchuria, a continuous journey would have been

possible in 1931 from either Hongkong or Shanghai to Paris by rail. A through train ran from Shanghai via Nanking, Tsinan, and Tientsin outside the Great Wall, and via Mukden to Tsitsihar in north Manchuria, by Chinese railroads built parallel to the Japanese-owned South Manchurian Railway^[1]. A branch line from Tsitsihar connected with the Trans-Siberian Railway. The progress of unification in China and the building of these parallel lines prompted the Japanese to try to take Manchuria, or the "Three Eastern Provinces," at a stroke—which became known to the world as the "Mukden Incident" of September 18, 1931.

Along the coast the gap between the Chien-tang and Tsao-ao rivers on the Shanghai-Hangchow-Ningpo line was filled, but the laying of track was suspended when war broke out. The new line between Soochow and Hangchow, however, was completed before hostilities began. Another new line from Hangchow running west to Kiangsi was finished just before the war and during the war was prolonged farther west to Hunan, where it connected with the Canton-Hankow Railway. The line was also further extended to Kweilin, capital of the southwest province of Kwangsi.

Highways were extended more rapidly. The Nanking-Hangchow highway was built during my sojourn in Nanking and I had the pleasure of going through it before it was opened to traffic. It traversed the richest sections of Chekiang and Kiangsu Provinces. As the car wound its way along Tai Lake one felt like stopping for a few days to sit under the pine trees and watch the sails rise or vanish over the horizon in the sunset. The fishermen cast their nets and drew up shining carp from the water. Tai is one of the five largest lakes in China, irrigating millions of acres of fertile land in the two most populous and cultured provinces of the country.

This highway also passed through a bandit-infested region, but the bandits disappeared when the road was opened because troops could be rushed to the spot.

Local troubles sometimes brewed as fast as construction progressed. At times the railway and highway lines had to run a race

with disturbance in areas without modern roads. The rebellion in Fukien Province a year before the war was frustrated by central troops rushed down through the then newly built Hangchow-Kiangsan Railway and along the roads also newly built, from Hangchow to that province.^[2] More roads meant less rebellion and less banditry, aside from the easy flow of products from one locality to another.

Communication is the key to modernization and reforms and to the discovery of possibilities of future development of the country. Thus the Nationalist government began its reconstruction program with the building of roads and railways. This was also the way to secure the unification of the country; any local rebellion could be put down easily if good roads were available. Again, better and more communication means more travel and quicker exchange of ideas. Beautiful scenery hitherto hidden in inaccessible parts of the country suddenly opened to the appreciative eyes of scholars, painters, poets, and lovers of nature.

Under the influence of the Nationalistic government the provinces themselves began to build more roads. Existing roads were fast extended after the Kuomintang came to power. During the war, troops were freely shifted on these roads from one province to another. A year or two before the war a motor trip was made from Nanking to Kunming—that is, from the east coast to the southwest frontier city, the starting point of the Burma Road.

In the field of administration an attempt was made to increase the efficiency of official business. New filing systems for official documents were devised and put into trial use. The form of language in official documents was simplified.

A civil examination system was again inaugurated, but to the disappointment of those who had seen the old Imperial days, without the pomp and honors that had greeted the successful candidates.

A new code of civil law was drafted. The status of women was raised to the same level as that of men. Daughters were to inherit property of their parents as hitherto only sons had done. Freedom of marriage was granted to the parties concerned when they came to

legal age. A mutual agreement of the parties concerned is sufficient for legal divorce.

The school curriculum was standardized and the proportion of science teaching increased. Physical training was emphasized. New laws were promulgated governing the universities, and the Central Research Institute, Academia Sinica, etc., were established to carry on research in science, history, economics, and engineering.

The obnoxious internal customs system of *likin*, which we shall see more of in the next chapter, was abolished. Government finance was put on a sounder basis. National currency was standardized, government banks reorganized. The circulation of silver was later suspended and only government bank notes allowed to circulate; during the war we began to realize the importance of this move, for if we had had to rely upon bulky silver as the medium of exchange it would have been well-nigh impossible to carry on the long years of war, while if the shift had been made in wartime it would have caused great confusion.

From 1927, when the capital was established at Nanking, to 1937, when the Japanese army fired its first shots at the Marco Polo Bridge, only ten short years were allowed to the Nationalist government to do its job. During these ten years intermittent rebellions and other obstacles retarded the progress of reforms and reconstruction, yet in this brief time 7,300 kilometers of railway were constructed, in contrast to 8,300 kilometers during the last fifty years. More than 100,000 kilometers of highway were built, and 33,000 kilometers of new telegraph lines were added to those already in existence.^[3] Yet naturally there could be only a moderate beginning in each phase of construction in so short an interval, and so it must be considered.

第四部 国家统一

宪政的试验

军阀时代的一天晚上，俄国驻北京大使加拉罕举行宴会，招待当地首要。出席宴会的约有六十人。上菜上到烤乳猪时，席上一些客人，一面斜眼看看在座的国会议长、副议长，一面望着热气蒸腾的烤乳猪，不觉掩嘴而笑。这种吃吃的笑声，迅即传染到全体宾客，只有那位议长和那位副议长，板起面孔装聋作哑。最后我看到有人向苏俄大使咬耳朵，弄得这位大使也忍俊不止。

这里头有个典故。从前印尼的橡园主人和矿场老板，常常以不法手段向中国招募工人。中国的劳工招募所，就把南洋说得天堂似的，花点钱把工人诱骗到南洋群岛，转卖给当地的开发公司。这些被当做货色出卖的可怜虫就叫“猪仔”。他们有的是自甘卖身，有的根本糊里糊涂就被当猪一样卖掉了。

民国初年，国会的议员受贿舞弊，弄得声名狼藉，普受鄙视，许多人就骂他们是“猪仔议员”，因为他们只看谁出价高，就把自己卖给谁。当然，绝大多数的议员是正直无私的，但是这些人毫无组织，因此也就无法制止其中的败类。于是“猪仔”之名就普遍加在国会议员的头上了，坏人营私结党时，好人也必须团结一致，要不然，好人蒙冤不白，那是自作自受。有一次他们在万牲园里的豳风堂宴会，有人把豳字解作“猪积如山”，一时全城传诵，此后议员们就不敢再在那里请客了。

中国成文宪法的观念是从美国介绍来的。美国的宪法是美国人民思想信仰的具体表现，而且是根据人民的生活发展而来的。中国的宪法只是抄袭外国的观念，起草宪法的人随意取舍，根本没有考虑到中国人的生活习惯或思想观念。

革命前的帝政时代末年，由绅士阶级组成的省咨议局倒是成绩斐然，因为他们的目标大致相同，而且绅士阶级里也不乏领袖人才。同时各省巡抚威望甚高，足以约束省咨议局。碰到重大问题时，咨议局里很少发生政治纠纷。通过的议案大致都是为省民谋福利的，贪污舞弊绝无仅有。

民国元年，中山先生在南京任临时大总统时，参政会颇有成为现代

国会的迹象，因为参政员代表革命利益，而且有革命领袖在领导工作，孙先生担任总统，众望所归，威望一时无两。后来袁世凯继任总统，国会里可就有了纠纷了。革命领袖憎恶专制反动的袁世凯，袁也憎恶革命领袖。但因他掌握军队，不惜以武力恐吓国会议员，为此后国会发展史上开了恶例。我不妨在这里举一个例子，藉以说明恐吓手段对议会风气所产生的恶劣影响。事情发生在选举袁世凯为总统的时候，选举时有摄影师在场拍照。当时室内照须用镁光粉，点燃镁光粉时会发出炫目的闪光和震耳的响声。镁光粉爆炸时，许多人以为是炸弹，纷纷夺路逃命。有一位议员躲到桌子底下，高喊："我选举的是袁世凯！"另外有些人则落掉鞋子，事情过去以后到处找鞋。这场戏终以弹劾国会秘书张公权为结束，说他不该让摄影师以"炸弹"惊扰国会。

在袁世凯担任总统期间，经常活动的五六个政党之间纠纷迭起，派系之争和意气之争非常激烈。这个被老百姓瞧不起的国会后来终于被袁世凯称帝运动以及张勋复辟运动的潮流所卷走。不过两次运动相继失败，国会亦告恢复。政治权力一部分操在各省督军手里，一部分操在有名无实的北京中央政府手里。这时的北京政府，已经威信扫地，无力控制国会。北方军阀曹锟贿选获任总统之后，国会威信一落千丈，此后情势演变，国会声望更是每况愈下。

国会议员之中，许多是贿选而来。享誉国际、愤世嫉俗的学者辜鸿铭告诉我，有一次选举时，曾有一位哥伦比亚大学毕业的陈博士，出八百大洋收买他的选票，他把钱收下了，跑到天津逛了一趟胡同，根本没有去投票。后来在北京饭店的一次国际性聚会上，辜鸿铭碰到这位贿选的人，他指着这人对大家操英语说："这家伙要拿八百块钱买我，各位先生，你们看我辜鸿铭真的这么贱吗？"

若干不良分子就是这样混进国会的，虽然这种人数目不多，但是已足以使国会显得有点像拍卖场，谁出钱最高，就把议席卖给谁。

北京学生现在开始把他们的攻击目标移到这个"腐败之家"头上了。有一天下午，好几千男女学生包围了国会，要求取消议程上若干有关教育的议案。结果学生与守卫警察发生冲突。若干学生气愤之余，竟在几天之后从天津偷运来三颗炸弹准备去炸议会。这事被我们劝阻了，总算没有见诸行动，炸弹也运出城外丢到河里。几个礼拜之后，一位渔夫捡到其中的一颗炸弹，他把炸弹提在手里摇来摇去，希望弄清楚里面究竟是什么东西。轰隆一声，炸弹爆炸，炸得这位好奇的渔人血肉横飞。警方认为这颗炸弹是革命时期投进河去的，因此根本未进行任何调查。

国会与学生之间的冲突仍然不断发生。国会议员最先想确立人民代表的权威，学生们却反唇以"猪仔"相讥。国会预备弹劾北大校长，学生就发动示威游行，高举画着猪猡的旗帜，并且扬言要捣毁国会。国会自知本身有弱点，最后只好高悬免战牌，不敢再捋学校与学生的虎须。愤世嫉俗的辜鸿铭既看不起学生，也看不起议员，他有一天对我说："你相信民主，这实在是民狂。"

如果一个机关只是被公众憎恨，它也许仍旧有存在的余地，如果这个机关成为公众冷讽热嘲的对象，即使那是为了其中少数人的行为，多数人也会因此遭殃，而整个机关也就像沉船一样难逃劫数了。中国宪政初期的国会，情形就是如此。后来有些军阀抓住机会，干脆把它一脚踢开。

我们可以从两个不同的角度来看军阀时代的宪政。一方面是军阀以威胁利诱来破坏宪政，他们没有领导民主团体的威信、原则或政策。袁世凯垮台以后，中央政府的权力已经名存实亡，实际权力操纵在互相残杀的各省督军手里。他们根本不理什么叫法律，他们只晓得自己持有封建军队的武力。中央政府既不能维持宪政原则，也不能确立治国政策，事实上这个政府已经无足轻重，不值得拥护也不值得反对。

在另一方面，国会里的议员，很少有人关心国家利益。他们念念不忘的只是他们本省的或本地的利益，甚至只是本身的利益。他们对国家利益的观念，本来就很模糊，因此对国家大事也就不可能有整套的指导原则或政策。除了地方事件或私人利益之外，既无组织，亦无领导。中国人爱好自由，但是对有组织的民主政治，也就是对宪政，却无经验，也不懂组织对民主的重要。中西国情不同，想使中国遵循西洋的宪政规模，无异赶东方之车，朝向西方的一颗星走着。宪政试验的失败，实在毫不足奇。

中山先生有鉴于此，所以在他的民主宪政计划中，设计了训政制度，作为过渡到宪政政府的跳板。依照他的计划，先有军政时期以达国家统一，接着是一个以党领政的训政时期，最后才过渡到正式的宪政时期。民国十六年，北伐成功，国民党在南京建立训政政府，锐意革除国会的腐败风气。此后十年间，国民党在蒋委员长领导下，铲除军阀，统一全国。日本军阀所导致的国难，使统一的局面更为加强。

国家统一是实行宪政的先决条件。孙中山先生已经制定建国的原则，只要政府与国会能有坚强的领导，人民与政府一致尊重法律，中国无疑地将在民主宪政的道路上大步迈进。

中山先生之逝世

出师未捷身先死，

长使英雄泪满襟。

此为杜甫咏诸葛武侯之句，宋宗泽元帅假以自挽者也。如果拿这两句诗来描写中山先生之死，真是再恰当没有了。这位伟大的领袖，致力国民革命达四十年之久，不幸在国家建设正需要他的时候，死神就把他攫走了。

民国十四年（一九二五年）春天，孙先生因为宵旰勤劳的结果，几个月来身体一直不怎么好。他在容许共产党参加国民党以后，更采取了进一步的行动。他鉴于中国仍旧陷于分裂，同时鉴于只有团结才能产生力量，乃毅然应北洋军阀之邀，离粤北上，到北京讨论统一国家的计划。北上途中，他曾绕道访问日本，希望说服日本朝野，使他们相信强大统一的中国是对日本有利的。到达天津时，他竟病倒了。我到天津谒见孙先生及夫人并报告北京政情后，不日返京。过了几天，大家把他从天津护送到北京，我赴车站往迎。……先生到北京后病势仍是很重，无法讨论统一计划，且一直卧床不能起身。执政段祺瑞托称足疾亦未往谒。北京协和医院的医师对先生的病均告束手，胡适之先生推荐了一位中医陆仲安。但是孙先生不愿服中药。他说，他本身是医生，他知道现代医药束手时，中医的确有时也能治好疑难的病症。他说："一只没有装罗盘的船也可能到达目的地，而一只装了罗盘的船有时反而不能到达。但是我宁愿利用科学仪器来航行。"朋友仍旧一再劝他吃点中药，他不忍过于拂逆朋友的好意，最后终于同意了。但是这只没装罗盘的船却始终没有到达彼岸。

孙先生自协和医院移住顾少川（维钧）寓。顾寓宽敞宏丽，建于十七世纪，原为著名美人陈圆圆的故居。陈为明将吴三桂之妻，据说吴三桂为了从闯王李自成手中抢救陈圆圆，不惜叛明降清，并引清兵入关。

民国十四年三月十二日早晨，行辕顾问马素打电话来通知我，孙先生已入弥留状态。我连忙赶到他的临时寓所。我进他卧室时，孙先生已经不能说话。在我到达前不久，他曾经说过："和平、奋斗、救中国。……"这就是他的最后遗嘱了。大家退到客厅里，面面相觑。"先生还有复原的希望吗？"一个国民党元老轻轻地问。大家都摇摇头，欲言又止。

沉默愈来愈使人感到窒息，几乎彼此的呼吸都清晰可闻。时间一分一秒无声地过去，有些人倚在墙上，茫然望着天花板。有些人躺在沙发上，闭起眼睛沉思。也有几个人蹑手蹑脚跑进孙先生卧室，然后又一声不响地回到客厅。

忽然客厅里的人都尖起耳朵，谛听卧室内隐约传来一阵啜泣声，隐约的哭声接着转为号啕痛哭——这位伟大的领袖已经撒手逝世了。我们进入卧室时，我发现孙先生的容颜澄澈宁静，像是在安睡。他的公子哲生先生坐在床旁的一张小凳上，呆呆地瞪着两只眼，像是一个石头人。孙夫人伏身床上，埋头在盖被里饮泣，哭声凄楚，使人心碎。汪精卫站在床头号啕痛哭，同时拿着一条手帕擦眼泪。吴稚晖老先生背着双手站在一边，含泪而立。

覆盖着国旗的中山先生的遗体舁出大厅时，鲍罗廷很感慨地对我说：如果孙先生能够多活几年，甚至几个月，中国的局势也许会完全改观的。

协和医院检验结果，发现中山先生系死于肝癌。

孙先生的灵柩停放在中央公园的社稷坛，任人瞻仰遗容。一星期里，每天至少有两三万人前来向他们的领袖致最后的敬意。出殡行列长达四五里，执紼在十万人以上，包括从小学到大学的全部学生、教员、政府官员、商人、工人和农人。

灵柩暂停厝在离北京城约十五里的西山碧云寺石塔里。石塔建于数百年前，略带西藏风味，由白色大理石建成，塔尖是镀金的青铜打造的。石塔高踞碧云寺南方，四周古松围绕，春风中松涛低吟，芬芳扑鼻。碧空澄澈，绿茵遍地，潺潺的溪水和碧云寺的檐角的铃声相应和，交织成清轻的音乐。

毕生致力于科学和奋斗的孙先生，现在终于在艺术与自然交织的优美环境中安息了。

.....

按：罗家伦先生主编《国父年谱》七三八页对中山先生民国十四年于北平治疗情形，曾有刊载，志录如下：

十八日自协和医院移居铁狮子胡同行轅。是日，先生离协和医院，乘医院特备汽车，缓驶至铁狮子胡同行轅。家属及友好同志，多以为医院既经宣告绝望，仍当不惜采取任何方法，以延长先生寿命。于是有推

荐中医陆仲安者；因陆曾医治胡适博士，若由胡进言，先生或不峻拒。乃推李煜瀛（石曾）赴天津访胡（时胡适有事赴津），告以来意，约其同归。胡初以推荐医生责任太重，有难色。后抵京见汪兆铭等，力言侍疾者均惶急万状，莫不以挽救先生生命为第一，且因先生平时对胡甚客气，换一生人往说，或可采纳。胡乃偕陆同往。胡先入卧室进言。先生语胡曰："适之！你知道我是学西医的人。"胡谓："不妨一试，服药与否再由先生决定。"语至此，孙夫人在床边急乘间言曰："陆先生已在此，何妨看看。"语讫即握先生腕，先生点首，神情凄惋，盖不欲重拂其意，乃伸手而以面移向内望。孙夫人即转身往床之内方坐下，目光与先生对视。

反军阀运动

学生游行罢课闹了好几年，加上军阀互相残杀，北京政府的力量终于一蹶不振，军阀则像印度土大王一样统治各省。在北京的中央政府首脑，无时不需要邻近各省的支持，如果军阀一翻脸，随时可以长驱直入北京城。北京政府在各省的根基愈来愈脆弱，政权本身亦随之摇摇欲坠。某一军阀进入北京接收政权，另一军阀马上阴谋取而代之。当政的人如果遭遇民意的强烈反对，例如学生游行示威，其他军阀便利用机会从中取利。权谋、内战、政变，各种政治力量纵横捭阖的结果，北京政府随时在更换主人。我在北京的最初九年之中，所看到的变迁实在太多了，留在记忆中的是一大堆乱糟糟的悲喜剧场面。我像是埃及沙漠中一座金字塔，淡淡遥望着行行列列来来往往的驼影，反映在斜阳笼罩着的浩浩平沙之上，驼铃奏出哀怨的曲调，悠扬于晚红之中。

北京政府的经济状况非常窘困，国库应有的收入，都被各省军阀扣留，用以维持他们的私人军队或径入私人腰包。中央政府通常只能以极高的利息向银行借一点钱，这一点钱之中的一部分，还得用于笼络支持政府然而需索无厌的军阀。我们前面已经提到教员薪水拖欠的情形。不但教员如此，就是政府官员和驻外使节的薪水，也往往一欠就是好几个月，甚至好几年。

"北京政府的前途究竟怎么样呢？"有一天，一位美国外交官这样问我。

"它会像河滩失水的蚌，日趋干涸，最后只剩下一个蚌壳。"我回答说。

情势一年不如一年，终至老百姓对政府的最后一点敬意也消失了。学生帮同破坏了它的威信，军阀们则把它整个埋葬在北京的尘土里。

数年后在美国遇见那位美国朋友，他问我是否忘了蚌壳的故事，我说没有。

在那时候，广州的国民革命运动则以一日千里之势在发展，国民党的革命运动一直享有大众的支持，尤其是知识分子和学生，甚至连北洋军阀中的一些开明分子也同情国民党。一篮烂橘子里，有时也能找出几个好的来的。

中山先生虽然逝世了，国民党的精神却始终未沮丧。孙先生所建立

的革命武力核心，继续在蒋介石将军为校长的黄埔军校发展茁壮，短短几年之内，蒋将军的国民革命军已经完成训练，随时可予北洋军队以致命的打击。民国十六即一九二七年，革命军以雷霆万钧之势长驱北伐，左翼直入华中而下汉口，右翼循闽浙沿海北上而达杭州，继以钳形攻势会师南京。革命军攻克南京后，遂以南京为国民政府首都。

国民革命军开始北伐的那一年，北洋军阀张宗昌亦于同时入据北京，这位声名狼藉的军阀，体健如牛，脑笨如猪，性暴如虎。他的利爪随时会伸向他不喜欢的任何人，或者他垂涎的任何漂亮女人。我曾在一个治安委员会席上见过他几面，当时我是这个委员会的委员之一。他那副尊容，真叫人望而生畏。京报编辑邵飘萍被枪毙的那天晚上，北京政府的前总理孙宝琦告诉我，我的名字已经上了黑名单，我感觉到魔爪的影子已经向我伸过来了。刚好王亮畴（宠惠）来访，我不假思索，连忙跳上他的军警不会盘查的红牌汽车，直驶东交民巷使馆界，在六国饭店辟室住下。第二天跑到美国使馆向一位美国朋友开玩笑说："我天天叫打倒帝国主义，现在却投入帝国主义怀抱求保护了。"还有校长室秘书政治学教授李守常（大钊）、女生张挹兰等六七人先后逃入使馆界旧东清铁路办事处躲避。他们后来被张作霖派兵捕去，处绞刑而死。我在六国饭店住了三个月，经常以写字消遣。

同住在六国饭店的亦有几个人，地质学教授，以后任中央研究院院长朱骝先（家骅）就是其中之一。好些朋友不时探望我们，但是在那里关了三个月，即使那是一个豪华"监狱"，也有点吃不消。我们一直在设法逃出北京，后来局势比较松弛一点时，就相继溜出来了。我的一位朋友有一位年轻能干的太太，我之能够逃出北京，就是她一手策划的。她冒充我的太太，同乘一轮古老的马车陪送我到东车站，一路上居然逃过警察的耳目。陌生人望我一眼，都会使我心惊肉跳，虽然我在外表上仍旧竭力装作若无其事的样子。我挤在人潮中搭上一辆去天津的火车，然后从天津搭英国商船到上海。

在船上碰到朱骝先，他正预备转道上海赴广州，后来他出任广州中山大学校长。我本人则由上海转赴杭州。当时沪杭铁路已告中断，因此我只好绕道赴杭。这时何敬之将军（应钦）所率领的国民革命军尚未到达浙江，北京政府委派的浙江省长正准备起义反抗北洋政府向国民革命军输诚。我去拜访他时，他向我透露了参加南方集团的计划。他告诉我，他已经派了一千人沿铁路进驻江苏边境，江浙之间的铁路已告中断。

我心里想，他准是被别人的胜利陶醉了，否则他怎么会企图与实力强他十倍的敌人作战呢？第二天早晨，我就离开杭州，绕道重回上海。几星期以后，他的军队被北军打得落花流水。北军进杭州时，他被捕处决。

不久北洋军阀命运逆转，国民革命军进占杭州。我也再度回到西子湖畔。杭州人热烈欢迎国民革命军。这些现代装备的军队胜利进军杭州时，成千成万的市民满面笑容地列队欢迎。我站在人丛中观望，一颗心高兴得怦怦乱跳。经过十六年之后，一支现代化的中国军队的信誉又重新建立起来了。

大约一年之后，蒋总司令在民国十七年即一九二八年完成部署，准备继续北伐。他指挥的军队渡过长江，沿津浦路向北京推进。北伐军抵达山东济南府边缘时，日本人惟恐中国统一，藉口保护在山东的权益和日本皇民的生命财产，竟由青岛派兵沿胶济路向济南推进。他们的目的是制造"事件"，以破坏中国的统一计划。所谓"事件"，自然就是中日之间公开冲突。日军在济南府残杀山东交涉员及其僚属，希望藉此激起中国的报复行动。

蒋总司令洞烛日人阴谋，深恐小不忍而乱大谋，决定暂避其锋，把国民革命军的前头部队调离山东，并以迅雷不及掩耳的手段渡过黄河，直逼北京。因而国民革命军未遭阻挠，统一目标亦赖以实现。日本军队在山东终于扑了空。

国民革命军到达后，北京随即陷落，北京政府的纸老虎被南风一吹就倒了。

民国十六年国民革命军进杭州时，我被任为省政府委员兼教育厅长。我在政府中担任工作的经验也就在杭州开始了。杭州是浙江的省会，也是我青年时代读书的地方。省政府由省政府委员会组成。国民政府在南京成立以前，所有省府委员以及主席都是由国民革命军总司令蒋介石将军委派的。

省府委员之中有五位分别兼任民政厅长、财政厅长、军事厅长、建设厅长和教育厅长。省府委员会之上则有国民党中央政治会议浙江分会，负责全省一般政策，政策决定后即下令省政府执行。会议主席由省主席张静江先生担任，由我任秘书长。这是我第一次担任国民党要职。后来省境情势渐趋稳定，政分会遂告撤销。

省政府和南京的国民政府一样充满着改革和建设的精神，中央政府

的重大施政，我将在下一章加以叙述。省政府的建设计划相当庞大，但是革命之后，此项计划难免受经费支绌的限制。因此只能将工作集中在铺筑公路上面，几年之内确实铺了不少公路。省城本身也有许多道路经省政府指定拓宽或添建。两年之后，杭州城内已经添筑了许多宽阔的马路。西湖沿岸和苏堤也辟了马路，直达西山各名胜，另有一条公路与上海衔接，招来了不少度周末的游客。短短三年之内，杭州已经焕然一新了。市区之内，西湖之滨，以及湖边山麓，新建洋房别墅像雨后春笋一样出现，人口激增，商业也盛极一时。

各县市也新建了许多电灯厂。若干乡村里还装设了蒸汽帮浦灌溉稻田。因为浙江是丝织业中心，政府开始提倡科学养蚕法，以科学方法培育蚕种，然后转售给养蚕的人。头一年里，科学蚕种曾经引起强烈的反对，因养蚕的人受了以传统方法培育蚕种的人的影响，对于科学蚕种发生怀疑。但是事实胜于雄辩，第二年，政府出产的新式蚕种已经供不应求。

为了改善田租制度，政府举办全省耕地调查，工作继续了好几年。浙江省所采用的办法，与共产党对农地所采的激烈手段适成对照。浙江省采取一种比较温和的"二五减租"办法，也就是佃农付给地主的田租普遍减低百分之二十五。佃农通常以主要作物收获的百分之五十付给地主田租，"二五减租"以后，佃农就只要付收成的百分之三七点五了。田租的租率已经维持了几百年，计算方法各地互有差别，实行"二五减租"以后，有些地方的佃农得到很大的利益，在另一些地方，这个减租办法却在地主与佃农之间引起严重的纠纷。减租委员会所收受的讼案多如山积，全省各地普遍发生纠纷，减租办法终于几年之后放弃。推行减租最力的沈玄庐（定一）被暗杀，死因迄今未明。

不久之后，扫除文盲运动开始。经过六七年时间，除了普通的小学之外，短期的民众识字班增加了几千个。

省内的教育制度进行一次新试验。国立浙江大学成立，由我担任校长。浙大不但主持高等教育，并且主管全省公立学校。教育厅取消，浙大校长则成为省府委员。另外两省也继起仿效，各自成立大学。经过两年的试验，另外几省发生内部纠纷和政治争执，整个制度终于在民国十八年即一九二九年废止，那时我任国民政府教育部长，所以培植这个制度和埋葬这个制度的都是我自己。

我在杭州整整住了一年，翌年膺任教育部长，同时兼任浙江大学校长，因此经常往返京杭之间。民国十八年，我辞去浙大校长兼职，在南

京再住了一年，后以中央大学易长及劳动大学停办两事与元老们意见相左，被迫辞职。

我当时年壮气盛，有决策，必贯彻到底，不肯通融，在我自以为励精图治，在人则等于一意孤行。我本世居越中，耳濡目染，颇知绍兴师爷化大为小、化小为无的诀窍。今背道而驰，自然碰壁。武力革命难，政治革命更难，思想革命尤难，这是我所受的教训。

在我辞职的前夜，吴稚晖先生突然来教育部，双目炯炯有光，在南京当时电灯朦胧的深夜，看来似乎更觉明显。他老先生问我中央、劳动两校所犯何罪，并为两校讼冤。据吴老先生的看法，部长是当朝大臣，应该多管国家大事，少管学校小事。最后用指向我一点，厉声说道："你真是无大臣之风。"

我恭恭敬敬地站起来回答说：

"先生坐，何至于是，我知罪矣。"

第二天我就辞了职，不日离京，回北京大学去了。刘半农教授闻之，赠我图章一方，文曰："无大臣之风。"

国民党之出掌政权

国民革命军攻克北京以后，中国重归统一，首都亦由北京迁至南京，北京则改为北平。

北京曾为辽、金、元、明、清五代的首都，历时一千余年。现在国都固然改定为南京，北平却仍旧是文化和艺术的中心。中国知识阶级除了本地方言之外所说的，以及广播电台所采用和学校所教授的"官话"或"国语"就是以北京方言做基础的。

国民政府从北方黄河流域迁都南方的长江流域，主要原因有二。第一个理由是革命精神已经弥漫长江流域，因此也是革命精神比较容易生根的肥沃土壤，黄河流域则是反动军阀的根据地。第二个理由：长江流域是中国金融力量的中心，足以供应政府必需的经费。

在一八五一年至一八六四年之间，南京曾是太平天国的首都。太平军溃败以后，南京破坏殆尽，而且始终不曾恢复旧观。城内的废墟、麦田、菜圃、果园比盖了房子的街道还多。街道狭窄，路面高低不平，而且肮脏不堪，电灯昏暗如菜油灯。差个专人送信往往比打电话还快。

这座雄踞扬子江边的古城，在古时是文物教化的中心，尤其是在南朝时代，所谓南朝金粉是也。女人、醇酒、清歌、妙舞一直萦回在历代骚人墨客的记忆里。秦淮河横越城内，连接了盛长百合的湖泊。河上满是金碧辉煌高悬彩灯的画舫。秦淮河两岸酒楼歌榭栉比，雕梁画栋，门口挂着竹帘子，妙曼的曲调和醉人的幽香从竹帘后一阵阵飘送出来，此所谓：

"此曲只应天上有，

人间哪得几回闻。"

这就是旧日京华。但是南京是战略要地，国内每有重大战事，南京必定要遭一场浩劫，每经一次战祸，它的精华也就失去其大半。战事结束，和平重临，南京又会在废墟上重建，恢复旧日的光辉。我所描写的往昔金陵生活，就是根据历史记载而来的。

不过，自从太平天国灭亡，劫后南京一直未曾恢复昔日的美丽。历次重建似乎只是庸俗艺匠对于古本的临摹，经过一再临摹之后，原作的光彩渐渐消失，留下的只是俗不可耐的赝品。

秦淮河仍旧在南京城内流过，画舫歌榭也依然存在。但是形式、素质和内容都远非昔比了。风雅的生活已经随滚滚江流冲走了。

国民革命军进入南京以后，一种新精神随之诞生——一种改革和建设的精神。大家要拿现代科学来复兴往昔的艺术。在这疮痍满目的废墟上，一座柏油马路四通八达的现代城市建立起来了。街道旁栽种了葱翠的树木，供市民游息的公园也先后开始设计和建立。自动电话、电灯和自来水也装设了，停泊南京附近的美国兵舰的水上飞机则从空中测绘了一幅南京地图，南京的新都市计划就是根据这幅地图设计的。国民政府成立了首都建设设计委员会，我以教育部长的身分成为该委员会的委员之一。这个设计委员会在一位美国建筑师的协助下，辛勤工作了一年多。这位美国建筑师对北京的中国宫殿式建筑很有研究，委员会的目标是尽量保持中国建筑的宏伟和华丽，同时兼有现代都市的便利和卫生设备。

陈旧倾圯的建筑被拆除了，以便铺筑道路或重建新屋。商业日渐发达，现代戏院倍增，人口急速增加。秦淮河和湖泊一一加以疏浚，古刹和其他公共建筑也都开始修葺。

政府建造了中央博物院，来陈列北平故宫博物院的一部分珍品，而且在南京城内朝天宫一座小山里，造了一个不虞空袭的钢骨水泥的地下室，来保藏贵重文物。因为中央博物院的董事们早已预料到日本不久即将发动对华侵略，南京当然是他们的攻击目标。华北局势恶化，长城战云密布之时，故宫博物院的贵重宝藏即以数百辆火车运至南京，并且在南京失陷之前，全部转运内地，保留于山洞石室之中。

交通部大楼和铁道部大楼都是钢骨水泥的建筑，里面有现代的照明、通风等设备。但是它们的建筑图样却是完全中式的，釉瓦、雕梁、画栋、花窗，以及其他古色古香的装潢。这两幢雄伟的建筑屹立在新都交通要道中山路的两旁，成为配合现代需要的中国古代艺术的纪程碑。其他的建筑也已设计好蓝图，后以战事影响而告搁置。

中山陵位于城外紫金山之麓，上覆琉璃瓦，柱子全部是白色大理石。陵前有层层叠叠步步高升花岗岩的石阶。山上栽种着从全国各地移来的不同林木。山坡上点缀着各种各样的花木和果树，山脚建造了一个运动场和游泳池。

政府在南京附近规划了一个示范新村，由市府设计包括道路、下水道、电话、电灯、学校等的建设蓝图。几年之内，私人新建房屋已到处

矗立，房屋周围都有广大的空地，辟为东方式的花园。树木葱翠，花枝招展，小鸟啁啾，溪水低吟，古老的生活方式已为新生活所取代，科学与艺术，工作与娱乐，天工与人力，齐头并进，相得益彰。

这就是实验中的胚芽，大家希望它发展滋长，将来有一天可以推广到全国的每一角落。这只是个平凡的开端，但是已经有了相当的成果，因为这个新村运动已经在数年之内推广到许多大城市及其附近地区。如果持之以恒，而且经济有进一步的发展，这些新村势将使新中国的生活方式全面改观。

我们无法奢望北京政府垮台之后，军阀们随之销声匿迹。他们的实力仍旧根深蒂固地盘据在各省。中国幅员辽阔，交通不便，兼以人心未定，凡此种种，无不使军阀们蠢蠢欲动。时机一到，他们就企图扩张势力：他们像血液中的细菌一样潜伏在各省，身体衰弱，就会乘机偷袭。蒋总司令从挥军攻克北京到对日抗战的前夕，十年间为统一国家，真是宵旰辛劳，席不暇暖。

罗马帝国的将军们曾以纵横辐辏的道路巩固其帝国，蒋总司令也深知开辟公路、铁路和航空线的重要。他以南京为中心，建筑了向各省辐射的公路、铁路和航空线。国民政府成立以前，交通网的一部分业已存在。国民党执政以后，就以原有的交通网为基础，新建了许多支线和衔接线。边远城市则辟航空线以资联系。从新首都北飞可达北平、开封、西安和兰州，南飞可达福州、广州和昆明，西航则达汉口、重庆及成都。

连接汉口与广州及香港对岸九龙的新铁路也筑成了。如果日本不在此时侵略东北，我们很可能在民国二十年（一九三一年）就可以从香港或上海乘火车直达巴黎。如果从上海出发，可搭直达车经南京、济南到天津，从天津搭北宁路出长城到沈阳，从沈阳搭中国自建而与日人所有的南满铁路平行的长春铁路到齐齐哈尔；从齐齐哈尔有铁路支线与西伯利亚铁路连接。中国统一努力的进展以及在东北自建铁路，促使日人企图一举而占满洲（即东三省），乃在民国二十年（一九三一年）九月十八日挑起“沈阳事件”，亦即“九·一八事变”。

沪杭甬铁路钱塘江至曹娥江之间的一段缺口也填补起来了，但是铺轨工作却因战事发生而停止。不过苏州与杭州之间的苏杭铁道刚在战事开始以前就铺筑完成了。另一条从杭州到江西的浙赣铁路刚好在抗战前完成，抗战期间更西延至湖南境内，在株洲与粤汉路衔接。后来湘桂铁路完成，再往西可以直达广西的桂林。

公路的发展更为迅速。京杭国道是在我居留南京期间建成的，在这条公路正式开放以前，我曾经很荣幸地参加通车典礼。京杭国道穿越江浙两省最富庶的地区。当车子沿太湖奔驰时，我们真想留下来小住几天，坐在松树之下，眺望着远帆在夕阳余晖中出没。渔人们在湖边撒网捕鱼，渔网中跳跃着金鳞闪灿的鲤鱼。太湖是我国五大湖之一，湖水灌溉了我国人口最密、文化最高的江浙两省千万亩肥沃的农田。

京杭国道同时经过一个盗匪如毛的区域，但是公路通车以后，盗匪随之销声匿迹，因为现在如遇匪警，军队可以随时赶到出事地点了。

建设进展之时，各地也不断发生事故。有时缺乏现代道路的地区发生变乱，铁路和公路常常需要以赛跑的姿态赶筑到出事地点。抗战前一年，福建省发生叛变，中央军迅速沿新筑成的浙赣铁路及公路从杭州赶赴福建，变乱旋即收平。铁路公路愈多，叛乱与盗匪也愈会减少，各地间货运赖以畅流更不必说了。

交通是现代化和改革的关键，也是发现国家未来发展机会的钥匙。因此国民政府的建设计划就从建筑铁道公路着手。交通建设也是确保国家统一之一法，如果有完善的道路可资利用，地方性变乱很容易就可以收平。除此之外，交通愈便利愈发达，人民交往也愈频繁，观念交流也愈容易。偏僻地区的名胜风景，旦夕之间就成为学者、画家、诗人和爱好自然者的徜徉之所了。

各省在国民政府影响之下也开始修筑更多的道路。原有道路在国民党执政以后很快就开始修补拓展。因之抗战期间军队得以在各省之间畅通无阻。抗战前一两年，旅客可以从南京坐汽车直达昆明，换一句话说，可以从华东沿海直达西南边城，也就是滇缅公路的起点。

在行政方面，政府正设法增加行政效率。政府设计了一种新式的档案处理办法并在各机关试行。公文程式也经过简化。

文官考试制度重新恢复，但是见过清朝科举制度的人也许会失望，因为考试录取的人已经不再有从前那种煊赫的排场和荣耀。

新的法典也开始拟订。妇女的地位提高到与男人一样。过去只有儿子可以继承父亲的产业，现在女儿也享有同等的继承权了。男女到达结婚年龄就可以享受婚姻自由。只要当事两边协议，就可构成合法的离婚。

学校课程统一，科学钟点增加，体育普遍受重视。管理大学的法律也公布了。中央研究院等机构先后成立，以进行科学、历史、经济学和

工程等的高深研究。

厘金制度宣告废止。对于这种苛扰的国内关卡制度，我们将在下章再加论列。政府财政基础渐见巩固，全国币制统一，政府所属的各银行也加以改组。不久之后，银元禁止流通，一律改用法币，抗战期间我们开始了解此一措施的重要，如果我们一直依赖笨重的银子作交易的媒介，势将无法进行长期抗战，如果在抗战期间才能进行币制改革，也必定要引起严重的紊乱。

从民国十六年（一九二七年）定都南京开始，到民国二十六年（一九三七年）芦沟桥事变止，其间只有短短十年工夫让国民政府从事建设。十年之间还有断续的变乱和其他障碍阻滞改革和建设的进展，但在这短期间内，居然建筑了四千五百多公里的铁路，而在过去五十年内所建的铁路也不过一万六千公里而已。十年之内建筑的公路超过十万公里，新添电报线路则在一万多公里以上。在这样短的时间之内，自然各方面的建设成就都都有限，评断成绩时，不能不考虑到时间因素。

PART FIVE SOME ASPECTS OF CHINESE LIFE

CHAPTER 21 THE "LEAKAGE" SYSTEM

Foreigners coming to China for the first time used often to meet with the annoying practice of petty "squeeze" among their servants and cooks and naturally felt that something must be wrong with China. But they would presently be informed by old China hands, familiar with the China of Imperial days and the later regimes of the warlords, that the practice of "squeeze" was not only to be found in servant circles but also among those higher up. "Squeeze is a national system," they would say and cite concrete examples to illustrate their point.

This reference to happenings of bygone days that lingered in their memories would focus the eyes of the newcomers on remnants of the dark side of Chinese life which are fast passing, and the effect has been to throw a veil over unprejudiced minds in their effort to see the living, new China of today. This is very unfortunate for foreign observers who have tried to understand China, and unfair to both this and the last generation of Chinese leaders, who endured hardships and sacrificed their lives for reforms in China's national life.

I propose now to paint a dark, vivid, and real picture of Chinese economic life in the past, without exaggerating or minimizing—which I hope I can do even better than the old China hands.

Anyone who witnessed the downfall of the Imperial regime must be aware that one of the main factors which caused the Manchu government to lose control of the country was its decrepit system of public finance. Large numbers of public servants were paid only nominal salaries and left to finance themselves by *Lou-kwei*, or the "leakage" system. This practice deprived them of any sense of public morality and caused them to countenance corruption as a matter of course. The Imperial government connived at the irregular gains of its officials, and the officials in turn connived at those of their subordinates. The poisonous sap circulated in the whole tree of state, reaching to every twig of every branch and every leaf on each twig. It

flowed through all the roots of the tree and every rootlet.

From the government offices through which public revenues passed, the government required only certain fixed amounts to be forwarded to the national treasury. The officials in charge of the revenues could, by various means and all sorts of excuses and plausible reasons, attach a variety of fees to the regular taxes. In this way, for every tael of silver that flowed into the government treasury at least the same amount or even more would be diverted to "leakage" funds. In the later years of the Imperial regime more wine leaked into private cups than remained in the public barrel. The government, finding itself parched as a fish in a dry pond, pressed hard for more money—whence still more "leakage" for public servants and heavier burdens for the people.

Failing to realize funds by taxation or other means, such as offering public offices for sale, the Imperial government resorted to borrowing from foreign sources by awarding them concessions for building railroads or opening mines. This was to quench thirst by drinking poison. It may be remembered that the nationalization of railways in Szechuan Province, as a preliminary step to awarding the building rights to foreign concerns, pulled the trigger for the Revolution of 1911.

But as to the "leakage" system and how it worked. China was then divided into some twenty-two provinces, comprising about two thousand hsien. The chief executive of the hsien was the magistrate, who took charge of all financial matters and concurrently filled the role of administrator of justice in his district. His salary—not more than a few taels a month—was nominal. All expenses incurred by the holder of the office had to be paid out of "leakage" funds. When higher officials of the Imperial government passed through his district he had to entertain them and secure for them all the "necessities" required for their travel. To the entourage of any higher official he had to offer "presents," usually in the form of money.

On the banks of the Yaokiang River just outside the city wall of my native Yuyao stood a welcome pavilion at which the magistrate

welcomed passing officials of higher rank. One sunny afternoon some forty years ago I noticed crowds gathering at a distance, near the pavilion. I joined them and watched the landing of the Imperial Examiner and his entourage, on their way to Ningpo to hold civil examinations in that prefecture. On the previous day the magistrate had "caught," or requisitioned, many houseboats from the people and the one set aside for the Imperial Examiner was loaded with sealed cases, their contents known only to those who had prepared them.

I watched the party change boats. The Imperial Examiner stepped into the most prominent; the sails were set and the little flotilla with the officials and "leakage" gifts on board floated downriver with the ebbing tide to the seaport city of Ningpo. Under that inspiration I said to myself that from now on I must study hard, so that some day I myself might be an Imperial Examiner blessed with such mysterious gifts as lay hidden in those cases.

Regular "gifts" had to be presented to the secretaries of the civil governor (*fantai*) of the province. Failing that, a magistrate could not expect them to speak kind words for him to the governor and would find them faultfinding in his official relations with the governor's office. Added together, the amount required for plain sailing in his career was by no means small. Human nature also made him not unmindful of the necessity to provide for a rainy day. And he had his family and followers to support.

Candidates for magistracy who had pull were covetous of the districts with large revenues. I remember that in the hsien in which we lived during my school days no magistrate had ever held office for more than a year. The regular term of office was three years, in which a magistrate could realize approximately a hundred thousand dollars. In those times this sum was considered very great. So the governor appointed acting magistrates, whose term was usually one year. In this way there would be more chances for expectant magistrates to share the profit.

When a magistrate retired from office after the expiration of his term and paid an official call on the governor, he was usually asked by

his superior whether his district had been a good one, meaning how much he had got out of the "leakage" funds. His friends and relatives also asked him the same question by way of starting a conversation.

The higher the rank of the official through whose hands the government revenues passed, the more "leakage" flowed into his private coffer. The taotai of Shanghai was known to reap a profit of some 100,000 taels a year. Governors and viceroys of rich provinces and the powerful princes and grand ministers in Peking usually enjoyed large yearly incomes.

The system was upheld even by the great statesman and scholar, General Tseng Kuo-fan, who put down the Taiping Rebellion for the Manchu Dynasty. In one of his letters he argued that "leakage" was indispensable to the smooth running of the government; the expenses incurred by an official were great and he had a family and relatives to provide for. The system was countenanced by scholars as well. In his diary a famous scholar-official who lived in Peking during the Hsien-feng and Tung-chi period complains that Viceroy Chang Chi-tung presented him with only a small "gift." A later entry reads something like this: "Went to Tao Ren Pavilion in the afternoon to sip tea. Chang Chi-tung entered. I pretended not to see him and left the place." This may be safely interpreted to mean that the famous viceroy had offended the prominent scholar by presenting him with too small a gift from his "leakage" funds.

During the Imperial regime promising candidates could keep servants with very little pay or none at all. The servants would stick to their masters through thick and thin for years, hoping that some day when luck fell into the laps of their masters they too could share the "leakage" with their lords. When luck did come master and servant alike would strive to make it still leakier, so that each and all could have cupfuls of this wine to their hearts' content. If luck failed to appear they would keep on waiting until the last ray of hope was gone. Under pressure of starvation some unfortunate masters found relief in the rope, with which they ended their lives. In Hangchow during my school days the news circulated by word of mouth that an

expectant magistrate, idle for years, had hanged himself on a New Year's Eve when his creditors pressed him hard for the money he owed them.

The poisonous sap penetrated even to the households of the well to do. The cook would poke "holes" in his vegetable and meat baskets in order to make them "leak." Servants got something from the purchases they made for the household—especially in Peking the shops always added a certain percentage to the price for the servants who made the purchase.

The practice of "leakage" even went abroad and found its way into the household of Napoleon. Napoleon had a Chinese cook who served his master very faithfully. On his deathbed this great French general remembered his faithful servant, saying, "Treat him well because his country will be one of the greatest in time to come. But the Chinese love money. Give him five hundred francs." On the other hand, the Dean Lung Professorship of Chinese Literature in Columbia University was established in memory of a Chinese laundryman with the money earned by a lifetime of washing. Before his death Dean Lung handed over a bag of gold to his master and asked him to do something good for China. The master, adding a sum to it, established the chair in memory of the patriotic laundryman.

The practice of "leakage" permeated the entire system of *likin*. And *likin*, like a gigantic octopus with tentacles reaching to every communication line in the country, sucked the blood out of the trade and commerce of the nation. It had been installed during the Taiping Rebellion to raise war funds for the support of the Imperial army. The Taipings were gone, but the obnoxious system was there to stay.

It worked this way. Anyone who knew how to "squeeze" the people would bid—say two hundred thousand dollars a year—to government agents for the right to run the *likin* at a certain station or a number of stations established at points on the highway where merchandise passed from one city to another. The person who won the bid would become *likin* commissioner at that station or group of stations and had the right to assess duties on the goods passing

through. If he could realize a sum of three hundred thousand dollars within the year, he would turn over two hundred thousand to the government and keep the remainder for himself and his partners. So he would make most goods dutiable in order to swell his private fortune.

Once I saw a boat loaded with watermelons passing under the bridge at a station. It was stopped by a long bamboo hook from shore and several inspectors jumped down and began to thrust iron rods into the melons. The owner begged them to desist and promised to pay any amount they demanded. The "duties" were paid; the poor farmer sailed on.

I remember how small traders and farmers hated *likin*. Everybody would have liked to smash the stations to pieces. Once a group of young scholars going by boat to take an Imperial examination passed by a *likin* station, ignoring the order to stop. The inspectors detained the boat and began to search their belongings. The scholars leaped ashore, entered the station, and smashed everything they could lay their hands on. Only the flag, emblem of the authority of the Imperial government, was left drooping in the air with its inscription: "To Collect *Likin* by His Majesty's Orders." Triumphantly the scholars departed under the gaze of the admiring crowd.

After the Revolution of 1911 the "leakage" system was gradually suppressed, and the system of *likin* was abolished later on. Higher salaries were paid to officials. But cases of corruption were still frequent. The practice persists among servants in the form of petty "squeeze." A lady once scolded her cook for being too greedy in getting his "squeeze," and got into a quarrel with him. Someone remarked that he was as greedy as a hungry wolf, to which he replied, "If one were not greedy, he would not become a cook."

In one of the embassies in Peking the ambassador's cook charged ten cents for an egg, while his secretary's cook charged his master five cents. "Why should I have to pay more for an egg than the wife of our secretary?" asked the ambassador's wife. "Madam, the ambassador receives a higher salary than the secretary," was the reply. Owners of

cars often found their gas tanks "leaky," because the drivers helped themselves to cupfuls of gasoline. Unwarranted repairs made bills for maintenance mount up.

Since the Nationalist government came to power in 1927 China has been endeavoring to check the occasional corruption in the government. Severe punishment has been meted out to offenders. However, the legacy from centuries of the "leakage" system, which existed even before the Manchus, is difficult to discard totally within a few years or even a generation. Under the leadership of Generalissimo Chiang Kai-shek official corruption has been reduced to a few isolated cases. With the introduction of a modern financial system and the gradual enlightenment of public conscience, China has done much in checking these malpractices. As the technique of government improves with time, she will attain the level of a modern, well-organized country in which more efficient methods of taxation and effective control of public finance will be devised.

The Chinese have always trusted in the intrinsic good of human nature, believing that evils arise only from perversion of that good through negligence or lack of proper education. It was the decrepit system of public finance that caused China's trouble in this respect, not lack of a sense of moral responsibility. But the system had such a demoralizing influence on public practice that we still suffer from its effects.

Concrete examples have shown us that the remedy lies in building up a good system to supersede the bad ones. It is not sufficient merely to abolish the bad. The customs administration organized by the British for China was free of the bad influence of "leakage." Employees were properly trained and adequately paid. Ample pensions were given them after retirement. Patronage was little known. The control of this important branch of national revenue by foreign governments as a guarantee for the payment of indemnities and foreign debts has been humiliating and extremely dangerous to national integrity, but the adequate system of revenue built up as a by-product is an unintended blessing to China.

The postal administration was organized under the Western system. It has been running efficiently since its inception—even long years of civil war did not disrupt its work. Ever since the Japanese aggression started it has been marvelous to see letters circulating in the occupied areas as freely as in Free China. Mail carriers have constantly crossed the firing lines to deliver the mails entrusted to them.

The salt administration is another example. Even during the long years of Japanese aggression the people have been adequately supplied with this daily necessity.

The Huang-ho Commission was well known formerly for its "leakage" system; indeed, the famous Shantung and Honan cuisines were the product of the rich appetites and well-lined coffers of the gluttonous commissioners of the Huang-ho works. In the same way, Yangchow cooking became renowned through the epicurean salt merchants of Yangchow.

With the formation of a Huang-ho Conservancy Board with modern trained engineers in charge of the conservation work, the "leakage" system itself was cast into the river and flowed down into the Yellow Sea. The gluttons disappeared with their system; only the art of cooking remains. Yangchow delicacies, too, are still admired by men of good taste, while the innovators who introduced them are gone and forgotten since the introduction of the salt gabelle, a modern, well-organized system of salt administration.

With well-organized administration, a well-trained and well-paid personnel, tenure of office ensured and adequate pensions provided after retirement, the good that is in human nature has full play.

It may be said that these successes have depended on foreign assistance. But let me ask: Are they due alone to the good morals of the foreigners—or rather to the good system they have introduced into China? Without personal integrity no such system would work, yet could we depend on foreign morals alone to obtain the desired results? Could a handful of foreign experts on top be powerful enough to check the irregular practices of hundreds and thousands of Chinese

personnel? It is through the co-operation of the rank and file of Chinese employees under a good system that the customs, salt, and postal administrations have been successful. This is what Mencius, disciple of Confucius, has said: "Good morals alone will not make a good administration; systems alone will not carry the work to the desired ends."

The modern banking system and railway administration in China are also commendable examples. The banks and railways on the whole run efficiently and are free of gross maladministration of funds.

Modern universities in China are further examples of honest administration of funds, aside from their stand for intellectual honesty. Teachers have worked hard, through privations on account of the abnormally high cost of living during the war, to maintain their standards of scholarship. The majority of students coming under the good influence of the teachers and the university organization cannot but form healthy ideas and correct habits as regards honest and efficient administration of public funds, along with the modern training they have received. And we must remember that in their hands the future of China lies.

Above all, the attitude toward the administration of public funds has basically changed. In the old days the "leakage" system was connived at or even admired. At present it is disliked and reviled by all intelligent people. This change of public sentiment will have an important bearing, given modern methods, upon the future handling of funds in all spheres of public administration.

It is more difficult to eradicate the practice of "squeeze" among servants, cooks, and chauffeurs. Perhaps it will take a generation or two to alleviate the economic status of these people; until that is done, we cannot very well expect that they will drop their bits of "sweets." Perhaps by then it will be difficult in any case to find people to work as household servants. Yet in my six years of sojourn in Kunming during the war I have met with one cook, one man servant, one maid, and one chauffeur in our employ who never "squeezed." Our present cook and man servant have a spotless record as regards money

matters.

Let the reader turn the leaves of a textbook of European history to the period just before the French Revolution; let him glance through the constitutional development of England or the history of India in the times of Warren Hastings; he will readily agree with the writer that the "leakage" system of China was but a mild form of corruption. Yet, along with other forces, it did gradually sap the vitality of a reigning dynasty, once very powerful, and render it in the end financially anemic and politically impotent. Finally the Manchu Empire crumbled like a house of cards before the moral force of Dr. Sun Yat-sen.

CHAPTER 22 SOCIAL STRUCTURE AND SOCIAL PROGRESS

It has been a common belief that China's four hundred million people were as loosely connected as the sands of the sea. It would be nearer the truth to say that her great population is—or was—segmented into many small self-governing units. Chinese democracy has consisted of tens of thousands of such units, loosely knit together by a common language, a common culture, and common ideals of life achieved through centuries of cumulative effort. These units, large or small, developed on a basis of family, trade, and tradition. Individuals were bound by these common ties to each self-governing group and so were more intimate with the members of their own group than with a broader society. They understood local problems better than national ones. This was the fundamental reason the constitutional National Assembly failed to work, and this was why the people allowed themselves to be governed by warlords. It was the frame of mind that gave birth to the nationwide idea in Imperial days, often quoted here, that "Heaven is high above and the Emperor is far away."

Individuals, unless they broke with society in some way, were always part of the unit, but the units were not well cemented by any effective national organization. This was a strong point as well as a weakness in China's national life—a strength because it made China democratic and enduring through ages of war and invasion, and a weakness because it made her central authority impotent and rendered her vulnerable to the attack of invaders.

The existence of these units in Chinese life has its historical background. They came into being by the slow work of centuries. As the Chinese gradually moved into the less populated or unpopulated areas, they went in groups to form separate colonies which grew into self-governing villages or communities. The vast Chinese Empire was built up by centuries of peaceful colonization^[1] of outlying territory by just such social clusters. In recent years, by a study of the dialects

of China, we have been able to trace the path of this development. The Cantonese dialect is found to be closely related to the spoken language of the Tang Dynasty. We may reasonably infer that the predominant part of the population of Canton are descendants of the Tangs. Later arrivals, forming their own distinct groups, spoke a quite different dialect known as *Hak-ka*, which shows the language characteristics of recent centuries. Even along the Yangtze Valley the slight difference in dialect in various localities affords a subtle record of the stages of colonization.

The migration of the Chinese population to the south was hastened in the tenth century by the downfall of the Tangs when north China was devastated by invaders from outside the Great Wall. The southern provinces, especially Kwangtung, Hunan, and Chekiang, which were not vulnerable to the successive invasions and were less affected by intermittent wars, became reservoirs of Chinese culture destined to irrigate the vast territory of New China in the last fifty years.

If a reform was to be truly effective in the direction of national unity and coherence, it had to touch the age-old local units by effecting some sort of change in the family, the trades, and tradition. And inversely, since these units were knit together by a common language and culture and common ideals of life, any modification of culture and ideals through the common language would be bound to affect the life of these social clusters and consequently of the country.

China was first set on the road to change when foreign manufactures began to affect the trades. Thus one of the three strands that bound her society was loosened. That was the early stage of change when she first came under modern influence, and the process was unconscious. Then the introduction of modern ideas through books and newspapers and the school system further weakened the already slipping knot by loosening the strand of tradition. The last remaining element, that of family ties, had finally to give way with the other two.

The loosening of these three ties which bound people to their

local units caused years of disturbance. Individuals groping for new effective bonds created trouble of many sorts. The students were the first to be affected by the new ideas and it was they who started the trouble; workers in the new industries lost their old trade bonds and they, too, joined the students in troublemaking, as we have seen. The internecine wars of the warlords, the failure of constitutionalism, and the existence of the demoralizing "leakage" system neither prevented the disintegration of the old social organizations nor retarded social progress to any great extent. The troubles caused by the warlords were but ripples on China's vast social sea. The undercurrent went on swirling under the surface, with or without them, or the debased National Assembly, or the "leakage" system. These were evils in the superstructure merely; the self-governing units themselves remained temperamentally peaceful and morally clean.

In the long course of history, especially since the latter days of the Tang Dynasty, China has been weak in national defense because her invaders have all been organized on a war footing while she was organized on a basis of peace. Defense forces have had to be drawn from peaceful communities and maintained by a central authority which was a mere superstructure above a peace-loving society.

The Chinese under the leadership of the Mings overthrew the Yuans or Mongols not so much through their own military might as because of the failing strength of the Mongols. Through long years of wars on two continents the military force of the descendants of Genghis Khan had spent itself. Under Chung Chu, second emperor of the Ming Dynasty, China succeeded in organizing a strong army which conquered a great part of Manchuria during his reign; but this military power gradually weakened after his death. When the warlike Manchus rose outside the Great Wall the Mings were helpless in the face of Tartar invasion, and the Ming Dynasty gave way to the Ching or Manchu Dynasty without much effective fighting. After more than a century in China the Manchus in turn were contaminated by the peaceful spirit of the Chinese, and when the Western Powers attacked China with gunboats she was again helpless.

Studying the past, Japan assumed that history would repeat itself and on this assumption began her continental campaign against China in 1894. Up to that year she was right. But Chinese history then began to shift its course as China learned the "tricks" of Western civilization. Japan was either unaware of this change or tried to nip it in the bud. In either case she did not hesitate to launch a new continental campaign some thirty years later, and was surprised to find that a stumbling block had risen in her way.

This was China's social progress. Japan had seen at the top the weak and corrupt Imperial Peking government whose financial strength had been sapped by the "leakage" system; later she saw on the surface the warring warlords; but she was blind to the undercurrents which had slowly but persistently moved in China's immense ocean during the last fifty years.

In the old days organized national ties had existed in secret societies. The members lived outside the village units, gathering around large cities and along commercial routes. Their main purpose was mutual protection against oppression, but this sometimes degenerated into illicit trade. They were powerful in time of internal rebellion but not of much use against foreign aggression. They lacked new ideas and the notion of social progress was alien to them.

But now, on the fringes of the many thousands of self-governing units in the country there had gathered people imbued with national ideas as against local prejudices and newly learned patriotism as against family loyalty. These individuals hummed like honeybees round a hive and gradually gathered in clusters along the edges. More and more individuals sneaked out to join those outside. As the clusters grew in size, they began to make intrusions into the hive and affected the life of the whole colony. At the same time they began to organize themselves into a national union, so to speak, and took China as their common hive.

Such was the growth of China's modern national institutions. The process was hastened by the rapid extension of communication: steam navigation, highways, railroads, and airways. Educational

associations, chambers of commerce, labor unions—scientific, engineering, and political science societies and other bodies—all were organized on a national basis. Political parties, whether the Kuomintang or those whose views were opposed to it, all led the people to think along national lines. The universities took members of the family and molded them into leaders of the nation. Schools instilled national consciousness and patriotism into the formative minds of the new generation.

In spite of continuous civil wars, even before the unification of the country the number of public schools had multiplied in all the provinces. Private citizens established private schools as a way of expressing their patriotism. These millions of elementary school graduates, entering thousands of local self-governing communities, spread ideas of patriotism even to the humble hamlets of the interior.

Once, traveling in the interior during the fight along the Great Wall, I saw a solitary small boy playing soldier. He took a tree for his imaginary enemy and stabbed it with his dagger. Then he imagined that his enemy struck back. He made gestures of defending himself, then fell to the ground with his eyes closed and whispered to himself, "I die for my country." Evidently he was defending the country against the Japanese invasion. During the later war, after a few of the Chungking people had deserted to the Japanese, way back in the hinterland I saw a little boy digging a small grave with a spade. When the work was done he put a sign on the grave: "The Traitor." In one mountainous region, where the nearest school was miles away, a mining engineer saw small boys writing on the walls of their village: "Long live the Three People's Principles of Dr. Sun Yat-sen." These instances show the growth of the national bonds that were taking the place of local ones.

Under the influence of the new education, organized into a national school system, children all over the country now made paper airplanes and sailed them in the air. They made toy water pumps and built toy automobiles. They began to be mechanically minded—a good groundwork for future industrialization of the country.

The growth of light industries in recent years has drawn more and more individuals from the local units and they have begun to associate into a national body instead of local guilds. Radio has brought new ideas to the people through the air. Customs, superstitions, dialects, folksongs, religions, domestic industries, and the economic condition of the tottering local trades and of the suffering farmers have been investigated and studied scientifically from data gathered by institutions of higher learning and learned societies. China has begun to know herself through scientific research.

The turmoils of half a century had set the people thinking. Their attitudes toward life began to change. They tried to create a new stability out of chaos by forming effective national bonds to hold China together in the face of invasion and by working for the progress of the country. This new social and national consciousness was not yet strong enough to face modern warfare with full force. But it was formidable enough to offer stubborn resistance, with indomitable will.

[1] colonization : 殖民, 拓殖。在此语境中指将汉民族的居民、住民等送往偏远地区长期居住, 建立商业或永久定居点。

CHAPTER 23 ENCHANTED CITY OF PEKING

As Paris has inherited the spirit of the ancient Roman Empire, Peking has inherited that of the Chinese Empire of the old glorious days. Paris is the city of cities in the West, Peking in the East. Of Paris you feel that it is not only a city of Frenchmen but also your own; so Peking is not the city of the Chinese alone but universal. In both Paris and Peking one says, "This is my city, where I would like to live."

I lived in Peking for fifteen years until the Evil One dislodged me in 1937. As I look back to the old days there even the annoying dust of Peking is rich in pleasant associations. I miss it and long for it. In the early morning when the rising sun cast its beams upon the paper windows, with shadows of creeping vines dancing upon them, you would see a thin layer of dust sprayed evenly upon your mahogany desk from the night before. It was a pleasure to dust it off carefully with a feather duster. Then you would dust the brush-holder carved with landscapes, and the carved ink stone once owned by famous scholars of past centuries who dusted and washed it centuries before you. And you would do the same for the porcelains of Chien-lung, the bronzes of the Chow Dynasty, the oracle bones of the Shang period—used for divination four thousand years ago—and other timeworn treasures. Even the books, printed long before the West knew anything of the art and lying peacefully on your shelves, did not escape your attention. Let your fingers touch the covers; you would find that the dust did not grudge its favor.

Then you felt that you had done well your morning's preliminary work. The sunlit windows with their dancing shadows now smiled before you. The spotless desk with its ageless pieces of art displayed before your eyes beckoned you on. With a tranquil mind and contented heart you set to your day's work.

In such an atmosphere of antiquity you might read of the period when Confucius taught his disciples; or when the Nestorians came to

the glorious empire of the Tangs; or the Jesuits made their astronomical instruments at the Ming court; or Buddha preached his doctrine of eternity; or Napoleon carried his campaign into Russia and drank oil from the street lights; or Genghis Khan sent his invincible armies to the Danube basin, founded an empire on two continents, and made Peking the capital of one of his sons. In Peking one could read history in its true perspective. For this city was as grand as nature itself and as old as history. As a capital it has witnessed the rise and fall of five dynasties—dynasties came and were gone, but Peking remained.

The palace buildings were all rectangular and symmetrically arranged like an armchair, with a vast rectangular courtyard in the middle in which stood proudly the giant incense burners of gilded bronze whose smoke, when incense was burning, streamed to the sky. Bronze deer stood in rows and pairs of crouching lions of stone or bronze guarded the entrances. Over a hundred of these courtyards with imposing buildings on three sides were fitted together like the squares of a chessboard in the Forbidden City, which was shut in by rectangular yellow walls with yellow-roofed towers standing out against the sky at the four corners. The Mongols began it, the Mings rebuilt it, and the Manchus improved it to its present form.

The yellow enamel tiles of the roofs shone under the brilliant sun in a speckless blue sky. At dusk or before dawn the triumphal towers of Wu Men—the main entrance of the Forbidden City—silhouetted against the pale sky, looked like castles in the air. On a cloudless moonlit night they made one feel that he was near some fairy palace of the moon which he might admire but not reach.

Before the little Emperor Pu-yi, who reigned over this city within the city of Peking, was ousted from the Forbidden City by General Fung Yu-hsiang in 1926, semimonthly audiences were granted to the remnants of Manchu officialdom. Attired in the quaint old Manchu costumes the officials clustered around the back doors of his toy empire seeking admittance.

A few days after the coup d'état I went into the palace to witness

a government committee sealing, house by house, the doors of the halls. A few of the eunuchs were still retained, from whom I got quite a bit of information about life in the palace and stories of the doings of emperors and empresses, princes and princesses, of bygone days.

One story was about the large looking glass which ran from the ceiling to the bottom of the wall. The Empress Dowager loved to sit opposite it so that she could see for herself how stately she was. One day the governor of Shensi was granted an audience by Her Majesty. As he entered the door he saw her in the mirror and bent his knees before the image, kowtowing.

"What did the Empress Dowager do? I suppose she was angry," I said.

"No, no. She smiled and said to him kindly, 'You are seeing me in the mirror.'"

I met some of the eunuchs who attended the princes at the palace school for princes and found them to be all illiterate. Imperial household regulations forbade them to have an education, so that they would remain ignorant of what was taught in the school.

Perched on frames hanging in the veranda, red, yellow, and blue parrots talked the language of the princesses who had spent much time in teaching them. "Please come in. Guests coming. Bring tea..." said the blue one to me, and the red and yellow ones echoed, "Bring tea! Bring tea!" This was the first time I ever saw a blue parrot. Goldfish—black, white, red, and gold varieties—many of them almost a foot long, darted in the palace ponds, their periscope eyes looking skyward while their multiple fan-shaped silken tails waved gracefully in the water.

The living quarters of Pu-yi looked vulgar. A cheap-looking long foreign table stood in the middle of the hall with a few ugly chairs at either side. A pair of pink glass vases decorated the table. It was more like a second-rate country inn in America than the residence of an emperor of China. All the fine furniture and art treasures had been pushed aside and bundled up in the background. The vulgar Western

civilization of the treaty ports had invaded the palace; nothing could be more out of place. Cheap magazines were scattered about. Half an apple, freshly cut, and a newly opened box of biscuits lay on the table. Apparently the Emperor had been taken by surprise and left the place as it was at the moment.

When the sealed doors were subsequently opened for a methodical checking over of the art treasures, the variety of beautiful objects was amazing. There were watermelons carved out of jade which looked like real ones, porcelains the color of "blue skies after a shower," bronzes that had witnessed thirty centuries of peace and war, and Imperial seals of jade which had set their mark on many an important document.

Among the famous paintings of the Tang, Sung, Yuan, Ming, and Ching periods were landscapes depicting the beauty and harmony of nature which invited you to step in and enjoy a tranquil life; horses that looked ready to trot out from the picture; fish that seemed to be swimming in water; geese hissing and honking as if painted in sound; bamboo shadows that appeared to bend in the autumn breeze; lotus leaves fresh with morning dew; orchids that seemed to pour forth their mild scent into the air. Great painting in China meant to render not the likeness alone but the motion, sound, color, characteristics—all that would stir the imagination and evoke feeling. In other words, it tried to paint the spirit of the subject.

For two years the committee, with a staff of over a hundred persons, ransacked every recess of the vast palace for treasures of art and checked many hundreds of thousands of articles accumulated through generations of emperors. Some of the storerooms were sealed with spider webs and others had dust ankle deep, a sure sign that they had been a no-man's-land for a century or more. Some treasures had lain there unnoticed for many, many years, no one knew how long.

At long last the palace was thrown open to view and the Palace Museum established to exhibit its treasures. The public, especially the younger generation, opened their eyes at the riches and wonderful achievements of Chinese art through the centuries. Peking was already

a center of art; connoisseurs were many and artists not lacking, and with the opening of the Palace Museum the city was much enriched. Things heretofore secluded in the depths of the palace were now revealed for anyone to see—things previously accessible only to the royal family were now open to the common people.

As science is the expression of the mind in knowing and searching for the laws of nature, art is the expression of the heart in feeling their reality. Art is an expression of the life of the people who create it, and makes life richer and more enjoyable. Science is the product of the activity of the mind in satisfying its intellectual interest, and creates material prosperity. In modern civilization the two must join hands to make life complete.

There was a chain of three lakes—the South, Middle, and North "Seas"—to the left of the Forbidden City, with camel-back bridges spanning the creeks between them, trees centuries old along the shores, lilies growing luxuriantly in the water, and pavilions perched on the surrounding heights with golden enamel tiles, vermilion columns, and artistically painted beams. A fish caught some time ago in the lake, so the story has it, bore a gold plate with the sign of "Yung-lo" of the Ming Dynasty (1368-1643).

In the Middle Sea was Yun Tai, an islet surrounded by lotus where the Emperor Kwang-hsü was imprisoned by the Empress Dowager after the unsuccessful reforms of 1898 and where he died broken-hearted in 1909[2] . On the island was a group of palace buildings with spacious courtyards. Moss-grown trees stood high above the yellow tiles of an intricate system of halls, pavilions linked together with winding corridors of vermilion beams and columns. Miniature hills with rocks and caves brought mountain scenes into the Imperial gardens. How much the unfortunate Emperor enjoyed life in his beautiful prison only Kwang-hsü and those who were with him could tell. During the long days of his lonely existence he was perpetually tortured by ailments of mind and body until death relieved him.

Water was formerly conducted into the lakes through stone

conduits connected with springs in the Western Hills. Parts of these pipes still lay along the highways. The drainage system in Peking was a great engineering feat of the old days. Underground aqueducts resembling modern subway tunnels were constructed to drain the sewage from the city. During the latter part of the Manchu Dynasty they were all choked, but the system of yearly inspection of the drainage was still retained to the last days of the regime. In the early days inspectors were ordered to walk through the tunnels to see whether any section needed repair. Later, when passage was obstructed by deposits of dirt, they deceived the eyes of their superiors by a cunning method of cheating: two inspectors in uniform climbed down at one end of the aqueduct and stayed there, while another pair in identical uniforms, hidden at the other end, appeared as the inspector general rode by on his horse. The example illustrates how the spirit of the system had evaporated through years of stagnation while the system still remained as a symbol. This happened in many departments of the Imperial government in the later years. It was small wonder that the government of Imperial China had become a mere symbol.

Peking was a city of trees. In the spacious courtyards and gardens of private residences were moss-grown trees which shot heavenward with a wide spread of branches and luxuriant leaves. If you stood on Coal Hill or some other height, the city seemed to be built in a forest. Wide streets running parallel and crosswise like the lines in a checkerboard traversed the "Bois de Boulogne" of Peking. By an old Imperial rule trees might be planted but never cut down in the capital. With the years people forgot about the rule but had acquired the good habit of loving trees—an instance in which the spirit got into the veins of the people while the system was forgotten. Here lies a secret of China's regeneration.

Few of those who have lived in Peking will fail to retain the pleasant memory of its palaces and other public buildings with their gleaming tiles under the cloudless blue. Imperial parks and gardens were blessed with junipers planted in rows and squares centuries ago and filling the air with soothing scent. Restaurants with exquisite

cuisine were always ready to satisfy the wants of the epicure. Curio shops displayed antiques and jades, catering to connoisseurs. Public and private libraries preserved centuries of wisdom on their shelves and in archives. Most remote of all were the oracle bones which threw light on that misty era of Chinese history, the Shang Dynasty (1766-1122 B.C.)^[3]. And there was the awe-inspiring Altar of Heaven, which made one feel the grandeur of nature and the sublimity of the spirit of man.

Only yesterday, comparatively speaking—in 1898—the modern National University of Peking was founded as a direct successor to the centuries-old Imperial Academy, *Kuo-tse-chien*, in an atmosphere of centuries of accumulated culture. This institution served both as a center of the old culture and a fountain of new wisdom. Scholars, artists, musicians, writers, and scientists came to Peking to develop their minds and enrich their hearts in the congenial atmosphere of the ancient city. There the inspiration of the past, the influence of contemporary thought, and hope for the future flowed into one inseparable stream of wisdom, and the youth of the country came and drank at its fountain.

^[3] 商朝（公元前1600—前1046）。

CHAPTER 24 LIFE IN THE FOUR CITIES

Hangchow was the city of natural beauty; Shanghai that of foreign manufactures; Nanking, of revolutionary spirit; Peking, of the golden age—of art and leisure. In my childhood I was reared in a small village in Chekiang, lived among the farmers and craftsmen and played with their children. During my boyhood I was educated in the city of Hangchow and later in Shanghai. When I returned from America my work required that I live, first in Shanghai, then in Peking, then in Nanking and Hangchow, and finally again in Peking until the beginning of the war.

As to their geography, Peking stands in the northern plain not far from the seaport of Tientsin, in the Huang-ho (Yellow River) Valley. It is a northern city, while the other three are southern cities of the Yangtze basin. Hangchow is situated on the banks of the river Chien-tang, where Hangchow Bay begins to spread its broad waters out to the ocean. In the old days Hangchow and Peking were connected by the Grand Canal, 2,074 kilometers long, which crosses both the Yangtze and the Yellow River. The Canal is still partly navigable to the present day.

Northeast of Hangchow, Shanghai perches on the banks of the Whangpoo River, which empties near the mouth of the Yangtze into the Yellow Sea—a body of water which is an integral part of the Pacific, different only in name. Nanking lies a little inland, farther north and west of the other two, along the southern bank of the Yangtze. Not far down the river from it the Grand Canal crosses the Yangtze at Yangchow, where Marco Polo resided as magistrate under the Mongol Dynasty. The four cities are all connected now by railways. Generally speaking, they all border on the Pacific.

The southern cities of the lower Yangtze Valley have approximately the same climate. Spring and autumn days are very pleasant. Sprouting willows are signs of the coming of spring—joyous spring seekers pluck the budding branches and bring them home to

decorate their doors as symbols of welcome. When the leaves turn red they tell the coming of fall, and the crimson leaves in the setting autumn sun lend inspiration to poets. The damp season falls in spring, when there is plenty of rain; during the other seasons sunshine and rain are about evenly distributed. Summer and winter are not severe.

The soil is fertile. Rice is the chief product. Sericulture is a family industry. Fish, shrimps, crabs, eels, pork, mutton, beef, vegetables, and fruits abound. Out of these materials the famous Yangchow cuisine was created.

Shanghai was the financial center of the Yangtze Valley. It owed its growth to the commercial and industrial activities of the foreigner. Foreign capital was the foundation of its economic structure and foreign merchants and capitalists its aristocrats, before whom all the Chinese living in the city bowed their heads. These foreigners lived a life by themselves. Even if they had been there for several decades, China remained to many of them a *terra incognita*. They lived in beautiful mansions with spacious gardens and were served like lords by obedient Chinese servants. The masters got rich by exploitation and the servants got their modest share of profit by petty "squeeze." Their clubs excluded the Chinese worth knowing; their libraries excluded the books that were worth reading. Their minds were full of arrogance, ignorance, bigotry, and racial prejudice, but were closed like clams to such science and art as the great masters of their own people had created and were creating, and to the new ideas and new movements that were growing in China or in their own countries. Their life had no higher ideal than the amassing of money.

Second in rank to these foreigners, the Chinese compradors shared their masters' ignorance and their money. Compradors of foreign banks and concerns were held in high esteem by the Chinese merchants. When they looked up to their masters and opened their mouths for a bone, their compatriots wagged their tails sympathetically, their mouths watering. The compradors, like alchemists, spent their time turning coppers into silver, while their foreign masters transformed silver into gold. They spent a part of their

silver in getting concubines; their masters were much smarter and spent only gold on their "friends."

The third class of people in Shanghai were the merchants and shopkeepers. They waited on the doorsteps of the compradors to buy foreign manufactured goods. When they made money they sent it back home to buy land. Occasional visits to their families, who as a rule lived in their native villages, towns, or cities, brought "inspiration" to the provincial folk, and thus more relatives came back to Shanghai to share their business.

I can speak of these things that existed in Shanghai with intimacy and without exaggeration, for many of my relatives were merchants and some were compradors in that city. I know well their mode of life and their ways of thinking; I also knew quite a few foreigners there and have heard many stories about them. Enlightened foreigners, especially the Americans whom I knew well, shook their heads with knit brows when we talked about Shanghai.

The fourth class were the factory workers. They were surplus farmers or those who had given up farming to come to the great city to make more money. They were slum-dwellers.

The fifth and last were the rickshaw coolies, who came from the poor districts north of the Yangtze. These human animals pulled and ran like horses on their two hind legs, with small carriages rolling after them. This cheaper and handier means of communication kept Shanghai constantly in motion—the coolies kept the blood circulating in the city's business veins.

These five classes of people together formed what came to be called the "Settlement mind"—the mentality which grew in the Foreign Settlement of Shanghai. It is a mind which worships power and admires superficialities. Power, whether financial, military, extraterritorial, or in any other form, superficiality bordering on vulgarity in painting, calligraphy, singing, music, and every phase of life. These reigned supreme in Shanghai. *Hai-pai*, or the "Shanghai School," was the epithet invented for this kind of mentality; the opposite is *Ching-pai*, or the "Peking School," which admires the arts in

their deeper meaning and strives for perfection. Shanghai was a financial sea but an intellectual desert.

People were all busy as ants at their hoarding. The more they piled up, the more they were admired. In Shanghai both Western and Chinese civilizations were at their worst. The Chinese misinterpreted the West and foreigners misunderstood the Chinese; the Chinese hated the foreigners, who in turn despised the Chinese, both with reason. But they had one thing in common—their equally deculturated state; and one mutual understanding—hoarding. These two elements welded Chinese and foreigners together in a common brotherhood of money. "You exploit me, I squeeze you."

There were oases in the desert, and in them lay the redeeming feature of Shanghai. In the first decade of the century extraterritoriality here afforded a refuge and clearinghouse for revolutionary ideas and literature. The seeds of the theory of evolution and the ideas of democracy were first sown in these oases and blown far and wide to the intellectual centers of China. While in other parts of China they grew into giant trees, in international Shanghai they remained dwarfs. In the 'twenties a rapid growth of Chinese industry took place in and around the Settlement, protected from the exploitation of warlords by the same extraterritoriality. When returned students came into financial and industrial power, the Chinese began to put into use foreign tricks of management and production, learned, however, more often directly from Europe and America than from the foreigners of Shanghai.

The life of Peking must be painted in other colors, as we have already seen. Aside from beautiful palaces and Imperial gardens, one's first impression was that there seemed to be only two classes of people in the city: those who pulled rickshaws and those who were pulled in them. But when you lived there longer you discovered that there were various classes among those who rode. It would be difficult to find any "top" classes; there were simply people of various professions coexisting side by side in a good, neighborly way. In the old days the Manchus were born aristocrats, but these had now vanished into the

multitude. All men were born equal and their differences were of their own making. The only aristocracy was that of learning—the painters, the calligraphers, the poets, the philosophers, the historians, the literary men, and in recent times also the scientists and engineers.

The connoisseurs of art who could put their finger on the genuine amid the counterfeit; the craftsmen who made a thousand and one articles of art; the booksellers who were living bibliographies and the seal carvers who could make you feel your name worth preserving in artistic seals; the rug designers who beautified your floors and brightened up your living quarters—all lived side by side in the enjoyment of knowing or making things for the enjoyment of others. Knowledge and crafts were the keynote of life in Peking.

All could find some leisure in the day to enjoy beautiful things in many different ways. You might drop into an old, dingy-looking bookstore, converse with the man in charge and glance over the books on the shelf; you would feel that your mind was being led into the treasure of knowledge of the past and of the present. You might spend two or three hours there if you liked—when you left you would be invited courteously to come again. You need not buy unless you wanted to.

You might go into a curio shop if you felt like it, to look over all the beautiful things, both genuine and clever imitations, and enjoy them to your heart's content. You would be always welcome whether you bought or not at the time. But once you became interested you would very likely spend the last dollar you had counted on for supper.

You might go to a theatre and hear the singing of some of the great actors. It was perfect in every detail, touching the strings of your heart, which vibrated with every note. Or you could go to the Palace Museum and admire the treasures of art created by geniuses of the past. In this atmosphere of arts that always strive after perfection and the deeper meaning of life there grew up the mentality I have just mentioned which came to be called Ching-pai.

If you preferred you might go to the Imperial Gardens and sit under the moss-grown trees sipping tea, or upon the ancient rocks on

one of the artful little miniature hills, watching the geese swimming in the pond. On holidays one could go by donkey, rickshaw, or automobile to the Western Hills to see historic spots and breathe air laden with the fragrance of hoary pines.

In seeking wholesome pleasures scholars, artists, craftsmen, scientists, and engineers all united in their enjoyment of old Peking. At work, they carried on their activities in widely diverse fields. The scientists worked in their laboratories to make contributions to the stock of human knowledge, the engineers went back to their slide rules and drawing tools, the scholars buried themselves in books to reconstruct from the past ideas and ideals for the future. The craftsmen produced more beautiful goods; the artists, having drawn inspiration from nature and from the past, cast their mental images on paper or in other materials with their deft fingers.

Years of trouble and war had left Peking undisturbed. Governments had come and gone but the fine old city remained the same. As we have seen, the name was changed to Peiping when the capital of China was removed to Nanking. Peiping, however, still remained Peking and has a good chance to be the capital again in the future. With the shift of the capital a portion of Peking went to the new seat of government—some of the scholars and artists, the architectural design and treasures of art—but the atmosphere and flavor of Peking remained unchanged. Railways and airplanes kept the blood of the two cities interflowing to mutual advantage.

Nanking is different. It is a city that had to be built upon ruins. In the new capital there reigned a spirit of building up the new structure and tearing down old remains. In Peking, people were nurtured on old glories while they cast their minds into the future. But Nanking had no past to rely upon except memories; everything had to be built anew. Therefore in the collective mind all was thinking, planning, and work, and life kept pace with these activities. Everybody was busy attending meetings and carrying out orders. The atmosphere was always tense. The leisurely spirit of Peking could not have flowered in Nanking.

On the streets pedestrians hustled, rickshaw coolies dashed by; even the inert donkeys fell in with the rapid flow of traffic with hurried steps. Every month new streets shot through old blocks and new houses sprang up like mushrooms. Everywhere was growth—rapid growth.

Even pleasure had to be secured through hard work. Restaurants served delicious food in congested corners, waiting for new quarters under construction. People planned gardens and waited impatiently for the trees to grow. Things you wanted had to be improvised. Without constant constructive activity you fell out of line and were left behind; you had to keep up with the spirit of the time. After some six or seven years of hard work Nanking became a new and prosperous city. Old ruins were fast disappearing while the spirit of thinking, planning, and work was constantly growing, and it radiated to other cities in the provinces and into the future of the country.

Your mind ran ahead into the future to catch up with the spirit of progress in the world. But your steps were necessarily slower—too slow to keep pace with your mind. You can plant trees but you cannot make them shoot skyward overnight; railways and highways must be laid yard by yard; policies of reform have to be carried out day by day. Then, you would think, what is all this hustle and bustle for?

What people sometimes felt about their effort may be summed up in words current and typical in those times: "Discussions ended with no decisions, decisions ended with no actions, and actions ended with no results." It was not really as bad as that. But one thing was certain: people felt their work did not measure up to the efforts made. And that was the spirit of progress.

Hangchow had something of all three of the other cities, yet it was different from them all. It was like Peking in its old culture, for it is the capital of a province of scholars; yet it lacked the grandeur of the former capital of China. Like Shanghai it was tinged with commercialism, yet more lightly, while the absence of foreign overlords left the city freedom for self-expression. It was something like Nanking in its spirit of reforms and reconstruction. But it was

provincial-minded, as Peking and Nanking were national-minded. Hangchow is the city of a province in China, while the others are cities of China.

The great asset of the city is the West Lake, which not only supplied the richness of nature but retained the pleasant associations of generations of poets and scholars who once lived there. Hangchow's shortcomings also lie in its historic scene. For its people so treasured the lake that they could not look beyond its horizons; they fooled themselves into thinking it greater than the Pacific Ocean and as alluring as the veriest Paradise on earth. They were, in fact, hypnotized into believing the proverbial saying: "In the heavens you have Paradise and on earth you have Soochow and Hangchow." Just forget Soochow, they would think; Hangchow is here and Paradise is with us.

So Hangchow is West-Lake-minded. If you stayed there too long you were in danger of being engulfed, like the lovers of the South Seas; you would grow and wither there, and become complacent in life.

But the spirit of reforms and reconstruction emanating from Nanking awakened Hangchow from its slumber. Rubbing its eyes, it began to see the possibilities of future development of the province and the part it was to play in the rebuilding of China.

Peking, too, had its broad and tranquil water view. Outside the walled city, from the tops of the Western Hills, one had a bird's-eye panorama of the valley with the river Yunting winding its gentle way through vast tracts of cultivated land. The pagodas in the city were visible to the east. To the west the Marco Polo Bridge spanned the river where it lay like a sleeping dragon undisturbed through peace and war. Under this long, historical bridge the muddy, loess-laden water flowed steadily, day and night, month after month and year by year.

The name "Yunting" means "perpetual stability" or "everlasting peace." Was peace everlasting? The Chinese cherished that hope, and so we gave the river its name and then did little to make the peace

secure. Finally it slipped from our hands and vanished into the flowing water under that very bridge. For at that bridge, on July 7, 1937, the first shots were fired by the Japanese army in the undeclared war which ultimately set all China aflame. Japan had become intoxicated with the cup of seeming success. And in the Japanese magic box the flames of China were transformed into a streak of lightning that blasted Pearl Harbor on December 7, 1941.

第五部 中国生活面面观

陋规制度

凡是亲见清室覆亡的人都知道：满清政府失败的主要原因之一就是财政制度的腐败。公务人员的薪水只是点缀品，实际上全靠陋规来维持。陋规是不公开的公家收支，为政府及社会所默认的。以现在用语来说，好像我们大家所称的黑市。这种办法削弱了公务人员的公德心，也使他们把不规则的收入看成理所当然的事。清廷对官吏的这种收入视若当然，常说“规矩如此”，竟把陋规变成规矩了。这些官吏对下属营私舞弊也就开只眼闭只眼。如果拿一棵树来比喻政府的话，这种陋规的毒汁可以说已经流遍树上的每一枝叶，每一根芽。

政府只要求税收机关向国库缴纳定额的税款。主持税收的官吏可以利用各式各样的藉口和理由，在正规赋税之外加征各种规费。这样一来，如果有一两银子到了国库，至少也另有一两银子成了陋规金。在满清末年，“漏”入私人腰包的钱远较缴入国库的钱为多。清廷需用浩繁，只好一味向官吏需索。官吏向民间搜刮，结果官场陋规愈来愈多，人民负担也愈来愈重。乾隆皇帝几次下江南，开支浩大，都靠官吏孝敬、民间搜刮而来，清代在乾隆朝为极盛时代，而衰运亦在此时开始。

清代后期，征税与捐官等方法均未能使清廷达到筹款的目的，因此不得不乞灵于借贷外债，而以让渡铁路建筑权或矿产开采权为交换条件。这自然是饮鸩止渴的办法。现在或许还有人记得清廷将四川省内铁路收归国有，以为转让筑路权予外国公司之张本，结果触发了辛亥革命的导火线。时遭光绪帝丧，地方士绅披麻带孝，头顶“德宗景皇帝神位”，长跪于总督衙门之前，哭呼先帝，保佑四川，不使铁路收归国有，弄得政府啼笑皆非。

所谓陋规制度究竟是怎么一种办法呢？中国当时分为二十二行省，大约包括两千个县。县的行政首长是知县，他不但掌管一县的财政，同时还是一县的司法官。他的薪水每月不过数两银子，简直微不足道。因此他的一切费用都只能在陋规金上开支。如果上级官员经过他那一县，他除了负责招待之外，还得供应旅途一切需要财物。对于上级官员的随员也得送“礼”，所谓“礼”通常都是送的钱。

我的故乡余姚城外的姚江岸上有一座接官亭，这是各县都有的。如果有上级官员过境，知县就在亭里迎候。大约六十年前的一个下午，我发现亭子附近聚了一大堆人。我赶过去一看，原来是大家在观望学台和他的随行人员纷纷下船；有些上岸。这位学台正预备去宁波主持郡试。前一日，知县已经从老百姓手中“抓”去好几条大船，那条专为这位学台预备的船上装了好几只加封条的箱子，至于箱子里面装些什么，自然只有经手的人才知道了。

我遥望着学台等一行换了船，学台踏上最华丽的一只，随后这只载着官吏和陋规礼金的小型舰队就扬帆顺着退潮驶往宁波去了。那种气派使我顿生“大丈夫当如是也”的感触。我心里说从今以后一定要用功读书，以便将来有一天也当起学台享受封藏在箱子里面的神秘礼物。

知县还得经常给藩台的幕僚送礼，否则他就别想他们给他在藩台面前说好话；如果搞得不好，这些师爷们还可能在公事上吹毛求疵呢。各种礼金加起来，一个知县为保宦海一帆风顺所化的钱就很可观了。同时人情世故也告诉他必须未雨绸缪，何况他还得养活一家大小以及跟随他的一班人呢！

有靠山的候补知县无不垂涎收入比较大的县份。以我的故乡余姚县而论，就我所能记忆的，没有一个知县在我们的县里任职一年以上。正常的任期是三年，一位知县如果当上三年，大概可以搜刮到十万元叮当作响的银洋。这在当时是很大的数目。因此藩台只派些代理知县，任期通常一年。这样一来，候补知县们的分肥机会也就比较多了。

知县任满离职时，通常都得正式拜望藩台一次，藩台总要问一声他的缺好不好。当时对于所补的职位叫做缺，也就是等于问他得到了多少陋规金，他的亲朋戚友与他谈话，也常常以同样的问题做开场白，说“老兄你的缺想必很好罢”。

经手政府收支的官吏，官阶愈高，“漏”入他私人腰包的数目也愈大。据说上海道台每年可以获利十万两银子。所以上海道的缺，是全国缺中最肥的。富庶省份的藩台、督抚以及北京有势力的王公大臣，每年的收入也都很可观。

连平定太平天国之乱的学者政治家曾国藩也赞成陋规制度。他曾在一封信里为陋规制度辩护，认为要顺利推行政务，就不得不如此；他说一个官吏的必要开支太大，而且还得赡养一家和亲戚。咸丰同治年间住在北京的名士李莼客曾在日记里抱怨总督张之洞送他的“礼”太轻。过了

几天日记里又有一段记载，为：“午后至陶然亭，张之洞来，我避之。”可见张之洞从陋规金中提出来赠与李莼客的礼太轻，结果就得罪了这位名士了。

在满清时代，有前程的候补官员只要化很少的钱，甚至不必出钱，就会有仆从跟随他们。这些仆从们也会含辛茹苦地追随不舍，希望有朝一日他们的主人时来运转，他们也就可以分享陋规了。如果真的吉星高照，主子和奴才就沆瀣一气，大刮一笔。如果流年不利，官爵迟迟不能到手，仆从们也还株守不去，直至最后一线希望消灭时为止。一些倒霉的主人，受不住饥寒煎熬，只好投缳自尽，以求解脱。我在杭州读书时，曾经听说有一位赋闲多年的候补知县，因为受不住债主催逼，结果在大除夕自缢了。

变相的陋规恶习甚至流布于小康之家，厨子买菜时要揩油，仆人购买家用杂物时也要捞一笔。尤其在北平，仆人们来买东西时，商店照规矩会自动把价格提高一成，作为仆人们的佣金，这在北平通俗叫做“底子钱”。

这种变相的陋规之风甚至吹到外国而进入拿破仑的家里。拿破仑有个中国厨子，服务周到而热心。这位伟大的法国将军临死时记起他的忠仆，就吩咐他的左右说：“你们要好好地待他，因为他的国家将来是要成为世界最伟大的国家之一的。不过这位中国朋友很爱钱的，你们给他五百法郎罢！”自然，中国人并非个个如此。哥伦比亚大学的丁良（译音）中国文学讲座基金，就是为纪念一位中国洗衣工人而设的，基金的来源是他一生辛勤浆洗衣服的积蓄。丁良临死时把一袋金子交给他的东家，托付他做一点有益于中国的事。这位东家就拿这笔钱，再加上他自己的一笔捐款，在哥大设置了中国文学讲座，来纪念这位爱国的洗衣工人。

陋规之风更弥漫了整个厘金制度，厘金制度像一个硕大无朋的章鱼把它的触须伸展到全国的每一条交通线上，吮吸着国内工商业的血液。厘金是在太平天国时期设置的，旨在筹措战费以供应清廷士卒。太平军虽然被平定，厘金却始终未取消。

厘金方面的陋规大致是这样的：凡是懂得如何敲诈老百姓的人都可以向政府经纪人出价投标，只要他出价高，譬如说一年二十万块钱，他就可以获得在某一关卡或若干关卡征收厘金的权利。这些关卡通常设在官道上的货物必经之地，得标的人就成为此一关卡的厘卡委员，受权向过往的货物征税。如果他能在一年之内收到三十万块钱，他把二十万缴交政府，其余的钱就归他本人及其合伙者所有。因此他规定大多数的货

物都得抽税，以便充实他们的私囊。

有一次我看到一条装西瓜的木船从关卡附近的一座桥下经过。这条船马上被岸上伸下来的一根竹柄挠钩拦住了，同时岸上跳下好几位稽查，用铁棒往西瓜堆里乱戳乱擗。西瓜主人慌了手脚，哀求他们手下留情，同时答应他们，要缴多少税收就缴多少税。"税"缴过以后，这位可怜的农夫才得继续鼓棹前进。

小商人和农夫对厘金无不深恶痛绝，如果有机会，每一个人都愿意把关卡砸个稀烂。有一次，一群青年士子乘船去参加科举，途经一处厘金关卡，卡上着令停船，他们根本不予理睬。稽查们扣住船只，并且开始搜检行李。这群士子蜂拥上岸，冲进关卡，见物就砸，结果把关卡打得落花流水。只留下那面象征朝廷权威，上面写着"奉旨征收厘金"的旗子低垂在空中，围观的群众以不胜钦慕的目光伫望着这些士子扬长而去。

辛亥革命以后，陋规制度逐渐被戢止，厘金制度亦于稍后废止。官吏的薪俸也提高了。但是贪污案件还是屡见不鲜，仆役间的揩油风气迄今未衰。有一位太太骂她的厨子揩油揩得太贪心，结果与厨子大吵其架。有人批评这厨子贪心得像条饿狼，他的答覆是："如果一个人不贪心，他也就不会当厨子了。"

北京某大使馆的厨子每买一个鸡蛋，就向主人索价一毛，大使秘书的厨子为主人买蛋，却只索价五分钱一只。大使夫人问："为什么我买鸡蛋要比秘书太太多化钱呢？"她的厨子答道："太太，大使的薪水要比秘书先生的高呀！"汽车主人也常常发现汽油箱"漏"油，原因就是司机"揩"油。不必要的修理，更使保养费大得惊人。

自从民国十六年（一九二七年）国民党执政以来，中国一直在设法阻遏政府中的贪污风气，并且规定了几种对贪污舞弊的严厉罚则。但是陋规制度在清朝以前就已存在。数百年的积习，不是几年之内，甚至二三十年之内所能完全革除的。自从现代财政制度建立，公家道德逐渐提高以后，中国已经革除了很多积弊。行政技术正与时俱进，相信她在不久的将来一定可以达到组织健全的现代国家的水准，征收赋税和控制财政的有效办法也会渐次建立。不幸当时内乱外患并乘，致使功败垂成。

我们中国人一向相信人之初性本善，认为邪恶的产生只是缺乏正当的教育而使善良的本性湮没，中国社会风气的败坏导源于腐朽的财政制度，而非缺乏责任感。但是这种制度对社会风气产生极大的不良影响，

因此我们迄今仍蒙受其遗毒。

实际的例子已经指出，补救之道在于建立良好的制度，来代替腐败的制度。单单废止坏制度，还是不够的。英国人为中国建立的关税制度，一开始就摆脱了陋规的恶劣影响。海关雇员都经过良好的训练，薪俸也相当优厚，退休之后还有充裕的养老金。徇情偏私的情形很少发生。中国为了保证偿付外债而把国家重要收入的控制权交付给外国政府，这原是国家的奇耻大辱，而且严重威胁到主权的完整，但是因此而建立关税制度却是中国的意外收获。

邮政也是根据西方制度建立的。创办迄今，行政效率始终很高。就是在漫长的内战时期，邮递工作也从未中断。抗战期间，日军占领区与中国大后方之间，邮递一直畅通无阻，邮差们常常穿越火线把邮件送达收件人手里。

盐务机构是另一实例。八年抗战期间，人民的这种日用必需品始终供应无缺。

治黄河的河督衙门从前一向以陋规制度闻名于世；事实上著名的山东菜和河南菜就是这些食厌珍馐、腰缠万贯的治黄老爷们光顾的结果。同样地，扬州菜之所以出名，就是因为贪图口福的扬州盐商而来。

黄河水利委员会成立以后，改由受过现代训练的工程师主持疏浚工作，陋规制度也就随滚滚河水冲入黄海去了。老饕已随陋规制度消失，只有烹饪艺术依旧存在。美食家至今对扬州菜赞不绝口，但是自从组织完善的现代盐务制度建立以后，倡导扬州菜的盐商已无法立足了。

这些成就可以说是依赖外国协助而来的。但是我要请问：这些成就究竟由于外国人的良好道德，还是由于他们介绍到中国来的良好制度呢？没有健全的品德，这些制度固然无法实行，但是单凭外国人的道德难道就能收到预期的效果吗？单凭少数高居要津的外国专家就能够制止千千万万中国职员的不法行为吗？海关、盐务、邮政之所以成功，还是靠良好制度下的基层中国职员的通力合作。这就是孟子所谓：“徒善不足以为政，徒法不足以自行。”

中国的现代银行制度和铁道管理也是值得称道的实例。一般而论，银行与铁路的行政效率都很高，而且没有金钱上的重大舞弊案件。

中国的现代大学除了实事求是的学术立场之外，也是经费从无私弊的又一实例。抗战期间，因为物价高昂，教授生活非常清苦，但是他们始终辛苦工作，力求维持学术水准。绝大多数的学生，除了接受现代训

练之外，在教授和大学当局的良好影响之下，对于如何诚实而有效地运用公款，也自然养成正确的观念和好的习惯。

最重要的是对公款处理的态度已经起了根本的转变，过去大家都默认甚至赞扬陋规制度，到了抗战以前的几年，有识之士不但讨厌它而且随时加以讥讽，这种风气的转变，再加采用现代方法，当时我们相信对于将来公共行政各方面的经费处理，必将发生重大良好的影响。

要消灭仆役、厨子和司机的揩油行为可难得多了。或许要经过五六十一年之后才能提高这些人的经济地位，在他们的经济地位确切提高以前，我们无法奢望他们临财不苟。如果真的到了那一天，也许我们已经不容易找到愿意当家庭仆役的人了。抗战时我在昆明居留的八年期间，我倒在我的佣人中碰到过一位男仆、一位女佣和一位司机从来没有揩过油。

社会组织和社会进步

一般人都说中国的四万万人像一盘散沙，如果说中国的人是由许多自治的小单位构成的，倒更切近事实。中国的民主体制包括千千万万的这种单位，由几千年来累积下来的共同的语言、共同的文化和共同的生活理想疏松地联系在一起。这些或大或小的单位是以家庭、行业和传统为基础而形成的。个人由这些共同的关系与各自治团体发生联系，因此团体内各分子的关系比对广大的社会更为亲切。他们对地方问题比对国家大事了解较深。这就是立宪国会失败的症结，也是老百姓听凭军阀统治的原因。我们在前面曾经一再提到“天高皇帝远”的观念，帝制时代的这种观念就是上述心理状态产生的。

个人如非因特殊事故与所属社会破裂，永远是小单位的一部分，但是各单位之间并无全国性的组织使其密切团结。这是中国国民生活中的优点，同时也是弱点。好处在于使中国生活民主，虽经数百年之战乱以及异族^[2]之入侵而仍能屹立无恙，坏处在于中央政权软弱无能，因而易遭异族侵袭。

中国人民生活中这些单位的存在是有它历史的背景的。它们是几千年历史演变的结果。我们的祖先逐渐向人口比较稀少的地区迁移时，他们总是成群结队而行，在各地构成许多独立的部落，这些部落后来便发展为自治的村庄或乡镇。广大的中华帝国就是千百年来由这些聚族而居者向边疆和平原拓殖而形成的。近年来由于研究中国各地方言的结果，我们已经追溯出这种发展的途径。我们发现广东话与唐朝的口语有密切的关系，因此我们可以推断多数的广东人是唐朝的后裔。迁到广东较晚的移民又另行形成不同的部落，所说的方言也迥然不同，那就是我们所谓的客家话。客家话所显示的语言特征是属于近世纪的。甚至长江流域各地方言之间的些微差别，也可以隐约显示拓殖过程中的先后。

第十世纪，唐朝灭亡，中国北方普遍遭塞外入侵的异族蹂躏，因而也加速了中国人口的南迁。南方各省，尤其是广东、湖北和浙江一带，不易遭受外族的侵略，所受战祸较轻，因此就成了中国文化的蓄水库，并在过去六七十年内灌溉了新中国大块的土地。

如果要使某一改革对国家统一与团结切实有效，这种改革必须直接使这些古老的区域单位在家庭制度上、行业上和传统上发生某种程度的变化，反过来说，这些单位系共同的语言、文化和生活理想所维系，那

么任何经由共同语言所产生的文化和理想的变化，也势必影响这些社会集团的生活，并且进而影响国家的生活。

外国商品开始影响中国行业时，中国就开始变化了，维系中国社会的三条绳索之一因而松散。这是受现代影响的最初改变，这种改变人们是不大知道的。以后现代思想经由书籍、报纸和学校制度等输入中国，又松散了传统这一条绳索。最后留下来的一条绳索——家庭的联系，也终于不得不随其他两条绳索一起松散。

人们因探索新的有效的团结而引起各式各样的纷乱。首先受到新思潮影响的是学生，首先闹事的也是他们；新兴工业的工人丧失了旧日行业的维系力量，因此也就跟着学生一起滋生事端。军阀之间的内战，宪政的失败，以及败坏风气的陋规制度，既未阻止旧有社会组织的瓦解，亦未阻滞社会的进步。军阀所引起的祸患只是中国广大的"社会之海"面上的泡沫。不论有没有互相残杀的军阀，或者声誉扫地的国会，或者败坏风气的陋规，海面底下的潜流仍在滚滚而进。军阀、国会、陋规只是浮面上的祸患，那些自治单位本身仍然宁静如恒，在道德方面也洁净无瑕。

在悠久的历史过程中，尤其在唐朝末年以后中国的国防一直很脆弱，因为侵略她的异族全部组织严密，随时准备作战，而中国的社会组织却是升平世界的产物。国防部队是由太平无事的社会中征募来的，维持这些军队的中央政府也只是一个和平社会上层的空架子。

明室领导下的汉族之所以能推翻蒙古人所建立的元朝，并非由于汉人本身的军事力量，而是由于蒙古人本身力量的衰竭。成吉思汗的子孙在欧亚两大陆连年征战之后，武力已消耗殆尽。中国在明成祖御宇期间，曾经组织成一支强大的军队，并且征服了满洲的大部分；但是成祖驾崩以后，这支军队的实力也就日趋式微。骁勇善战的满洲人在关外崛起以后，明室对鞑靼入侵简直束手无策，结果没有经过激烈战斗，明朝就亡在满洲人手里了。满清入主中国一百余年以后，结果也染上了汉人的和平习气，等到西方列强的兵舰来攻击中国时，清室也是同样束手无策。

日本研究历史的结果，认为历史是会重演的，因此就在一八九四年发动对中国大陆的攻击。到那一年为止，日本的设想并没有错。但是自从中国学到西方的"诀窍"以后，中国的历史演变途径就开始转向了。日本不是对这种转变懵然无知，就是有意防患于未然。无论动机如何，日本终于在三十年之后又向中国大陆发动了另一次战争。结果发现她的途

程上障碍重重，使她大感意外。

日本遭遇的障碍就是中国的社会进步，日本已经看到高踞中国社会之上的腐败无能的北京帝制政府，这个政府的财政力量已经被陋规制度腐蚀殆尽；稍后日本又在水面上看到互相征战的军阀；但是她对过去五十年间在中国的浩瀚海洋之中缓慢地、然而不断地流动的潜流，却茫然无知。

在过去，秘密帮会是全国组织的维系力量。帮会弟兄生活于乡村单位之外而聚集于大城市附近或通商孔道。他们的主要目的是互相保护，抵制压迫，但是这种动机有时候会堕落为不法买卖。他们在内乱时可以表现相当大的力量，但是以之应付外国侵略却无多大用处。他们缺乏现代思想，也不懂什么叫社会进步。

现在的情形可不同了，全国千千万万自治单位的边缘，已经围集了充满国家观念和爱国热情的人，他们反对地域偏见和家族观念。这些人像蜜蜂一样绕着蜂巢喧嚷不休，最后就在蜂巢边缘聚集起来。从蜂巢里面溜出来参加巢外集团的个人愈来愈多。外面围集的群众数量增加以后，他们开始闯进蜂巢，终至影响了整个社会的生活。同时他们开始把自己组织为全国性的社会，拿中国作为他们的共同蜂巢。

中国现代的全国性社团就是这样形成的。轮船、公路、铁路、航空等交通网的迅速扩展，更加速了社团发展的过程。教育会、商会、工会、科学团体、工程学会、政治学会等社团都纷纷成立全国性组织。所有政党，包括国民党以及意见与其相左的政党，都鼓励人民考虑全国性的问题。大专学校吸收了家庭的分子，而把他们塑造成国家的领袖。学校都在努力把国家民族观念和爱国心灌输到新生代正在发育的心灵里。

虽然内战频仍，各省的公立学校甚至在国家统一之前就已经增加了好几倍。私人常常以创办学校来表达他们的爱国忠忱。千千万万的小学毕业生，跑进本乡本土的自治社会，把爱国观念散布到全国的每一角落。

中日正沿长城作战时，我在内地旅行，途中看到一个孤单的小孩在扮军人作游戏。他把一棵树当作假想敌，拿他的匕首猛刺这棵树。然后他又想像敌人向他还击，他装出自卫的姿势，接着躺倒在地上，闭起眼睛自言自语说："我为国牺牲了！"显然地他在想像自己为保卫国家而抵抗日本侵略。抗战后期，我在后方边荒地区看到一个小孩拿铲子挖了一

个小坟。坟挖成以后，他在坟上立了一个木牌，上书“汉奸”。那时少数重庆政要已经出亡投靠日本去了。有一次，一位矿冶工程师经过某山区，那里离最近的学校也有好几里路，他却看到几位小孩在他们村庄墙上书写“三民主义万岁！”这些例子可以显示全国性的团结力量已经代地方性的维系力量兴起了。

小孩子们新的教育制度影响之下，大家都能拿纸折飞机抛在空中滑翔。他们制造小小的抽水机，也能做玩具汽车。他们开始养成研究机械的习惯，这对国家的未来工业化运动也是个良好的基础。

近年来轻工业的发展，从地方单位吸收了许多人，他们开始彼此联系，组成全国性的团体。广播从空中给人民带来许多新观念。风俗习惯、迷信、方言、民歌、宗教、家庭工业、垂危的本地行业及苦难农民的经济情况，都经过仔细调查，并且根据高等学府和学术团体所收集的资料很科学地加以研究。中国已开始从科学研究中了解她自己了。

五十年的动荡已经促使人们思索，他们的人生观开始转变了。他们希望在侵略威胁下从事有效的组织，以团结全国的力量，同时为国家的进步辛勤工作，期望能在混乱中创造安定。这种新生的社会意识和国家意识或许还不够坚强，因为它还不能充分应付战争。但是这种意识可以产生坚忍不拔的意志来进行坚强的抵抗。从这一方面来看，社会意识和国家意识的力量是惊人的。

[2] 异族：相较于汉族而言的少数民族。此处的“异族入侵”实指边疆的少数民族进入中原。其中，蒙古族、满族进入中原之后建立了全国性政权。

迷人的北京

正像巴黎继承了古罗马帝国的精神，北京也继承了中华帝国黄金时代的精神。巴黎是西方都市之都，北京则是东方的都市之都。如果你到过巴黎，你会觉得它不但是法国人的首都，而且是你自己的城市；同样地，北京不仅是中国人的都市，也是全世界人士的都市。住在巴黎和北平的人都会说：“这是我的城市，我愿意永远住在这里。”

我在北京住了十五年，直到民国廿六年（一九三七年）抗战开始，才离开北京。回想过去的日子，甚至连北京飞扬的尘土都富于愉快的联想。我怀念北京的尘土，希望有一天能再看看这些尘土。清晨旭日初升，阳光照射在纸窗上，窗外爬藤的阴影则在纸窗上随风摆动。红木书桌上，已在一夜之间铺上一层薄薄的轻沙。拿起鸡毛帚，轻轻地拂去桌上的尘土，你会感到一种难以形容的乐趣。然后你再拂去笔筒和砚台上的灰尘；笔筒刻着山水风景，你可以顺便欣赏一番，砚台或许是几百年来许多文人士用过的，他们也像你一样曾经小心翼翼地拂拭过它。乾隆间出窑的瓷器，周朝的铜器，四千年前用于卜筮的商朝甲骨，也有待你仔细揩擦。还有静静地躺在书架上的线装书，这些书是西方还不懂得印刷术以前印的。用你的手指碰一碰这些书的封面，你会发现飞扬的尘土已经一视同仁地光顾到这些古籍。

拂去案头杂物上的灰尘，你会觉得已经圆满地完成这一早晨的初步工作。阳光映耀，藤影摇曳的纸窗在向你微笑，纤尘不染的书桌以及案头摆设的古董在向你点头；于是你心满意足地开始处理你这一天的工作。

这种古色古香的气氛可以使你回想到孔夫子设帐授徒的春秋时代；或者景教徒初至中国的唐朝时代；或者耶稣会教士在明朝制造天文仪器的时代；或是拿破仑长驱直入俄罗斯，迫得饮街灯油的时代；或者回想到成吉思汗派遣他的常胜军直入多瑙河盆地，建立横跨欧亚两大洲的蒙古帝国，并且把北京定为他的一位儿子的京城^[1]。我们可以从北京正确地了解历史，因为北京不仅像大自然一样伟大，而且像历史一样悠久。它曾是五个朝代的京城，一代继替一代兴起，一代又接着一代灭亡，但是北京却始终屹立无恙。

皇宫建筑都是长方形的，而且很对称地排得像一张安乐椅，中间有一个宽阔的长方形天井，天井中央摆着一只青铜镀金的大香炉，点了

香，香烟就袅袅地升入天空。宫门前站着一排排的铜鹿，宫门口则有雄踞着的一对对石狮或铜狮把守。这种三面围着雄伟建筑的天井，数在一百以上，星罗棋布在紫禁城内，紫禁城的周围是一座长方形的黄色城墙，城墙四角矗立着黄瓦的碉楼。北京皇城由元朝开始建造，明朝时曾予改建，清朝再予改良而成目前的形式。

碰到晴空澄碧、艳阳高照的日子，宫殿屋顶的黄色釉瓦就闪耀生辉。在暮霭四合或曙色初露之时，紫禁城的大门——午门——上的谯楼映着苍茫的天色，很像半空中的碉堡。在万里无云的月夜，这些谯楼更像是月亮中的神仙宫阙，可望而不可即。

民国成立以后，满清的末朝皇帝溥仪暂时仍统治着北京的这个城中之城，少数残留的清廷官吏还每隔半月觐见一次。这些官吏穿着旧日满清官服聚集在紫禁城的后门听候召见，仍执君臣之礼。民国十三年（一九二四年）冯玉祥入京，终于把溥仪逐出紫禁城。

政变后不久，我受命入故宫监督政府的一个委员会逐屋封闭各门。当时宫内还留有几个太监，我从他们口中得到好些有关宫廷生活的知识，以及过去许多皇帝、皇后、王子、公主等等的趣闻轶事。

其中一则故事涉及一面从天花板一直垂到墙脚的大镜子，据说慈禧太后喜欢坐在镜子前面，看看她自己究竟多威严。有一天陕西抚台奉命入宫觐见，他进门后首先看到镜子里的太后，于是马上跪倒对镜中人大叩其头。

"那末太后怎么样呢？我想她一定很生气吧！"我说。

"哦，不，不！她笑了，而且很和蔼地对他说：'你弄错了，那是镜子呀。'"

我遇到几个曾经侍候过王子读书的太监，但是这几个太监竟然全都目不识丁。宫廷规矩禁止他们受教育，因此他们对于王子念些什么始终毫无所知。

走廊上挂着许多鸟架，上面站着红色、黄色以及蓝色的鹦鹉，嘴里说着公主们花了不少时间教它们的话，"请进！客来了。倒茶……"一只蓝色的鹦鹉这样对我说，那只红色的和那只黄色的跟着喊："倒茶！倒茶！"这是我第一次看到蓝色的鹦鹉。金鱼在宫中的水池中追逐嬉戏，有白色的、黑色的、红色的和金色的。其中有许多几乎长达一尺，它们的潜望镜一样的眼睛朝天望着，它们的丝绸样的尾巴好像几柄相连的扇子在水中摇曳生姿。

溥仪住的宫殿看起来很俗气，大厅中央摆着一张似乎很粗俗的长长的外国桌子，桌子四周放着几张丑陋的椅子。桌子上摆着一对红色的玻璃花瓶。这房间看起来倒很像美国乡下的次等客栈，真想不到就是中国皇帝的居室。所有的精美家具和艺术珍品已经被弃置而收拾到后宫去了。通商口岸的粗俗的西方文明已经侵入到皇宫；对照之下，使人觉得没有再比这更不调和的了。低级杂志四散各处，新切开的半只苹果和一盒新打开的饼干还放在桌子上。溥仪显然因事起仓卒，匆匆出走，无暇收拾房间。

后来各宫启封清点艺术珍藏时，奇珍拱璧之多实在惊人。其中有足以乱真的玉琢西瓜，有“雨过天青”色的瓷器，有经历三千年沧桑的铜器，还有皇帝御用的玉玺。

唐宋元明清的历代名画，更是美不胜收。有些山水画，描写大自然的美丽和谐，使人神游其中，乐而忘返；有些名家画的鸟维妙维肖，跃然纸上；鱼儿遨游水中，栩栩如生；鹅嘶鸡啼，如闻其声；竹影扶疏，迎风摇曳；荷塘新叶，晨露欲滴；兰蕙飘香，清芬可挹。中国的名画，不仅力求外貌的近似，而且要表现动态、声音、色泽和特征，希望启发想像，甚至激发情感。换一句话说，就是要描摹事物的神韵。

这个委员会包括一百多职员，两年中翻箱倒篋，搜遍了皇宫的每一角落，把历代帝王积聚下来的千万件奇珍异宝一一登记点验。有些仓库密密层层满是蜘蛛网，有些仓库的灰尘几乎可以淹没足踝，显见已经百年以上无人问津。有些古物已经好久没有人碰过，究竟多少，谁也不知道。

最后故宫终于开放，同时故宫博物院成立，主持古物展览事宜。一般民众，尤其是年轻的一代，总算大开眼界，有机会欣赏几百年来中国艺术丰富而伟大的成就。北京本来就是艺术中心，鉴赏家很多，艺术家也不少，故宫博物院开放以后，更使北京生色不少。过去深藏在皇宮后院的東西，现在大都可以欣赏了，过去只有皇室才能接触的东西，现在已经公诸大众。抗战初期，政府就把故宫古物南运，由北平而南京而西南内地。战后运回南京。复因战乱而运至台湾。现在台中所陈列之古物，就是从北平故宫运来的。

科学是心智探究自然法则的表现，艺术则是心灵对自然实体所感所触的表现。艺术是人生的一种表现，它使人生更丰富，更美满；科学是心智活动的产物，旨在满足知识上的欲望，结果就创造物质文明。在现代文明里，艺术与科学必须携手合作，才能使人生圆满无缺。

紫禁城之西，有三个互相衔接的湖，叫南海、中海和北海，湖与湖之间的小溪上有似驼背形的石桥，沿湖遍植百年古木，湖里盛开着荷花，环湖的山峰上矗立着金黄色琉璃瓦、朱红柱子和雕梁画栋的亭子。据说有一次在湖中捕到一条鱼，鱼身上还挂着一块写着明朝（一三六八——一六四三）永乐年间放生的金牌。

中海之中有个瀛台，那是一个周围遍植荷花的小岛，一八九八年维新运动失败后，光绪皇帝就被慈禧太后囚禁在瀛台，后来在一九〇九年死在那里。小岛上建着许多庭院宽敞的宫殿。长着绿苔的古树高高地俯盖着设计复杂的宫殿上的黄瓦，各亭台之间有迂回曲折的朱红色的走廊互相连接。御花园中建有假山，洞穴怪石毕具，使人恍如置身深山之中。至于不幸的光绪皇帝是否在这美丽的监狱里乐而忘忧，那恐怕只有光绪皇帝自己和跟随他的人才知道了。在他被幽禁的寂寞的日子里，他一直受着身心病痛的困扰，最后还是死神解脱了他的痛苦。

湖水原先是用石渠从西山转引来的泉水。公路旁边至今仍可发现部分残留的渠道。北京的下水道系统更是旧日的一项伟大的工程成就。用以排泄市内污水的地下沟渠很像现代地道车的隧道。到了清朝末期，所有这些下水道都淤塞了，但是每年检查下水道一次的制度却维持到清朝末年。早年时，检查人员必须身入下水道，从这一头查到那一头，看看有没有需要修补的地方。后来下水道垃圾淤塞，这些检查人员就用一种非常巧妙的手段欺蒙他们的上司：两个穿制服的检查员在下水道的一端爬下去躲起来，另外两个穿着同样制服的检查员则预先躲在另一端，检查官骑马到了出口处时，事先躲在那里的检查员也就爬出来了。这个例子也说明了这个下水道系统表面上虽然仍旧存在，但是它的精神却因多年来阳奉阴违的结果而烟消云散了。满清末年，这类事情在政府各部门都有发生，所以清廷终于只剩下一个空架子，实在毫不足奇。

北京满城都是树木。私人住宅的宽敞的庭院和花园里到处是枝叶扶疏、满长青苔的参天古木。如果你站在煤山或其他高地眺望北京，整个城市简直像是建在森林里面。平行交叉的街道像是棋盘上纵横的线条交织着北京的“林园”。根据由来已久的皇家规矩，北京城里只许种树，不准砍树。年代一久，大家已经忘记了这规矩，却在无形中养成爱护树木的良好习惯——这个例子说明了制度本身虽然已经被遗忘，但是制度的精神却已深植人心。中国新生的秘密就在这里。

在北京住过的人，很少人会忘记蔚蓝天空下闪闪发光的宫殿和其他公共建筑。颐和园和公园里有几百年前栽种的古松。有的成行成列，有

的则围成方形，空气中充塞着松香。烹调精美的酒楼饭馆随时可以满足老饕们的胃口。古董铺陈列着五光十色的古玩玉器，使鉴赏家目不暇接。公共图书馆和私人图书馆的书架上保存着几千年来的智慧结晶。年代最久的是商朝（公元前一七六六——前一一二二）的甲骨，这些甲骨使我们对中国历史上雾样迷的时代开始有了概念。此外还有令人肃然起敬的天坛。它使我们体会到自然的伟大和人类精神的崇高。

现代的国立北京大学于一八九八年成立，直接继承了国子监的传统，在几百年积累下来的文化氛围中，北京大学的成立几乎可以说只是昨天的事。北大不仅是原有文化的中心，而且是现代化智慧的源泉。学者、艺术家、音乐家、作家和科学家从各方汇集到北京，在这古城的和谐的氛围中发展他们的心智，培育他们的心灵。古代的文物，现代思想的影响，以及对将来的希望，在这里汇为一股智慧的巨流，全国青年就纷纷来此古城，畅饮这智慧的甘泉。

[1] 定都北京的应为元世祖忽必烈，成吉思汗之孙。

杭州、南京、上海、北京

杭州富山水之胜，上海是洋货的集散地，南京充满了革命精神，北京则是历代的帝都，也是艺术和悠闲之都。我出生在浙江省的一个小村里，童年时生活在农夫工匠之间，与他们的孩子共同嬉戏。少年时代在杭州读书，后来又在上海继续求学。留美回国以后，因为工作的关系先住在上海，继至北京、南京、杭州，最后又回到北京，一直到抗战开始。

就地理来说，北京位于黄河流域的华北平原，离天津不远。其余三地则是长江流域的南方城市。杭州位于杭州湾口钱塘江之岸，与北京之间从前有运河可通。运河全长二〇七四公里，横越长江黄河两大河，至今仍有一部分可通舟楫。一千三百多年前，隋炀帝动员全国人力，筑此运河，河成而隋亡。唐皮日休有诗云：

"人道隋亡是此河，至今千里赖通波。

若无水殿龙舟事，共论禹功不较多。"

上海在杭州的东北，踞黄浦江之岸。黄浦江位于长江口而入黄海，所谓黄海实际上是与太平洋不可分的一部分，仅仅名称不同而已。南京离海较远，位于沪杭两地的西北，雄踞长江南岸。自南京沿长江东下可达扬州，运河即在此越江入江南，马哥·李罗曾在元朝扬州当过太守。北京、南京、上海、杭州四城之间现在均有铁路互通，也可以说是太平洋沿岸的城市。

长江下游的江南都市，气候大致差不多，春秋两季的天气尤其温煦宜人。杨柳发芽就表示春天到了，游春的人喜欢采摘新枝回家装饰门户，表示迎春。树叶转红则表示秋天到了，夕阳红叶曾给诗人带来不少灵感。春天有一段雨季，雨水较多，其余三季晴雨参半，夏天不太热，冬天也不太冷。

土壤非常肥沃，主要农作物是稻，养蚕是普遍的家庭工业。鱼、虾、蟹、蚌、鳗、牛、羊、猪、蔬菜、水果遍地皆是，著名的扬州菜就是拿这些东西来做材料的。

上海是长江流域的金融中心。上海的繁荣应该归功于外国人的工商活动，外国资本是上海经济结构的基础，外国商人和资本家因而成为上海的贵族阶级，住在上海的人都得向这些洋人低头。这些洋人有他们自

己的生活圈子，许多外国人虽然在上海住了几十年，中国对他们却仍然是个“谜样的地方”。他们住在富丽幽邃的花园洋房里，有恭顺的中国仆人们侍候着，生活得有如王公贵族。主人们靠剥削致富，仆人们则靠揩油分肥。他们的俱乐部拒绝华人参加，似乎没有一个华人值得结识；他们的图书馆也没有一本值得一读的书。他们自大、无知、顽固，而且充满种族歧视，就是对于他们自己国内的科学发明和艺术创造也不闻不问，对于正在中国或他们本国发展的新思想和潮流更无所知。他们唯一的目标就是赚钱。

地位仅仅次于这些洋人的是中国买办，他们像洋主子一样无知，也像洋主子一样富足。中国商人非常尊敬外国银行里和洋行里的买办。买办们张大嘴巴向洋主子讨骨头时，他们的同胞也就流着口水，不胜羡慕地大摇其尾巴。买办阶级很像炼金术士，可以点铜成银，他们的洋主子则点银成金。买办们花了一部分银子去讨小老婆，他们的洋主子却高明多了，只要在“女朋友”身上花点银子。

上海的第三等人物是商人。他们从买办手中购买洋货，赚了钱以后就汇钱回家买田置产。他们偶然回乡探亲时，自然而然触动了乡下人的“灵机”，因此到上海做生意的人也愈来愈多。

我所谈的上海种种情形，多半是身经目睹的，绝无夸张之词，因为我的许多亲戚就是在上海做生意的，其中有些还是买办。我对他们的生活思想知道得很清楚；同时，我认得不少住在上海的外国人，也听过不少关于他们的故事。开明的外国人，尤其是我所熟悉的美国人，每当我们谈起上海，总是紧蹙双眉，摇头叹息。

第四等人是工厂工人。他们是农村的过剩人口，因为在农村无法过活，结果放弃耕作而到上海来赚钱。他们是贫民窟的居民。

第五等人，也就是最低贱的一等人，是拉人力车的苦力。他们多半是来自江北的贫苦县份。这些名为万物之灵的动物，拖着人力车，像牛马一样满街奔跑。这种又便宜又方便的交通工具使上海的活动川流不息，使上海商业动脉中的血液保持循环的，就是人力车苦力。

这五等人合在一起，就构成了一般人所说的“租界心理”，一种崇拜权势、讲究表面的心理。权势包括财力、武力、治外法权等等，表面功夫则表现于绘画、书法、歌唱、音乐，以及生活各方面的肤浅庸俗。我们通称这种“租界心理”为“海派”，相对的作风则叫“京派”，也就是北京派。“京派”崇尚意义深刻的艺术，力求完美。上海是金融海洋，但是在

知识上却是一片沙漠。

上海人一天到晚都像蚂蚁觅食一样忙忙碌碌。他们聚敛愈多，也就愈受人敬重。在上海，无论中国文化或西洋文明都是糟糕透顶。中国人误解西方文明，西洋人也误解中国文化；中国人仇恨外国人，外国人也瞧中国人不起，谁都不能说谁没有理由。但是他们有一个共通之点——同样地没有文化；也有一个共同的谅解——敛财。这两种因素终使上海人和外国人成为金钱上的难兄难弟。“你刮我的钱，我揩你的油。”

沙漠之中还是有绿洲的，上海的可取之处也就在此。在本世纪的最初十年里，治外法权曾使上海成为革命思想和革命书籍的避难所和交换处。进化论和民主思想的种籽最初就散播在这些绿洲上，之后又随风飘散到中国各文化中心。科学和民主的种籽在其他各地发育滋长为合抱大树，在上海却始终高不盈尺。在民国十年到二十年间，上海因受治外法权的庇护，军阀无法染指，上海及其附近地区的工业曾有急速的发展。留学生回国掌握金融和工业大权以后，中国更开始利用管理和生产上的外国诀窍，不过这些诀窍多半是直接从欧美学来的，与上海的外国人关系较小。

北京的生活可就不同了。除了美丽的宫殿和宫内园苑之外，我们第一个印象是北京城内似乎只有两个阶级：拉人力车和被人力车拉的。但是你在北京住久了以后，你会发现被人力车拉的也分好几个阶级。不过要找出一个“上层”阶级倒也不容易，大家和睦相处，所不同的只是职业而已。在过去，旗人出生以后就是贵族；但这些贵族现在已经与平民大众融为一体。大家都生而平等，要出人头地，就得靠自己努力。唯一的贵族阶级是有学问的人——画家、书法家、诗人、哲学家、历史家、文学家以及近代的科学家和工程师。

一眼就能辨别真伪的艺术鉴赏家，制作各式各样艺术品的工匠，脑中装着活目录的书商，替你篆刻图章，使你俨然有名重百世之感的金石家，美化你的客厅卧室的地毯设计师，大家融融泄泄地生活在一起，有的陶醉于自己的鉴赏力，有的则以能为别人制造艺术品而自豪。鉴赏、技艺也是北京生活的特征。

差不多每一个人都可以抽空以不同的方式来欣赏美丽的东西。你可以逛逛古老的书铺，与店主人聊上一阵，欣赏一番书架上的古籍和新书，神游于古今知识的宝库之中，只要你有兴致，你不妨在这里消磨两三个钟头，临走时店伙会很客气地请你再度光临。除非你自己高兴，你不一定要买。

如果你有兴致，你可以跑进古董铺，欣赏书画珠宝，包括贵重的真品和巧妙的赝品。无论你买不买，都会受到欢迎，但是等到你真的对这些东西发生兴趣时，就是要你拿出留着吃晚饭的最后一块钱，你也在所不惜了。

你也可以跑到戏园里去，欣赏名伶唱戏。他们多半唱得无懈可击，声声动人心弦。要不然你就跑到故宫博物院，去欣赏历代天才所创造的艺术珍品，我在前面所提到的"京派"作风就是在这种永远追求完美、追求更深远的人生意义的氛围下产生的。

如果你高兴，你也可以跑到皇宫内苑所改的"中央公园"，坐在长满青苔的古树下品茗，或是坐在假山的古石上闲眺池中的白鹅戏水。在星期天，你可以骑驴，或者坐人力车，或者乘汽车到西山去凭吊名胜古迹，呼吸充塞着古松芳香的空气。

寻求正当娱乐时，学者、艺术家、工匠、科学家和工程师一致欣赏古老的北京。工作时，他们各自在不同的行业上埋头努力。科学家们在实验室里从事研究，希望对人类的知识宝库提供贡献；工程师拿起计算尺和绘图仪器，设计未来建设的蓝图；学者们埋头在书堆里，希望从历史教训里找寻未来的理想；工匠们在努力创造美丽的器皿；艺术家们从自然和历史文物里获得灵感，用灵巧的手指把心目中的形象表达于画纸或其他材料。

连年战乱并没有使北京受到多大的影响，政府虽然一再易手，这个可爱的古城仍然还是老样子。我在前面曾经提到，国都迁移南京以后，北京已经改名为北平。但是在精神上，北平仍旧是北京，随着国都的迁移，北京的一部分也转到政府的新址，例如一部分学者和艺术家、建筑式样和艺术珍藏，但是北平的气氛和情趣却始终未变。铁路和飞机使这两个城市的血液彼此交流，结果两蒙其利。

南京和北平不同，它是个必须从废墟上重建的城市。新都里充满着拆除旧屋、建筑新厦的精神。北京的人固然也憧憬着未来，他们却始终浸淫于旧日的光辉里，但是南京除了历史记忆之外，并无足资依赖的过去，一切都得从头做起。因此大家都在思考、计划和工作，生活也跟着这些活动而显得紧张。每个人都忙着开会和执行命令。空气永远是那么紧张，北京的悠闲精神无法在南京发荣滋长。

街上行人熙来攘往，人力车夫争先恐后，就是懒洋洋的驴子也受了急急忙忙的行人车辆的感染而加紧了脚步。每月都有新道路和新建筑出

现，到处在发展，而且是急速地发展。

甚至连娱乐都得花很大气力去争取。饭馆只能在拥挤的角落里供应饭菜，新店面尚未建筑完工。人们在花园里栽花种木，焦急地等待着花木长大。你需要东西全得临时设法。除非你不断地积极工作，你就会落伍；你必须努力不懈，才能追上时代精神。经过六七年的辛勤工作之后，南京终于成为崭新而繁荣的都市了。旧日废墟正在迅速地消失，思考、计划和工作的精神不断在发展，而且扩散到各省的其他城市，国家的前途也因而大放光明。

你为了追赶上世界的进步潮流，计划或许很远大，甚至已经跑在时代的前头，但是实际行动势必无法赶上你的思想。你可以栽花种木，但是你不能使它们在一夜之间长大成荫；铁路公路必须一尺一码地铺筑，改革计划也不能在旦夕之间实现。于是，你可能要问：我们又何必这样惶惶不可终日呢？

当时有几句流行的话，颇足代表一般人的感慨，这几句话是："议而不决，决而不办，办而不通。"当然，实际的情形并不至于如此之糟，但是有一件事情是无可置疑的：大家都觉得他们的工作成绩不如理想。其实，这就是进步的精神。

杭州与前面所谈的三个城市都有一点相像，但是与它们又都不同。在古文化上，杭州有点像北京，因为它是"学人之省"的首府，但是缺少北京的雄伟。杭州像上海一样带点商业色彩，但是色调比较清淡，同时因为没有洋主子存在，故有表现个性的自由。在改革和建设的精神上，它有点像南京，但是气魄较小。杭州究竟只是中国一省里的城市，北京和南京却是全国性的都市。

杭州最大的资产是西湖。西湖不但饶山水之胜，而且使人联想到历代文人雅士的风流韵事，但是杭州的缺点也就在此。因为杭州人把西湖视如拱璧，眼光也就局限于此；他们甚至自欺欺人地以为西湖比太平洋还伟大，并且足与天堂媲美。他们已经被"上有天堂，下有苏杭"的俗谚所催眠而信以为真。他们想：且别管苏州怎么样，杭州就在这里，所以这里也就是天堂。

自我来台湾以后，从经验中证实，苏杭确是天堂，因为既无地震，又无台风。

杭州人的心目中只有西湖，你如果在这里住得太久，你不免有沉醉于西湖的危险。此种情况，自古已然。昔人有诗为证云：

"山外青山楼外楼，西湖歌舞几时休。

暖风吹得游人醉，却把杭州作汴州。"

但是，从南京传播过来的改革和建设的精神终于把杭州从沉醉中唤醒了。揉揉眼睛以后，它渐渐看出浙江省未来发展的远景以及它在重建中国的过程中所应担负的任务。

北京也有它辽阔宁静的一面。从城外西山之顶可以鸟瞰北京内外：永定河蜿蜒于广漠的田野之间；向东可以看到城内的塔尖；向西可以看到横跨永定河之上的芦沟桥，它像一条沉睡的巨龙，不理睬战争，也不理睬和平，在这条年代久远的长桥之下，挟着黄沙的河水日以继夜地、经年累月地奔流着。

"永定"是"永远安定"或者"永久和平"的意思。和平真能永维不坠吗？国人存着这个希望，因此也就给这条河取了这么个名字。但是我们并未努力保持和平，结果和平从我们手上溜走，随着芦沟桥下的河水奔腾而去。民国二十六年（一九三七年）七月七日，日本军队未经宣战而发动了对芦沟桥的攻击，终使烽火燃遍了整个中国。为步步胜利所陶醉的日本，把在中国的战火日积月累的贮蓄在魔盒里滋长，终至民国三十年（一九四一年）十二月七日变为一道金光向珍珠港闪击。

PART SIX WAR

CHAPTER 25 MANCHURIA AND KOREA

In the summer of 1918, some nineteen years before the outbreak of actual war between Japan and China, I made a trip with a friend, Huang Yen-peï, to Manchuria. As this is the area where Japanese aggression in China began, it will not be inappropriate to describe how it appeared in those early years.

We took a train from Shanghai to Nanking, and thence, from across the Yangtze at Pukow, went by the Tientsin-Pukow Railway to Peking. From Pukow north, for two days and a night, the train traversed a vast plain. The dry dust, the arid yellow soil, and the cornfields in this enormous plain of the northern section of the country, which I was visiting for the first time, contrasted greatly with the humid black earth, winding creeks, rice fields, and hilly valleys of the south in which I was born and reared.

I wondered whether the difference in geographical surroundings between north and south had much to do with the difference in physical and mental make-up of their respective peoples. The eastern coastal provinces of Chekiang and Kiangsu, where my ancestors had lived for generations and indeed for many centuries, were the regions in China which, down the long avenue of history, had produced great numbers of scholars, artists, and statesmen. But northern Kiangsu, together with that part of northern Anhwei through which we now traveled, struck me as the poorest part of the country, where deforestation was extreme and the frequent floods of the Huai River played havoc among the population.

Then we came to the Yellow River Valley—to Shantung, the northern coastal province where people were tall, muscular, and hard working, but much crowded through overpopulation—and finally to Peking. From the capital, of whose parks and palaces, museums and gardens, I then had my first glimpse, we continued to Mukden by the Peking-Mukden Railway, passing through Shanhaikwan Pass, the coastal terminal of the world-famous Great Wall of China which, like a

gigantic dragon, runs hundreds of miles from Kansu to the coast, separating China proper^[1] from Manchuria and Mongolia. Before the train went through the pass we heard cicadas singing in chorus on the leaves of summer trees, just as noisily as in every other part of China. But as soon as we crossed the pass, all the trees were silent, without those singing homopterous insects. They lived and sang only inside the Great Wall!

We came at night into Mukden station, in the Japanese settlement of the city. The streets were dotted with Japanese shops and looked like a small city in Japan. Penetration of the Japanese in Manchuria was already a fact—nothing short of victorious war could stop it. Historically Manchuria, together with that vast territory to the west called Mongolia, had been the center of China's^[2] troubles. From time to time the peoples of these great areas—the Huns, the Mongols, and the Tartars—made inroads inside the Great Wall and wrought havoc there. The Japanese were to be modern Tartars after entrenching themselves in Manchuria.

We saw a number of officials working under General Chang Tso-lin, the local warlord in power, and learned much about Manchuria from them. We wanted to interview the general but were advised by friends not to do so. Mukden, former capital of the Manchus before they conquered China some three hundred years ago, was the capital of Fengtien Province, over which Chang Tso-lin ruled. We visited the Imperial Manchu mausoleums near the city, where Manchu emperors were buried before they came inside the Great Wall.

From Mukden we traveled by the South Manchurian Railway, owned and operated by the Japanese, to Kuan-cheng-tse, which was later—after the Mukden Incident of 1931—renamed Shinching, or Seijo, and made capital of the Japanese-made puppet empire of Manchukuo. Here the penetration was very evident. Japanese shops were everywhere to be seen.

On both sides of the railroad endless miles of luxuriant wheat nourished in the virgin soil of Manchuria bore witness that this tremendous area of north China beyond the Great Wall was the richest

portion of China and could well support the tens of thousands of immigrants that flowed yearly from Shantung and Hopei Provinces into this northernmost part of the Chinese Republic. To cut off Manchuria from China was to deprive her of lebensraum and suffocate the provinces in the Yellow River Valley.

Kuan-cheng-tse was the terminal of the Japanese-owned South Manchurian Railway and the starting point of the Chinese Eastern Railway, formerly owned and operated by Tsarist Russia. This company had inherited a legacy of corruption from the tsarist regime and the line was operated by a gang of corrupt White Russian employees. People who bought tickets had to fight for a seat on the train, while free riders occupied comfortable compartments. Theft was rampant. One passenger who slept with his shoes on in an upper berth next morning found one of them gone. He stared at his shoeless foot and wondered how the shoe could have been stripped off without his knowing it; and I wondered what was the earthly use of stealing one shoe without the other. All passengers kept a watch on their belongings after this strange incident. As a precaution my companion hid his supply of rubles in the pockets of his underwear and slept with his Chinese gown on. The next morning the rubles were gone. On our return trip, at Harbin station as I was talking to a Chinese customs official—an American—through a window of the train, I felt somebody meddling with my hip pocket. Before I could turn around my own rubles were gone.

The dilapidated city of Harbin, international metropolis of the extreme north, was a meeting place of East and West. Poor Chinese and Russian children in rags played together in the streets and intermarriages were frequent. Children spoke a sort of hybrid language, part Chinese and part Russian. The free mixing of the poorer classes of inhabitants of Harbin was something novel to me. The bigoted foreigners of Shanghai looked down upon the poorer classes of Chinese as something that would contaminate them. Perhaps this was because few poverty-stricken Europeans ever came to stay in Shanghai.

The streets of Harbin, once well paved, had gone unrepaired for years. The carriages in which we rode bounced up and down on the rough ground so badly that comfort was a negligible factor—we had constantly to grasp at something to avoid being thrown out. The sewers were choked up. After a shower the streets turned into rivers in which the water often came up to one's knees. We met a number of people from south China who were in trade there. All the merchants did prosperous business in that frontier city by speculating in wheat, soy beans, and minerals. So long as their business was good they had no time to worry about the dilapidated state of the Russian-developed city.

We went to Kirin, capital of Kirin Province—one of the three provinces of Manchuria—and were impressed with its beautiful scenery. The city is situated on the banks of the Sungari River. Climbing to the temple on the hill in the city and looking down over the widest part of the river, one saw that it was like a lake, and I was reminded of West Lake at Hangchow. The river was rich in fish. The best fish I ever tasted was whitefish from the Sungari. In old Imperial days this delicious fish found its way only to the tables of the Imperial Court and the princesses and grand ministers. Ginseng, the life-sustaining drug that China treasured, was also indigenous to the province; large quantities found their way every year inside the Great Wall to all the provinces.

We paid a short visit to Tsitsihar, capital of the province of Heilungkiang. There we experienced an abrupt turn of summer to winter. Overnight we noticed that the green leaves began to wither and drop from their branches. This was the northernmost city within Chinese boundaries; we could go no farther unless we went on to Siberia by the branch line which connected with the Trans-Siberian Railway.

Returning to Harbin, we chartered a steamboat and sailed down the gentle Sungari to Fuchin Hsien. For two days and a night we enjoyed the mountain scenery on both sides, while mountain islands wreathed in virgin forest appeared here and there in the winding

river. The evening was blessed with a brilliant moon in a clear sky, the air crisp in the northern summer night. The moon was reflected from the water, which broke into ripples of silver as our boat plowed calmly through. Often the Sungari itself appeared to have ended in a lake, with dark forested mountains rising ahead of us against the moonlit sky. But as we drew near the river suddenly opened to left or right, and as our boat changed its course and curved gradually around the mountains, the river seemed to straighten out and roll down ahead beyond the horizon.

Fukchin, or Fuchin Hsien, was a city of granaries. The wheat and soy beans produced in the surrounding hundreds of square miles all were brought to this frontier city. In the winter it was defended against possible attacks of bandits—the "Red Beards"—by walls built round it with bricks of ice which melted away in summer when the defense was less necessary. Everyone carried a gun and knew how to use it. The new stock of Chinese in the frontier provinces was primitive, full of fighting spirit, and not burdened with the overrefinements of old culture. What a contrast with the overcivilized stock inside the Great Wall! Before the war we drew our best fighters in the Chinese Air Forces from this strong stock from the virgin soil of Manchuria.

Our final destination was Lu-pu Hsien and the plantation of a friend of ours. This district was situated at the sharp end of that spearhead of land where the Sungari and Amur rivers meet and flow concurrently into the Huen-tung—the lower part of the Amur. We went by small boat down the river, arriving at dusk, and were put up for the night in a small lonely hut with thatched roof. A section of the broad brick bed was already occupied by an old woman and a cat, the remainder being set aside to accommodate us. Two pigs lay comfortably on the mud floor, snoring occasionally. Mosquitoes and bedbugs annoyed us the whole night.

Long before dawn we set out for the plantation. A party of four, we trotted on horseback in single file through miles of woods and wheat fields. Before we reached our destination the sun had begun to

come up over the horizon. Mountains were barely visible in shady outlines on the Russian side of the Amur Valley. Horseflies began to gather and the animals bled profusely; I was riding a white horse, whose coat showed streaks of blood running down. We did our best to chase away the flies with a horsetail duster. At about six in the morning we came to a plantation run by a Dane. We were told that a band of Red Beards had visited the place a week before. The walls were riddled with bullets.

We arrived at our destination at about eight. The plantation yielded fairly good profits for the first few years of cultivation in that virgin soil, but bandits were the real problem. A few months earlier the "Little White Dragon" and his band had paid them a visit and carried away a large portion of the cattle and poultry. The bandits were on friendly terms with the people on the plantation, apparently, and exchanged their bad guns for good ones. "After all," said the manager, "the bandits are really not so bad, but if the Japanese should get control of this part of the country it would be the end of us all."

This was the final point of our northern journey. At the southern tip of the Manchurian mainland we also visited Dairen^[3] and Port Arthur^[4], both Japanese-leased territories. Dairen was a commercial port through which soy beans were exported in immense quantities. Port Arthur was a naval base, the key to Manchuria, over which the Japanese fought the Russians in 1904. The defeat of Tsarist Russia had resulted in a transfer of the lease to Japanese hands. With railways starting from Port Arthur and Korea and running through south Manchuria, the Japanese had already got control of the heart and veins of the Chinese Three Eastern Provinces.

We wandered about the naval base for a day and climbed many hills trying to get a bird's-eye view. Finally, on top of one of them, in the slanting sun we came across a stone monument inscribed with the famous lines of the Tartar general who conquered the Sungs in 1276: "March an army of a million men to the West Lake and mount, on horseback, the first peak of the Wu Mountains."^[5] At Hangchow, overlooking the lake, the Sungs had established their capital in 1127.

To follow in the Tartar's steps was the dream of Admiral Togo and his people after the Russo-Japanese War. And after some thirty years the dream came true, when a Japanese army entered Hangchow after the fall of Shanghai.

Korea was the springboard by means of which Japanese imperialism leapt to the mainland of Asia. It was over Korea that China and Japan clashed in 1894. The Sino-Japanese War for control of that ancient kingdom was the starting point of Japan's aggression on the continent. It opened a new chapter of China's history—the chapter which was to see China's reforms, revolutions, wars, sufferings, humiliation, and eventual westernization and modernization.

After our trip to Manchuria we turned off to Korea. Crossing the Yalu River which forms the boundary line between China and her erstwhile protectorate, we arrived by train at Chemulpo. From there we proceeded to Seoul, capital of the country.

The Japanese governor general of Korea resided in the capital. His imposing, Western-style office building was located right in front of the royal palace, as if put there purposely to insult the Korean kings. The kings were gone, but the palace remained to endure the humiliation of being put back into the background.

The royal palace looked exactly like the Chinese Imperial Palace in Peking, but on a very much smaller scale, rather like a toy palace. In the old times, when the Chinese Imperial ambassador condescended to call, the king had to descend from the granite steps to meet the honored guest in the courtyard. If the ambassador had an Imperial Edict to deliver, His Majesty had to bend his knees in receiving the Imperial favor.

At the back of the palace was a Chinese pavilion in which the princesses performed the ancient Chinese dances of the Tang Dynasty. In Korea as well as Japan, ancient Chinese customs still prevailed. Their pronunciation of Chinese words, their customs, dances, music, and ways of living could all be traced back to influences of the Tang era. As I stood in the pavilion gazing up at the mist-mantled hills of

Seoul, my mind reverted to the glorious times of that dynasty (618-905) when Chinese civilization shone as brilliant as the sun in a clear sky, casting its beams far beyond the horizon upon such lands as Japan, Korea, and Indo-China. The offshoots of Chinese civilization grew, were preserved and later rejuvenated in Japan, whereas in Korea and Indo-China they grew and withered. The mother country of this glorious civilization had changed its manners, customs, and ways of life as the waves of invasion swept over it. Japan, which succeeded in building up a new civilization in the last century by the introduction of Western civilization upon a foundation of Chinese Tang culture, had gobbled up Korea, and as appetite grew with eating, was on the way to swallow up China, her teacher and benefactor. But Japan taught China a lesson in her turn: how to build a strong new nation upon a foundation of old civilization. Hence China's reforms, revolutions, westernization, and modernization.

While I mused thus over the past and the future, sunshine was peeping through the clouds and the mist was fast fading from the Seoul hills. The Korean who had taken me there, an old Chinese scholar, was standing by in silence but now called my attention to a dinner engagement. We left the pavilion and passed the spot where the Princess Ming was assassinated, presumably by the Japanese for her sympathy toward China. "I know what you have been thinking," said the old scholar. "It is too late for my country now. Our kings preferred dances to the affairs of state. But China, which is your country and may be regarded as mine, has a bright future. I am old now. Brother, you are young. Do your best for China."

The dinner was ready at the Chinese Consulate General, formerly the residence of China's special ambassador. What had happened behind the doors of this historic mansion during the quadrangular love affairs of China, Tsarist Russia, and Japan in courtship of the Korean lady, only those who participated knew. History gives bare outlines only; personal records, if any, remain yet unpublished. Matters have had to be left to the imagination of posterity.

Life in Seoul was being fast engulfed in Japanization. Japanese

bazaars, banks, shops, and restaurants occupied prominent sections of the streets. Managers of big business, government officials, and teachers of the more important schools were all Japanese. The life of the vanquished people was fast receding into the background, like their palace. Here and there you would see Koreans squatting complacently on the sidewalks with long stick-like pipes in their mouths, puffing to their heart's content, and women walking leisurely by with heavy loads on their heads. Some of the old type of school, in which Confucian classics were taught, had been left to struggle for existence. I went into such a school, which had one old scholar of the classics as teacher and a dozen pupils squatting around him on the matting. The Koreans and Japanese still kept the ancient Chinese way of squatting on their heels on the floor. It was slightly heated from beneath even in summer and was kept as clean as a bed. The pupils had to learn the Chinese classics by heart as I had done in childhood. Although they used the same textbooks they pronounced the words quite differently. Like the Japanese and the Indo-Chinese, they had been influenced by the Tang pronunciation.

All the people wore padded cotton stockings even in summer. I asked the reason and was informed that the earth was cold in the northern country. Yet they all wore white linen gowns which were quite cool.

The Koreans as well as the Japanese and Indo-Chinese loved Chinese landscape painting, calligraphy, and poetry. But each of the three peoples retained their own individual characteristics. As it was with their arts, so it was with their lives. Korea and Indo-China had come more under the Ming influence in later centuries while Japan, beyond the sea, escaped it. Moreover, the seafaring people of Japan were highly adventurous and therefore kept the martial spirit of ancient China, while the Koreans and Indo-Chinese were touched more deeply with that complacency that tinged Chinese life in later centuries. The system of civil examinations which conferred so much honor upon scholars in China found its way to Korea and Indo-China, but stopped at the gates of Japan.

In its relation to China the younger generation in Korea was undergoing a change under the pressure of Japanese-controlled modern schools, in which the sacred person of the Mikado was worshiped, the virtues of the Japanese exalted to the skies, and the vices of the Chinese amplified to monstrous proportions. If the attitude of young Koreans toward Japan was hatred, toward China it was contempt. While the older generation lamented the passing of the good old ways of Chinese culture, the young people were made to think that they were now the blessed subjects of the Mikado's glorious empire.

[1] China proper：中国本部，指中国历史上以汉文化为主导、汉族占人口绝大多数的地区，一般不包括东北、新疆、蒙古、青海、西藏等地区。此英文名词为当时的传统用法，今日主要用于历史或地理研究。

[2] China：参见第六章注3。

[3] Dairen：大连（Dalian）旧译。

[4] Port Arthur：西方对旅顺（Lüshun）的称谓。

[5] 此处疑原文有误。1161年，金朝皇帝完颜亮（1122—1161）强征各族人民，大举南侵攻宋，在南宋境内作战时被部将杀死。据说他曾即兴题诗称：“万里车书一混同，江南岂有别疆封？提兵百万西湖上，立马吴山第一峰。”（《鹤林玉露》卷一）

CHAPTER 26 WAR CLOUDS DEEPENING

In October, 1930, after my resignation from the office of Minister of Education in the national government, I had gone back to Peking—now called Peiping. Again I was entrusted by Generalissimo Chiang Kai-shek, then President of the Executive Yuan (the title of the executive branch of government), with charge of the National University of Peking.

The number of student demonstrations was very much reduced. When the capital was moved to the south the focus of political activities went with it. There was not much left for students to demonstrate against except for occasional outbursts provoked by Japanese aggression, which had started in Manchuria and was now fast extending inside the Great Wall.

On the morning of September 19, 1931, as I was sitting at my desk in the Chancellor's office of the university, a telephone call brought me the fatal news of the previous day. Japan had delivered a blow at Mukden and the Chinese troops had evacuated the city to avoid a clash.

.....

A few months later I made the trip back to the south. The afternoon of January 28, 1932, I went to Shanghai station to take the train back to Peiping. As I entered a sense of utter strangeness stole over me—the station looked as quiet as a deserted village. A station guard told me that there was no outgoing train. "It looks as if the Japanese are ready for a blow," he said. "You had better leave here right away. Something may happen any minute."

That night I was suddenly awakened by the roar of cannon, followed by the rat-tat-tat of machine guns. I jumped from my bed and followed the stream of guests to the roof of the hotel. The sky was red with the glow of fires that leapt out here and there from the

vicinity of the station. Japanese aggression seemed to have followed on my very heels from north to south. The next morning I went up again to the roof and my heart ached with the sight of the *Commercial Press* Library on fire. Several Japanese bombers kept on bombing the building of the *Commercial Press*. The dark smoke rose heavenward, carrying with it scraps of scorched paper which floated in the sky and sailed idly over the roofs. The print still visible on some of the fragments read dearly "The *Commercial Press*."

The Japanese had opened an attack on Shanghai. It resulted in the bitterest fighting before 1937, but China was finally forced to accept terms under which Japanese troops were permitted to remain in the city.

For seven years, from 1930 to 1937, I was at the helm of the university, endeavoring to steer that ship of learning through the rough seas of Sino-Japanese conflict. With the aid of many friends—particularly Dr. Hu Shih, Mr. V. K. Ting, and Mr. Fu Shih-nian—the university sailed smoothly with only an occasional trimming of her canvas.

The standard of science teaching and research was raised. A serious study was made of Chinese history and literature. The faculty had ample time for research and the students were led to direct their attention to study; the whirlpool of revolutionary activity and student demonstration was gradually transformed into a center of learning. During all these years there was only one demonstration worth recording, As the Japanese forces drove rapidly inside the Great Wall the students in Nanking and Shanghai clamored for war. Demonstrations on a large scale were frequent in the capital and the students in Peiping wanted to join the movement. One day a crowd of students tried to take a south-bound train at the East Station. Being refused entrance to the train itself, the boys and girls lay on the track day and night to prevent it from leaving the station. At length a few hundred were allowed to go and join their comrades in Nanking.

Seeing that war clouds hung thick over our heads, during the next years we tried to gain time by sailing along the shallows of caution,

not venturing on those high seas where we would be bound to clash full-force with the Japanese tidal wave. But our caution was not timidity. When Japanese scholars, fifth columnists in disguise, came to pay "respects" to the "center of culture" (which really meant to them the center of the anti-Japanese movement), we talked frankly with them. One, I remember, spoke at length about cultural relations with our professors and was told that we did not see any cultural relations between the two countries but only the military ambition of Japan. "Give up your military ambition and China and Japan will co-operate well."

These men—geologists, economists, biologists, and other scholars—came to us from time to time seeking the "friendship" of the university. They all complained about our anti-Japanese movement. We told them that anti-Japanese we were not, but anti-Japanese-militarism we were. Their minds, however, were set on the strangulation of China; nothing short of a complete surrender could change their course.

Meanwhile the Japanese Kwantung army stationed in Manchuria made rapid inroads inside the Great Wall. The Chinese army fought against the intruders along the Wall, then in the northern part of Hopei Province, and finally withdrew to Peiping and its vicinity. Wounded soldiers streamed in and all the hospitals were filled. A hospital was established supported by faculty members. Wives and young co-eds acted as nurses. Here I came into close contact with the fighting forces and learned their psychology. In conversations at their bedsides the soldiers showed no sign of weakness toward the Japanese. They attributed their defeat to the lack of modern weapons, especially guns, which permitted the enemy to break through the Chinese wall of human flesh.

I wish to remind the reader that this undaunted spirit of the Chinese army built a wall of flesh and blood for the defense of their country against the steel and fire of the enemy. It enabled China to fight on and on for eight long, suffering years, with millions of dead and wounded, without a murmur. China lost many battles but was still

winning the war.

When the fighting was going on along the Great Wall, General Ho Yin-chin, Minister of War, came to Peiping to direct the operations. He and I wanted to effect a truce in order to gain time. I went to call on Sir Miles Lampson, the British Ambassador, to sound out his feelings as to acting as mediator. He said that Mr. Suma of the Japanese Embassy had intimated to him that the Japanese, too, desired a truce. Cables were sent to London and the reply permitted Sir Miles to act as mediator. Washington was informed through the good offices of Mr. Nelson Johnson, the American Ambassador. But the plan fell through when the Foreign Minister, Lo Wen-kan, told the British Embassy in Nanking that no one was authorized to deal with a foreign country but himself.

Then the Japanese forces broke through the defense lines along the Great Wall and swept down toward Peiping. The city was about to be evacuated.

As I was laid up in the Peking Union Medical College after an appendix operation, I was not informed. But early in the morning I heard Japanese planes droning over our heads and smelt something wrong. I got permission from the doctor in charge to leave the hospital and limped to the residence of General Ho Yin-chin, who was surprised to see me still in the city and informed me that the Japanese were about to attack. I made plans to leave the next day.

Next morning at dawn my telephone rang. It was the general. "A truce has been arranged—you don't have to leave the city." At once I telephoned Dr. Hu Shih.

"Why, the Japanese planes are droning over our heads," he said.

"I have just received a message from General Ho Yin-chin to that effect," was all I could say. But the Tangku Agreement had been signed for China at midnight by Huang Fu, by the terms of which the Japanese forces were to halt after occupying the northern part of Hopei.

The Japanese, having occupied this area and established a puppet

"autonomous government" there, urged the Chinese commander of the remaining Hopei forces to co-operate by establishing an autonomous government in Peiping. Rumors circulated widely in the city that the commander, General Sung Chieh-yuan, would give in to the Japanese. In this momentary crisis the university professors issued a statement that they were unconditionally opposed to the so-called autonomous movement in north China. The general, in point of fact, did not comply.

One afternoon a month or two later a Japanese gendarme called on me in the university. "The Japanese garrison in the Legation Quarter invites you to go there and talk over some matters which they wish to understand and which need explanation," he announced. I promised to go in an hour, and he left.

Before dark I went alone to the Japanese barracks in the Legation Quarter, after informing my family and some of my friends. As I entered the offices of General Kawabe I heard the click of the key which meant that the door was locked behind me. A Japanese colonel stood up and said, "Please be seated." I took the seat and out of the tail of my eye saw a soldier standing by the door with a drawn revolver.

"Our commanding general invites you to come here and wishes to know why you carry on an extensive propaganda against Japan." He offered me a cigarette as he spoke.

"What do you mean? I carry on anti-Japanese propaganda—? Nothing of the sort," I replied, accepting the cigarette.

"Then did you sign that statement opposing the autonomous movement?"

"Yes, I did. It is our internal problem. It has nothing to do with an anti-Japanese movement."

"You wrote a book in which you attacked Japan."

"Show me the book."

"Then you are a friend of Japan?"

"Not exactly. I am a friend of the Japanese people, but an enemy

to Japanese militarism, just as I am an enemy to Chinese militarism."

"Well, you know, there is some misunderstanding about it in the Kwantung army. Would you go there and have a talk with General Itagaki at Dairen?" The telephone rang and the colonel answered, then turned to me. "A special coach has been prepared for you. Would you go to Dairen tonight?"

"No, I will not."

"Don't be afraid. The Japanese gendarmes will go with you for your protection."

"I am not afraid. If I had been I would not have come here alone. If you want to use force, go ahead—I am in your hands. But I advise you not to. You will become a laughingstock when the world, including Tokyo, is informed that the Japanese army has abducted the Chancellor of Peking University."

His face changed color and he looked as if I were now a problem to him. "Please don't be afraid," he said casually.

"Afraid? No, no. Confucius has told me as well as you to remain calm in the face of danger. You believe in Bushido. Bushido would not harm a defenseless person." I puffed the cigarette calmly.

The telephone rang again, and again he turned to me. "Well, Chancellor Chiang, the general wanted me to thank you for your visit. You may wish to go to Dairen some other time—whenever you like. Thank you. Good-by." The key clicked again. The colonel helped me with my overcoat, accompanied me to my car, and opened the car door. Darkness had already fallen.

The following afternoon General Sung Chieh-yuan sent a major general to advise me to leave Peking lest he should be unable to protect me. I thanked his representative and said that I would remain on my own responsibility.

I stayed on, but nothing happened to me. Occasionally some Koreans came to the university and acted very queer—these incidents were reported to me but I did not pay much attention to them. Then

the tactics of the Japanese changed. General Matsumoro was sent to Peiping as special agent of the Japanese army. He made friends with me and came to my house often. He denounced the Japanese general for grilling me at the Legation barracks, and for about half a year we were very friendly. At the end of his term of office he came in full military uniform to say good-by. He told me that he was being sent to Hailar, on the border between Manchuria and Siberia, to command a cavalry division, and said that he was afraid the war clouds were deepening and that a clash between China and Japan would be very unfortunate. "If the war should come," he said, "the Japanese army would go as far as Hankow."

"Yes, General, I agree with you. If our two countries should be so unfortunate as to come to an open clash, international complications might arise and all the Japanese navy be sent to the bottom of the sea, and the Island Empire might be reduced to a few tiny dots on the map of the Pacific Ocean."

He sighed and said, "That may be. But Japan would still be an independent nation, while China will be destroyed by the Western Powers."

"It may be so. Next time we meet I hope we shall not embrace each other, weeping for what we have done so foolishly. No matter what happens in the future, General, let us remain friends." We parted with heavy hearts.

General Imai succeeded him. He called on me and I returned his call. We talked quite frankly along the same lines as I had talked with his predecessor. Once two members of the Japanese House of Peers called. One had formerly been governor of Formosa. After looking around to see whether anyone was within hearing he inquired in a whisper who had been the person responsible for detaining me in the Japanese barracks. I told him it was Takahashi. He shook his head and said, "Ridiculous."

The Japanese had found out by now that the University had no immediate desire to start an anti-Japanese movement and they hoped to win it to the Japanese side by making friends with leading members

of the faculty. Both sides were cautious in dealing with each other and the tension between the university and the Japanese army was somewhat eased.

General Tashiro came to Tientsin as commander of the army there. The Japanese had treaty rights, with other Powers, to station troops in that city. The general came to Peiping and gave a banquet, to leading Chinese and Japanese officials, military as well as civil. In a speech at the banquet he advocated economic co-operation between China and Japan. Some of the Chinese officials responded but spoke rather equivocally. On the score of economic co-operation I remained as silent as a sphinx except for occasional jokes at the table. To my great surprise a telegram came to me in code from Nanking a few days later, informing me that the Japanese Embassy had intimated to the Ministry of Foreign Affairs that the Chancellor of Peking University supported Sino-Japanese co-operation.

This was how the Japanese worked on China. The procedure seemed to be: first sweet words, then political intrigue, then intimidation, again sweet words, and finally blitzkrieg. The order might vary somewhat, but they never deviated from their fundamental course—the subjugation of China. This was also the way the Japanese went about dealing with America before Pearl Harbor.

CHAPTER 27 WAR

When Peiping was Peking, the city was a center of intellectual activities and the student movement. When it became Peiping it turned into the center of Sino-Japanese conflict. During the early months of 1937 one incident after another happened in the vicinity. The arrow was drawn and must in time fly. With lightning speed it went off at the Marco Polo Bridge. On the night of July 7 the Japanese army under cover of darkness suddenly shelled the outskirts of the city from their side of the bridge, and the Chinese army stationed in the city returned fire.

I was at Kuling, a summer resort on the middle Yangtze, when the war god descended upon Peiping. Generalissimo Chiang Kai-shek had summoned a group of intellectuals for discussion of national problems in the cool Kuling mountains during those hot summer days. The sky was clear and patches of shade from the trees made lacelike patterns on the green lawns. One day after lunch, as I was resting in a one-room cottage, one of a group of houses the Generalissimo had set aside for his guests, and was looking through the window into a tall shady tree and listening to the singing of the cicadas, Chen Tsang-po, editor of the *Central Daily News*, broke the quiet of the noon hour by knocking at the door with the news that the Japanese had struck at Marco Polo Bridge the previous night. I leapt from the bed and inquired for further details. There were none.

We discussed the possibilities. As I was fresh from Peiping he asked my opinion from what I knew of conditions in the city. I told him that from my impression of the Japanese commanding generals there and their conservative views, the thing looked like another local incident. The Japanese plan seemed to be to bite off the Chinese cheese piece by piece, and I was not inclined to think they were ready to swallow the whole chunk. But by this policy of slow motion—gnawing off a bit from time to time and slowly accumulating, day after day—in a few years they would have entrenched themselves

firmly in north China and it would be difficult to dislodge them. The Yangtze Valley would be at their mercy. Japan had swallowed up Manchuria by a slow process and had then come to north China. What Manchuria was to north China, so north China was to the south. The same method and the same process. That seemed to be the policy of the Japanese vis-à-vis China.

There was desultory fighting for some days. Twelve days later, as skirmishing went on outside the city, Generalissimo Chiang Kai-shek, in an address to several thousand officers from various armies in the country who were under training in the Kuling Training Center, expressed the view that the Japanese were about to launch a general war against China and we must get ready to defend the country at any cost. "But if such a general war should start," he said, "we must be ready to sacrifice... It will be a long war and the longer it drags on, the more we shall suffer."

It was the first time I had heard him speak in such unequivocal terms of the Japanese question. General Chen Chun, General Hu Chung-nan, and other commanding generals of the Chinese armies who later distinguished themselves at the various fronts were among the listeners. A few days after this speech Generalissimo Chiang Kai-shek returned to Nanking by air and the commanding generals rejoined their respective armies. With some of my friends I flew to the capital and tried to get back to Peiping, but northbound trains were all suspended.

In about two weeks the war was spreading like a flood in the vicinity of Peiping. General Sung Chieh-yuan fought gallantly as casualties mounted. The commander of the Japanese army, Tashiro, with whose conservative views regarding China problems I was well acquainted, fell ill and the radical younger officers got control of the Japanese forces. After a few days General Tashiro died. Was it illness, suicide, or assassination? Rumors were rampant but nobody could find out the truth. General Sung Chieh-yuan still clung to the idea of localizing the incident and urged the central government troops, which were being rushed northward, to stop at Paoting. And at

Paoting, accordingly, they made a halt.

But the Japanese army, now under the direction of young officers, did not stop; Sung's forces were attacked by the enemy right and left and on all sides. One of the commanding generals died in action. Finally General Sung withdrew from Peiping and the Japanese entered the city without firing a shot.

Now the Japanese had control of Peiping. Would north China suffer the same fate as Manchuria after they occupied Mukden some six years earlier? Would Japan stop at north China for the moment, wait a few years more, and use that base for a further attack on south China? Or was she tired of waiting—would she strike at south China with a single blow and get the thing done, once and for all? Either way seemed possible. The plan of slow motion seemed on the whole more dangerous to China. All the ranking officers in Nanking and the military leaders in the provinces favored a country-wide resistance to the aggression. All China—officials, generals, and the people—stood up as one man to face the greatest calamity in history to fall upon the country.

Meanwhile Japan began to dispatch troops to Shanghai from across the sea. China at the same time rushed her own troops down the Yangtze to the same port. In that small area, face to face, were massed tens of thousands of men. A tiny spark would set off a terrific explosion in the powder magazine. It was immaterial which side should strike it first—whether by the accidental discharge of a gun by a careless soldier without orders, or by the policy of men high up in power.

The Japanese army knew very well that the men responsible for the Mukden Incident, such as Generals Honjo and Doihara, had received the highest rewards and honors for their meritorious acts. Those responsible for the Marco Polo Bridge Incident were to receive like honors, there was no doubt. Who could blame the commanding generals from across the sea for aspiring to similar rewards?

All of us in Nanking knew that the thick war clouds hanging over the whole country were bound to break into a storm. I left for

Hangchow by motorcar to stay with a friend in a villa on the historic West Lake. In the serene quiet of the place I had a chance to muse over the past and think of the future. Every day, and every succeeding night, we expected a clash between the two opposing forces in that tightly congested area of Shanghai. Every now and then my friend, Wang Wen-po, telephoned to Shanghai to inquire about the situation. On August 12 the voice at the other end replied abruptly, "No news. Tomorrow at ten, at ten. That's all." The receiver was hung up.

Next morning the fatal hour struck. Smoke rose sky-high. Bombers from both sides blasted the lines of the opposing forces. A full-scale war had begun. There would be no more local incidents, no more piecemeal ways. Japan must either gobble up all China or give it up. But gobble she could not—quite, and give up she would not. It was bound to be a long-drawn-out war.

Two days later, on a cloudy afternoon, I was sitting under a willow tree watching the fish shuttling back and forth in the shallows of the lake. Peals of thunder were audible over the other side of the city. The telephone rang for me. "Hello—do you hear that?" More thunder. "Yes, it's thundering."

"No—the enemy is bombing our airfield."

Seven bombers had flown over from Formosa without escort. They were met by Chinese fighters stationed at Hangchow and five were shot down on the spot. The remaining two flew for their lives and were forced to land at some distance. The pilots were captured, and we learned that they had been told by their commanding officers that there were no fighter planes in China.

Next day the Japanese bombed Nanking. In the beginning of the war the enemy dropped only one bomb at any one place, so that all their bombs were scattered. This caused much less damage than concentrated bombing, which they learned a year later from the Russians at Changkaofen, a border town between Manchuria and Siberia where they had a clash with Soviet forces.

My friend Wang Wen-po was a member of the Chekiang

provincial government and Commissioner of Reconstruction. He had to get busy. Hundreds of trucks were taken over from the bus lines and munitions shipped to the front in them. Once a fleet of some twenty such trucks was sent to the front. It ran into the rear of the enemy and was fired upon. One truck driver got out of his car and hid in the fields; under cover of darkness he crawled on his stomach through the enemy lines and came back to Hangchow. A few days later he found another truck and dashed off again for the front.

Refugees from Shanghai poured into Hangchow. The temples were filled with women and children. Humble huts in the mountains were turned into temporary homes for fashionable young ladies. They talked and laughed as if nothing had happened to them. The Chinese were always in good humor even in time of danger.

A friend of mine, formerly a cotton magnate, came to Hangchow with his daughters and young children and lived in a temple up in the mountains. He told me that he would like to build a house for his family.

"What for?" I asked.

"I should like to stay in Hangchow during the war in Shanghai," he said.

I was surprised at his idea of the war. I told him that he had better move into the interior as the war would surely spread to Hangchow and all coastal cities and perhaps up the Yangtze as far as Hankow. He was stunned and could not believe my words. Five years later I met him in Chungking, where he told me that he and his family had left Hangchow before war descended upon the West Lake.

In Nanking a plan was afoot for the evacuation of three of the northern universities: Peking and Tsinghua Universities in Peiping and Nankai University in Tientsin. These three institutions were to combine into a union university at Changsha; an inland city on the upper Yangtze. Hu Shih telephoned from the capital and asked me to go back to Nanking to put the scheme into effect. I did not welcome the idea but was finally forced to accept the plan. There are things in

the world which you do not want to do but must do in the end, willy-nilly. Like war itself: when war comes, you find yourself fighting whether you like it or not. This was my attitude toward the associated university.

Knowing that I would be unable to see my father's home again before the end of the war and that the hazards of war are difficult to foresee, I borrowed a Buick from a friend and drove home. My father, now very old, was all smiles. When I left again for Nanking I told him that China would be reborn through fire and blood.

"What do you mean?" he asked, giving me a steady look from his twinkling eyes.

"The thing is this. The war will be a long war. Hundreds and thousands of houses will be burned and thousands and millions of lives will be lost. This is what I mean by fire and blood. And in the end China will emerge victorious."

When I left him I had the feeling that most probably I would not see my beloved father again, to whom I owed so much and had returned so little. When bombs visited the native city of my boyhood days, he moved into the mountains and there enjoyed his trees, flowers, and birds. After two years of war he got up early one morning as usual and felt dizzy. He went back to bed and there his spirit fled, at the age of nearly eighty. He was but one of many indirect casualties of war. War is rather hard on old people.

I stayed at Nanking for several days and then boarded a steamer sailing upriver for Hankow. Near the docks wooden boxes containing government archives, books of the Central University library, and art treasures from the Palace Museum were piled high along the banks of the Yangtze, ready for shipment. And on the way to Hankow we met boat after boat packed with troops steaming down the river to reinforce Shanghai.

From Hankow I took the Canton-Hankow Railway to Changsha. On the way we met trainloads of troops crowded in open cars, coming up to Hankow from Canton and Kwangsi. The war was now really on

a national footing, not a mere local war as heretofore. The spirit of the fighting men was high. I asked where they were going.

"Fight the Japs!" they replied with zest.

CHAPTER 28 LIFE IN CHANGSHA

Changsha is an inland city. For the first time in my life I lived far away from the sea. Even in America I had stayed first in California for four years and then in New York for another five, always on the seacoast. Living in an inland city I felt a kind of dryness in spite of the damp climate and Tung-ting Lake not far away. My ideal of a place to live was in the mountains near a vast plain or on the plain near the mountains, in either case not far from the sea. Away from the sea, the sense of space in my mind seemed to fill up with solid earth. I began to feel somewhat uncomfortable.

When I arrived at Changsha Mei Yi-chi, President of Tsinghua University, was already there. To run a university in troubled times is something of a headache. To do it during a war, in conjunction with two other institutions not lacking in the diverse personalities and idiosyncrasies common to university professors, was worse. With the worries of war and anxiety as to my family and friends in the war zones or occupied areas, it was more than any health could endure. "Headache" is a figurative term, but real stomach trouble saps one's spirit and physical vigor. In spite of frequent stomachaches I had to exert myself to help my colleagues steer our precarious craft with its mixed crew over a rough sea.

Teachers and students of the three component institutions flocked to Changsha. Some came by sea from Tientsin, taking a British steamer to Hongkong and then a plane or the Canton-Hankow Railway; others took the Peiping-Hankow Railway to Hankow and then the Canton-Hankow line to Changsha. Within a few weeks some two hundred professors and over a thousand students had gathered around the Changsha Bible School, which the Union University rented as its temporary home. Books and laboratory apparatus were bought and shipped in from Hongkong. In less than two months the university was in full swing.

Owing to lack of space in the city the College of Literature moved

to the sacred mountains of Nan-yu. I made two trips there, and these are among my pleasantest recollections of this part of the country. On one of them I wandered with friends deep into the mountains on a three-day jaunt, crossing on our way the road by which a fugitive Ming emperor passed to the southwest almost three centuries ago to avoid capture by the Manchus. A stone tablet in his memory stands there to this day, with the names of all the officials who followed him inscribed upon it. Oddly, at one of the temples we visited, a tree planted by the fleeing emperor had grown into a crooked shape looking like an old, old man taking a rest after a very long journey. We were now treading the same path, standing in the same temple. For what reason? Foreign invasion from the north, which had troubled China through ten centuries.

The first night we stopped at the Fang-kwang Temple. Here a famous Ming scholar passed the remainder of his life after the fall of the Ming Dynasty. It was a clear night—the full moon sailed low over the mountains in the empty sky. I had never seen the moon look so low and so near, as if one could poke one's fingers in its smiling face.

The second night we stopped at a monastery near the highest peak of the sacred mountains. A spring gushes from the very top of the peak, and a temple is perched there. This is the house of the Fire God and a symbol of the ancient practical wisdom that water should always be ready near fire, which may thus be controlled.

Near this temple we saw the sun come up next morning, a wonderful sight. It rose out of a sea of clouds, first sending up violet, golden, pink, and blue tints through the cloud bank and then emerging to lie like a golden ostrich egg on a white velvet cushion. All of a sudden it split into four brilliant oranges, then in the flash of a few seconds merged again into one great ball. For some moments it seemed to change color with every fraction of a second, as if with the turning of a moving-picture color camera. Then it stopped, glowed mellow gold for a few instants, and finally became a great ball of fire from which we had to turn our eyes. The icebergs of cloud disappeared and the still waves vanished. Only a thin layer of mist

veiled the valleys down below. Through it one could see chimneys sending up their smoke in the mild morning sun.

Pilgrims came by thousands to the sacred mountains. Many walked from several hundred miles away. Old and young, rich and poor, all joined in common worship of the Buddha.

Changsha is the capital of Hunan Province, a center of rich rice production feeding many millions of people outside its boundaries. Fish, shrimp, eels, and turtles from the river Hsiang were abundant, oranges and persimmons bountiful. Pork was tender and full of flavor. The bean curd, China's national food for rich and poor alike, was as pure and smooth as thickened milk. The only drawback was the high humidity—there were far more rainy or cloudy days in a year than sunny ones.

Every time I went up by airplane from the city, as I sometimes had to do, I thought of the crystal palace deep in the sea where the king of dragons lives, as we all learned in Chinese fairy tales. There would still be clouds above my head, while down below mist enveloped the city like the white around the yolk of an egg. Farther up, there would be another ceiling of cloud without a streak of sun.

The people were healthy, independent, and hard working. They loved to fight. The slightest provocation would find them ready for combat, whether vocal or by fists. At highway stations one often saw signs: DO NOT QUARREL and DO NOT FIGHT. Rickshaw coolies sauntered along the streets and refused to run. If you told a coolie to run faster he would invariably say, "You pull the rickshaw—I'd like to see you run." While the temper of the people was quick, their movements were slow. Here was a case where temper and tempo did not go together.

They were frank and sincere, not easily influenced by other people's opinions. They would be either your friends or your enemies, with no halfway between. They are good soldiers. "No Hunanese, no army." It was by his Hunan army that Tseng Kuo-fang defeated the Taipings in 1864. Even now no Chinese army is found without some soldiers from Hunan. It is the Sparta of China.

The Japanese invaded Changsha three times in the course of the war, and three times suffered defeat there. The people co-operated with the national army wholeheartedly, through blood and fire.

In Changsha we had news of the war in Shanghai. For three long months Chinese troops of flesh and blood held at bay the Japanese army of fire and steel. Finally the Chinese army withdrew to save further futile sacrifice. Now the enemy converged on Nanking. An exodus of the population from the capital began—thousands of people streamed along the highway to Changsha. Trains of trucks and cars miles long poured into the city. Suddenly it was congested with refugees. Some ministries of the government moved to Changsha, others to Hankow.

Before long the Japanese army entered Nanking, where animal instincts ran wild in the Japanese soldier. Women were raped to death and fleeing people were machine-gunned at random. Military trucks ran through streams of people on the streets. The atrocities committed by the Japanese will remain forever a black spot in human history.

At the turn of the new year the Japanese army headed upriver toward Nanchang. It seemed to be approaching Changsha, while the Chinese army was concentrated around Hankow. The capital of Hunan Province was now vulnerable to enemy attack. I flew to Hankow to sound out the Generalissimo as to the removal of the Union University still farther inland. I interviewed first the Minister of Education, Chen Li-fu, who advised me to see the Commander in Chief. So I went to call on him. He agreed that the university ought to move farther west, and I suggested that we move to Kunming, which had access to the sea through the Yunnan-Indo-China Railway. He readily agreed and suggested that some-one go there first to select a site for the university.

The month of January, 1938, passed in preparation for the removal. Books and scientific apparatus were packed and trucks and gasoline bought. In February, as the preparations were almost complete, I flew to Hongkong, where I took a French liner to Haiphong in French Indo-China. Thence I went by train to Hanoi,

capital of the French colonial government, and from there to Kunming by the Yunnan-Indo-China Railway through one of the most mountainous regions of China.

CHAPTER 29 INDO-CHINA AND BURMA

Just as, some twenty years earlier, I had found the ancient Chinese ways of life still persisting in Korea, so now, taking the opportunity of going to Kunming by way of Indo-China, I found there the same ancient Chinese ways. Like the Koreans, they wore a dress similar to that of the Ming Dynasty. Their pronunciation of Chinese words stemmed from that of the Tang Dynasty; villages, cities, and administrative districts bear Chinese names pronounced somewhat after the Tang fashion.

The French preferred for general use a romanization of the Annamese language, which is itself a modified form of Chinese. I must admit that it is much easier for the common people to learn. But this romanized Annamese will further widen the gap between China and Indo-China.

The capital of Annam^[1], where the titular emperor, Pao-dai, lived, was very much like the palace of the former Korean kings and, again, like the Imperial Palace in Peking on a much smaller scale. Indeed, the court of Annam looked like a living branch of the Imperial Ming Court. The French had preserved it as a sort of living museum, while the Japanese preferred to transport the Korean king to Tokyo and make a Japanese out of him.

I was told that the first ancestor of the emperor of Annam was buried on a hill in Kunming. For he was Chinese. One afternoon, later, I tried to locate the grave but failed to find it.

While Hanoi, capital of the French colonial government, had become a French city with wide streets and imposing public buildings, the peasants lived in miserable villages which seemed to be sinking down into the earth. Liberty, Equality, and Fraternity! Colonial governments are an anachronism and bad as a system, for the governors are there for exploitation and not interested in the welfare

of the governed, which is contrary to modern theory of government.

Here I wish to make one exception: the colonial government of the Philippine Islands. The Americans had an ideal—to raise the people to a higher level of civilization. The American colonial government in the Philippines established a system of public schools not inferior to American schools. I went to the Philippines in 1931. Everywhere I saw schools in which history, literature, science, and democratic ideals were taught. The United States endeavored to make the Philippine Islands a republic in the image of her own.

Britain had to depend on her colonies for her national existence; France had to be fed with riches from her colonies. Each was interested in the welfare of the governed peoples only in the sense that the geese should be kept alive to lay more golden eggs. In Korea and Formosa Japan was pressing the geese flat in order to squeeze the eggs out of them. Before the war Japan had amassed a great fortune from trade with China. But she was not satisfied; she wanted to make China a vast colony so as to be completely free to squeeze that giant goose.

The British way of keeping the geese alive was rather ingenious. They controlled the key industries and let the natives live on what was left. Let the geese feed on the corn and fish they can catch in the pond. So the geese were happy with their corn and small fish and the owners were happy with their golden eggs. The British never interfered with the customs, manners, superstitions, or beliefs of the governed peoples, and the natives could enjoy their life undisturbed except in matters affecting public health. For public health concerns alike both governors and the governed; you cannot segregate contagious disease or pestilence. Roads, too, were built and maintained, for peace and order and commerce depend upon good roads. Defense was built up only to the extent required to put down rebellions within the colony; to defend it against attacks from some other Power was left to the prestige of the British Empire, and when that prestige weakened the colony was at the mercy of a powerful neighbor. This was how Hongkong and Burma were temporarily lost,

and this was why Britain was so jealous for her prestige, especially in the Far East.

Burma borders on the southwest corner of Yunnan. I went there as leader of a goodwill mission just about a year before Pearl Harbor. The British way of governing colonies was clearly evident. I saw the oil refineries, lumber mills, and rice mills—these were key industries and were under British control. Other things were left to the Burmese. Sacred cows roamed the streets in Rangoon without interference from the police. Here, there, and everywhere were temples with their gilt pagodas and monks respected by both the governors and the governed. The Burmese enjoyed an undisturbed life under British rule; the geese, swimming in their pond, were satisfied with their fish and corn, and as far as I could see showed no sign of unrest. And the owners got their golden eggs.

But the light that shone brilliantly in the homeland of the governors could not be altogether smothered in the colonies. In India Gandhi went unmolested except for imprisonment in times of crisis. Such instances would be dealt with underhandedly in the colonies of certain other European nations. But Great Britain, that land of liberty, could not help shedding some of her light through the clouds of a colonial sky. There are signs that Britain is on the road to a more enlightened policy toward her colonies. I hope that these streaks of light will be broadened to strong beams of liberty, illuminating the peoples she is entrusted to lead. British friends, give them more of that light which you have so plentifully in the British Isles. Chuck overboard the anachronisms!

As far as types of civilization are concerned, the former kingdom of Annam, now a part of Indo-China, is Chinese, while Burma is Indian. The palace of the former king of Burma at Mandalay is Indian in architectural design. The names of the cities and towns bear no trace of Chinese origin. The Annamites, like the Chinese, eat with chopsticks; the Burmese, like the Indians, with their fingers. Yet both Annam and Burma, as we have seen earlier, were formerly tributaries of China, and their loss was part of her awakening.

When Burma fell to British hands the royal family escaped into Yunnan and is supported by the provincial government down to this day, although its title is only nominal now. Its children and grandchildren entered Chinese schools and became Chinese. But they are known to the people of Tengtsung in Yunnan as descendants of the Burmese royal family, whose ancestors once reigned over the kingdom of golden pagodas and yellow-robed monks from their peacock throne in the royal palace at Mandalay.

CHAPTER 30 THE MIGRATION OF UNIVERSITIES

The migration of universities from the coastal provinces where Chinese institutions of higher learning were originally centered to the hinterland of China was a direct sequel to the outbreak of war. Besides the three I have mentioned, other institutions located nearest to the scene of war and likely to be first affected moved gradually toward the interior. As a result there were toward the end of the war some twenty universities and colleges, with a total enrollment of about sixteen thousand students, boys and girls, newly established in Free China.

These institutions were scattered all over the interior provinces. They were housed either in temples or in the buildings of local schools. Some were able to rent private mansions when no public buildings were available. Still others had to put up temporary shacks. All brought with them such scientific apparatus and books as conditions permitted. The amount was of course negligible, yet even this scanty equipment was not infrequently ruined by the deliberate and merciless bombing of the enemy.

A large number of the students were from the occupied areas. Their support from their parents was naturally cut off; some even lost track of their families in the war zones. It may be noted, also, that some parents in the occupied areas deemed it wise, when questioned, to report as dead sons who were actually studying in Free China. The national government in Chungking consequently allotted large sums of money to care for these helpless students.

As the Japanese invasion began in north China the universities first affected were naturally those located in the areas of Tientsin and Peiping. When the two cities were occupied many students and faculty members, realizing the futility of expecting to have any spiritual freedom at the point of the invader's bayonet, went south or elsewhere to join their universities. Two combined universities were established

by order of the national government then at Nanking: one at Changsha as I have related, and the other at Sian in the northwest. The Northwestern Union University consisted of two former national universities and two colleges. It was later moved from Sian to Hanchung and has since been broken up into more or less its original components.

As the war spread to other parts of China, universities which had hitherto been able to remain where they were had now to follow our example. Thus the National Central University was moved from the former capital to the war capital of Chungking; Chekiang University was moved from Hangchow to the interior province of Kweichow; Chungshan University was moved from Canton in south China to Yunnan in the southwest.

I shall describe in some detail the former Union University in Changsha: how it was organized—or associated, to use a better term—and later transplanted from Changsha to Kunming. The story may serve as an example of the handling of other migrating universities.

As I have already related, the Union University at Changsha was formed by the association of three former Peiping and Tientsin universities by order of the Ministry of Education, then at Nanking. They were the National University of Peking, the oldest and the first government-sponsored modern university in China; the National Tsinghua University; and Nankai University at Tientsin. The presidents of these three institutions were made members of the presidium. All their faculty members and students were turned over to the Union University. Classes were resumed at Changsha by November 1, 1937, with an enrollment of approximately 1,250 students from the three universities, and an additional 220 students from other institutions which had also been moved. The latter were admitted as visiting students. The university was in fairly good shape, though equipment and facilities were meager. The spirit among the professors and students was excellent; the reading rooms were, for the most part, packed with students despite the handful of books available. But early in 1938—that is, after the fall of Nanking—things changed. Japanese

planes made Changsha one of their bombing objectives. A prolonged stay in the city was perilous, so with the approval of the government, after the completion of a semester's work the Union University moved, at the end of February, 1938, southwest to Kunming.

The migration from Changsha to Kunming was made in two groups: some three hundred male students with a few professors constituted themselves a walking party, hiking from Changsha in Hunan through the mountainous province of Kweichow all the way to the remote city of Kunming in Yunnan—a trek of 3,500 *li*, or approximately 1,160 miles, accomplished over a period of two months and ten days. The others, numbering about eight hundred, rode from Changsha to Canton on the much-bombed Canton-Hankow Railway, thence by boat to the British colony of Hongkong, and again by boat to Haiphong. From here they traveled by the French Indo-China Railway to Kunming, their final destination. The rail-boat and boat-rail trip required from ten to fourteen days, depending upon connections. Over three hundred and fifty students remained in Changsha to join the various war organizations.

After its removal to Kunming the title "Union University" was changed to the present name: National Southwest Associated University. As Kunming had no immediately available and suitable buildings to put at the disposal of the newcomers, the university—called "Lienta" from the abbreviation of its Chinese name—decided to locate its College of Arts and College of Law and Commerce at Mengtsz, probably the second largest city in the province, and keep the College of Science and Engineering in Kunming. When classes began in early May, 1938, there were around thirteen hundred students in the total enrollment for these four colleges of Lienta. In September of the same year the two colleges at Mengtsz moved back to Kunming, where the housing problem had become less acute as all the local middle schools had by then been moved to the country and their school buildings could be rented. The "happy-double-union" was celebrated by the founding of a teachers' college by order of the national government at Chungking. Enrollment in the five colleges, comprising twenty-six departments, increased to two thousand.

In September, 1939, Lienta again grew in size. There were by now over three thousand students. The university was fortunate, as its hundred shacks, built in the past ten months, could then be used to accommodate the growing student body. At the close of the war we had about five hundred professors, assistants, and administrative officers and three thousand students. Most of the latter came from the occupied areas and had to cross more than one firing line to reach the free zone; they went through much hardship and suffering, and others lost their lives before they could reach Free China.

My son, a student in Chiao-tung University in Shanghai, on his way to join me at Kunming met with several incidents. Once, on a dark night, with a number of friends he tried to go by small boat under a bridge guarded by the enemy and was shot at. On another occasion the party traveling ahead of his lost one of its members, who was arrested by the enemy and his head was later found by his friends dangling from a tree.

The son of a friend of mine came from Peiping to Kunming, traversing many firing lines in the north, and was shot at by the enemy several times. Often he had nothing to eat during the day and had to walk miles under cover of night. He had left Peiping with his brother, who was arrested by the Japanese guard at the station and sent to a detention camp because something was found in his pocket which identified him as a student. They had disguised themselves as apprentices of a shop. When the identity of such a person was established it was a serious offense.

It was reported that the basement of the College of Literature in the University of Peking had been turned into a dungeon in which terror reigned. I had no way to verify actual conditions there, but later met a former student of mine who had been arrested and imprisoned for two years before he managed to leave Peiping for Free China. He said that he was sent there for a "treat." The place was a living hell. Water was forced into his nose until he lost consciousness. When he came to, a Japanese gendarme by the name of Uyemura told him that he deserved the treatment because his alma mater was responsible for

this terrible war in which Japan had suffered so much. "No pity!" said Uyemura in a rage. "Let the punishment fit the crime!" Three times he was thus "treated," fainting each time. In that dungeon he saw other tortures which do not befit my pen to describe. The shrieks of the girls and the groans of the boys turned that seat of learning into an inferno where Satan had his day.

While the students left in Peiping moaned under torture, the university in Kunming was blasted by enemy bombs. The bombing was done deliberately, since the seat of the university was outside the city wall with no military objective near by. Many buildings were destroyed, including the stacks of the main university library and some of the science laboratories. About one third of the university buildings were rendered useless and had to be rebuilt as fast as possible. Despite all this, the spirit of the students was wonderful. As a rule they studied hard in these trying circumstances, with meager food and poor living conditions.

This migration of institutions of learning from the seacoast to the interior has an important bearing on the future development of China's hinterland. The presence of a large number of intellectuals in various localities in the interior will exercise a strong influence upon the mental outlook of people in those localities. Moreover, students as well as teachers who have lived for a long time along the coast with only a local knowledge of the country have now had an opportunity to learn actual conditions in the interior, which has given them a better perspective on conditions in the vast country as a whole.

The migration of universities, combined with the removal of industries, both government and private, and of skilled laborers, engineers, experts, and managers, was indeed epoch-making. In the postwar period ahead of us the development of China in regions far from the coast, hitherto inaccessible to Western influence, will have a better chance than ever before.

CHAPTER 31 AT THE TERMINAL CITY OF THE BURMA road

With the migration of the universities, I came to stay for the duration of the war at Kunming, terminal city on the Burma Road. Before Pearl Harbor I made one visit to Burma and many to Indo-China and Hongkong; all were connected with Kunming by air. After the capitulation of France, Indo-China was given over to Japan virtually without a fight. So we built the Burma Road to connect the city with Rangoon. After Pearl Harbor Burma, too, was lost to the enemy. Land communications with Haiphong in Indo-China and Rangoon in Burma were cut. Kunming was now bottled up. Lend-Lease ammunition ceased to flow into the city except by air over the "hump" of the Himalayas which separates China from the land of Buddha.

In the last few years I have visited Chungking by air many times and once also Chengtu, capital of Szechuan Province. The hilly wartime national capital of China is situated on the banks of the Yangtze River within the Yangtze gorges. The city is built on hills. Its narrow strip of land is girdled by the Yangtze on the south and the Kialing River on the north, the two rivers merging into the greater Yangtze at the easternmost point of the narrow strip. Thus Chungking looks like a tiny peninsula. Most of the houses are built upon terraces, and dugouts were made at their back doors or under the buildings through the granite hills. For several years Japanese planes rained explosives on the defenseless city day after day, night after night, month after month. But the capital remained undaunted. Buildings were hit and destroyed and rebuilt by tens of thousands, yet comparatively few lives were lost. The enemy tried to bomb the wartime government out of its capital, but the city still stands like the pyramids, which have endured their many centuries of hardship and will stand many centuries more. Chungking embodies to perfection the spirit of stubborn resistance against the Japanese invaders.^[1]

To the west of the hilly capital, about half an hour distant by air, is the flat city of Chengtu. This walled city is as spacious as Peking. The streets are wide. The atmosphere is also somewhat like that of the former capital. The irrigation system at Kwan Hsien, established some twenty centuries ago, waters over a million acres of fertile land in the Chengtu Valley. Serious flood or drought are almost unknown. This immense, rich valley kept the people in Chungking and the army stationed in the province and adjacent districts amply fed.

When we moved our university to Kunming we had in mind the possibility of importing books and scientific instruments from Europe and America through Indo-China. But after the fall of Canton the main line for the supply of munitions was cut and shipments were diverted to the Indo-China-Yunnan route. The congestion on the railway precluded the shipment of nonmilitary cargoes. Only a small fraction of our shipments was allowed to trickle in.

Meanwhile all the cities along the Yangtze River fell one after another into the hands of the enemy, up to I-chang, not far from the Yangtze gorges. Finally that too failed to stem the tide of advancing enemy might and went under the heel of the invader.

Kunming felt the pinch of every adversity of war. What most affected the daily life of the people was the rising cost of living. When we came there, in the second year of war, rice per Chinese bushel (eighty kilograms) cost \$6 in Chinese currency. When it had increased by degrees to \$40 a bushel one of our professors of economics predicted that after a few months it would rise to \$70. People laughed at him. But it did go to \$70. The capitulation of Indo-China and the loss of Burma both severely affected the price of commodities.

The first noticeable rise in prices came after the first bombing of the city by enemy planes. The country people were afraid to come in, and fewer vegetables and meats were brought to market. The shopkeepers worried over the safety of their goods and raised prices to cover their possible loss. The embargo on certain imported goods also affected the prices of similar or allied home products. Thus the embargo on kerosene raised the prices of vegetable oils. The rise in

price of vegetable oils carried with it an increasing price for lard. When lard went up, pork followed suit. One thing thus led to another. The upward run of prices naturally gave rise to a host of hoarders. Hoarding in turn aggravated the price situation. When the swing of the pendulum went higher on one side, momentum brought it high again on the other.

The thing to have done, of course, was to control prices by controlling commodities from the very beginning of the war; not try to regulate prices after it was too late. I was told by a British friend that British farmers made a good deal of profit out of the First World War, but that farm products were controlled at the beginning of this war. Since this was the first modern war on a large scale in China, she had no past experience of such problems.

The climate of Kunming is really ideal. Situated in the semitropical zone at an altitude of six thousand feet, the city is something like a great summer resort. But because of its size the inhabitants do not think of it as such. It is perpetual spring. The rainy season falls in summer, when, frequent showers cool off the summer days. During the other seasons most of the days are filled with smiling sunshine cast upon the luxuriant growth in the fields from a cloudless blue sky.

Flowers abound in that climate and fruits are plentiful. Melons, eggplant, and citrons grow to enormous sizes. People do not have to work hard to make a living; they enjoy a complacent life and take things in leisurely fashion. Newcomers from the coastal provinces were at first exasperated by the slowness of the inhabitants, but they themselves gradually melted into that sea of tranquility.

The people of Kunming were quite concerned about the flow of thousands of refugees into the city from the coast. Many brought large sums of money and spent it freely. The local people blamed them for the increasing cost of living. The city was crowded with fashionable young ladies and well-dressed folk from the coast. In the evenings they rubbed shoulders with native citizens on the sidewalks of the main streets of Kunming. House rents rose fast. Hotels were all filled

to capacity; on arrival people often found no place to stay. New houses shot up like mushrooms. Old houses destroyed by bombs were rapidly restored. Yet the population grew faster than houses could be built to accommodate it.

Within the few years of the war Kunming was transformed. The old tranquil scene was filled with truck drivers, war profiteers, contractors, engineers, and manufacturers. Munitions trucks shuttled through the outskirts of the city.

The natural and historic surroundings, however, remained unchanged. Kunming Lake, which flows into the Yangtze and over two thousand miles into the Yellow Sea,^[2] remained as placid as before. Fish and duck enjoyed their watery life as in days of old. Historic temples with quaint trees around them perched on the hills overlooking the wide span of the rippling lake. The Buddhist monks chanted their prayers as others had done centuries ago. Looking over the lake to the horizon I often wondered: If a sealed bottle with letters in it were thrown into the water, might it not be carried by the outgoing current down the Yangtze, passing through Chungking, I-chang, Hankow, Kiu-kiang, Anking, and Nanking to the sea near Shanghai? And perhaps some fisherman might pick it up and forward it to my native land of Chekiang. It was, of course, only the dream of an exile thinking of home.

A network of aqueducts, built between two parallel embankments protected by age-old spruces, conducts water to irrigate tens of thousands of acres of fertile land. The embankments are wide enough to run a horse on; one could trot leisurely along this endless trail for miles in the forest of scent-laden spruce, traversing the luxuriant fields.

In the city a stone tablet marking the spot where the last refugee emperor of the Mings was strangled to death looks tragically down the slope at the passers-by. The much-to-be-pitied emperor fled to Burma, but was taken back to China by General Wu San-kwei, the one who later, while defending the Great Wall against the Manchus, was to go over to the enemy in order to save his lady from the bandit leader. In

his campaign against his own people in south China he came to Yunnan, where the captive emperor was brought before him.

"What do you have to say?" asked the general, as the story has it.

"Nothing," replied the last emperor of the Mings. "The only thing I want to know is, why did you rebel against my forefathers, from whom you received so much favor and so many honors?"

Wu San-kwei trembled at these words and ordered the captive emperor strangled at the spot where the stone tablet now stands. It reads: "Here died Emperor Yung-li of the Ming Dynasty for his country."

About ten kilometers from the city is the Black Dragon Pool. Spring water, crystal clear, oozes out from the bottom and overflows into tiny streams. Around it are temples and gigantic moss-grown trees. A scholar and his family lived here toward the end of the Ming Dynasty. When news of the emperor's death and the consequent downfall of the dynasty reached him, he plunged into the pool and committed suicide. His family and servants followed suit. The whole family died for their country by suicide and were all buried there. This is difficult for the Western mind to understand, but Chinese philosophy holds that if you cannot do anything else to save your country, death is the only way to redeem the debt of your conscience. By this philosophy the Chinese soldiers laid down their lives during this war willingly by hundreds of thousands in a battle often of simple flesh and blood against the enemy's steel and fire.

Our more or less chronological story is here ended for the time being. The following chapters will discuss some of the problems of Chinese civilization and culture, past, present, and future, and some of the persistent national problems that will present themselves in China in years to come.

From Hongkong in 1842 to Pearl Harbor in 1941 is a period of exactly one century; to tell the story of that period this volume has been written. England was instrumental in blasting China's southern gates open to world commerce. With the flow of opium and Western

manufactures came the seeds of Western thought and science, which affected China's view toward life and the universe. She resisted, struggled, and finally absorbed Western culture, as she did Indian culture centuries and centuries before. England was the instrument of Fate that brought China into the community of the world.

The course China took was rather roundabout, like the winding of the Yangtze River. But in direction she remained unchanged—like the Yangtze which moves down over its course of more than two thousand miles to color the Yellow Sea, in spite of its many windings. It flows day and night, month after month, year after year, and will flow in the same way for endless centuries to come. The invincible Yangtze is the symbol of China's national life and culture.

[1] 中国国民党和中国共产党领导的抗日军队，分别担负着正面战场和敌后战场的作战任务，形成了共同抗击日本侵略者的战略态势。以国民党军队为主体的正面战场，组织了一系列大仗，特别是全国抗战初期的淞沪、忻口、徐州、武汉等战役，给日军以沉重打击。

[2] 此处与事实不符。长江注入东海，而非黄海（长江口北岸的启东角与韩国济州岛西南角的连线是黄海和东海的分界线）。

第六部 抗战时期

东北与朝鲜

民国七年（一九一八年）夏天，也就是中日战争爆发前十九年，我曾经和一位朋友到东北去过一趟。日本侵略中国是从东北开始的，我们且来看看民国初年时那里的情形。

我们从上海搭火车到南京，在下关渡长江到浦口，再搭津浦铁路火车到北京，自浦口北上，火车穿越广漠的平原，一共走了两天两夜。这还是我第一次经过这一区域。飞扬的沙尘，干旱的黄土，以及遍野的玉蜀黍，与江南潮湿的黑土，蜿蜒的溪涧，连绵的稻田和起伏的丘陵，适成强烈的对比。

我心里想，北方与南方地理环境的不同，可能与两地人民体魄和心理的差异有很大的关系。我的祖先几百年来所居住的华东江浙两省，曾在历史上出过无数的学者、艺术家和政治家；但是我现在经过的苏北和皖北却似乎是全国最贫穷的地区，境内树木砍伐殆尽，淮河更不时泛滥成灾。

车离苏北进入黄河流域的山东省境。山东是华北的沿海省份之一，人民个子高大，肌肉结实，生活勤劳，但是人烟过于稠密，省民不得不向外谋发展。最后我们到了北京，使我有机会初次瞻仰故都的公园、宫殿、博物院和花园。我们从北京循京奉铁路续向沈阳进展，途经长城的终点山海关。全球闻名的万里长城，西起甘肃的嘉峪关，像一条巨龙蜿蜒而东，以迄于渤海岸的山海关，把中国本部与满洲及蒙古隔为两半。在火车穿越山海关以前，我们随处可以听到知了（蝉）在枝头此唱彼和，喧闹的情形与中国其他各地完全一样。但一出山海关就不闻蝉声了。原来知了只在长城以内生长、歌唱。

我们在夜色苍茫中到达沈阳，车站建在城内的日本租界里。街头到处是日本商店，很像日本的一座小城。日本势力侵入满洲已经是铁的事实，除非中国与日本一决雌雄，否则这种情势绝无法遏止。在历史上，满洲和蒙古一直是中国祸患之源。这两个广大区域里的民族如匈奴、蒙古和鞑靼，不时越过长城入侵，致令中原板荡，民不聊生。日本人一旦盘据满洲，势将成为现代的鞑靼。

我们拜访了好几位在当地军阀张作霖手下做事的官员，从他们那里听到许多关于满洲的情形。我们原来打算去看张作霖，但是被朋友劝住了。沈阳是奉天省的省会，也是三百年前满洲人征服中国以前的京城。我们参观了沈阳附近的皇陵，清兵入关前的清室诸王就葬在那里。

我们从沈阳搭日本人经营的南满铁路到宽城子。宽城子就是我们现在所知道的长春市，民国二十年（一九三一年）九·一八事变后一度改名新京而成为伪满洲国的首都。日本势力侵入宽城子的迹象非常显著，日本商店随处可见。

铁道两旁是一望无际的麦田，繁茂的麦穗说明了长城之外这块辽阔的处女地正是中国最富庶的地方，供应每年从山东、河北来的千万移民，绰有余裕。从中国抢走东北等于剥夺了她的生存空间，并使黄河流域的省份窒息而死。

宽城子是日人经营的南满铁路的终点，也是原由帝俄经营的中东铁路的起点。中东铁路公司承袭了沙皇政府的腐败作风，由一群贪污无能的白俄雇员在管理。买了票的乘客上车时还得争夺座位，不买票坐霸王车的人反而大模大样占据着舒适的车厢。扒窃之风非常猖獗。有一位乘客，穿着皮鞋睡在卧车的上铺，早上醒来，发现一只皮鞋已经不翼而飞。他眼睁睁地望着那只失掉鞋子的脚，想不通鞋子被人脱走时他为什么毫无知觉。我也想不通，偷鞋子的贼光偷一只鞋子究竟有什么用途。这件怪事发生以后，全体乘客都小心翼翼地守着自己的行李不敢离开。我的那位朋友为了保险起见，赶紧把携带的卢布塞到内衣口袋里，晚上并且穿着长衫睡觉。第二天早上他的卢布仍然不翼而飞。回程经过哈尔滨车站时，我从车窗探身与中国海关的一位美国官员谈话，我发觉有人摸我臀部的裤袋。我还来不及转身，自己的卢布也不见了。

破败的哈尔滨市是我国最北的国际都市，也是东方与西方的交会地，衣衫褴褛的中俄两国的穷孩子在街头一道玩耍，中俄通婚的事也屡见不鲜。小孩子们说着一种混杂的语言，一半中文，一半俄文。哈尔滨贫苦居民不分畛域地交往相处，对我倒是一件新鲜的事。在上海，顽固的洋人总是瞧不起比他们穷的中国人，把中国人看成瘟疫似的。这或许是因为很少赤贫的欧洲人到上海来住的缘故。但是最重要的原因，还是俄国多混血儿。鞑靼与斯拉夫血统合流已经有相当的年代了。

从前平坦整洁的哈尔滨街道，已经多年未曾修整。我们所坐的马车，在崎岖的路面经过时，忽上忽下地颠簸震荡，我们必须经常紧紧抓住一点东西，才不致于跌出车外，舒服不舒服自然谈不到了。下水道大

部淤塞。一阵暴雨之后，街道便成泽国，积水深可没胫。我们曾经碰到不少从南方来的人在这里做生意。这城里的商人们靠小麦、大豆和矿砂的投机居奇，全都利市百倍。他们只知道赚钱，可没有时间理会这个俄国人发展起来的城市究竟残破到什么程度。

我们随后又到吉林省城吉林，当地优美的风景给我们很深的印象。吉林城建筑在松花江北岸，爬上城内山头的寺庙眺望江景，宽阔处有如湖泊，使我想起了杭州的西湖。江中盛产鱼鲜，松花江的白鱼是大家公认最为鲜美的一种鱼。帝制时代，只有皇帝、后妃以及王公大臣才有吃到白鱼的口福。北京郊外青龙桥在夏季有白鱼市，因为慈禧太后常在颐和园驻蹕避暑。直到北伐以前，我们在青龙桥还可买到白鱼。大家相信能够延年益寿的人参也是吉林的特产，每年有大量的人参运入关内，销售各省。

我们又到黑龙江的省会齐齐哈尔逗留了一个短时期，我们在那里经历了一次气候由夏转冬的急速变化。我们发现绿叶在一夜之间枯萎，纷纷从枝头飞坠。齐齐哈尔已经是中国境内最北的都市，除非搭乘连接西伯利亚铁路的支线火车前往西伯利亚，我们已无法再往北前进。

回到哈尔滨以后，我们包了一只汽船，沿平静的松花江顺流驶往富锦县。舟行两日一夜，沿途饱览山光水色，曲折迂回的江上不时出现原始森林遮掩着的岛屿，夜间月明如洗，北国夏夜的空气更是清新凉爽。月亮倒映在河水里，我们的船缓缓经过时，水面激起银鳞似的微波。松花江本身也常常有山穷水尽疑无路的情境，江水似乎汇为湖泊，森林覆盖得黑森森的山峰，常常在月色辉映中横阻去路。但是当我们驶近山麓时，江流会或左或右忽然回转，我们的船也绕山而过，河道再度向前平伸，江水继续向天边外滚滚奔流而去。

富锦县是个农仓林立的城市。周围几百里内所出产的小麦和大豆都运集在这个边城里。冬天里四周用冰砖筑起城墙，以防止土匪“红胡子”的袭击。入夏冰砖融化，因为夏天盗匪较少，防务也可以稍稍松弛。这里每个人都带着枪，也都知道如何放枪。这些边陲省份的人民仍然保持着原始作风，充满了战斗精神，未曾因古老文化的熏染而变得文弱，与长城以内的老大民族适成强烈的对比。抗战前，中国空军就曾从东北处女地的这群强壮的人民中吸收了大批最优秀的斗士。

我们的最终目的是罗甸县和我们一位朋友的农场。罗甸县在黑龙江与松花江汇合处三角地带的尖端，黑龙江下游与松花江合流后叫混同江。我们从富锦改乘小船顺流而下，于傍晚到达罗甸，当晚寄宿在一个

孤零零的小茅屋里，宽阔的砖炕的一部分已经睡着一位老太婆和一只小猫，剩下的一角就用以安顿我们。泥地上睡着两只肥猪，它们似乎睡得很安稳，时而发出重浊的鼾声。蚊子和臭虫扰得我们整夜不能入睡。

天亮以前我们就起个大早望农场进发。一行四人骑着马，鱼贯穿越连绵数里的树林和麦田。在我们到达目的地以前，太阳已经爬上树梢。黑龙江彼岸俄罗斯境内的山岭依稀可辨。马蝇渐聚渐多，咬得我们坐骑血流如注。我骑的是一匹白马，马身上血流如汗，下垂如柳条。我们只有用马尾鬃制的蝇拂尽力驱逐这些马蝇。早上六点钟光景，我们到达一个丹麦人经营的农场，据说一星期前曾有一伙红胡子光顾这里。各处墙壁弹痕累累。

我们在八点钟左右到达目的地。在最初几年里，这块处女地上所经营的农场，每年种植的收益相当不错，真正的问题在乎盗匪。几个月以前，“小白龙”曾经带着一伙人到农场来光顾一次，掳走大批的鸡鸭牛羊。土匪们似乎对农场上的人相当友善，还用他们的破枪枝换走一批新枪。农场经理说：“无论如何，土匪并不如想像中的那么坏。如果日本人控制东三省，那我们就真的完蛋了。”

罗甸县是我们这次北行的终站，在满洲大陆的南端，我们曾访问过日本的租借地大连与旅顺。大连是个商港，东北的大豆就是由这里大量出口的。旅顺港是个海军基地，也是东北的门户，一九〇四年日俄战争就为此而发。帝俄失败以后，租借权也就转入日人之手。从旅顺和朝鲜开始而贯穿南满的铁路已使日本人控制了东三省的心脏和动脉。

我们在这海军基地漫游了一天，爬上许多山头，希望能够鸟瞰全港。夕阳衔山时我们终于在一处山头上看到一个石碑，碑上刻着日本东乡大将引金人的两句诗云：

“拥兵百万西湖上，

立马吴山第一峰。”

南宋曾在——二七年建都杭州，吴山第一峰就在西湖之滨，金人则于一二七六年征服南宋。^[6]日俄战争以后，东乡大将和他同胞的梦想就是步武金人的后尘。大约三十年之后，这个梦想居然实现。继攻陷上海之后，日军终于进占杭州，骑马登上吴山第一峰。

朝鲜是日本帝国主义到达亚洲大陆的跳板。一八九四年的中日战争就是因为朝鲜而引起的。为控制这个古老王国而起的中日战争是日本侵略亚洲大陆的开端，也为中国历史揭开了新的一页，接着而来的是中国

的维新运动、革命、内战、灾祸、国耻以及西化运动和现代化运动。

我们在游历满洲以后就转往朝鲜。我们坐火车渡过鸭绿江到达仁川，由仁川续行到达朝鲜京城汉城^[7]。

日本的朝鲜总督就住在汉城。雄伟的西式总督府建在王宫的正前面，像是故意要侮辱朝鲜国王似的。国王已经不再存在，王宫却仍留在那里忍受被挤在总督府背后的侮辱。

王宫与北京的中国宫殿一模一样，不过规模却小得多，所以只能算是小型宫殿。据熟悉李朝掌故的韩人某君对我说：中国钦差来访时，李王必须降阶亲迎；如奉上谕，李王尚须跪接圣旨。

王宫的后面有个中国式的亭，嫔妃们就在这亭子里表演唐朝时的中国古代歌舞。在朝鲜和日本，古代的中国风俗习惯至今仍风行不衰。他们对中国字的发音，他们的风俗习惯、舞蹈、音乐和生活方式都可追溯到唐代的影响。当我站在那个亭子里眺望着笼罩在烟雾里的汉城小山时，我不禁神驰于唐朝（六一八——九〇五）的辉煌时代，当时的中国文化有如丽日中天，光芒四射，远及日本、朝鲜和越南等地，成了一个远东文化圈。这个灿烂的文化的祖国已因历经外族入侵而改变了她的风俗习惯和生活方式。十九世纪时，日本在中国唐朝的文化基础上吸收了西洋文明而创立了一种新的文化，终于并吞了朝鲜，而且食髓知味，正预备鲸吞她的恩师中国。但是日本倒也给了中国一个教训：如何在古文化的基础上建立一个富强的新中国。中国的一连串改革、革命、西化运动和现代化运动也就是这样开始的。

在我思前想后的当儿，太阳已经从云层后面探出头来，汉城山头的烟雾也很快消散了。引我到王宫去的是位精通汉学的韩国老学者，他一直默然站在我旁边，这时才提醒我晚上的一个宴会。我们离开亭子后经过闵妃被刺的地方，据说闵妃因同情中国而遭日人暗杀。"我知道你心里在想什么，"这位老学者对我说，"我国现在要振作也太晚了。我们的国王已经因沉湎声色歌舞而贻误国事。但是中国是有光明的前途的，中国是你的国家，也可以看作我的祖国。我已经老了，老弟，你还年轻，你好好地为中国努力吧！"

我们到达中国总领事馆时，晚餐已经准备好了。总领事馆在从前是中国特使的官邸。中国、帝俄和日本竞争这位朝鲜小姐的四角恋爱期间，这座历史性的大厦里面究竟有过什么活动，恐怕只有参与其事的人才知道。历史记载只给我们一个模糊的轮廓；私人记录即使有，也迄今

未发表。一切情形只能凭后人想像了。

汉城的生活正在迅速地日本化。日本的商场、银行、店铺和饭馆，占据着大街闹市。大企业的经理、政府官员、重要学府的教员全都是日本人，被征服者的生活习惯，正像他们的皇宫一样，正在步步往后退缩。街头不时可以碰到朝鲜人蹲踞在人行道上，嘴里衔着长烟筒，吞云吐雾，悠然自得；妇女们头上顶着沉重的篮子，悠闲地在街上走过。几处讲授四书五经的老式学校已有无法维持之势。我曾经去过这样的一所学校，那里有一位教经书的老先生，十多位学生则围着他蹲踞在垫席上。朝鲜人和日本人仍旧保持着中国的古代方式，蹲踞在地板上。地板下面即使在夏天也用温火烘着，垫席打扫得和床铺一样清洁。学生们必须背诵中国经书，和我童年时的情形完全一样。虽然他们采用同样的课本，字句发音却迥然不同。他们像中国的广东和日本、越南一样，中国字的发音和唐朝人的读法相似或竟相同。

所有人都穿着棉絮布袜，夏季也不例外。我问他们这是什么道理，他们说是因为北方的土地太寒。但是他们身上却都穿着非常凉爽的白色麻布长衫。

朝鲜人、日本人和越南人，都爱好中国的山水画、书法和诗词。但是这三个民族都保持着他们自己的特色。艺术方面如此，生活方面亦然。朝鲜和越南后来受明朝的影响较大；日本则为海洋所隔离，且明代与德川幕府，彼此均以锁国为政策，故所受影响不多。此外，以海为家的日本人富于冒险精神，因此保持着古代中国的尚武精神；朝鲜人和越南人则深受明以后几百年来中国崇尚文事的影响。授予中国文人莫大尊荣的科举制度曾经传入朝鲜和越南，却止于日本大门之外。

朝鲜的年轻一代因受日本人控制下的现代学校的影响，对中国的态度已有急剧的转变；在这些学校里，日本天皇被奉为神明，日本人的优点被捧上天，中国人的缺点则被过分描写。如果说朝鲜青年对日本的态度是仇恨，那么对中国的态度就是鄙夷。年老的一代惋叹充满中国文化的黄金时代已成为过去，年轻的一代虽有少数人认为自己是日本帝国的天皇子民，而大多数的青年却仍仇视日本。

[6] 此处疑原文有误。1276年，元军攻占南宋都城。1279年，南宋彻底灭亡。

[7] 汉城：2005年起中文译名作“首尔”。

战云密布

我辞卸国民政府的教育部长以后，于民国十九年（一九三〇年）十月回到北京——这时已改称北平。但北京大学校名以历史关系名未改。旋奉当时任行政院长的蒋委员长之命，再度承乏北京大学校务。

学生游行示威的次数已大见减少。国都迁往南方以后，政治活动的重心已跟着转移，学生们示威反对的对象已经不多，只有日本的侵略偶然激发学生的示威行动。日本在东北发动侵略以后，此时已经向关内迅速扩展。

民国二十年（一九三一年）九月十九日早晨，我正坐在北大校长室里办公，忽然电话传来前一天发生的惊人消息：日本人已经在沈阳发动突击，国军为避免冲突，已撤出沈阳。

.....

几个月以后，我因事回到南方。民国二十一年（一九三二年）一月二十八日下午，我前往上海车站，准备搭火车回北平。进车站后，发现情势迥异平常，整个车站像荒凉的村落。一位车站警卫是认识我的，他告诉我，已经没有往外开的车子。“看样子，日本人马上要发动攻击了。”他说，“你最好马上离开这里。恐怕这里随时要出事呢！”

那天夜里，我突然被一阵炮声惊醒，接着是一阵轧轧的机枪声。我从床上跳起来，随着旅馆里的人跑到屋顶观望。天空被车站附近射出来的炮火映得通红。日本侵略似乎已经追在我脚跟后面，从北方到了南方，我所住的十层高楼的旅馆在租界以内，日本炮火不会打过来的。我同一班旅客都作隔岸观火。隆隆的大炮声、拍拍的机枪声终宵不断。第二天早晨，我再度爬上屋顶，发现商务印书馆正在起火燃烧，心里有说不出的难过。好几架日本轰炸机在轮番轰炸商务印书馆的房子。黑烟冲天，纸片漫天飞舞，有些碎纸片上还可以看到“商务印书馆”的字样。

日本已经展开对上海的攻击。结果引起一场民国二十六年（一九三七年）以前最激烈的战事，但是中国终于被迫接受条件，准许日本在上海驻兵。

从民国十九年到二十六年的七年内，我一直把握着北大之舵，竭智尽能，希望把这学问之舟平稳渡过中日冲突中的惊涛骇浪。在许多朋友协助之下，尤其是胡适之、丁在君（文江）和傅孟真（斯年），北大幸

能平稳前进，仅仅偶尔调整帆篷而已。

科学教学和学术研究的水准提高了。对中国历史和文学的研究也在认真进行。教授们有充裕的时间从事研究，同时诱导学生集中精力追求学问，一度曾是革命活动和学生运动漩涡的北大，已经逐渐转变为学术中心了。七年之中只有一次值得记录的示威运动。当日军迅速向长城推进时，京沪一带的学生大声疾呼，要求政府立即对日作战。大规模的示威游行不时在南京发生，北平的学生也亟欲参加此一救国运动。有一天，一大群学生聚集东火车站，准备搭乘南下的火车。军警当局不准他们上车，这班男女青年就日夜躺卧在铁轨上，不让火车出站。最后当局只好让几百名学生南下，与他们在南京的同志会师。

我们头上的乌云愈来愈密，此后几年中我们为了争取时间，只好小心翼翼地浅水里缓缓前进，不敢闯进急流，以免正面撞上日本侵华的浪潮。但是我们的谨慎是与懦怯不同的。每当日本的第五纵队伪装的学者来这"文化中心"（实际上他们却把北大看成反日运动的中心）"拜访"时，我们总是毫无保留地表示我们的态度。记得有一位日本学者曾经对北大教授们滔滔不绝地大谈中日文化关系，结果我们告诉他，除了日本的军事野心之外，我们可看不出中日之间有什么文化关系存在。"只要你们肯放弃武力侵略的野心，中日两国自然就能携手合作的。"

这些学者，包括地质学家、经济学家、生物学家等等，不时来拜访我们，希望争取北大的"友谊"。他们一致埋怨我们的反日运动。我们告诉他们，我们不一定是反日，不过我们反对日本军国主义却是真的。但是他们一心一意要灭亡中国，除了中国完全投降，他们绝不会改变方针。

这时，驻屯东三省的日本关东军正迅速向长城之内推进。国军先沿长城浴血奋战，继在河北省北部步步抵抗，最后终于撤退到北平及其近郊。伤兵络绎于途。各医院到处人满。北大教职员也发动设立了一所伤兵医院，由内子陶曾主持院务，教职员太太和女学生充任职员和看护。因为这医院的关系，我与作战部队有了较密切的接触，同时，获悉他们的心理状态。他们认为作战失利完全是由于缺乏现代武器，尤其是枪支，因而以血肉之躯筑成的长城，终被敌人冲破了。

国军以血肉筑成长城抗御敌人的弹雨火海，主要的凭藉就是这种不屈不挠的精神。这种精神使中国在漫长痛苦的八年之中愈战愈勇，虽然千千万万的人受伤死亡，中国却始终连哼都不哼一声。我们虽然节节失利，却终于赢得战争。

战事正在沿长城进行时，当时的军政部长何敬之（应钦）将军曾亲至北平指挥作战。他和我都希望能达成停战以换取时间。我访晤英国大使蓝浦生，探询他有无出任调人之意。他说日本大使馆的须磨先生曾经对他暗示，日本也希望停战。蓝浦生大使当即拍电报向伦敦请示，伦敦覆电同意由他出任调人。我们经由美国驻华大使詹森先生把这件事通知华盛顿。但是这个计划终于胎死腹中，因为当时的外交部长罗钧任（文干）告诉在南京的英国大使馆说，除了他本人之外，谁也无权与外国办交涉。

不久日军突破国军沿长城布置的防线，步步向北平逼近，北平军民已开始准备撤退。

我当时因为割盲肠之后正躺在北京协和医院，对外面的情形很隔膜。有一天清早，我听到日本飞机在头上盘旋，直觉地感到情势不妙。我得到主治医生的许可，忍痛步行到何敬之将军的寓所。他见我还留在北平城内，很感意外。他告诉我日军马上会发动攻击，劝我快离开北平，于是我准备第二天就离开。第二天早晨，我的电话响了，是何将军打来的：“我们已经谈妥停战，你不必走了。”我马上打电话把这消息转告胡适之。

“真的吗？日本飞机还在我们头上盘旋呢！”他说。

“何敬之将军刚刚打电话来这样说的。”我所能回答的也仅此而已。后来才知道黄膺白（鄂）已代表中国在午夜签订塘沽协定，根据此项协定，日军在占领河北省北部以后，将暂时停止前进。

日军占领上述地区后，就在当地成立“自治政府”，并催促留在河北的国军司令官与他们合作，在北平也成立一个“自治政府”。北平城内谣言满天飞，说河北省境内的司令宋哲元将军即将对日本人屈服。北大教授就在这紧急关头发表宣言，声明誓死反对华北的所谓“自治运动”。事实上，宋哲元将军也并没有答应日本人的要求。

一两个月以后的一个下午，一个日本宪兵到北大来找我。“日本在东交民巷的驻防军请你去一趟，谈谈他们希望了解并且需要你加以解释的事情。”他这样告诉我。我答应在一小时之内就去，这位日本兵也就告辞回去了。

我把这件事通知家里的几位朋友之后，在天黑以前单独往东交民巷日本兵营。我走进河边将军的办公室以后，听到门锁咔嚓一声，显然门已下了锁。一位日本大佐站起来对我说：“请坐。”我坐下时，用眼睛扫

了旁边一眼，发现一位士官拔出手枪站在门口。

"我们司令请你到这里来，希望知道你为什么要进行大规模的反日宣传。"他一边说，一边递过一支香烟来。

"你说什么？我进行反日宣传？绝无其事！"我回答说，同时接过他的烟。

"那末，你有没有在那个反对自治运动的宣言上签字？"

"是的，我签了名的。那是我们的内政问题，与反日运动毫无关系。"

"你写过一本攻击日本的书。"

"拿这本书出来给我看看！"

"那末你是日本的朋友吗？"

"这话不一定对。我是日本人民的朋友，但是也是日本军国主义的敌人，正像我是中国军国主义的敌人一样。"

"呃，你知道，关东军对这件事有点小误会。你愿不愿意到大连去与坂垣将军谈谈？"这时电话铃响了，大佐接了电话以后转身对我说："已经给你准备好专车。你愿意今晚去大连吗？"

"我不去。"

"不要怕，日本宪兵要陪你去的，他们可以保护你。"

"我不是怕，如果我真的怕，我也不会单独到这里来了。如果你们要强迫我去，那就请便吧——我已经在你们掌握之中了。不过我劝你们不要强迫我。如果全世界人士，包括东京在内，知道日本军队绑架了北京大学的校长，那你们可就要成为笑柄了。"

他的脸色变了，好像我忽然成了一个棘手的问题。"你不要怕呀！"他心不在焉地说。

"怕吗？不，不。中国圣人说过，要我们临难毋苟免，我相信你也一定知道这句话。你是相信武士道的，武士道绝不会损害一个毫无能力的人。"我抽着烟，很平静地对他说。

电话又响了，他再度转身对我说："好了，蒋校长，司令要我谢谢你这次的光临。你或许愿意改天再去大连——你愿意什么时候去都行。谢谢你。再见！"门锁又是咔嚓一响。大佐帮我穿好大衣，陪我到汽车旁

边，还替我打开汽车门。这时夜色已经四合了。我独自到日本兵营，也有朋友说我不应该去的，听日本人来捕好了。他们敢么？

第二天下午，宋哲元将军派了一位少将来劝我离开北平，因为他怕自己无力保护我。我向他的代表致谢，不过告诉他，我将继续留在北平负起我的责任。

不久以后，蒋委员长因陈辞修将军北上之便，亦来代表慰问。

我继续在北平住下来，而且居然平安无事。偶然也有些朝鲜浪人到北大来寻衅找岔，这些事曾经一一报告给我知道，但是我并未予以重视。不久日本人的策略开始转变了。松室孝良将军受命来北平担任日军的特别代表。他与我交了朋友，常常到我家里来。他大骂那位日本将军不该在东交民巷兵营折磨我。大概半年光景，我们私人之间一直保持非常友好的关系。他任期届满时，穿了全副武装来向我辞行。他告诉我，他已奉命调往东北与西伯利亚交界的海拉尔去指挥一个骑兵师。他说战云愈来愈低，如果中国与日本真的发生冲突，那是很不幸的。"战事一旦发生，"他说，"日军势将深入汉口。"

"是的，将军，我同意你的看法。两国之间不幸而发生公开冲突，很可能会引起国际纠纷，那时整个日本舰队都可能葬身海底，日本帝国会缩小为太平洋地图上的几粒小黑点。"

他叹了一口气："那当然也可能。但是日本仍旧是独立的国家，中国却不免要被西方列强消灭了。"

"也可能如此。下次碰面时，希望我们不必为愚蠢的作为而抱头痛哭。不管将来发生什么事情，将军，希望我们永远是朋友。"我们就这样怀着沉重的心情分别了。战事结束若干年后，我经过东京偕内子陶曾往访，相对话旧，不禁感慨系之。

接替他的是今井将军。他来拜访我，我也曾去回拜。我们谈得很坦白，和我跟松室孝良谈话的情形大致相似。有一次，日本贵族院的两位议员来访，其中一位曾任台湾总督。四顾无人之后，他低声问我，在东交民巷日本兵营拘留我的是谁。我告诉他是高桥。他摇头说：

"岂有此理！"

这时候日本人已经明白，北大并无意于马上发起反日运动，他们希望能与北大里的主要教授建立友谊，而把北大拉到日本这一边。双方来往都很审慎，北大与日军之间的紧张情势至此已渐渐缓和了。

后来田代将军来到天津担任当地驻军司令。日本以及其他列强，因条约规定有权在天津驻军，田代特地跑到北平来，设宴招待中日双方文武要员。田代在席间发表演说，鼓吹中日经济合作，中国官员也曾有人继起发言，但是措词都相当含糊。我除了吃饭时偶尔说笑外，对于经济合作问题始终不发一言。几天之后，忽然南京来了密电，告诉我，日本大使馆已经暗示外交部，说北大校长支持中日合作。

这就是日本人对付中国的手段。程序大概是：先来一套甜言蜜语，继之挑拨阴谋，然后威胁恫吓，接着又是甜言蜜语，最后施行闪电攻击。先后次序可能有所改变，但是从来不离征服中国的基本方针。日本人在珍珠港事变以前对付美国的，也是这一套。

抗战初期

未改名北平以前的北京是文化活动和学生运动的中心，易名以后则变为中日冲突的中心。民国二十六年（一九三七年）之初，北平附近事端迭起，战事已如箭在弦上，不得不发。七月七日的晚上，终于发生芦沟桥事变。日军在夜色掩护下发动攻击，从芦沟桥的彼端向北平近郊侵袭，城内驻军当即予以还击。

战神降临北平时，我正在庐山。当时蒋委员长在这华中避暑胜地召集了一群知识分子商讨军国大事，有一天午后，天空万里无云，树影疏疏落落地点缀着绿油油的草地。蒋委员长曾经为他的客人准备了许多简单雅洁的房子，我吃过午饭正在一幢单开间独立的宿舍里休息，一面眺望着窗外一棵枝叶扶疏的大树，一面谛听着枝头知了的唱和。忽然《中央日报》程社长沧波来敲门，告诉我日军在前一晚对芦沟桥发动攻击的消息，我从床上跳起来追问详情，但是他所知也很有限。

我们曾经讨论可能的发展。因为我刚从北平来，他问我，根据我所知道的北平情况，对时局有何看法。我告诉他，以我对当地日军司令官的印象以及他们的保守见解来判断，这次事变似乎仍旧是地方性事件。日本的计划似乎还是蚕食中国，一时恐怕尚无鲸吞的准备。但是蚕食的结果，日本很可能在数年之内即根深蒂固地盘据华北而无法撼其分毫，到那时候，长江流域也就危在旦夕了。日本已经以渐进的方式吞噬东北而进窥华北，将来华北对华中、华南的局势亦复如是。同样的方法，同样的过程。这似乎就是日本对付中国的政策。

战事断断续续相持了好几天。十二天以后，北平城外的零星战事仍在进行，蒋委员长在牯岭对几千名在庐山训练团受训的将领演说，认为日本即将对中国发动全面攻击，呼吁大家准备不计代价保卫国家。他说：“全面战争一旦开始，我们必须随时准备牺牲。……这次战争必将旷日持久，时间拖得愈长，我们的牺牲也就愈大。”

在这次演说里，我初次听见蒋委员长称呼倭华的日军为倭寇，并表示对日问题的坚决主张。倭寇这个名词，在一般听众或不甚注意，但在明代长期遭倭寇蹂躏的宁波和绍兴人，听到这种称呼，就会觉得事态严重。当时的听众之中有陈诚将军、胡宗南将军，以及其他后来在各区建立殊勋的许多将领。这次演说后不久，蒋委员长飞返南京，各将领亦分别返防。我和几位朋友飞到南京，希望赶返北平，但是北上火车已全部

停顿。

在此后的两个星期内，战事像洪水一样泛滥北平附近。宋哲元将军英勇奋战，部下伤亡惨重。日军司令田代对中国问题的看法一向很保守，我知道得很清楚，不幸田代忽然病倒，思想激进的少壮军官遂得控制日本部队。数日后田代去世。究竟是病故、自杀或被杀，虽然谣言满天飞，谁也弄不清楚底细。宋哲元将军仍旧希望把事件局部化，要求兼程北上的中央政府军队暂时停留在保定。结果中央部队就在保定留下来了。

但是现由少壮军人指挥的日本军却并未停止前进；宋哲元将军的部队四面八方受到攻击。一位高级将领并在作战时阵亡。宋将军不得已撤出北平，日军未经抵抗即进入故都。

日军已经控制北平了，华北是否会像沈阳陷落后的东北，遭逢同样的命运呢？日本会不会在华北暂时停下来，在华北等上几年，然后再以之为攻击南方的基地呢？日本是不是已等得不耐烦，准备一举攻下南方而图一劳永逸呢？二者似乎均有可能。日本的渐进政策似乎对中国更危险。南京的高级官员以及各省的军事领袖全都赞成全面抵抗侵略。结果全国上下，包括政府官员、军事将领和平民百姓，万众一心，一致奋起应付空前的国难。

这时候，日本已开始派遣军队循海道开抵上海。中国也在同时派军队沿长江东下赶到沪渎。在这小小的区域里，已有好几万军队结集对峙着，战事一触即发。究竟那一方面先发第一枪都无关宏旨，不论是一位粗心大意的士兵无意中走火，或者是掌握大权者的决策。

日军官兵大家都知道，制造沈阳事变的负责将领如本庄繁和土肥原等均曾因功而获得最高级的勋奖。一手制造芦沟桥事变的人，无疑地也会获得同样的勋奖。谁又能怪渡海而来上海的日军将领也想一显身手呢？

我们在南京的人都知道，密布在全国上空的乌云势将迸发为狂风暴雨。我离开南京循公路到杭州，在湖滨一位朋友的别墅里住了几天，我们没有一天不担心，在淞沪对垒的中日军队会发生冲突。我的朋友王文伯不时打长途电话到上海探问情况。八月十二日，上海方面的回答很短促："没有消息。明天十点钟，十点钟，再见！"接着电话就挂断了。

第二天早上十点钟，历史性的时刻终于来临。浓烟上冲霄汉，双方的轰炸机交互射敌方阵地，全面战争已经开始了。从此不再有地方性

的事件，也不再会有蚕食的机会。日本要就一口吞下中国，要就完全放弃。但是吞下去倒也不容易，放弃吗？她又舍不得。这局面注定是一场长期战争。

两天以后，一个乌云密布的下午，我正坐在柳荫下欣赏湖边浅水中鱼儿穿梭往返，城的这一边隐隐传来阵阵雷声。有人打电话给我："喂！你听到没有？"接着又是一阵雷声。"是呀，在打雷。"

"不是——敌人在轰炸我们的机场！"

七架没有战斗机掩护的木更津队轰炸机已经从台湾松山机场飞到杭州。驻扎笕桥的中国战斗机当即升空拦截，并当场击落其五架，其余两架夺路逃命，但是也在离杭州不远处被迫降落，飞行员被俘。我到绍兴专员公署去看一位俘虏，据他说，他们在台湾的指挥官曾经告诉他们，中国根本没有战斗机。

第二天，日军开始轰炸南京。战事刚开始时，日本人在一个地方只丢一个炸弹，所以他们所有的炸弹都是分散的。这种轰炸方式所造成的损害远较集中轰炸为小。一年之后，日军与俄军在伪满与西伯利亚交界处的张高峰^[1]发生冲突，日本人才从俄国学到集中轰炸的战术。

我的朋友王文伯是浙江省政府委员兼建设厅厅长。战事开始以后，他的工作自然跟着紧张起来了。他调集了好几百辆公路车，把军火运给前方。有一次，大约二十辆车子结队驶往前方，结果这队车辆误入敌人后方而遭围攻。其中的一位司机跳下车子躲在田野里，后来借夜色掩护爬出敌人阵地回到杭州。几天之后，他找了另外一辆卡车，又再度上前线担任运输工作去了。

难民从上海像潮水一样涌到杭州。庙宇里住满了妇孺老幼。山区的小茅屋也成了衣装入时摩登小姐的临时香闺。她们还是像以前一样谈笑，似乎根本没有发生过任何变故。我们中国人就有这点本领，即使身临危难，也常能处之泰然。

我有一位朋友，本来是上海的棉纱大王，"八·一三"战事发生后，带着他的子女逃到杭州，暂时住在山中的一所庙宇里。他告诉我，他预备给他的家人盖一幢房子。

"为什么？"我问他。

"上海作战期间，我想在杭州住下来。"他说。

我真想不到他对这次战争有这样的看法。我劝他最好还是迁到内地

去，因为战事必定要蔓延到杭州以及所有的沿海城市，甚至可能远及华中的汉口。他听到这些话，好像没法相信似的。五年之后，我在重庆碰到他，他告诉我，他们一家人在战火扩及杭州以前就离开西湖了。

与北方三个大学有关的人士正在南京商议学校内迁的计划。大家有意把北平的北京大学、清华大学和天津的南开大学从北方撤退而在长沙成立联合大学。胡适之从南京打电话给我，要我回到南京商量实施这个计划的办法。我经过考虑，勉强同意了这个计划。

我晓得在战事结束以前恐怕没有机会再见到父亲和我的老家。而且战局前途很难逆料，因此我就向朋友借了一辆别克轿车驶回家乡。这时父亲年纪已经很大，看到我回家自然笑逐颜开。我离家重返南京时告诉父亲说，中国将在火光血海中获得新生。

"你这是什么意思？"他目不转睛地望着我，双目炯炯有光。

"事情是这样的：这次战争将是一次长期战争，千千万万的房屋将化为灰烬，千千万万的百姓将死于非命。这就是我所说的火光血海，最后中国将获得胜利。"

当我向父亲告别时，我心里有一个感觉，怕自己从此没有机会再见到我所敬爱的父亲了。父亲所施于我的实在太多了，但是我所报答他的却又如此之少。后来我的家乡遭到轰炸时，他迁到山中，以栽花养鸟自娱。战事发生两年以后的一个早上，他像平常一样起得很早，他忽然感到有点头晕，回到卧室，即告去世。享年八十。他不过是战争的间接受害者之一。战争对老年人实在是很大的磨难。

我回南京逗留几天之后就搭轮溯江而至汉口，码头附近沿江堆积着大批木箱，里面装着政府的档案、中央大学图书馆的书籍和故宫博物院的古物（即现在台中之古物）。从南京至汉口途中，我们曾碰到满载军队的船只，顺流东下增援上海。

我从汉口搭粤汉铁路赴长沙，沿途碰到好几批军队挤在敞篷车里，由广东、广西向北开往汉口。这次战争现在的的确确是全国性的，不再像过去一样是地方性的战事了。士兵们的斗志非常激昂，我问他们往哪里去。

"打日本鬼！"他们异口同声地说。

战时的长沙

长沙是个内陆城市。住在长沙的一段时期是我有生以来第一次远离海洋。甚至在留美期间，我也一直住在沿海地区，先在加利福尼亚住了四年，后来又在纽约住了五年。住在内陆城市使我有干燥之感，虽然长沙的气候很潮湿，而且离洞庭湖也不远。我心目中最理想的居所是大平原附近的山区，或者山区附近的平原，但是都不能离海太远。离海过远，我心目中的空间似乎就会被坚实的土地所充塞，觉得身心都不舒畅。

我到达长沙时，清华大学的梅贻琦校长已经先到那里。在动乱时期主持一个大学本来就是头痛的事，在战时主持大学校务自然更难，尤其是要三个个性不同、历史各异的大学共同生活，而且三校各有思想不同的教授们，各人有各人的意见。我一面为战局担忧，一面又为战区里或沦陷区里的亲戚朋友担心，我的身体就有点支持不住了。“头痛”不过是一种比喻的说法，但是真正的胃病可使我的精神和体力大受影响。虽然胃病时发，我仍勉强打起精神和梅校长共同负起责任来，幸靠同仁的和衷共济，我们才把这条由混杂水手操纵的危舟渡过惊涛骇浪。

联合大学在长沙成立以后，北大、清华、南开三校的学生都陆续来了。有的是从天津搭英国轮船先到香港，然后再搭飞机或粤汉铁路火车来的，有的则由北平搭平汉铁路火车先到汉口，然后转粤汉铁路到长沙。几星期之内，大概就有两百名教授和一千多名学生齐集在长沙圣经学校了。联合大学租了圣经学校为临时校舍。书籍和实验仪器则是在香港购置运来的，不到两个月，联大就粗具规模了。

因为在长沙城内找不到地方，我们就把文学院搬到佛教圣地南岳衡山。我曾经到南岳去过两次，留下许多不可磨灭的回忆。其中一次我和几位朋友曾深入丛山之中畅游三日，途中还曾经过一条山路，明朝末年一位流亡皇帝（永历帝）在三百年前为逃避清兵追赶曾经走过这条山路。现在路旁还树着一个纪念碑，碑上刻着所有追随他的臣子的名字。在我们经过的一所寺庙里，看见一棵松树，据一位老僧说是永历帝所手植的。说来奇怪，这棵松树竟长得像一位佝偻的老翁，似乎是长途跋涉之后正在那里休息。我们先后在同一的路上走过，而且暂驻在同一寺庙里，为什么？同是为了由北方来的异族入侵。一千多年来，中国始终为外来侵略所苦。

第一夜我们住宿在方广寺。明朝灭亡以后，一位著名的遗老即曾在方广寺度其余年。那天晚上夜空澄澈，团明月在山头冉冉移动，我从来没有看到过这样低、这样近的月亮，好像一伸手就可以触到它这张笑脸。

第二夜我们住在接近南岳极峰的一个寺院里。山峰的顶端有清泉汨汨流出，泉旁有个火神庙。这个庙颇足代表中国通俗的想法，我们一向认为火旁边随时预备着水，因为水可以克火。

第二天早晨，我们在这火神庙附近看到了日出奇观，太阳从云海里冉冉升起，最先透过云层发出紫色的光辉，接着发出金黄色、粉红和蓝色的光彩，最后浮出云端，像一个金色的鸵鸟蛋躺在雪白的天鹅绒垫子上。忽然之间它分裂为四个金光灿烂的橘子，转瞬之间却又复合为一个大火球。接着的一段短暂时刻中，它似乎每秒钟都在变换色彩，很像电影的彩色镜头在转动。一会儿它又暂时停住不动了，四散发射着柔和的金光，最后又变为一个耀目大火球，使我们不得不转移视线。云海中的冰山不见了，平静的云浪也跟着消逝，只剩下一层轻雾笼罩着脚下的山谷。透过轻雾，我们看到缕缕炊烟正在煦和的旭日照耀下袅袅升起。

来南岳朝山进香的人络绎于途，有的香客还是从几百里之外步行来的。男女老幼，贫贱富贵，都来向菩萨顶礼膜拜。

长沙是湖南的省会，湖南是著名的鱼米之乡，所产稻米养活了全省人口以外，还可以供应省外几百万人的食用。湘江里最多的是鱼、虾、鳝、鳊和甲鱼，省内所产橘子和柿子鲜红艳丽。贫富咸宜的豆腐洁白匀净如浓缩的牛奶。唯一的缺点是湿气太重，一年之中雨天和阴天远较晴天为多。

我每次坐飞机由长沙起飞时，总会想到海龙王的水晶宫。我的头上有悠悠白云，脚下则是轻纱样的薄雾笼罩着全城，正像一层蛋白围绕着蛋黄。再向上升更有一层云挡住了阳光。在长沙天空飞行终逃不了层层遮盖的云。

湖南人的身体健壮，个性刚强，而且刻苦耐劳，他们尚武好斗，一言不合就彼此骂起来，甚至动拳头。公路车站上我们常常看到“不要开口骂人，不要动手打人”的标语。人力车夫在街上慢吞吞像散步，绝不肯拔步飞奔。如果你要他跑得快一点，他准会告诉你“你老下来拉吧——我倒要看看你老怎么个跑法”。湖南人的性子固然急，但行动却不和脾气相同，一个人脾气的缓急和行动的快慢可见并不一致的，湖南人拉黄包车

就是一个例子。

他们很爽直，也很真挚，但是脾气固执，不容易受别人意见的影响。他们要就是你的朋友，要就是你的敌人，没有折衷的余地。他们是很出色的军人，所以有“无湘不成军”的说法。曾国藩在清同治三年（一八六四年）击败太平军，就是靠他的湘军。现在的军队里，差不多各单位都有湖南人，湖南是中国的斯巴达。

抗战期间，日本人曾三度进犯长沙而连遭三次大败。老百姓在枪林弹雨中协助国军抗敌，伤亡惨重。

在长沙我们不断有上海战事的消息。国军以血肉之躯抵御日军的火海和弹雨，使敌人无法越过国军防线达三月之久。后来国军为避免继续作无谓的牺牲，终于撤出上海。敌军接着包围南京，首都人民开始全面撤退，千千万万的人沿公路涌至长沙。卡车、轿车成群结队到达，长沙忽然之间挤满了难民。从南京撤出的政府部会，有的迁至长沙，有的则迁到汉口。

日军不久进入南京，士兵兽性大发。许多妇女被轮奸杀死，无辜百姓在逃难时遭到日军机枪任意扫射。日军在南京的暴行，将在人类历史上永远留下不可磨灭的污点。

新年里，日军溯江进逼南昌。中国军队结集在汉口附近，日军则似有进窥长沙模样。湖南省会已随时有受到敌人攻击的危险。我飞到汉口，想探探政府对联大续迁内地的意见。我先去看教育部陈立夫部长，他建议最好还是去看总司令本人。因此我就去谒见委员长了。他赞成把联大再往西迁，我建议迁往昆明，因为那里可以经滇越铁路与海运衔接。他马上表示同意，并且提议应先派人到昆明勘寻校址。

民国二十七年（一九三八年）正月，就在准备搬迁中过去了。书籍和科学仪器都装了箱，卡车和汽油也买了。二月间，准备工作已经大致完成，我从长沙飞到香港，然后搭法国邮船到越南的海防。我从海防搭火车到法属越南首府河内，再由河内乘滇越铁路火车，经过丛山峻岭而达昆明。

日军入侵前夕之越南与缅甸

我由长沙绕道越南赴昆明途中，发现越南也保留着许多古代中国的风俗习惯，正如二十多年前我在朝鲜所发现的。越南人与朝鲜人一样，穿着一种近似明朝服饰的衣服。他们念中国字时，发音与唐代语言相像；乡村、城市和行政区也采用中国地名，这些地名的读音多少与唐代的读音相似。亦可以说与广东音相似。

越文是中文的一种变体，在一般用途上，法国人却宁取一种拉丁化的越文。这种拉丁化文字在一般人学起来自然容易得多，但以此为表达高深思想之工具是不够的。

越南国王保大在顺化的宫殿很像过去朝鲜李王的宫室，但是与北京的紫禁城比起来，规模同样地小得多了。事实上，越南皇宫很像明朝皇宫残留的一枝，法国人一直保留着越南皇宫，拿它作活的博物馆看待，日本人却宁愿把朝鲜国王送到日本，想把他改造为日本人。

有人告诉我，越南王的始祖葬在昆明某山头，因为他本来是中国入。后来有一天下午，我曾经去找越南王陵寝的故址，结果没有找到。

法国殖民地政府的所在地河内已经发展为现代化的法国城市，街道宽阔，公共建筑巍然矗立。但是一般农民所住的乡村却肮脏破落，与河内相较，真有天渊之别。自由、平等、博爱，原来如此！殖民地政府是一种时代的倒置，也就是非常倒退的制度，总督们到殖民地来只是为了剥削榨取，对人民的福利漠不关心，这与现代的政治原理恰恰背道而驰。

不过，我想在这里声明一句：菲律宾的殖民地政府应该例外。美国人有一个理想——提高菲人的文化水准，美国在菲律宾的殖民政府，在当地建立了一种足与美国学校媲美的学校制度。我曾在民国二十年（一九三一年）去过菲律宾，所到之处，学校都在传授历史、文学、科学和民主思想。美国正按照自己的模型，致力建设菲律宾为一民主共和国。菲律宾在欧美人殖民地制度下，获得两大贡献。一是西班牙人留下来的天主教。二是美国人留下来的民主制度和言论自由。

英国的生存寄托在殖民地上，法国也得靠殖民地的资源维持生存。如果说英法对殖民地人民的福利还没有完全漠视的话，那也只是为了养活母鸡，好让它多生一些蛋而已。

英国人养鸡生蛋的方法更是妙不可言，他们控制了主要的工业，而让当地人民在余留的行业上自觅生路。让鸡到田野里自行寻觅谷粒小虫充饥。鸡能找到谷粒小虫就心满意足了，养鸡的人则捡起晶莹的鸡蛋笑逐颜开。英国人从来干涉殖民地人民的风俗或迷信思想，除了影响公共卫生的事情以外，当地人民可以自在地过活而不受干扰。因为公共卫生不但与被统治者有关，与统治者也有同样的关系，传染病或瘟疫是不认肤色人种的。道路修得宽敞平坦，而且保养得很好，因为治安和商业是要靠良好的道路来维持的。防御力量只建立到足以镇压当地叛乱的程度，抵御其他强国的攻击则有赖大英帝国的威望。这种威望衰退时，殖民地就不免要受强邻的觊觎了。香港和缅甸一度失陷就是这个道理，英国这样珍惜她的威望，尤其是在远东的威望，也是这个道理。

缅甸与云南省的西南角接壤，珍珠港事变前约一年，我曾经奉命组织一个友好访问团到缅甸，我参观过炼油厂、锯木厂和碾米厂，这些都是缅甸的主要工业，统由英国控制，其余的行业则留归缅甸人经营。被视为神圣的牛只闲荡仰光街头，警察从来不加干涉。到处是寺院，院内矗立着镀金的宝塔，生活着普受统治者及被统治者尊崇的僧侣。缅甸人在英国统治之下自由过活，像一群吃饱了小虫谷粒的母鸡悠然自得，至少，我看不出一点不满的情绪，养的人则心满意足地捡取他们的鸡蛋。

但是总督们在祖国照耀出来的光明在殖民地里却不能完全隔绝。在印度，甘地的行动一直不受干扰，只有在紧急危难时才遭受监禁。像甘地的这种行动，在某些欧洲国家的殖民地里或许早已受到阴毒的处置了。但是大不列颠究竟是自由之邦，自由的光辉不免要透过殖民地上空的云层而惠及当地人民。各种迹象显示，英国对殖民地正在采取一种比较开明的政策。我希望这些照射到海外殖民地的微光能扩大为强烈的自由火炬，引导殖民地人民向光明的前途迈进。

就文化形态而言，越南王国是属于中国型的，缅甸则是印度型的。从前缅甸国王在曼达来的宫殿就是印度式的建筑。城镇的地名也看不出与中国有丝毫的渊源。越南人和中国人一样，吃饭时用的是筷子；缅甸却和印度人一样用手指。但是越南和缅甸在过去曾一度尊重中国的宗主权，中国在两国宗主权的丧失是中国觉醒的原因之一。

缅甸落入英人手中以后，缅甸的王室就逃到云南，生活费用一直由云南省政府供给，不过缅甸王的头衔已经有名无实了。缅王的子孙后来进了中国学校，结果归化为中国人。但是云南腾冲一带的人仍旧知道，这些缅甸王室后裔的祖先，曾经在曼达来皇宫的雀屏宝座上，统治过有

镀金宝塔和黄袍僧人的王国。

大学逃难

中日战争爆发以后，原来集中在沿海省份的大学纷纷迁往内地，除了我前面提到过的北大、清华、南开三所大学之外，接近战区以及可能受战争影响的高等学府都逐渐向内地迁移，到抗战快结束时，在内地重建的大学和独立学院，数目当在二十左右，学生总数约一万六千人。

这些学府四散在内地各省。有的借用庙宇祠堂，有的则借用当地学校的一部分校舍上课。公共建筑找不到时，有的学校就租用私人宅院，也有些学校临时搭了茅篷土屋。所有学校都已尽可能带出来一部分图书仪器，数量当然很有限，然而就是这一点点简陋的设备也经常受到敌机故意而无情的轰炸。

许多学生是从沦陷区来的，父母对他们的接济自然断绝了；有些学生甚至与战区里的家庭完全音信不通。有些在沦陷区的家长，虽然明知子弟在内地读书，遇到敌伪人员查问时，宁愿把儿子报成死亡，以免招致无谓的麻烦。后来由政府拨了大笔经费来照顾这些无依无靠的学生。

因为日本侵略是从华北开始的，所以最先受到影响的大学自然是在平津区的学校。平津区陷敌以后，许多教员和学生知道在侵略者的刺刀下绝无精神自由的希望，结果纷纷追随他们的学校向南或其他地方转进。当时政府尚在南京，看到这种情形，便下令在后方成立两个联合大学，一个在长沙，另一个在西北的西安。西北联大包含过去的两个国立大学和两个独立学院。它后来从西安迁到汉中，因为校舍分散，结果多少又回复了原来各单位的传统。

战事蔓延其他各地以后，原来还能留在原地上课的大学也步我们的后尘内迁了。结果国立中央大学从南京搬到战时首都重庆，浙江大学从杭州搬到贵州，中山大学从广州搬到云南。

我想详细地叙述一下长沙临时大学的情形，它是怎么联合起来的，后来又如何从长沙迁移到昆明。这故事也许可以说明一般大学播迁的情形。

我在前面已谈到，长沙临时大学是原在北平和天津的三所大学奉教育部之命联合而成的。这三所大学就是国立北京大学、国立清华大学和私立南开大学。三所大学的校长成立校务委员会，教职员全部转到临时大学。民国二十六年（一九三七年）十一月一日在长沙复课，注册学生

有从原来三个大学来的约一千二百五十人，以及从其他大学转来的二百二十名借读生。虽然设备简陋，学校大致还差强人意，师生精神极佳，图书馆图书虽然有限，阅览室却经常座无虚席。但是民国二十七年初，也就是南京失陷以后，情形可不同了。日本飞机把长沙作为轰炸目标之一。在长沙久留是很危险的，结果临时大学在第一学期结束后，经政府核准于二十七年二月底向西南迁往昆明。

从长沙西迁昆明是分为两批进行的，一批包括三百名左右男生和少数教授，他们组织了一个徒步旅行团，从湖南长沙穿越多山的贵州省一直步行到云南的昆明，全程三千五百公里，约合一千一百六十哩，耗时两月零十天。另外一批约有八百人，从长沙搭被炸得疮痍满目的粤汉路火车到广州，由广州坐船到香港，再由香港转到海防，然后又从海防搭滇越铁路到达昆明。他们由火车转轮船，再由轮船转火车，全程约耗十至十四天，视候车候船的时日长短而有不同。另有三百五十名以上的学生则留在长沙，参加了各种战时机构。

搬到昆明以后，"长沙临时大学"即改名"国立西南联合大学"，简称"联大"。因为在昆明不能立即找到合适的房子容纳这许多新客，联大当局决定把文学院和法商学院设在云南第二大城蒙自。民国二十七年五月初联大开课，四个学院的学生总数约在一千三百人左右。同年九月间，文学院和法商学院由蒙自迁回昆明，因为当地各中学均已迁往乡间，原有校舍可以出租，房间问题已不如过去那么严重。这时适值联大奉教育部之令成立师范学院，真是"双喜临门"。五院二十六系的学生人数也增至二千人。

二十八年九月间，联大规模再度扩充，学生人数已达三千人。联大过去十个月来新建造的百幢茅屋刚好容纳新增的学生。抗战结束时，我们共有五百左右的教授、助教和职员以及三千学生。多数学生是从沦陷区来的。他们往往不止穿越一道火线才能到达自由区，途中受尽艰难险阻，有的甚至在到达大后方以前就丧失了性命。

我的儿子原在上海交通大学读书，战事发生后他也赶到昆明来跟我一起住。他在途中就曾遭遇到好几次意外，有一次，他和一群朋友坐一条小船，企图在黑夜中偷渡一座由敌人把守的桥梁，结果被敌人发现而遭射击。另一次，一群走在他们前头的学生被敌人发现，其中一人被捕，日人还砍了他的头悬挂树上示众。

我有一位朋友的儿子从北平逃到昆明，在华北曾数度穿越敌人火线，好几次都受到敌人射击。他常常一整天吃不到一点东西，晚上还得

在夜色掩护下赶好几里路。他和他的兄弟一道离开北平，但是他的兄弟却被车站上的日本卫兵抓走送到集中营去了，因为他身上被搜出了学生身分的证件。他们是化装商店学徒出走的，但是真正的身分被查出以后，就会遭遇严重的处罚。

据说北大文学院的地下室已经变为恐怖的地牢。我无法证实这些传说，不过后来我碰到一位老学生，在他设法逃出北平到达大后方以前，曾经被捕坐了两年牢。据他说，他曾被送到北大文学院地下室去受"招待"。那简直是活地狱。敌人把冷水灌到他鼻子里，终至使他晕过去。他醒过来时，日本宪兵上村告诉他，北大应该对这场使日本蒙受重大损害的战争负责，所以他理应吃到这种苦头。上村怒不可遏地说："没有什么客气的，犯什么罪就该受什么惩罚！"他曾经连续三次受到这种"招待"，每次都被灌得死去活来，他在那个地牢里还看到过其他的酷刑，残酷的程度简直不忍形诸笔墨。女孩子的尖叫和男孩子的呻吟，已使中国历史最久的学府变为撒旦统治的地狱了。

留在北平的学生在敌人的酷刑下呻吟呼号，在昆明上课的联大则受到敌机的无情轰炸。轰炸行为显然是故意的，因为联大的校址在城外，而且附近根本没有军事目标。校内许多建筑都被炸毁了，其中包括总图书馆的书库和若干科学实验室。联大的校舍约有三分之一被炸毁，必须尽速再建。但是敌机的轰炸并没有影响学生的求学精神，他们都能在艰苦的环境下刻苦用功，虽然食物粗劣，生活环境也简陋不堪。

学术机构从沿海迁到内地，对中国内地的未来发展有很大的影响，大群知识分子来到内地各城市以后，对内地人民的观念思想自然发生潜移默化的作用。在另一方面，一向生活在沿海的教员和学生，对国家的了解原来只限于居住的地域，现在也有机会亲自接触内地的实际情况，使他们对幅员辽阔的整个国家的情形有较真切的了解。

大学迁移内地，加上公私营工业和熟练工人、工程师、专家和经理人员的内移，的确具有划时代的意义。在战后的一段时期里，西方影响一向无法到达的内地省份，经过这一次民族的大迁徙，未来开发的机会已远较以前为佳。

战时之昆明

北大等校内迁以后，我也随着迁居滇缅路的终点昆明。珍珠港事变爆发以前，我曾一度去过缅甸，并曾数度赴法属印度支那及香港。当时以上数地与昆明之间均有飞机可通。法国对德投降以后，日本不战而下法属印度支那，因此我们就筑了滇缅路与仰光衔接。珍珠港事变以后，缅甸亦陷敌手，我国与法属印度支那的海防以及缅甸的仰光，陆上交通均告断绝，昆明亦陷于孤立状态。租借法案下运华的军火，只好由空运飞越隔绝中印两国的喜马拉雅山的"驼峰"，才免于中断。

抗战期间，我曾数度坐飞机去重庆，也曾一度去过四川省会成都。重庆是战时的首都，位于嘉陵江与长江汇合之处。嘉陵江在北，长江在南，重庆就建在两江合抱的狭长山地上，看起来很像一个半岛。房子多半是依山势高下而建的，同时利用屋后或屋基下的花岗岩山地挖出防空洞，躲避空袭。日本飞机经年累月，日以继夜地滥炸这个毫无抵抗力的山城，但是重庆却始终屹立无恙。成千累万的房屋被烧毁又重建起来，但是生命损失却不算太大。敌人企图以轰炸压迫战时政府迁出重庆，但是陪都却像金字塔样始终雄踞扬子江头，它曾经受过千百年的磨练考验，自然也能再经千百年的考验。重庆可以充分代表中国抵抗日本侵略的坚忍卓绝的精神。

重庆之西约半小时航程处是平坦的成都市。成都和北平差不多一样广大，街道宽阔，整个气氛也和故都北平相似。成都西北的灌县有两千年前建设的水利系统，至今灌溉着成都平原百万亩以上的肥沃土地。严重的水灾或旱灾几乎从来没有发生过。这块广大丰饶的平原使四川成为"天府之国"，使重庆人民以及驻防省境和附近地区的军队，粮食得以供应无缺。

学校初迁昆明之时，我们原以为可经法属印度支那从欧美输入书籍和科学仪器，但是广州失陷以后，军火供应的干线被切断，军火都改经滇越线运入。滇越铁路军运频繁，非军用品根本无法挤上火车。我们运到越南的图书仪器，只有极少一部分获准载运入滇。

这时候，长江沿岸城市已相继陷入敌手，日军溯江直达宜昌，离长江三峡只是咫尺之遥。最后三峡天险也无法阻遏敌人的侵略狂潮而遭到铁骑的蹂躏。

每当战局逆转，昆明也必同时受到灾殃。影响人民日常生活最大的莫过于物价的不断上涨。抗战第二年我们初到昆明时，米才卖法币六块钱一担（约八十公斤）。后来一担米慢慢涨到四十元，当时我们的一位经济学教授预言几个月之内必定会涨到七十元，大家都笑他胡说八道，但是后来一担米却真的涨到七十元。法属安南投降和缅甸失陷都严重地影响了物价。

物价初次显著上涨，发生在敌机首次轰炸昆明以后，乡下人不敢进城，菜场中的蔬菜和鱼肉随之减少。店家担心存货的安全，于是提高价格以图弥补可能的损失。若干洋货的禁止进口也影响了同类货物以及有连带关系的土货的价格。煤油禁止进口以后，菜油的价格也随之提高。菜油涨价，猪油也跟着上涨。猪油一涨，猪肉就急起直追。一样东西涨了，别的东西也跟着涨。物价不断上涨，自然而然就出现了许多囤积居奇的商人。囤积的结果，物价问题也变得愈加严重。钟摆的一边荡得愈高，运动量使另一边也摆得更高。

控制物价本来应该从战事刚开始时做起，等到物价已成脱缰野马之后，再来管制就太晚了。一位英国朋友告诉我，英国农人在第一次世界大战时曾经大发其财，但是第二次大战一开始，农产品就马上受到管制了。这次战争在中国还是第一次大规模的现代战争，所以她对这类问题尚无经验足资借鉴。

昆明的气候非常理想，它位于半热带，海拔约六千，整个城有点像避暑胜地。但是因为它的面积大，居民并不认为它是避暑胜地。昆明四季如春，夏季多雨，阵雨刚好冲散夏日的炎暑。其他季节多半有温煦的阳光照耀着农作密茂的田野。

在这样的气候之下，自然是花卉遍地，瓜果满园。甜瓜、茄子和香橼都大得出奇。老百姓不必怎么辛勤工作，就可以谋生糊口；因此他们的生活非常悠闲自得。初从沿海省份来的人，常常会为当地居民慢吞吞的样子而生气，但是这些生客不久之后也就被悠闲的风气同化了。

昆明人对于从沿海省份涌到的千万难民感到相当头痛。许多人带了大笔钱来，而且挥霍无度，本地人都说物价就是这批人抬高的，昆明城内到处是从沿海来的摩登小姐和衣饰入时的仕女。入夜以后他们在昆明街头与本地人一齐熙来攘往，相互摩肩接踵而过。房租迅速上涨，旅馆到处客满，新建筑像雨后春笋一样出现。被飞机炸毁的旧房子，迅速修复，但是新建的房子究竟还是赶不上人口增加的速度。

八年抗战，昆明已变得面目全非。昔日宁静的昆明城，现已满街是卡车司机，发国难财的商人，以及营造商、工程师和制造厂商。军火卡车在城郊穿梭往返。

自然环境和名胜古迹却依然如昔。昆明湖的湖水仍像过去一样平滑如镜，依旧静静地流入长江，随着江水奔腾两千哩而入黄海。鱼儿和鹅鸭仍像往昔一样遨游在湖中。古木围绕的古寺雄踞山头，俯瞰着微波荡漾的辽阔湖面。和尚还是像几百年前的僧人一样念经诵佛。遥望天边水际，我常常会想入非非：如果把一封信封在瓶子里投入湖中，它会不会随湖水流入长江，顺流经过重庆、宜昌、汉口、九江、安庆、南京而漂到吴淞江口呢？说不定还会有渔人捡起藏着信件的瓶子而转到浙江我的故乡呢！自然，这只是远适异地的思乡客的一种梦想而已。

纵横的沟渠把湖水引导到附近田野，灌溉了千万亩肥沃的土地。沟渠两旁是平行的堤岸，宽可纵马奔驰；我们可以悠闲地放马畅游，沿着漫长的堤防跑进松香扑鼻的树林，穿越苍翠欲滴的田野。

城里有一个石碑，立碑处据说是明朝最后的一位流亡皇帝被缢身死的故址。石碑立在山坡上，似乎无限哀怨地凝视着路过的行人。这可怜的皇帝曾经逃到缅甸，结果却被叛将吴三桂劫持押回中国。吴三桂原来奉命防守长城抗御清兵，据传说他是为了从闯王李自成手中援救陈圆圆，终于倒戈降清。他为了镇压西南的反抗被派到云南，已经成为他阶下囚的永历帝被带到他的面前受审。

"你还有什么话要说没有？"据说吴三桂这样问。

"没有，"明代的末朝皇帝回答说，"唯一我想知道的事是你为什么背叛我的祖上？你受明室的恩泽不能不算深厚吧？"

吴三桂闻言之下，真是心惊胆战，他马上下令绞死这位皇帝。后人那里立了纪念碑，上刻："明永历帝殉国处。"

离城约十公里处有个黑龙潭。春天里，澄澈的潭水从潭底徐徐渗出，流入小溪浅涧。黑龙潭周围还有许多古寺和长满青苔的大树。明朝末年曾有一位学者和他的家人住在这里。崇祯帝殉国和明朝灭亡的消息传来以后，他就投身潭中自杀了。他的家属和仆人也都跟着跳入潭中，全家人都以身殉国，后来一齐葬在黑龙潭岸旁。西洋人是很难了解这件事的，但是根据中国的哲学，如果你别无办法拯救国家，那末避免良心谴责的唯一方法就是以死殉国。抗战期间，中国军人以血肉之躯抵抗敌人的弹雨火海，视死如归；他们的精神武装就是这种人生哲学。

这个多少依年份先后记述的故事到此暂告段落。后面几章将讨论中国文化上的若干问题，包括过去的、现在的和未来的；同时我们将讨论若干始终未能解决的全国性问题，这些问题在未来的年月里也将继续存在。

从一八四二年香港割让到一九四一年珍珠港事变，恰恰是一世纪。《西潮》所讲的故事，主要就是这一段时期内的事情。英国人用大炮轰开了中国南方的门户，开始向中国输入鸦片和洋货，但同时也带来了西方的思想和科学的种籽，终于转变了中国人对人生和宇宙的看法。中国曾经抵抗、挣扎，但是最后还是吸收了西方文化，与一千几百年前吸收印度文化的过程如出一辙。英国是命运之神的工具，她带领中国踏入国际社会。

中国所走的路途相当迂回，正像曲折的长江，但是她前进的方向却始终未变，正像向东奔流的长江，虽然中途迂回曲折，但是终于经历二千多哩流入黄海。它日以继夜、经年累月地向东奔流，在未来的无穷岁月中也将同样地奔腾前进。不屈不挠的长江就是中国生活和文化的象征。

PART SEVEN CHINA IN THE MODERN WORLD

CHAPTER 32 CHINA AND JAPAN—A COMPARISON

Before the coming of Admiral Perry Japan was an offshoot of Chinese civilization, pure and simple. After that time she became a blend of offshoots of both Chinese and Western civilizations. Unless one understands both China and the West he is not in a position to understand Japan.

Yet there is something more. Offshoots may be similar to their main roots, but they are not identical. To render judgment upon things similar as if they were the same may lead miles away from the truth. Moreover, the blending of two civilizations may change the character of the contributing originals.

The offshoots of Chinese civilization in Japan were of the Tang era (618-905). While many of the precious elements of Tang culture had been worn away in China through centuries of barbaric invasion, they were preserved in Japan. Dancing, music, the arts, ways of living, the pronunciation of Chinese words and China's martial spirit, all of Tang origin, found living embodiment in the Island Empire of the Rising—or hereafter the Setting—Sun. If you want to know something about the Tang civilization, go to Japan. Upon a foundation of Tang culture Japan made herself great by the absorption of Western science.

However, an offshoot is but an offshoot; it has to receive nourishment from the roots of the mother tree. As soon as the mother tree in China withered, the offshoot had to depend for nourishment on the local soil of Japan. Now, Japan had every nourishment in her soil to nurse the Tang offshoots to grow, save one—originality. In this respect she failed miserably, and for lack of this one element Japan remained a dwarf tree.

After Perry's arrival she began to tap the flow of Western civilization to fertilize her land. The tree did shoot up heavenward after receiving new nourishment from this source. But again she failed

in respect of that most valuable element of Western civilization—originality.

She copied. She copied the Tangs in her civilization. She copied England in building up her navy. She copied Germany in training her army. She copied America in developing her industry. She copied the nineteenth-century Western anachronism of building a colonial empire—a bit too late. She copied Germany's blitzkrieg by hitting at Pearl Harbor—a bit too far. Japan is a wonderful copy which is almost as good as the original but falls short in reproducing the spirit behind it, something rather elusive. Her copybook is closed now, I hope, forever. She grew on copying, became strong on copying, and I hope will not commit hara-kiri on copying.

I admire Japan for her genius of exact aping—something China was unable to do, for she was too clumsy for that. But China made up for it by the possession of originality. She created and created until her energy was sapped by centuries of barbarian invasion, famine, and disease after the downfall of the Tangs.

In parallel fashion, America is an offshoot of European civilization. But here the case is different, for the early colonist from England brought with him the seeds of a love of freedom, which is an expression of originality in ideas. So America created and created till she became the most highly industrialized nation in the world: the most materialistic and at the same time the most idealistic and humanitarian. In the combination of these great opposing elements into one unity lies the greatness of America.

The martial spirit of Japan, of which the Japanese are very proud, is embodied in Bushido, the way of chivalry, which she incorporates into what she calls vaguely Yamato, the "spirit of Japan." Bushido as revealed in peace is an intense loyalty to one's country; in war it means to fight to the last man. Japan has forgotten that what she calls Bushido is nothing more than the martial spirit of ancient China. The very word shows the Tang origin. The modern Chinese pronunciation is Wu-shi-tao—in Cantonese, Mu-shi-do, very similar to Tang pronunciation, whence the Japanese Bu-shi-do.

With strict discipline and efficient organization, and with a thorough application of modern science, Bushido became a mighty weapon of war with which Japan won victory in the Sino-Japanese and Russo-Japanese Wars and ultimately hoped to conquer China and the world. Out of it grew a will to power; upon this foundation she built up a military empire which recognized nothing but power.

The secret of the phenomenal success of Japan in world power lies in reforms along Western lines made by hereditary ruling classes nurtured in the martial spirit, with a strong aptitude for copying and an intense loyalty to leaders and to their native land. They had at hand a people whose supreme virtue is to follow their leaders and obey orders. So the reforms of Japan since the beginning of the Meiji period have moved in a constant and unchanging direction.

Reforms in China, on the other hand, have to start from the bottom. There have been no hereditary ruling classes, no aristocracy but the aristocracy of learning. The vast country has to be whipped into unity of purpose by learned leaders from among the common people. Thus the process is necessarily slow and follows a zigzag way. Political leaders such as Sun Yat-sen and intellectual leaders such as Chang Pin-ling, Liang Chi-chao, and Tsai Yuan-pei have all been scholarly men drawn from ordinary backgrounds. From the common people they came and to the common people they went with their great gifts of social and intellectual vision.

Modern Japan has been built up by ruling classes, modern China by the common people. It is therefore much easier to be a leader in Japan, where a leader dictates to the people; in China he has to educate and really lead them—a much more difficult art, which requires a good deal of resourcefulness and originality.

China was comparatively slow in making reforms, but once she made up her mind to it she always tried to find their deeper meaning. In the course of the last hundred years, as we have seen, she began by making cannon balls, from which she was led to political reforms, thence to social reforms and to the introduction of ideas from the West. She wanted to strike at the core of everything. She penetrated

deeper and deeper to the heart of Western civilization. She recast her old beliefs and constructed new ones until they became part and parcel of her life. She is a scholar, a moral philosopher, an artist. Her civilization and culture have grown out of her life and she could not be satisfied with Western ideas until they were thoroughly assimilated into that life. In contrast to Japan, therefore, China's thought is modern but her social and industrial structure still lags behind. This is something inherent in the philosopher, the dreamer.

China is broad-minded and democratic and possesses originality but she lacks organization, discipline, and the martial spirit. She is a country of scholars, where learning is most honored and culture most treasured. Yet the military might to defend herself within her own boundaries is something that China has yet to achieve. In China's strong points her weaknesses lie.

So it is with Japan. The Japanese is a warrior and an efficient administrator. The adopted Western civilization has been but a military superstructure which made Japan a militarily potent nation but did not touch the deeper life and thought of the people. While her structure is modern, her spirit and ideas are medieval. This should not surprise the reader, since the feudal system actually existed in Japan until only yesterday—the beginning of the Meiji period. Its abolition took place almost simultaneously with the introduction of Western civilization, while China abolished feudalism before the Christian era.

By elevating the martial spirit to the highest plane which it is possible to maintain by strict discipline, Japan has sacrificed the creative spirit which, in the long run, is the heart of a culture and the sure foundation of a nation. The creative spirit is something one cannot ape. The more one relies on imitation, the more one is apt to lose his creativeness. The more strict the discipline for war required of a people, the more that people will lose the creative spirit.

In the assimilation of Chinese culture, as with the Western, Japan was only partially successful. For example, of the two important moral precepts which are the guiding principles of life in China—loyalty and considerateness—Japan learned loyalty, an indispensable virtue in a

feudal state or a militaristic nation, but failed to understand considerateness, which is the virtue of the scholar. She stuck to her own ideas stubbornly or faithfully but refused to consider other people's viewpoints. The narrow-mindedness of the Japanese, of which even they themselves are conscious, deprived them of the leadership necessary for a continental colonial empire. They had ambition and military might but no statesmanship. The Japanese see things very clearly within certain limits but are blind to major cultural movements of the world. They are bigoted, intolerant, and inflexible under the cover of extreme courtesy.

On the other hand, the two virtues went hand in hand in China. She is faithful and at the same time considerate. China does not feel that faithfulness to her own ideas precludes the existence of other points of view. She always tries to imagine herself in the position of others. That is considerateness, of which Japan was not capable. So she failed to understand China.

Japan has acted like a strong little boy who tries to take a ram by the horns. It snorts, jumps, arches its back, and butts at him until he is forced to let go or is laid flat on his back. Then he wonders why the creature should act that way. Poor boy! Think what you would do if someone took you by the ear—try to see yourself in another's position—and you will understand China.

Another important factor that has made the Japanese a war-loving race is the belief that Japan is a divine country, born of gods and living and conquering by divine will. This is not easily understood either by the West or by the Chinese. But it is a fact that the Japanese believe it reverently. The Chinese believe in gods, but they take them as the guardians of morals, not of war. For the Chinese the gods have nothing to do with the rise or downfall of an empire. But to the Japanese the rise of Japan was the will of the gods.

From time immemorial the ruling classes of Japan have believed that in war the gods are always on the side of Dai Nippon. When the Yuans or Mongols failed to conquer her, they thought the gods had protected her with their divine power. The typhoon that destroyed

Kublai Khan's Mongol fleet was an act of the gods. The reigning dynasty of the Mikado, the Japanese have believed up to now, is of divine origin and its emperors the direct descendants of gods.

A Chinese graduate of Tokyo Imperial University, later a professor in a Chinese university, has done an illuminating piece of historical research to show how Japanese imperialism grew out of this religious-patriotic fervor. Expressions of it in the everyday life of the soldier are not lacking. During the war Japanese soldiers almost all carried Buddhist or Shinto charms for protection in battle. I saw many such charms brought back from battlegrounds by Chinese soldiers, who finally came to regard them as an indispensable part of enemy military equipment and paid no more attention to them, except to joke about them occasionally.

After one battle between the American Air Force and the Japanese invaders I acted as guide to a party of American officers and soldiers who drove in jeeps over miles of rugged mountain paths to a crashed Japanese bomber. In the pockets and on the bodies of the dead pilots we found the usual Buddhist and Shinto charms; smeared with blood and riddled with bullets. An American captain pulled a cloth charm from the dead pilot and asked me what it was. I told him.

"What's the use of it?" asked the captain.

"For divine protection," I replied.

"No protection, though—" he turned over the cloth and tried to make out the indecipherable signs on it, "—you get me?" And he threw it on the ground casually and forgot about it. Like this American officer, the Chinese had come to dismiss lightly these tokens of invulnerability. So it is with the world.

On the day of that aerial battle I saw seven enemy bombers spinning down from the skies in white smoke. The other search parties brought back from the wrecked planes many similar talismans, besides cartridges, maps, and scientific charts. A curious combination of medieval superstition with modern science. But to the Japanese it is no superstition; there is a living divine force which spurs them on to

fight for their country, protected by the gods. The charms are but the symbol of that divine power.

After the fall of Hongkong a Chinese couple—a Mr. and Mrs. Huang whom I know well and who understand the psychology of the Japanese—presented an image of Buddha to a Japanese soldier who entered their house. Crossing the harbor to Kowloon the little boat he took capsized and all on board were drowned but himself. He came back to them to express his gratitude, for he believed that the image had saved his life. But to the Chinese way of thinking the image had protected the couple from being molested by the enemy, while the escape from drowning was mere luck.

The world does not know much about Japanese religious fanaticism in war because the Japanese themselves have not said much about it in their propaganda. While in China modern science has sapped the old beliefs and is a disintegrating factor in relation to them, in Japan it became merely a powerful weapon of the gods to weld the country together in a war of aggression. This psychological background of intense religious patriotism has made the Japanese warlords unamenable to reason, the Japanese soldier a hard nut to crack, and Japan herself a menace to the world; such is the result of fanaticism combined with modern science.

To have such a fanatical neighbor would be a headache to any country. And Japan has been much more than a headache to China during the last fifty long, troubled years. Only utter defeat and unconditional surrender could make Japan come to her senses. The inevitable fate awaited her, and we must now hope that it will have its bitter but salutary consequence.

When the gods of the Allied nations have fulfilled their mission, Japan—as I can imagine—may be a picturesque and peaceful country, with enchanting mountain scenery, pretty gardens wreathed in sakura blossoms, attractive pavilions with ladies in beautiful kimonos; and an industrious, courteous, and docile people, in whose ears will ring no voices of gods urging them onward to war and to conquest.

Then, and not until then, will peace reign in Japan, in China, in

the Far East, and in the world.

CHAPTER 33 CHARACTERISTICS OF CHINESE CULTURE

East and West are different because their cultures are different. Yet you will find similarities in both. These parallels, no matter how close, will not make two cultures alike; the peculiar characteristics of each still render one different from the other. In the West varying culture traits make the Germans different from the English and the French from the Dutch. Yet there are characteristics common to all—common ties which hold the Western nations together culturally under the loose name of "Western culture." These again differ from the Eastern nations. Similarities or contrasts of culture, therefore, are not to be judged by outward parallels but by the fundamental character of each.

In this chapter we will examine the characteristics of Chinese culture under three headings: (1) the absorbing power of Chinese civilization, (2) morals and intellect, and (3) the practical wisdom of the Chinese people.

1. The Absorbing Power of Chinese Civilization

Some forty years ago, when I was still in school, we were constantly told by foreigners and progressive Chinese alike that China was like a solid rock which absorbs little or nothing. That is to say, Chinese civilization was stagnant and petrified and China was incurably conservative. She loved and lived by her own ways. Nothing could effect a change in John the Chinaman.

This appeared to be all right but proved all wrong. From the opening of the treaty ports until after the Sino-Japanese War in 1894 China appeared to resist Western influence. However, during previous centuries she had absorbed many of the outlandish things which from time to time made inroads upon her life.

In music, the so-called "national" Chinese music of the present day is played on instruments mostly of foreign origin. Forms of the fiddle,

flute, and harp were introduced from Turkestan^[1] centuries ago. We also kept the ancient Chinese harp, but only a few understand its music and still fewer can play it.

Various foods have been introduced to the Chinese dinner table from foreign lands: watermelons, cucumbers, grapes, and peppers came hundreds of years ago; sweet potatoes, peanuts, and Indian corn have appeared in recent centuries. In late decades the Irish potato, tomato, cauliflower, cabbage, and lettuce have found their way into Chinese cooking. Tenderloin steaks of the West, chopped very fine and served with bean sauce, have kept delightful company with Chinese dishes. Tomato soup with tender shrimp meat and hot fried rice hissing euphoniously in it was an innovation. Dinner in China is sometimes topped off with ice cream, American coffee, and Sunkist oranges, together with fruits of native production. Oranges grew originally in Chinese soil, traveled to America, received their education in the Luther Burbank school of California, and returned to their native land with a new title—something like the B.A. or Ph.D. brought back by Chinese students from American universities. Chinese oranges also went to Germany many, many years ago, where they turned into apples—for the Germans called orange *apfelsine*, Chinese apple.

Spiritual or intellectual nourishment from any quarter that was worth the trouble of absorbing China was always ready to welcome. During the Ming Dynasty the Jesuits brought to China astronomy, mathematics, and the Bible. An Imperial minister was converted and his residence in the Siccawei district of Shanghai was made a center of Catholic activities. From the Jesuits the Chinese learned Western astronomy and some became Christians because of it. The Siccawei Observatory has been a guiding star for shipping along that coast ever since the opening of the treaty ports.

Huang Chung-hsi, a great Ming scholar living during the end of the Ming and the beginning of the Ching (Manchu) Dynasty, was one of the admirers of Western astronomy brought by the Jesuits. He said: "Learning has been preserved in foreign lands while China has lost it

owing to the lack of proper care." He once told a friend that "so far as astronomy is concerned, we are only babies in comparison with the Western scholar." Which shows how open-minded great Chinese scholars were.

The fact is that China has endured many vicissitudes of fortune in the course of her centuries because of her great capacity for absorption. No civilization in the world could sustain itself without taking in alien elements from time to time in one way or another. I think it needs no historian to prove that point. The interdependence and mutual influences of Western civilizations are so obvious as to require no argument. But the interaction of Eastern and Western civilizations is less apparent. I have been told by Professor Joseph Needham of Cambridge that the expanding properties of gunpowder influenced the discovery of steam power, and that the idea of good in human nature, of the Confucian school, influenced the Encyclopedists in France. A number of things have trickled from time to time into the West from the East. But I would like to leave it to the West to tell us.

We did not absorb more than music, foodstuffs, and things of similar nature through our western and northern frontiers by land because there was not much more to absorb. The races in those regions had little spiritual or mental food to offer. For the latter we turned to India. In the field of arts Chinese painting and architecture were influenced by Buddhism; in Chinese philosophy Buddhist thought played a very important part, and it even affected the style and vocabulary of Chinese literature.

Centuries before the Jesuits the Chinese had assimilated the moral aspects of Buddhism, but they left the system of other-worldly philosophy alone. After centuries of sojourning in China, with tens of thousands of Buddhist temples and monasteries occupying the best sites on mountains as well as in cities, its basic philosophy and religion still remain foreign to the Chinese mind. The scholars befriend or tolerate it and the common people worship it as one of the religions in China. Nevertheless it remains foreign. To the practical-minded Chinese its metaphysical system is not palatable. It exists in

China because there are moral teachings in it and in time of distress one could find moral refuge in it. The Chinese only wanted to absorb foreign elements into their own system of thought, to be enriched by them; they would not surrender their own system to an alien one.

Out of their virtue of tolerance the Chinese had an ingenious way of dealing with any system they could not absorb into their own. They would take part of it and leave the rest to co-exist with the indigenous products. Thus a portion of her teeming millions would take in the imported system and become Buddhists, Mohammedans, or Christians, and all lived side by side in a good, neighborly way.

But to go back to the introduction of Western civilization during the last half century. In the matter of clothing the process of westernization in the past thirty years has been still more striking. Felt or straw hats have taken the place of old types of headgear; cut hair has banished the "Chinaman's queue" as you have seen it in old pictures. Women wear bobbed hair with permanent waves. Short skirts and silk and nylon stockings have given Chinese women a chance to show their pretty and well-developed legs. As regards their feet, they have indeed gone through a revolution. Western shoes have relieved the agelong agonies of foot-binding, with subsequent improvement in their bodily health. Healthy mothers bring forth healthy children—the effect upon the coming generation has been remarkable. Our children are not only healthier as compared with children of days gone by, but more active—quicker in movement and keener in mind.

In social affairs both sexes intermingle more freely in contrast with the old customs of segregation. In civil law marriages no longer have to be arranged by parents; young men and women have the right to find their lovers and choose their own mates. Coeducational institutions are rather the rule than the exception.

As regards dwellings the old superstition of *feng-shui* that affected the choice of sites for buildings has given way to modern theories of architecture. While the old artistic styles are still preserved for their beauty and grandeur in some cases, air, light, convenience, comfort,

and hygienic conditions are first considerations. Flush toilets, baths, and a steam heating system are installed in modern houses. Stiff-backed chairs and hard beds have given way to sofas and spring mattresses.

Chinese food is rich in its variety because it is always ready to absorb alien elements. Western food is comparatively simple because it is, I think, not so ready to take in foreign materials. Tea was indeed introduced into Europe from China centuries ago. Spices were introduced from the East, and in search for a shorter trade route to India Columbus happened upon America. Worcestershire sauce, I am told, was developed from Chinese bean sauce. Aside from these, Western food has remained untouched by Eastern influences. Chop suey houses are found by the hundreds in America and Americans are quite fond of chop suey but know few other Chinese dishes.

On the other hand, China keeps on absorbing more and more alien elements, sometimes sensibly and at other times rather indiscriminately—not only food but clothing, shelter, ideas, social customs, and so forth. In most cases the process of absorption is through unconscious rather than conscious action. It is something like the absorption of nutriment from the soil by the roots of a tree: they absorb and cannot do otherwise. It is the nature of a growing tree to absorb, or it would cease to grow.

The introduction and absorption of alien civilization from China's western frontiers were accomplished in the course of many, many centuries, during which foreign elements came into the country only in trickles. Therefore she took them in gradually and slowly digested them. It was for the most part an unconscious process; it did not change the main course of Chinese civilization, but was something like the attraction of a magnet for iron particles. They cluster around it, but the magnet does not change its position.

Western civilization, on the other hand, came to China's eastern frontiers by sea in torrents, in all its fierceness, speed, and magnitude, and in the short span of some fifty years. To try to absorb Western civilization—with all that the French and industrial revolutions had

contributed to it—was like gobbling up many days' food supply at one meal. Naturally China suffered some discomfort—not to say unbearable stomachache. Thus Western civilization at one time became so distasteful to China that she feared it, cursed, kicked the table over, and turned from it in despair, only to find more food being pressed on her. The reaction against Western civilization was a reaction against food after a stomachache through much overeating. The abortive reforms of 1898 were but a case of overeating. The Boxer Rebellion of 1900 was a violent case of acute and complicated indigestion. China was forced on the operating table, to be operated on by Western doctors—the allied armies of eight nations. For that she had a handsome bill to pay—450,000,000 taels—and in the operation almost lost her life.

The doctrine of Chang Chi-tung that "Chinese culture is fundamental and Western civilization is supplementary" is no more than to say that a sound stomach is more important to health than the foods it is to take. So China tried to move cautiously, measuring her steps instead of lengthening them. But the tides of Western civilization would not wait for her. They lashed her eastern shores, overflowed into the rich Pearl and Yangtze Valleys, and rapidly extended to the Yellow River Valley. She had to go on taking more imported food in spite of her recent serious upset.

By 1902 the students, who had the best appetites, caught up with the spirit of the times, and revolution—against established authorities, educational, political, and moral, as well as intellectual—became the catchword of the rising generation. Burdened with a legacy of the past which seemed to them at the time no more than the dead hand of a bygone civilization, the receptive mind of youth took so enthusiastically to Western ideas as to offset the influences of tradition.

Soon after the opening of the five treaty ports, China had established arsenals, dockyards, machine shops, schools of foreign languages; had translated books on elementary sciences and sent students to study in America. Being defeated in various wars of self-

defense against Western Powers, she started to build a navy. A small navy was built, indeed, only to be destroyed by Japan in 1894. Japan could not endure to have China have a navy.

Failing this, China went a step further by taking up the reform of government, army, and education. The Imperial government at Peking began to prepare for the adoption of a Western constitutional form of government; it established new systems of education, organized modern armies and police, and sent large numbers of students to study abroad. This may be regarded as the first conscious effort in history to absorb a foreign civilization on a large scale, and it had far-reaching consequences in China's national life.

The reforms in education were the most important, because they were the best planned, with most foresight, and dealt directly with the rising generation whose minds were least fettered by traditional ideas. Later, when the students of one school generation grew up and came into power, they adopted more Western ways and consequently those of the succeeding generation were in a better position to absorb more new ideas. When these came to power in their turn, they went still further in westernization and more new measures were introduced into the government, army, and schools. Thus each new generation was more modernized than the previous one.

The 1919 student movement in Peking, the emphasis upon science and modern democratic ideas by professors of the National University there, and the literary revolution sponsored by Professor Hu Shih, were the beginnings of conscious effort to absorb Western thought, hitherto limited mainly to the industrial and political spheres. This effort came nearer to the heart of Chinese culture and with it a new leaf was turned in the cultural history of China. For by this means China has been trying to catch up with the advancing tides of the world. Chinese civilization, with compass pointing to the West, has gradually shifted its course to meet the main currents of Western civilization, and in the next fifty years, while still retaining its own characteristics, it will flow in the common channels of the coming civilization of the world.

So far China has already received much benefit from westernization. The freedom of women to be on equal terms with men in social activities, to marry and remarry, and to have their feet unbound has been gained through the influence of Western respect for women. Western medicine has prevented plagues which wrought yearly havoc among the teeming millions. Painless operations have relieved the suffering of thousands of people. Machinery and inventions have improved means of production and contributed much to the enjoyment of life. And it goes without saying that modern weapons of war have also helped people to kill more, and to be killed. Modern science has widened the scope of knowledge; scientific methods have been carried into the study of Chinese history, philosophy, and literature. Above all, the old superstitions in which people used to live are giving way to the enlightenment of scientific truths. The greater our capacity to absorb Western ideas, the more our civilization will be enriched. Poverty and disease, twin curses of Chinese national life, will gradually disappear in proportion to the extent and thoroughness of China's modernization. To me, in this respect, modernization and westernization seem inseparable, if not identical, since the process of modernization began in the West and has gone forward without interruption. So China cannot get one without getting the other.

In a way, modernization has been as much imposed upon the West as westernization upon China. Wherever the spearhead of modern invention passes through, it changes the means of production, creates problems of distribution and control, and thus gives rise to new problems. Men must adjust themselves to changing conditions; the constant changes of environment and adjustments of man to them impose a progress on him. Imagine yourself looking down on Europe after the French Revolution; you would see that there had not been much visible change on the surface of that continent since the Roman Empire. But if you took another look half a century after the industrial revolution the changes would be quite noticeable. After still another half century you would find networks of railways covering the surface of all Europe and America, too, with trains crawling on them like

thousands of centipedes. Here and there factories with chimneys sticking up would cluster in the large industrial centers like fantastic beehives. Steamboats carrying manufactured goods would be shuttling in and out of harbors, ready to bear the finished products of the factories to all the corners of the earth.

These same steamboats half a century ago brought to China the lucifer matches, clocks, kerosene lamps, toys, and other useful and ingenious foreign articles that I played with in childhood in that tranquil village. The innocent and unconscious absorption of these curious things was the beginning of the great change that was to bring China in line with the trend toward modernization—with all its accompanying sufferings, turmoils, and perils, and with the rapid disappearance of the pleasant, tranquil life of old China.

Heretofore the absorption of foreign elements, conscious or unconscious, had enriched the life of the people and led to no complications. With the absorption of modern Western manufactures and systems or ideas, trouble began to spring up. Like the modern sulfa drugs, they cure diseases but sometimes cause serious reactions, which may prove fatal. To absorb Western civilization with less violence of reaction is the problem China has yet to face. It calls for experiment and scientific research, which again are western products—machine tools to make all modern machinery, mental, social, or industrial.

2. Morals and Intellect

When for the first time I read the Greek philosophers in the ethics class in California I began to feel, as I have said before, that Chinese thinkers in ancient times were enclosed in an atmosphere of morals, while the Greeks possessed the quality of all-piercing intellect. As I read more books on Greek life and culture it became more clear and convincing to me that some such striking contrast did exist between ancient Chinese and Greek thought, and that among other causes this was probably the main one for the divergence in development of Eastern and Western civilizations. Perhaps this assertion will seem rather too sweeping, but as my experience grew with the years I could

not see it otherwise, and I still believe it to be so.

After my return from abroad I constantly tried to drive home to the minds of my people the importance of the development of intellect. The names of Socrates, Plato, and Aristotle appeared in my lectures and writings so often that I was caricatured by tabloid papers in Shanghai as "a man with mouthfuls of Plato and Aristotle." Seeing that I was not carrying the public with me, I gave it up as a bad job and changed my tactics to preaching the study of natural science. Instead of leading people to the source of the current I reversed the process by letting them see the current first. Naturally they would go back to the sources later on.

My compatriots, children of ages of practical sense, had rebuked me for forgetting the true nature of my own people.

A prominent Chinese scientist once was asked why China has not developed natural science. He offered four reasons: First, the belief of Chinese scholars in Yin, the negative, and Yang, the positive, as complementary principles of the universe. Second, the belief in the Five Elements—metal, wood, water, fire, and earth—as the constituents of the universe, and the application of this analysis of the material world around us to human life, even to medicine. Third, the Chinese rule-of-thumb ways, which are an enemy to accurate calculations. Fourth, the aversion of scholars to using their hands or doing manual work.

All these may be obstacles to the growth of natural science; but quite aside from them I do not believe that natural science would have grown up. It could not, for our attention was not directed along that line.

My people are most interested in things practical—something useful to them. I often noticed in America that when people were shown something they were apt to say, "That's interesting." The response from my own people in like case would be, "What is the use of it?" This shows the truth of the common Chinese saying that the virtuous see virtue while the wise see wisdom in the things they come in contact with. A difference in mental attitude produces different

manifestations of interest. The use of a thing interests my people more than the thing itself.

Chinese thinkers see all things in their relation to man, to moral applications, to artistic or poetic sense, or to practical use. The scientific thought of ancient Greece found its origin in Egypt and Babylon. Babylonian astronomy and Egyptian geometry, like astronomy and mathematics in China, aimed at practical applications. But the intellectual quality of the Hellenic genius was to seek the *general truth* in these sciences by generalizing and formulating their principles, a process which paved the way for the discovery of natural law.

For the Greeks there were two worlds: the world of the senses and the world of reason. The senses deceive us; therefore the philosopher should not trust his sense impressions but develop his reason. It was not for its practical use that Plato insisted upon the study of geometry, but in order to develop the faculty of abstraction and train the mind to correct and vigorous thinking. Applying these powers to ethics and politics, Plato laid the foundation of Western social philosophy, and by their application in studying the reality of concrete things Aristotle laid the foundation of physical science.

For Aristotle trusted reality as seen through the senses. His was a great systematizing intellect which has left its imprint on nearly every branch of knowledge. For him, to know properly involved a correct use of the senses as well as of the reason; the advance of science depends upon development of both speculation and observation. From applied mathematics Aristotle deduced certain general laws, the study and exploration of which provided a form of mental gymnastics through which he disciplined a powerful and penetrating intellect. And by means of the same well-exercised intellect and right use of the senses, he created a system of knowledge which has been the foundation of modern science. Logic and the theory of knowledge were outgrowths of these same intellectual exercises which systematized Western thought.

Chinese thought is centered upon the development of human

relations. We are interested in natural laws only so far as they are capable of serving as guides for human conduct. The *Great Learning*, one of the Confucian classics, taught us a system of knowledge to which I have alluded in an earlier chapter. It starts with the search for truths in things, from which we gain our knowledge. Knowledge is the power by which the mind is developed.

So far the story is intellectual. But as it goes on the shading of moral sense begins to grow. Mental development is for personal culture, which in turn will serve as the foundation for a well-ordered family life. The latter is the foundation of a well-governed state, which in turn will serve as a step toward international peace. From the rudiments of knowledge down to international peace this forms a complete scheme of practical moral idealism. To the Chinese, world peace is not something to be dreamed about but a practical moral scheme. For national prosperity is invariably bound up with peace between nations. A type of knowledge which does not lead to this end is but secondary or trifling.

For such an attitude toward learning, to ascertain whether the earth goes round the sun or the sun round the earth is but trivial.

Or again, what is the use of bothering with the expansion of water in a boiling kettle, as Watt did if we are to believe the story? The Chinese would be more interested in the hissing sound, which suggests making tea in preparation for guests. It is poetic.

The drop of an apple to the ground is only natural. The Chinese would moralize it. They would say that when a thing is ripe, it drops. When you do things in a proper way they come to their natural conclusion. There is no use in puzzling about it. Should the apples in your garden shoot up to the sky, it would set the Chinese to fearing that some great calamity might fall upon the people; as would the appearance of a comet, or some other perversion of the familiar order of things. It would take a Newton to think along the line of the attraction of the earth.

Thus with my own effort to preach. What is the use to China of those figures of Greek antiquity or their teachings? In my people's eyes

natural science is useful only because practical uses come out of it. The Greek philosophers are remote even from modern natural sciences. What earthly use is there in them? The Chinese are in sympathy with the usefulness of science but recoil from the idea of science for science' sake. "Learning is for the sake of its use," is an accepted dictum among Chinese scholars.

With such a mental attitude it is small wonder that China has not developed pure science, an elaboration of intellectual interest rather than of practical considerations. We built the Great Wall and the Grand Canal and developed a system of irrigation; the grandeur of our architectural design, our palaces and temples, has inspired world-wide admiration. These works are among the greatest engineering feats the world has ever known. But they were not developed from a foundation of pure science and therefore, however remarkable they were, no further development was possible until modern engineering came to the rescue. For without pure science the applied science of modern engineering could not attain its present high plane. The discovery of the compass and gunpowder by the Chinese has served useful purposes in the world. But it was a Western mind that observed the principle of explosive expansion in gunpowder and applied it to boiling water, thus making possible the discovery of steam power.

In China discoveries stopped at their immediate practical use. We did not, like the Greeks, try to venture into generalization; nor, like modern Europeans, did we try to get universal laws from particular discoveries—a trait inherited from the Hellenic world in its improved form. Once the useful purposes of an invention were served, we stopped there; therefore Chinese science traveled unaided and without the guiding light of scientific thought. The development of science in China was arrested because we were too practical-minded.

I do not mean to say that the Chinese do not think logically. But their minds were not aided by systematic mental gymnastics. This defect has been reflected in Chinese philosophy, political and social organization, and daily life. It has become more glaring as the rest of the world came to live under the light of modern science in an

industrialized society.

Besides being practical, our people are imbued with a sound moral sense. It may also be said that because we are moral we are practical. For morals refer to conduct, which is necessarily judged by practical results. There will be no such fanciful ideas or speculation about conduct as the Greeks had with physics and metaphysics.

At times we may venture beyond that practical moral way of thinking, but the antennae of our minds recoil as soon as we feel we are getting away from the sphere of human relations, and stop right there. A Sung philosopher of the twelfth century once stepped over the moral bounds by speculating on the formation of mountain ranges and on the finding of seashells on the tops of mountains. He observed that the waves of the mountain ranges indicated the fluidity of the mountains many thousands of years earlier, while the shells bore witness to the fact that their peaks must once have been at the bottom of the sea. But when and how the fluid suddenly coagulated into mountains, and how the bottom of the sea was raised to such a height, he had no means of discovering. There he stopped, fearing shipwreck if he should venture too far. There have been similar instances of observing nature both before and after this philosopher, but Chinese thinkers were always scrupulous, in their mental excursions, not to drift too far away from the camp of human relations.

That the Chinese are not a nonintellectual people needs no proof as it is so evident; but their intellect was exercised within the sphere of morals and practical uses. Thus they set limits to their own intellectual activities. Like silkworms, they wove their moral cocoons with threads drawn from their own minds, as it were, to encase themselves. And they loved their encasement and felt comfortable in it. Chinese life is a life of contentedness. Stability is aimed at in Chinese philosophy. Progress? No—it will create discontent, which will destroy stability. The Chinese is contented with his immediate world and has never wanted to speculate far and deep in nature. China has not produced natural science because she did not want it.

The Greeks were quite a different sort of people. Aristotle's mind

ventured high up into the heavens, low down beneath the earth, and far away beyond the corners of the land. The universe was material for the exercise of Greek intellect. To the Greeks the mere use of the intellect was a pleasure. They did not care much about whether it was practical or had anything to do with morals or human relations. "What do I get by learning these things?" asked a pupil of Euclid. "Give him sixpence, since he must make gain out of what he learns," said Euclid to his servant, as the story runs. Even with morals they developed a system of ethics, looking into the validity of moral laws through intellectual inquiry, and this was how Socrates got into trouble, being accused of poisoning the souls of young people with dangerous questionings.

Out of Greek ideas about nature and love of intellectual exercise in systematic thinking—flowing intermittently through the Renaissance, the Reformation, and the French Revolution and receiving great impetus from the industrial revolution, through which it gradually improved its instruments and technique—natural science has grown to its modern stage. The practical considerations of science were never neglected in its later development in Europe. Frequent inventions and discoveries gave further impetus to scientific research. Scientific generalizations and applied science marched shoulder to shoulder. So the influences of pure and applied science react one upon another to their mutual benefit.

When modern science began to trickle into China after the opening of the commercial ports, it was its practical value that attracted the attention of the Chinese scholars. They built arsenals and dockyards. Incidentally they translated books on elementary science. They were not interested in whether the sun goes round the earth or vice versa; it was immaterial to them, since the alternatives had no practical consequence in their relation to man. More than a century earlier, when the Jesuits brought mathematics and astronomy to the court of the Ming emperors, scholars were interested because these sciences would mend the deficiencies then found to exist in the Chinese calendar. For the calendar is indispensable not only for reckoning days, months, and years but also for sowing and harvesting.

Around the beginning of the twentieth century the theory of evolution was brought into China. Chinese scholars at once saw the practical moral significance of it. With the application of a natural law of "struggle for existence," "natural selection," and "survival of the fittest," they came to the conclusion that nations in the world were struggling for existence, and through natural selection only the fittest would survive. Would China be the fittest and would she survive? She must struggle—struggle for existence. As to the validity of the theory, they had no particular interest and no scientific background to start an investigation, anyhow. Right away they threw a moral cushion over the intellectual undertaking of Darwin. At once they moralized it by saying, "The flesh of the weak is the food of the strong." Being a weak nation, China had to worry about her flesh. Countrymen, arise! It is your duty to your country to look out for the "cannibal" nations around us!

Another phase of the theory of evolution was taken up in its application to history. History goes round in a circle, the Chinese scholars believed. Under the influence of Darwinism they recast their old belief into a new faith that history forges ahead, or else recedes, or remains stationary. This change in the conception of history exercised a paramount influence upon the minds of Chinese scholars in regard to progress.

The conceptions of Yin and Yang and the Five Elements undoubtedly grew out of naïve observations of nature. They were good enough for rationalizing the conduct of nature and man. No minute calculations were necessary, much less the use of the hands. I presume that if Chinese scholars were interested in manual work, they would apply it to making useful or beautiful objects of art rather than to experiments in the scientific laboratory. People would still think and do only along the lines where their interests lay. The magnetic needle will only point in the direction of the magnetic pole.

Such an attitude of mind is of course no fertile soil for pure science. However, slowly but steadily China is modifying her attitude—from applied science she has been led to pure science, from pure

science to new ways of thinking, and finally to actual modification of her attitude of mind. We have opened windows in the walls of our moral universe and looked into the gardens of a new intellectual universe where the fruits of science and invention abound.

This modification of mental attitude has set a new value upon nature—nature as the pure scientist sees it and not only as the moralist or poet sees it. The universe to the modern Chinese is not only a moral one as the ancient Chinese saw it but also an intellectual one as the Greeks saw it.

The moralist studies nature with a view to finding its laws for the benefit of human relations. The scientist studies it with a view to finding its natural laws for intellectual interest—knowledge for the sake of knowledge. China's absorption of modern science has penetrated through these moral bounds of her universe and the minds of the modern Chinese are reaching further and further out to search for truths. Their thinking has been becoming more adventurous, like a ship sailing in unknown seas, exploring for hidden treasures. In other aspects this intellectual release has caused the minds of the younger generation to adopt a critical attitude toward traditional ideas—make critical inquiries into morals, government, and social customs—with far-reaching consequences. While men of the older generation have been very much alarmed at the possible destruction of their tranquil moral abodes and have lamented the passing of the good old days, the younger generation has busied itself in building a new intellectual edifice.

All that, I think, is one of the most valuable contributions that the West has made to China.

Inversely, as the Greeks found with the Babylonian and Egyptian sciences, a study of Chinese sciences may yield profitable contributions to the modern scientific world. A modest beginning made in recent years in the scientific study of Chinese architecture, medicine, and economic botany has yielded fruitful results.

Civilizations are built around different systems of the universe as men conceive it. The Chinese conceived a moral universe, around

which they built their civilization. The Greeks conceived an intellectual universe, around which they built theirs. European morals as they are today have been drawn from Christianity—a moral universe as revealed through God. On the other hand, the Chinese moral universe is as revealed through nature's ways. The Christians have endeavored to build a kingdom of heaven on earth, while the Chinese were content with trying to build a kingdom of peace and stability.

Chinese morals are derived from nature; Christian morals from divine power; for the Chinese the gods are but part of nature, while to Christians nature is but the creation of God. On these grounds it is plain that the conflicts between Christian dogma and science were bound to be very serious, as Western history has proven in abundance; while the conflicts between science and Chinese moral precepts would be mild since both started from the same ground—nature—only traveling in different directions.

It has been said that Christian thought is heavenly or godly, Chinese thought is worldly, and Greek thought unworldly. It is this unworldly thought that has led men to the discovery of the natural laws which are the foundation of modern science and hence of modern invention. The unworldly thought in the applications of science has brought prosperity to the world, if not peace and stability.

The development of European civilization, as I see it, is a struggle at various times between the Christian moral universe and the Greek intellectual universe. The Renaissance, the Reformation, and the French Revolution were but the bursting out of a submerged intellectual universe under the domination of a moral one—these various movements were only different phases of the same current. Finally came the industrial revolution in which the same intellectual universe, continuously developing through centuries, came to the surface in an overwhelming torrent and swept aside everything in its way. Its spearhead had already taken China unawares before and during the time of my childhood; it pierced our moral universe, burst out later to destroy the stability of Chinese life, and thus furnished the

materials for the writing of this volume.

One universe cannot be expected to produce the fruits of another. The fruits of the tree of science ripen in intellectual gardens alone—within the system of Christian dogma or that of Chinese moral precepts no science could have been produced.

Though, indeed, we find much scientific thought in Mencius^[2] in ancient times, this is a nonessential part of his philosophical system. Such thoughts are but satellites to a planet; his system is fundamentally moral.

For science grows out of man's whole being, a burning desire for unworldly truths; a fearless, ever-searching intellect with unbiased spirit continuously reaching out for truth, and an indomitable vigor of mind and body; in other words, it grows out of the very soul of man in his intellectual world. No mere side interests or occasional excursions of the mind into nature, or lukewarm desire to understand it, could ever crown man with the glorious garland of science.

In China, under the influence of modern science, there is growing up a new moral edifice stripped of superstition and false analogies to nature; tested through intellectual inquiry and supported by findings of social science based upon methods adapted from physical research to the investigation of society.

On the other hand we must not forget that the old Chinese moral edifice, built up through centuries of vicarious experience and generations of continuous effort, by such various means as the Confucian classics, literature in general, the graphic arts, music, the family, theatre, gods, temples, even toys—this moral structure has made Chinese people trustworthy, their society stable, and their civilization enduring. Such moral precepts as loyalty, honesty, love of parents, truthfulness, benevolence, righteousness, moderation, and broad-mindedness have contributed much toward the moral emotional make-up of the Chinese people. Intellectual honesty that grows out of modern science will reinforce these virtues that have grown out of ages of moral teaching.

Side by side with the new moral universe, a new intellectual edifice will be raised to house the achievements of the creative genius of young China. On the stem of the Confucian system of knowledge, which starts with the investigation of things, or nature, and leads to human relationships, we shall graft the Western system of scientific knowledge, which starts with the same investigation of things or nature but leads the other way round to their interrelationships.

As in the West, the moral universe will co-exist in China with the intellectual, one for stability and the other for progress. Can we strike the happy mean?

3. The Practical Wisdom of the Chinese People

Learning is for the sake of its use. What is this use? It comes under two main principles. First, whatever has to do with the elevation of moral sentiments in the masses and with the cultivation of right moral attitudes in the individual. Second, whatever will contribute to national prosperity and the people's livelihood. These principles are the summary of ages of teachings from the sages and scholars. Whatever they say and teach has come eventually to these. Scholars learned them and diffused their learning to the common people. The common people, under this influence, through ages of accumulated effort have gradually and unconsciously developed a mentality, as the reader will readily see, of common sense and practical wisdom. They have kept on asking what is the use of this or that in the light of these same principles.

When trains and steamboats came to China, people were ready to ride on them because they went much faster. They used kerosene oil because it gave more light. Telephone and telegraph facilities transmit messages without the necessary delay of mail or foot—or even house—messengers. Clocks and watches give exact time without looking at the sun. People bought Western manufactures because they served useful purposes in daily life.

When missionaries came they established schools and hospitals. What wonderful people they are, said the Chinese: they heal the sick and educate the children of the poor. When the Chinese assembled to

listen to the preaching of the gospel, the eyes of a number of them were usually directed toward the hospitals or the schools. Through the leaves of the Holy Bible they peeped at the useful things of Western manufacture the preacher had brought to China from his homeland. My father made friends with a local missionary because he repaired our water pumps and gave us cough drops and quinine powder. He was honest and friendly in dealing with his neighbors. The last is important because the Chinese are both practical and moral. What about the religion they taught us? Oh—that is a good religion. It teaches people to be good. What about their God? Oh, yes. Their God? He is a good God. Put him in our temples beside many other good gods. We'll worship him, burn candles and incense before him. But He will not sit in your temples beside your idols. Well, we'll make an idol for him. No, that can't be done. He is omnipotent and omnipresent. God is in you, not in the idol. Yes, yes. When he is not in me, maybe he likes to be in an idol. No, He is in heaven. Yes, I know he is, as all the other gods are. Maybe he wants to take a trip down to earth and use the temples as his hotels. Then we can worship him there. No, He is the only God—when you worship Him you cannot worship other gods.

Then our people would hesitate and say, you worship yours; we will worship ours. "There it is if you believe it so; it is not there if you do not believe it." Herein lies China's wisdom of religious toleration.

Modern legal sense as the West understands it is not developed in China. Avoid the courts if you can. Let us settle our disputes without going to law. Let's compromise. Let's have a cup of tea and sip together with friends and talk things over. It is much less expensive, much less troublesome, and much fairer. What is the use of going to law? You often see stone tablets on the highways near a hsien capital bearing these bold letters: "DO NOT GO TO LAW."

This may be the reason for the nonlegal-mindedness of the Chinese. But as modern industry and commerce grow, society will grow in complexity, and laws for governing the complicated social relations will be necessary. When laws become a necessity, the

practical wisdom of the Chinese will see to it that we are more legal-minded. But would it not lessen the burdens of the courts if people should settle their cases by sipping a cup of tea?

Do not do unto others what you would not have others do unto you. Critics say this is negative, while "Do unto others what you would have others do unto you" is positive. Yes, that is true. But the Chinese prefer the negative, from practical sense. You may like onions, so you try to force them upon others. That is positive. Onions may taste good to me, but others may not have the same feeling; they may fear them as ladies do rats. If you were not a lover of this obnoxious vegetable, would you like others to impose it upon you? No, of course not. Then why should you impose it upon others? It's negative, but it's more sensible. For the positive way, if you persist, will lead to trouble, while the negative way will avoid it.

Love your friend, be fair to your enemy. Of course it is a higher ideal to love your enemy. But how many in all history have ever loved their enemy? It looks like hitching your wagon to a star—it is something unattainable. It is practical idealism to be fair to your enemy. So the Chinese prefer it to pure idealism.

Is there any use in music? Yes, it is very useful. It can bring the feelings of an individual to harmony. It can raise the morals of a people to a higher level.

Is there any use in the arts? Yes, they are very useful. They will cultivate the finer sense of the people and thus raise their morals to a higher level. Landscape gardening, splendid palaces and temples, landscape painting, literature, poetry, calligraphy, porcelains, bronzes, skillful carvings, and the like all cultivate this finer sense in man.

Why must a man be honest? Because if you are dishonest and untrustworthy people will not believe and trust you. Then you will fail in business and in dealing with other people. Dishonesty simply does not pay. Not only is honesty a virtue, but its practical results are invaluable to human relations.

The Chinese love humor. Why? Because you can say things

without offending people; besides, you can get a lot of innocent pleasure from it. You can get along with people better by innocent and amusing suggestions. Humor makes company more congenial and life more enjoyable.

Perseverance is one of the great virtues necessary to success. If you keep on filing and filing, you will break the steel. If you keep on grinding and grinding, you will shape the precious stone.

In the scenic Western Hills of Peking, one summer afternoon, Professor John Dewey, Dr. Hu Shih, and I watched a Sisyphus beetle pushing a tiny mud ball up the slope. It pushed first with forelegs, then with hind legs, and then with its side legs. The ball rolled up and up until some mishap occurred which set it rolling down to where it started with the diminutive Sisyphus riding on it. He repeated the process but met with the same failure. Again and again he tried. We admire his perseverance, said both Hu Shih and I. Yes, but his lack of intelligence is regrettable, said John Dewey. Thus the virtuous see virtue; the wise see wisdom. There are different aspects in the same thing. The eminent philosopher is truly a loyal son of the West, while his disciples are truly loyal sons of the East. The West pitied Mr. Sisyphus' lack of head, while the East admired his heart.

The Chinese people are contented with their lot. If a Chinese lives on a frugal diet, takes a humble house, and has enough clothes to keep warm, he feels satisfied. This attitude toward a simple way of living keeps China's millions contented and happy, but it precludes progress as the West understands it. Unless China is industrialized, she cannot lift the people to any level of material prosperity. Perhaps for years to come her countless people will have to be content with their lot.

The Chinese people are devoted to nature, not in the sense of finding the natural laws but in the sense of cultivating the poetic, artistic, or moral sense of lovers of nature. To be under pine trees steeped in the moon and listen to streams flowing gently over the rocks gives one a placid mind and a tranquil heart. To see spring flowers in bloom makes one feel the universe filled with the spirit of growth; to observe autumn leaves falling serves as a warning of the

approach of declining days.

From nature the Chinese learns the sublime nature of man. In Peking there is the Altar of Heaven, built of white marble somewhat like a great theatre, but terraced upward toward the center, which is raised higher than the surrounding terraces. At this altar the emperors of the past worshiped heaven. On one clear moonlit autumn night, when the sky was blue without a speck of cloud upon it, the full moon shone directly upon my head and the marble terraces were flooded with silver light overflowing into the vast space around me. I stood at the center of the altar and all of a sudden felt as if heaven, earth, and myself merged into one vastness.

This experience of sudden sublimation made me understand why the Chinese regard heaven, earth, and man as one and inseparable. By believing in their unity the Chinese elevate man from the pettiness of daily life to the higher plane of sublime spirit. The vastness of space, the brilliance of the sun, the placidity of the moon, the multitude of stars, the luxuriant growth of plants, the rotation of the seasons, the timely rains that nourish the crops, the winding rivers that irrigate the fields, the dashing tides that reveal the power of nature, the high mountains that touch the sky—each and all furnish rich materials in cultivating man's sublime spirit. Of nature man is born; to nature man owes his life; from nature he learns his ways of good living. Nature and man are one and inseparable.

Nature is so good, so kind, so sincere, and so generous that man in his own very nature—which is but part and parcel of greater nature—must be good, kind, sincere, and generous. Here comes the belief of the Chinese that human nature is all-good. Evils grow only out of the perversion of good. This is why great Chinese teachers and statesmen always trust the good that is in man. Great statesmen like Dr. Sun Yat-sen and great teachers like Dr. Tsai Yuan-pei always take any Tom, Dick, or Harry for a good man until he proves the contrary. And they are always ready to forgive and forget. Herein lies their greatness and broad-mindedness. It is proverbial that a statesman's mind is so broad that you could row a boat in it, while a scholar's heart is as resonant

as a hollow in mountain regions that echoes with every vibration of sound.

Nature is China's national teacher. Upon nature she built her moral universe, and thus her culture and civilization. Since Chinese civilization furnishes only inadequate means to control nature, she follows nature. Here lie the differences between East and West. It is the duty of the moralists and poets to follow nature; it is the duty of the scientist to control it. Under the influence of Western civilization the younger generation is changing—changing from a poetic and moral appreciation to a scientific study of nature. Hereafter China will understand nature not only through feelings and empirical observation but through the intellect and scientific research. China will know nature more intimately and control it more effectively to bring prosperity to the nation and better the livelihood of the people.

At the same time, science will not destroy the sense of beauty in nature as some people think it may. As I write I look out through the windows and see in the gardens the old pine trees and bamboo groves, flesh after a rain, and over the bamboo trees I see the Yangtze River gracefully winding its tranquil way past the hilly city of Chungking. The sense of the beauty of nature gives me peacefulness of mind and tranquility of heart. But if I think of the plants botanically, I see in them the growth of the cells and the circulation of the sap, which does not lessen my sense of beauty at all. If I look at the river geologically, I see through its silt-carrying waters to its bed, which millions and millions of years ago may have been just dry land or even the bottom of a rough sea. Thinking in this way, the beauty of the gentle Yangtze remains in my mind just the same or even with richer associations. That a knowledge of the working of their cells should destroy one's sense of the beauty of pine trees or bamboo groves is unthinkable. It makes me feel that nature is even more wonderful and beautiful with a scientific outlook.

From love of the beauty in nature and a feeling of her irresistible force, a strong fatalism grew up in the minds of the Chinese people. In spite of all human efforts, nature will stick to its invariable course.

Thus flood and drought are beyond human power to control, and people have learned to submit to Fate. Since it is Fate, they may just as well take it good-naturedly. What is the use of making much fuss over Fate? This is why one finds many a toiler in China with a smiling face. Misery is a fate—why not take it in good humor?

Here is one secret of why the Chinese people have had so great a capacity to stand hardship and suffering during the years of war. Do your best, perform your duty, and let Fate take care of the rest. "Enjoy Nature's way and be contented with your lot." The placid autumn moon, the tender June breeze, spring blossoms, winter snows, all are in store for your enjoyment, rich and poor alike.

[1] Turkestan : 土耳其斯坦。现习惯称突厥斯坦，一般指里海以东的广大中亚地区。

[2] 此处疑原文有误，疑应作Micius（墨子）。

CHAPTER 34 MODERN CIVILIZATION

Modern civilization originated in Europe; American civilization is but its offspring. Chinese civilization, which developed from its own sources and is of a very high order, is regarded as ancient—China began to be modernized only with the influx of modern influences from Europe and America. In the last fifty years she has been going through the metamorphosis of coming up to date, with its accompanying agonies. She has been forced into the modern world step by step, by the tides of westernization, as we have seen in these pages.

"Modern civilization" is an ambiguous term. It yields various impressions. It may mean more and better weapons of war for men to massacre each other with, until it destroys them all. It may mean better means of production, to support more millions in comfort and luxury and create a higher standard of living. Or the term may be used for the science and invention that have made both modern warfare and a high standard of living possible. It may represent the mentality which searches for objective truths in order to enable man to control nature. It may refer to better communication, and better organization in mobilizing resources and wealth. It may signify democracy to the democratic countries or totalitarianism to totalitarian nations.

Part or all of these may be called modern civilization—as to what is most essential or most truly typical no two people seem to agree. Then what has China been doing during these fifty troubled years? She has trodden in the dark. Sometimes she has seemed to be walking into a trap, as a fly will, by licking the sweetness that leads it along the path of doom. At other times she seems to have been cornered by a group of armed gangsters who forced her into submission. This she resented, and afterward tried to get weapons to defend herself. All in all, she has struggled and muddled and finally began to see light in what is called Western civilization, with its good as well as evil, blessings as well as curses.

What are the goods and blessings she should try to absorb, what evils reject? Here, too, there seems to be no agreement, whether among individuals or groups. The evils she has taken in may later prove to be laden with blessings. Thus from the evil of opium, forced upon China by superior weapons of war, she got the seeds of modern science. The goods she has adopted may prove to be accompanied by unsuspected evils. For example, by relying too much on system and organization we forgot the virtues of individual integrity and responsibility. There are cases where new systems and organizations have failed in their work for lack of due emphasis upon these qualities.

The standard of living was raised for the few who lived upon the exploitation of many. Thus automobiles were imported and used without making an effort to manufacture them. It takes thousands of farmers, each raising hundreds of bushels of rice, to produce the means of exchange for one imported car. Modern conveniences in modern towns, such as electric lights, radios, flush toilets, and other comforts, must be paid for by the sweat of millions of tillers of the land. In lifting our standard of living we are impoverishing the country by an unfavorable trade balance. Yet the standard of living must be raised, and accompanying evils must be remedied by scientific agriculture, farm machinery, and an irrigation system for increased productivity.

These again will give rise to new problems. We have suffered much from modern civilization, yet we still need more of it. If we take too much at a time we vomit it forth again violently as in the case of the Boxer uprising of 1900; if we take too little it is ineffective. This seems to be how modern civilization goes in China. Yet China must muddle along with the world, willy-nilly.

In the West, during the last hundred years, one invention has led to another, one idea to another, one step in progress to another, one prosperity to another, and one war to another. Only peace did not lead to another peace, but to war. This is how the world has forged ahead in the name of modern civilization. Must China fall in line with

the rest of the world?

If there should be another war, as the world so much fears, it seems probable that it will start again, like the first World War, in eastern and middle Europe; or like the recent cataclysm, in the Chinese Three Eastern Provinces, known as Manchuria. The people of middle Europe want lebensraum elsewhere, while as to Manchuria, outside peoples want to find their lebensraum there. The former, being a densely populated area, tends to spill its troubles, while the latter—a vast vacuum—sucks trouble in. Either is a potential source of war, in which, if it comes, the whole world must again be involved, to its incalculable disaster.

In safeguarding the powder magazines of the East, responsibility will inevitably rest upon the shoulders of China. Therefore the political, social, economic, and industrial development of China during the next twenty or thirty years will have a determining effect upon the peace situation of the world. A strong and prosperous China, co-operating with the major Powers of the West, could eliminate the danger to a very great extent if not entirely. It is to the mutual interest of the Allied Powers and of world peace in general that the Western Powers should co-operate with China, say for a period of fifty years, in the development of her natural resources; and for the coming twenty years, perhaps, in the work of her economic and social rehabilitation.

Before Western influence made inroads into China, her troubles for many centuries had come solely from Manchuria and the neighboring region known as Mongolia. When Japan became a world Power after the Sino-Japanese War, she contended with Tsarist Russia for control over that vast territory, a conflict which culminated in the Russo-Japanese War. Japan's scheme to use that part of China as a steppingstone to control of the whole country led to the Mukden Incident. If history since the downfall of the Tangs has taught us anything, we may be reasonably sure that the Three Eastern Provinces will still be a trouble center for China and a cause of worry to the world until China herself is strong and prosperous and the vast vacuum of Manchuria is filled.

In building up a modern democracy and industries China needs time and favorable conditions for experiment. These conditions are peace and security. Internal peace depends upon unification of the country. Security depends upon international understanding. China will have security only when Manchuria becomes a center of peace.

We shall have to start anew in creating our future by making that vast territory a focus of peace instead of war. In that important work I hope the world—especially America, Britain, and Soviet Russia—will co-operate with China. With their co-operation the task must be crowned by complete success, a blessing for China in particular and for the world generally.

In 1921 I was elected an unofficial observer to the Washington Conference by the Chamber of Commerce and educational associations in Shanghai, and supported by Dr. Sun Yat-sen's Nationalist government in Canton. In the following year, 1922, I went to Europe for a visit to the source of modern civilization. It was very soon after the first World War. One could see that every country in Europe was busy planning postwar rehabilitation and the major victorious Powers were occupied in trying to make peace more enduring. But no one seemed to realize then that they were all helping to sow the seeds of a next war.

France was tired and longed for a permanent peace. Her eyes looked over the Rhine, whence came the danger to her national existence. Her defensive mood was later embodied in the Maginot Line, which she thought would make her immune to German attack. Like the first emperor of the Chin Dynasty (246-207 B.C.)^[1] who built the Great Wall to defend China from the attack of the Tartars, France built the Maginot Line. And as trouble for the empire of the Chins came not from outside but from inside the Great Wall, so it was with the French Republic and her "impregnable" barrier.

England was busy with the economic reconstruction of Europe and endeavoring to maintain the balance of power on the Continent. Germany, defeated, was licking her wounds. Tsarist Russia was utterly ruined and a new political experiment was under way in that gigantic

Republic of Soviet Russia. Such was the political aspect of Europe after World War I.

America, unwilling to pull European chestnuts out of the fire, had withdrawn from that much-troubled continent and summoned the Washington Conference, at which the Nine-Power Treaty was penned, the Anglo-Japanese Alliance superseded, and the Shantung question settled; this, to save Japan's face, was negotiated outside the conference. The Twenty-One Demands, superseded by the new treaty, were thus unostentatiously sent to the grave. Tsingtao, a seaport in the peninsula of Shantung, had been awarded to Japan at Versailles and the complications which grew out of the award were known as the Shantung question. Indignation at this move gave rise in China to the student movement which had such far-reaching repercussions in Sino-Japanese relations, as well as in political and cultural developments in China, during the following twenty years. In America it troubled public men who had sympathy for China and became a knotty political problem. Both the Republican and Democratic parties more or less committed themselves to right the wrongs done to China by the ill-fated Versailles Treaty; thus while America withdrew her fingers from Europe she dipped them deep into Pacific waters. The result, twenty years later, was Pearl Harbor.

Without the active participation of America in the League of Nations of which she was the author; with a defensive psychology on the part of France, whose only desire was to avoid trouble; and with Britain's main interest focused on maintaining the balance of power on the Continent, the League became toothless. It barked a lot but never meant to bite. Yet any problem that member nations could not handle among themselves was handed over to the League. So it became a dumping ground for international difficulties. When China was unable to meet her difficulties vis-à-vis Manchurian problems she, too, dumped them on the League, of which Japan was a member. In the case of the Mukden Incident France was not interested. Britain was concerned only so far as the balance of power in the Far East was involved, but she was afraid of being drawn in. The League, therefore, had scarcely even the nerve to bark at Japan. Its few mild yelps might

indeed be construed as connivance.

The League, however, made an invaluable contribution to our experience. Learning from its failures, the world may profit in planning the coming peace. Born of American idealism, it died of conflicting interests and the ambitions of member nations, especially the major Powers.

So matters developed in the course of some twenty years after the Versailles Treaty. The seeds of war sown at Versailles grew in every corner of the world like weeds, which eventually caught fire and set the whole world aflame.

But politics are but a passing show destined soon to vanish into history. What will always remain is the fundamental problem of culture. It is undeniable that Europe has produced modern science and organized democracy, which have brought to mankind more blessings than evils.

Germany appeared to me a country of telescopes, microscopes, and test tubes; her inventions and discoveries multiplied by leaps and bounds. In Shanghai foreign manufactures of superlative quality became known as *Jahming huo*—"German goods." The Germans were masters of material things but fell short in human relations. This, as I see it, is why they often got into trouble in dealing with other nations. Their sight was focused through the microscope or the telescope, which concentrated their view either too near or too far to perceive human behavior or feelings. They could not very well put international relations or human feelings into a test tube to observe their reactions. In the broader realm of human activities the Germans often failed to grasp the essentials or shortcomings of human nature. They had highly developed special senses in which other nations did not excel, but they were short of common sense. Their special endowments gave them the scientific thoroughness which has made so many special contributions to the world, and their lack of common sense brought misery alike to their own country and to others.

The British were just the opposite. They were a nation of common sense and masters of human relations. Their views on world affairs

and policies relative to them were flexible and adaptable. They never let the cord stretch to the point of breaking. If a stronger force pulled at the other end of the rope, the British would loosen it a little to save it from snapping. If the other side was weaker they would keep on drawing the cord to themselves until it slipped from their opponents' hands. But the British would never let go their end of the rope—they would stick to the last, irrespective of consequences. In relations with other countries and in colonial policies this trait of the British people was seen everywhere.

Hand in hand with flexibility and adaptability went such other British traits as tolerance, moderation, considerateness, fair play, and an attitude of compromise. They never went to extremes in their views, and were always trying to understand other people's view in order either to bring themselves to it or to bring others to their own. They loved freedom of speech and thought, disliked hard and fast rules which might prove unadjustable to varying conditions.

The British are reserved to the point of brutal coolness, a trait disliked by other peoples and often the cause of suspicion. It has lost the British many a friend among other nations. But when you know them better, or rather when they know you better, you want to make friends with them.

Some or all of these traits together made English democracy possible. For democracy is not something abstract, something that has dropped from the sky. It consists of the best traits there are in the people who have succeeded in it. If you run through the constitutional history of England, you will find that intolerance, persecutions, corruption, and cruelties fill its pages. Quite a number of lives, including that of a king, have been sacrificed to democracy. The experience of English democracy is worth our serious study.

One fact, however, we must bear in mind: that English democracy grew fast after the unification of the United Kingdom, and American democracy, too, developed by leaps and bounds only after the Civil War. History teaches us that unification and security must go hand in hand to make an organized democracy. For England was lucky in that

her islands were small and protected by the sea. In the old days invasion was not easy. So the English enjoyed security and therefore had plenty of time for trial and error. Their national existence was not endangered by foreign invasion during the period of incubation and experiment.

A similar situation existed in America. The North American Continent is itself a gigantic island, the seas around it preventing any formidable invasion. The early colonists from England brought with them seeds of the love of freedom which grew into a great tree of liberty, sheltered from the ax of foreign invaders. In the course of a century or so the democracy of America took firm root. Not only was experiment freely made in human relations but also in things material, by which I mean scientific research. While American democracy grew out of the English model, American science owed a great debt to the Germans.

The American system of higher education is a combination of the English college and the German university; the American academic dress is, so to speak, an English gown with a German cap. In the American colleges boys and girls lived in a spirit of comradeship and free association and secured a liberal foundation of learning. Knowledge was not strictly regimented; human relationships were learned through free mingling of the strident body; the sight of the younger generation was not simply narrowed into telescopes, microscopes, or test tubes; a general culture was furnished to all those who cared to absorb it.

In the university proper, or the graduate school, American students were taught methods of research, German thoroughness was admired and encouraged, but its full realization had yet to be achieved at the time of my college days. During the First World War the five colors of the former Chinese flag—red, yellow, blue, white, and black were reduced to two: black and white. The reason was that German dyes were no longer available in China on account of the war. An American chemist in New York told me that in Germany several specialists worked on one color, whereas in America one chemist dealt

with many colors. This was some twenty years ago. Conditions have changed by now, since Americans have acquired so much of the German thoroughness during the last two or three decades.

Thus on the American side of the water English democracy and German science have gone hand in hand. With her rich natural resources, her power of organization and love of great projects, America may now easily be ranked as first of the democracies of the world. Just the other day at a party in the American Embassy in Chungking, a British diplomat remarked to me that "England is Americanized, Russia is Americanized, and China is Americanized."

"In what way is England Americanized?" I asked.

"Hollywood, for example," was the reply.

"Russia—in the sense of great industries?"

"Yes."

Meanwhile flashes of pictures passed rapidly through my mind, in which I saw that Chinese political and educational systems, social changes, and industrial developments were richly tinged with Americanization. At the same time I was not unaware of the fact that China colors all the sea that washes her shores.

Pointing at the six rows of eight stars each on the American flag, the same diplomat turned to a high-ranking American military officer standing by and asked with a touch of humor, "What are you going to do when you add one state more?"

"Well, we'll make it seven rows of seven, but what new state do you have in mind?"

"England," replied the diplomat. We all laughed. It was only a joke, but in jokes one may see the temper of the times.

In days of old, when the West fought for colonial empire in the East, all the important Western Powers except America at various times wronged China. Even Portugal bit off a tiny piece of land called Macao, in the province of Kwangtung. The only thing America got from China was extraterritoriality, but what she has done for China is

far more and will be remembered for generations to come. As everybody knows this, I need not elaborate here. Now both America and Britain have abolished that system and Britain has returned all the settlements, which were an anachronism—though Hongkong remains in British hands. In spite of terrible wars all over the world, much encouraging light has shone through the international clouds. Let us hope that, with victory achieved, it may grow into brilliant sunshine in a cloudless sky.

America has definitely joined the coming international peace organization. She has fought the war. She is to fight for an enduring peace. A new epoch in history is in the making. The combined resources of America, Britain, Soviet Russia, and China are so great that if they desire peace, with an effective world organization backed up by an international defense force to enforce it, peace will indeed be enduring.

For China's part, she will have to redouble her effort of reconstruction and regeneration for the coming twenty or probably thirty years. This will be a critical period for China. Success depends upon foresight and leadership, and the extent to which our Allies will co-operate. The extent to which co-operation is given will also depend upon our political developments and how sound a policy we adopt regarding international investments. Our difficulties are enhanced by the devastations of war and wanton destruction in all the once-prosperous provinces where the heel of the enemy has trodden.

On the other hand, China has a double duty to perform. First, it is her duty to herself to become strong and prosperous. Second, it is her duty to the world to help make world peace secure. In the political philosophy of the Confucian school, peace for the world is the ultimate aim. On the basis of the Confucian philosophy Dr. Sun Yat-sen aimed at world peace in his Three Principles of the People.

If we can bridge over this critical period of twenty or thirty years the momentum thus gathered will carry reforms and reconstruction forward, ever increasing and ever widening, into a glorious future in which China will be in a position to help the world in assuring a more

permanent peace.

From the West China has still much to learn. Ever since the downfall of the great dynasty of the Tangs she has been overrun from time to time by peoples from the immense outlying territories of Asia. The decline of Chinese civilization after the fall of that dynasty was due to the invasion of barbarians who at intermittent periods devastated the country and turned it into a stretch of ruins. The successive invasions, together with famine, disease, and internal dissensions, sapped the energy of the Chinese people and thus weakened their creative power. When Western influence began to come into China, therefore, she met it with her civilization at the lowest ebb.

People in China now talk of the Tang civilization as if in hopes of restoring the glories of that era. It is a good thing, so far as we can, to draw inspiration from the Tangs and be stimulated by their more humanistic civilization as contrasted with the ascetic type of the later Sung. In Tang paintings we admire the strong physique of the people. Music, dancing, poetry, painting, and calligraphy were developed to a very high level, which finds no equal in later days.

But for China to go back to this brilliant period of her history is next to impossible. For centuries we have tried to recover our past glories, yet our civilization slid progressively downward in steady decline. For conditions had changed. The fertile soil in which the Tang civilization grew had been washed away by the tides of long years of devastation. If, however, we can get rid of the cause of the Tang downfall by learning from such modern Tangs as America and other countries where arts, science, political and military organization, health and wealth, are on a very high plane, we shall then perhaps find the glories of the Tangs redescending upon us.

In making the peace China's part will be by no means small. Throughout her history she has had many wars. But they have been wars more in the nature of internal revolution than external aggression—internal conflicts generally caused by the rebellion of oppressed farmers and suffering people against a rotten officialdom.

Even her external wars have been more defensive than offensive in nature. China has been oppressed much more than oppressing. Ever since the time of the first emperor of the Chin Dynasty who built the Great Wall—symbol of a defensive mentality—China has wished to be let alone.

Confucius' teaching of proper human relations and world peace, and the democratic ideas of Mencius, will fit China to be a modern democratic state which wishes to do no wrong to other peoples. What China must emphasize after the war is modern science with its applications to means of production; and democracy in its organized form, with emphasis upon unification of the country. Science and democracy, twin instruments of a progressive modern state, is the key to power, prosperity, and a more lasting peace.

With the practical wisdom of her people, in its special emphasis on human relations and democratic ways of living and thinking, China has the solid foundation for a modern democracy. As we have seen, her democracy is loosely organized. Her intense love of individual liberty has not kept step with modern social consciousness. Strong family ties have been partly responsible for retarding the organization of individuals into a broader society. But these ties are rapidly loosening; modern institutions have appeared in the larger cities, and further industrialization will mean a further loosening of family bonds and socialization of individuals.

In the field of knowledge China's way of looking at things has given her a practical wisdom but made her neglect the importance of generalization and abstraction. Her love of nature in poetic, artistic, and moral ways has given her breadth of mind, as exemplified by great scholars and statesmen, and a harmony of feeling, as revealed in the arts and in conduct; it has not extended to the investigation of natural laws, which are the indispensable weapon of man in controlling nature. With the assimilating power of Chinese civilization, the Western contribution of science will be absorbed in due course of time, and with the rich natural resources of the country and high intelligence of her people, the integration of science into her

life will open up wonderful opportunities in the future. Chinese morals and arts will prosper in the material wealth thus developed, while Chinese thought and the rich store of literature and philosophy will tend to be clarified and systematized by modern logical and scientific ways of thinking.

On this new basis of initial peace and prosperity, China will be in a position to build up a new defense force to preserve and sustain peace. No country would be a worthy partner for peace that was not a worthy partner for war. The attention of the world has already been drawn to China by the contribution she has made to the world in a war of resistance for eight long years, in spite of weaknesses and shortcomings in some aspects of her national life during the war.

Modern science, with special reference to inventions and industry, will fuse with China's rich treasures of art and sound morals. A new civilization is in the making; perhaps it, too, can contribute to the world's progress.

[1] 秦始皇（公元前246年—前210年在位）。

第七部 现代世界中的中国

中国与日本——谈敌我之短长

日本在培利上将抵达以前，只是中国大陆文化的一支而且是很单纯的一支。自从这位海军上将来过以后，日本就变为中西文化的混合体了。除非你能同时了解中国和西方，否则你就无法了解日本。

但是单单了解日本的中西两种文化的来源是不够的。分支可能与它们的主体相似，但是并不完全相同。把相似的东西看成完全相同而遽下断语，很可能差以毫厘而谬以千里。同时，两种文化的混合，还可能使原来文化变质。

中国大陆文化在日本的支流导源于唐朝（六一八——九〇五年）。唐代文化中许多可贵的成份，其中包括从西域输入的印度文化与从伊兰民族间接输入的希腊文化，在中国因千余年来历经异族侵略，已逐渐衰落，但在日本却被保留下来了。唐代的舞蹈、音乐、美术、习俗、语音和尚武精神，都还留在日本。如果你想了解一点唐代文化，你最好还是到日本去一趟。日本以唐代文化为基础，其中包括儒家思想并唐代所吸收的佛教文化及其他外来文化。又在南宋时代（日本镰仓时代）输入宋儒朱子之学，盖随禅僧而俱来者。因此造成在日本儒佛一致之思想。寻至明末之际，德川氏本其向来保护禅僧研究儒学之素志，于开府江户（东京古名）时，广招儒者讲学刻书，极一时之盛。并藉新政权之威力，使儒家之学为此后日本兴国之张本，而为日本发展了道德、政治、经济、史学、数学与夫流入民间之教育。日本虽于晋初从朝鲜人王仁得《论语》、《千字文》，而在明末又输入了阳明之学，但经世之学的中心则在朱子之学。到了咸同之间，明治维新，以儒家经世之学与西洋近世社会科学、自然科学相接引，遂在短短数十年里成为史无前例的东西两洋文化的大结合，而致日本于盛强之境。并予文化祖国的中国以极大的鼓励与兴奋。在我幼年时代，我们一辈青年，都奉日本为师，希望日本反哺文化之母鸟而帮助中国复兴。惜乎日本秉国的军阀，知尽忠于己，而不知施恕于人。知义而不知仁，见小而不见大，识近而不识远。致使中国近六十年之历史成为中日关系之惨痛史，终至鹬蚌相争，渔翁得利，真是历史上很大的一幕悲剧。

我们此后应把中国文化广称为大陆文化，作为中国、日本、韩国、

越南共有之文化，亦犹希罗文化（希腊罗马合流之文化）之为欧美各国共同之文化。若在文化方面抱狭义之国家主义，则反将文化之价值减低了。

实际言之，唐代文化所包含外来因素既广且多，在当时已成为国际文化，因其来甚渐，故国人不自觉耳。日本于吸收唐代文化时，亦于不知不觉中吸收了当时的国际文化，此亦日本之大幸也。

日本善于效法。她效法唐宋的文化而定立国之基础；她效法英国建立海军；效法德国训练陆军；效法美国发展工业。她效法十九世纪的西方建立殖民帝国——只可惜晚了一步。她效法德国闪电战术而发动珍珠港的突击——只可惜太远了一点。

我很钦佩日本的善于模仿，这是中国所做不到的，因为她在这方面似乎有点笨脚。但中国创造能力弥补了这一缺憾，她创造又创造，一直到唐代衰亡。此后千余年历经异族侵略、饥谨、疾病等灾祸，终至精疲力竭。

美国的情形和日本很相似，美国文化是欧洲文化的一支，所不同的是从英国来的早期殖民者是带爱好自由的种籽而俱来的。因此美国创造又创造，直到她成为世界上最工业化的国家，同时也是最重理想和人道的国家。美国的伟大就在于这两种矛盾因素的溶而为一。

日本在国际舞台上的空前成就，应该完全归功于依循西方路线所进行的改革。这些改革是在世袭的统治阶级领导下完成的。他们孕育于尚武精神之中，效法他国并使之适应本国，对于领袖和祖国更是精忠不贰。他们统治下的老百姓，最大的美德就是拥护领袖，服从命令。因此从明治初年开始的日本改革运动，始终是坚定不移地朝着固定目标前进。

回头看看我们自己：中国的改革却必须从基层开始，也就是由下而上的。我们没有世袭的统治阶层，除了相当于贵族的士大夫阶级之外，也没有贵族阶级，要使这辽阔的国度里的人民万众一心，必须仰仗老百姓之间的学者领袖来驱策督导。因此改革的过程必然很缓慢，而且迂回曲折。政治领袖像孙中山先生，学者领袖像章太炎、梁任公、蔡子民诸先生，都是来自民间的学者。他们来自民间，又带着能根据他们的社会理想和知识上的远见而深入民间。

现代日本是统治阶级建立起来的，现代中国系平民百姓所缔造。因此，在日本当一个领袖要容易得多，他可以任意独裁，他要人民做什

么，人民就会做什么；在中国当一个领袖的却必须教育人民，而且真正地领导人民——这是一种远为困难的才能，也必须具备超人的才智创造能力。

中国在采取改革措施方面每较迟缓，但是她一旦决心改革，她总希望能够做得比较彻底。在过去的一百年中，她从制造炮弹着手，进而从事政治改革、社会改革，乃至介绍西方思想。她扬弃了旧的信仰，另行建立新的，直至这些信仰成为她生活中不可分的一部分为止。她是一位学者，一位道德哲学家，也是一位艺术家。她的文化是从她的生活发展而来的，她不会轻易满足于西方的思想观念，除非她能够把这些观念彻底同化而纳之于她的生活之中。因此与日本比起来，中国的思想是现代化的，但是她的社会和工业建设却仍旧落在日本之后。这是这位哲学家兼梦想家的天性使然。

中国胸襟宽大，生活民主，而且能自力创造，但是她缺乏组织、纪律和尚武精神。她是学者之国，最受尊敬的是学问，最受珍视的是文化。但是保卫国土的武力则尚待建立。中国的优点正是她的弱点所在。

日本的情形也是优劣互见，日本人是位斗士，也是位很干练的行政人员。日本所吸收的西方文明只是军事方面的上层结构，并未触及人民较深一层的生活和思想，她的上层结构固然现代化了，她的精神和观念却仍然是中世纪的。对这种情形，读者自然不会感到惊奇，因为封建制度废除的时间甚短，故封建精神在明治时代仍然存在，中国则在西历纪元以前就已经废除了。

日本对同化中国文化和西方文化都只有部分的成功。例如日本对忠和恕这两个重要的道德观念只学到忠，却无法了解恕。这或许受政治与地理环境之影响而使然，然而日本人之不能以恕道待人，却是事实。忠和恕是中国生活的两大指导原则，忠在封建国家或黷武国家是必不可少的品德，恕则是学者的美德。日本一向坚执己见，不肯考虑别人的观点。日本人胸襟狭窄，连他们自己都有此自觉，这种褊狭的心理使他们无法具备建立洲际殖民帝国所必需的领导能力。他们有野心，有武力，但是缺乏政治家风度。所以他们藉武力而建立的"东亚共荣圈"，只如空中楼阁，顷刻幻灭。忠和恕在中国却是携手同行的。她不但忠贞，而且处处为人设想。中国并不觉得忠于她自己的思想观念就应该排斥他人的观点。她常常设身处地考虑别人的观点，这就是所谓恕。日本人对恕的观念很薄弱，所以不克了解中国。

日本的行为很像一个身体健壮的顽童。他抓住了公羊的两只角不许

它动，公羊急得乱叫乱跳，用角来撞他，结果他不是被迫放手，就是被撞倒地上。他想不通这只公羊为什么这样不听话。可怜的孩子！他应该想想如果有人抓住他的两只耳朵，他的反应又如何？他应该设身处地想一想，这样他就会了解中国了。

使日本人变为好战民族的另一重要因素，是他们的一种错误信念，他们认为日本是个神圣的国家，系神所缔造，而且应该根据神的意志行事，并且征服世界。这种心理是由军阀御用的历史家歪曲史实所造成的。为西洋人或中国人所不易了解，但是日本人却的确如此深信不疑。中国人也相信神佛，但是他们把神佛当作道德的监护者，而不是战争的呵护者。日本人却认为日本称霸是神的意旨。

从悠远的年代以来，日本的统治阶级一直相信神佛在战时总是站在大日本这一边的。元朝不克征服她时，他们就认为那是神佛以无边的法力保护了她。他们认为吹毁忽必烈汗蒙古舰队的台风就是神佛的意旨。我修改本稿时，已在战后十多年了，还在日本箱根遇见一位老尼。她说人们应该信佛，日本打败蒙古人，就靠佛的法力的。日本人一直相信历代天皇都是神的嫡亲后裔。直到战后，日本历史家得到言论自由，才用科学方法，把那些凝结在教科书里的神话，一口气吹散了。

中国某大学的一位教授，原是东京帝大的毕业生，他曾作过一件发人深省的历史研究工作，说明了这种宗教性的爱国热狂如何发展为日本帝国主义。这种宗教性的爱国热狂表现于军人日常生活者更是屡见不鲜。中日战争期间，几乎所有日本士兵身上都带着佛教或神道的护身符。我曾经见过许多由中国士兵从战场捡回来的这种护身符。中国士兵因为见得多了，就把这些护身符看作敌人装备中必备的一部分，除了偶而拿它们开开玩笑之外，并不拿它们当回事。

其次美国空军与日本入侵飞机发生空战之后，我曾经权充向导，领了一群美国官兵，乘吉普车经过好几里崎岖的山路，去看一架被击落坠毁的日本轰炸机残骸。我们从飞行员的尸身上和口袋里发现常见的佛教和神道的护身符，符上满是血迹，且已为枪弹所洞穿。一位美军上尉从日本飞行员尸体上检出一块布符，问我那是什么。我告诉他那是符。

"那是做什么用的？"上尉问道。

"求神佛保佑。"我回答说。

"不过，佛好像并没有保佑他——"他翻过布符，想看看上面无法辨认的符号究竟说些什么，说了一声"我真不懂"，接着随手把布符往地上

一丢，就立刻把它忘了。中国人也像这位美国军官一样，对于这种刀枪不入的表征始终一笑置之。世界各地人士也是如此。

那次空战时，我曾经看到七架敌机冒着白烟回旋下坠。其他的搜索队也从敌机残骸中捡回许多类似的符，以及弹药、地图和科学图表。这是中世纪迷信和现代科学一种奇怪的混合，但是日本人绝不以为那是迷信；一种存在于冥冥之中的神圣力量驱策着他们为国家奋斗，神佛则随时随地在呵护他们，护符只是那种神圣力量的象征而已。

香港陷落以后，有一对我很熟识的黄氏夫妇住在香港，他们很了解日本人的心理，当一位日本士兵进他们房子盘查时，他们就送了一尊佛像给他。这位日本兵由香港赴九龙时，所乘小船不意覆没，船上乘客除他之外全体没顶。他后来回来向黄氏夫妇道谢，因为他相信是那尊佛像救了他的命。但是按照中国人的想法，他之没有被淹死，不过是运气而已。

世界人士对于日本人在战时的宗教狂热所知不多，因为日本人自己在他们的宣传中很少提到它。但是在中国，现代科学却已削弱了旧的信仰，而且成为使旧信仰解体的一个因素。在日本，现代科学反而成为神的一种有力武器，使日本在侵略战争中团结一致。这种由强烈的宗教性爱国心所形成的心理背景，终使日本军阀无可理喻，使日本兵难于制服，使日本本身成为世界的一个威胁；这就是宗教狂热与现代科学结合的结果。

任何国家有这一位疯狂的邻居都会头痛。在过去六十年的动乱时代里，日本又岂仅使我国头痛而已！

讲到这里，我们不得不责备从明治以来至战事结束这一时代之日本历史家，他们仰军阀鼻息，无古太史之风。其中虽偶有若干史家，敢批军阀逆鳞，但在环境逼迫之下，亦属孤掌难鸣，遂使日本历史成为神权迷信军权崇拜之护符。我就在碰见那老尼的同一天，在箱根的一家理发店理发。店主自称其祖若父，曾在封建时代为将军武士们束发整容。幼时曾听人们说，天皇的祖宗是中国人，从中国来的，这些话现在大家敢说了。以前没有人敢说，说了要杀头的。可见这些天皇非神说，早在武士阶级及民间流传。他还有几句有趣的话，我们可以在此作一插曲。他好蓄古钱，在他的小小搜集里，倒点缀了宋元明清四朝的铜钱，及相当时代的日本钱，他说日本钱是用日本铜在中国铸的。最有趣味的是，把大正昭和两代的硬币排列成行。中日战争开始以后，硬币步步缩小，战事愈久，钱缩得愈小，在最后一两年间，缩小了几等于鹅眼。他很幽默

的指着说，这是代表"东亚共荣圈"的。从民间流传的关于天皇源流故事看来，可以推想到日本历史虽受军阀之统制，而民间仍保存着乃祖若宗世代相传之口史，为军阀所不能毁灭者。

战后因思想言论自由，近年来新出版的日本史是值得我们一读的。昔韩宣子适鲁，见易象与鲁春秋，曰周礼尽在鲁矣。读日本最近出版之日本历史并各种学术的书籍，几乎使我与宣子有同样的感叹！

六七十年来，我国与日本所定的国策，同为富国强兵。日本所走的路线为资本主义与军国主义。用资本主义所产生的财富来养兵，军阀与财阀联合操纵军政大权。他们的权力超越一切党派与学派。军国主义与资本主义的日本，一战而胜中国，再战而胜帝俄，三战横冲直撞而轰炸到珍珠港。

我国为何想富国而国不富，想强兵而兵不强呢？

第一，内政问题。日本倒幕尊皇，政权统一已数十年。我国初则保皇革命，国是未定。继则军阀割据，全国扰攘。等到国民革命军统一全国的时候，内则战乱频仍，外则日本侵略，内忧外患接踵而起。那里还谈得到富国强兵呢？

第二，经济思想问题。我国儒家"不患寡而患不均"的经济思想，先天上已有不赞成资本主义的色彩，数十年来一般士大夫复颇有仰慕王安石统制经济之倾向，故对西洋资本主义，虽不一定反对，却不热心拥护。这个事实，是谁也不能否定的。只以此而论，就可知道建设一个资本主义的社会是怎样的不容易了。

第三，门户开放问题。中国明清两代均采锁国主义。日本在德川时代亦采锁国主义。十九世纪之资本主义迫开了两国之门。在中国称之为通商，日本称之为开国。然日本之开国发之于统一之政府，故全国一致而收实效。中国则此开彼闭，前迎后拒，步骤极不一致。故开国之实效未显，而瓜分之祸兆已见。

以上对于中国与日本的比较，和对日本之批评，大部分是抗战期间我在重庆所想到而记下来的。当全国被日军蹂躏，千千万万人民在日军铁蹄下牺牲生命财产的期间，我这记录似乎相当客观和公平。这是出于儒家忠恕平衡的传统观念，而日本却缺少一个恕字。对日和约，我国主张维持日本皇室，放弃赔款要求，遣送全体俘虏返国，凡此种种，虽出于政治远见，根本思想还是出于恕道。我国人民知道"不念旧恶"为维持和平的要道，所以这种和约，为全国人民所拥护。

停战以后，我视察了好多日本俘虏营（湘西、汉口、南京等址）；我未曾看见当地民众对日俘有嘲笑或侮辱的举动，使我感觉到中国人民度量的宽宏。

日本战败后十余年，其国内思想颇有变动，有些地方和我们在战前所见和战时所论的颇有不同。如民主主义之抬头，思想和言论之充分自由，神道迷信之渐趋薄弱，历史之重史实而放弃传统的虚伪，工业化之加速与产品的进步，学术研究之加速的发达。凡此种种，影响日本本身之将来与东亚之局势者必甚大。

东欧之西德与远东之日本，已居冷战中重要地位。西德则站在西方民主阵线而为其重要的一环。日本则表面似倾向西方，而其内心则犹站在三岔路中，游移未定。亲西方乎？中立乎？抑或倾向共产主义集团乎？现在日本各种不同之政见，归纳起来，不外乎此三点。这是日本的内心烦恼，亦是她本身的课题，而亦为西方民主集团的课题。

（注）本章【中文】全文经宋越伦先生之口译，得嘉治隆一先生之指教，而关于日本历史方面指正尤多，特此志谢，但其文责仍由作者负之。

敌机轰炸中谈中国文化

东方与西方不同，因为它们的文化不同。但是你仍旧可以找出东西文化之间的相似之点。无论两种文化如何相似，不可能完全相同，每一文化的特点也必有异于他种文化。就西方而论，不同的文化特征使德国人异于英国人，同时也使法国人不同于荷兰人。但是他们之间仍有共通的特征，这些特征使西方国家在文化上结为一体，泛称"西方文化"。这些特征又使他们与东方各国显出不同。因此，文化上的异同，不应该由表面上的类似之点来判断，而应该由各别的基本特征来论定。

在这一章里，我们将从三方面来讨论中国文化的特征：（一）中国文化之吸收力。（二）道德与理智。（三）中国人的人情。

（一）中国文化之吸收力

大约五十年前，当我还在学校念书的时候，外国人和前进的中国人都常常说，中国很像一块绝少吸收能力，甚至毫无吸收能力的岩石，那也就是说中国文化已经停滞不前，而且成为化石，因此中国已经变得无可救药地保守。她一直我行我素，谁也不能使这位"支那人"改变分毫。

这种说法表面上似乎言之成理，但是结果却证明完全错误。从五口通商开始，至一八九四年中日战争为止，中国似乎一直在抗拒西方影响。但是在以前的几百年内，她曾经吸收了许多先后侵入她生活之中的外来东西。

在音乐方面，现在所谓的"国乐"，实际上多半是用起源于外国的乐器来弹奏的。胡琴、笛和七弦琴，都是几百年前从土耳其斯坦传入的。我们现在仍旧保留着中国的古琴，但是只有极少数人能够欣赏，至于能弹古琴的人就更少了。

从外国介绍到中国的食品更不计其数：西瓜、黄瓜、葡萄和胡椒是好几百年前传入中国的；甘薯、落花生、玉蜀黍则是最近几百年传入的；在最近的几十年中，洋山芋、番茄、花菜、白菜和莖菜也传入中国了。切成小块，用酱油红烧的西方牛排，也已经变为一道中国菜。锅巴虾仁加番茄汁更是一种新花样。中菜筵席有时也要加上冰淇淋、咖啡和金山橙子。柑橘原是中国的土产，后来出洋赴美，在加利福尼亚经过园艺试验家褒朋克改良后，带着新的头衔又回到了本乡，与中国留学生从美国大学带着硕士、博士的头衔学成归国的情形差不多。中国柑橘还在

很久很久以前传到德国，想不到柑橘到了德国却变成了苹果，因为德国人把柑橘叫做"中国苹果"。

凡是值得吸收的精神食粮或知识养分，不论来自何方，中国总是随时准备欢迎的。明朝时，耶稣会教士把天文、数学和圣经传到中国。大学士徐光启，不但从他们学习天算，而且还信仰了天主，把他在上海徐家汇的住宅作为天主教活动中心，我们从耶稣会教士学到西方的天文学，有些人因此而成为天主教徒。五口通商以后，徐家汇天文台一直是沿海航行的指针。

明末清初有位学者黄梨洲，他非常佩服耶稣会教士传入的天文学。他曾说过这样一句话，中国有许多学问因自己没有好好地保存，所以有不少已经流到外国去了。他有一次告诉一位朋友说："就天文学而论，我们与西方学者比起来，实在幼稚得很。"可见中国学者是如何虚怀若谷！

事实上正因为她有伟大的吸收能力，中国才能在几千年的历史过程中历经沧桑而屹立不坠。世界上没有任何文化能够不随时吸收外国因素而可维系不坠。我想这是不必历史家来证明的。西方各国文化间的相互依存关系和相互影响，彰彰在人耳目，无庸争辩。但是东方文化与西方文化间的相互作用却比较不太明显。剑桥大学的尼邓教授曾告诉我，火药的膨胀性导致蒸汽机的发明，而儒家的性善学说则影响了法国大光明时代学派的思想。许多东西曾经悄无声息地从东方流传到西方。至于这些东西究竟是什么，我想还是让西洋人自己来告诉我们罢。

但是我们除了音乐、食物之类以外，并没有经由西面和北面陆上边界吸收其他的东西。这些区域里的民族，所能提供的精神食粮事实上很少，因此我们转而求诸印度。在艺术方面，我国的绘画和建筑都有佛教的影响，佛教思想在中国哲学方面更占着重要的地位，佛教经典甚至影响了中国文学的风格和辞藻。

在耶稣会教士到达中国之前好几百年，中国人已经吸收了佛教的道德观念，但是对佛教的超世哲学却未加理睬。佛教传入中国虽已有千百年的历史，而且千千万万的佛教寺庙也占据着城市和山区的最好位置，但是佛教的基本哲学和宗教在中国人的思想里仍然是陌生的。学者们对佛教保持友善或容忍的态度，一般老百姓把它当作中国的诸多宗教之一来崇拜。但是它始终还是外国的东西。在重实用的中国人看起来，佛教的超知识主义并无可用。超知识主义所以能在中国存在，是因为它含有道德教训，同时遇到苦难的时候，可以作精神上的避风港。中国人只想把外国因素吸收进来充实自己的思想体系；但是他们绝不肯放弃自己的

思想体系而完全向外国投降。

中国人凭藉容忍的美德，对于无法吸收的任何思想体系都有巧妙的应付办法。他们先吸收一部分，让余留的部分与本国产物和平共存。因此亿万人口中的一部分就接纳了外国的思想文化，成为佛教徒、回教徒，或基督教徒，大家和睦相处，互不干扰。

中国历史上最有趣味的两件事，一件是关于道家思想的。我们把它劈成两半。一半为老庄哲学，以此立身，为任自然而无为；以此治国，为无为而治。另一半成为道教，起于东汉张道陵之五斗米道。流入特殊社会而成帮会，二千年来，揭竿而起，改朝换代，都是与帮会有关系的。流入通俗社会则成道教。既拜神也拜佛，台湾之“拜拜”即此。通俗所迷信之阎罗王，本为印度婆罗门教冥府之司狱吏，由佛教于无意中传来中国而入了道教。至轮回之说，入了道教而亦忘其来源矣。

第二件是把佛教也劈成两半。宗教部分入了道教，哲学部分则合道家而入了儒家。老子之无为主义，凑合了佛家之无为主义，使佛学在中国思想系统里生了根。故宋儒常把老佛并称。

自宋以来之儒家，可以说没有不涉猎道家哲学与佛学的。儒家之洒脱思想，实因受其影响而来。

中国之学人，以儒立身，以道处世，近年以来加上了一项以科学处事。美国本年六月份《幸福》杂志，以幽默的口气，谓台湾有人对美国人说，台湾的建设靠三子。一孔子，二老子，三鬼子。问什么叫鬼子，则笑谓洋鬼子。

现在让我们再回头看一看过去五十年间西方文化传入中国的情形。在衣着方面过去三十年间西化的趋势最为显著。呢帽和草帽已经取代旧式的帽子和头巾；昔日电影中所看到的辫子已失去了踪迹。女人都已烫了头发，短裙、丝袜和尼龙袜已使中国妇女有机会显示她们的玉腿。女人的足更已经历一次重大的革命，西式鞋子使她们放弃了几千年来的缠足恶习，结果使她们的健康大为改善。健康的母亲生育健康的子女，天足运动对于下一代的影响至为明显。现代的儿童不但比从前的儿童健康，而且远较活泼，不但行动比较迅速，心智也远较敏锐。

在社交方面，男女可以自由交际，与过去授受不亲的习俗适成强烈的对照。民法中规定，婚姻不必再由父母安排；青年男女成年以后，有权自行选择对象。男女同校已经成为通例，男女分校倒成了例外。

在住的方面，一向左右屋基选择的风水迷信已经渐为现代的建筑理

论所替代。在若干实例中，古代的艺术风格固然因其华丽或雄伟而保留了下来，但是大家首先考虑的还是阳光、空气、便利、舒适、卫生等要件。现代房屋已经装置抽水马桶、洋瓷浴盆和暖气设备。硬背椅子和硬板床已经渐为沙发及弹簧床垫所取代。

中国菜肴花样繁多，因为我们随时愿意吸收外国成分。西菜比较简单，我想主要是因为不大愿意采用外国材料的缘故。不错，茶是好几世纪以前从中国传入欧洲的。香料也是由东方传去。哥伦布就是为了找到印度的通商捷径而无意中发现新大陆的。有人告诉我，渥斯特郡辣酱油也是从中国酱油发展而来的。但是除此以外，西菜始终很少受东方的影响。美国的"杂碎"店固然数以万计，而且美国人也很喜欢"杂碎"，但是除此以外，他们就很少知道别的中国菜了。

中国却一直不断地在吸收外国东西，有时候经过审慎选择，有时候则不分皂白，乱学一气——不但食物方面如此，就是衣着、建筑、思想、风俗习惯等等也是如此。吸收的过程多半是不自觉的，很像一棵树通过树根从土壤吸收养分。吸收养分是成长中树木的本能，否则它就不会再长大。

中国由新疆输入外国文化并加吸收的过程很缓慢，千余年来只点点滴滴地传入了少许外国东西。因此她是逐步接受这些东西，有时间慢慢加以消化。大体上这是一种不自觉的过程，因此并未改变中国文化的主流，很像磁石吸收铁屑。铁屑聚集在磁石上，但是磁石的位置并未改变。

由华东沿海输入的西方文化，却是如潮涌至，奔腾澎湃，声势慑人；而且是在短短五十年之内涌到的。西方文化在法国革命和工业革命之后正是盛极一时，要想吸收这种文化，真像一顿饭要吃下好几天的食物。如果说中国还不至于胀得胃痛难熬，至少已有点感觉不舒服。因此中国一度非常讨厌西方文化，她惧怕它，诅咒它，甚至踢翻饭桌，懊丧万分地离席而去，结果发现饭菜仍从四面八方向她塞过来。中国对西方文化的反感，正像一个人吃得过饱而闹胃痛以后对食物的反感。一八九八年的康梁维新运动，只是吃得过量的毛病；一九〇〇年的"义和团之乱"，则是一次严重而复杂的消化不良症，结果中国硬被拖上手术台，由西医来开刀，这些西医就是八国联军。这次医药费相当可观，共计四亿五千万两银子，而且她几乎在这次手术中丧命。

张之洞"中学为体，西学为用"的主张，事实上也不过是说：健全的胃比它所接受的食物对健康更重要。因此中国很想稳步前进，不敢放步

飞奔。但是西方文化的潮流却不肯等她。西潮冲激着她的东海岸，泛滥了富庶的珠江流域和长江流域，并且很快弥漫到黄河流域。虽然她最近闹了一场严重的胃病，她也不得不再吃一点比较重要的食物。

到了一九〇二年，胃口最佳的学生已为时代精神所沾染，革命成为新生的一代的口头禅。他们革命的对象包括教育上的、政治上的、道德上的，以及知识上的各种传统观念和制度，过去遗留下来的一切，在这班青年人看起来不过是旧日文化的骸骨，毫无值得迷恋之处。他们如饥如渴地追求西方观念，想藉此抵消传统的各种影响。

五口通商后不久，中国即已建立兵工厂、码头、机器厂和外语学校，翻译了基本科学的书籍，而且派学生留学美国。因为她在抵抗西方列强的保卫战中屡遭败北，于是决定先行建立一支海军。一支小型的海军倒是真的建立起来了，结果却在一八九四年被日本所毁灭。日本是无法容忍中国有海军的。

海军既然建不成，中国就进一步进行政治、陆军和教育上的改革。北京的满清政府开始准备采取西方的立宪政制；它建立了新的教育制度，组织了现代化的军队和警察，并且派遣了大批学生出洋留学。这可算是中国文化有史以来首次自觉地大规模吸收外国文明，其结果对往后国民生活发生了非常深远的影响。

最重要的是教育上的改革，因为这些改革的计划最完善，眼光最远大，而且是针对新兴一代而发的，传统观念对这班年轻人的影响最小。后来这班年龄相若的学生逐渐成长而在政府中掌握大权，他们又采取了更多的西洋方法，使较年轻的一代有更佳的机会吸收新的观念思想。这年轻的一代接着握权以后，他们又进一步从事西化工作，更多的新措施也随之介绍到政府、军队和学校等部门。因此新兴的每一代都比前一代更现代化。

民国八年（一九一九年）北京的学生运动，北大教授所强调的科学和现代民主观念，以及胡适教授所提倡的文学革命，只是自觉地致力吸收西方思想的开端，这种努力在过去只限于工业和政治方面。这次自觉的努力比较更接近中国文化的中心，同时中国文化史也随之转入新页。因为中国正想藉此追上世界潮流。中国文化把罗盘指向西方以后，逐渐调整航线，以期适应西方文化的主流。在今后五十年内，它在保持本身特点的同时，亦必将驶进世界未来文化共同的航道而前进。

到目前为止，中国已经从西化运动中获得很多好处。妇女与男子享

受同等的社会地位，享受结婚和再嫁的自由，并且解放缠足，这就是受到西方尊重妇女的影响而来的。西方医药也已阻遏了猖獗的时疫，麻醉药的应用已使千万病人在施行手术时免除痛苦。机器和发明已经改进了生产技术，对于人民的生活提供了重大的贡献。现代作战武器增加了杀伤的能力，因而也招致了更大的生命损失。现代科学已经拓宽了知识范围；中国的历史、哲学和文学的研究工作已采用了科学方法。大家一向信守不疑的迷信，也因科学真理的启示而渐渐失势。我们吸收西方思想的能力愈强，我国的文化亦将愈见丰富。中国的现代化工作愈广泛彻底，则与中国国民生活结着不解缘的贫困和疾病两大祸患亦将随之逐渐消灭。在这一方面，我认为现代化运动和西化运动，即使并非完全相同，也是不可分的，因为现代化运动肇始于西化，而且已经毫无间断地向前迈进。中国无法取此而舍彼。

西方被迫现代化，多少有点像中国之被迫西化。现代发明浪潮所经之处，随即改变了生产的方式，招致分配和控制的问题，并进而引起其他新的问题。人类必须适应日新月异的环境，进步就是由环境的不断改变和人类适应新的环境产生的。你不妨看一看法国革命以后的欧洲情形，你或许会发现自从罗马帝国以来，欧洲大陆在表面上几无多大改变。但是你如果再仔细看看工业革命以后五十年来的欧洲情形，你一定会发现许多显著的变化。再隔五十年之后，你又会发现整个欧洲大陆和美洲都已经遍布了铁路网，一列列的火车则像千万条蜈蚣爬行在铁路上。烟囱高耸入云的工厂像蜂房一样集中在工业大城里。装载工业成品的轮船在港口穿梭进出，准备把工厂产品运送到世界的每一角落。

半世纪以前，这些轮船曾经把自来火、时辰钟、洋油灯、玩具，以及其他实用和巧妙的外国货带到中国。我童年时代在安宁的乡村里就曾经玩过这些洋货。我们天真而不自觉地吸收这些新鲜的玩艺儿，实际上正是一次大转变的开端，这次转变结果使中国步上现代化之途，同时也经历了相伴而生的苦难、扰攘、危险，以及旧中国恬静生活的迅速消逝。

中国在此以前所吸收的外国东西，不论是自觉的或是不自觉的，都曾使人民生活更见充实丰富，而且并未导致任何纷扰。但是自从西方工业制品和思想制度传入以后，麻烦就来了。正像现代的磺胺药品，它们固然可以治病，但是有时候也会引起严重的副作用，甚至致人于死。中国所面临的问题就是如何吸收西方文化而避免严重的副作用。此项工作有赖于实验与科学研究，因为实验和科学研究是推动心理、社会、工业

各项建设的基本工具。不过这些工具仍然是西方的产物。

（二）道德与理智

我在加州大学伦理学班上初次读到希腊哲学家的著作时，我开始觉得中国古代思想家始终囿于道德范围之内，希腊哲学家则有敏锐深刻的理智。后来我读了更多有关希腊生活和文化的书籍以后，更使我深信古代中国思想和古希腊思想之间，的确存在着这种鲜明的对照，同时我相信就是东西文化分道扬镳的主要原因。这种说法也许过于武断，但是据我后来的经验来说，我并未发现有予以修正的必要，而且我至今仍如此深信不疑。

我从美国留学回来以后，曾不断努力使国人了解发展理智的重要，无论是上课或写作，我总是经常提到苏格拉底、柏拉图和亚里士多德等名字，以致若干上海小报讥讽我是“满口柏拉图、亚里士多德的人”。我发现并没有多少人听我这一套，结果只好自认失败而放弃了这项工作，同时改变策略转而鼓吹自然科学的研究。事实上这是一种先后倒置的办法，我不再坚持让大家先去看看源头，反而引大家先去看看水流。他们看到水流以后，自然而然会探本穷源。

有人曾经请教一位著名的中国科学家，为什么中国未曾发展自然科学。他提出四个理由：第一，中国学者相信阴阳是宇宙中相辅相成的两大原则。第二，他们相信金、木、水、火、土，五行是构成宇宙的五大要素，并把这种对物质世界的分析应用到人类生活以及医药方面。第三，中国人的粗枝大叶，不求甚解。这是精确计算的大敌。第四，中国学者不肯用手，鄙夷体力劳动。

这些很可能都是自然科学发展的障碍，但是即使没有这些障碍，我也不相信自然科学就能发展起来，因为我们根本就没有注意到这方面的工作。

我们中国人最感兴趣的是实用东西。我在美国时常常发现，如果有人拿东西给美国人看，他们多半会说：“这很有趣呀！”碰到同样情形时，中国人的反应却多半是：“这有什么用处？”这真是中国俗语所谓智者见智，仁者见仁。心理状态的不同，所表现的兴趣也就不同了。我们中国对一种东西的用途，比对这种东西的本身更感兴趣。

中国思想对一切事物的观察都以这些事物对人的关系为基础，看它们有无道德上的应用价值，有无艺术价值，是否富于诗意，是否切合实用。古希腊的科学思想源于埃及与巴比伦。巴比伦的天文学和埃及的几

何学，和中国天文数学一样，都以实际应用为目的。但是希腊学者具有重理知的特性，他们概括并简化各种科学原则，希望由此求出这些科学的通理。这种追求通理的过程为天然律的发现铺平了道路。

对希腊人而言，一共有两个世界：即官觉世界与理性世界。官觉有时会弄玄虚；所以哲学家不能信赖他的官觉的印象，而必须发展他的理性。柏拉图坚主研究几何学，并不是为了几何学的实际用途，而是想发展思想的抽象力，并训练心智使之能正确而活泼地思考。柏拉图把思想的抽象力和正确的思考能力应用在伦理与政治上，结果奠定了西方社会哲学的基础；亚里士多德把它们应用在研究具体事物的真实性上，结果奠定了物质科学的基础。

亚里士多德相信由官觉所得知识的真实性。他并有惊人的分析的理智力，他的这种理智力几乎在任何学问上都留有痕迹。他认为正确的知识不但需要正确地运用理性，同时也牵涉到官觉的正确运用；科学的进步则同时仰赖推理能力和观察能力的发展。亚里士多德从应用数学演绎出若干通则，研究与探讨这些原则是一种心智的锻炼，他便由此训练出一种有力而深刻的理智力。凭着这种训练有素的理智力以及官觉的正确运用，他创造了一套成为现代化科学基础的知识系统。使西方思想系统化的逻辑和知识理论也同是这种理智锻炼的产物。

中国思想集中于伦理关系的发展上。我们之对天然律发生兴趣，只是因为它们有时可以作为行为的准则。《四书》之一的《大学》曾经提出一套知识系统，告诉我们应该先从格物着手，然后才能致知。知识是心智发展的动力。

到此为止，我们所谈的还是属于知识方面的。讨论再进一步以后，道德的意味就加强了。心智发展是修身的一部分，修身则是齐家的基础。齐家而后方能治国，国治而后方能平天下。从格物致知到平天下恰恰形成一个完整的、非常实际的、道德上的理想体系。在中国人看起来，世界和平绝非梦想，而是实际的道德体系。因为国家的安定必然是与国际和平密切关联的。离开此目标的任何知识都是次要的或无关痛痒的。

在这种学问态度之下，查问地球究竟绕日而行，抑或太阳绕地球而运行，原是无关痛痒的事。

再说，我们何苦为沸水的膨胀而伤脑筋？瓦特实在太傻了！我们中国人倒是对于沸水的嘶嘶声更感兴趣，因为这种声音可以使我们联想到煮

茗待客的情调。那该多么富于诗意！

苹果落地是自然的道理，中国人可以在这件事情上找出道德意义。他们会说，一样东西成熟了自然就掉下来。因此，你如果好好地做一件事情，自然就会得到应有的结果，为此多伤脑筋毫无好处。如果你家花园里的苹果不是往地下落，而是往天上飞，那倒可能使中国人惴惴不安，认为老百姓即将遭逢劫难。彗星出现，或者其他习见情形失常，中国人就是如此解释的。只有牛顿这种人才会从苹果落地想到地心吸力上面去。

我一度鼓吹发展理智，结果徒劳无功，原因不言而喻。这些古希腊人物和他们的学说对中国有什么用？在我们中国人的眼光里，自然科学的价值只是因为它们能够产生实际的用途。希腊哲学家离现代自然科学太远了，他们还有什么实际用途呢？我们中国人对科学的用途是欣赏的，但是对为科学而科学的观念却不愿领教。中国学者的座右铭就是"学以致用"。

在这样的心理状态之下，中国未能发展纯粹科学是毫不足奇的，因为纯粹科学是知识兴趣的表现，而非实际应用的产物。我们曾经建造长城和运河，也曾建设伟大的水利工程；我国建筑式样的宏丽，我们的宫殿和庙宇，都曾获得举世人士的激赏。这些工程足与世界上最伟大的工程成就相提并论。但是它们并不是纯粹科学的基础上发展而来的。因此它们无论如何伟大，也没有进一步发展的可能，直到现代工程技术输入以后，才见转机。如果没有纯粹科学，现代工程科学根本无法达到目前的巅峰状态。中国人所发明的指南针和火药曾使全世界普受其利，但是发现火药爆炸的膨胀原理，把这原理应用于沸水，并进而发明蒸汽机的，结果还是西洋人。

在中国，发明通常止于直接的实际用途。我们不像希腊人那样肯在原理原则上探讨；也不像现代欧洲人那样设法从个别的发现中归纳出普遍的定律。现代欧洲人的这种习性是从古希腊继承而来的，不过较诸希腊时代更进步而已。中国人一旦达到一件新发明的实用目的，就会马上止步不前；因此中国科学的发展是孤立无援的，也没有科学思想足为导向的明灯。科学发展在中国停滞不进，就是因为太重实际。

我并不是说中国人不根据逻辑思考，而是说他们的思想没有受到精密的系统的训练。这缺点已经反映在中国哲学、政治组织、社会组织，以及日常生活之中。世界其余各地的人民普遍享受现代科学的光明和工业社会的福利以后，这种缺点在中国已经更见显著。

除了重实际之外，我们中国人还充满着强烈的道德观念。也可以说正因为我们注重道德，我们才重实际。因为道德系指行为而言，行为则必然要凭实际结果来判断。希腊人在物理学和形而上学方面曾有离奇的幻想和推测，但是我们对行为却不可能有同样的幻想和推测。

有时候我们也可能闯出重实际、重道德的思想常规，但是我们一旦发觉离开伦理范围太远时，我们马上就会收回心灵的触角。宋代的朱子就曾有一次超越道德的范围。他从山顶上发现的贝壳而推断到山脉的成因。他认为山势的起伏显示千万年以前的山脉一定是一种流体，山顶上的贝壳正可以说明，目前的山峰一度曾是深渊之底。至于这种流体何时凝结为山脉，如何凝结为山脉，以及海底如何突出水面而成高峰等等问题，他却无法解答了。他的推断也就到此为止，深恐冒险前进要栽筋斗。在朱子之前以及朱子之后都曾有过同样的观察自然的例子，但是中国思想家在理论方面的探讨一向是谨慎的，惟恐远离伦理关系的范围。

中国人当然不是缺乏理智的民族；但是他们的理智活动却局限于道德与实用的范围。他们像蚕一样作茧自缚，自立智识活动的界限。他们深爱他们的道德之茧，而且安居不出。中国人的生活就是一种乐天知命的生活。中国哲学的目标是安定。求进步？算了吧——进步势将招致对现状的不满，不满现状则会破坏安定，中国人很满意现实世界，从来不想对大自然作深入的探讨。中国未曾发展自然科学，只是因为她根本无意于此。

希腊人却大不相同。亚里士多德的思想可以上天入地，无远弗届。整个宇宙都是希腊理智活动的范围。希腊人觉得运用理智，本身就是一种快乐。他们不管它是否切合实际，也不管它与道德伦理有没有关系。据说古希腊数学家欧几里得的一位学生曾经这样问过老师："我学这些东西能得到些什么呢？"欧几里得吩咐他的仆人说："既然他一定要从所学的里面得到些东西，你就给他六个铜板让他走吧。"希腊人甚至对道德也发展了一套伦理学，以理智的研究来检讨道德的正确性。苏格拉底就是因此而招致了麻烦，被控以危险的研究毒害青年的心灵。

自然科学之能发展到目前的阶段，首先归功于希腊人对大自然的概念以及对有系统的智力训练的爱好的爱好，中间经过文艺复兴、宗教革命、法国革命，后来又受到工业革命的大刺激。工业革命使工具和技术逐渐改进。西欧在自然科学的后期发展中，从未忽视科学的实际用途。不断的发现和发明更进一步刺激了科学研究。理论科学和应用科学齐头并进，而相辅相成。

五口通商以后，现代科学开始涓涓滴滴地流传到中国时，引起中国学者注意的还是科学的实用价值。他们建立了兵工厂和轮船码头。他们附带翻译了基本科学的书籍。究竟是太阳绕地球运行或者是地球绕太阳运行，他们仍未感觉兴趣。在他们看起来，那是无足轻重的，因为无论谁绕谁转，对人都没有实际的影响。三百多年前耶稣会教士把天文数学传到中国时，学者们马上发生兴趣，因为这些科学可以纠正当时中国日历上的许多错误。不但计算日子、月份、年份缺不得日历，就是播种收获，日历也是不可或缺的。

二十世纪初叶，进化论传入中国。我国学者马上发现它的实用的道德价值。应用"物竞天择，适者生存"这项天然律，他们得到一项结论，知道世界各国正在互相竞争以求生存，而且经过天择之后只有适者才能生存。中国会不会是适者？她会不会生存呢？她必须竞争，为生存而竞争！进化论如需证据，只要看街头大狗和小狗打架，小狗会被大狗咬死，小虫碰到大虫，小虫会被大虫吃掉的事实。俗语说："大虫吃小虫，小虫吃眯眯虫。"这已经足够证明"物竞天择，适者生存"的正确性了，又何必向达尔文讨证据呢？他们就这样轻易地为达尔文的科学研究披上了一件道德的外衣。下面就是他们道德化的结果，他们说："弱肉强食。"中国既然是弱国，那就得当心被虎视眈眈的列强吃掉才行。

进化论的另一面则被应用于历史上，照中国过去学者的历史观，世运是循环的。受了达尔文学说影响以后，他们相信世运是依直线进行的，不进则退，或者停住不动。这种历史观的转变，对中国学者有关进步这一观念产生了重大的影响。

阴阳和五行等观念显然是从直接观察大自然得来，拿这些观念来理性化宇宙的变幻和人类的行为已经绰有余裕。我们不必作精密的计算，更不必动手。我猜想，中国学者如果有兴趣从事体力劳动，他们宁愿去制作实用的东西，或者美丽的艺术品，而不愿在科学实验室里从事试验。大家仍旧只根据自己的兴趣去思想，去行动。磁针永远是指向磁极的。

这样的心理状态自然不是纯粹科学的园地。不过中国已在慢慢地、不断地改变她的态度，她已经从运用科学进而研究纯粹科学，从纯粹科学进而接触到新的思想方法，最后终于切实修正了她的心理状态。我们已经在道德宇宙的墙上开了一扇窗子，凭窗可以眺望长满科学与发明果实的理智的宇宙。

这种心理状态的改变已经使大自然有了新的价值，从此以后，大自

然不再仅仅是道德家或诗人心目中的大自然，而且是纯粹科学家心目中的大自然。对现代中国人而言，宇宙不仅是我国先贤圣哲心目中的道德宇宙，而且是古希腊人心目中的理智宇宙。

道德家观察大自然的目的在于发现有利伦道德的自然法则。科学家观察大自然则是为了发现自然法则，满足知识上的兴趣，也就是为知识而求知识。中国所吸收的现代科学已经穿越她那道德宇宙的藩篱，近代中国学人正深入各处探求真理。他们的思想愈来愈大胆，像一只小舟在浩瀚的海洋上扬帆前进搜寻秘密的宝藏。这种知识上的解放已经使年轻的一代对某些传统观念采取了批评的态度，对道德、政治和社会习俗予以严厉的检讨，其影响至为深远。年纪较大的一代忧虑宁静的道德乐园将被毁灭，惋叹太平盛世渐成过去，年轻的一代则为建筑新的知识之宫而竟日忙碌。

我想这就是西方对中国的最大贡献。

在相反的一方面，把中国的学问加以整理研究，也可能对现代科学世界提供重大的贡献，希腊人研究巴比伦和埃及科学的结果就是如此。近年来对中国建筑、医学和实用植物学的初步科学研究已经有了可喜的成绩。

世界各国的文化奠基于不同的宇宙观。中国人所想的是一个道德的宇宙，并以此为基础而发展了他们的文化。希腊人所想的是一个理智的宇宙，也以此为基础发展了他们的文化。今日欧洲人的道德观念导源于基督教教义——一个上帝所启示的道德的宇宙。但中国人的道德宇宙是自然法则所启示的。基督徒努力想在地球上建立一个天国，中国人却只想建立一个和平安定的王国。

中国道德观念本诸自然，基督的道德观念则本诸神权；在中国人看起来，神只是大自然的一部分，在基督徒看起来，大自然却是上帝所创造的。由此可见基督教教条与科学之间的矛盾必然是很严重的，西方历史已经一再证明如此；科学与中国的道德观念之间的矛盾却比较缓和，因为二者的出发点都是大自然，所不同的只是发展的方向。

有人说过，基督教思想是天国的或神国的，中国思想是为人世的，希腊思想是不为人世的，换言之，即越出人世以外的。引导人类发现自然法则的就是这种超越人世的思想。自然法则是现代科学的基础。有了现代科学，然后才有现代发明。这种不为人世的思想在科学上应用的结果，如果说未为世界带来和平与安定，至少也已为世界带来繁荣。

据我个人的看法，欧洲文化的发展过程就是基督教的道德宇宙与希腊的理智宇宙之间的一部斗争史。文艺复兴、宗教革命和法国革命，都不过是长久淹没在道德宇宙下的理智宇宙的重现而已，这些运动事实上只是同一潮流中的不同阶段。最后工业革命爆发，理智宇宙经过几百年的不断发展，终于涌出水面，奔腾澎湃，横扫全球。工业革命狂潮的前锋，在我童年时代前后已经突然冲到中国；它冲破了我们的道德宇宙，破坏了我们的安定生活；《西潮》所讲的正是这些故事。

道德宇宙不可能产生理智宇宙的果实，理智宇宙也不可能产生道德宇宙的果实。科学之果只能在理智之园成长，在基督教教条或中国的道德观念之下，不可能产生任何科学。

不错，我们发现古时的墨子也有过科学思想，但是那只是他哲学体系中无关紧要的一部分，这些科学思想只是行星的卫星，墨子的哲学体系基本上仍旧是属于道德方面的。

科学的发展有赖于人们全力以赴，需要对超越人世以外的真理持有梦寐以求的热忱；并且有赖于不屈不挠、无休无止的思维和不懈的精神去探索真理；无论身心，均须不辞劳瘁，愈挫愈奋。换一句话说，科学是人的整个灵魂从事知识活动的结果。仅凭玩票的态度，或者偶而探讨大自然的奥秘，或者意态阑珊，不求甚解，绝不可能使人类荣获科学的桂冠。

在现代科学影响之下，中国正在建立起一个新的道德体系。扬弃了迷信和那些对大自然似是而非的推断，经过理智探究的考验，并受到社会科学结论的支持，这些结论是根据对社会的实地调查而获得的。

在另一方面，我们绝不可忘记中国旧的道德体系，这个旧体系是经过千百年长期的经验和历代不断的努力而建立起来的，建立过程中所运用的方法或工具包括四书五经、一般文学、雕刻、音乐、家庭、戏剧、神佛、庙宇，甚至玩具，这个道德体系曾使中国人诚实可靠，使中国社会安定平静，并使中国文化历久不衰。道德观念如忠、孝、仁、义、诚、信、中庸、谦冲、诚实等等都曾对中国人的心情个性有过重大贡献。现代科学所导致的知识上的忠实态度，自将使几千年来道德教训所产生的这些美德，更为发扬光大。

一片新的知识园地将与新的道德观念同时建立起来，以供新中国富于创造能力天才的发展。我们将在儒家知识系统的本干上移接西方的科学知识。儒家的知识系统从探究事物或大自然出发，而以人与人的关系

为归趋；西方的科学知识系统也同样从探究事物或大自然出发，但以事物本身之间的相互关系为归趋，发展的方向稍有不同。

道德宇宙与理智宇宙将和在西方一样在中国平行并存，一个保持安定，一个促成进步。问题在于我们是否能觅得中庸之道。

（三）中国人的人情

我们说，学以致用，那末所谓“用”又是什么呢？这里有两大原则：第一是有益于世道人心，第二是有益于国计民生。这是为世俗所熟知的，亦即《左传》里所说的“正德利用厚生”。这两大原则是先贤圣哲几千年来训诲的总结，他们所说所论，最后总是归结到这两点。学者们从先贤学到这些原则，然后又把所学传播给老百姓。老百姓在这种影响之下已逐渐而不自觉地形成一种重常识与重人情的心理。他们根据上述两大原则，随时要问这样东西有什么用，那样东西有什么用。

轮船火车传到中国时，大家都愿意搭乘，因为它们走得比较快。他们采用洋油灯，因为洋油灯比较亮。电话电报使消息传递更为便利，而且不像邮寄或者专差送递那样迟缓。有了钟表以后，可以不必看太阳就知道正确的时刻。大家购买西方货品，因为它们能够满足日常生活中的实际需要。

传教士到了中国以后，到处设立学校和医院。中国人异口同声地说：这些人真了不起啊，他们为患病者诊疗，又使贫穷的子弟受教育。当中国人上礼拜堂听福音时，许多人的眼睛却瞅在医院和学校上面。他们的手里虽然拿着《圣经》，眼睛却偷偷地瞅着牧师从西方故乡带来的实用货品。我父亲与当地的一位牧师交了朋友，因为这位牧师替我们修好了抽水机，并且还送给我们咳嗽糖和金鸡纳霜。他非常诚实，而且对邻居很客气。最后一点非常重要，因为中国人不但实际，而且最重道德。那末，他们所宣扬的宗教怎么样？哦，那是一个好宗教，它是劝人为善的。那末，他们的上帝呢？哦，当然，当然。你说他们的上帝吗？他是个好上帝呀。我们要把它与其他好神佛一齐供奉在庙宇里。我们应崇拜它，在它的面前点起香烛。但是它不肯与你们的偶像并供在庙宇里又怎么办呢？那末，我们就给它也塑个偶像吧！不行，那怎么可以？它是无所不能，无所不在的。上帝就在你身上，而不是在偶像上。哦，是的，是的。不过它不在我身上时，也许喜欢托身在偶像上呢。不，它住在天堂。是，是，我知道，其它神佛不也都是住在天上吗？不过，他也许愿意到下界来玩玩，拿庙宇作旅馆暂住，那时候我们就可以在庙宇里祭拜它了。不行，它是独一无二的神——你崇拜它，就不能崇拜其他的

神佛。

这可使中国人颇费踌躇了。最后他们说，好吧，你们崇拜你们的上帝，我们还是崇拜我们的神佛算了。"信者有，不信者无。"中国对宗教的包容并蓄，其故在此。

西方人所了解的现代法律观念在中国尚未充分发展。中国人以为最好是不打官司。不必诉诸法律就能解决纠纷不是很好吗？还是妥协算了！让我们喝杯茶，请朋友评个理，事情不就完了？这样可以不必费那么多钱，不必那么麻烦，而且也公平得多。打官司有什么用？你常常可以在县城附近的大路旁边看到一些石碑，上面刻着"莫打官司"四个大字。

这或许就是中国人不重法律的原因。但是现代工商业发达以后，社会也跟着变得复杂了，处理复杂的社会关系的法律也成为必需的东西，法律成为必需时，通达人情的中国人自将设法发展法律观念。但是，如果能凭饮杯茶，评个理就解决事端，法院的负担不是可以减轻了吗？

己所不欲，勿施于人。批评家说这是消极的，"己之所欲，施之于人"才算积极。不错，这说法很正确。但是中国人基于实际的考虑，还是宁愿采取消极的作风。你也许喜欢大蒜，于是你就想强迫别人也吃大蒜，那是积极的作法。我也许觉得大蒜味道好，别人却未必有同样的感觉；他们也许像太太小姐怕老鼠一样怕大蒜。如果你不爱好臭味冲天的大蒜，难道你会高兴别人硬塞给你吃吗？不，当然不。那末，你又何必硬塞给别人呢？这是消极的，可是很聪明。因为坚持积极的办法很可能惹出麻烦，消极的作风则可避免麻烦。

以直报怨，以德报德。自然，更高的理想应该是爱敌如己。但是历史上究竟有多少人能爱敌如己呢？这似乎要把你的马车赶上天边的一颗星星，事实上，那是达不到的。以直报怨则是比较实际的想法。所以中国人宁舍理想而求实际。

音乐有没有用处？当然很有用。它可以陶冶性情，可以移风易俗。

艺术有没有用处？当然很有用。艺术可以培养人民的高尚情操，有益于世道人心。花卉草木、宫殿庙宇、山水名画、诗词歌赋、陶瓷钟鼎、雕塑篆刻等等都足以启发人的高尚情操。

一个人为什么必须诚实呢？因为你如果不诚实，不可靠，人们就不会相信你，你在事业上和社交上也会因此失败，不诚实是不合算的。诚实不但是美德，它的实际效果对人与人之间的关系也有很大的价值。

中国人爱好幽默。为什么？因为幽默的话不会得罪人；而且你可从幽默中觅得无限的乐趣。你如果常常提些无伤大雅而有趣的建议，你一定可以与大家处得更好。幽默使朋友聚晤更觉融洽，使人生更富乐趣。

有恒为成功之本。只要有恒心，铁杵磨成针。

有一个夏天下午，杜威教授、胡适之先生和我三个人在北平西山看到一只屎蜣螂正在推着一个小小的泥团上山坡。它先用前腿来推，然后又用后腿，接着又改用边腿。泥团一点一点往上滚，后来不知怎么一来，泥团忽然滚回原地，屎蜣螂则紧攀在泥团上翻滚下坡。它又从头做起，重新推着泥团上坡，但结果仍旧遭遇同样的挫败。它一次接一次地尝试，但是一次接一次地失败。适之先生和我都说，它的恒心毅力实在可佩。杜威教授却说，它的毅力固然可嘉，它的愚蠢却实在可怜。这真是智者见智，仁者见仁。同一东西却有不同的两面。这位杰出的哲学家是道地的西方子弟，他的两位学生却是道地的东方子弟。西方惋叹屎蜣螂之缺乏智慧，东方则赞赏它之富于毅力。

中国人多半乐天知命。中国人如有粗茶淡饭足以果腹，有简陋的房屋足以安身，有足够的衣服可以御寒，他就心满意足了。这种安于俭朴生活的态度使中国亿万人民满足而快乐，但是阻滞了中国的进步。除非中国能够工业化，她无法使人民达到高度的物质繁荣。或许在今后的一段长时间内，她的亿万人民仍须安贫乐道。

中国人深爱大自然，这不是指探求自然法则方面的努力，而是指培养自然爱好者的诗意、美感或道德意识。月下徘徊，松下闲坐，静听溪水细语低吟，可以使人心神舒坦。观春花之怒放感觉宇宙充满了蓬勃的精神；见落叶之飘零则感觉衰景的凄凉。

中国人从大自然领悟到了人性的崇高。北京有一个天坛，是用白色大理石建造的，这个天坛就是昔日皇帝祭天之所。一个秋天的夜晚，万里无云，皓月当空，银色的月光倾泻在大理石的台阶上，同时也弥漫了我四周的广大空间。我站在天坛的中央，忽然之间我觉得自己已与天地融而为一。

这次突然升华的经验使我了解中国人为什么把天、地、人视为不可分的一体。他们因相信天、地、人三位一体，使日常生活中貌不足道的人升入庄严崇高的精神境界。茫无边际的空间、灿烂的太阳、澄明的月亮、浩繁的星辰、葱翠的树木、时序的代谢、滋润五谷的甘霖时雨、灌溉田地的江河溪涧、奔腾澎湃的海浪江潮、高接云霄的重峦叠嶂，这一

切的一切，都培养了人的崇高精神。人生于自然，亦养于自然；他从大自然学到好好做人的道德。自然与人是二而为一的。

大自然这样善良、仁慈、诚挚，而且慷慨，人既然是大自然不可分的一部分，人的本性必然也是善良、仁慈、诚挚，而且慷慨的。中国人的性善的信念就是由此而来。邪恶只是善良的本性堕落的结果。中国伟大的教育家和政治家始终信赖人的善良本性，就是这个缘故。伟大政治家如孙中山先生，伟大教育家如蔡子民先生，把任何人都看成好人，不管他是张三、李四，除非张三或李四确实证明是邪恶的。他们随时准备饶恕别人的过错，忘记别人的罪愆。他们的伟大和开明就在这里。所以我国俗语说：“宰相腹内可撑船”，又用虚怀若谷来形容学者的气度。

大自然是中国的国师。她的道德观念和她的一切文物都建筑于大自然之上。中国文化既不足以控制自然，她只好追随自然。中西之不同亦即在此。道德家和诗人的责任是追随自然；科学家的责任则是控制自然。中国年轻一代在西方文明影响之下，已开始转变——从诗意的道德的自然欣赏转变到科学的自然研究。中国此后将不单凭感觉和常识的观察来了解自然，而且要凭理智的与科学的探讨来了解自然。中国将会更真切地认识自然，更有效地控制自然，使国家臻于富强，使人民改善生活。

有人以为科学会破坏自然的美感，其实未必如此。我现在一面握笔属稿，一面抬头眺望窗外，欣赏着花园中在雨后显得特别清新的松树和竹丛。在竹丛的外边，我还可以看到长江平静徐缓地在重庆山城旁边流过。大自然的美感使我心旷神怡。但是我如果以植物学观点来观察树木，我会想到它们细胞的生长，树液的循环，但是这种想法并不至于破坏我的美感。如果我以地理学的观点来看长江，我可能想到挟带污泥的江水之下的河床，亿万年之前，这河床或许只是一块干燥的陆地，也可能是深海之底。这些思想虽然在我脑海掠过，但是长江优美的印象却始终保留在我心里，甚至使我产生更丰富的联想。如果说对于细胞作用的知识足以破坏一个人对松树或竹丛的美感，那是不可想像的。我觉得科学的了解只有使大自然显得更奇妙、更美丽。

中国人因为热爱大自然的美丽，同时感觉大自然力量之不可抗拒，心里慢慢就形成了一种强烈的宿命论。无论人类如何努力，大自然不会改变它的途径。因此，洪水和旱灾都不是人力所能控制的，人们不得不听任命运的摆布。既然命中注定如此，他们也就不妨把它看得轻松点。天命不可违，何必庸人自扰？我们发现中国的许多苦力也笑容满面，原

因在此。苦难是命中注定的，何不逆来顺受？

抗战期间，中国人民表现了无比的忍受艰难困苦的能力，秘密就在此。尽力而为之，其余的听天由命就是了。你最好乐天知命。秋天的明月、六月的微风、春天的花朵、冬天的白雪，一切等待你去欣赏，不论你是贫是富。

二次大战期间看现代文化

现代文化肇始于欧洲；美国文化不过是欧洲文化的一支而已。中国文化是中华民族自己发展出来的，历史悠久，而且品级很高。现代思潮从欧美涌到后，中国才开始现代化。在过去五十年内，她已经逐渐蜕变而追上时代潮流，在蜕变过程中曾经遭受许多无可避免的苦难。中国已经身不由主地被西潮冲到现代世界之中了。

"现代文化"是个笼统的名词。它可以给人许多不同的印象。它可以指更多更优良的作战武器，使人类互相残杀，直至大家死光为止。它也可以指更优越的生产方法，使更多的人能够享受安适和奢华，达到更高的生活水准。现代文化也可以指同时促成现代战争和高级生活水准的科学和发明。它可以代表人类追求客观真理，控制自然的欲望，也可以指动员资源和财富的交通建设和组织制度。对民主国家而言，它可以代表民主政治，对极权国家而言，它又可以代表极权政治。

这一切的一切，或者其中的任何一项，都可以叫现代文化——至于究竟什么最重要，或者什么最标准，似乎没有任何两个人的意见会完全相同。那末，在过去多灾多难的五十年中，中国究竟在做些什么呢？她可以说一直在黑暗中摸索，有时候，她似乎已掉进陷阱，正像一只苍蝇被蜜糖引诱到灭亡之路。有时候，她又似乎是被一群武装强盗所包围，非逼她屈服不可。她自然不甘屈服，于是就设法弄到武器来自卫。总而言之，她一直在挣扎，在暗中摸索，最后发现了"西方文化"的亮光，这亮光里有善也有恶，有祸也有福。

哪些是她应该努力吸收的善因，哪些又是她必须拒斥的祸根呢？这问题似乎没有一致的结论，个人之间与团体之间都是如此。她所遭遇的祸患，也可能在后来证明竟是福祉。鸦片是列强用枪炮硬加到她身上的祸害，但是她却因此而获得现代科学的种子。在另一方面，她接纳的福祉在后来却又可能夹带着意想不到的祸患。例如我们因为过分相信制度和组织，竟然忘记了人格和责任感的重要。因缺乏对这些品德的强调而使新制度、新组织无法收效的例子已经屡见不鲜。

少数以剥削他人为生的人，生活水准是提高了。汽车进口了，但是他们从来不设法自己制造。事实上要靠成千的农夫，每人生产几百担谷子，才能够赚换一辆进口汽车的外汇。现代都市里的电灯、无线电、抽水马桶等等现代物质享受，也必须千千万万农夫的血汗来偿付。我们

以入超来提高生活水准，结果使国家愈来愈贫困。但是生活水准是必须提高的，因此而产生的祸害只有靠增加生产来补救。为了增加生产，我们必须利用科学耕种、农业机械和水利系统。

这种工作势将引起其他新的问题。我们吃足了现代文化的苦头，然而我们又必须接受更多的现代文化。我们如果一次吃得太多，结果就会完全吐出来。一九〇〇年的义和团之乱就是一个例子；如果我们吃得太少，却又不夠营养。现代文化在中国所产生的影响就是这样。无论如何，中国还是不得不跟着世界各国摸索前进。

西方在过去一百年中，每一发明总是导致另一发明，一种思想必定引发另一种思想，一次进步之后接着必有另一次进步，一次繁荣必定导致另一次繁荣，一次战争之后必有另一次战争。惟有和平不会导致和平，继和平而来的必是战争。这就是这个世界在现代文化下前进的情形。中国是否必须追随世界其余各国亦步亦趋呢？

大家都在担忧发生第三次世界大战，如果另一次大战争真地发生的话，很可能仍像第一次大战一样爆发于东欧和中欧，也可能像第二次大战一样爆发于中国的东三省。中欧的人民想在别处找个生存空间，至于中国的东北，则是别国人民想在那里找生存空间。中欧是个人口稠密的区域，境内的纷扰很容易蔓延到其他区域；东三省则是辽阔的真空地带，很容易招惹外来的纷扰。二者都可能是战争的导火线，战争如果真地发生，势将再度牵涉整个世界，未来浩劫实不堪设想。

确保东方导火线不着火的责任，自然要落在中国的肩膀上。因此今后二三十年间，中国在政治、社会、经济和工业各方面的发展，对于世界和平自将发生决定性的影响。一个强盛兴旺的中国与西方列强合作之下，即使不能完全消弭战争的危机，至少也可以使战争危机大为减低。西方列强如能与中国合作，不但同盟国家均蒙其利，即对整个世界的和平亦大有裨益。西方国家在今后五六十年内至少应该协助中国发展天然资源，在今后二十年内尤其需要协助中国进行经济复员和社会重建的工作。

在西方潮流侵入中国以前，几百年来的祸患可说完全导源于满洲和蒙古。甲午中日战争之后，日本一跃而为世界强国，遂即与帝俄抢夺满洲的控制权，终至触发日俄之战。日本处心积虑，想利用东三省作为征服全中国的跳板，结果发生九·一八事变。如果唐朝灭亡以后的历史发展能够给我们一点教训的话，我们就很有理由相信，东三省今后仍系中国的乱源，除非中国成为强大富足的国家，并且填补好满洲的真空状态。

在建立现代民主政治和工业的工作上，中国需要时间和有利的条件从事试验。这些条件就是和平和安全。国内和平有赖于国家的统一。国家安全则有赖于国际间的了解。只有在东北成为和平中心时，中国才有安全可言。

我们必须从头做起，设法把广大的东北领土从战乱之源转化为和平的重镇。在这件艰巨的工作上，我希望全世界——尤其是美国、英国和苏俄——能够与中国合作。如果她们肯合作，这件工作自然会成功，那不但中国之福，也是全世界之福。

民国十年（一九二一年），我承上海市商会及各教育团体的推选，并受广州中山先生所领导的国民党政府的支持，曾以非官方观察员身份列席华盛顿会议。翌年我又到欧洲访问现代文化的发祥地。那时刚是第一次世界大战结束后不久，欧洲各国正忙于战后复员，主要的战胜国则忙于确保永久和平。但是当时似乎没有一个国家意识到，实际上他们正在帮着散布下一次大战的种籽。

法国已经精疲力竭，渴望能有永久和平。她目不转睛地监视着莱茵河彼岸，因为威胁她国家生存的危机就是从那里来的。法国的防御心理后来表现在马奇诺防线上，她认为有了这道防线，就可以高枕无忧，不至于再受德国攻击了。秦始皇（公元前二四六——前二〇七年）筑长城以御鞑靼，法国则筑马奇诺防线以抵御德国的侵略。但是中国的祸患结果并非来自长城以外，而是发于长城之内，法国及其“固若金汤”的防线，命运亦复如是。

英国忙于欧洲的经济复兴，并在设法维持欧陆的均势。战败的德国正在休养将息。帝俄已经覆亡。一种新的政治实验正在地广人众的苏俄进行。这就是第一次世界大战后的欧洲政治情势。

美国因为不愿卷入欧洲纷扰的漩涡，已经从多事的欧陆撤退而召开华盛顿会议；九国公约就是在这次会议中签订的。此项公约取代了英日同盟，所谓山东问题，经过会外磋商后，亦告解决，日本对华的二十一条要求终于静悄悄地被放进坟墓。巴黎和会中曾决定把青岛赠送给日本，所谓山东问题就是因此而起的。中国人民对巴黎和会的愤慨终于触发了学生运动，在中日关系上发生了深远的影响，同时在此后二十年间，对中国政治和文化上的发展也有莫大的影响。巴黎和会的决定使同情中国的美国政界人士也大伤脑筋，终至演化为棘手的政治问题。共和党与民主党都以打抱不平自任，承诺为中国伸雪因凡尔赛和约而遭受的冤抑。因此，美国固然从欧洲脱身，却又卷入了太平洋的漩涡。二十年

后的珍珠港事变即种因于此。

美国虽然是国际联盟的倡导者，结果却并未参加国联的实际活动；法国唯一的愿望是避免纠纷，防御心理弥漫全国；英国的注意力集中在维持欧陆均势上面；结果国际联盟形同虚设。它只会嗥嗥狂吠却从来不会咬人。但是会员本身无法解决的问题，还是一古脑儿往国际联盟推，结果国联就成了国际难题的垃圾堆。中国无法应付东北问题的困难时，也把这些难题推到国联身上，因为日本是国联的会员国。法国对沈阳事变^[2]漠不关心，英国所关切的只是欧洲大陆的均势，惟恐卷入远东纠纷，因此国联连向日本吠几声的胆量都没有。结果只懒洋洋地打了几个呵欠，如果说那是默认既成事实，未始不可。

国联虽然一事无成，却是一个很有价值的教训。世界人士可以从它的失败中，学习如何策划未来的和平。国联诞生于美国之理想，结果因会员国间利益之冲突，以及列强间的野心而夭折。

凡尔赛和约订立后约二十年间，世局演变大致如此。由凡尔赛和约播下的战争种子在世界每一角落里像野草一样蔓生滋长，这些野草终于着火燃烧，火势遍及全球。

但是政治究竟只是过眼云烟，转瞬即成历史陈迹。恒久存在的根本问题是文化。我们无法否认欧洲已经发展了现代科学和民主制度，为人类带来了许多幸福。

在我看起来，德国是个遍地是望远镜、显微镜和试验管的国家。她的发明日新月异，突飞猛进。上海人甚至把高级舶来品统称为“茄门货”（德国货）。德国人在物质发明上的确称得起能手，但是在人事关系上却碌碌无能。我想，这或许就是他们无法与其他国家和睦相处的原因。他们透过望远镜或显微镜看人，目光焦点不是太远就是太近，因而无法了解人类的行为和情感。他们不可能把国际关系或人类情绪放到试管里去观察它们的反应。在人类活动的广大领域里，德国人常常抓不到人性的要点或缺点。他们已经发展了其他民族望尘莫及的特殊才智，但是欠缺常识。他们的特长使他们在科学上穷根究底，对世界提供了许多特殊的贡献；但是他们在常识方面的欠缺，却使德国和其他国家同受其害。

英国人刚刚与德国人相反。他们是个常识丰富的民族，也是应付人事关系的能手。他们对国际事务的看法以及有关的政策富于弹性和适应性。他们从来不让绳子拉紧到要断的程度。如果拉着绳子另一端的力量

比较强，英国人就会放松一点免得绳子拉断。如果拉着另一端的力量比较弱，英国人就会得寸进尺地把绳子拉过来，直至人家脱手为止。但是他们绝不会放弃自己拿着的这一端——他们会坚持到底，不顾后果。在国际关系和殖民政策上，英国人的这种特性随处可见。

英国人的特性中，除了弹性和适应性之外，同时还有容忍、中庸、体谅、公平以及妥协的精神。他们的见解从来不走极端，而且始终在努力了解别人的观点，希望自己能因此迁就别人，或者使别人来接受他们自己的观点。他们爱好言论自由和思想自由，憎恶无法适应不同情况的刻板规律。

英国的拘谨矜持几乎到了冷酷的程度，这是英国人最受其他民族讨厌的一种特性，而且常常因此引起猜疑误会。这种特性使英国人丧失了许多朋友。但是当你对他们有较深的认识时，或者说当他们对你了解较深时，你就会愿意与他们交朋友了。

这许多特性凑合在一起时，英国的民主政治才成为可能。因为民主不是抽象的东西，也不是天上掉下来的，民主政治包含着民主先进国家的所有特长。翻开英国的宪政史，你会发现其中充满了偏执、迫害、腐败和残忍的史实。许多生命，包括一位君主，曾经为民主牺牲。英国实行民主的经验的确值得我们好好研究。

不过，我们必须记住一项事实：英国的民主政治在联合王国达成统一之后才迅速发展，美国民主政治也是在南北战争之后才突飞猛进。历史告诉我们：只有统一与安全同时并进时，有组织的民主政治才能实现。英国幸而是小岛组成的王国，四围有海洋保护着。在古代，外国侵入英国是不容易的，因此英国人得以永久安全，有足够的时间从事民主实验。在民主的孕育和实验期间，英国的生存始终未受外来侵略的威胁。

美国的情形也很相似。北美大陆本身就是一个大岛，周围的海洋使它不受外来的侵略。从英国来的早期殖民者带来爱好自由的种籽，这些种籽遂即滋长为自由大树，海洋则保护了这些大树，免受外来侵略者的斧斤之扰。经过约一百年的发荣滋长，美国的民主已经根深蒂固，不但人事方面普遍进行实验，即在物质方面也是如此，换一句话说，科学研究之风已吹遍美洲的每一角落。美国的民主固然由英国模型发展而来，美国的科学却受德国之惠不浅。

美国的高等教育制度是英国学院和德国大学的混合体；打个比喻，

美国的学术服装是由一件英国袍子和一顶德国帽子凑合而成的。美国大学里男女学生的友好相处与交际自由，建立了自由研究的基础。知识不受严格的管制；人与人的关系是经由学生团体的自由接触而学到的；年轻一代的目光并未受到望远镜、显微镜或试验管的局限；凡是有兴趣的人都可以接受一种普遍文化的陶冶。

在大学部和研究院里，美国学生普遍接受研究方法的训练。德国学者的彻底精神普受赞许与提倡，但是这种彻底精神直到我进大学的时代才充分发挥。第一次世界大战期间，中国旧国旗中的红黄蓝白黑五色一度只剩下黑白两色。理由是德国颜料因战事关系已无法再输入中国。纽约一位美国化学家告诉我，在德国，通常是好几位专家共同研究一种颜料，在美国却是一位化学家同时研究好几种颜料。这是二十多年前的事了，目前的情况已经有了改变，因为在过去二三十年间，美国人民已经深获德国彻底精神的诀窍。

英国民主和德国精神在美国携手并进，相得益彰。美国以其丰富的天然资源，强大的组织能力，以及对大规模建设的热诚，已经一跃而登民主国家的首座。有一天，重庆的美国大使馆举行酒会，会中一位英国外交官对我说："英国美国化了，俄国美国化了，中国也美国化了。"

"英国在哪一方面美国化了呢？"我问道。

"好莱坞电影就是一个例子。"他回答说。

"那末俄国呢——你是不是指大工业？"

"是的。"

这使我联想到中国的政治制度、教育制度、社会改革和工业发展，这一切都带着浓厚的美国色彩。但是我并没有忘记：中国也已使冲激着她海岸的汪洋染上了她自己的色彩。

这位英国外交官用手指着缀有四十八颗星星的美国国旗，带点幽默地转身问站在他身边的一位美国高级将领说："这上面是六行星星，每行八颗。如果你们增加一个新的州时，你们预备怎么安排？"

"呃，我想它们排成七行，每行七颗星就成了。但是你问这个干什么？你心里所想的是哪一个新的州？"

"英格兰。"这位外交官回答说。我们大家都笑了。这当然只是一个笑话，但是从笑话里，我们可以看出时代的潮流。

昔日西方在东方争取殖民地时，西方列强除了美国之外都曾或先或

后地侵略过中国。甚至连葡萄牙也从广东省咬走一小块土地——澳门。美国取自中国的唯一东西是治外法权，但是美国所施于中国者实远较其所取者为多。这些人皆知的事实，用不到我浪费笔墨。现在美国与英国都已放弃了在华的治外法权，英国虽然仍旧保持香港，却已交还了所有的租界。全世界虽然历经战争惨祸，国际乌云之中已经透露出一线曙光了。希望这一线曙光，在大战胜利之后，能够渐渐扩大而成为光芒万丈的曜日。

美国已经决意参加未来的国际和平组织，她已经英勇地参加战斗，为永久和平而战斗。历史上的一个新时代正在形成中。中、美、英、苏俄如能合力谋求和平，再由一个有效的世界组织来维护和平，永久和平并非不可能的。

就中国而论，在未来二十年或者三十年里，她尤须加倍努力，从事建设和复兴。今后二三十年将是中国的兴衰关头。我们的努力能否成功，要看我们有无远大眼光，有无领导人才，以及盟国与我们合作的程度而定。盟国与我们合作的程度，又要看我们国内的政治发展以及我们对国际投资所采取的政策而定。战争的破坏，敌骑的蹂躏，更使我们的复兴工作倍形困难。

在另一方面，中国必须完成双重的任务。第一是使她自己富强。第二是协力确保世界和平。在儒家的政治哲学里，世界和平是最终的目的。中山先生根据儒家哲学，也把世界和平定为他的三民主义的目标。

我们如果能够度过这二三十年的难关，自然就可以驾轻就熟，继续进行更远的改革和建设，为中国创造辉煌的将来，到那时候，中国自然就有资格协助世界确保永久的和平了。

有许多地方，中国仍得向西方学习。自从唐朝覆亡以后，中国曾经一再被来自附近亚洲地区的异族所征服。唐亡以后中国文化的衰退，就是蛮夷戎狄不断蹂躏中国的结果。异族一再入寇中原，加上饥谨、疾病和内乱，终使中国元气衰竭，人民创造能力大为削弱。西方影响开始侵入中国时，正是中国文化陷于最低潮的时候。

现在我们中国人一提到唐朝文化，不禁眉飞色舞，心向往之，满望能恢复旧日的光荣。唐朝的文化比起后来宋朝禁欲主义的文化要近人情得多。如果我们能从唐朝文化得到些灵感与鼓舞，也未始不是一件好事。从唐人的绘画里，我们深深赞叹唐人体格的强健。唐朝的音乐、舞蹈、诗歌、绘画和书法都有登峰造极的成就，后代少能望其项背。

但中国要想回到历史上的这个辉煌时代是不可能的。千百年来我们一直在努力恢复过去的光荣，但是我们的文化却始终在走下坡。因为环境已经改变了。唐代文化赖以滋长的肥沃土壤，已经被历代祸乱的浪潮冲刷殆尽，但是我们如果能避免重蹈唐代灭亡的覆辙，转向在艺术、科学、军事、政治、卫生、财富各方面均有高度成就的现代文明国家如美国等学习，我们或许会发现唐代的光荣将有重临的一日。在维护和平的工作上，中国的职责将是相当重大的。中国的历史上曾经有过不少次的战争，但是这些战争多半属于国内革命的性质。对外的比较少，国内战争多半是被压迫的农民和苦难人民反抗腐败的政府所引起。至于对外战争，性质上也是防御多于攻击。中国受外国侵略者多，侵略外国者少，从筑万里长城的秦始皇开始，中国就一直希望能闭关自守，长城本身就是防御心理的象征。

孔子的忠孝、仁爱、信义、和平的教训和孟子的民主观念，都使中国适于做一个不愿欺凌其他民族的现代民主国家。中国在战后必须强调的是现代科学和民主政治；科学方面应注重生产方法的应用，民主方面应强调国家的统一。科学和民主是现代进步国家的孪生工具，也是达成强盛、繁荣和持久和平的关键。

中国人民深通人情，特别注重待人接物的修养，生活思想习于民主，这一切都使中国具备现代民主国家的坚实基础。我们在前面已经提到，中国的民主社会组织相当松泛。中国人对于个人自由的强烈爱好并未能与现代社会意识齐头并进。强烈的家族观念已经阻滞了使个人结合为广大团体的过程。不过这种褊狭的观念正在迅速衰退；现代社团已经在大城市里相继出现；进一步工业化之后，家族关系自将愈来愈松弛，个人社会化的程度也将愈来愈深。

在知识方面，中国人看待事物的态度使他深通人情，但是也使他忽视概括与抽象的重要。他以诗人、艺术家和道德家的心情热爱自然，因而胸怀宽大，心平气和。但是这种对自然的爱好尚未推展到对自然法则的研究，人类要控制自然，必须靠这些法则作武器。以中国文化同化能力之强，她必定能慢慢地吸收西方在科学上的贡献；以中国天然资源之富，人民智慧之高，科学的发展将使她前途呈现无限光明。物质文明发展之后，她的道德和艺术更将发扬光大；她的文学和哲学也将在现代逻辑方法和科学思想影响下更见突出而有系统。

在这个初步的和平与繁荣的新基础上，中国将可建立新的防卫力量来维护和平。只有战斗中的伙伴才有资格成为平时期的伙伴。中国八

年抗战对世界和平的贡献，已使举世人士刮目相看。

现代科学，特别是发明和工业上的成就，将与中国的艺术宝藏和完美道德交织交融。一种新的文化正在形成，这种新文化对世界进步一定会提供重大的贡献。

[2] 沈阳事变，即九一八事变。

编后记

蒋梦麟的著作《西潮》诞生于上世纪40年代，初以英文写就，1947年以*Tides from the West: A Chinese Autobiography*为名由耶鲁大学出版社出版。《西潮》丹麦文译本于1949年出版。作者于上个世纪50年代将此书译为中文，同时在原英文版基础上对内容有所增订。中文版于1958年完成，同年开始在台湾《中华日报》刊载，第二年由台湾中华日报社出版。

《西潮》英文版写于抗日战争期间（中文版增订于十余年之后），因此作品无可避免地带有其所处时代的背景与印记。举例来说，当时对一些地名、译名、朝代称谓、民族关系、世界政治等的表述与当前的通行用法不尽一致，亦有部分词语已不再使用，因而不为读者所熟悉。中文版和英文版的写作时间间隔较长，因此文中两种语言并非严格对照，也存在一些数据上的出入。此外，因当时条件所限，书中也存在个别事实性错误。对于上述几类情况，本版尽可能保留作品原貌，适当作注说明于书后，供读者参阅。除保留原作英文注释外，其余中文注释为编者所加。特此说明。

[返回总目录](#)

费孝通（1910—2005），著名社会学家、人类学家、民族学家、社会活动家，中国社会学和人类学的奠基人之一。费孝通著述浩繁，其作品《江村经济》《乡土中国》《中国士绅》是研究中国经济、社会 and 文化的必读之书。

20世纪40年代后期，费孝通根据其在西南联大和云南大学所讲“乡村社会学”一课的内容，应《世纪评论》之约写成分期连载的文章。这十四篇文章后以《乡土中国》之名结集出版。正如费孝通所说，这本书是一种尝试，尝试回答了“作为中国基层社会的乡土社会究竟是个什么样的社会”这个问题。

“这里讲的乡土中国，并不是具体的中国社会的素描，而是包含在具体的中国基层传统社会里的一种特具的体系，支配着社会生活的各个方面。”本书介绍了一个“乡土本色”的中国，并使用社会结构分析方法解剖中国传统社会，独创了“差序格局”概念并被国际社会学界所接受。作者对中国传统文化、社会结构的分析，对于认识和理解具体的中国社会大有裨益。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的My Country and My People（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（A Pictorial History of Chinese Architecture），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以Peasant Life in China—A Field Study of Country Life in the Yangtze Valley为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（Has Man a Future? —Dialogues with the Last Confucian），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（Intellectual Trends in the Ch'ing Period）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（Waiting for the Dawn: A Plan for the Prince），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

FOREWORD

The bulk of this book is a translation of *Xiangtu Zhongguo*, a set of essays written by Fei Xiaotong shortly after World War II. In writings about Fei and his works, the book's title is usually rendered in English as "rural China," but this rendering is inexact. *Xiang* means "countryside" and *tu* means "earth"; but the combination, *xiangtu*, is a set phrase meaning "one's native soil or home village." By using *xiangtu* to modify *Zhongguo* (China), Fei is conveying a subtle meaning to his readers: that Chinese society has grown out of its ties to the land. Should any of his readers miss the subtlety, Fei clarifies the meaning of the title in the book's first sentence, "Chinese society is fundamentally rural." "From the soil" captures Fei's meaning in a way that "rural China" does not.

Although this book is virtually unknown in the West, it is a standard text in many Chinese universities and contains ideas that are useful for Western readers as well. It is our assessment that this book remains as fresh and as intellectually gripping today as it was over forty years ago, when it was first written. In fact, it may be even better suited to today's climate of opinion than to the earlier one, because Fei addresses the structural foundations of social pluralism and cultural diversity. By describing the fundamental differences between Chinese and Western societies, Fei helps us to understand the distinctiveness of Chinese society and to look at Western modernity in a new way.

We decided to translate this book because we were engaged in a similar pursuit. We, too, were contrasting China and the West in order to understand the distinctiveness of Chinese society; and on first reading Fei's book (Hamilton in 1985 and Wang in 1986), we were struck by the parallels between what we were trying to do and what Fei had already done forty years earlier. Moreover, once we had studied the book, it became increasingly evident that our subsequent work would have to build on Fei's insights. For this reason, we realized that we had to produce an English translation of the book and to explain how Fei's ideas open the way for understanding China and indeed other non-Western societies in new terms.

Throughout the book, Fei is attempting to explain to his Chinese readers what the West is like, so that he can show how Chinese society differs from Western societies. In our translation, we find ourselves having to cross the cultural barrier one additional time. Here we have had to convey in English what the West is like from a Chinese point of

view, and to show how this Chinese understanding of the West allows the unique qualities of Chinese society to become visible to the very Chinese who would otherwise take those qualities for granted. Multiple levels of discourse needed to be included simultaneously. Throughout our translation, we have tried to emphasize Fei's Chinese point of view and to clarify this point of view for an English-reading public. As Fei himself has said, however, every act of translation is necessarily a new interpretation. We only hope that the English readers of this book will bracket their own taken-for-granted world—their Westernness—and allow themselves not only to enter a different social world but also to understand that that social world functions as fully as the world they themselves live in.

Xiangtu Zhongguo has been reissued many times in Taiwan and Hong Kong. For our translation, we used two reissued copies of the original edition.¹ One of the reissued editions was printed in Taiwan without publishing information or date of publication. The other edition was published in Hong Kong with publishing information but no date of publication.² Both editions were identical; we subsequently checked this version against a more recent edition published in Hong Kong.³ With one exception, which we note in the text, this version is identical to the version we used in the translation.

We wish to acknowledge the assistance of a number of people and to express our thanks to them all. The students at the University of California, Davis, in a number of courses on complex organizations, comparative management, and Chinese societies, encouraged us by their enthusiastic reactions to our initial translations of chapters 4 and 5. Finding that people with no previous knowledge of China could enjoy and learn from these chapters prompted us to translate the entire book. The following people gave helpful comments on all or parts of this book (although we incorporated many of their suggestions, we are still responsible for the result): Tani Barlow, Eleanor Bender, Nicole Biggart, Thomas Gold, Lyn Loftand, Mausang Ng, Benjamin Orlove, Martha Winnacker, and especially Marco Orru, who also gave us the benefit of his editorial skills. We want to single out David Arkush for a special acknowledgment. His encouragement from the outset helped keep the project going, and his line-by-line reading of our translation saved us from many mistakes. Finally, we thank Sasha Bessom and Jean Stratford for assembling the manuscript and putting it into its present form.

重刊序言

这本小册子的写作经过，在“后记”里已经交代清楚。这里收集的是我在四十年代后期，根据我在西南联大和云南大学所讲“乡村社会学”一课的内容，应当时《世纪评论》之约，而写成分期连载的十四篇文章。

我当时在大学里讲课，不喜欢用现存的课本，而企图利用和青年学生们的接触机会，探索一些我自己觉得有意义的课题。那时年轻，有点初生之犊的闯劲，无所顾忌地想打开一些还没有人闯过的知识领域。我借“乡村社会学”这讲台来追究中国乡村社会的特点。我是一面探索一面讲的，所讲的观点完全是讨论性的，所提出的概念一般都没有经过琢磨，大胆朴素，因而离开所想反映的实际，常常不免有相当大的距离，不是失之片面，就是走了样。我敢于在讲台上把自己知道不成熟的想法，和盘托出在青年人的面前，那是因为我认为是这是一个比较好的教育方法。我并不认为教师的任务是在传授已有的知识，这些学生们自己可以从书本上去学习，而主要是在引导学生敢于向未知的领域进军。作为教师的人就得带个头。至于攻关的结果是否获得了可靠的知识，那是另一个问题。实际上在新闻的领域中，这样要求也是不切实际的。

在教室里讲课和用文字传达，公开向社会上发表，当然不能看作一回事。在教室里，教师是在带领学生追求知识，把未知化为已知。在社会上发表一种见解，本身是一种社会行动，会引起广泛的社会效果。对实际情况不正确的反映难免会引起不良的影响。我是明白这个道理的，在发表这些文章之前，犹豫过。所以该书初次出版时在“后记”中向读者恳切说明：由于刊物的编者“限期限日的催稿，使我不能等很多概念成熟之后才发表”。“这算不得是定稿，也不能说是完稿，只是一段尝试的记录罢了。”尝试什么呢？尝试回答我自己提出的“作为中国基层社会的乡土社会究竟是个什么样的社会”这个问题。

这书出版是在1947年，离今已有三十七年。三联书店为什么建议我把这本小册子送给他们去重刊，我不知道。我同意他们的建议是因为我只把它看成是我一生经历中留下的一个脚印，已经踏下的脚印是历史的事实，谁也收不回去的。现在把它作为一件反映解放前夕一些年轻人在知识领域里猛闯猛攻的标本，拿出来再看看，倒另有一番新的意义。至于本书内容所提出的论点，以我现有的水平来说，还是认为值得有人深入研究的，而且未始没有现实的意义。

这本小册子和我所写的《江村经济》、《禄村农田》等调查报告性质不同。它不是一个具体社会的描写，而是从具体社会里提炼出的一些概念。这里讲的乡土中国，并不是具体的中国社会的素描，而是包含在具体的中国基层传统社会里的一种特具的体系，支配着社会生活的各个方面。它并不排斥其他体系同样影响着中国的社会，那些影响同样可以在中国的基层社会里发生作用。搞清楚我所谓乡土社会这个概念，就可以帮助我们去理解具体的中国社会。概念在这个意义上，是我们认识事物的工具。

我这种尝试，在具体现象中提炼出认识现象的概念，在英文中可以用Ideal Type这个名词来指称。Ideal Type的适当翻译可以说是观念中的类型，属于理性知识的范畴。它并不是虚构，也不是理想，而是存在于具体事物中的普遍性质，是通过人们的认识过程而形成的概念。这个概念的形成既然是从具体事物里提炼出来的，那就得不断地在具体事物里去核实，逐步减少误差。我称这是一项探索，又一再说是初步的尝试，得到的还是不成熟的观点，那就是说如果承认这样去做确可加深我们对中国社会的认识，那就还得深入下去，还需要花一番工夫。

这本书最初出版之后，一搁已有三十七年。在这一段时间里，由于客观的条件，我没有能在这方面继续搞下去。当三联书店提出想重刊此书时，我又从头读了一遍。我不能不为当时那股闯劲所触动。而今老矣。回头看，那一去不复返的年轻时代也越觉得可爱。我愿意把这不成熟的果实贡献给新一代年轻人。这里所述的想法大可议论，但是这种一往无前的探索的劲道，看来还是值得观摩的。让我在这种心情里寄出这份校订过的稿子给书店罢。

费孝通

1984年10月11日

① SPECIAL CHARACTERISTICS OF RURAL SOCIETY

Chinese society is fundamentally rural. I say that it is fundamentally rural because its foundation is rural. Several variations have arisen from this foundation, but even so, these variations retain their rural character. Moreover, in the past hundred years, a very special society has formed as a consequence of the encounter between East and West.¹ For the time being, however, I am not going to discuss the characteristics of these variations, but instead will concentrate exclusively on rural society and on those so-called hayseeds, the people living in the countryside. They are truly the foundation of Chinese society.

We often say that country people are figuratively as well as literally "soiled" (tuqi). Although this label may seem disrespectful, the character meaning "soil" (tu) is appropriately used here. Country people cannot do without the soil because their very livelihood is based upon it. In the earliest times, there may have been some groups of people in the Far East who did not know how to farm; but for us now, how those primitives lived is merely a matter of curiosity. Today, most people in East Asia make a living by working in the fields. To be more specific, even from early times, the tributaries of China's three large rivers were already entirely agricultural.² Historically, wherever people from those agricultural regions migrated, they took with them their tradition of making a living from the soil.

Recently, I met an American friend who had returned from a trip to Inner Mongolia. He told me he could not understand why the people who moved to those frontier prairies still tried to farm as if they lived in China's heartland. Mongolian grasslands are best suited only for pastureland, but he said that every family had carved up the land into small plots for farming. It was as if they had dived, headfirst, into the soil, as if they were unable to see any other way of using the land. I remember that one of my teachers, Dr. Shirokogoroff, once told me about some Chinese who had moved to Siberia. In total disregard of the climate, those Chinese still planted their seeds just to see if anything would grow. These accounts show that the Chinese are really inseparable from the soil. To be sure, out of this soil has grown a glorious history, but it is a history that was naturally limited by what could be taken from the soil. Now it appears that these very

limitations imposed by agriculture will hold China back, will prevent the nation from moving forward.

Only those who make a living from the soil can understand the value of soil. City dwellers scorn country people for their closeness to the land; they treat them as if they were truly "soiled." But to country people, the soil is the root of their lives. In rural areas, the god represented in the most shrines is Tudi, the god of the earth. Tudi is the god closest to human nature; Tudi and his wife are an old white-haired couple who take care of all the business of the countryside and who have come to symbolize the earth itself. When I went abroad for the first time, my nanny slipped something wrapped in red paper into the bottom of my suitcase. Later, she told me in private that if I had trouble getting accustomed to my new home and if I were too homesick, I should make some soup from the stuff wrapped in the red paper. In the package was dirt that she had scraped from her stove. I remember seeing a similar custom in a movie called *A Song to Remember*, which took place in Poland, an Eastern European agricultural country. It made me realize even more what an important role the earth plays and should play in a civilization like ours.

Agriculture differs from both pastoralism and industry. Farmers are necessarily connected to the land, whereas herdsmen drift about, following the water and the grass, and are forever unsettled. Industrial workers may choose where they live, and they may move without difficulty; but farmers cannot move their land or the crops they grow. Always waiting for their crops to mature, those old farmers seem to have planted half their own bodies into the soil; it is this inability to move that causes farmers to appear so backward and sedentary.

Indeed, those who must depend on farming seem to be stuck in the soil. I once met a friend who had studied language in the Zhangbei area of northern China.³ I asked him if the language there had been influenced by Mongolian. Shaking his head, he said that no influence at all could be seen in language and little in any other aspect. "For hundreds of years," he noted, "there have always been only a few surnames in the village. I reconstructed the genealogy of each family from the gravestones, and it is clear that only these few families have ever lived there. The entire population of the village seems rooted in the soil; generation after generation, not much appears to have changed." We could add some qualifications to his conclusion, but, generally speaking, this kind of attachment to the soil is one of the characteristics of rural society. It is normal for farmers to settle in one spot for generations; it would be abnormal for them to migrate. Of course, droughts, floods, or continuous wars may force some farmers to leave their homes. But even such big events as the war of resistance against Japan did not, I believe, produce high mobility among rural

people.

I certainly do not mean to argue that the rural population of China is fixed. That is impossible, because the population increases so quickly. After only several generations of normal reproduction, the number of people on one piece of land reaches a saturation point. The surplus population has to leave; those people, all carrying their own hoes, go out to open up new lands. But the core groups seldom move. And those who do migrate, if they find the land to survive, like the seeds blown from the trees by the wind, create the same small, lineage-based villages that they left behind. Those who do not find land simply vanish, or perhaps go into business. While I was in Guangxi province, near the mountains where the Yao people live, I saw some migrant villages—seeds that had been blown from the old trees—where people had to struggle bitterly to create a home from new soil. In Yunnan province, I saw other small villages that had been in existence for only two or three generations. In the same places, I have also seen homeless vagrants who failed to find any land at all, and some dead bodies, half eaten by dogs, along the sides of the road.

This immobility, this enduring attachment to the soil, points to a relationship between people and space. Being fixed in space, people live in solitude and isolation. But the unit of isolation is not the individual but the group. For farming, it is not necessary for many people to live together. The division of labor required for agriculture is very simple. At most, there are a few distinctions between what men and women do; women typically transplant rice seedlings, whereas men usually hoe the soil. But this kind of cooperation is not designed to achieve greater efficiency; rather, it occurs because during the busy farming season there are just too many things for men to do by themselves, so their families come out to the fields to help them. Because farming has not developed a specialized division of labor, it is unnecessary for many people to live together in the same place. Therefore, when we see various sizes of rural communities, we may be sure that many of the larger ones were formed for reasons other than agriculture.

The smallest rural communities can be as small as one household. A husband, a wife, and some children, living together, fulfill the need for sex and procreation. In any kind of society, except for such special cases as armies and schools, the family is always the most basic social unit. In China's countryside, however, communities with only one family are seldom seen. There may be some such communities in terraced mountainous areas of Sichuan, but the majority of farmers live grouped together in villages. This pattern of residence greatly influences the nature of Chinese rural society. In rural areas of the United States, each family is geographically separated from its

neighbors and constitutes its own individual collectivity. This pattern is the consequence of the early frontier period, when the land was vast and the people few. In those days, settlers held fast to a spirit of individual responsibility and self-reliance. In China, the same situation would be very rare. Generally speaking, Chinese farmers live grouped together in villages for the following reasons: (1) The piece of land that each family cultivates is invariably small. This is a petty agricultural economy; people live together in the same place so that they can be close to their fields. (2) Where irrigation is required, people must work together as a group, so living together is quite convenient. (3) Living together as a group also greatly contributes to everyone's security. (4) We practice partible inheritance of land, which gives an equal share of an estate to all male heirs. Therefore, because of this practice of dividing land among brothers, and thus attaching each of them to the same soil, over a period of several generations small communities grow into large villages.

No matter what the reasons, the basic unit of Chinese rural society is the village. Some villages may have only three households; others may have as many as several thousand households. When I mentioned that a characteristic of Chinese rural society is solitude and isolation, I was referring to the situation of villages, not individuals. The solitude and isolation are, of course, not absolute. But because villagers do not move around much, the communities themselves do not interact much. I think it is safe to say that life in rural society is very parochial. Villagers restrict the scope of their daily activities; they do not travel far; they seldom make contact with the outside world; they live solitary lives; they maintain their own isolated social circle. All of these characteristics contribute to the parochialism of rural China.

People in rural China know no other life than that dictated by their own parochialism. It is a society where people live from birth to death in the same place, and where people think that this is the normal way of life. Because everyone in a village lives like that, distinctive patterns of human relationships form. Every child grows up in everyone else's eyes, and in the child's eyes everyone and everything seem ordinary and habitual. This is a society without strangers, a society based totally on the familiar.

In sociology, we usually make a distinction between two basic types of societies. One type of society forms as a natural result of people growing up together, and has no other purpose than being simply an outgrowth of human interaction. The other type of society is that which has been organized explicitly to fulfill goals. In the words of the German sociologist Ferdinand Tönnies, the first type is called *Gemeinschaft* and the second *Gesellschaft*.⁴ To the French sociologist

Emile Durkheim, the first is an example of mechanical solidarity and the second an example of organic solidarity.⁵ Using our own terms, we would identify the first type of society as one based on ritual and customs (*lisu*) and the second as one based on law and reason (*fali*). Later on, I will carefully analyze the differences between these two societies, but for now I merely want to emphasize that the land itself constrains the lives of rural people. The people they see every day are the ones they have known since childhood, just as they know the people in their own families. They do not have to select the kind of society they would live in; they are born into it; choice is not a factor.

Familiarity is an intimate feeling that develops from frequent and repeated interaction occurring over a long period of time. The character used in the first sentence of Confucius's *Analects* expresses this process of interaction. The character is *xi*, which means "to practice." If we put this character together with *xue*, which means "to meet strange things for the first time," we obtain the idea "to learn" (*xuexi*). First we encounter, then we practice; and through this process, the unknown becomes the familiar. One obtains a real sense of satisfaction from becoming thoroughly intimate with one's environment. In a society characterized by this level of familiarity, we achieve a level of freedom whereby we can do whatever we please without fear of violating the norms of the society. This type of freedom is unlike those freedoms defined and protected by laws. The social norms in a familiar society rest not upon laws but, rather, upon rituals and customs that are defined through practice; hence, to follow these norms is to follow one's own heart and mind (*xin*). In other words, society and the individual become one.

"We all know each other very well (*shuren*). If you need my help, you have it. You don't have to ask twice." Expressions such as these expose the limitations of our modern society. Modern society is composed of strangers. We do not know each other's pasts. When we talk, we must explain things clearly. Even then, we fear that oral agreements are not binding; therefore, we draw up written contracts to which we sign our names. Laws arise in just this fashion. But there is no way for laws like this to develop in a rural society. "Isn't that what outsiders do?" rural people would say. In rural society, trust derives from familiarity. This kind of trust has very solid foundations, for it is rooted in customary norms. Even today, Western merchants often remark that trustworthiness is an innate quality of the Chinese. Many stories sound like fairy tales, such as the one told recently about a Westerner who received, after the war, a whole set of porcelain that his grandfather had ordered years earlier when he was in China. The goods were delivered without any charge and with the seller's profuse apologies for being unable to send them earlier. Trust in rural society

is based not on the importance of contracts but, rather, on the dependability of people, people who are so enmeshed in customary norms that they cannot behave in any other way.

This sort of familiarity is a distinctive characteristic of being rural, of being a "hayseed," if you will. Only those who depend on the soil for their livelihood would root themselves in one place like a plant. Over time, people rooted in the same small place come to know everybody's life just as a mother knows her children. Strangers cannot understand what a baby says, but a mother not only clearly understands everything that her baby says, but she also understands what the baby wants even though the baby does not use words.

Rural people not only know each other intimately; they also get to know other aspects of rural life equally well. If an old farmer sees ants moving their anthill, he will quickly dig ditches in the fields, because he knows the meaning behind their move. Knowledge acquired from familiarity is specific and is not deduced from abstract general principles. People who grow up in a familiar environment do not need such principles. They only need to know the specific relationship between means and ends within the scope of their activities. They do not seek universal truths. When I read the Analects, I noticed that Confucius gave different definitions of filial piety (xiao) to different people. I realized then the special character of rural society. What is filial piety? Confucius did not give an abstract explanation, but gave different answers to different students by describing concrete behavioral examples. Finally, he concluded that filial piety is simply a peaceful mind. Sons and daughters should become thoroughly familiar with their parents' personalities in the course of daily contact, and then should try to please them in order to achieve peace of mind. The basic methods of human interaction in rural society rest on familiarity and on maintaining a peaceful mind.

These methods cannot be used with a stranger. China is undergoing a rapid transformation that is changing a fundamentally rural society into a modern one. The way of life that has been cultivated in rural society is now giving rise to abuses. Created by strangers, modern society cannot incorporate the customary basis of rural society. Rejecting the customary ways of rural life, modern people denigrate everything rural. The rural village is no longer a place to which successful people want to return.

壹 乡土本色

从基层上看去，中国社会是乡土性的。我说中国社会的基层是乡土性的，那是因为我考虑到从这基层上曾长出一层比较上和乡土基层不完全相同的社会，而且在近百年来更在东西方接触边缘上发生了一种很特殊的社会。这些社会的特性我们暂时不提，将来再说。我们不妨先集中注意那些被称为土头土脑的乡下人。他们才是中国社会的基层。

我们说乡下人土气，虽则似乎带着几分藐视的意味，但这个“土”字却用得很好。“土”字的基本意义是指泥土。乡下人离不了泥土，因为在乡下住，种地是最普通的谋生办法。在我们这片远东大陆上，可能在很古的时候住过些还不知道种地的原始人，那些人的生活怎样，对于我们至多只有一些好奇的兴趣罢了。以现在的情形来说，这片大陆上最大多数的人是拖泥带水下田讨生活的了。我们不妨缩小一些范围来看，三条大河的流域已经全是农业区。而且，据说凡是从这个农业老家迁移到四围边地上去的子弟，也老是很忠实地守着这直接向土里去讨生活的传统。最近我遇着一位到内蒙旅行回来的美国朋友，他很奇怪地问我：你们中原去的人，到了这最适宜于放牧的草原，依旧锄地播种，一家家划着小小的一方地，种植起来；真像是向土里一钻，看不到其他利用这片地的方法了。我记得我的老师史禄国先生也告诉过我，远在西伯利亚，中国人住下了，不管天气如何，还是要下些种子，试试看能不能种地。——这样说来，我们的民族确是和泥土分不开的了。从土里长出过光荣的历史，自然也会受到土的束缚，现在很有些飞不上天的样子。

靠种地谋生的人才明白泥土的可贵。城里人可以用土气来藐视乡下人，但是乡下，“土”是他们的命根。在数量上占着最高地位的神，无疑的是“土地”。“土地”这位最近于人性的神，老夫老妻白首偕老的一对，管着乡间一切的闲事。他们象征着可贵的泥土。我初次出国时，我的奶妈偷偷地把一包用红纸裹着的东西，塞在我箱子底下。后来，她又避了人和我说，假如水土不服，老是想家时，可以把红纸包裹着的东西煮一点汤吃。这是一包灶上的泥土。——我在《一曲难忘》的电影里看到了东欧农业国家的波兰也有着类似的风俗，使我更领略了“土”在我们这种文化里所占和所应当占的地位了。

农业和游牧或工业不同，它是直接取资于土地的。游牧的人可以逐水草而居，飘忽无定；做工业的人可以择地而居，迁移无碍；而种地的人却搬不动地，长在土里的庄稼行动不得，侍候庄稼的老农也因之像是半身插入了土里，土气是因为不流动而发生的。

直接靠农业来谋生的人是黏着在土地上的。我遇见过一位在张北一带研究语言的朋友。我问他在这一带的语言中有没有受蒙古语的影响。他摇了摇头，不但语言上看不出什么影响，其他方面也很少。他接着说：“村子里几百年来老是这几个姓，我从墓碑上去重构每家的家谱，清清楚楚的，一直到现在还是那些人。乡村里的人口似乎是附着在土上的，一代一代地下去，不太有变动。”——这结论自然应当加以条件的，

但是大体上说，这是乡土社会的特性之一。我们很可以相信，以农为生的人，世代定居是常态，迁移是变态。大旱大水，连年兵乱，可以使一部分农民抛井离乡；即使像抗战这样大事件所引起基层人口的流动，我相信还是微乎其微的。

当然，我并不是说中国乡村人口是固定的。这是不可能的，因为人口在增加，一块地上只要几代的繁殖，人口就到了饱和点；过剩的人口自得宣泄出外，负起锄头去另辟新地。可是老根是不常动的。这些宣泄出外的人，像是从老树上被风吹出去的种子，找到土地的生存了，又形成一个小小的家族殖民地，找不到土地的也就在各式各样的运命下被淘汰了，或是“发迹了”。我在广西靠近瑶山的区域里还看见过这类从老树上吹出来的种子，拼命在垦地。在云南，我看见过这类种子所长成的小村落，还不过是两三代的事；我在那里也看见过找不着地的那些“孤魂”，以及死了给狗吃的路毙尸体。

不流动是从人和空间的关系上说的，从人和人在空间的排列关系上说就是孤立和隔膜。孤立和隔膜并不是以个人为单位的，而是以住在一处的集团为单位的。本来，从农业本身看，许多人群居在一处是无须的。耕种活动里分工的程度很浅，至多在男女间有一些分工，好像女的插秧，男的锄地等。这种合作与其说是为了增加效率，不如说是因为在某一时间男的忙不过来，家里人出来帮帮忙罢了。耕种活动中既不向分工专业方面充分发展，农业本身也就没有聚集许多人住在一起的需要了。我们看见乡下有大小不同的聚居社区，也可以想到那里出于农业本身以外的原因了。

乡下最小的社区可以只有一户人家。夫妇和孩子聚居于一处有着两性和抚育上的需要。无论在什么性质的社会里，除了军队、学校这些特殊的团体外，家庭总是最基本的抚育社群。在中国乡下这种只有一户人家的小社区是不常见的。在四川的山区种梯田的地方，可能有这类情形，大多的农民是聚村而居。这一点对于我们乡土社会的性质很有影响。美国的乡下大多是一户人家自成一个单位，很少屋檐相接的邻舍。这是他们早年拓殖时代，人少地多的结果，同时也保持了他们个别负责、独来独往的精神。我们中国很少类似的情形。

中国农民聚村而居的原因大致说来有下列几点：一、每家所耕的面积小，所谓小农经营，所以聚在一起住，住宅和农场不会距离得过分远。二、需要水利的地方，他们有合作的需要，在一起住，合作起来比较方便。三、为了安全，人多了容易保卫。四、土地平等继承的原则下，兄弟分别继承祖上的遗业，使人口在一地方一代一代地积起来，成为相当大的村落。

无论出于什么原因，中国乡土社区的单位是村落，从三家村起可以到几千户的大村。我在上文所说的孤立、隔膜是以村和村之间的关系而说的。孤立和隔膜并不是绝对的，但是人口的流动率小，社区间的往来也必然疏少。我想我们很可以说，乡土社会的生活是富于地方性的。地方性是指他们活动范围有地域上的限制，在区域间接触少，生活隔离，各自保持着孤立的社会圈子。

乡土社会在地方性的限制下成了生于斯、死于斯的社会。常态的生活是终老是乡。假如在一个村子里的人都是这样的话，在人和人的关系

上也就发生了一种特色，每个孩子都是在人家眼中看着长大的，在孩子眼里周围的人也是从小就看惯的。这是一个“熟悉”的社会，没有陌生人的社会。

在社会学里，我们常分出两种不同性质的社会，一种并没有具体目的，只是因为在一起生长而发生的社会，一种是为了要完成一件任务而结合的社会。用Töennies的话说：前者是Gemeinschaft，后者是Gesellschaft；用Durkheim的话说：前者是“有机的团结”，后者是“机械的团结”。用我们自己的话说，前者是礼俗社会，后者是法理社会。——我以后还要详细分析这两种社会的不同。在这里我想说明的是生活上被土地所囿住的乡民，他们平素所接触的是生而与俱的人物，正像我们的父母兄弟一般，并不是由于我们选择得来的关系，而是无须选择，甚至先我而在的一个生活环境。

熟悉是从时间里、多方面、经常的接触中所发生的亲密的感觉。这感觉是无数次的小磨擦里陶炼出来的结果。这过程是《论语》第一句里的“习”字。“学”是和陌生事物的最初接触，“习”是陶炼，“不亦说乎”是描写熟悉之后的亲密感觉。在一个熟悉的社会中，我们会得到从心所欲而不逾规矩的自由。这和法律所保障的自由不同。规矩不是法律，规矩是“习”出来的礼俗。从俗即是从心。换一句话说，社会和个人在这里通了家。

“我们大家是熟人，打个招呼就是了，还用得着多说么？”——这类的话已经成了我们现代社会的阻碍。现代社会是个陌生人组成的社会，各人不知道各人的底细，所以得讲个明白；还要怕口说无凭，画个押，签个字。这样才发生法律。在乡土社会中法律是无从发生的。“这不是见外了么？”乡土社会里从熟悉得到信任。这信任并非没有根据的，其实最可靠也没有了，因为这是规矩。西洋的商人到现在还时常说中国人的信用是天生的。类于神话的故事真多：说是某人接到了大批磁器，还是他祖父在中国时订的货，一文不要地交了来，还说着许多不能及早寄出的抱歉话。——乡土社会的信用并不是对契约的重视，而是发生于对一种行为的规矩熟悉到不假思索时的可靠性。

这自是“土气”的一种特色。因为只有直接有赖于泥土的生活才会像植物一般地在一个地方生下根，这些生了根在一个小地方的人，才能在悠长的时间中，从容地去摸熟每个人的生活，像母亲对于她的儿女一般。陌生人对于婴孩的话是无法懂的，但是在做母亲的人听来都清清楚楚，还能听出没有用字音表达的意思来。

不但对人，他们对物也是“熟悉”的。一个老农看见蚂蚁在搬家了，会忙着去田里开沟，他熟悉蚂蚁搬家的意义。从熟悉里得来的认识是个别的，并不是抽象的普遍原则。在熟悉的环境里生长的人，不需要这种原则，他只要在接触所及的范围之中知道从手段到目的间的个别关联。在乡土社会中生长的人似乎不太追求这笼罩万有的真理。我读《论语》时，看到孔子在不同人面前说着不同的话来解释“孝”的意义时，我感觉到这乡土社会的特性了。孝是什么？孔子并没有抽象地加以说明，而列举具体的行为，因人而异地答复了他的学生。最后甚至归结到“心安”两字。做子女的得在日常接触中去摸熟父母的性格，然后去承他们的欢，做到自己的心安。这说明了乡土社会中人和人相处的基本办法。

这种办法在一个陌生人面前是无法应用的。在我们社会的激速变迁中，从乡土社会进入现代社会的过程中，我们在乡土社会中所养成的生活方式处处产生了流弊。陌生人所组成的现代社会是无法用乡土社会的习俗来应付的。于是，“土气”成了骂人的词汇，“乡”也不再是衣锦荣归的去处了。

②BRINGING LITERACY TO THE COUNTRYSIDE

In the eyes of those living in cities, country people are "stupid" (yu). Even those people who advocate rural work regard stupidity, sickness, and poverty as symptoms of everything that is wrong in Chinese rural villages.¹ We can, of course, objectively measure sickness and poverty, but on what grounds can we say that country people are "stupid"? When peasants, walking in the middle of a road, hear a car honking behind them, they become so nervous that they simply do not know which way to jump. Then the drivers of those cars slam on the brakes, stick their heads out of the window, spit and curse, and call those peasants "stupid"! If that is stupidity, then country people have been wronged.

Once I took my students on a field trip to the countryside. After inspecting corn growing in one of the fields, a young female student, acting as if she knew it all, announced, "This year's wheat has grown extremely tall." The peasant standing beside her did not spit at her even once, but gave her a little smile, which an astute observer might have interpreted as a reaction to her stupidity. Country people do not know how to deal with traffic because they have never experienced how to live in a city. That is a question of knowledge, not of intelligence. In the same way, when city people visit the countryside, they do not even know something as simple as how to chase the dogs away; but we should not call them "idiots" just because they are frightened by barking dogs. By equal measure, we certainly have no reason to call country people "stupid" because they lack knowledge about such simple rules of the road as whether to walk on the left or on the right side. Stupidity has no bearing here.

When our well-meaning social workers say that country people are stupid, they usually mean that country people cannot read. They are illiterate, or what we call "character blind." Their eyes cannot even recognize one Chinese character. That they are illiterate is a fact. I would never oppose a movement to bring literacy to the countryside. However, it would be hard to convince me that illiteracy equals stupidity. "Stupidity" indicates a lack of, or a defect in, intelligence. The ability to read is not a measure of intelligence. Intelligence is the ability to learn. If people have had no opportunity to study, they will necessarily know very little, regardless of whether or not they possess the ability to learn. Therefore, do we mean to say that country people

are not only illiterate but also incapable of learning?

During the war, when my colleagues and I were evacuated to a distant rural area, some of our children attended a rural elementary school. In whatever classes they attended, our children learned faster and had better grades than the country children. In front of all the parents, the teachers always praised our children as being bright and spirited, by which they meant that the children of professors naturally possess high intelligence. I was, of course, delighted with such compliments for my own child. For us poor professors, who had been deprived of nearly everything, it seemed nice that we could still bequeath to our children a natural ability that left others far behind. One day, however, I saw students catching grasshoppers in the field after school. Those "bright and spirited" children of ours chased those grasshoppers all over the place, but they failed to catch anything. At the same time, being very agile, the peasant children caught grasshoppers with every grab. On my way home, I felt my pride deflate.

That peasant children could not learn characters in the classroom faster than the professors' children is just like the fact that professors' children could not catch more grasshoppers than the peasant children. I did not blame my child for being unable to catch grasshoppers. First, our family did not need grasshoppers to supplement our food. In those rural areas of Yunnan, people like to add grasshoppers to their dishes; their taste is somewhat like the dried shrimps from Suzhou. Second, my child never had the opportunity to practice catching grasshoppers. Professors' children always wore socks and shoes. To keep their dignity, they had to walk very carefully, and if they got dirty, their parents would scold them. Therefore, even when they went after the grasshoppers, they would always have misgivings about it, and so would never be quite agile enough to catch them. These are probably the immediate reasons, but an even more basic reason is that they never ran wild in the fields every day; they never learned to distinguish a blade of grass from an insect. As a result of protective coloration, grasshoppers are always the same color as the grass, so it takes trained eyes to see them.

Can this reasoning that I just applied to my own child also be applied to rural children to explain their "stupidity" in learning characters? I think it fits perfectly. Unlike professors' children, those children from the countryside did not grow up seeing books and characters everywhere. That was not their daily fare. Professors' children did not inherit some special ability to learn characters well, but they obviously grew up in an environment that made learning characters easier. Therefore, seen in this fashion, the question about whether country people are the equals of city people in intelligence

cannot be resolved.

When those social workers say that country people are stupid, they probably mean that their knowledge, and not their intelligence, is inferior. However, even this point seems implausible. At most, we can say that country people do not match city dwellers in their knowledge about what is required for city living. That much is correct. But can we not also say that there are many illiterate people in the countryside because life there does not require literacy? Now we arrive at a key point: What is the use of a written language?

In the last chapter, I showed that one of the characteristics of rural society is that people grow up among close acquaintances. In other words, people who work together see each other every single day. In sociology, we call this kind of group a "face-to-face" (mianduimian) group. Gui Youguang says in his book *Xiangjixuan ji* that, when he meets the same people every day, after a while he is able to tell who is coming by the sound of that person's footsteps.² In face-to-face groups, people can identify a visitor without actually seeing him. Although we have lived in modern cities for some time now, we have not completely given up those habits that are so prominent in rural society. Give this a try. The next time someone knocks on your door, just say, "Who is it?" I bet that the person behind the door will simply answer, in a loud voice, "Me!" You recognize the person by the voice. People who live in face-to-face groups do not need to say names. Would a wife say her name to answer her husband's question "Who is it?" We have become so accustomed to giving this "me" answer that sometimes we even do it when the person behind the door cannot recognize our voice. Once, when I returned to my hometown after a long absence, I remember answering a phone call. I had no way to identify the person on the other end of the line, who would only say, when I asked who was speaking, "It's me." I ended up making a blunder.

We ask for the name because we do not know the person. But this is not the way among people who are familiar with each other. Footsteps, voices, even smells are enough for identification. Even in our own social circles, we often omit names when we address one another. This shows that we, too, live among familiar people, and thus we duplicate, in some small degree, a rural society.

Before written languages came into existence, people tied knots in ropes to record things. They did so in order to overcome the difficulty in communicating across time and space. Only when we cannot talk face to face do we need something to replace the spoken word. In Guangxi province, in the mountains where the Yao minority lives, tribal groups notify each other about emergencies by sending runners who carry special coins. Upon receiving the coins, the other tribes will

come to the rescue immediately. The coin here is a "character," a sign representing certain meanings upon which both parties previously agreed. If talking face to face is possible, however, such a sign not only would be unnecessary but also could cause misunderstandings. Before the last decade, young lovers were prohibited from seeing each other.³ In order to communicate, they exchanged love letters. Many tragedies were caused by misunderstandings in those love letters. People who have experienced such misunderstandings know all too well the limits of written language.

Written language cannot fully express one's meaning or emotion, because those meanings and emotions are always grounded in time and space; they fit a context. When one reads the written word, however, one is in a different time and probably in a different place; it is very unlikely that the meanings and emotions, so carefully recorded in written language, can be fully understood in that new context. As a tool for expressing oneself, written language has this irreparable flaw. Therefore, when we use written language, we must pay close attention to grammar, style, and syntax, because they help to lessen the misrepresentations inherent in written language.

When talking, we do not need to pay such close attention to grammar. I am not saying that there is no grammar in conversations but, rather, that when we talk, we also use many additional gestures to clarify what we say. We may point at ourselves while omitting the word "I," but we cannot do this when we write. Instead, we have to try our best to write grammatically correct sentences, because incorrect sentences may cause unfortunate misunderstandings. By contrast, when we use complete, grammatically correct sentences in speech, we sound funny and pedantic. This is the sort of painfully correct speech that one hears from people who learned a foreign language only from books.

Written language is indirect talk. It is an imperfect tool—so much so that telephones and broadcasting are already beginning to displace letters and other forms of writing. What will happen to the written word in the future, after still more developments in communication technology?

If we follow this line of reasoning, then, illiteracy cannot be equated with stupidity. Face-to-face communication is direct contact. Why should people in rural society abandon what is in that context a superior form of communication for one that does not serve as well?

Now I want to take the argument one step further.⁴ In face-to-face groups, even spoken language is a tool, for which there is no alternative. Language is a symbolic system based on sounds. A symbol is a thing or an action to which meaning is attached. I say "attached" because "meaning" is not essential to the nature of the thing or the

action but, rather, is something added through an association of ideas. A symbol is a social product that arises within the process of social interaction and that people use only as a way to convey meaning to others. Moreover, a symbol only functions as a symbol when other people recognize the meaning that was originally intended. A "meaningful" action, then, will result in the same response from most people. Thus, we can never have a strictly individual language, only social languages. To have the same meaning for the same symbol, people must have had the same experience; they must have been exposed to the same symbol in a similar environment, so that the same meaning can be attached to that symbol. This is the reason that every living group has its own special language, which contains many untranslatable words and sentences.

Language can occur only in the context of a group's common experience. In large groups, people's experiences are complex and often disconnected. They have fewer common experiences on which to base their language. Therefore, the larger the group, the more generalizable and simple the common language becomes—as can be clearly seen in the history of languages.

Besides a common language that the group as a whole shares, there will also be, within the same group, many specialized vocabularies used by various subgroups to articulate their special requirements. Such "working languages" are filled with jargon and idioms. People in the same profession typically have a language of the trade. Other people cannot understand the conversations, because they have not shared the same working experience. In every school and even every dormitory room, specialized vocabularies develop. The most widely occurring "working language" is that which develops between mothers and their children.

Such working languages are only one aspect of the system of symbols used by tightly knit groups. This is the part that is based on sound and that can be verbalized. In such groups, however, many nonverbal symbols can also be used. Facial expressions and gestures are sometimes more expressive than sound in face-to-face settings. Even when a verbal language is used, it is always used in the context of other symbols. I might say to an acquaintance, "That's the way it is." At the same time, I would frown, tighten my lips, rub my temples, and lower my head. The person would understand that the phrase means "It can't be helped" and would sense my disappointment. If the same phrase is used with a different expression, its meaning is entirely different.

Working languages are usually very effective, because they loosen the fixed meanings of words. Language is society's sifter. Those feelings and meanings that differ in size and shape from the holes in

the sifter cannot pass through the sifter. I am sure that everyone must have experienced a time when "silence really is better than words." It is in fact true that, although this social sifter helps people understand each other, it also formalizes their meanings and their emotions. In this way, language distorts actual meanings and emotions the very moment they are articulated through words. We always trim the toes to fit the shoes. Language constrains what can be felt and expressed, and sensitive people often resent that.

In face-to-face groups, we speak less. We convey our intentions with our eyes, our emotions with a gesture. We abandon indirect symbols to seek more direct understandings. That is why written language is superfluous in rural society, and even spoken language is not the only way to communicate symbolically.

I absolutely do not mean to suggest that we need not promote literacy in the countryside. With the process of modernization, rural society is already being changed, and literacy is the tool of that change. The point I want to make here is that illiteracy in the countryside results not from people's stupidity but, rather, from the nature of rural society itself. I would like to go even further to say that one should not judge the degree of understanding between people in a society only from the perspective of their written and spoken languages. This is not enough. Written and spoken languages are tools for expression, but they are not the only tools. Moreover, the tools themselves have flaws and limit what can be conveyed. Those advocates of rural literacy should first consider the social foundation of both written and spoken languages. Otherwise, just opening a few rural schools and teaching rural people a few characters will not create "intelligence," as the advocates define it.

贰 文字下乡

乡下人在城里人眼睛里是“愚”的。我们当然记得不少提倡乡村工作的朋友们，把愚和病贫联结起来去作为中国乡村的症候。关于病和贫我们似乎还有客观的标准可说，但是说乡下人“愚”，却是凭什么呢？乡下人在马路上听见背后汽车连续地按喇叭，慌了手脚，东避也不是，西躲又不是，司机拉住刹车，在玻璃窗里，探出半个头，向着那土老头儿，啐了一口：“笨蛋！”——如果这是愚，真冤枉了他们。我曾带了学生下乡，田里长着包谷，有一位小姐，冒充着内行，说：“今年麦子长得这么高。”旁边的乡下朋友，虽则没有啐她一口，但是微微的一笑，也不妨译作“笨蛋”。乡下人没有见过城里的世面，因之而不明白怎样应付汽车，那是知识问题，不是智力问题，正等于城里人到了乡下，连狗都不会赶一般。如果我们不承认郊游的仕女们一听见狗吠就变色是“白痴”，自然没有理由说乡下人不知道“靠左边走”或“靠右边走”等时常会因政令而改变的方向是因为他们“愚不可及”了。“愚”在什么地方呢？

其实乡村工作的朋友说乡下人愚那是因为他们不识字，我们称之为“文盲”，意思是白生了眼睛，连字都不识。这自然是事实。我决不敢反对文字下乡的运动，可是如果说不识字就是愚，我心里总难甘服。“愚”如果是智力的不足或缺陷，识字不识字并非愚不愚的标准。智力是学习的能力。如果一个人没有机会学习，不论他有没有学习的能力还是学不到什么的。我们是不是说乡下人不但不识字，而且识字的能力都不及人呢？

说到这里我记起了疏散在乡下时的事来了。同事中有些孩子送进了乡间的小学，在课程上这些孩子样样比乡下孩子学得快、成绩好。教员们见面时总在家长面前夸奖这些孩子们有种、聪明。这等于说教授们的孩子智力高。我对于这些恭维自然是私心窃喜。穷教授别的已经全被剥夺，但是我们还有别种人所望尘莫及的遗传。但是有一天，我在田野里看放学回来的小学生们捉蚱蜢，那些“聪明”而有种的孩子，扑来扑去，屡扑屡失，而那些乡下孩子却反应灵敏，一扑一得。回到家来，刚才一点骄傲似乎又没有了着落。

乡下孩子在教室里认字认不过教授们的孩子，和教授们的孩子在田野里捉蚱蜢捉不过乡下孩子，在意义上是相同的。我并不责备自己孩子蚱蜢捉得少，第一是我们无需用蚱蜢来加菜（云南乡下蚱蜢是下饭的，味道很近于苏州的虾干），第二是我的孩子并没有机会练习。教授们的孩子穿了鞋袜，为了体面，不能不择地而下足，弄污了回家来会挨骂，于是在他们捉蚱蜢时不免要有些顾忌，动作不活灵了。这些也许还在其次，他们日常并不在田野里跑惯，要分别草和虫，须费一番眼力，蚱蜢的保护色因之易于生效。——我为自己孩子所作的辩护是不是同样也可以用之于乡下孩子在认字上的“愚”呢？我想是很适当的。乡下孩子不像教授们的孩子到处看见书籍，到处接触着字，这不是他们日常所混熟的环境。教授们的孩子并不见得一定是遗传上有什么特别善于识字的能

力，显而易见的却是有着易于识字的环境。这样说来，乡下人是否在智力上比不上城里人，至少还是个没有结论的题目。

这样看来，乡村工作的朋友们说乡下人愚，显然不是指他们智力不及人，而是说他们知识不及人了。这一点，依我们上面所说的，还是不太能自圆其说。至多是说，乡下人在城市生活所需的知识上是不及城市里人多。这是正确的。我们是不是也因之可以说乡下多文盲是因为乡下本来无需文字眼睛呢？说到这里，我们应当讨论一下文字的用处了。

我在上一篇里说明了乡土社会的一个特点就是这种社会的人是在熟人里长大的。用另一句话来说，他们生活上互相合作的人都是天天见面的。在社会学上我们称之为Face-to-face Group，直译起来是“面对面的社群”。归有光的《项脊轩记》里说，他日常接触的老是那些人，所以日子久了可以用脚步声来辨别来者是谁。在“面对面的社群”里甚至可以不必要见面而知道对方是谁。我们自己虽说是已经多少在现代都市里住过一时了，但是一不留心，乡土社会里所养成的习惯还是支配着我们。你不妨试一试，如果有人在你门上敲着要进来，你问：“谁呀！”门外的人十之八九回答你一个大声的“我”。这是说，你得用声气辨人。在面对面的社群里一起生活的人是不必通名报姓的。很少太太会在门外用姓名来回答丈夫的发问。但是我们因为久习于这种“我呀！”“我呀！”的回答，也很有时候用到了门内人无法辨别你声音的场合。我有一次，久别家乡回来，在电话里听到了一个无法辨别的“我呀”时，的确闹了一个笑话。

“贵姓大名”是因为我们不熟悉而用的。熟悉的人大可不必如此，足声、声气，甚至气味，都可以是足够的“报名”。我们社交上姓名的不常上口也就表示了我们原本是在熟人中生活的，是个乡土社会。

文字发生之初是“结绳记事”，需要结绳来记事是为了在空间和时间中人和人的接触发生了阻碍。我们不能当面讲话，才需要找一些东西来代话。在广西的瑶山里，部落有急，就派了人送一枚铜钱到别的部落里去，对方接到了这记号，立刻派人来救。这是“文字”，一种双方约好代表一种意义的记号。如果是面对面可以直接说话时，这种被预先约好的意义所拘束的记号，不但多余，而且有时会词不达意引起误会的。在十多年前青年们讲恋爱，受着直接社交的限制，通行着写情书，很多悲剧是因情书的误会而发生的。有这种经验的人必然能痛悉文字的限制。

文字所能传的情、达的意是不完全的。这不完全是出于“间接接触”的原因。我们所要传达的情意是和当时当地的外局相配合的。你用文字把当时当地的情意记了下来，如果在异时异地的圆局中去看，所会引起的反应很难尽合于当时当地的圆局中可能引起的反应。文字之成为传情达意的工具常有这个无可补救的缺陷。于是在利用文字时，我们要讲究文法，讲究艺术。文法和艺术就在减少文字的“走样”。

在说话时，我们可以不注意文法。并不是说话时没有文法，而且因为我们有着很多辅助表情来补充传达情意的作用。我们可以用手指指着自己而在话里吃去一个“我”字。在写作时却不能如此。于是我们得尽量地依着文法去写成完整的句子了。不合文法的字词难免引起人家的误会，所以不好。说话时我们如果用了完整的句子，不但显得迂阔，而且可笑。这是从书本上学外国语的人常会感到的痛苦。

文字是间接的说话，而且是个不太完善的工具。当我们有了电话、

广播的时候，书信文告的地位已经大受影响。等到传真的技术发达之后，是否还用得到文字，是很成问题的。

这样说来，在乡土社会里不用文字绝不能说是“愚”的表现了。面对面的往来是直接接触，为什么舍此比较完善的语言而采取文字呢？

我还想在这里推进一步说，在“面对面社群”里，连语言本身都是不得已而采取的工具。语言本是用声音来表达的象征体系。象征是附着意义的事物或动作。我说“附着”是因为“意义”是靠联想作用加上去的，并不是事物或动作本身具有的性质。这是社会的产物，因为只有在人和人需要配合行为的时候，个人才需要有所表达；而且表达的结果必须使对方明白所要表达的意义。所以象征是包括多数人公认的意义，也就是这一事物或动作会在多数人引起相同的反应。因之，我们绝不能有个人的语言，只能有社会的语言。要使多数人能对同一象征具有同一意义，他们必须有着相同的经历，就是说在相似的环境中接触和使用同一象征，因而在象征上附着了同一意义。因此在每个特殊的生活团体中，必有他们特殊的语言，有许多别种语言所无法翻译的字句。

语言只能在一个社群所有相同经验的一层上发生。群体愈大，包括的人所有的经验愈繁杂，发生语言的一层共同基础也必然愈有限，于是语言也愈趋于简单化。这在语言史上看得很清楚的。

可是从另一方面说，在一个社群所用的共同语言之外，也必然会因个人间的需要而发生许多少数人间的特殊语言，所谓“行话”。行话是同行人的话，外行人因为没有这种经验，不会懂的。在每个学校里，甚至每个寝室里，都有他们特殊的语言。最普遍的特殊语言发生在母亲和孩子之间。

“特殊语言”不过是亲密社群中所使用的象征体系的一部分，用声音来作象征的那一部分。在亲密社群中可用来作象征体系的原料比较多。表情、动作，因为在面对面的情境中，有时比声音更容易传情达意。即使用语言时，也总是密切配合于其他象征原料的。譬如，我可以和一位熟人说：“真是那个！”同时眉毛一皱，嘴角向下一斜，面上的皮肤一紧，用手指在头发里一插，头一沉，对方也就明白“那个”是“没有办法”、“失望”的意思了。如果同样的两个字用在另一表情的配合里，意义可以完全不同。

“特殊语言”常是特别有效，因为它可以摆脱字句的固定意义。语言像是个社会定下的筛子，如果我们有一种情意和这筛子的格子不同也就漏不过去。我想大家必然有过“无言胜似有言”的经验。其实这个筛子虽则帮助了人和人间的了解，而同时也使人和人间的情意公式化了，使每一人、每一刻的实际情意都走了一点样。我们永远在削足适履，使感觉敏锐的人怨恨语言的束缚。李长吉要在这束缚中去求比较切近的表达，难怪他要呕尽心血了。

于是在熟人中，我们话也少了，我们“眉目传情”，我们“指石相证”，我们抛开了比较间接的象征原料，而求更直接的会意了。所以在乡土社会中，不但文字是多余的，连语言都并不是传达情意的唯一象征体系。

我决不是说我们不必推行文字下乡，在现代化的过程中，我们已开始抛离乡土社会，文字是现代化的工具。我要辨明的是乡土社会中的文

盲，并非出于乡下人的“愚”，而是由于乡土社会的本质。我而且愿意进一步说，单从文字和语言的角度去批判一个社会中人和人的了解程度是不够的，因为文字和语言，只是传情达意的一种工具，并非唯一的工具，而且这工具本身是有缺陷的，能传的情、能达的意是有限的。所以在提倡文字下乡的人，必须先考虑到文字和语言的基础，否则开几个乡村学校和使乡下人多识几个字，也许并不能使乡下人“聪明”起来。

③ MORE THOUGHTS ON BRINGING LITERACY TO THE COUNTRYSIDE

In the last chapter, I said that written language develops when time and space put limits on direct human communication. I only discussed, however, how space influences this development. In rural society, which is a face-to-face society, people can talk directly to one another and do not need to rely on a written language. But how does separation across time influence the process of human communication?

There are two aspects of this question that we need to discuss. First is the spread of time over a person's lifetime, and the second is the spread of time across generations. Let me begin with the first aspect.

What differentiates human beings from other animals is the extraordinary ability of humans to learn.¹ Most forms of human behavior are not predetermined by innate physiological reactions. What we mean by learning is exactly that process by which human beings, from the time of their birth, reshape their instincts, making them fit man-made behavioral molds. This shaping of behavior is accomplished through "practice." Practice means "training," doing the same thing again and again until a new routine becomes thoroughly ingrained. Therefore, for the individual, learning necessarily breaks down the separation between the past and the present. Human beings have that special ability, which we call "memory," that bridges time. To be sure, animals also have memories, but their memories operate only at a simple physiological level. A white mouse learns which is the shortest route in a maze, but what the mouse learns is merely a new set of physiological reactions. That kind of learning does not depend on a symbolic system. Humans certainly have many habits that are basic to human nature, and in this regard they are like mice running in a maze. But unlike mice, humans are always helped along by their symbolic system of communication, and the most important elements of this system are words. We learn through talking. We abstract the concrete world. We express our reality by a set of concepts that can be applied universally. Such concepts are necessarily expressed through words; by relying on words, we move from the specific to the universal. Concepts create the bridge that joins one event with

another. Concepts allow us to move backward into the past as well as forward into the future; concepts allow us to bridge time. From this perspective, animals relate to time in a direct way: stimulus, then response. The human relation to time, however, is mediated through concepts. Words make the world more complex to humans than it is to animals. By simply closing their eyes, humans can envision their past, and from that past, from that accumulation of events and ideas, they can selectively draw out the images needed to interpret the present.

Animals, living instinctively, do not have a problem with time. Their lives form a chain of presents. No one can stop time, just as no knife can cut off the flow of water. But human time differs from animal time. The human present is the total accumulation of the past that is retained through memory. If we lost our memory, our recognition of time would cease.

Humans have such a memory not because their brains operate automatically, like cameras. Humans have the ability to remember, it is true. But they utilize and develop this ability because their present lives must necessarily include ways of doing things that have been transmitted from the past. I already have said that humans learn by incorporating into their behavior preexisting patterns. Only when they have learned these patterns are they able to live in groups. These patterns are not each person's individual creation; they are the legacy of society. The white mouse does not learn from other mice. In order to adapt to its own environment, each mouse has to acquire its own set of experiences through a process of trial and error. Mice are unable to transmit their experiences to other mice; they cannot learn from each other. Humans, however, have the ability to think abstractly and to use complex symbols. They can accumulate not only their own experiences but also those of others. The transmitted patterns are the accumulations of a group's common experiences, which we often refer to by the term culture. Culture is the collective social experience perpetuated by a symbolic system and individual memories. In this way, each person's "present" contains not only the projection of his or her own past but also that of the whole group's past. For individuals, history is not mere ornamentation but the very foundation of life; it is both practical and indispensable. Humans must live in groups; they must learn culture; but to learn culture requires memory, not instincts. Therefore, humans have had to cultivate their ability to remember. They use this ability not only to bridge their own past and present but also to bridge generations, for without this ability there would be neither culture nor the life that we now enjoy.

Perhaps I have said enough on this topic to demonstrate the connection between human life and time. This connection rests upon the ability to use words. It has been said that the language makes the

people, and I think this is absolutely correct. The Bible, you will recall, says that when God said something, that something immediately came into existence.² Saying is the beginning of being—if not in the material world, certainly in the cultural world. Without a symbolic system, there would be no concepts. And without concepts, there would be no accumulation of human experiences across time. Human life could not go beyond that of animals.

Writing employs symbols that can be recognized by the human eye, but words do not need to be written in order to be symbols. Words can be spoken. Every culture has "words," but not all cultures have a written language. I emphasize this point because I want to show that, generally speaking, rural society is a society without a written language. In the last chapter, I showed that country people do not need to use a written language because they are not separated in space. Now I want to show the same result for their relationship with time.

I just said that we have developed our capacity for memory because our lives require it. Animals, being without culture, manage their lives through instincts, so they have no need for memory. What I have said actually implies something else as well. The requirements for human living determine the level to which our memory actually develops. The world that we encounter at every moment is very complex; we do not take all of it in through our senses. We are selective. Our line of vision moves with the shifting focus of our attention, and our choice of focus depends on the meanings objects have for our livelihood. Those things having no relevance in our lives go unnoticed. Our memory works in the same way. It does not record everything that occurs in the past, but only a small part of it. Actually, it is more accurate to say "recall" than "record." "Record" suggests that we note something in the present for use in the future. "Recall," however, means that we reflect back on our past experience to establish a connection to the present. In fact, it is very difficult to foresee in the present what might be useful in the future. Instead, what we need in the present is constructed selectively by our recalling of the past. This process can sometimes be very hard, as with the so-called painful recall. In any event, our memory is never useless; it is practical, for out of it comes the ability to live as humans.

The range of memory needed by a person living in rural society is not the same as that required for one living in modern cities. Life in rural society is very stable. I have said that people who make their living from the earth cannot readily move. The place of their birth is the place where they grow up and where they die. The most extreme version of this rural model is Laotse's ideal society, where, "although they can hear their neighbors' chickens and dogs, people grow and die

without ever visiting their neighbors."³ In truth, not only do people rarely leave their hometown, but their hometown is usually the same as that of their parents. This is the consequence of being born and dying in the same place. Even though this extreme version of rural society is seldom realized, people often do intend to stay in one place forever. Otherwise, why should people who have died in other places request in their will to have their coffin transported back to their hometown for burial in the family graveyard?⁴ They have taken their life from this piece of soil, so after death they want to return their flesh and bones to it.

Because people seldom move, they grow up not only among familiar people but also in familiar places. Staying in the same place for such a long time, the people there seem to intermingle with the earth itself. The experiences of one's ancestors with this familiar patch of earth are passed down and necessarily become one's own experiences. The ages speak as if their lessons were written in stone. These lessons surround ensuing generations and are repeated endlessly, so that each person's experiences are the same as every other person's. It is like a play repeated on the stage; actors need only to remember the same set of lines. Each person's individual experience equals that of the entire generation. There is no need to accumulate experience, only to preserve it as it is.

I remember that, when I was in elementary school, a teacher forced us to keep a diary. Although I took great pains to think about what I did, it seemed, after a while, that I only wrote the same line: "The same as above." And that was true, too. Every day my life was the same. Get up in the morning, go to school, play, and go to sleep at night. What else could I write? When the teacher forbade all the students to write "The same as above," we had to make up lies.

When the patterns of life are fixed on physiological habits, our existence takes on a working rhythm: "Wake with the sun and rest with the dusk." Memory becomes superfluous. The saying "We act as if we never know that old age is coming" (bu zhi lao zhi jiang zhi) describes a life in which we forget time. The fall of the Qin, the rise of the Han—what difference does it make?⁵ People in rural society do not fear forgetfulness. They are even quite comfortable with it.

Only when we want to remember to do something outside our normal routine do we tie a knot around our finger. That string on our finger is a primitive form of written language. Such a language serves to assist human memory by means of external symbols that create an association among ideas. In a frequently changing environment, we sense that our memory may be inadequate, and so we need to use external symbols. At this point, language is transformed from a spoken language into a written language, from communication based on

sounds to one based on words. Language becomes the ability to use a rope to tie knots, a knife to carve ideograms, a brush to write characters—all of which necessarily occur when our lives are changed from a fixed to an ever-changing existence. People who live in cities and see strange faces day in and day out need to keep an address book in their pockets. In rural society, even an identification card bearing a photograph is totally meaningless. There may be over a dozen "elder brother Wangs" in a village, but nobody would mistake one for another.

In a society where the life of each generation appears before us like a movie played over and over again, history is simply unnecessary. What is past is only a legend. Whenever people account for the origins of things, they begin with the same phrase, "When heaven separated from the earth." They have to begin, with a bang, at the exciting starting point, because what follows will be only ordinary things like those at present. In urban society, there is news; but in rural society, news is something strange and absurd. In urban society, there are celebrities; but in rural society, as the saying goes, "People fear becoming famous just as pigs fear becoming fat."⁶ No one should lead, no one should follow. Everyone should be the same, and everyone should follow the same path. People in this kind of society do not distribute themselves in the form of a normal curve. Instead, all of them act as if they are made out of the same mold.

In this kind of society, a spoken language is sufficient to pass experience between generations. When a person has a problem, he or she is certain to get an effective solution from someone older. People all live in the same environment. They all walk along the same path, but some walk there earlier than others do. The ones who come later step into the footprints of those who walked earlier. Experience of this sort can be passed from mouth to mouth without anything being lost. So where is the need for a written language? Time provides no obstacle; one thing closely follows another. An entire culture can be passed between fathers and sons without any omissions.

This being the case, if China is a rural society, how could a written language have come into existence in the first place? My answer is that, although the foundation of Chinese society is certainly rural, Chinese writing itself did not develop in rural society. The earliest characters had a religious quality to them and were used in temples; those characters, even down to the present time, have never belonged to the people in the countryside. Our written language emerged in a different setting. In this chapter, all that I want to point out is that, at the most basic level, at the rural level, there is spoken language but no genuine use for a written language. If we consider the spatial and temporal qualities of rural life, we must conclude that

country people live their lives in face-to-face intimacy and with repetitious and rigid life patterns. Rural people are certainly not too stupid to learn characters. Instead, they have no need for characters to assist them, because a written language does not help them with the necessities of living in rural society. If China's rural foundations were to change, then—and perhaps only then—literacy would come to the countryside.

叁 再论文字下乡

在上一篇论“文字下乡”里，我说起了文字的发生是在人和人传情达意的过程中受到了空间和时间的阻隔的情境里。可是我在那一篇里只就空间阻隔的一点说了些话。乡土社会是个面对面的社会，有话可以当面说明白，不必求助于文字。这一层意思容易明白，但是关于时间阻隔上怎样说法呢？在本文中，我想申引这一层意思了。

所谓时间上的阻隔有两方面，一方面是个人的今昔之隔，一方面是社会的世代之隔。让我先从前一方面说起。

人的生活和其他动物所不同的，是在他富于学习的能力。他的行为方式并不固执地受着不学而能的生理反应所支配。所谓学就是在出生之后以一套人为的行为方式作模型，把本能的那一套方式加以改造的过程。学的方法是“习”。习是指反复地做，靠时间中的磨练，使一个人惯于一种新的做法。因之，学习必须打破个人今昔之隔。这是靠了我们人类的一种特别发达的能力，时间中的桥梁——记忆。在动物学习过程中，我们也可以说它们有记忆，但是它们的“记忆”是在简单的生理水准上。一个小白老鼠在迷宫里学得了捷径，它所学得的是一套新的生理反应。和人的学习不相同的是它们并不靠一套象征体系的。人固然有很多习惯，在本质上是和小白老鼠走迷宫一般的，但是他却时常多一个象征体系帮他的忙。所谓象征体系中最重要的是“词”。我们不断地在学习时说着话，把具体的情境抽象成一套能普遍应用的概念，概念必然是用词来表现的，于是我们靠着词，使我们从特殊走上普遍，在个别情境中搭下了桥梁；又使我们从当前走到今后，在片刻情境中搭下了桥梁。从这方面看去，一个动物和时间的接触，可以说是一条直线的，而人和时间的接触，靠了概念，也就是词，却比一条直线来得复杂。他有能力闭了眼睛置身于“昔日”的情境中，人的“当前”中包含着从“过去”拔萃出来的投影，时间的选择累积。

在一个依本能而活动的动物不会发生时间上阻隔的问题，它的寿命是一连串的“当前”，谁也不能剪断时间，像是一条水，没有刀割得断。但是在人却不然，人的“当前”是整个靠记忆所保留下来的“过去”的累积。如果记忆消失了、遗忘了，我们的“时间”就可说是阻隔了。

人之所以要有记忆，也许并不是因为他的脑子是个自动的摄影箱。人有此能力是事实，人利用此能力，发展此能力，还是因为他“当前”的生活必须有着“过去”所传下来的办法。我曾说人的学习是向一套已有的方式的学习。唯有学会了这套方式才能在人群中生活下去。这套方式并不是每个人个别的创制，而是社会的遗业。小白老鼠并不向别的老鼠学习，每只老鼠都得自己在具体情境里，从“试验错误”的过程中，得到个别的经验。它们并不能互相传递经验，互相学习。人靠了他的抽象能力和象征体系，不但累积了自己的经验，而且可以累积别人的经验。上边所谓那套传下来的办法，就是社会共同的经验的累积，也就是我们常说的文化。文化是依赖象征体系和个人的记忆而维持着的社会共同经验。

这样说来，每个人的“当前”，不但包括他个人“过去”的投影，而且是整个民族的“过去”的投影。历史对于个人并不是点缀的饰物，而是实用的、不能或缺的生活基础。人不能离开社会生活，就不能不学习文化。文化得靠记忆，不能靠本能，所以人在记忆力上不能不力求发展。我们不但要在个人的今昔之间筑通桥梁，而且在社会的世代之间也得筑通桥梁，不然就没有了文化，也没有了我们现在所能享受的生活。

我说了这许多话，也许足够指明了人的生活 and 时间的关联了。在这关联中，词是最主要的桥梁。有人说，语言造成了人，那是极对的。

《圣经》上也有上帝说了什么，什么就有了，“说”是“有”的开始。这在物质宇宙中尽管可以不对，在文化中是对的。没有象征体系也就没有概念，人的经验也就不能或不易在时间里累积，如要生活也不能超过禽兽。

但是词却不一定要文。文是用眼睛可以看得到的符号，就是字。词不一定是刻出来或写出来的符号，也可以是用声音说出来的符号——语言。一切文化中不能没有“词”，可是不一定有“文字”。我这样说是因为我想说明的乡土社会，大体上，是没有“文字”的社会。在上篇，我从空间格局中说到了乡下人没有文字的需要，在这里我是想从时间格局中说明同一结果。

我说过我们要发展记忆，那是因为我们生活中有此需要。没有文化的动物中，能以本能来应付生活，就不必有记忆。我这样说，其实也包含了另一项意思，就是人在记忆上发展的程度是依他们生活需要而决定的。我们每个人，每一刻，所接触的外界是众多复杂，但是并不尽入我们的感觉，我们有所选择。和我们眼睛所接触的外界我们并不都看见，我们只看见我们所注意的，我们的视线有焦点，焦点依着我们的注意而移动。注意的对象由我们选择，选择的根据是我们生活的需要。对于我们生活无关的，我们不关心，熟视无睹。我们的记忆也是如此，我们并不记取一切的过去，而只记取一切过去中极小的一部分。我说记取，其实不如说过后回忆为妥当。“记”带有在当前为了将来有用而加以认取的意思，“忆”是为了当前有关而回想到过去经验。事实上，在当前很难预测将来之用，大多是出于当前的需要而追忆过去。有时这过程非常吃力，所以成为“苦忆”。可是无论如何记忆并非无所为的，而是实用的，是为了生活。

在一个乡土社会中生活的人所需记忆的范围和生活在现代都市的人是不同的。乡土社会是一个生活很安定的社会。我已说过，向泥土讨生活的人是不能老是移动的。在一个地方出生的就在这地方生长下去，一直到死。极端的乡土社会是老子所理想的社会，“鸡犬相闻，老死不相往来”。不但个人不常抛井离乡，而且每个人住的地方常是他的父母之邦。“生于斯，死于斯”的结果必是世代的黏着。这种极端的乡土社会固然不常实现，但是我们的确有历世不移的企图，不然为什么死在外边的人，一定要把棺材运回故乡，葬在祖塋上呢？一生取给于这块泥土，死了，骨肉还得回入这块泥土。

历世不移的结果，人不但在熟人中长大，而且在熟悉的地方上生长大。熟悉的地方可以包括极长时间的人和土的混合。祖先们在这地方混熟了，他们的经验也必然就是子孙们所会得到的经验。时间的悠久是从

谱系上说的，从每个人可能得到的经验说，却是同一方式的反复重演。同一戏台上演着同一的戏，这个班子里演员所需要记得的，也只会有一套戏文。他们个别的经验，就等于世代的经验。经验无需不断累积，只需要是保存。

我记得在小学里读书时，老师逼着我记日记，我执笔苦思，结果只写下“同上”两字。那是真情，天天是“晨起，上课，游戏，睡觉”，有何可记的呢？老师下令不准“同上”，小学生们只有扯谎了。

在定型生活中长大的有着深入生理基础的习惯帮着我们“日出而起，日入而息”的工作节奏。记忆都是多余的。“不知老之将至”就是描写“忘时”的生活。秦亡汉兴，没有关系。乡土社会中不怕忘，而且忘得舒服。只有在轶出于生活常轨的事，当我怕忘记时，方在指头上打一个结。

指头上的结是文字的原始方式，目的就是利用外在的象征，利用联想作用，帮助人的记忆。在一个常常变动的环境中，我们感觉到自己记忆力不够时，方需要这些外在的象征。从语言变到文字，也就是从用声音来说词，变到用绳打结，用刀刻图，用笔写字，是出于我们生活从定型到不定型的过程中。在都市中生活，一天到晚接触着陌生面孔的人才需要在袋里藏着本姓名录、通信簿。在乡土社会中粘着相片的身份证，是毫无意义的。在一个村子里可以有一打以上的“王大哥”，绝不会因之错认了人。

在一个每代的生活等于开映同一部影片的社会中，历史也是多余的，有的只是“传奇”。一说到来历就得从“开天辟地”说起；不从这开始，下文不是只有“寻常”的当前了么？都市社会里有新闻；在乡土社会，“新闻”是希奇古怪、荒诞不经的意思。在都市社会里有名人，乡土社会里是“人怕出名，猪怕壮”。不为人先，不为人后，做人就得循规蹈矩。这种社会用不上常态曲线，而是一个模子里印出来的一套。

在这种社会里，语言是足够传递世代间的经验了。当一个人碰着生活上的问题时，他必然能在一个比他年长的人那里问得到解决这问题的有效办法，因为大家在同一环境里，走同一道路，他先走，你后走；后走的所踏的是先走的人的脚印，口口相传，不会有遗漏。哪里用得着文字？时间里没有阻隔，拉得十分紧，全部文化可以在亲子之间传授无缺。

这样说，中国如果是乡土社会，怎么会有文字的呢？我的回答是中国社会从基层上看去是乡土性，中国的文字并不是在基层上发生。最早的文字就是庙堂性的，一直到目前还不是我们乡下人的东西。我们的文字另有它发生的背景，我在本文所需要指出的是在这基层上，有语言而无文字。不论在空间和时间的格局上，这种乡土社会，在面对面的亲密接触中，在反复地在同一生活定型中生活的人们，并不是愚到字都不认得，而是没有用字来帮助他们在社会生活的需要。我同时也等于说，如果中国社会乡土性的基层发生了变化，也只有发生了变化之后，文字才能下乡。

④ CHAXUGEJU: THE DIFFERENTIAL MODE OF ASSOCIATION

Selfishness is the most serious shortcoming of country people. That is the opinion of those intellectuals who advocate rural reconstruction.¹ When we think of selfishness, we think of the proverb "Each person should sweep the snow from his own doorsteps and should not fret about the frost on his neighbor's roof." No one would deny that this proverb is one of the Chinese creeds. Actually, this attitude is held not only by country people but also by city people. The person who only sweeps the snow from his own door is still regarded as having high social ethics.

Ordinary people usually throw their garbage onto the streets right in front of their door, and that is the end of their garbage problem. For instance, in Suzhou the houses usually have back doors that open onto slow-moving canals. This sounds very beautiful, and, in fact, literary works depict Suzhou as the Chinese Venice. But I do not think that there are any waterways in the world dirtier than those in Suzhou. Everything can be thrown into the canals, which even in the best of circumstances do not flow well. Filled with garbage, they flow even worse. Many families use no other toilets. Even knowing full well that other people wash clothes and vegetables in the canals, they feel no need for self-restraint.

Why is this so? The reason is that such canals belong to the public. Once you mention something as belonging to the public, it is almost like saying that everyone can take advantage of it. Thus, one can have rights without obligations. Even if we reduce the scale and look at a small courtyard shared by two or three families, we can still see dirt piled in the public corridors and weeds growing in the backyard. No one wants to clean or to weed. But the worst place in such a courtyard would be the public toilets. Not a single family wants to take care of this business. Whoever finds the condition of the toilet intolerable has to clean it up without pay or even without thanks. It is like Gresham's law. Just as "bad money drives out the good," selfishness drives out social consciousness.

Judging from examples like this, the problem of selfishness in China is really more common than the problem of ignorance or illness. From the top of society to the bottom, no one seems to be without this

shortcoming. It has, in fact, gained some notoriety. Corruption and incompetence have become a stereotype of Chinese people that the foreign media use to belittle us. But so-called corruption and incompetence have less to do with individual ability than with each person's service to, and responsibility for, the public welfare.

The Chinese are not bad managers. Indeed, a great many Westerners are impressed by the business achievements of the overseas Chinese in Southeast Asia. Neither are the Chinese incompetent. When it comes to managing their family's businesses, earning money, and making personal connections, they show a greater aptitude than people from any other country. The problem defined by this kind of selfishness is thus actually one of how to draw the line between the group and the individual, between others and our own selves. How this line has been drawn in China traditionally is obviously different from the way it is drawn in the West. Therefore, if we want to discuss the problem of selfishness, we have to take into consideration the pattern of the entire social structure.

Western societies are somewhat like the way we collect rice straw to use to cook our food. After harvest, the rice straw is bound into small bundles; several bundles are bound into larger bundles; and these are then stacked together so that they can be carried on shoulder poles. Each piece of straw belongs in a small bundle, which in turn belongs in a larger bundle, which in turn makes up a stack. The separate straws, the separate bundles, and finally the separate stacks all fit together to make up the whole haystack. In this way, the separately bound bundles can be stacked in an orderly way.

In Western society, these separate units are organizations. By making an analogy between organizations in Western societies and the composition of haystacks, I want to indicate that in Western society individuals form organizations. Each organization has its own boundaries, which clearly define those people who are members and those who are not. That much is always clear. The people in an organization form a group, and their relationship to the organization is usually the same. If there are differences among group members or distinctions among ranks within the organization, these would have been agreed upon earlier as part of the rules of the organization.

In one respect, my analogy is not too appropriate. An individual may join several organizations, but it is impossible for a straw to be in several bundles at the same time. That is the difference between people and straws. My purpose in making the analogy, however, is only to help us see more concretely the pattern of personal relationships in social life, what I will henceforth call the "organizational mode of association"(tuantigeju).

Families in the West are organizations with distinct boundaries. If

a Western friend writes to you saying that he will "bring his family" to visit you, he knows very well who will be coming with him. In China, however, this sentence is very ambiguous. In England and America, a family will include the man, his wife, and his children who have not yet grown up. If he is bringing only his wife, he does not use the word family. In China, we often see the sentence "The whole family will come" (hedi guanglin), but few people can tell what family members should be included in the word di(family). In Chinese, the word jia (family) is used in many ways. Jialide (the one at home) can mean one's wife. Jiamen (kinsmen) may be directed at a big group of uncles and nephews. Zijiaren (my own people) may include anyone whom you want to drag into your own circle, and you use it to indicate your intimacy with them. The scope of zijiaren can be expanded or contracted according to the specific time and place. It can be used in a very general way, even to mean that everyone under the sun is a jia (one family).

Why are nouns for such basic social units so ambiguous in Chinese? In my opinion, the ambiguity indicates the difference between our social structure and that of the West. Our pattern is not like distinct bundles of straws. Rather, it is like the circles that appear on the surface of a lake when a rock is thrown into it. Everyone stands at the center of the circles produced by his or her own social influence. Everyone's circles are interrelated. One touches different circles at different times and places.

In Chinese society, the most important relationship—kinship—is similar to the concentric circles formed when a stone is thrown into a lake. Kinship is a social relationship formed through marriage and reproduction. The networks woven by marriage and reproduction can be extended to embrace countless numbers of people—in the past, present, and future. The same meaning is implied in our saying "Everyone has a cousin three thousand miles away," with three thousand miles indicating the vastness of kinship networks. Despite the vastness, though, each network is like a spider's web in the sense that it centers on oneself. Everyone has this kind of kinship network, but the people covered by one network are not the same as those covered by any other. We all use the same system of notation to identify our relatives, but the only thing we hold in common is the system of notation itself. This system is merely an abstract pattern, a set of categorical concepts. When we use this system to identify concrete relatives, however, each term identifies a different person. In our kinship system, we all have parents, but my parents are not your parents. No two people in the world can have entirely the same set of relatives. Two brothers certainly would have the same parents, but each brother would have his own wife and children. Therefore, the

web of social relationships linked with kinship is specific to each person. Each web has a self as its center, and every web has a different center.

In our rural society, this pattern of organization applies not only to kinship but also to spatial relationships. An exception might be the modern baojia system, which is somewhat similar to the Western organizational mode of association (tuantigeju) and is quite incompatible with traditional social structure.² In the traditional structure, every family regards its own household as the center and draws a circle around it. This circle is the neighborhood, which is established to facilitate reciprocation in daily life. A family invites the neighbors to its weddings, sends them red-dyed eggs when a new baby is born, and asks for their help in lifting its dead into coffins and carrying the coffins to the cemetery. But a neighborhood is not a fixed group. Instead, it is an area whose size is determined by the power and authority of each center. The neighborhood of a powerful family may expand to the entire village, while a poor family's neighborhood is composed of only two or three nearby families.

This pattern is just like the circles of kinship. For instance, in *The Dream of the Red Chamber*, the story's main family, the Jia family, was so wealthy and powerful that the family's compound contained both Lin Daiyu, a cousin on the father's side, and Xue Baochai, a cousin on the mother's side.³ Later in the story, the Jia family house, which was called "Jia's Grand Garden," contained even more distant relatives, such as Baoqin and Xiuyan. But when the Jia family lost its power and wealth, the family dwindled away into a tiny group. As the saying goes, "When the tree falls, the monkeys scatter." There is even a more extreme case, that of Su Qin, who, after seeking his fortune for many years, returned home as a total failure.⁴ His wife refused to regard him as a husband, and his sister-in-law refused to regard him as her brother-in-law.

This pattern of organization in Chinese traditional society has the special quality of elasticity. In the country, families can be very small, but in the wealthy landlord and bureaucratic classes, families can be as big as small kingdoms. These highly elastic social circles, which can be expanded or contracted according to a change in the power of the center, cause the Chinese to be particularly sensitive to changes in human relationships.

In the West, everyone recognizes his or her social boundaries. Even adult children who still live with their parents usually pay for their room and board. People in an organization must fulfill the particular qualifications for membership, and, accordingly, people who no longer possess those qualifications must leave the organization. To Westerners, such requirements show not a lack of

human warmth but, rather, a respect for individual rights. Westerners struggle for their rights, but in our society people seek connections in higher places and do things for the sake of friendship.

According to the Western pattern, all members in an organization are equivalent, just as all straws in a bundle are alike. This is quite different from the Chinese pattern. Social relationships in China possess a self-centered quality. Like the ripples formed from a stone thrown into a lake, each circle spreading out from the center becomes more distant and at the same time more insignificant. With this pattern, we are faced with the basic characteristic of Chinese social structure, or what the Confucian school has called *renlun* (human relationships). What is *lun*? To me, insofar as it is used to describe Chinese social relationships, the term itself signifies the ripplelike effect created from circles of relationships that spread out from the self, an effect that produces a pattern of discrete circles. In the ancient text *Shiming* (The Interpretation of Names), *lun* is defined as "the order existing in ripples of water." Pan Guangdan once said, "Word combinations with *lun* all have similar meanings, which express proper arrangements, classifications, and order."⁵

Lun stresses differentiation. In the Book of Rites (*Liji*), the "ten relationships" form a discontinuous classification. Gods and ghosts, monarchs and subjects, fathers and sons, the noble and the base, the intimate and the unconnected, the rewarded and the punished, husbands and wives, public affairs and private affairs, seniors and juniors, and superiors and inferiors—these are principal types of human relationships. "Everyone should stay in his place" (*bu shi qi lun*); thereby, fathers are differentiated from sons, those remote from those close, those who are intimate from those who are not.⁶

Lun is order based on classifications. Some may wonder why the concrete social relationships, such as gods and ghosts, monarchs and subjects, fathers and sons, and husbands and wives, are placed in the same category as the abstract positional types, such as the noble and the base, the intimate and the unconnected, the remote and the close, those above and those below. In fact, the basic character of traditional Chinese social structure rests precisely on such hierarchical differentiations as these. Therefore, the key to understanding networks of human relationships is to recognize that such distinctions create the very patterns of Chinese social organization. In the Book of Rites, it is written, "Toward the intimate, there is only intimacy; toward the respected, only respect; toward superiors, only deference; between men and women, only differences; these are things that people cannot alter." This means that the framework of social structure is unchangeable; what is changeable is only the use to which the framework is put.

Confucius paid a lot of attention to the word tui (pushing or extending out), in the sense of ripples expanding out from the center. He first recognized the centrality of the self. Noting that one should "do to others as you would have done to yourself," Confucius explained that one should "control oneself and conform to rituals" (ke ji fu li). By exercising such self-restraint, one cultivates moral character. Attaining control over one's inner self, one then can tui, can extend oneself out into other circles of human relationships. Confucius wrote, "When the inner person is established, the way is born.... A man who is a good son and a dutiful brother will seldom be disposed to quarrel with those in authority over him, and a man who is not disposed to quarrel with those in authority will never be found to disturb the peace and order of the state."⁷ The path runs from the self to the family, from the family to the state, and from the state to the whole world (tianxia). In the Doctrine of the Mean (Zhongyong), the five relationships (monarch and subject, father and son, husband and wife, older and younger brothers, and friends) are regarded as passages to the world (tianxia zhi dadao).⁸ In such a social structure, the way to go beyond oneself and reach out to the world is to extend oneself circle by circle. Mencius even praised Confucius by saying that he "was good at extending himself."

In these elastic networks that make up Chinese society, there is always a self at the center of each web. But this notion of the self amounts to egocentrism, not individualism. With individualism, individuals make up organizations in the same way that parts make up the whole. The balance between parts and whole produces a concept of equality: since the position of each individual in an organization is the same, one person cannot encroach on the others. It also produces a concept of constitutionality: an organization cannot deny the rights of an individual; it controls individuals merely on the basis of the partial rights they have willingly handed over. Without these concepts, such organizations as these could not exist. However, in Chinese traditional thought, there is no comparable set of ideas, because, for us, there is only egocentrism. Everything worthwhile rests on an ideology in which the self is central.

This kind of egocentrism is not limited to the actions of someone like Yang Zhu, who was unwilling to pluck out even a single hair in order to benefit the world.⁹ It also includes the Confucians. The difference between Yang Zhu and Confucius himself is that Yang Zhu neglected the relative, elastic qualities of egocentrism. He held his self close and would not let it out. Confucius, however, felt that people need to extend beyond themselves in order to achieve their own interests. But even if one extends as far as possible, one's self is still at the center. Confucius wrote, "A ruler who exercises government by

means of his virtue is like the North Star, which makes all the other stars surround it."¹⁰ This is, in fact, a very apt simile for describing the Chinese system of organization, that of a pattern of discrete circles, the differential mode of association (*chaxugeju*). The self is always at the center; so, like the motionless North Star, the self is always surrounded by others who come under the influence of the center. In this regard, Confucius is not like Jesus Christ. Jesus transcends human organizations. He has his Heaven; so he can sacrifice himself for the sake of Heaven, for something beyond human society.

Confucius, however, is different. One of his disciples, Zigong, said to him, "If there were a man who extensively carried out good works for the welfare of the people and really gave benefits to the multitude, what would you say of such a man? Could he be called benevolent (*ren*)?" The Master said, "It is not a matter of benevolence with such a man. If you must describe him, sage is the right word. Even Yao and Shun would have found it difficult to accomplish as much. A benevolent man, in forming his own moral character, forms the character of others; in enlightening himself, he enlightens others. This is a good method for attaining a moral life, if one is able to judge of others by what is nigh in himself."¹¹

Confucian ethics cannot be divorced from the idea of discrete centers fanning out into a weblike network. As Confucius wrote, "What the superior man seeks is in himself; what the petty man seeks is in others." With sentiments such as these, Confucius could not be like Jesus, who so loved everyone under the sun, including his enemies, that he asked God to have mercy on those who killed him. These actions could not have been motivated by egocentrism. What would Confucius have done? When someone asked him, "What about returning good for evil?" Confucius answered, "Why should one return good for evil? Treat evil with justice and return good for good."¹² Confucius could not put aside these kinds of distinctions. But Confucius was certainly not like Yang Zhu, who used his miserly little self to control all situations. Instead, Confucius expanded and contracted the moral scope according to necessity.

Once we understand these highly elastic social spheres, we are able to understand the problem of selfishness in Chinese society. I often think that the Chinese would sacrifice their families for their own self-interests, their party for their families' interests, their country for their party's interests, and the whole world for their country's interests. This same idea is found in the classic book *The Great Learning*: "The ancients who wished to display illustrious virtue throughout the empire first put their own states in good order. Wishing to order their states, they first regulated their families. Wishing to regulate their families, they first cultivated their own self.

Their self being cultivated, their families were regulated; their families being regulated, their states were correctly governed. Their states being well governed, the whole empire was made tranquil and peaceful.¹³

Now we can see that the boundary between the public and private spheres is relative—we may even say ambiguous. In *The Great Learning*, public order is achieved by moving toward the center of the discrete circles—that is, toward the family. Private selfishness, however, is justified by moving outward, toward the state. Both public officials and private persons use the same ambiguous conception of the social order to define the context of their action. This situation differs greatly from that in Western society, in which public and private rights and obligations are divided distinctly.

Sacrificing the family for one's own interests, or the lineage for the interests of one's household, is in reality a formula. With this formula, it is impossible to prove that someone is acting selfishly. The person concerned would likely deny it. He might contend that a person who sacrifices his lineage for the sake of his family is performing a public duty. When he sacrifices his country in struggling for the interests and rights of his own small group, he is still acting on behalf of the public, which is now defined as the small group itself. In this pattern of oscillating but differential social circles (*chaxugeju*), public and private are relative concepts. Standing in any circle, one can say that all those in that circle are part of the public. As a matter of fact, when Western diplomats work for the benefit of their own countries in international conferences, they willingly sacrifice world peace and other countries' legal rights; these actions are the same as ours. But the difference is that Westerners regard the state as an organization surpassing all smaller groups. Both international and local affairs can be sacrificed for the sake of the state, but the state cannot be sacrificed for other groups. This is the concept of the modern state. It is a concept absent from Chinese rural society.

In the West, the state is an organization that creates distinct boundaries between the public and the private spheres. Like straws in a haystack, citizens all belong to the state. They have to make the state a public organization beneficial to each individual. Therefore, they have revolutions, constitutions, laws, and parliamentary bodies. But in traditional China, the concept of public was the ambiguous *tianxia* (all under heaven), whereas the state was seen as the emperor's family. Hence, the boundary between public and private has never been clear. The state and the public are but additional circles that spread out like the waves from the splash of each person's social influence. Therefore, people must cultivate themselves before they can extend outward. Accordingly, self-restraint has become the most

important virtue in social life. The Chinese thus are unable to assert themselves against society to ensure that society does not infringe on their individual rights. In fact, the Chinese notion of a differential mode of association (chaxugeju) does not allow for individual rights to be an issue at all.

In the pattern of Chinese organization, our social relationships spread out gradually, from individual to individual, resulting in an accumulation of personal connections. These social relationships form a network composed of each individual's personal connections. Therefore, our social morality makes sense only in terms of these personal connections. I will discuss this last point in the next chapter.

肆 差序格局

在乡村工作者看来，中国乡下佬最大的毛病是“私”。说起私，我们就会想到“各人自扫门前雪，莫管他人屋上霜”的俗语。谁也不敢否认这俗语多少是中国的信条。其实抱有这种态度的并不只是乡下人，就是所谓城里人，何尝不是如此。扫清自己门前雪的还算是了不起的有公德的人，普通人家把垃圾在门口的街道上一倒，就完事了。苏州人家后门常通一条河，听来是最美丽也没有了，文人笔墨里是中国的威尼斯。可是我想天下没有比苏州城里的水道更脏的了。什么东西都可以向这种出路本来不太畅通的小河沟里一倒，有不少人家根本就不必有厕所。明知人家在这河里洗衣洗菜，毫不觉得有什么需要自制的地方。为什么呢？——这种小河是公家的。

一说是公家的，差不多就是说大家可以占一点便宜的意思，有权利而没有义务了。小到两三家合住的院子，公共的走廊上照例是尘灰堆积，满院生了荒草，谁也不想去拔拔清楚，更难以插足的自然是厕所。没有一家愿意去管“闲事”，谁看不惯，谁就得白服侍人，半声谢意都得不到。于是像格兰亨姆的公律，坏钱驱逐好钱一般，公德心就在这里被自私心驱走。

从这些事来说，私的毛病在中国实在比愚和病更普遍得多，从上到下似乎没有不害这毛病的。现在已成了外国舆论一致攻击我们的把柄了。所谓贪污无能，并不是每个人绝对的能力问题，而是相对的，是从个人对公家的服务和责任上说的。中国人并不是不善经营，只要看南洋那些华侨在商业上的成就，西洋人谁不侧目？中国人更不是无能，对于自家的事，抓起钱来，拍起马来，比哪一个国家的人能力都大。因之这里所谓“私”的问题却是个群己、人我的界线怎样划法的问题。我们传统的划法，显然是和西洋的划法不同。因之，如果我们要讨论私的问题就得把整个社会结构的格局提出来考虑一下了。

西洋的社会有些像我们在田里捆柴，几根稻草束成一把，几把束成一扎，几扎束成一捆，几捆束成一挑。每一根柴在整个挑里都属于一定的捆、扎、把。每一根柴也可以找到同把、同扎、同捆的柴，分扎得清楚不会乱的。在社会，这些单位就是团体。我说西洋社会组织像捆柴就是想指明：他们常常由若干人组成一个个的团体。团体是有一定界限的，谁是团体里的人，谁是团体外的人，不能模糊，一定分得清楚。在团体里的人是一伙，对于团体的关系是相同的，如果同一团体中有组别或等级的分别，那也是先规定的。我用捆柴来比拟，有一点不太合，就是一个人可以参加好几个团体，而好几扎柴里都有某一根柴当然是不可能的，这是人和柴不同的地方。我用这譬喻是在想具体一些使我们看到社会生活中人和人的关系的一种格局。我们不妨称之作团体格局。

家庭在西洋是一种界限分明的团体。如果有一位朋友写信给你说他将要“带了他的家庭”一起来看你，他很知道要和他一同来的是哪几个人。在中国，这句话是含糊得很。在英美，家庭包括他和他的妻以及未

成年的孩子。如果他只和他太太一起来，就不会用“家庭”。在我们中国“阖第光临”虽则常见，但是很少人能说得这个“第”字究竟应当包括些什么人。

提到了我们的用字，这个“家”字可以说最能伸缩自如了。“家里的”可以指自己的太太一个人；“家门”可以指伯叔侄子一大批；“自家人”可以包罗任何要拉入自己的圈子，表示亲热的人物。自家人的范围是因时因地可伸缩的，大到数不清，真是天下可成一家。

为什么我们这个最基本的社会单位的名词会这样不清不楚呢？在我看来却表示了我们的社会结构本身和西洋的格局是不相同的，我们的格局不是一捆一捆扎清楚的柴，而是好像把一块石头丢在水面上所发生的一圈圈推出去的波纹。每个人都是他社会影响所推出去的圈子的中心。被圈子的波纹所推及的就发生联系。每个人在某一时间某一地点所动用的圈子是不一定相同的。

我们社会中最重要亲属关系就是这种丢石头形成同心圆波纹的性质。亲属关系是根据生育和婚姻事实所发生的社会关系。从生育和婚姻所结成的网络，可以一直推出去包括无穷的人，过去的、现在的和未来的。我们俗语里有“一表三千里”，就是这个意思，其实三千里者也不过指其广袤的意思而已。这个网络像个蜘蛛的网，有一个中心，就是自己。我们每个人都有这么一个以亲属关系布出去的网，但是没有一个网所罩住的人是相同的。在一个社会里的人可以用同一个体系来记认他们的亲属，所同的只是这体系罢了。体系是抽象的格局，或是范畴性的有关概念。当我们用这体系来认取具体的亲亲戚戚时，各人所认的就不同了。我们在亲属体系里都有父母，可是我的父母却不是你的父母。再进一步说，天下没有两个人所认取的亲属可以完全相同的。兄弟两人固然有相同的父母了，但是各人有各人的妻子儿女。因之，以亲属关系所联系成的社会关系的网络来说，是个别的。每一个网络有个“己”作为中心，各个网络的中心都不同。

在我们乡土社会里，不但亲属关系如此，地缘关系也是如此。现代的保甲制度是团体格局性的，但是这和传统的结构却格格不相入。在传统结构中，每一家以自己的地位作中心，周围划出一个圈子，这个圈子是“街坊”。有喜事要请酒，生了孩子要送红蛋，有丧事要出来助殓、抬棺材，是生活上的互助机构。可是这不是一个固定的团体，而是一个范围。范围的大小也要依着中心的势力厚薄而定。有势力的人家的街坊可以遍及全村，穷苦人家的街坊只是比邻的两三家。这和我们的亲属圈子一般的。像贾家的大观园里，可以住着姑表林黛玉、姨表薛宝钗，后来更多了，什么宝琴、岫烟，凡是拉得上亲戚的，都包容得下。可是势力一变，树倒猢猻散，缩成一小团。到极端时，可以像苏秦潦倒归来，“妻不以为夫，嫂不以为叔”。中国传统结构中的差序格局具有这种伸缩能力。在乡下，家庭可以很小，而一到有钱的地主和官僚阶层，可以大到像个小国。中国人也特别对世态炎凉有感触，正因为这富于伸缩的社会圈子会因中心势力的变化而大小。

在孩子成年了住在家里都得给父母膳宿费的西洋社会里，大家承认团体的界限。在团体里的有一定的资格。资格取消了就得走出这个团体。在他们不是人情冷热的问题，而是权利问题。在西洋社会里争的是

权，而在我们却是攀关系、讲交情。

以“己”为中心，像石子一般投入水中，和别人所联系成的社会关系，不像团体中的分子一般大家立在一个平面上的，而是像水的波纹一般，一圈圈推出去，愈推愈远，也愈推愈薄。在这里我们遇到了中国社会结构的基本特性了。我们儒家最考究的是人伦，伦是什么呢？我的解释就是从自己推出去的和自己发生社会关系的那一群人里所发生的一轮轮波纹的差序。《释名》于“伦”字下也说：“伦也，水文相次有伦理也。”潘光旦先生曾说：凡是有“伦”作公分母的意义都相通，“共同表示的是条理、类别、秩序的一番意思”（见潘光旦《说伦字》，《社会研究》第十九期）。

伦重在分别，在《礼记·祭统》里所讲的十伦，鬼神、君臣、父子、贵贱、亲疏、爵赏、夫妇、政事、长幼、上下，都是指差等。“不失其伦”是在别父子、远近、亲疏。伦是有差等的次序。在我们现在读来，鬼神、君臣、父子、夫妇等具体的社会关系，怎能和贵贱、亲疏、远近、上下等抽象的相对地位相提并论？其实在我们传统的社会结构里最基本的概念，这个人和人往来所构成的网络中的纲纪，就是一个差序，也就是伦。《礼记·大传》里说：“亲亲也，尊尊也，长长也，男女有别，此其不可得与民变革者也。”意思是这个社会结构的架格是不能变的，变的只是利用这架格所做的是。

孔子最注重的就是水纹波浪向外扩张的“推”字。他先承认一个己，推己及人的己，对于这己，得加以克服于礼，克己就是修身。顺着这同心圆的伦常，就可向外推了。“本立而道生”，“其为人也孝悌，而好犯上者鲜矣，不好犯上而好作乱者，未之有也”。从己到家，由家到国，由国到天下，是一条通路。《中庸》里把五伦作为“天下之达道”。因为在这种社会结构里，从己到天下是一圈一圈推出去的，所以孟子说他“善推而已矣”。

在这种富于伸缩性的网络里，随时随地是有一个“己”作中心的。这并不是个人主义，而是自我主义。个人是对团体而说的，是分子对团体。在个人主义下，一方面是平等观念，指在同一团体中各分子的地位相等，个人不能侵犯大家的权利；一方面是宪法观念，指团体不能抹煞个人，只能在个人所愿意交出的一份权利上控制个人。这些观念必须先假定了团体的存在。在我们中国传统思想里是没有这一套的，因为我们所有的是自我主义，一切价值是以“己”作为中心的主义。

自我主义并不限于拔一毛而利天下不为的杨朱，连儒家都该包括在内。杨朱和孔子不同的是杨朱忽略了自我主义的相对性和伸缩性，他太死心眼儿，一口咬了一个自己不放；孔子是会推己及人的，可是尽管放之于四海，中心还是在自己。子曰：“为政以德，譬如北辰，居其所，而众星拱之。”这是很好一个差序格局的譬喻，自己总是中心，像四季不移的北斗星，所有其他的人，随着他转动。孔子并不像耶稣，耶稣是有超于个人的团体的，他有他的天国，所以他可以牺牲自己去成全天国。孔子呢？不然。

子贡曰：“如有博施于民，而能济众，何如？可谓仁乎？”子曰：“何事于仁，必也圣乎！尧舜其犹病诸？夫仁者，己欲立而立人，己欲达而达人，能近取譬，可谓仁之方也已。”

孔子的道德系统里绝不肯离开差序格局的中心，“君子求诸己，小人求诸人”。因之，他不能像耶稣一样普爱天下，甚至而爱他的仇敌，还要为杀死他的人求上帝的饶赦——这些不是从自我中心出发的。孔子呢？

或曰：“以德报怨，何如？”子曰：“何以报德？以直报怨，以德报德。”

这是差序层次，孔子是决不放松的。孔子并不像杨朱一般以小己来应付一切情境，他把这道德范围依着需要而推广或缩小。他不像耶稣或中国的墨翟，一放不能收。

我们一旦明白这个能放能收、能伸能缩的社会范围，我们可以明白中国传统社会中的私的问题了。我常常觉得：“中国传统社会里一个人为了自己可以牺牲家，为了家可以牺牲党，为了党可以牺牲国，为了国可以牺牲天下。”这和《大学》的：

古之欲明明德于天下者，先治其国；欲治其国者，先齐其家；欲齐其家者，先修其身……身修而后家齐，家齐而后国治，国治而后天下平。

在条理上是相通的，不同的只是内向和外向的路线，正面和反面的说法，这是种差序的推进形式，把群己的界限弄成了相对性，也可以说是模棱两可了。这和西洋把权利和义务分得清清楚楚的社会，大异其趣。

为自己可以牺牲家，为大家可以牺牲族……这是一个事实上的公式。在这种公式里，你如果说他私么？他是不能承认的，因为当他牺牲族时，他可以为了家，家在他看来是公的。当他牺牲国家为他小团体谋利益、争权利时，他也是为公，为了小团体的公。在差序格局里，公和私是相对而言的，站在任何一圈里，向内看也可以说是公的。其实当西洋的外交家在国际会议里为了自己国家争利益，不惜牺牲世界和平和别国合法利益时，也是这样的。所不同的，他们把国家看成了一个超过一切小组织的团体，为这个团体，上下双方都可以牺牲，但不能牺牲它来成全别种团体。这是现代国家观念，乡土社会中是没有的。

在西洋社会里，国家这个团体是一个明显的也是唯一特出的群己界限。在国家里做人民的无所逃于这团体之外，像一根柴捆在一束里，他们不能不把国家弄成个为每个分子谋利益的机构，于是他们有革命、有宪法、有法律、有国会等等。在我们传统里群的极限是模糊不清的“天下”，国是皇帝之家，界限从来就是不清不白的，不过是从自己这个中心里推出去的社会势力里的一圈而已。所以可以着手的，具体的只有己，克己就成了社会生活中最重要的德性，他们不会去克群，使群不致侵略个人的权利。在这种差序格局中，不发生这问题的。

在差序格局中，社会关系是逐渐从一个一个人推出去的，是私人联系的增加，社会范围是一根根私人联系所构成的网络，因之，我们传统社会里所有的社会道德也只在私人群系中发生意义。——这一点，我将留在下篇里再提出来讨论了。

⑤ THE MORALITY OF PERSONAL RELATIONSHIPS

The basic structure of Chinese rural society is what I have called "a differential mode of association" (chaxugeju). This pattern is composed of distinctive networks spreading out from each individual's personal connections. It is quite different from the modern Western organizational mode of association (tuantigeju). In such a pattern, personal relationships depend on a common structure. People attach themselves to a preexisting structure and then, through that structure, form personal relationships. The concept of the citizen, for example, necessarily follows the development of the state. It seems likely that this type of organizational pattern grew out of primitive tribal formations. In primitive nomadic economies, these patterns were quite prominent. Depending on each other in daily life, tribal peoples could not survive if they spread out among the mountains, with each person living alone. To them, a cohesive organization was a precondition of life. But it is different for those people living in a settled agricultural society, where everyone earns his or her own living from the land and feels the need of companions only under fortuitous, temporary, or special circumstances. To these people, starting relationships with others is a matter of secondary importance. Moreover, they need connections to different degrees on different occasions. They do not seem to need large, continuous organizations. Therefore, their society has adopted a differential mode of association.

These two patterns of social organization give rise to different types of morality. Morality is the belief that people in a society should abide by certain norms of social behavior. Morality always includes regulations, beliefs, and sanctions, all of which are shaped by the constraints imposed by a social structure. According to a sociological perspective, morality is society's sanction on individual behavior; it makes people conform to established social norms in order to maintain the existence and continuity of the society.

In the Western pattern, the fundamental concept of morality is built on the relationship between the organization and the individual. An organization is an entity that transcends the individual. Even so, organization itself has no material reality. It is impossible to call material things an organization. Instead, an organization is really a kind of social relationship among human beings. It is a force controlling individual behavior. It is an object on which the

composition of individual elements depends. It is a common will that precedes individual members, even as it relies on them for its very existence.

The concept of organization can be expressed only by symbols. It is for this reason that the idea of an omnipresent God arose in the West. The relationship between the organization and the individual is signified in the relationship between God and his disciples. God is a judge who rewards and punishes, a keeper of justice who is an omnipotent protector.

If we want to understand the morality produced by Western organizational patterns, we must never leave out their religious concepts. Religious piety and beliefs are not only the source of Western morality but also the force that supports Western behavioral norms. From the concept of God, who is actually the symbol of universal organization, two important corollaries have emerged. One is that everyone is equal before God, and the other is that God treats everyone with equal justice.

Jesus addressed God as the Father, as everyone's Father. He even publicly rejected his own parents, who gave birth to him and brought him up. To achieve this equality, according to Christian beliefs, Jesus was born of a young virgin; the special and personal relationship between father and son is denied here. This denial is actually not nonsense; it is, instead, a powerful symbol of the public quality of organizations. God represents the universality of public organizations. God is necessarily without a private side. Jesus symbolizes each person within this universal organization. Besides a biological father, each person, therefore, shares a more important heavenly father—that is, an all-encompassing organization. Only by means of this conceptual thinking can the equality among individuals be established. The relationship of each member to the organization is the same. This organization cannot be any individual's private possession. These complex ideas are the very ones that form the basis of the American Declaration of Independence, whose main theme is clearly stated at the very beginning: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights."

But God is not of this world. He symbolizes the invisible entity of universal organization. To carry out the will of organizations, ministers are needed. The term minister is a basic concept in the Western organizational mode of association. The person who carries out God's will is a minister, and the official who executes the power in an organization is also a minister. Both of them are agents. They are not gods themselves. Nor do they somehow embody the organization itself. The difference between God and his ministers, or between the

state and its ministers, is never ambiguous. Throughout the history of Christianity, people have time and again tried to communicate with God directly and have opposed the agents on the grounds that they do not truly act at God's behest. Following the same logic, and in fact having grown out of it, the Declaration of Independence further states, "That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it."

God treats everyone with justice, impartiality, and love. If agents violate these "self-evident truths," they become disqualified. Thus, a concept of individual rights is inherently a part of the morality of the Western mode of organization. People should respect each other's rights. Organizations also should protect individual rights. To prevent the misuse of power by agents in organizations, constitutions have come into being. The concept of constitutions is coordinated with the Western concept of public service. The state may ask for people's service, but it must promise not to infringe on their rights. The state should exercise power only within the scope of justice and love.

I have talked a lot about the morality inherent in Western organizational patterns. My purpose has been to provide a contrast to the characteristics of morality found in the Chinese mode of association. In these self-centered networks of social relationships, the most important feature is certainly *ke ji fu li* (subdue the self and follow the rites). "From the Son of Heaven down to ordinary people, all must consider the cultivation of the person as the root of everything."¹ This idea is the starting point in the system of morality inherent in Chinese social structure.

Extending out from the self are the social spheres formed by one's personal relationships. Each sphere is sustained by a specific type of social ethic. The process by which the social spheres extend outward takes various paths, but the basic path is through kinship, which includes relations between parents and children and among siblings born of the same parents. The ethical values that match this sphere are filial piety and fraternal duty. "Filial piety and fraternal submission—are they not the foundation of a moral life?"² An additional route out from the self is through friends. The ethical values that match friendship are loyalty (*zhong*) and sincerity (*xin*). As Confucius said, "When acting on another's behalf, shouldn't you always be loyal? When dealing with friends, shouldn't you always be sincere? ... Make loyalty and sincerity your first principles. Have no friends who do not measure up to yourself."³ Confucius once concluded, "A young man, when at home, should be filial, and when out in the world should be respectful to his elders. He should be

earnest and truthful. He should overflow with love, and cultivate the friendship of the good."⁴

Now I must mention a more complicated concept, ren (benevolence). As I have said, the Chinese pattern of social organization embraces no ethical concepts that transcend specific types of human relationships, as is the case in the West. Filial piety, fraternal duty, loyalty, and sincerity—these are all ethical principles found in private personal relationships. Confucius, however, frequently mentioned ren. In the Analects, he explained ren more than any other concept, but these explanations were also the most elusive. On the one hand, he repeatedly tried to clarify the meaning of the word; on the other hand, "In his conversations, Confucius seldom spoke of profit, destiny, and benevolence."⁵ On several occasions, Confucius was simply unable to express what he seemed to have on his mind.

"Sima Niu asked Confucius about ren. The Master said, 'A man possessing ren is cautious and slow in speaking.' Niu asked, 'Is this what is meant by ren?' The Master said, 'Acting in a benevolent way is difficult. Is it any wonder that one should be reluctant to speak?'"⁶ At another point, Confucius said, "I have never met a person who loves ren. There may be such a case, but I have never seen it."⁷ At yet another point, when Meng Wubo asked whether Zilu was ren, Confucius said, "I cannot say." When Meng Wubo repeated the question, the Master said, "In a government of a state of even a thousand chariots, You (Zilu) can be given the responsibility of managing the army, but whether he is ren or not I cannot say." He was asked, "What about Qiu?" Confucius replied, "Qiu can be given the responsibility of being the steward in a town with a thousand households or in a noble family with a hundred chariots, but whether he is ren or not I cannot say." "What about Chi?" Confucius said, "When Chi puts on his finery and takes his place at court, he can be given the responsibility of conversing with the honored guests, but whether he is ren or not I cannot say."⁸

Many times, Confucius observed that what someone did "is insufficient to prove benevolence." But when he tried to explain ren in a positive way, he always returned to the ethical qualities in personal relationships: "Subduing yourself and submitting to ritual is what constitutes ren." He also said, "Whoever is able to put five things into practice throughout the whole world is certainly ren. These are earnestness, consideration for others, trustworthiness, diligence, and generosity. If you are earnest, you will never meet with disrespect. If you are considerate to others, you will win the people's hearts. If you are trustworthy, people will trust you. If you are diligent, you will be successful in your undertakings. If you are generous, you will find

plenty of people who are willing to serve you."⁹

Confucius's difficulty is that, with a loosely organized rural society such as China's, it was not easy to find an all-encompassing ethical concept. The concept of ren is, in fact, only a logical synthesis, a compilation of all the ethical qualities of private, personal relationships. Chinese social patterns, unlike Western ones, lack organizations that transcend individual personal relationships. In China, there was only the all-encompassing tianxia(everything under heaven), as in the phrase "Everything under heaven returns to ren." Tianxia matches ren in its ambiguity, and so ren cannot be more clearly defined than tianxia. Therefore, whenever Confucius wanted to clarify ren, he had to return to the ethical principles of individual relationships: filial piety, fraternal duty, loyalty, and sincerity. Similarly, when he tried to clarify tianxia, he had to return to concrete relationships themselves, such as those between fathers and sons, between older and younger brothers, and among friends.

In the traditional Chinese system of morality, there is no concept of "love" such as that which exists in Christianity—universal love without distinctions. It is even hard to find ethical principles linking individuals with groups. In the organizational patterns in Western society, public service, in the sense of fulfilling obligations toward a group, is a clearly defined social norm. In Chinese traditional society, however, there is no such norm. Nowadays we sometimes use the word zhong (loyalty) to convey this meaning, but the meaning of the word zhong as given in the Analects is quite different. In the sentence "When acting on another's behalf, shouldn't you always be loyal?" the word loyal really means "to be sincere with others"; it is another way of indicating inner emotions, of saying something is heartfelt.

In the Analects, Zizhang asked Confucius his opinion of the minister Ziwen: "In his public life he was made prime minister three times, and yet on none of these occasions did he show any sign of elation. Three times he was dismissed from office, and on none of these occasions did he show any sign of resentment. He was always careful, when giving up office, to explain to his successor the line of policy which the government had been pursuing under his administration. Now, what do you think of him?" Confucius answered, "He was zhong (loyal)."¹⁰ In this passage, zhong means something close to loyalty to one's duty, but it does not mean loyalty to an organization. As a matter of fact, in the Analects, zhong is not even a principle of the relationship between a ruler and his officials. There, the principle linking ruler and official is yi (righteousness, correctness). As Confucius said, "A gentleman who takes office tries to carry out what he thinks to be right."¹¹ The concept of the "loyal official" came later. Furthermore, loyalty to the ruler is itself not an

ethical principle joining the individual to an organization but, rather, signifies a personal relationship between ruler and officials.

This absence of an organizational morality can be seen even more clearly in the conflict between the public and the private spheres. Though responsible for governing the empire, the emperor still had first to fulfill the obligations of his personal relationships. According to Mencius,

Tao Ying asked, "When Shun was emperor and Gaoyao was the judge, if Shun's father had killed a man, what should have happened?"

Mencius said, "Gaoyao would have arrested him."

"In that case, would Shun not have tried to stop it?"

"How could Shun have stopped it? Gaoyao would have had the authority to deal with the matter."

"Then what would Shun have done?"

"Shun would have regarded abandoning the empire as throwing away a worn-out shoe. He would have secretly carried the old man on his back and fled to the edge of the sea. He would have lived there all his life happily and forgotten all about the empire."¹²

All this is to say that, although Shun was the emperor, he was still unable to treat his father as he would any other subject. Mencius's answer is an ideal solution to the conflict between the public and the private. Shun tried to serve two goals, but could not. Mencius thought of a way to escape the law by Shun's living in a remote place by the sea.

Mencius was able to give this answer because this example was fictitious. However, in another place, Mencius dealt with a problem in a way that demonstrates even more clearly the absence of universalism in Chinese moral standards.

Wan Zhang said, "Xiang was daily engaged in plotting against Shun's life. When Shun became the emperor, why did he only banish his brother?"

Mencius said, "He enfeoffed him; some only called it banishment."

Wan Zhang said, "[Shun banished Gonggong to Youzhou, Huandou to Mount Chong, Sanmiao to Sanwei, and Gun to Mount Yu, where he died. When these four culprits were punished, the people in the Empire bowed to the will of Shun, because it was the punishment of the wicked.] Xiang was the most wicked of them all; yet he was enfeoffed in Youbi. What wrong had the people of Youbi done? Is that the way a benevolent man behaves? Others he punished, but when it came to his own brother, he enfeoffed him."

Mencius replied, "[A benevolent man neither harbors anger nor nurses resentment against a brother. All he does is to love him. Because he loves him, he wishes him to have rank. Because he loves him, he wishes him to be rich. To enfeoff him in Youbi was to enrich him and let him have rank.] If as emperor he had allowed his brother to remain a common man, could that be described as loving him?"¹³

A society with a differential mode of association is composed of

webs woven out of countless personal relationships. To each knot in these webs is attached a specific ethical principle. For this reason, the traditional moral system was incapable of producing a comprehensive moral concept. Therefore, all the standards of value in this system were incapable of transcending the differential personal relationships of the Chinese social structure.

The degree to which Chinese ethics and laws expand and contract depends on a particular context and how one fits into that context. I have heard quite a few friends denounce corruption, but when their own fathers stole from the public, they not only did not denounce them but even covered up the theft. Moreover, some went so far as to ask their fathers for some of the money made off the graft, even while denouncing corruption in others. When they themselves become corrupt, they can still find comfort in their "capabilities." In a society characterized by a differential mode of association, this kind of thinking is not contradictory. In such a society, general standards have no utility. The first thing to do is to understand the specific context: Who is the important figure, and what kind of relationship is appropriate with that figure? Only then can one decide the ethical standards to be applied in that context.

In a society based on a Western organizational mode of association, people in the same organizations apply universal moral principles to themselves and so regard each other as equals. This kind of thinking, however, is exactly what Mencius most opposed. He said, "That things are unequal is part of their nature.... If you reduce them to the same level, it will only bring confusion to the empire."¹⁴ Motzu's idea about universal love is exactly opposite to the Confucian idea of differential human relationships. It is for this reason that Mencius accused Motzu of being both fatherless and rulerless.¹⁵

伍 系维着私人的道德

中国乡土社会的基层机构是一种我所谓“差序格局”，是一个“一根根私人联系所构成的网络”。这种格局和现代西洋的“团体格局”是不同的。在团体格局里个人间的联系靠着一个共同的架子；先有了这架子，每个人结上这架子，而互相发生关联。“公民”的观念不能不先有个“国家”。这种结构很可能是从初民民族的“部落”形态中传下来的。部落形态在游牧经济中很显著的是“团体格局”的。生活相倚赖的一群人不能单独地、零散地在山林里求生。在他们，“团体”是生活的前提。可是在一个安居的乡土社会，每个人可以在土地上自食其力地生活时，只在偶然的和临时的非常状态中才感觉到伙伴的需要。在他们，和别人发生关系是后起和次要的，而且他们在不同的场合下需要着不同程度的结合，并不显著地需要一个经常的和广被的团体。因之他们的社会采取了“差序格局”。

社会结构格局的差别引起了不同的道德观念。道德观念是在社会里生活的人自觉应当遵守社会行为规范的信念。它包括着行为规范、行为者的信念和社会的制裁。它的内容是人和人关系的行为规范，是依着该社会的格局而决定的。从社会观点说，道德是社会对个人行为的制裁力，使他们合于规定下的形式行事，用以维持该社会的生存和绵延。

在“团体格局”中，道德的基本观念建筑在团体和个人的关系上。团体是个超于个人的“实在”，不是有形的东西。我们不能具体地拿出一个有形体的东西来说这是团体。它是一束人和人的关系，是一个控制各个人行为的力量，是一种组成分子生活所倚赖的对象，是先于任何个人而又不能脱离个人的共同意志……这种“实在”只能用有形的东西去象征它、表示它。在“团体格局”的社会中才发生笼罩万有的神的观念。团体对个人的关系就象征在神对于信徒的关系中，是个有赏罚的裁判者，是个公正的维持者，是个全能的保护者。

我们如果要了解西洋的“团体格局”社会中的道德体系，决不能离开他们的宗教观念的。宗教的虔诚和信赖不但是他们道德观念的来源，而且是支持行为规范的力量，是团体的象征。在象征着团体的神的观念下，有着两个重要的派生观念：一是每个个人在神前的平等；一是神对每个个人的公道。

耶稣称神是父亲，是个和每一个人共同的父亲，他甚至当着众人的面否认了生育他的父母。为了要贯彻这“平等”，基督教的神话中，耶稣是童贞女所生的。亲子间个别的和私人的联系在这里被否定了。其实这并不是“无稽之谈”，而是有力的象征，象征着“公有”的团体，团体的代表——神，必须是无私的。每个“人子”，耶稣所象征的“团体构成分子”，在私有的父亲外必须有一个更重要的与人相共的是“天父”，就是团体。——这样每个个人人格上的平等才能确立，每个团体分子和团体的关系是相等的。团体不能为任何个人所私有。在这基础上才发生美国《独立宣言》中开宗明义的话：“全人类生来都平等，他们都有天赋不可夺的权利。”

可是上帝是在冥冥之中，正象征团体无形的实在；但是在执行团体的意志时，还得有人来代理。“代理者”Minister是团体格局的社会中一个基本的概念。执行上帝意志的牧师是Minister，执行团体权力的官吏也是Minister，都是“代理者”，而不是神或团体的本身。这上帝和牧师、国家和政府的分别是不容混淆的。在基督教历史里，人们一度再度地要求直接和上帝交通，反抗“代理者”不能真正代理上帝的意旨。同样的，实际上是相通的，也可以说是一贯的，美国《独立宣言》可以接下去说：“人类为了保障这些权利，所以才组织政府，政府的适当力量，须由受治者的同意中产生出来；假如任何种政体有害于这些目标，人民即有改革或废除任何政体之权。这些真理，我们认为是不证自明的。”

神对每个个人是公道的，是一视同仁的，是爱的；如果代理者违反了这些“不证自明的真理”，代理者就失去了代理的资格。团体格局的道德体系中于是发生了权利的观念。人对人得互相尊重权利，团体对个人也必须保障这些个人的权利，防止团体代理人滥用权力，于是发生了宪法。宪法观念是和西洋公务观念相配合的。国家可以要求人民的服务，但是国家也得保证不侵害人民的权利，在公道和爱护的范围内行使权力。

我说了不少关于“团体格局”中道德体系的话，目的是在陪衬出“差序格局”中道德体系的特点来。从它们的差别上看去，很多地方是刚刚相反的。在以自己作中心的社会关系网络中，最主要的自然是“克己复礼”，“壹是皆以修身为本”。——这是差序格局中道德体系的出发点。

从己向外推以构成的社会范围是一根根私人联系，每根绳子被一种道德要素维持着。社会范围是从“己”推出去的，而推的过程里有着各种路线，最基本的是亲属：亲子和同胞，相配的道德要素是孝和悌。“孝悌也者其为人之本欤。”向另一路线推是朋友，相配的是忠信。“为人谋而不忠乎，与朋友交而不信乎？”“主忠信，无友不如己者。”孔子曾总结说：“弟子入则孝，出则悌，谨而信，泛爱众，而亲仁。”

在这里我得一提这比较复杂的观念“仁”。依我以上所说的，在差序格局中并没有一个超乎私人关系的道德观念，这种超己的观念必须在团体格局中才能发生。孝、悌、忠、信都是私人关系中的道德要素。但是孔子却常常提到那个“仁”字。《论语》中对于仁字的解释最多，但是也最难捉摸。一方面他一再地要给仁字明白的解释，而另一方面却又有“子罕言利，与命与仁”。孔子屡次对于这种道德要素“欲说还止”。

司马牛问仁。子曰：“仁者其言也讱。”曰：“其言也讱，斯谓之仁已乎？”子曰：“为之难，言之得无讱乎？”

子曰：“我未见好仁者。……盖有之矣，我未之见也。”

孟武伯问：“子路仁乎？”子曰：“不知也。”又问。子曰：“由也，千乘之国，可使治其赋也，不知其仁也。”“求也何如？”子曰：“求也，千室之邑，百乘之家，可使为之宰也，不知其仁也。”“赤也何如？”子曰：“赤也，束带立于朝，可使与宾客言也，不知其仁也。”

孔子有不少次数说：不够说是仁。但是当他积极地说明“仁”字是什

么时，他却退到了“克己复礼为仁”、“恭宽信敏惠”这一套私人间的道德要素了。他说：“能行五者于天下为仁矣。……恭则不侮，宽则得众，信则人任焉，敏则有功，惠则足以使人。”

孔子的困难是在“团体”组合并不坚强的中国乡土社会中并不容易具体地指出一个笼罩性的道德观念来。仁这个观念只是逻辑上的总合，一切私人关系中道德要素的共相，但是因为在社会形态中综合私人关系的“团体”的缺乏具体性，只有个广被的“天下归仁”的天下，这个和“天下”相配的“仁”也不能比“天下”观念更为清晰。所以凡是要具体说明时，还得回到“孝悌忠信”那一类的道德要素。正等于要说明“天下”时，还得回到“父子、昆弟、朋友”这些具体的伦常关系。

不但在我们传统道德系统中没有一个像基督教里那种“爱”的观念——不分差序的兼爱，而且我们也很不容易找到个人对于团体的道德要素。在西洋团体格局的社会中，公务，履行义务，是一个清楚明白的行为规范。而在中国传统中是没有的。现在我们有时把“忠”字抬出来放在这位置里，但是“忠”字的意义，在《论语》中并不如此。我在上面所引“为人谋而不忠乎”一句中的“忠”，是“忠恕”的注解，是“对人之诚”。“主忠信”的“忠”，可以和“衷”字相通，是“由衷”之意。

子张问曰：“令尹子文三仕为令尹，无喜色；三已之，无愠色。旧令尹之政，必以告新令尹。何如？”子曰：“忠矣。”

这个“忠”字虽则近于“忠于职务”的“忠”字，但是并不包含对于团体的“矢忠”。其实，在《论语》中，忠字甚至并不是君臣关系间的道德要素。君臣之间以“义”相结合，“君子之仕也，行其义也”。所以“忠臣”的观念可以说是后起的，而忠君并不是个人与团体的道德要素，而依旧是对君私人间的关系。

团体道德的缺乏，在公私的冲突里更看得清楚。就是负有政治责任的君王，也得先完成他私人间的道德。《孟子·尽心上》篇有：

桃应问，“舜为天子，皋陶为士，瞽瞍杀人，则如之何？”孟子曰：“执之而已矣。”“然则舜不禁与？”曰：“夫舜恶得而禁之，夫有所受之也。”“然则舜如之何？”曰：“舜视弃天下，犹弃敝屣也。窃负而逃，遵海滨而处，终身忻然，乐而忘天下。”

这是说舜做了皇帝，不能用对其他国民一样的态度去对待他的父亲。孟子所回答的是这种冲突的理想解决法，他还是想两全，所以想出逃到海滨不受法律所及的地方去的办法。他这样回答是可以的，因为所问的也并非事实问题。另一个地方，孟子所遇到的问题，却更表现了道德标准的缺乏普遍性了。万章问曰：“象日以杀舜为事，立为天子，则放之，何也？”孟子曰：“封之也，或曰放焉。”万章曰：“象至不仁，封之有庠，有庠之人，奚罪焉？仁人固如是乎？在他人则诛之，在弟则封之？”孟子的回答是：“身为天子，弟为匹夫，可谓亲爱之乎？”

一个差序格局的社会，是由无数私人关系搭成的网络。这网络的每一个结附着一种道德要素，因之，传统的道德里不另找出一个笼统性的道德观念来，所有的价值标准也不能超脱于差序的人伦而存在了。

中国的道德和法律，都因之得看所施的对象和“自己”的关系而加以程度上的伸缩。我见过不少痛骂贪污的朋友，遇到他的父亲贪污时，不但不骂，而且代他讳隐。更甚的，他还可以向父亲要贪污得来的钱，同时骂别人贪污。等到自己贪污时，还可以“能干”两字来自解。这在差序社会里可以不觉得是矛盾；因为在这种社会中，一切普遍的标准并不发生作用，一定要问清了，对象是谁，和自己是什么关系之后，才能决定拿出什么标准来。

团体格局的社会里，在同一团体的人是“兼善”的，就是“相同”的。孟子最反对的就是那一套。他说“夫物之不齐，物之情也，子比而同之，是乱天下也。”墨家的“爱无差等”和儒家的人伦差序恰恰相反，所以孟子要骂他无父无君了。

⑥ PATRILINEAGES

In the last two chapters, I discussed first the relations between groups and individuals and then patterns of social structure. I proposed several concepts—in particular, "differential mode of association" (chaxugeju) and "organizational mode of association" (tuantigeju). I knew that these unfamiliar terms would cause troubles for my readers, but I had to create them in order to conceptualize clearly those contexts that are currently absent from sociological terminology. I am not entirely satisfied with the terms I used, and I know they can lead to some misunderstandings. For instance, after reading my analysis in the last chapter, a friend of mine shook his head and said that he could not agree with my conclusion that there are no organizations in Chinese rural society. He pointed to families, lineages, neighborhoods, communities, and villages. What are they if not organizations? Obviously, we used the same term to define different things. In order to distinguish the distinctive patterns underlying the two kinds of social groups, I narrowed the conventional meaning for the term organization, applying it only to groups having a continuous organizational pattern. I used this term to accentuate the contrast with groups having a differential mode of association. Those groups I called "social circles"(shehui quanzi) instead of the more common term organizations. All social groups are organized in some fashion. Most of those groups mentioned by my friend conform in nature to what I have defined as "social circles."But let me clarify this some more. I do not mean to say that there are no "organizations" in Chinese rural society or that all groups have the characteristics of a social circle. For example, rotating credit associations(qianhui) obviously have an organizational pattern.¹ In my analysis, I wanted to discuss only the predominant pattern; in Chinese rural society, the pattern formed by differential relationships and social circles is more important than other patterns. Similarly, differential relationships also exist in modern Western societies, but they are not as important there. The two types of patterns represent basic forms of social structure that can be distinguished in concept but often coexist in reality. Nonetheless, we can see that the different patterns gain predominance in different settings.

It is essential to differentiate conceptually between the two types of social groups and the two ways of organizing, because the distinction helps us even better to understand social structures and thereby to avoid confusion. In this chapter, I will continue to use this

set of concepts to examine the nature of the most basic group in Chinese rural society, the family (jia).

The most common group in rural society is generally called the "large family" (da jiating). In *Peasant Life in China*, I called this group the "expanded family." The important part of these two terms is "family" (jiating). I added the adjectives "large" or "small" to "family" in order to show that, although Chinese and Western families are the same in nature, they are different in form. But now my viewpoint has changed. I think the terminology is no longer appropriate. Instead, a more appropriate term for identifying the most basic unit in Chinese rural society is "small lineage" (xiao jiazou).

I suggest this new term because I want to clarify the difference in the structural principles of Chinese and Western "families." The difference between the so-called big and small family is not one of size, not one concerning the number of people who can be included, but one of structure. A family with more than ten children does not constitute a "large family," while a family of four people—containing the husband, wife, their son, and their daughter-in-law—should not be called a "small family." The first is larger than the second in number, but the second is more complicated than the first in structure. The two families incorporate different principles.

In anthropology, there is a clear definition of the concept of family: A family is the procreative group formed by parents and their children. The parent-child relationship indicates the structure, and procreation is the function. This definition suggests a bilateral kinship system, which simultaneously stresses both the father's side and the mother's side of the family. The sons and daughters are the children produced by the couple. The purpose of such a social union is to give birth and raise children. In societies where each individual must bear the task of raising children, there will be many of these procreative groups. But for each of these families, the function of procreation is fulfilled in a relatively short time span. The children quickly grow up and leave their parents' care, and then they, too, take on the tasks of giving birth to and raising their own children. This process continues generation after generation. For this reason, it is in the nature of the family group to be temporary. In this respect, the group composed of a family is not the same as other common types of social groups. Groups such as schools and states are not considered temporary, although in reality they certainly do not continue forever. They are not temporary, because both fulfill functions that last over the long term. But insofar as the family is considered to have only procreation as its function, the family might as well prepare to end shortly after it begins. The purpose of having children ends when they are raised. I have discussed this issue in detail in the book *Systems of Reproduction*.²

In every culture, however, the family always has other functions besides procreation. The cooperation of a husband and wife does not end when their children grow up. There are periods, at the beginning of the union as well as after the children have grown, when a couple will be by themselves. Between the two, there will be economic, emotional, and sexual cooperation, but what the two of them can accomplish just by themselves will be very limited. To accomplish most things requires the joint effort of a lot of people; therefore, these things must be managed by other kinds of social groups.

In the West, families are groups that have an organizational character. As I explained earlier, Western families have strict boundaries. For this reason, they are able to manage few things beyond raising children. But in Chinese rural society, families do not have strict organizational boundaries. These groups can expand, as needed, by incorporating ever more distant categories of relatives. Those people who make up the family and who form what I have called social circles are not limited to parents and children. Nonetheless, the manner of expansion is limited by social structure. For Chinese families, the route of expansion is patrilineal; it incorporates only those from the father's side of the family. With few exceptions, families do not include daughters-in-law and sons-in-law at the same time.³ According to the patrilineal principle, married daughters and their husbands, the sons-in-law, are outside the family. But on the paternal side, the family can be expanded to include very distant kin. A family with five generations under the same roof would include all paternal relatives in all five generations.

Anthropologists call the social group organized on the patrilineal or matrilineal kinship principle a "lineage." Structurally, Chinese families are lineages. Lineage (shizu) is not exactly the same as what we commonly refer to as the clan (zu). What we call a clan is really a number of lineages whose members have the same surname.⁴ Therefore, I will use the term small lineage to indicate a single-lineage social group. Small and large lineages rest on the same structural principles, but they differ in number and in size. That is why I prefer not to use the term large family to identify a lineage. By using the term small lineage, I emphasize the structural characteristics of the Chinese family and not just the size.

The lineage structure includes the household. The smallest lineage may, in fact, be equal to a nuclear family household. Kinship structure is based on the relationship between parents and children, which is the triangle formed by the father, mother, and child. A lineage expands out from this household family base. But in a lineage the nuclear family is only one ring in a structure of concentric social circles. We cannot say that the nuclear family household does not

exist, but we should never think of it as an independent unit, as an organization unto itself.

Differences in social structure produce variations in behavior. Although one of the functions of a lineage is to raise and educate children, it is not limited to that function. From an anthropological perspective, a lineage is a way of organizing activity; when a single lineage joins other lineages in a common frame of action, the group becomes what anthropologists call a "tribe." Lineages and tribes have complex political, economic, and religious functions. This is true for Chinese families as well. It is my hypothesis that Chinese rural society took on a differential mode of association when kinship was successfully used as a medium to create social groups and to manage all kinds of activities. Not until that time did the Chinese family change into a lineage-based structure. This fact is important on two counts. First, in Chinese rural society, lineages carry the responsibility for political, economic, religious, and other functions. Second, in order to handle so much activity, the family structure cannot be limited to simple combinations of parents and children but must expand outward. Moreover, because politics, economy, religion, and social activity all require long-term continuity, the basic social groups certainly cannot be as transitory as Western families. The family must have continuity. It must not break up when the children grow up and must not end when individual members die. Therefore, the family has incorporated the qualities of a lineage, becoming a lineage unto itself. A lineage is longterm, and so are our families. I call this kind of social group a "small lineage," to emphasize its inherent long-term qualities. The Chinese family is the opposite of a temporary household.

The Chinese family is a medium through which all activities are organized. The size of the family depends on the extent of the activity being organized. If an activity is small enough for husband and wife to handle, the family can be as small as a single household; but if the enterprise goes beyond what the couple can manage, then brothers and uncles may all join in to form what now becomes a large family. In Chinese rural society, therefore, the size of families varies a great deal. But no matter how much the size may vary, the structural principle, the patrilineal pattern of differential relationships, always remains the same.

In any society, when the group whose principal task is procreation begins to take on many other functions, changes necessarily occur in the relationships between the members of that group. In the organization of Western families, husband and wife are the main axis, and together they manage the task of raising children. Playing a supporting role, the children leave this organization when they become adults. In the West, political, economic, and religious

functions are the responsibility of other organizations and are not included among the tasks of households. Husband and wife are central players around whom everything else moves, and the force that holds them together as a couple is their emotional attachment. The emotional quality of this union has made the family serve as the main source of solace and comfort in Western life. In my book *The American Character*, I describe the family as a "life fortress."⁵

In Chinese rural society, however, there are obvious differences in the nature of the family. Our families have long-term continuity and serve as means to organize other activities. The main axes of the family are between father and son and between mother and daughter-in-law. These are vertical, not horizontal, relationships. The husband-wife relationship plays a minor role. Nonetheless, the relations between husband and wife, as well as the relations along the main axes of the family, are never temporary. But these family attachments have been stripped of "ordinary emotions" by the demands of a family's practical activities. What I call "ordinary emotions" stand in contrast to discipline. No enterprise can abandon considerations of efficiency. In order to obtain efficiency, one must have strict discipline. But discipline does not tolerate personal feelings. All Chinese families have family rules. Between husband and wife, there should be mutual respect. For women, there are "the three followings and the four virtues."⁶ Between father and son, there should be responsibility for the father and obedience for the son. These are the special characteristics of groups designed for enterprise.

In wealthy families and in families devoted to scholarship, men and women often live in separate parts of the household, women being consigned to the inner quarters and men living in the outer portions of the house. But this separation is also psychological, and even extends to rural villages, where it is common to see an obvious indifference between husbands and wives. When I conducted surveys in rural areas, I paid special attention to this problem. Later, during the war, when I was evacuated to the countryside, I lived with a farm family for a long time and was even more struck by this fact. Most rural couples I know say that they have "little use for words" or that they "really have nothing to talk about" with each other. From the time people get up in the morning, they are so fully occupied with their work that they have no time to chat. If the women do not work in the fields, they stay at home taking care of children. After a day's work, men usually do not stay at home. In fact, a man is regarded as spineless if he likes to hang around with his wife. So a man goes out whether he has business to attend to or not. Teahouses, tobacco stores, even street corners and alleyways—these are the places where men go to idle away their time and to find emotional comfort. There they talk,

laugh, and have a really good time. When they return home, the husband and wife cooperate smoothly, each doing what is expected of him or her. As long as everything goes smoothly, there is nothing special to talk about, and so there is no need to talk. If things are not going well, they may start to quarrel or even have a fight. You cannot call this intimacy. These observations made me feel that the emotional life of Western and of rural Chinese families cannot be discussed in the same terms. In rural areas, talking, laughing, and showing emotion and affection openly occur only in groups composed of people of the same sex and age. Men get together only with other men, women with other women, and children with other children. Except for matters of work and reproduction, people of different sexes and ages maintain considerable distance.

This separation by age and sex is certainly not accidental. In my opinion, it results from the family's taking on many functions other than just procreation. The emotional life of the Chinese is not the same as that of Westerners. Emotion among the Chinese, especially between the sexes, is characterized by reserve and restraint, and cannot be displayed openly as it can in the West. It is this social environment, an environment dominated by lineages, that nurtures this Chinese personality.

陆 家族

我曾在以上两章中，从群己的关系上讨论到社会结构的格局。我也在那章里提出了若干概念，比如“差序格局”和“团体格局”。我知道这些生疏的名词会引起读者的麻烦，但是为了要表明一些在已有社会学词汇里所没有确当名词来指称的概念，我不能不写下这些新的标记。这些标记并没有使我完全满意，而且也有容易引起误会的地方。譬如有一位朋友看过我那一章的分析之后，曾摇头说，他不能同意我说中国乡土社会里没有团体。他举出了家庭、氏族、邻里、街坊、村落，这些不是团体是什么？显然我们用同一名词指着不同的实体。我为了要把结构不同的两类“社群”分别出来，所以把“团体”一词加以较狭的意义，只指由团体格局中所形成的社群，用以和差序格局中所形成的社群相区别；后者称之为“社会圈子”，把社群来代替普通所谓团体。社群是一切有组织的人群。在那位朋友所列举的各种社群中，大体上都属于我所谓社会圈子的性质。在这里我可以附带说明，我并不是说中国乡土社会中没有“团体”，一切社群都属于社会圈子性质，譬如钱会，即是[〔]赙[〕]，显然是属团体格局的；我在这个分析中只想从主要的格局说，在中国乡土社会中，差序格局和社会圈子的组织是比较的重要。同样的，在西洋现代社会中差序格局同样存在的，但比较上不重要罢了。这两种格局本是社会结构的基本形式，在概念上可以分得清，在事实上常常可以并存的，可以看得到的，不过各有偏胜罢了。

在概念上把这两种格局和两种组织区别出来并不是多余的，因为这个区别确可帮助我们对于社会结构上获得许多更切实的了解，免除种种混淆。在这里我将接着根据这套概念去看中国乡土社会中基本社群——“家”的性质。

我想在这里提出来讨论的是我们乡土社会中的基本社群，这社群普遍被称为“大家庭”的。我在《江村经济》中把它称作“扩大了的家庭”（Expanded Family）。这些名词的主体是“家庭”，在家庭上加一个小或大的形容词来说明中国和西洋性质上相同的“家庭”形式上的分别。可是我现在看来却觉得这并不妥当，比较确当的应该称中国乡土社会基本社群作“小家族”。

我提出这新名词来的原因是在想从结构的原则上去说明中西社会里“家”的区别。我们普通所谓大家庭和小家庭的差别决不是在大小上，不是在这社群所包括的人数上，而是在结构上。一个有十多个孩子的家并不构成“大家庭”的条件，一个只有公婆儿媳四个人的家却不能称之为“小家庭”。在数目上说，前者比后者为多，但在结构上说，后者却比前者为复杂，两者所用的原则不同。

家庭这概念在人类学上有明确的界说：这是个亲子所构成的生育社群。亲子指它的结构，生育指它的功能。亲子是双系的，兼指父母双方；子女限于配偶所出生的孩子。这社群的结合是为了子女的生和育。在由个人来担负孩子生育任务的社会里，这种社群是不会少的。但是生

育的功能，就每个个别的家庭说，是短期的，孩子们长成了也就脱离了他们的父母的抚育，去经营他们自己的生育儿女的事务，一代又一代。家庭这社群因之是暂时性的。从这方面说，家庭这社群和普通的社群不完全一样。学校、国家这些社群并不是暂时，虽则事实上也不是永久的，但是都不是临时性的，因为它们所具的功能是长期性的。家庭既以生育为它的功能，在开始时就得准备结束。抚育孩子的目的就在结束抚育。关于这一层意思我在《生育制度》一书中有详细的讨论。

但是在任何文化中，家庭这社群总是赋有生育之外其他的功能。夫妇之间的合作并不因儿女长成而结束。如果家庭不变质，限于亲子所构成的社群，在它形成伊始，以及儿女长成之后，有一段期间只是夫妇的结合。夫妇之间固然经营着经济的、感情的、两性的合作，但是所经营的事务受着很大的限制，凡是需要较多人合作的事务就得由其他社群来经营了。

在西洋，家庭是团体性的社群，这一点我在上面已经说明有严格的团体界限。因为这缘故，这个社群能经营的事务也很少，主要的是生育儿女。可是在中国乡土社会中，家并没有严格的团体界限，这社群里的分子可以依需要，沿亲属差序向外扩大。构成这个我所谓社圈的分子并不限于亲子。但是在结构上扩大的路线却有限制。中国的家扩大的路线是单系的，就是只包括父系这一方面；除了少数例外，家并不能同时包括媳妇和女婿。在父系原则下女婿和结了婚的女儿都是外家人。在父亲方面却可以扩大得很远，五世同堂的家，可以包括五代之内所有父系方面的亲属。

这种根据单系亲属原则所组成的社群，在人类学中有个专门名称，叫氏族。我们的家在结构上是一个氏族。但是和普通我们所谓族也不完全相同，因为我们所谓族是由许多家所组成，是一个社群的社群。因之，我在这里提了这个“小家族”的名词。小家族和大家族在结构原则上是相同的，不相同是在数量、在大小上。——这是我不愿用大家庭，而用小家族的原因。一字的相差，却说明了这社群的结构性质。

家族在结构上包括家庭，最小的家族也可以等于家庭。因为亲属结构的基础是亲子关系，父母子的三角。家族是从家庭基础上推出来的。但是包括在家族中的家庭只是社会圈子中的一轮，不能说它不存在，但也不能说它自成一个独立的单位，不是一个团体。

形态上的差异，也引起了性质上的变化。家族虽则包括生育的功能，但不限于生育的功能。依人类学上的说法，氏族是一个事业组织，再扩大就可以成为一个部落。氏族和部落赋有政治、经济、宗教等复杂的功能。我们的家也正是这样。我的假设是中国乡土社会采取了差序格局，利用亲属的伦常去组合社群，经营各种事业，使这基本的家，变成氏族性了。一方面我们可以说在中国乡土社会中，不论政治、经济、宗教等功能都可以利用家族来担负；另一方面也可以说，为了要经营这许多事业，家的结构不能限于亲子的小组合，必须加以扩大。而且凡是政治、经济、宗教等事物都需要长期继续性的，这个基本社群决不能像西洋的家庭一般是临时的。家必须是继续的，不因个人的长成而分裂，不因个人的死亡而结束，于是家的性质变成了族。氏族本是长期的，和我们的家一般。称我们这种社群作小家族，也表示了这种长期性在内，和

家庭的临时性相对照。

中国的家是一个事业组织，家的大小是依着事业的大小而决定。如果事业小，夫妇两人的合作已够应付，这个家也可以小得等于家庭；如果事业大，超过了夫妇两人所能担负时，兄弟伯叔全可以集合在一个大家庭里。这说明了我们的乡土社会中家的大小变异可以很甚。但不论大小上差别到什么程度，结构原则上却是一贯的、单系的差序格局。

以生育社群来担负其他很多的功能，使这社群中各分子的关系的内容也发生了变化。在西洋家庭团体中夫妇是主轴，夫妇共同经营生育事务，子女在这团体中是配角，他们长成了就离开这团体。在他们，政治、经济、宗教等功能有其他团体来担负，不在家庭的分内。夫妇成为主轴，两性之间的感情是凝合的力量。两性感情的发展，使他们的家庭成了获取生活上安慰的中心。我在《美国人性格》一书中曾用“生活堡垒”一词去形容它。

在我们的乡土社会中，家的性质在这方面有着显著的差别。我们的家既是个绵续性的事业社群，它的主轴是在父子之间，在婆媳之间，是纵的，不是横的。夫妇成了配轴。配轴虽则和主轴一样并不是临时性的，但是这两轴却都被事业的需要而排斥了普通的感情。我所谓普通的感情是和纪律相对照的。一切事业都不能脱离效率的考虑。求效率就得讲纪律；纪律排斥私情的宽容。在中国的家庭里有家法，在夫妇间得相敬，女子有着“三从四德”的标准，亲子间讲究负责和服从。这些都是事业社群里的特色。

不但在大户人家、书香门第，男女有着阍内阍外的隔离，就是在乡村里，夫妇之间感情的淡漠也是日常可见的现象。我在乡间调查时特别注意过这问题，后来我又因疏散下乡，和农家住在一所房子里很久，更使我认识了这事实。我所知道的乡下夫妇大多是“用不着多说话的”，“实在没有什么话可说的”。一早起各人忙着各人的事，没有工夫说闲话。出了门，各做各的。妇人家如果不下田，留在家里带孩子。工做完了，男子们也不常留在家，男子汉如果守着老婆，没出息。有事在外，没事也在外。茶馆、烟铺，甚至街头巷口，是男子们找感情上安慰的消遣场所。在那些地方，大家有说有笑，热热闹闹的。回到家，夫妇间合作顺利，各人好好地按着应做的事各做各的。做得好，没事，也没话；合作得不对劲，闹一场，动手动脚，说不上亲热。这些观察使我觉得西洋的家和我们乡下的家，在感情生活上实在不能并论。乡下，有说有笑、有情有意的是在同性和同年龄的集团中，男的和男的在一起，女的和女的在一起，孩子们又在一起，除了工作和生育事务上，性别和年龄组间保持着很大的距离。这决不是偶然的，在我看来，这是把生育之外的许多功能拉入了这社群中去之后所引起的结果。中国人在感情上，尤其是在两性间的矜持和保留意见，不肯像西洋人一般的在表面上流露，也是在这种社会圈局中养成的性格。

⑦ "BETWEEN MEN AND WOMEN, THERE ARE ONLY DIFFERENCES"

In the previous chapter, I said that Chinese rural society is composed of groups devoted to activities, to enterprises. Wherever they exist, such groups must maintain discipline, and discipline necessarily excludes personal sentiments. With this point, we face the basic question about the orientation of emotions within the Chinese tradition. I discussed this question briefly in the last chapter. In this chapter, I will elaborate further.

By using the term emotional orientation, I want to point out that people develop a direction or orientation to their feelings. This direction is shaped by cultural norms. Therefore, when we analyze these cultural patterns, we should pay attention to the directions in which cultural norms allow personal emotions to develop. We will call this cultural shaping of emotions the "emotional orientation."

Emotions can be analyzed from two perspectives. Psychology explains the nature and kinds of emotions by observing physiological changes in the body. Sociology, however, will look at the role of emotions as they occur within social relationships. Happiness, anger, sorrow, and joy are certainly physiological phenomena, but they always happen in the context of human life and always have an influence on human relationships. It is only as social phenomena that emotions, like other human actions, obtain their significance.

Psychology defines emotions as internal behavior that manifests itself in external ways. William James said that emotion is a change in one's internal disposition.¹ This change forms a tendency to act, a sort of bodily tension, a force capable of launching behavior. If the connection between a certain stimulus and a given response is customary, the response will be stable and automatic; no inner tension, and hence no strong emotions, will be produced. Emotion always occurs when an old response is blocked and a new response is attempted. When this happens, what we mean by emotions is much the same as what we mean when we say that we are "getting excited" or that we are "fired up." In fact, using "fire" as a metaphor for emotions indicates this state of readiness, of being tense. In social relationships, such emotion can be used either for destructive or for creative purposes. The immediacy and excitement of emotions change

the original relationships. In other words, if one wants to maintain stable social relationships, one needs to avoid situations that cause emotional agitation. In fact, indifference is an indication of stable social relationships. This is the reason I said in the previous chapter that discipline excludes personal feelings.

The force that stabilizes social relationships is not emotion (ganqing) but understanding (liaojie). Understanding means accepting a common frame of reference. The same stimulus will call forth the same response. In the two chapters on literacy in the countryside, I mentioned that propinquity and familiarity breed a mutual awareness. Such feelings of mutuality and a condition of being emotional are completely at odds with each other. Mutuality rests on a harmony that is continuously reproduced. Mutuality is silent, whereas emotionality needs to be voiced. Singing, crying, shouting—these are all indispensable accompaniments to emotional excitement.

In *The Decline of the West*, Oswald Spengler writes that two cultural patterns characterize Western civilization.² He calls one pattern "Apollonian" and the other "Faustian." Apollonian patterns rest on a belief that the universe consists of a perfect order that is beyond the creative power of human beings to alter. Human beings can only accept this order, be content with it, and maintain it. But if human beings do not have the capacity to maintain the world as it is, the paradise will be lost and the golden age will pass away. This is the spirit of classical antiquity. Modern culture, according to Spengler, is Faustian. Conflicts are the basis of existence. To live is to overcome obstacles; without obstacles, life loses its significance. All that human beings can see in the future is the process of endless creation and continuous changes.

These two cultural perspectives can be used to understand the differences in emotional orientation between rural and modern societies. Rural society is Apollonian; modern society is Faustian. The difference in the spirit manifest in the two types of cultures also shows up in the most basic patterns of social life in the two types of societies.

Rural society depends on intimate and long-term cooperation to coordinate the interactions of individuals. Their social contacts are so well developed and so familiar that rural people do things automatically to a certain extent. Only living and dying in the same place, generation after generation, will create such intimate groups. In such a place, people develop a high degree of mutual understanding. They have similar likes and dislikes, and even stink in the same way. To reach such a state requires one precondition, that there should be no major difference among people to impede their mutual understanding. Spatial location is not a factor preventing rural people from understanding each other. Being isolated and having only few

contacts with other groups, rural people live in a small world. Each generation lives the same life cycle as the previous generation—birth, aging, sickness, then death—and each experiences these in much the same way. The young have not experienced the life of a person who has passed into old age, so they do not understand an older person's frame of mind. For this reason, age differences contribute to a lack of mutual understanding. This lack of understanding occurs only on the part of the young, because older people can understand the young and even predict the problems they will face. But when the young look upon the old as a reference point for their own lives, what we might regard as a lack of understanding does not at the same time result in a generation gap.

In rural society, it is the differences in biology that prevent people who live closely together from obtaining a full understanding of each other. These biological differences are certainly not characteristics transmitted by heredity, for such hereditary differences are not so obvious in small communities where families intermarry generation after generation. The biological differences that eternally divide people are the sexual differences between men and women. No one has ever personally experienced what it is to be a member of the opposite sex, so our exact knowledge of that difference can only be indirect and superficial. In reality, everyone has, at some point, felt a lack of mutual understanding between the sexes. We have no way to comprehend the content of that difference; we can only guess.

Even in a society where people base their behavior on mutual familiarity, the sexual divide remains a fundamental obstacle. Only in heaven is this split between the sexes overcome. It is no accident that many religions, whether consciously or unconsciously, deny the fact of gender. Perfect morality and absolute justice must be based on complete understanding, a condition that presumes no obstacles. They cannot be sought (or found) in a society that has as one of its foundations the gap between men and women.

The biological differences between men and women are for the sake of reproducing the species. The union of men and women is guided by this fact. It is a union based on differences, not on similarities. To seek a perfect understanding on the basis of these differences is difficult. That path is full of obstacles, because it requires people to search creatively for some greater unity between the sexes. This is a Faustian attempt. Faust is the symbol of emotion. He regarded ever-changing, ever-surging emotions as his lifeblood. The Faustian effort is an unending one, because a final unity can never be achieved. The Faustian effort is only a process that searches for unity. Moreover, the more that men and women attempt to create a common life, the deeper the degree of their differences and the larger

the obstacles to unity become. This growing struggle requires yet stronger creative powers to overcome the obstacles. In the Faustian view, life's force becomes stronger and life's meaning more profound because of the unending struggle.

A Faustian style of love between the sexes is inappropriate for a relationship culminating in reproduction. Faustian love is an adventure, an exploration into the unknown. It differs from friendship, in that friendship may stop at a certain level of understanding. Faustian love, however, never stops; it only pursues. The effort that goes into this kind of love does not have practical purposes—either for economic production or for any enterprising activity. Rather, it is an effort to create one's own life experiences, an effort to create the meaning of life itself. If this kind of love is to persist, one must constantly re-create the love relationship by continuously discovering and overcoming obstacles. What one wants to achieve is the process itself, not the results of the process. In fact, those results may be of no importance whatsoever. This struggle to achieve an unending love makes social relationships unstable. Moreover, activities that rely on such social relationships cannot be easily managed. If we look at modern culture, we see that the changes occurring in the emotional relationships between men and women have already disrupted the process of creating families. Unless we find other ways for society to operate, the Faustian spirit will destroy our society's most fundamental activity—its own patterns of procreation.

Rural society does not allow the Faustian spirit. Rural society does not need to create new social relationships. Social relationships are fixed from the time of birth. Rural society seeks stability, so it fears the destruction of social relationships. It is Apollonian. The relationship between men and women must be arranged so that their emotional states are not erratic. That is what the principle "Between men and women, there are only differences" actually means.³ One need not seek an underlying commonality between men and women; between them, there should be some distance. This distancing is clearly present in the prescription "There should be no intimacy in the interaction between men and women."⁴ This distancing is not just physical but also psychological. Although they act in concert, men and women should manage their respective economic and reproductive activities by strictly following assigned rules of behavior. They should not hope to achieve mental or emotional harmony with each other.

As I mentioned in the last chapter, Chinese social structure promotes many associations that join people of the same sex together. The presence of such associations can be clearly seen in Chinese rural society. The principles underlying such same-sex associations and the formation of nuclear families would seem to be at odds, because the

family's function of procreation is based on a heterosexual union. Accordingly, the cohesion of individual households in rural society would seem to be affected by—indeed, to be threatened by—the presence of all those same-sex associations. In rural society, however, lineages serve as a substitute for individual families, and lineages give priority to alliances among people of the same sex. In lineages, heterosexual relationships complement but do not necessarily contradict the dominant pattern. In Chinese rural society, lineages are the basic social unit and are an expression of the relative importance of the principle underlying same-sex associations.

The same principle underlies the dictum "Between men and women, there are only differences." People's understanding of this principle has caused them to develop emotional attachments to people of the same sex. We cannot say for sure how common homosexuality and narcissism are. But many sworn brotherhoods and sisterhoods in rural society seek a level of intimacy that is conveyed in the saying "Friends wish not to be born but, rather, to die on the same day." Thus, the emotional orientation toward having close relationships among people of the same sex is already quite profound. Extreme examples of this pattern, involving women, are the sisterhood associations in South China and, in literature, the Feng Xiaoqing genre of women's writing, which takes on a narcissistic tone.⁵ It is a shame that we have not analyzed the emotional life of Chinese people very much. Because so little has been done, my discussion on this topic has to stop here.

Because men and women do not spend time chasing after someone of the opposite sex in search of unending love, there is in this society one less source of impractical diversions. The pragmatic spirit of Chinese rural society embraces a quality of "this-worldliness." Confucians do not talk about ghosts. Confucius himself said that one should "sacrifice to the spirits as if the spirits were present."⁶ Apparently, even teachers of religion had no real interest in anything beyond this life. Ordinary people go even further; they secularize heaven itself. They do not want to use a utopian vision to change reality and to realize a heaven on earth. Instead, they regard the present reality as a working draft of what heaven must be like and therefore push this world into heaven itself. People see living as a matter of restraining oneself in order to accommodate to an outside world. In other words, one must change oneself internally so that one can fit externally into an established order. That is the reason we can say that Chinese rural society conforms to the patterns of antiquity—that it is Apollonian.

The social order restrains and contains individuality. In order to protect itself, it suppresses all potentially destructive forces. The

distance between men and women is built on this suppression. Rural society is a society in which "between men and women, there are only differences." For this reason, it is also a stable society.

柒 男女有别

在上篇我说家族在中国的乡土社会里是一个事业社群，凡是做事业的社群，纪律是必须维持的，纪律排斥了私情。这里我们碰着了中国传统感情定向的基本问题了。在上篇我虽则已说到了一些，但是还想在本篇里再申引发挥一下。

我用“感情定向”一词来指一个人发展他感情的方向，而这方向却受着文化的规定，所以从分析一个文化形式时，我们应当注意这文化所规定个人感情可以发展的方向，简称作感情定向。“感情”又可以从两方面去看：心理学可以从机体的生理变化来说明感情的本质和种类，社会学却从感情在人和人的关系上去看它所发生的作用。喜怒哀乐固然是生理现象，但是总发生在人事圈局之中，而且影响人事的关系，它们和其他个人的行为一样，在社会现象的一层里得到它们的意义。

感情在心理方面说是一种体内的行为，导发外表的行为。William James说感情是内脏的变化。这变化形成了动作的趋势，本身是一种紧张状态，发动行为的力量。如果一种刺激和一种反应之间的关联，经过了练习，已经相当固定的话，多少可说成为自动时，就不会发生体内的紧张状态，也就是说，不带着强烈的感情。感情常发生在新反应的尝试和旧反应的受阻情形中。

这里所谓感情相当于普通所谓激动，动了情，甚至说动了火。用火来形容感情，就在指这动的势和紧张的状态，从社会关系上说感情是具有破坏和创造作用的。感情的激动改变了原有的关系。这也就是说，如果要维持着固定的社会关系，就得避免感情的激动。其实，感情的淡漠是稳定的社会关系的一种表示。所以我在上篇曾说纪律是排斥私情的。

稳定社会关系的力量，不是感情，而是了解。所谓了解，是指接受着同一的意义体系。同样的刺激会引起同样的反应。我在论“文字下乡”的两篇里，已说起过熟习所引起的亲密感觉。亲密感觉和激动性的感情不相同的。它是契合，发生持续作用；它是无言的，不像感情奔放时铿然有声，歌哭哀号是激动时不缺的配合。

Oswald Spengler在《西方陆沉论》里曾说西洋曾有两种文化模式，一种他称作亚普罗式的（Apollonian），一种他称作浮士德式的（Faustian）。亚普罗式的文化认定宇宙的安排有一个完善的秩序，这个秩序超于人力的创造，人不过是去接受它，安于其位，维持它；但是人连维持它的力量都没有，天堂遗失了，黄金时代过去了。这是西方古典的精神。现代的文化却是浮士德式的。他们把冲突看成存在的基础，生命是阻碍的克服；没有了阻碍，生命也就失去了意义。他们把前途看成无尽的创造过程，不断的变。

这两种文化观很可以用来了解乡土社会和现代社会在感情定向上的差别。乡土社会是亚普罗式的，而现代社会是浮士德式的。这两种精神的差别也表现在两种社会最基本的社会生活里。

乡土社会是靠亲密和长期的共同生活来配合各个人的相互行为，社

会的联系是长成的，是熟习的，到某种程度使人感觉到是自动的。只有生于斯、死于斯的人群里才能培养出这种亲密的群体，其中各个人有着高度的了解。好恶相投，连臭味都一般。要达到这境界，却有一个条件，就是没有什么差别在阻碍着各人间的充分了解。空间的位置，在乡土社会中的确已不太成为阻碍人了解的因素了。人们生活在同一的小天地里，这小天地多少是孤立的，和别群人没有重要的接触。在时间上，每一代的人在同一的周期中生老病死，一个公式。年轻的人固然在没有经历过年长的生活时，可以不了解年长的人的心情，年龄因之多少是一种隔膜；但是这隔膜却是一方面的，年长的人可以了解年轻的人，他们甚至可以预知年轻的人将要碰着的问题。年轻的人在把年长的人当作他们生活的参考蓝图时，所谓“不了解”也不是分划的鸿沟。

乡土社会中阻碍着共同生活的人充分了解的却是个人生理上的差别。这差别倒并不是起于有着悬殊的遗传特质，这在世代互婚的小社区里并不会太显著的。永远划分着人们生理差别的是男女两性。正因为还没有人能亲身体会过两性的差别，我们对于这差别的认识，总是间接的；所能说的差别多少只限于表面的。在实际生活上，谁也会感觉到异性的隔膜，但是差别的内容却永远是个猜想，无法领会。

在以充分了解来配合人们相互行为的社会中，这性别的鸿沟是个基本的阻碍。只在他们理想的天堂里，这鸿沟才算被克服：宗教家对性的抹煞，不论自觉或不自觉，决不是偶然的。完全的道义必须有充分的了解，无所隔，这就不能求之于生理上早已划下了鸿沟的男女之间。

男女生理上的分化是为了生育，生育却又规定了男女的结合。这种结合基于异，并非基于同。在相异的基础上去求充分了解，是困难的，是阻碍重重的，是需要不断地在创造中求统一，是浮士德式的企图。浮士德是感情的象征，是把感情的激动，不断的变，作为生命的主脉。浮士德式的企图也是无穷止的，因为最后的统一是永远不会完成的，这不过是一个求同的过程。不但这样，男女的共同生活，愈向着深处发展，相异的程序也愈是深，求同的阻碍也愈是强大，用来克服这阻碍的创造力也更需强大，在浮士德的立场说，生命力也因之愈强，生活的意义也因之愈深。

把浮士德式的两性恋爱看成是进入生育关系的手段是不对的。恋爱是一项探险，是对未知的摸索。这和友谊不同，友谊是可以停止在某种程度上的了解，恋爱却是不停止的，是追求。这种企图并不以实用为目的，是生活经验的创造，也可以说是生命意义的创造，但不是经济的生产，不是个事业。恋爱的持续倚于推陈出新，不断地克服阻碍，也是不断地发现阻碍，要得到的是这一个过程，而不是这过程的结果。从结果说可以是毫无成就的。非但毫无成就，而且使社会关系不能稳定，使依赖于社会关系的事业不能顺利经营。依现代文化来看，男女间感情激发的发达已使生育的事业摇摇欲坠。这事业除非另外设法，由社会来经营，浮士德式的精神的确在破坏这社会上的基本事业。

在乡土社会中这种精神是不容存在的。它不需要创造新的社会关系，社会关系是生下来就决定的，它更害怕社会关系的破坏，因为乡土社会所求的是稳定。它是亚普罗式的。男女间的关系必须有一种安排，使他们之间不发生激动性的感情。那就是男女有别的原则。“男女有

别”是认定男女间不必求同，在生活上加以隔离。这隔离非但有形的，所谓男女授受不亲，而且是在心理上的，男女只在行为上按着一定的规则经营分工合作的经济和生育的事业，他们不向对方希望心理上的契合。

在社会结构上，如上篇所说的，因之发生了同性间的组合。这在我们乡土社会中看得很清楚。同性组合和家庭组合原则上是交错的，因为以生育为功能的家庭总是异性的组合。因之，乡土社会中“家庭”的团结受到了这同性组合的影响，不易巩固。于是家族代替了家庭，家族是以同性为主，异性为辅的单系组合。中国乡土社会里，以家族为基本社群，是同性原则较异性原则为重要的表示。

男女有别的界限，使中国传统的感情定向偏于同性方面去发展。变态的同性恋和自我恋究竟普遍到什么程度，我们无法确说；但是乡土社会中结义性的组织，“不愿同日生，但愿同日死”的亲密结合，多少表示了感情方向走入同性关系的一层里的程度已经并不很浅。在女性方面的极端事例是华南的姊妹组织，在女性文学里所流露的也充满着冯小青式的自恋声调。可惜我们对于中国人的感情生活太少分析，关于这方面的话我们只能说到这里为止了。

缺乏两性间的求同的努力，也减少了一个不在实利上打算的刺激。中国乡土社会中那种实用的精神安下了现世的色彩。儒家不谈鬼，“祭神如神在”，可以说对于切身生活之外都漠然没有兴趣。一般人民更会把天国现世化：并不想把理想去改变现实，天国实现在这世界上，而把现实作为理想的底稿，把现世推进天国。对生活的态度是以克己来迁就外界，那就是改变自己去适合于外在的秩序。所以我们可以说这是古典的，也是亚普罗式的。

社会秩序范围着个性，为了秩序的维持，一切足以引起破坏秩序的要素都被遏制着。男女之间的鸿沟从此筑下。乡土社会是个男女有别的社会，也是个安稳的社会。

⑧ A RULE OF RITUAL

It is conventional to contrast "a rule of people" to "a rule of law" and to categorize Western societies as ruled by laws and our society as ruled by people. Actually, this contrast is not very accurate. A rule of law does not mean that the law itself rules and maintains social order but, rather, that human relationships in the society are sustained according to laws. Laws depend on political power for their support and on people for their execution. Therefore, rule by law actually means both that people use laws to rule and, of course, that human factors are involved.

Some modern legal theorists place great weight on the human factors that influence laws.¹ They emphasize that, when a law is applied in a specific case, a judge must render an interpretation based on a legal statute. Although the object of the judge's interpretation may be that legal text, what is included in a specific judgment results from many factors. The judge's biases, whether he has a stomachache or not, the state of public opinion—all these and other factors may be very important. Therefore, these legal theorists think that the law is nothing but a judge's judgment. This itself is a one-sided view. Judges cannot render a decision just as they please. At a minimum, the decision must be seen to be based in law. Nonetheless, this view should remind us that human factors are always involved in a rule of law.

What, then, is the distinction between a rule of people and a rule of law? If ruling by people is the opposite of ruling by laws, does that mean that people do not use laws to rule? If ruling means the maintenance of social order, one can hardly imagine a social order that could be maintained without any force whatsoever. It is equally difficult to imagine that human interaction could be coordinated automatically without any rules or norms. If a society is not run according to laws, how is it run? If we take the words literally, a rule of people would seem to mean that powerful people can, at their whim, establish the social rules for human relationships. I doubt very much that this kind of "rule by the people" could ever happen. If people who live together had no norms to guide their interaction and no regulations to fix their rights and responsibilities, and if they did everything only according to the ruler's unpredictable whims, the society would be in absolute chaos. People would not know how to act. That situation could not happen, and, in any event, it could not be called a system of rule, by whatever name.

The difference between ruling by people and ruling by laws does not lie in the words people and laws but, rather, in the force used to maintain order and in the nature of the social norms.

Maintaining a rural social order differs, in many respects, from maintaining a modern social order. But that does not mean that rural society is "without laws and without heaven" or that it "does not need laws," although that is the opinion of some people. Believing in a simple, natural life, Laotse thought that as long as a nation is simply a small community with few people—where one can hear the neighbors' chickens and dogs but never has to deal with the neighbors themselves—social order can be maintained without an exterior force. People will depend on their instincts and good sense, and the society will be peaceful. Laotse was not the only one to have this idea. The entire world economy has become intertwined and interrelated through modern systems of transportation; yet most people in the United States still believe in the theory of free competition as laid out in classical economics. Those Americans are opposed to humans' creating plans and regulations to maintain economic order; when there is free competition, they believe, an invisible hand automatically arranges for everyone a moral economic order. In various social, political, and economic professions, there are also those who regard anarchy as the ideal state. Certainly, anarchy does not equal chaos but, rather, is a type of order, a type that does not need laws. Hence, anarchy represents a kind of self-generated order, a society that is "ruled without being ruled."

But rural society is not of this kind either. We can say that it is a society "without laws," if we define laws as those regulations maintained by state power. However, the absence of laws does not affect social order, because rural society is ruled by rituals.²

Let me clarify one point from the outset. The fact that a society is ruled through an etiquette established by rituals does not mean that the people in that society are gentle and refined. It is not like that country of highly civilized gentlemen depicted in the novel *Jing hua yuan*.³ "Ritual etiquette" here does not convey the notion of manners—of being "cultured" or "benevolent" or even of "nodding to people you meet" and of not being atrocious. With ritual etiquette, one can kill others; one can be utterly barbaric. For instance, in India, there are some places where wives are expected to immolate themselves on their husbands' funeral pyres. This is ritual etiquette. In Myanmar, there are some places where boys, as their rite of passage into adulthood, must chop off several human heads; otherwise, they cannot establish themselves as men. In our own ancient novels, we often read about military rituals of offering people as a sacrifice to the flag. According to modern standards, such rituals may seem very cruel. But

whether something is cruel or not is unrelated to whether something is a ritual or not. It is written in the Analects, "Zigong did not want his lamb slaughtered for a ceremony. But Confucius said, 'You love the lamb; I love the rites.'"⁴ A sense of pity did not make Confucius agree to call off the ruthless deed.

Rituals are publicly recognized behavioral norms. If one behaves according to the rituals, then one's behavior is correct and proper. In this respect, rituals are the same as laws, because laws are also behavioral norms. The difference between a ritual and a law is the force used to maintain the norms. Laws are enforced through state power. The term state here means political power. Before modern states developed, tribes also held political power. But rituals do not require any concrete structure of political power in order to be effective. Instead, ritual norms are maintained by tradition.

Tradition is accumulated social experience. The purpose of behavioral norms is to coordinate behavior—that is, action taken in concert with others—so that people can fulfill their social responsibilities. Social responsibilities are simply those necessities of life that each person in society must satisfy. People need to cooperate with each other and to adopt efficient techniques in order to obtain resources from the environment. These techniques cannot be designed anew by each individual person or even by small temporary groups. People have the ability to learn. Therefore, those results that work successfully for one generation can be taught to the next generation. This kind of accumulation over many generations produces a set of methods that help people in their lives. Therefore, when people are born, they are born into a world in which other people have already worked out ways to cope with the problems that they will likely encounter themselves. The newcomers only need to learn and practice the received wisdom from previous generations in order to be able to enjoy the pleasures of satisfying their own needs.

Culture itself is tradition. No society is without tradition. We do not have to be overly concerned about how to deal with the most basic things in life—food, clothes, shelter, and transportation—because, thanks to our ancestors, we have ready-made rules to follow. Tradition in rural society, however, is more important than it is in modern society, because it is more effective.

Rural society is a society of deep attachments, where people are born, live, and die in the same spot. Rural people move around very little, and the land from which they take their livelihood seldom changes. In this environment, people do not keep track of who is running the government. They live the same life generation after generation, trusting only their own experiences and those of their parents and grandparents. An old farmer tilling his fields encounters

changes in seasons but not in epochs. Every year, the same cycle is repeated. It is easy for people to borrow their ancestors' solutions to problems as a guide for their own lives. What proved effective in the previous generation is surely worth preserving. As the saying goes, "When one speaks, one has to mention Yao and Shun";⁵ one has to know the past, because whatever security exists in life comes from following the old ways.

After the Japanese invasion of China, when my wife and I were evacuated to the countryside around Kunming, our newborn baby began to cry all the time. We could not find a doctor, so we had to ask our landlady for help. As soon as she heard the baby's cry, she knew that the baby had what she called "a false tooth," a condition caused by a parasite. The "tooth" would hurt each time the baby was breast-fed. But as soon as the baby stopped eating, she would cry because she was hungry. The landlady calmly told us to wipe the inside of the baby's mouth with pickles and blue cloth. After a day or two, the baby was well. It turned out that this was a local disease; every child got it, so every mother knew how to cure it. In this instance, experience was effective. As long as the environment does not change, as long as no new germs come in, this "method without theory" will always work. Because such methods work, there is no reason to seek the causes of their effectiveness.

In a tradition like that, you do not have to know why something works. Rather, you just have to follow the example of others. From knowing the past, one obtains those methods for ensuring one's own existence. Moreover, these methods are not isolated techniques; they are embedded in, and naturally carry with them, a set of values. When we say that some technique is "effective" (*lingyan*), we mean that there is some unknown magic behind it. If you use that technique, you will have luck; if you don't, you will have problems. Therefore, people grow up in awe of tradition.

If we do not examine the relation between action and purpose, and if we only follow conventional methods in the belief that otherwise we will encounter misfortune, then the resulting sets of behavior will have a fixed ceremonial form. The meaning of ritual (*li*) is "an act performed in accordance with ceremonial forms." The character *li* itself consists of two radicals, one signifying a tool used in rituals and the other signifying a type of ritual. Together, *li* means both the ritual itself and the action taken to conform to ritual.

A ritual (*li*) is not something that is carried out by an exterior force. Rituals work through the feeling of respect and of obedience that people themselves have cultivated. People conform to rituals on their own initiative. In fact, people can simply enjoy rituals. As the saying goes, "Being wealthy, one also loves the rituals" (*fu er hao li*).

As is clear from the following conversation, even Confucius believed that people should act according to rituals on their own initiative:

Yan Yuan asked about ren.

The Master said, "To subdue oneself and conform to rituals is ren. If a man can for one day subdue himself and conform to rituals, all under heaven will ascribe ren to him. Is the practice of ren from a man himself, or is it from others?"

Yan Yuan said, "I beg to ask the steps of that process."

The Master replied, "Look not at what is contrary to rituals; listen not to what is contrary to rituals; speak not what is contrary to rituals; do not what is contrary to rituals."

Yan Yuan then said, "Though I am deficient in intelligence and vigor, I will make it my business to practice this lesson."⁶

Ritual is obviously different from law and even from what we normally call morality. Law restrains people by setting external limits to action. The penalty for breaking a law is imposed on the individual by a designated power. People may break the law but escape being detected, and they may even feel proud of themselves or complacent if they succeed. Morality is sustained by public opinion. If you do something immoral or scandalous, people will ostracize you, and you will be shamed.

Ritual is even more exacting than morality. If you act in violation of rituals, your action is not only immoral but incorrect, and it will not bring about a desired result. Rituals are sustained by personal habits. It is as if there were ten eyes watching you and ten fingers pointing at you all the time. You cannot help but follow the ritual, even if you are all by yourself. Following rituals is the right way to act. Actually, it is a habit formed in the process of cultivating oneself. One learns to conform to tradition on one's own initiative.

On the surface, "a rule of rituals" seems like a self-generated form of social order in which people's actions are unrestrained by laws. Actually, "self-generated" is the wrong word here, because a rule of rituals implies that one uses one's own initiative to follow conventional rules. Confucius often used the words restrain (ke) and bind (yue) to describe the process of ritual cultivation. These words suggest that "a rule of rituals" does not occur in the absence of society, does not stem from natural human instincts, and does not depend on directions from heaven.

A social order based on rituals has, as a precondition, a tradition that offers effective solutions to life's problems. Rural society meets this requirement. It is an order maintained by rituals. In societies that frequently change, the efficacy of tradition cannot be guaranteed. No matter how effective a solution was in the past, no one would follow the old ways to deal with new problems in a new environment. When a problem requires group cooperation, everyone in the group needs to

agree on the methods used. And in order to ensure that everyone in the group uses the same methods at the same time to solve common problems, there needs to be some force to control each person. This is what a "rule of law" means.

A rule of laws and a rule of rituals occur in two different social circumstances. An order established through rituals may be the same as what some people commonly call "a rule of people." But "a rule of rituals" is a better term, because it will not be as easily misunderstood as the second term, which leads people to believe that a social order can be sustained by individual will. Ruling through rituals is very different from ruling through individuals. Rituals come from tradition, and the whole history of a society goes into maintaining this order. A society governed by rituals cannot easily appear in an era of rapid changes. But such a system of rule is characteristic of Chinese rural society.

捌 礼治秩序

普通通常有以“人治”和“法治”相对称，而且认为西洋是法治的社会，我们是“人治”的社会。其实这个对称的说法并不很清楚。法治的意思并不是说法律本身能统治，能维持社会秩序，而是说社会上人和人的关系是根据法律来维持的。法律还得靠权力来支持，还得靠人来执行，法治其实是“人依法而治”，并非没有人的因素。

现代论法理的学者中有些极重视人的因素。他们注意到在应用法律于实际情形时，必须经过法官对于法律条文的解释。法官的解释的对象虽则是法律条文，但是决定解释内容的却包含很多因素，法官个人的偏见，甚至是否有胃病，以及社会的舆论都是极重要的。于是他们认为法律不过是法官的判决。这自是片面的说法，因为法官并不能任意下判决的，他的判决至少也须被认为是根据法律的，但是这种看法也告诉我们所谓法治绝不能缺乏人的因素了。

这样说来，人治和法治有什么区别呢？如果人治是法治的对面，意思应当是“不依法律的统治”了。统治如果是指社会秩序的维持，我们很难想象一个社会的秩序可以不必靠什么力量就可以维持，人和人的关系可以不根据什么规定而自行配合的。如果不根据法律，根据什么呢？望文生义地说来，人治好像是指有权力的人任凭一己的好恶来规定社会上人和人的关系的意思。我很怀疑这种“人治”是可能发生的。如果共同生活的人们，相互的行为、权利和义务，没有一定规范可守，依着统治者好恶来决定，而好恶也无法预测的话，社会必然会混乱，人们会不知道怎样行动，那是不可能的，因之也说不上“治”了。

所谓人治和法治之别，不在“人”和“法”这两个字上，而是在维持秩序时所用的力量，和所根据的规范的性质。

乡土社会秩序的维持，有很多方面和现代社会秩序的维持是不相同的。可是所不同的并不是说乡土社会是“无法无天”，或者说“无需规律”。的确有些人这样想过。返璞回真的老子觉得只要把社区的范围缩小，在鸡犬相闻而不相往来的小国寡民的社会里，社会秩序无需外力来维持，单凭每个人的本能或良知，就能相安无事了。这种想法也并不限于老子。就是在现代交通之下，全世界的经济已密切相关到成为一体时，美国还有大多数人信奉着古典经济学里的自由竞争的理想，反对用人为的“计划”和“统制”来维持经济秩序，而认为在自由竞争下，冥冥之中，自有一双看不见的手，会为人们理出一个合于道德的经济秩序来的。不论在社会、政治、经济各个范围中，都有认为“无政府”是最理想的状态，当然所谓“无政府”决不是等于“混乱”，而是一种“秩序”，一种不需规律的秩序，一种自动的秩序，是“无治而治”的社会。

可是乡土社会并不是这种社会，我们可以说这是个“无法”的社会，假如我们把法律限于以国家权力所维持的规则，但是“无法”并不影响这社会的秩序，因为乡土社会是“礼治”的社会。

让我先说明，礼治社会并不是指文质彬彬，像《镜花缘》里所描写

的君子国一般的社会。礼并不带有“文明”，或是“慈善”，或是“见了人点个头”、不穷凶极恶的意思。礼也可以杀人，可以很“野蛮”。譬如在印度有些地方，丈夫死了，妻子得在葬礼里被别人用火烧死，这是礼。又好像在缅甸有些地方，一个人成年时，一定要去杀几个人头回来，才能完成成年礼而举行的仪式。我们在旧小说里也常读到杀了人来祭旗，那是军礼。——礼的内容在现代标准看去，可能是很残酷的。残酷与否并非合礼与否的问题。“子贡欲去告朔之饩羊。子曰：‘赐也，尔爱其羊，我爱其礼。’”惻隐之心并没有使孔子同意于取消相当残忍的行为。

礼是社会公认合式的行为规范。合于礼的就是说这些行为是做得对的，对是合式的意思。如果单从行为规范一点说，本和法律无异，法律也是一种行为规范。礼和法不相同的地方是维持规范的力量。法律是靠国家的权力来推行的。“国家”是指政治的权力，在现代国家没有形成前，部落也是政治权力。而礼却不需要这有形的权力机构来维持。维持礼这种规范的是传统。

传统是社会所累积的经验。行为规范的目的是在配合人们的行为以完成社会的任务，社会的任务是在满足社会中各分子的生活需要。人们要满足需要必须相互合作，并且采取有效技术，向环境获取资源。这套方法并不是由每个人自行设计，或临时聚集了若干人加以规划的。人们有学习的能力，上一代所试验出来有效的结果，可以教给下一代。这样一代一代地累积出一套帮助人们生活的方法。从每个人说，在他出生之前，已经有人替他准备下怎样去应付人生道上所可能发生的问题了。他只要“学而时习之”就可以享受满足需要的愉快。

文化本来就是传统，不论哪一个社会，绝不会没有传统的。衣食住行种种最基本的事务，我们并不要事事费心思，那是因为我们托祖宗之福，一一有着可以遵守的成法。但是在乡土社会中，传统的重要性比了现代社会更甚。那是因为在乡土社会里传统的效力更大。

乡土社会是安土重迁的，生于斯、长于斯、死于斯的社会。不但是人口流动很小，而且人们所取给资源的土地也很少变动。在这种不分秦汉、代代如是的环境里，个人不但可以信任自己的经验，而且同样可以信任若祖若父的经验。一个在乡土社会里种田的老农所遇着的只是四季的转换，而不是时代变更。一年一度，周而复始。前人所用来解决生活问题的方案，尽可抄袭来作自己生活的指南。愈是经过前代生活中证明有效的，也愈值得保守。于是“言必尧舜”，好古是生活的保障了。

我自己在抗战时，疏散在昆明乡下，初生的孩子，整天啼哭不定，找不到医生，只有请教房东老太太。她一听哭声就知道牙根上生了“假牙”，是一种寄生菌，吃奶时就会发痛，不吃奶又饿。她不慌不忙地要我们用咸菜和蓝青布去擦孩子的嘴腔。一两天果然好了。这地方有这种病，每个孩子都发生，也因之每个母亲都知道怎样治，那是有效的经验。只要环境不变，没有新的细菌侵入，这套不必讲学理的应付方法，总是有效的。既有效也就不必问理由了。

像这一类的传统，不必知之，只要照办，生活就能得到保障的办法，自然会随之发生一套价值。我们说“灵验”，就是说含有一种不可知的魔力在后面。依照着做就有福，不依照了就会出毛病。于是人们对于传统有了敬畏之感了。

如果我们在行为和目的之间的关系不加推究，只按着规定的方法做，而且对于规定的方法带着不这样做就会有不幸的信念时，这套行为也就成了我们普通所谓“仪式”了。礼是按着仪式做的意思。“礼”字本是从事。是一种祭器，示是指一种仪式。

礼并不是靠一个外在的权力来推行的，而是从教化中养成了个人的敬畏之感，使人服膺；人服礼是主动的。礼是可以为人所好的，所谓“富而好礼”。孔子很重视服礼的主动性，在下面一段话里说得很清楚：

颜渊问仁。子曰：“克己复礼为仁。一日克己复礼，天下归仁焉。为仁由己，而由人乎哉？”颜渊曰：“请问其目。”子曰：“非礼勿视，非礼勿听，非礼勿言，非礼勿动。”颜渊曰：“回虽不敏，请事斯语矣。”

这显然是和法律不同了，甚至不同于普通所谓道德。法律是从外限制人的，不守法所得到的罚是由特定的权力所加之于个人的。人可以逃避法网，逃得脱还可以自己骄傲、得意。道德是社会舆论所维持的，做了不道德的事，见不得人，那是不好；受人唾弃，是耻。礼则有甚于道德：如果失礼，不但不好，而且不对、不合、不成。这是个人习惯所维持的。十目所视，十手所指的，即是在没有人的地方也会不能自己。曾子易箦是一个很好的例子。礼是合式的路子，是经教化过程而成为主动性的服膺于传统的习惯。

礼治在表面看去好像是人们行为不受规律拘束而自动形成的秩序。其实自动的说法是不确的，只是主动地服于成规罢了。孔子一再地用“克”字、用“约”字来形容礼的养成，可见礼治并不是离开社会，由于本能或天意所构成的秩序了。

礼治的可能必须以传统可以有效地应付生活问题为前提。乡土社会满足了这前提，因之它的秩序可以礼来维持。在一个变迁很快的社会，传统的效力是无法保证的。尽管一种生活的方法在过去是怎样有效，如果环境一改变，谁也不能再依着老法子去应付新的问题了。所应付的问题如果要由团体合作的时候，就得大家接受个同意的办法，要保证大家在规定的办法下合作应付共同问题，就得有个力量来控制各个人了。这其实就是法律，也就是所谓“法治”。

法治和礼治是发生在两种不同的社会情态中。这里所谓礼治也许就是普通所谓人治，但是“礼治”一词不会像“人治”一词那样容易引起误解，以致有人觉得社会秩序是可以由个人好恶来维持的了。礼治和这种个人好恶的统治相差很远，因为礼是传统，是整个社会历史在维持这种秩序。礼治社会并不能在变迁很快的时代中出现，这是乡土社会的特色。

⑨ A SOCIETY WITHOUT LITIGATION

In rural society, if a person mentions the word *songshi*, a litigation monger, everyone thinks of a troublemaker, of someone who creates discord. Such people have no social status in this kind of society. In cities, however, not only do you have lawyers who promote litigation but you add the words "the honorable" to every lawyer's name, and list their names and services on the first page of every newspaper. Moreover, ordinary companies and individuals ask lawyers to serve as their permanent advisers. All this gives the impression to traditionally minded people that cities are full of disputes and are places where well-behaved people should not live.

Let us visualize now a change in emphasis in what a lawyer does. Instead of being a sort of legal shyster, a person who constantly quarrels over technicalities, the lawyer becomes a representative of a legal tradition. With this shift in emphasis, lawyers go from being instigators of disputes to being legal advisers. These two extremes nicely represent the changing nature of society itself. Instead of being governed through rituals, it now is governed through laws.

In urban societies, it is not shameful for a person who does not understand the law to ask others for advice. In fact, ordinary people living and working in cities are not likely to know all the various laws related to their lives and occupations. Law has become a specialized area of knowledge. Even so, people who have no knowledge of law cannot live outside of law, because to do so in an orderly urban society would disrupt people's sense of collective security. Therefore, many ordinary people have to have a lawyer to serve as their own legal adviser. Because of this requirement, lawyers have been able to elevate their social position.

However, in those rural societies where order is achieved through rituals, a person who does not know how to act according to rituals will be accused of behaving atrociously, of disregarding established norms, and of being morally bankrupt. To a county official in charge of the local order, the ideal means for maintaining an order based on ritual is through education, not through litigation. If a case has to end up in front of an official, then it is certain that someone has broken the traditional norms.

In the old novels from the imperial period, we often read about the process of hearing a case. It usually goes like this: The "convicts"

are dragged to the main hall in the yamen. Each person, in turn, is beaten with a bamboo stick. Each party in the case then accuses the other party. Finally, the county official uses his insights into physiognomy to decide which person—by virtue of being uglier, slyer, or otherwise more repulsive—must be the perpetrator of the moral injustice. That person is then tortured until he or she confesses. Through confession, the good and bad will have been distinguished and set right. Justice having been administered, the people then will shout out their praises for the upright magistrate. From a modern point of view, this kind of process is irrational, but in rural society it is considered legitimate. Otherwise, why would stories based on this process, such as the cases of Magistrate Pao and Magistrate Shi, have become traditional best-sellers?¹

In the last chapter, I explained how ruling through ritual is accomplished. Here I want to use an analogy to illustrate this idea further. In a soccer game, when the referee whistles and indicates that someone has committed a foul, that person has to accept the penalty. It is unnecessary for the two sides to stop the game and debate about the penalty. The ideal game is one in which the referee does nothing—except, of course, such things as starting the game and indicating when the ball goes out of bounds. Ideally, all the players are expected to know the rules of the game thoroughly before the game starts and to abide by those rules while they play the game. The referee is merely a person who is responsible for seeing that no player breaks the rules. It is not good sportsmanship for one player surreptitiously to hit another player behind the referee's back. If such incidents occur, and the player gets caught, the referee will penalize him, and his reputation as a player, and maybe even the reputation of the whole team, will suffer. Therefore, a player must be very familiar with the rules and must possess a level of skill that permits him to play spontaneously without breaking them. What he needs is a long period of training. If somebody deliberately commits a foul, that suggests he does not have adequate training, which in turn reflects badly on the coach.

This analogy may help explain rural society's view of litigation. A system of control based on rituals means adherence to traditional rules. All aspects of life and human relationships are governed by specific rules. All the actors in this society have been familiar with the rules since childhood, and they take those rules for granted. Their long education since childhood has turned these exterior rules into interior habits. The force to maintain rituals comes not from the outside but from the inside, from one's own conscience. Therefore, this social order pays a great deal of attention to self-cultivation and self-restraint. Ideally, in a society ruled through rituals, everyone will

abide by the rules voluntarily, so that all exterior supervision is unnecessary. But ideal ritual-ruled society is not frequently seen. A person who surreptitiously breaks the rules for selfish reasons will be considered the scum of the earth. Understanding the rituals is everyone's responsibility. This society assumes that everyone will understand them, and it is this society's responsibility to make sure that everyone does understand them. Therefore, as we often say, "If the son is not taught, the fault lies with the father." In rural society, that is why the relatives of an offender—and even his teachers—are also punished. The assumption is that if he were taught in a serious way, then, as a son or as a student, he would be unable to misbehave. Therefore, any litigation is shameful, because it indicates a lack of proper education.

Settling disputes in villages is actually part of the educational process that goes on in rural society. I have been asked to attend meetings where I was to help mediate quarrels. In the villagers' view, it was very natural that I should be invited to do so. I am a teacher. Therefore, I read books. Therefore, I must understand rituals. Therefore, I must be an authority in this respect. The other mediators were the village elders. One of the most interesting things about these meetings was that the *baozhang*, the government's representative in the village, never spoke. And the reason he did not speak was that he had no social status in the village at all. He was just a petty bureaucrat. What we now call "mediation" (*tiaojie*) used to be called "critical reasoning" (*pingli*). In almost every meeting of this sort, the same extremely articulate local notable would speak first. His procedure would be first to scold both sides in the dispute. He would say something like this: "This incident is making our entire village lose face! Admit your wrongs and go home." Then he would give them a lecture. Sometimes, in a fit of temper, he would even pound on the table. He would tell them what he thought they "should" do. This kind of procedure was very effective, and often both sides in the dispute would be reconciled on the spot. Sometimes they would be penalized and would have to treat all the mediators to an expensive meal. On those occasions, I often felt as if I were watching a referee in a soccer game, blowing his whistle and doling out his penalties.

I remember one especially interesting case. The case involved an old man who was addicted to opium. The eldest son hated his father's habit because it was depleting the family's wealth, but the son could not easily interfere. The second son had no regular employment, and he secretly smoked opium as well. In fact, he would often get his father to smoke opium, so that he could join. The dispute arose when the elder brother recognized what the younger brother was doing, and severely beat him. The younger brother, however, blamed his father,

and in a fit of temper, the eldest son scolded the father as well. These mutual recriminations led to a big fight in the family. Eventually, the dispute came before the village elders for resolution. That same gentleman once again spoke first, saying that this scandal involved the entire village. Then he used a range of moral principles to reach a resolution: The younger son should be driven out of the village; he was morally bankrupt, and even from his appearance, one would see that he was up to no good. The eldest son should be punished because he scolded his father. The old man, the father, is the one who received the lecture, because he did not know how to instruct either son in appropriate behavior, and besides that he smoked opium. After the punishments were meted out, everyone went home. That old gentleman who mediated the case later complained to me that each generation is worse than the previous one and that public morality is deteriorating by the day.

Confucius said: "In hearing litigation, I am like any other person. What is necessary, however, is to cause the people to have no litigation."² At that moment, after seeing how rural society resolves its disputes, I understood what Confucius meant.

Modern urban society emphasizes individual rights. Rights are not to be violated. The state should protect those rights, and that is the reason modern states have so many laws. Judges in these societies do not dwell on moral issues or ethical concepts. It is not their job to teach morality and ethics to people. The purpose of punishment is not to warn others against following a bad example, but to protect individual rights and to provide for public safety. Especially in civil law, judges do not decide who is right and who is wrong; instead, they determine the rights of the individuals in each case. The British and American legal systems are based on legal precedent. Many times, the aim of a lawsuit is to establish a precedent for people to follow. In a changing society, rules have to change. The environment changes, so mutually negotiated rights have to change as well. In reality, no two cases represent exactly the same situation, so it is often problematic to locate individual rights in a consistent way. Therefore, legal cases are sometimes put forward in order to establish a precedent. These are called "test cases." Proposing such cases presents no inherent moral problem.

Modern society does not view laws as fixed rules. Laws have to follow the times, so the contents of laws have to change. People living in modern society are not all expected to be familiar with laws that constantly change. If they do not know a law, they are not considered "morally bankrupt." Because lawyers must keep abreast of changing laws, they have become an indispensable professional group in modern society.

China is changing from a rural to modern society. However, because most people cling to the old ideas about litigation, it is unlikely that a modern judicial system will be able to take firm hold. First of all, the principles of the modern laws currently in force come from the West and greatly differ from the concepts embodied in the old ethical doctrines. In a previous chapter, I said that the Chinese traditional patterns of a differential mode of association undermined the possibility that a general rule could be applied to all people. The current laws, however, presume individual equality. This presumption is something not easily understood by common people. They also have no knowledge of how to use the processes of the judicial system. Common people from rural areas are still afraid of taking any case to court, but now China's new judicial system is beginning to spread to the countryside. Those people who have been excluded from consideration in rural communities, because of their immoral behavior, now find in this imported legal system new protections. If they do not like what the village mediators decide, they can always file a lawsuit in the judicial department. In theory, this would be a good thing because it might destroy the traditions of rural society and put China on the path toward modernization. In reality, the people who file cases in the courts are the same people recognized in the countryside as being morally bankrupt. If you judge them according to current laws(ignoring, for the moment, any corruption in the legal system), the results often differ from a judgment based on local tradition. What rural people recognize as improper behavior may, in fact, be perfectly legal. Therefore, from a rural perspective, the modern judicial system has become an institution that shelters evildoers.

A county magistrate who concurrently served as a judge told me about a case that he was hearing. In this case, a man who discovered that his wife was sleeping with another man had beaten up that man. In rural areas, beating up someone like this is justice. But adultery is not a crime; besides, there was no proof. Assault and battery, however, are crimes. The magistrate asked me how he should judge the case. He knew that if the adulterer were an honest person, he would never have come to the district headquarters to file charges against the husband who had beaten him. However, those people who have no moral values and who possess only a little legal knowledge could do evil things in the villages, and the law had to protect them. I admitted that this was probably a common occurrence. The current judicial system has very distinctive side effects in rural areas. It is destroying the original order based on a rule of rituals, but it has not been able to establish an effective order based on law. We cannot establish a social order based on a rule of law simply by making a few

legal texts available and by setting up a few courts. More important is how people use these facilities. What is more, the first thing needed is to reform the social structure and the ideological perspective. If there are no reforms in these areas, then simply taking laws and courts to the countryside will not provide any of the advantages of a society ruled by law. Instead, it will only generate those disadvantages associated with having destroyed a society ruled through rituals.

玖 无讼

在乡土社会里，一说起“讼师”，大家会联想到“挑拨是非”之类的恶行。做刀笔吏的在这种社会里是没有地位的。可是在都市里“律师”之上还要加个“大”字，报纸的封面可能全幅是律师的题名录。而且好好的公司和个人，都会去请律师作常年顾问。在传统眼光中，都市真是是个是非场，规矩人是住不得的了。

讼师改称“律师”，更加“大”字在上；打官司改称“起诉”；包揽是非改称“法律顾问”——这套名词的改变正代表了社会性质的改变，也就是礼治社会变为法治社会。

在都市社会中一个人不明白法律，要去请教别人，并不是件可耻之事。事实上，普通人在都市里居住，求生活，很难知道有关生活、职业的种种法律。法律成了专门知识。不知道法律的人却又不能在法律之外生活。在有序都市社会中，在法律之外生活就会捣乱社会的共同安全，于是这种人不能不有个顾问了。律师地位的重要从此获得。

但是在乡土社会的礼治秩序中做人，如果不知道“礼”，就成了撒野，没有规矩，简直是个道德问题，不是个好人。一个负责地方秩序的父母官，维持礼治秩序的理想手段是教化，而不是折狱。如果有非要打官司不可，那必然是因为有人破坏了传统的规矩。在旧小说上，我们常见的听讼，亦称折狱的程序是：把“犯人”拖上堂，先各打屁股若干板，然后一方面大呼冤枉。父母官用了他“看相”式的眼光，分出那个“獐头鼠目”，必非好人，重加呵责，逼出供状，结果好坏分辨，冤也伸了，大呼青天。——这种程序在现代眼光中，会感觉到没有道理；但是在乡土社会中，这却是公认正当的。否则为什么这类记载，《包公案》、《施公案》等等能成了传统的最畅销书呢？

我在上一次杂话中已说明了礼治秩序的性质。在这里我可以另打一个譬喻来说明：在我们比赛足球时，裁判官吹了叫子，说哪个人犯规，哪个人就得受罚，用不到由双方停了球辩论。最理想的球赛是裁判员形同虚设（除了做个发球或出界的信号员）。为什么呢？那是因为每个参加比赛的球员都应当事先熟悉规则，而且都事先约定根据双方同意的规则之下比赛，裁判员是规则的权威。他的责任是在察看每个球员的动作不越出规则之外。一个有Sportsmanship的球员并不会在裁判员的背后，向对方的球员偷偷地打一暗拳。如果发生此类事情，不但裁判员可以罚他，而且这个球员，甚至全球队的名誉即受影响。球员对于规则要谙熟，技艺要能做到从心所欲而不逾规的程度，他需要长期的训练。如果发生有意犯规的举动，就可以说是训练不良，也是指导员的耻辱。

这个譬喻可以用来说明乡土社会对于讼事的看法。所谓礼治就是对传统规则的服膺。生活各方面，人和人的关系，都有着一定的规则。行为者对于这些规则从小就熟习，不问理由而认为是当然的。长期的教育已把外在的规则化成了内在的习惯。维持礼俗的力量不在身外的权力，而是在身内的良心。所以这种秩序注重修身，注重克己。理想的礼治是

每个人都自动地守规矩，不必有外在的监督。但是理想的礼治秩序并不常有的。一个人可以为了自私的动机，偷偷地越出规矩。这种人在这种秩序里是败类无疑。每个人知礼是责任，社会假定每个人是知礼的，至少社会有责任要使每个人知礼。所以“子不教”成了“父之过”。这也是乡土社会中通行“连坐”的根据。儿子做了坏事情，父亲得受刑罚，甚至教师也不能辞其咎。教得认真，子弟不会有坏的行为。打官司也成了一种可羞之事，表示教化不够。

在乡村里所谓调解，其实是一种教育过程。我曾在乡下参加过这类调解的集会。我之被邀，在乡民看来是极自然的，因为我是在学校里教书的，读书知礼，是权威。其他负有调解责任的是一乡的长老。最有意思的是保长从不发言，因为他在乡里并没有社会地位，他只是个干事。调解是个新名词，旧名词是评理。差不多每次都由一位很会说话的乡绅开口。他的公式总是把那被调解的双方都骂一顿：“这简直是丢我们村子里脸的事！你们还不认了错，回家去。”接着教训了一番。有时竟拍起桌子来发一阵脾气。他依着他认为“应当”的告诉他们。这一阵却极有效，双方时常就“和解”了，有时还得罚他们请一次客。我那时常觉得像是在球场旁看裁判员吹叫子，罚球。

我记得一个很有意思的案子：某甲已上了年纪，抽大烟。长子为了全家的经济，很反对他父亲有这嗜好，但也不便干涉。次子不务正业，偷偷抽大烟，时常怂恿老父亲抽大烟，他可以分润一些。有一次给长子看见了，就痛打他的弟弟，这弟弟赖在老父身上。长子一时火起，骂了父亲。家里大闹起来，被人拉到乡公所来评理。那位乡绅，先照例认为这是件全村的丑事。接着动用了整个伦理原则：小儿子是败类，看上去就不是好东西，最不好，应当赶出村子。大儿子骂了父亲，该罚。老父亲不知道管教儿子，还要抽大烟，受了一顿教训。这样，大家认了罚回家。那位乡绅回头和我发了一阵牢骚：一代不如一代，真是世风日下。

子曰：“听讼，吾犹人也，必也使无讼乎。”——当时体会到了孔子说这话时的神气了。

现代都市社会中讲个人权利，权利是不能侵犯的。国家保护这些权利，所以定下了许多法律。一个法官并不考虑道德问题、伦理观念，他并不在教化人。刑罚的用意已经不复“以儆效尤”，而是在保护个人的权利和社会的安全。尤其在民法范围里，他并不是在分辨是非，而是在厘定权利。在英美以判例为基础的法律制度下，很多时间诉讼的目的是在获得以后可以遵守的规则。一个变动中的社会，所有的规则是不能变动的，环境改变了，相互权利不能不跟着改变。事实上并没有两个案子的环境完全相同，所以个人的权利应当怎样厘定，时常成为问题，因之构成诉讼，以获取可以遵守的判例，所谓Test Case。在这种情形里自然不发生道德问题了。

现代的社会中并不把法律看成一种固定的规则了，法律一定得随着时间而改变其内容。也因之，并不能盼望各个在社会里生活的人都能熟悉这与时俱新的法律，所以不知道法律并不成为“败类”。律师也成了现代社会中不可缺的职业。

中国正处在从乡土社会蜕变的过程中，原有对诉讼的观念还是很坚固地存留在广大的民间，也因之使现代的司法不能彻底推行。第一是现

行法里的原则是从西洋搬过来的，和旧有的伦理观念相差很大。我在前几篇杂话中已说过，在中国传统的差序格局中，原本不承认有可以施行于一切人的统一规则，而现行法却是采用个人平等主义的。这一套已经使普通老百姓不明白，在司法制度的程序上又是隔膜到不知怎样利用。在乡间普通人还是怕打官司的，但是新的司法制度却已推行下乡了。那些不容于乡土伦理的人物从此却找到了一种新的保障。他们可以不服乡间的调解而告到司法处去。当然，在理论上，这是好现象，因为这样才能破坏原有的乡土社会的传统，使中国能走上现代化的道路。但是事实上，在司法处去打官司的，正是那些乡间所认为“败类”的人物。依着现行法去判决（且把贪污那一套除外），时常可以和地方传统不合。乡间认为坏的行为却正可以是合法的行为，于是司法处在乡下人的眼光中成了一个包庇作恶的机构了。

有一位兼司法官的县长曾和我谈到过很多这种例子。有个人因妻子偷了汉子打伤了奸夫。在乡间这是理直气壮的。但是和奸没有罪，何况又没有证据，殴伤却有罪。那位县长问我，他怎么判好呢？他更明白，如果是善良的乡下人，自己知道做了坏事决不会到衙门里来的。这些凭借一点法律知识的败类，却会在乡间为非作恶起来，法律还要去保护他。我也承认这是很可能发生的事实。现行的司法制度在乡间发生了很特殊的副作用，它破坏了原有的礼治秩序，但并不能有效地建立起法治秩序。法治秩序的建立不能单靠制定若干法律条文和设立若干法庭，重要的还得看人民怎样去应用这些设备。更进一步，在社会结构和思想观念上还得先有一番改革。如果在这些方面不加以改革，单把法律和法庭推行下乡，结果法治秩序的好处未得，而破坏礼治秩序的弊病却已先发生了。

⑩ AN INACTIVE GOVERNMENT

Scholars who analyze political power can be divided into two groups, each with a different perspective. One group emphasizes social conflict; the other, social cooperation. Depending on the emphasis, what the two see as the nature of political power is quite different.

Those who emphasize a social conflict perspective see political power as the outcome of a struggle between unequally ranked groups and classes. Let us call this kind of power "dictatorial power." Those who come out on top are the ones who have power, and they use their power to dominate those beneath them. They give orders and, through their will, dictate the actions of the dominated. According to this view, the exercise of political power is a continuation of the process of conflict and represents merely a truce, a temporary equilibrium in a continuing struggle. Although the use of military force has ended, contention does not disappear. The vanquished merely recognize their defeat and act more obediently. However, they will not willingly accept the conditions dictated by their victors and will not sincerely submit to their rule. Therefore, political power emerges from the relationship between contending parties. It is the necessary means to maintain the relationship; it is inherently oppressive and works to differentiate the rulers from the ruled. From this perspective, the government apparatus and the institutions of the state are the tools of the dominators. Following this line of reasoning, one can say that government and the state structure itself exist only insofar as they are a part of the process of class struggle. If, one day, the problem of class struggle were solved and societies were no longer divided into classes, then, like leaves in the autumn, government and state institutions would, of their own accord, fall away.

Those who look at power from the perspective of social cooperation see it in quite a different light. The result of a division of labor in society is that everyone is mutually interdependent. The division of labor benefits everyone, because it is the basis of the economy. People can achieve more with less labor. Labor represents both capital and people's sweat. With a division of labor, people reduce their burdens and increase their enjoyment in life. Enjoyment is certainly what people want, but one cannot be self-reliant and hope to attain it. One cannot just care for oneself and cannot just "mind one's own business." If others fail to do their fair share of work, or if they fail to do it well, your own life will be influenced. Thus, for your

own sake, you have to interfere with others. Similarly, if you fail to do your part, you will influence other people, and they will interfere with you. In this way, rights and obligations are generated. Interfering in other people's business is your right; allowing them to interfere in yours is your obligation. Each person has the responsibility to work, as well as the responsibility to supervise others. People cannot just seek their own happiness and do whatever they please. They have to perform the work that society has assigned to them.

But what ensures that this work will be done? What would happen if someone decided not to go along with all of this? At this point, we see that power arises from a common will. The basis of this power is social contract and mutual consent. The more complicated the division of labor, the more extensive this power becomes. If you do not want to be constrained by this form of power, you will have to return to an environment that allows self-reliance. To be truly independent, you will have to be your own Robinson Crusoe. Or perhaps you can live in Laotse's ideal state, "a small nation with few people," and so not feel the weight of so much power. To put the matter more clearly, you will have to give up your economic beliefs, forgo the enjoyment you get out of your possessions, and return to an original state of nature, to a living standard like that of the storybook hero Tarzan of the Apes. Otherwise, you will never escape the reach of this power, a kind of power that might best be called "consensual power," a sort of power that arises out of mutual agreements.

Both the conflict and the cooperative perspectives on power are grounded in reality and are not actually contradictory. In all human societies, both types of power exist. Although regimes may differ in the degree to which the two types of power are present, rulers and their governments represent both types of power simultaneously. In a period of social transformation, therefore, it is not easy to have only cooperation and no conflict. At least, that is the lesson we learn from history. The two processes—conflict and cooperation—often overlap and intermix. Conflict contains elements of cooperation, and cooperation contains elements of conflict. Neither is pure. Therefore, the two kinds of power differ more in concept than in reality. To understand the power structure of a community, we have to analyze how the two types of power interrelate. Some communities emphasize one sort of power over the other, while other communities do the reverse. Moreover, in any one community, one type of power relations may come into being among certain people, and the other among other people. For instance, on the surface, people in the United States emphasize consensual power, but, in reality, a sort of dictatorial power still characterizes the relations between the races.

Some people think that power itself is the temptation, that human

beings are intrinsically "power hungry." This view overlooks the fact that power is a tool. Although those who hold power may sometimes be driven by a pure desire to dominate or by sadistic psychological perversions, these situations are, after all, abnormal. What people love most are the benefits that flow from power. If power did not bring benefits or if those benefits could be obtained without holding power, the temptation of power would not be so strong. For instance, an opinion poll in England shows that only a small percentage of the people want their children to become members of Parliament or the Cabinet. People in both positions in England have low salaries, even though they do obtain many social rewards. Most people are not in a hurry to get those kinds of lofty positions.

The main temptation of power is to gain economic advantage. From a consensus perspective, people in power do not hold power because they want to protect their own special interests. Instead, they hold power because society needs to reward them with prestige and high pay in order to solicit their services.¹ From a perspective of dictatorial power, however, the relation between power and economic advantage is more direct: Rulers use force to maintain their positions, and one of their reasons for doing so is certainly to gain economic advantages. Conversely, without the likelihood of economic advantage, dictatorial power would have little meaning, and therefore would be less likely to occur.

If group A wants to control group B to gain some economic advantage, there must be a precondition—namely, that group B is able to provide this advantage. The production of group B must exceed its consumption so that it has a surplus that makes group A's conquest of it worthwhile. This is very important. A person who produces only enough for his own survival does not make a very good slave. What I am trying to point out here are the limitations of dictatorial power in an agricultural society. When I was doing a survey among Yao tribes in the mountainous regions of Guangxi province, I often noticed that the Han Chinese (hanren) had occupied the land of the Yao but had never enslaved them. There were certainly a lot of reasons for this; but in my view, the major one was that the place was just too poor, and those Yao tribesmen who planted rice fields could not lower their standard of living yet further to become tenants of the Han Chinese. Therefore, when the Han Chinese won a battle with one of the Yao tribes, the Yao just gave up their land and moved. In wars in agrarian societies, the most common pattern is to drive out the natives, take over their land, and cultivate it personally. This especially happens when a population is large, labor is plentiful, and the available arable land is being fully utilized. In studying Chinese history, we often come across references to conquerors who "buried tens of thousands of

enemies alive." In fact, until quite recently, it was not unusual to encounter groups of roving bandits who would kill people with great ferocity. Such a situation is not one that an aggressive industrial power could understand.²

I do not mean to imply that a dictatorial power cannot be established in an agricultural society. On the contrary, it is precisely this kind of society that produces a foundation for imperial power, but that is because rural society does not possess organizations capable of mounting resistance to this form of government. The historical record is very clear; nomadic invaders have repeatedly overrun agricultural societies, and the agricultural plains of East Asia have always endured empires of one sort or another. However, agrarian empires are not good examples of dictatorial power holding. In fact, they are relatively weak governments. Imperial power is unable to develop great strength, because the social and economic foundations are simply insufficient to support a powerful dictatorial power. The population increases daily, and accordingly the agricultural surplus decreases daily. Even the peace supplied by successful agrarian empires provides further opportunities for population increases.

Chinese history is proof of this fact. Ambitious emperors, anxious to open new frontiers, will build cities and dig rivers. Normally, such rulers would not be considered tyrants but would be thought of as great leaders making an investment for a nation's future, such as Franklin Roosevelt was with his Tennessee Valley Authority. But an agrarian economy like China's does not produce enough surplus to finance such large projects easily, and without sufficient surplus large public-works projects always cause great discontent—so much so that people will try to escape imperial control. Therefore, active emperors simultaneously burden their subjects with taxation and strengthen their control over them. Both tasks in turn add to their expenses. Suddenly, individuals like Chen Sheng and Wu Guang will rise up in rebellion, and there will be great upheavals everywhere.³ Such rebellions will claim the lives of many people, thereby easing population pressures. The chaos will end, and peace will prevail once again. At this juncture, people want to do nothing more than rest. Imperial power will also seek nothing; it will simply be inactive. Through their own inaction, the rulers, as the saying goes, will "nourish the people." After a period of recuperation, the imperial government will gradually accumulate greater resources, and the emperors' ambitions will grow again. The cycle will thus begin anew.

In order to maintain their power, imperial rulers draw upon the experiences of their predecessors. They find survival value in doing nothing, and they glorify this strategy by establishing wuwei zhengzhi, an inactive government, a government at peace with its

people.

Dictatorships have economic restraints. In China, the distance between the ruler and his subjects is characterized by the saying "Heaven is high and the emperor is far away." With this kind of gap between the ruler and the ruled, those rulers who seem to exercise dictatorial powers really rule by allowing people in rural society to manage their own affairs. Power in rural society is primarily consensual power, but this kind of power is also limited by economic conditions. As I have already said, the consensual power grows out of a division of labor and is able to expand only when the division of labor itself develops. Rural society is a small-scale peasant economy, and, if necessary, each peasant household can become self-sufficient, except for a few items of daily necessity. The household may simply close its doors on the larger economy. When this occurs, we can imagine that the scope of consensual power would also decrease. Judging from the reality of people's lives in agrarian societies, then, we can see that the power structure, although it may be labeled a "dictatorship," is actually loose, weak, and nominal. It is a government that does not actively govern at all.

拾 无为政治

论权力的人多少可以分成两派，两种看法：一派是偏重在社会冲突的一方面，另一派是偏重在社会合作的一方面。两者各有偏重，所看到的不免也各有不同的地方。

从社会冲突一方面着眼的，权力表现在社会不同团体或阶层间主从的形态里。在上的是握有权力的，他们利用权力去支配在下的，发号施令，以他们的意志去驱使被支配者的行动。权力，依这种观点说，是冲突过程的持续，是一种休战状态中的临时平衡。冲突的性质并没有消弭，但是武力的阶段过去了，被支配的一方面已认了输，屈服了。但是他们并没有甘心接受胜利者所规定下的条件，非心服也。于是两方面的关系中发生了权力。权力是维持这关系所必需的手段，它是压迫性质的，是上下之别。从这种观点上看去，政府，甚至国家组织，如果握有这种权力的，是统治者的工具。跟下去还可以说，政府，甚至国家组织，只存在于阶级斗争的过程中。如果有一天“阶级斗争”的问题解决了，社会上不分阶级了，政府，甚至国家组织，都会像秋风里的梧桐叶一般自己凋谢落地。——这种权力我们不妨称之为横暴权力。

从社会合作一方面着眼的，却看到权力的另一性质。社会分工的结果，每个人都不能“不求人”而生活。分工对于每个人都有利的，因为这是经济的基础，人可以较少劳力得到较多收获；劳力是成本，是痛苦的，人靠了分工，减轻了生活担子，增加了享受。享受固然是人所乐从的，但贪了这种便宜，每个人都不能自足了，不能独善其身，不能不管“闲事”，因为如果别人不好好地安于其位地做他所分的工作，就会影响自己的生活。这时，为了自己，不能不干涉人家了。同样地，自己如果不尽其分，也会影响人家，受着人家的干涉。这样发生了权利和义务，从干涉别人一方面说是权利，从自己接受人家的干涉一方面说是义务。各人有维持各人的工作、维持各人可以互相监督的责任。没有人可以“任意”依自己高兴去做自己想做的事，而得遵守着大家同意分配的工作。可是这有什么保障呢？如果有人不遵守怎么办呢？这里发生共同授予的权力了。这种权力的基础是社会契约，是同意。社会分工愈复杂，这权力也愈扩大。如果不愿意受这种权力的限制，只有回到“不求人”的境界里去做鲁滨生，那时才真的顶天立地。不然，也得“小国寡民”以减少权力。再说得清楚些，得抛弃经济利益，不讲享受，像人猿泰山一般回到原始生活水准上去。不然的话，这种权力也总解脱不了。——这种权力我们不妨称之为同意权力。

这两种看法都有根据的，并不冲突的，因为在人类社会里，这两种权力都存在，而且在事实层里，统治者，所谓政府，总同时代表着这两种权力，不过是配合的成分上有不同。原因是社会分化不容易，至少以已往的历史说，只有合作而没有冲突。这两种过程常是互相交割，错综混合，冲突里有合作，合作里有冲突，不很单纯的。所以上面两种性质的权力是概念上的区别，不常是事实上的区分。我们如果要明白一个社

区的权力结构不能不从这两种权力怎样配合上去分析。有的社区偏重在这方面，有的社区偏重在那方面；而且更可以在一社区中，某些人间发生那一种权力关系，某些人间发生另一种权力关系。譬如说美国，表面上是偏重同意权力的，但是种族之间，事实上，却依旧是横暴权力在发生作用。

有人觉得权力本身是具有引诱力的，人有“权力的饥饿”。这种看法忽略了权力的工具性。人也许因为某种心理变态可能发生单纯的支配欲或所谓Sadism（残酷的嗜好），但这究竟不是正常。人们喜欢的是从权力得到的利益。如果握在手上的权力并不能得到利益，或是利益可以不必握有权力也能得到的话，权力引诱也就不会太强烈。譬如英国有一次民意测验，愿意自己孩子将来做议员或做阁员的人的比例很低。在英国做议员或做阁员的人薪水虽低，还是有着社会荣誉的报酬，大多数的人对此尚且并无急于攀登之意，如果连荣誉都不给的话，使用权力的人真正成为公仆时，恐怕世界上许由、务光之类的人物也将不足为奇了。

权力之所以诱人，最主要的应当是经济利益。在同意权力下，握有权力者并不是为了要保障自身特殊的利益，所以社会上必须用荣誉和高薪来延揽。至于横暴权力和经济利益的关系就更为密切了。统治者要用暴力来维持他们的地位不能是没有目的的，而所具的目的也很难想象不是经济的。我们很可以反过来说，如果没有经济利益可得，横暴权力也没有多大的意义，因之也不易发生。

甲团体想用权力来统治乙团体以谋得经济利益，必须有一前提：就是乙团体的存在可以供给这项利益；说得明白一些，乙团体的生产量必须能超过它的消费量，然后有一些剩余去引诱甲团体来征服它。这是极重要的。一个只有生产他生存必需的消费品的人并没有资格做奴隶的。我说这话意思是想指出农业社会中横暴权力的限制。在广西瑶山里调查时，我常见到汉人侵占瑶人的土地，而并不征服瑶人来做奴隶。原因当然很多，但主要的一个，依我看来，是土地太贫乏，而种水田的瑶人，并不肯降低生活程度，做汉人的佃户。如果瑶人打不过汉人，他们就放弃土地搬到别处去。在农业民族的争斗中，最主要的方式是把土著赶走而占据他们的土地自己来耕种。尤其在人口已经很多，劳力可以自足，土地利用已到了边际的时候更是如此。我们读历史，常常可以找到“坑卒几万人”之类的记录，至于见人便杀的流寇，一直到不久之前还是可能遭遇的经验。这种情形大概不是工业性的侵略权力所能了解的。

我并不是说在农业性的乡土社会基础上并不能建立横暴权力。相反的，我们常见这种社会是皇权的发祥地，那是因为乡土社会并不是一个富于抵抗能力的组织。农业民族受游牧民族的侵略是历史上不断的记录。这是不错的，东方的农业平原正是帝国的领域，但是农业的帝国是虚弱的，因为皇权并不能滋长壮健，能支配强大的横暴权力的基础不足，农业的剩余跟着人口增加而日减，和平又给人口增加的机会。

中国的历史很可佐证这个看法：一个雄图大略的皇权，为了开疆辟土，筑城修河，这些原不能说是什么虐政，正可视为一笔投资，和罗斯福造田纳西工程性质可以有相类之处。但是缺乏储蓄的农业经济却受不住这种工程的费用，没有足够的剩余，于是怨声载道，与汝偕亡地和皇权为难了。这种有为的皇权不能不同时加强它对内的压力，费用更大，

陈涉、吴广之流揭竿而起，天下大乱了。人民死亡遍地，人口减少了，于是乱久必合，又形成一个没有比休息更能引诱人的局面，皇权力求无为，所谓养民。养到一个时候，皇权逐渐累积了一些力量，这力量又刺激皇帝的雄图大略，这种循环也因而复始。

为了皇权自身的维持，在历史的经验中，找到了“无为”的生存价值，确立了无为政治的理想。

横暴权力有着这个经济的拘束，于是在天高皇帝远的距离下，把乡土社会中人民切身的公事让给了同意权力去活动了。可是同意权力却有着一套经济条件的限制。依我在上面所说的，同意权力是分工体系的产物。分工体系发达，这种权力才能跟着扩大。乡土社会是个小农经济，在经济上每个农家，除了盐铁之外，必要时很可关门自给。于是我们很可以想象同意权力的范围也可以小到“关门”的程度。在这里我们可以看到的是乡土社会里的权力结构，虽则名义上可以说是“专制”、“独裁”，但是除了自己不想持续的末代皇帝之外，在人民实际生活上看，是松弛和微弱的，是挂名的，是无为的。

⑪ RULE BY ELDERS

To understand the power structure in rural society, one needs to go beyond the two concepts of power that I discussed in the previous chapter—dictatorial power and consensual power. We may use our understanding of the nature of rural societies as a means to explain the actual limitations of authoritarian governments in agrarian societies. But demonstrating these limitations does not lead us to infer that the power structure of rural society is somehow "democratic." Democracy is a form of consensual power. In a traditional agrarian society, although government rule may be dictatorial at the top, the force of that power does not penetrate rural areas to any great extent. In rural areas, government is very inactive, is really very weak. The relative absence of government in rural areas, however, does not then mean that local society becomes a place full of "citizens" possessing equal rights and jointly participating in their governance.

There is some controversy about the nature of Chinese local politics. Some people say that, although China does not have political democracy, it does have a sort of social democracy. Others say that in the Chinese political structure we can identify two layers, a non-democratic and a democratic layer, with the former on top and the latter on the bottom. There is some truth in both views. But I cannot say that either is correct, for the simple reason that there is another kind of power that is neither dictatorial nor consensual, a kind of power that arises from neither conflict nor cooperation. Instead, this kind of power emerges in the process of establishing an orderly succession in society, a kind of social reproduction, by which social power and privilege are passed from one generation to the next. A succession of this kind rests on power generated through education and through patriarchal privilege, or what is normally called "paternalism."

"Social reproduction" is a term I coined in my book *Systems of Reproduction*, but it is really not a new concept. It refers to a process of social metabolism. Life and death are capricious; the length of a person's life is always limited. The world is only a hotel in which one stays for a while; whether the stay is long or short does not make much difference. However, the rules in this hotel are more complicated and strict than those in actual hotels. No newcomer understands the rules before entering the door. Moreover, those who enter the hotel do not do so by their own choice, and, once in, they cannot freely leave. There is only one hotel and no more. True, this

hotel is large and has many sections; each section has a different culture with distinctive rules. The only similarity among sections is that they all have rules. They post on the wall their "Notice to the Guests," which seems to contain more than ten commandments. Those who live in this hotel have to receive an education; they have to know the rules well enough so that they can fully satisfy their desires without bumping up against the limits of what is possible.

Some of the rules in the society result from social conflicts, and others from social cooperation. Therefore, the limits of individual behavior in any particular setting are set by both dictatorial and consensual powers. But, regardless of how they are established, these are rules that demand people's understanding and compliance. If human beings were like ants and bees, things would be simpler. The rules of group life would be anchored in biology, so to master them would require no education. Human rules, however, are all human made. To pick up tofu gracefully with chopsticks and to dance in high heels without stepping on your partner's feet are not easy things to do. If you won't learn or if you won't practice, you cannot do these things correctly. And when you are learning to do them, you cannot fear the difficulties or dread the trouble. But fearing difficulties and dreading trouble are only natural. Therefore, learning requires some form of compulsion, and behind this compulsion there must be some form of power.

This kind of power is neither consensual nor dictatorial. It would be an exaggeration to say that we are entering into a social contract when we require our children to wear shoes outdoors. Social contracts presuppose the exercise of individual will. Individuals do not have the right to break the terms of their contract freely, but in the process of setting the terms of a contract, the free will of each individual needs to be respected. A democracy, therefore, is a form of government that combines both individual will and social compulsion. However, the process of education does not give rise to this kind of problem. The one who is being educated has no opportunity to exercise choice. What such a person learns is what we call wenhua, or culture itself. Culture exists before the individual. We Chinese do not use the term will in reference to a child's personality, because the process of education does not require that a child's will be recognized. Actually, what we call "will" is not like a biological organ that develops gradually over time. And it is not a psychological phenomenon either. Rather, it is a social product, an object of social recognition. "Will" is an essential element in the maintenance of a consensual order, but not of other orders. That we do not recognize a "will" in nonadults proves that they have not yet entered a situation where order is assumed to be consensually based.

I said in my earlier book *Systems of Reproduction*, "Children come into a world that is made not for their convenience, but rather for that of adults. They enter the world with neither a capacity to establish a new order nor a desire to comply with the old order."¹ In teaching children how to live in society, those doing the teaching neither seek nor consider the advice and consent of the children they teach. We can certainly say that this process is undemocratic, but we cannot say it is dictatorial. Dictatorial power develops in the course of social conflicts and is a tool that rulers use to maximize their exploitation of the ruled. It is an overstatement, therefore, to say that the process of education is exploitative. I once wrote that raising and educating children is the sort of job that "harms the self, even as it benefits others." Except, perhaps, for a sense of spiritual fulfillment, what benefit does one get out of raising an embryo to an adult? There may be some exploitation when young children are treated as adults. But, at a minimum, having children in order to benefit from them economically is likely a losing proposition.

As I have written, it appears at first glance that "the amount of correction a child gets in one hour would exceed the criticism an adult would receive in one year. To be a citizen under the most tyrannical king is no worse than being a child with the most loving parents."² In fact, however, a strict father and a tyrannical king differ in that the parents substitute for society itself in the process of education. They teach the child how to mold his or her self according to established cultural patterns, and how to manage the social roles embedded in group life. The goal of this educational process is, on the one hand, for the benefit of society and, on the other hand, for the benefit of the person being educated. But either way, it is not a relationship that can be characterized as one of domination.

The power differential that arises as part of the process of education is most obvious in the parent-child relationship, but it is not restricted to that relationship. All cultural, as opposed to political, coercion partakes of this kind of power. The difference between culture and politics lies here: cultural norms are readily accepted because they are already taken for granted by the society; politics, however, operate in the absence of a set of agreed-upon norms, when there are all sorts of different competing opinions about how to act and when short-term solutions to problems are sought. Unlike politics, the cultural foundation of a society is necessarily consensual, but to those new members of society, learning culture is a compulsory educational process.

In a relatively static society, culture is stable. There are very few new problems. Living consists primarily of following a set of traditional recipes. In a society completely regulated by tradition,

there would be no politics, just education. Although such a society does not actually exist, rural society comes close. The simplicity of political action in our society is described in the sayings "To govern is to say little" (Wei zheng bu zai duo yan) and "To rule is to do nothing" (Wuwei er zhi). In this kind of society, human behavior is regulated by traditional rituals. Confucians were always interested in supporting a ruler who would base his power on the educational process, but they were never enthusiastic about maintaining a social order based on dictatorial powers. "Tyranny," they wrote, "is fiercer than a tiger." The proper way to rule, they said, is "to rule through ethics." The idea is carried further in the saying that prescribes how government officials are supposed to act: "Be parents to the people." This idea represents patriarchalism in China.

The extension of educational power to relationships among adults requires a stable culture. A stable cultural tradition provides a guarantee of efficacy. If we seek specific solutions for specific problems, we must, as the saying goes, "Even into old age, live and learn." Problems in each stage of life are different. Culture is like an almanac to which we constantly turn for guidance as new problems arise. In such a society, there is no dividing line, no entry point into adulthood, that puts a person beyond instruction. Everyone who is older than I must have come across the problems I encounter. Therefore, elders can be my "teachers." If three individuals walk together, one of them must be capable of teaching me how to deal with my problems. Every older person possesses the power to teach, and thereby to impose a culture upon, every younger person. Confucius even taught this. "Respect your elder brother," he said. That is, when you meet someone older, you must respect and submit to that person's educational power.

It is not an accident that, when we greet guests, we ask their age. Such politeness shows that, in our society, the way we treat each other is related to a social order based on seniority. The ranking by seniority also demonstrates the effectiveness of power gained through education. Seniority is an extremely important principle in the way we address one another. We distinguish an elder brother from a younger brother, an elder sister from a younger sister, an uncle who is older than our father from one who is younger. Many other societies do not have these distinctions at all. I remember that my teacher Dr. Shirokogoroff once reminded me that the distinction between the senior and the junior is the most fundamental principle in the Chinese kinship system. Sometimes it even overrides the generational principle.³ Kinship principles are formed in the midst of social life. The importance of the principle of seniority in Chinese society indicates the importance of education and of the power that arises

from education.

When culture is unstable and when traditional methods are inadequate to solve current problems, educational power becomes restricted to the relationships between parents and children and between teachers and students, and lasts for a shorter period. In the process of social change, people cannot rely on experience for guidance. Instead, they must rely on abstract principles, principles that go beyond specific situations. Those who develop and use such principles are not necessarily older people. After all, competence of this sort is not closely related to age. It is related mainly to intelligence and expertise—and also to opportunity. And in reference to opportunity, younger people may have more chances to show their competence than older people, because they are less afraid of change; they are curious and willing to experiment.

In periods of social transition, habits limit one's ability to adapt to change. In such times, it is obstinate and backward-looking to use past experiences as a measure of present actions. Such obstinacy and backwardness are not merely foolish and humorous at times, but are a threat to survival under the changed circumstances. If a child calls his father by a nickname, he will not risk being scolded for being informal. Quite the contrary, this expression of intimacy will give the father the comfort of not being pushed aside. When respect is not based on age, comparing who is senior and who is junior becomes a meaningless exercise; people will stop asking about each other's age when they first meet. This kind of society is far removed from rural society.

Now let us return to China's rural society. Its structure of power contains elements of both dictatorial and consensual power; but, besides these, the structure of power rests upon education. This power generated in the process of education is neither democratic nor dictatorial; it differs from both. Therefore, if you measure Chinese society by the standards of Western concepts of democracy, there will be some similarities, but it will not be exactly the same. Such comparisons are inaccurate, for the terms do not apply. If another term were really required to characterize the power structure in Chinese, then I could not suggest anything better than "rule by elders" (zhanglao tongzhi).

拾壹 长老统治

要了解乡土社会的权力结构，只从我在上篇所分析的横暴权力和同意权力两个概念去看还是不够的。我们固然可以从乡土社会的性质上去说明横暴权力所受到事实上的限制，但是这并不是说乡土社会权力结构是普通所谓“民主”形式的。民主形式根据同意权力，在乡土社会中，把横暴权力所加上的一层“政府”的统治揭开，在传统的无为政治中这层统治本来并不很强的，基层上所表现出来的却并不完全是许多权利上相等的公民共同参预的政治。这里正是讨论中国基层政治性质的一个谜。有人说中国虽没有政治民主，却有社会民主。也有人说中国政治结构可分为两层，不民主的一层压在民主的一层上边。这些看法都有一部分近似，说近似而不说确当是因为这里还有一种权力，既不是横暴性质，又不是同意性质；既不是发生于社会冲突，又不是发生于社会合作。它是发生于社会继替的过程，是教化性的权力，或是说爸爸式的，英文里是Paternalism。

社会继替是我在《生育制度》一书中提出来的一个新名词，但并不是一个新的概念，这就是指社会成员新陈代谢的过程。生死无常，人寿有限。从个人说这个世界不过是个逆旅，寄寓于此的这一阵子，久暂相差不多。但是这个逆旅却是有着比任何客栈、饭店更复杂和更严格的规律。没有一个新来的人，在进门之前就明白这一套的。不但如此，到这“逆旅”里来的，又不是由于自己的选择，来了之后又不得任意搬家；只此一家，别无分店。当然，在这大店里有不同部分，每个部分，我们称之为不同文化的区域，有着不完全的规律，但是有规律这一点却并无轩轻。没有在墙壁上不挂着比“十诫”还多的“旅客须知”的。因之，每个要在这逆旅里生活的人就得接受一番教化，使他能在这些众多规律下，从心所欲而不碰着铁壁。

社会中的规律有些是社会冲突的结果，也有些是社会合作的结果。在个人行为的四周所张起的铁壁，有些是横暴的，有些是同意的。但是无论如何，这些规律是要人遵守的，规律的内容要人明白的。人如果像蚂蚁或是蜜蜂，情形也简单了。群体生活的规律有着生理的保障，不学而能。人的规律类皆人为。用筷子夹豆腐，穿了高跟鞋跳舞不践别人的脚，真是难为人的规律；不学，不习，固然不成，学习时还得不怕困，不惮烦。不怕困，不惮烦，又非天性；于是不能不加以一些强制。强制发生了权力。

这样发生的权力并非同意，又非横暴。说孩子们必须穿鞋才准上街是一种社会契约未免过分。所谓社会契约必先假定个人的意志。个人对于这种契约虽则并没有自由解脱的权利，但是这种契约性的规律在形成的过程中，必须尊重各个人的自由意志，民主政治的形式就是综合个人意志和社会强制的结果。在教化过程中并不发生这个问题，被教化者并没有选择的机会。他所要学习的那一套，我们称作文化的，是先于他而存在的。我们不用“意志”加在未成年的孩子的人格中，就因为教化过

程里并不需要这种承认。其实，所谓意志并不像生理上的器官一样是慢慢长成的，这不是心理现象，而是社会的承认。在维持同意秩序中，这是个必需的要素；在别的秩序中也就不发生了。我们不承认未成年的人有意志，也就说明了他们并没有进入同意秩序的事实。

我曾说：“孩子碰着的不是一个为他方便而设下的世界，而是一个为成人们方便所布置下的园地。他闯入进来，并没有带着创立新秩序的力量，可是又没有个服从旧秩序的心愿。”（《生育制度》，一〇一页）。从并不征求，也不考虑他们同意而设下他们必须适应的社会生活方式的一方面说，教化他们的人可以说是不民主的，但是说是横暴却又不然。横暴权力是发生于社会冲突，是利用来剥削被统治者以获得利益的工具。如果说教化过程是剥削性的，显然也是过分的。我曾称这是个“损己利人”的工作，一个人担负一个胚胎培养到成人的责任，除了精神上的安慰外，物质上有什么好处呢？“成人”的时限降低到生理上尚是儿童的程度，从而开始“剥削”，也许是可以发生的现象，但是为经济打算而生男育女，至少是一件打算得不大精到的亏本生意。

从表面上看，“一个孩子在一小时中所受到的干涉，一定会超过成年人一年中所受社会指摘的次数。在最专制的君王手下做老百姓，也不会比一个孩子在最疼他的父母手下过日子为难过。”（同上注）但是性质上严父和专制君王究竟是不同的。所不同的就在教化过程是代替社会去陶炼出合于在一定的文化方式中经营群体生活的分子，担负这工作的，一方面可以说是为了社会，一方面可以说是为了被教化者，并不是统治关系。

教化性的权力虽则在亲子关系里表现得最明显，但并不限于亲子关系。凡是文化性的，不是政治性的强制都包含这种权力。文化和政治的区别是在这里：凡是被社会不成问题地加以接受的规范，是文化性的；当一个社会还没有共同接受一套规范，各种意见纷呈，求取临时解决办法的活动是政治。文化的基础必须是同意的，但文化对于社会的新分子是强制的，是一种教化过程。

在变化很少的社会里，文化是稳定的，很少新的问题，生活是一套传统的办法。如果我们能想象一个完全由传统所规定下的社会生活，这社会可以说是没有政治的，有的只是教化。事实上固然并没有这种社会，但是乡土社会却是靠近这种标准的社会。“为政不在多言”、“无为而治”都是描写政治活动的单纯。也是这种社会，人的行为有着传统的礼管束着。儒家很有意用思想形成一个建筑在教化权力上的王者，他们从没有热心于横暴权力所维持的秩序。“苛政猛于虎”的政是横暴性的，“为政以德”的政是教化性的。“为民父母”是爸爸式权力的意思。

教化权力的扩大到成人之间的关系必须得假定个稳定的文化。稳定的文化传统是有效的保证。我们如果就个别问题求个别应付时，不免“活到老，学到老”，因为每一段生活所遇着的问题是不同。文化像是一张生活谱，我们可以按着问题去查照。所以在这种社会里没有我们现在所谓成年的界限。凡是比自己年长的，他必定先发生过我现在才发生的问题，他也就可以是我的“师”了。三人行，必有可以教给我怎样去应付问题的人。而每一个年长的人都握有强制年幼的人的教化权力：“出则悌”，逢着年长的人都得恭敬、顺服于这种权力。

在我们客套中互问年龄并不是偶然的，这礼貌正反映出我们这个社会里相互对待的态度是根据长幼之序。长幼之序也点出了教化权力所发生的效力。在我们亲属称谓中，长幼是一个极重要的原则，我们分出兄和弟、姊和妹、伯和叔，在许多别的民族并不这样分法。我记得老师史禄国先生曾提示过我：这种长幼分划是中国亲属制度中最基本的原则，有时可以掩盖世代原则。亲属原则是在社会生活中形成的，长幼原则的重要也表示了教化权力的重要。

文化不稳定，传统的办法并不足以应付当前的问题时，教化权力必然跟着缩小，缩进亲子关系、师生关系，而且更限于很短的一个时间。在社会变迁的过程中，人并不能靠经验作指导。能依赖的是超出个别情境的原则，而能形成原则、应用原则的却不一定是长者。这种能力和年龄的关系不大，重要的是智力和专业，还可加一点机会。讲机会，年幼的比年长的反而多。他们不怕变，好奇，肯试验。在变迁中，习惯是适应的阻碍，经验等于顽固和落伍。顽固和落伍并非只是口头上的讥笑，而是生存机会上的威胁。在这种情形中，一个孩子用小名来称呼他的父亲，不但不会引起父亲的呵责，反而是一种亲热的表示，同时也给父亲一种没有被挤的安慰。尊卑不在年龄上，长幼成为没有意义的比较，见面也不再问贵庚了。——这种社会离乡土性也远了。

回到我们的乡土社会来，在它的权力结构中，虽则有着不民主的横暴权力，也有着民主的同意权力，但是在这两者之间还有教化权力，后者既非民主又异于不民主的专制，是另有一工的。所以用民主和不民主的尺度来衡量中国社会，都是也都不是，都有些像，但都不确当。一定要给它一个名词的话，我一时想不出比“长老统治”更好的说法了。

⑫ CONSANGUINITY AND REGIONALISM

In a static culture, substantial social differences appear between people who differ only in age. The older people wield imposing power over the younger. This is the foundation of a consanguineous society. Consanguinity (xueyuan) means that people's rights and obligations are determined by kinship. Kinship is the relationship constituted through reproduction and marriage. Strictly speaking, consanguinity only defines the relatedness that derives from reproduction, from the parent-child relationship. And in truth, in a society having a patrilineal kinship organization, kinship derived through reproduction is valued much more highly than that derived through marriage, so much so that we can call such a society consanguineous.

Reproduction is necessary for social continuity. This is true for all societies. What differs, however, is that in some societies a person's social position derives from relationships that are fixed by the fact of procreation, while in others this form of relatedness is less important. The former society is consanguineous. Generally speaking, consanguineous societies are stable and static. It is difficult for a society undergoing frequent changes to remain consanguineous. Social stability suggests a lack of structural changes; even though individuals change position within the structure, the structure itself remains motionless. People are limited by their fate, by the circumstance of their birth; they continue in life as long as they can, and then they die. The consanguineous society maintains structural stability by using the biological process underlying reproduction as the medium to establish social continuity. The principle is that when the father dies, the son succeeds. A farmer's son becomes a farmer, and a merchant's son becomes a merchant; such successions in occupation are consanguineous. An aristocrat's son becomes an aristocrat; such succession in identity is consanguineous. A rich man's son becomes rich; such succession in wealth is consanguineous. Up to the present time, very few societies have entirely abandoned all forms of consanguineous succession—such is the power and importance of kinship in the reproductive process. However, if the social structure is changing, it is also impossible for succession to be determined entirely according to consanguinity. Until such time as reproduction is fully socialized, the strength of consanguinity will be determined by rates of social change.

The social positions determined by consanguinity are not subject to individual choice, since the determination of one's parents is sheer chance. It seems irrational that societies should use the circumstance of parentage to decide everyone's occupation, status, and wealth. The only argument for the rationality of this procedure would be that it is the most basic way to stabilize an existing order. Therefore, as long as one accepts the principle of consanguinity (and who, in fact, has ever seriously doubted or explored the reason for the existence of such a principle?), many different kinds of social disputes will simply not occur at all.

Consanguinity is a stabilizing force. In stable societies, a tie to a specific place (*diyuan*), or regionalism, is no more than an extension of consanguinity and cannot be separated from it. "Being born and dying in the same place" fixes the relationship between places and people. Therefore, birth—that is, one's bloodline—determines one's ties to a location. The reproduction of a population across generations resembles sprouts growing out of the same tree trunks; in space, there appear to be clumps of people. This closeness in space reflects the closeness in consanguinity. Geographical location is actually socialized space. We distinguish directions in terms of superiority and inferiority: the left is superior to the right, and the south superior to the north. These are consanguineous coordinates. Space itself is inherently formless, but using our consanguineous coordinates, we divide space into directions and into positions. In fact, the word we use to describe the location of a person in society, "position" (*diwei*), was originally used to indicate a location in "space" (*kongjian*), but gradually the term acquired a social significance as well. This change in meaning should remind us that our association with "a place" (*di*) rests on social relationships.

Those societies where people do not move around much tend to be self-sufficient enough that very little migration is required. Where the population is static, lineage groups actually imply a geographical location. In fact, the concept of village may be superfluous. We have heard the children's song "Row, row, row your boat to grandma's home." From our own experience, we know that "grandma's home" means an enduring relationship to a place. This combination of consanguinity and regionalism is what communities, in their original sense, were all about.

But human beings are, after all, not plants; they will move. Lineage segmentation, that process of "cell division" in rural society, is unavoidable. A constantly reproducing consanguineous group cannot live together in one place for very long. The group needs a certain amount of land for its survival, but the population of the group necessarily grows beyond the capacity of the land nearby to provide

for it. When this occurs, the group has to segment geographically, because the distance between where people live and where they farm becomes so great that it hinders their ability to farm. But because a group's landholdings cannot be expanded without limit, what happens in the short run is that existing landholdings are farmed ever more intensively. Such intensive cultivation leads to gradually decreasing productivity, so the group is again restricted by its ability to survive on a given allotment of land. Again the group is forced to divide. The lineage segment that splits off moves to other places to look for land.

If the lineage segment is able to claim some land that has never been worked before and to develop a village community there, it will still maintain its consanguineous connections with the original village, and even name the new place after the old. Its actions would seem to deny that any real separation occurred. This phenomenon is commonplace in societies with many immigrants. If people traveling in the United States just looked at the names of places, they would have the illusion that Europe had been transplanted there. New England and New York are famous examples. Many Londons and many Moscovs can be found on the American map. In our own case, however, consanguineous geographical relationships are much more conspicuous. I left my hometown, Wujiang, when I was ten years old, and lived in Suzhou for nine years. Both are in Jiangsu province. But whenever I fill out a form of some kind, I put "Wujiang, Jiangsu" as my native place (jiguan). During the recent war, I lived in Yunnan for eight years, but my native place did not change. Even my child, born in Yunnan, inherited my native place. She will probably write "Wujiang, Jiangsu" on all the forms that she fills out throughout her life. My ancestors lived in Wujiang for over twenty generations, but our lanterns bore the big red characters "Jiangxia Fei." Jiangxia is in Hubei province; so, geographically speaking, why should I be connected with Jiangxia? That is the same with my child: on what grounds should she have a geographical connection with Wujiang, a place she has never been to? Obviously, in our rural society, one's geographical location does not create a distinctive identity. Our native place is the same as our father's native place, rather than the place of our birth or the place where we currently live. We inherit a native place just as we inherit a family name; it is like a blood relationship. Therefore, we can conclude that one's native place is only the projection of consanguinity into space.

Many people who migrate from their hometowns do not start new villages in other places. Instead, they settle down in other established communities. If these people who have no relatives nearby could organize a local group, this group would be based not on blood relationships but on a current geographical location. In this case,

consanguinity and geography would be separated. But this seldom happens in Chinese rural society. In villages in all parts of the country, I often met people who are labeled "guest" (kebian), "new guest" (xinke), or "outsider" (waicunren). Their residential registration cards also indicate that they are "nonnatives" (jiji). Modern cities always establish procedures for how people are able to become legal residents, and the main requirement is a certain period of residence. However, in rural villages, the period of residence does not matter. I know many people who have lived in a village for several generations but are still called "new guests."

When I was doing surveys in Jiangcun and in Lucun, I paid close attention to the question "How can one become a native villager?" Generally speaking, the replies suggested that anyone who wanted to be considered a native resident had to fulfill several conditions. The first condition was that the person have "roots" in the earth—that is, own land in the village. The second condition was that he or she enter local kinship circles through marriage. These are not easy conditions to satisfy. The land in rural China cannot be bought and sold freely. The rights over the land are protected by lineages, so it is difficult to sell land to outsiders unless the sale is approved by the lineage groups themselves. Marriage is certainly a way to gain a social connection to a geographical location. When a woman marries a man in a different community and goes to live in his home, she becomes a member of that community. Likewise, if a man marries into the bride's family, he, too, can enter the local community. However, it is not easy for a "guest" to marry a local woman, and, besides that, such a marriage would allow their children to be considered members of the local community. Perhaps the person needs to own land first before he can more readily enter into the local consanguineous networks. But this is only my hypothesis; I need comparable material from other villages to substantiate it.

The "guest" residents (those who live on the margin of the community) cannot be regarded as having entered the village group, because they often do not have the same rights as the residents. They are not seen as "insiders" and cannot be trusted. I previously wrote that rural society is an intimate society, but here we have people who are "strangers," with an unknown past; so native people are suspicious of them. Nevertheless, because of this very characteristic, "guest" residents find special vocations in rural societies.

The intimacy of close kinship ties limits some kinds of social activities, mainly those requiring conflict or competition. Your relatives and you are from the same blood; you have all sprouted from one root. In principle, you share the same fate; your pains and sorrows are interconnected, and so you should help meet each other's needs.

Moreover, living closely and intimately with each other, relatives become, over long periods of time, mutually interdependent in many aspects of their lives. There is no way to count the favors given or received. The unity of the intimate group depends on the fact that each member owes countless favors to the other members. This all seems so obvious to us that we take it for granted. Friends vie with each other to pay bills, each hoping to let the others "owe them one"(renqing). Such debts are like an investment to the lender. When you owe another person a favor (renqing), you have to look for an opportunity to return a bigger favor. By repaying the favor with a bigger favor, you make others owe you more favors in the future. So it goes, back and forth; the continuing reciprocation maintains the cooperation among people in the group. It is impossible for a person not to owe favors in such an intimate group. In fact, people are afraid to square their accounts (suanzhang). To settle accounts (suanzhang) or to be completely square (qingsuan) with somebody means to break off relationships, because if people do not owe something to each other, there will be no need for further contact.

But no matter how close relatives are to you, they are, after all, not you. Although relatives are concerned with each other, their concern goes only so deep. To maintain the closeness of the group—to ensure that intimacy itself does not turn into resentment—too many favors, too much renqing, should be avoided. In social relationships (shehui guanxi), rights and obligations must be mutually balanced, although the balancing of the relationship may be spaced out over a long period of time. But if it is one-sided, a social relationship cannot be sustained without some kind of compulsory force. One of the methods to prevent a break in social relationships is to reduce the burdens placed on the relationship itself. For example, in the rural areas of Yunnan province, there are "money clubs" (qianhui) called cong; these clubs are a type of cooperative credit association. I investigated the relationship of those people in the cong and found two underlying similarities among members. First, each cong excluded relatives from the same lineage; second, it included friends with whom members had no kinship relationship. I asked why the members did not let people from the same lineage join their cong. The reason they gave is very practical. In theory, people belonging to the same lineage have an obligation to take care of each other's needs and generally to help each other. If kinsmen are able and kind, they will directly loan money to relatives without joining a cong. In truth, such generous relatives are fairly rare. However, if relatives join a cong and do not pay their loans on time, it is difficult to force them to do so because of the members' relationship (renqing) with them. These unrepaid loans will cause the cong to fail. For this reason, people

trying to start a cong do not recruit members of their own lineage. Other relatives, such as those on the mother's side, may join a cong, but often they do not pay their money on time either. I once interviewed the head of a cong who was worried about exactly this kind of situation. He told me with a sigh that it is best not to be involved with relatives in money matters. His words provide an explanation of what I meant above about lightening the burden on social relations with relatives.

The more developed the society, the more frequent and complex the contacts among people become, and the more difficult it is to maintain a good balance between one's rights and obligations by relying simply on renqing, on one's intuitive sense about the appropriate levels of reciprocation between people. Therefore, the need to "settle accounts on the spot" increases. In this context, money becomes both the unit of exchange to settle accounts and the medium of exchange to calculate levels of reciprocation. With money as the unit, the settling of accounts can be exact. And with money as the medium, a balanced credit relationship can be guaranteed. Renqing exchanges based on money calculations allow accounts to be cleared; they also bring this aspect of life into the scope of what is normally included in "the economy." In a narrow sense, then, renqing-motivated money exchanges become subsumed under the knack of doing business; hence, these aspects of life become commercialized.

Commerce cannot exist in an intimate consanguineous society. Although exchanges do take place in such a society, people exchange with renqing, by giving gifts to each other. In essence, both exchanging gifts and exchanging goods for commercial purposes can be used to supply needs. The two differ only in how people settle their accounts. A barter trading system based on large-scale exchanges of presents can still be seen in the Pacific islands. The Kula system that Malinowski described and analyzed is such an example.¹ This system of trade is not only complex but also quite restrictive: trading relationships are usually established among people not connected by ties of consanguinity. In Chinese rural society, there are special markets created for trading. The markets usually are located not in a village but in an open space. People from all over come to this special place and act, as they say, "without human feelings" (wuqing). When they trade, people momentarily set aside their original relationships and settle all exchanges on the spot. I have often seen neighbors carrying goods to a market ten miles (li) away to exchange with each other and then walk the long distance back home again. Why can't they exchange at their front doors? Why should they make such a long trip to the market? The trip has its function. When standing at their own front doors, they are neighbors. But when they are in the market,

they are "strangers." The act of settling accounts on the spot should occur only between strangers and should not involve other social relationships.

When an economy becomes more complex and exchanges in periodic markets give way to exchanges in established stores, the position of "guest" provides a special convenience. The outsiders living on the margin of a consanguineous community become the vehicle for business activities. The villagers can bargain with them and square their accounts with them on the spot. Favors are unnecessary, and there is no need to feel embarrassed in bargaining. According to what I have learned, except for some stands run by poor old people who are virtually beggars, most stores in villages are run by the "new guests"—people from outside the village. Here, too, business develops outside of consanguineous relationships.

Regionalism, the geographical tie to a home region, is a social relationship that has developed out of commerce. Blood ties provide the foundation for status in Chinese society, but regional ties provide the foundation for contractual obligations. Contract here means the agreement reached between strangers. When making contracts, people exercise their freedom of choice. In carrying out their contracts, people rely both on the trustworthiness of the parties and on the law. If laws are to be effective, they must be supported by the consensual power of the people. To fulfill the conditions of a contract is to settle accounts—to take complete care of the rights and obligations as required by the terms of the contract. This requires careful calculation, an exact unit of exchange, and a reliable medium of exchange. Calm thinking is involved, not personal emotion. Reason dominates contractual activities. These are special features of modern society, and they are exactly what rural society lacks.

Changing from a society linked together through blood ties to a society integrated on the basis of geographical location is a qualitative, historically momentous social transformation.

拾贰 血缘和地缘

缺乏变动的文化里，长幼之间发生了社会的差次，年长的对年幼的具有强制的权力。这是血缘社会的基础。血缘的意思是人和人的权利和义务根据亲属关系来决定。亲属是由生育和婚姻所构成的关系。血缘，严格说来，只指由生育所发生的亲子关系。事实上，在单系的家族组织中所注重的亲属确多由于生育而少由于婚姻，所以说是血缘也无妨。

生育是社会持续所必需的，任何社会都一样，所不同的是说有些社会用生育所发生的社会关系来规定各人的社会地位，有些社会却并不如此。前者是血缘的。大体上说来，血缘社会是稳定的，缺乏变动；变动得大的社会，也就不易成为血缘社会。社会的稳定是指它结构的静止，填入结构中各个地位的个人是不能静止的，他们受着生命的限制，不能永久停留在那里，他们是要死的。血缘社会就是想用生物上的新陈代谢作用——生育，去维持社会结构的稳定。父死子继：农人之子恒为农，商人之子恒为商——那是职业的血缘继替；贵人之子依旧贵——那是身份的血缘继替；富人之子依旧富——那是财富的血缘继替。到现在固然很少社会能完全抛弃血缘继替，那是以亲属来担负生育的时代不易做到的。但是社会结构如果发生变动，完全依血缘去继替也属不可能。生育没有社会化之前，血缘作用的强弱似乎是以社会变迁的速率来决定。

血缘所决定的社会地位不容个人选择。世界上最用不上意志，同时在生活上又是影响最大的决定，就是谁是你的父母。谁当你的父母，在你说，完全是机会，且是你存在之前的既存事实。社会用这个无法竞争，又不易藏没、歪曲的事实来作分配各人的职业、身份、财产的标准，似乎是最没有理由的了；如果有理由的话，那是因为这是安稳既存秩序的最基本的办法。只要你接受了这原则，（我们有谁曾认真地怀疑过这事实？我们又有谁曾想为这原则探讨过存在的理由？）社会里很多可能引起的纠纷也随着不发生了。

血缘是稳定的力量。在稳定的社会中，地缘不过是血缘的投影，不分离的。“生于斯，死于斯”把人和地的因缘固定了。生，也就是血，决定了他的地。世代间人口的繁殖，像一个根上长出的树苗，在地域上靠近在一伙。地域上的靠近可以说是血缘上亲疏的一种反映，区位是社会化了的空间。我们在方向上分出尊卑：左尊于右，南尊于北，这是血缘的坐标。空间本身是混然的，但是我们却用了血缘的坐标把空间划分了方向和位置。当我们用“地位”两字来描写一个人在社会中所占的据点时，这个原是指“空间”的名词却有了社会价值的意义。这也告诉我们“地”的关联派生于社会关系。

在人口不流动的社会中，自足自给的乡土社会的人口是不需要流动的，家族这社群包含着地域的涵义。村落这个概念可以说是多余的。儿谣里“摇摇摇，摇到外婆家”，在我们自己的经验中，“外婆家”充满着地域的意义。血缘和地缘的合一是社区的原始状态。

但是人究竟不是植物，还是要流动的。乡土社会中无法避免的是“细

胞分裂”的过程，一个人口在繁殖中的血缘社群，繁殖到一定程度，他们不能在一定地域上集居了，那是因为这社群所需的土地面积，因人口繁殖，也得不断地扩大。扩大到一个程度，住的地和工作的地距离太远，阻碍着效率时，这社群不能不在区位上分裂。——这还是以土地可以无限扩张时说的。事实上，每个家族可以向外开垦的机会很有限，人口繁殖所引起的常是向内的精耕，精耕受着土地报酬递减律的限制，逼着这社群分裂，分出来的部分到别的地方去找耕地。

如果分出去的细胞能在荒地上开垦，另外繁殖成个村落，它和原来的乡村还是保持着血缘的联系，甚至把原来地名来称这新地方，那是说否定了空间的分离。这种例子在移民社会中很多。在美国旅行的人，如果只看地名，会发生这是个“揉乱了欧洲”的幻觉。新英伦、纽约（纽约克）是著名的；伦敦、莫斯科等地名在美国地图上都能找到，而且不止一个。以我们自己来说罢，血缘性的地缘更是显著。我十岁离开了家乡——吴江，在苏州城里住了九年，但是我一直在各种文件的籍贯项下填着“江苏吴江”。抗战时期在云南住了八年，籍贯毫无改变，甚至生在云南的我的孩子，也继承着我的籍贯。她的一生大概也得老是填“江苏吴江”了。我们的祖宗在吴江已有二十多代，但是在我们的灯笼上却贴着“江夏费”的大红字。江夏是在湖北，从地缘上说，我有什么理由和江夏攀关系？真和我的孩子一般，凭什么可以和她从来没有到过的吴江发生地缘呢？在这里很显然在我们乡土社会里地缘还没有独立成为一种构成团结力的关系。我们的籍贯是取自我们的父亲的，并不是根据自己所生或所住的地方，而是和姓一般继承的，那是“血缘”，所以我们可以说籍贯只是“血缘的空间投影”。

很多离开老家漂流到别地方去的并不能像种子落入土中一般长成新村落，他们只能在其他已经形成的社区中设法插进去。如果这些没有血缘关系的人能结成一个地方社群，他们之间的联系可以是纯粹的地缘，而不是血缘了。这样血缘和地缘才能分离。但是事实上在中国乡土社会中却相当困难。我常在各地的村子里看到被称为“客边”、“新客”、“外村人”等的人物。在户口册上也有注明“寄籍”的。在现代都市里都规定着可以取得该地公民权的手续，主要的是一定的居住时期。但是在乡村里居住时期并不是个重要条件，因为我知道许多村子里已有几代历史的人还是被称为“新客”或“客边”的。

我在江村和禄村调查时都注意过这问题，“怎样才能成为村子里的人？”大体上说有几个条件，第一是要生根在土里：在村子里有土地。第二是要从婚姻中进入当地的亲属圈子。这几个条件并不是容易的，因为在中国乡土社会中土地并不充分自由买卖。土地权受着氏族的保护，除非得到氏族的同意，很不易把土地卖给外边人。婚姻的关系固然是取得地缘的门路，一个人嫁到了另一个地方去就成为另一个地方的人（入赘使男子可以进入另一地方社区），但是已经住入了一个地方的“外客”却并不容易娶得本地人做妻子，使他的儿女有个进入当地社区的机会。事实上大概先得有了土地，才能在血缘网中生根。——这不过是我的假设，还得更多比较材料加以证实，才能成立。

这些寄居于社区边缘上的人物并不能说已插入了这村落社群中，因为他们常常得不到一个普通公民的权利，他们不被视作自己人，不被人

所信托。我已说过乡土社会是个亲密的社会，这些人却是“陌生”人，来历不明，形迹可疑。可是就在这个特性上却找到了他们在乡土社会中的特殊职业。

亲密的血缘关系限制着若干社会活动，最主要的是冲突和竞争；亲属是自己人，从一个根本上长出来的枝条，原则上是应当痛痒相关，有无相通的。而且亲密的共同生活中各人互相依赖的地方是多方面和长期的，因之在授受之间无法一笔一笔地清算往回。亲密社群的团结性就依赖于各分子间都相互地拖欠着未了的人情。在我们社会里看得最清楚，朋友之间抢着会账，意思是要对方欠自己一笔人情，像是投一笔资。欠了别人的人情就得找一个机会加重一些去回个礼，加重一些就在使对方反欠了自己一笔人情。来来往往，维持着人和人之间的互助合作。亲密社群中既无法不互欠人情，也最怕“算账”。“算账”、“清算”等于绝交之谓，因为如果相互不欠人情，也就无需往来了。

但是亲属尽管怎样亲密，究竟是体外之己；虽说痛痒相关，事实上痛痒走不出皮肤的。如果要维持这种亲密团体中的亲密，不成为“不是冤家不碰头”，也必须避免太重叠的人情。社会关系中权利和义务必须有相当的平衡，这平衡可以在时间上拉得很长，但是如果是一面倒，社会关系也就要吃不消，除非加上强制的力量，不然就会折断的。防止折断的方法之一是在减轻社会关系上的担负。举一个例子来说：云南乡下有一种称上矧的钱会，是一种信用互助组织。我调查了参加矧的人的关系，看到两种倾向，第一是避免同族的亲属，第二是侧重在没有亲属关系的朋友方面。我问他们为什么不找同族亲属入矧？他们的理由是很现实的。同族的亲属理论上互通有无、相互救济的责任，如果有能力，有好意，不必入矧就可以直接给钱帮忙。事实上，这种慷慨的亲属并不多，如果拉了入矧，假若不按期交款时，碍于人情不能逼，结果矧也吹了。所以他们干脆不找同族亲属。其他亲属如舅家的人虽有入矧的，但是也常发生不交款的事。我调查时就看到一位矧首为此发急的情形。他很感慨地说：钱上往来最好不要牵涉亲戚。这句话就是我刚才所谓减轻社会关系上的担负的注解。

社会生活愈发达，人和人之间往来也愈繁重，单靠人情不易维持相互间权利和义务的平衡。于是“当场算清”的需要也增加了。货币是清算的单位和媒介，有了一定的单位，清算时可以正确；有了这媒介可以保证各人间所得和所欠的信用。“钱上往来”就是这种可以当场算清的往来，也就是普通包括在“经济”这个范围之内的活动，狭义地说是生意经，或是商业。

在亲密的血缘社会中商业是不能存在的。这并不是说这种社会不发生交易，而是说他们的交易是以人情来维持的，是相互馈赠的方式。实质上馈赠和贸易都是有无相通，只在清算方式上有差别。以馈赠来经营大规模的易货在太平洋岛屿间还可以看得到。Malinowski所描写和分析的Kula制度就是一个例证。但是这种制度不但复杂，而且很受限制。普通的情形是在血缘关系之外去建立商业基础。在我们乡土社会中，有专门作贸易活动的街集。街集时常不在村子里，而在一片空场上，各地的人到这特定的地方，各以“无情”的身份出现。在这里大家把原来的关系暂时搁开，一切交易都得当场算清。我常看见隔壁邻舍大家老远地走上

十多里在街集上交换清楚之后，又老远地背回来。他们何必到街集上去跑这一趟呢，在门前不是就可以交换的么？这一趟是有作用的，因为在门前是邻舍，到了街集上才是“陌生”人。当场算清是陌生人间的行为，不能牵涉其他社会关系的。

从街集贸易发展到店面贸易的过程中，“客边”的地位有了特殊的方便了。寄籍在血缘性社区边缘上的外边人成了商业活动的媒介。村子里的人对他可以讲价钱，可以当场算清，不必讲人情，没有什么不好意思。所以依我所知道的村子里开店面的，除了穷苦的老年人摆个摊子，等于是乞丐性质外，大多是外边来的“新客”。商业是在血缘之外发展的。

地缘是从商业里发展出来的社会关系。血缘是身份社会的基础，而地缘却是契约社会的基础。契约是指陌生人中所作的约定。在订定契约时，各人有选择的自由，在契约进行中，一方面有信用，一方面有法律。法律需要一个同意的权力去支持。契约的完成是权利义务的清算，须要精密的计算，确当的单位，可靠的媒介。在这里是冷静的考虑，不是感情，于是理性支配着人们的活动——这一切是现代社会的特性，也正是乡土社会所缺的。

从血缘结合转变到地缘结合是社会性质的转变，也是社会史上的一个大转变。

⑬ SEPARATING NAMES FROM REALITY

It is convenient to regard rural society as basically static, especially when we contrast it with modern society. But, in fact, no society is entirely static. Rural society simply changes more slowly than modern society. Although slow, the pace of change in rural society is indicative of something more. Different rates of change may indicate different types of change. In this chapter, I am going to discuss the type of change that occurs in the slow transformation of rural society.

When I discussed the nature of power, I proposed three types: dictatorial power growing out of social conflict; consensual power growing out of social cooperation; and paternalistic power growing out of generational succession. Now I want to propose a fourth type, which occurs in periods of rapid social transition. The term generational succession indicates individual mobility in a society with a fixed social structure. The term social transition indicates changes in the social structure itself. The two processes of change are not necessarily in conflict but, rather, can coexist. No society would suddenly one day turn up with an entirely different social structure. No matter how fast the transition was, it would still be gradual. Whatever changes occur in a given period of time, they always pertain only to a small part of the whole social structure. Therefore, the two types of power that grow out of the two social processes necessarily exist simultaneously. But they are inversely related; as one wanes, the other waxes. If society changes slowly, paternalistic power is stronger; if it changes rapidly, a different phenomenon occurs, which is characterized by the saying "Fathers do not act like fathers, and sons do not act like sons" (fu bu fu, zi bu zi). Therefore, when rapid changes occur, the paternalistic power of fathers over sons diminishes accordingly.

A social structure itself has no inherent need to change. Some scholars, including one I mentioned earlier, Oswald Spengler, view social structure (which they see as a major component of culture) as an organic being that, like our bodies, has a life cycle. In youth, it is strong; in old age, it is weak. I am not willing to accept this view, for social structure, like other parts of culture, is produced by people; it is a tool used by people in society to satisfy their needs. Changes in a social structure occur when the social structure no longer meets

people's needs, and people want it to change. It is like writing characters with a brush. A brush and Chinese characters are tools, and we use them to convey meanings to others. If, however, we want to convey our ideas to English people, then Chinese characters and a brush are no longer effective tools; we would have to use other tools, such as the English language and typewriters.

Social changes often occur when the old structure can no longer cope with new circumstances. When people first encounter a new set of circumstances, they discover that the old methods are not effective in bringing about expected results. As a consequence, difficulties creep into life. People will not give up the old methods before they find them clearly inadequate. The old ways of life have their inertia. But if old methods no longer meet people's needs, people will eventually begin to distrust them. On the one hand, holding on to ineffective tools is senseless and inconvenient and may even result in losses. On the other hand, new methods are not ready-made but have to be invented by someone, or learned from some other culture, or otherwise imported. And then the new methods have to be tested, and only afterward will people begin to accept them. Then the process of social transition comes to an end. During the transitional period, people will feel perplexed and at a loss. They will be full of tension, hesitant, and uneasy. It is at this juncture that a type of person whom we might call "a cultural hero" (wenhua yingxiong) most likely appears. This person is able to provide the way to organize new procedures and to gain people's trust. This kind of person, at this point at least, may dominate followers; therefore, a certain power accrues to him. This power differs from dictatorial power, because it is not based on an exploitative relationship. It also differs from consensual power, because it is not bestowed by society. It differs from paternalistic power as well, because it is not based on tradition. It is produced by changing trends; it is a power brought on by changing times; therefore, I will call it "temporal power" (shishi quanli).¹

Temporal power can be found in primitive societies. In such societies, people often encounter unusual situations, and they need capable people to provide solutions. Such people are regarded as heroes. Wars are also special circumstances, and in times of war heroes become prominent. In modern times, society is rapidly changing; accordingly, this type of power is gaining momentum again. It is interesting to see that temporal power shows up most clearly when a backward society is undergoing rapid modernization. I think we can look at the nature of power in the Soviet Union from this perspective. British and American scholars think it is a type of dictatorial power, because in form it is a dictatorship. But from the standpoint of the people in the Soviet Union, this dictatorship is

different from czarism. If we adopt the concept of temporal power, it may be easier for us to understand its nature.

This power is least advanced in stable societies. Insofar as its social structure meets people's daily needs, Chinese rural society is among the most stable of societies. It has few "leaders" and few "heroes." Stability is, of course, relative; but it is safe to say that change here is very slow. But just using the phrase "very slow" is not very clear; we should also ask exactly how slow. Confucius has already provided an answer to this question: "Nothing should be changed until three years after your father dies." In other words, social change becomes absorbed into the regular cycle of generational succession. This is, indeed, a sign of a stable society.

The concept of filial piety that Confucian scholars stress is actually a way to maintain social stability. Filial piety means that there should be no disobedience. This concept recognizes the priority of paternalistic power. The most senior people represent the tradition. If you comply with the tradition, you will not disobey your father's instructions. The representatives of this tradition will die, and you yourself will become senior to others; it is merely a matter of time. If the speed of social change is as slow as the speed of generational succession, then parents and children, representing two different generations, will have no conflicts. Tradition itself changes gradually, and therefore can support the leadership of older people. A society of this kind does not need a "revolution."

From a societal point of view, if the leaders can keep up with the pace of social change, society may avoid the turmoil caused by a larger social transformation. England is a good example. Many people envy the fact that it was able to carry out many fundamental reforms without bloodshed. But these same people overlook the conditions that enabled the British to do so. In the past few centuries, Great Britain has been a world leader, and it is the country where the industrial revolution began. In British society, the ruling class is also the class that can best adapt to a changing environment. The ability of that class to adapt to change matched the pace of change in that environment, so that a bloody revolution was unnecessary. Whether Great Britain can keep this record depends on whether it can maintain this coordination.

Rural society has a fixed environment. If a son can wait three years after his father dies to begin to make changes, then whatever social changes that are made will likely not give rise to much conflict. In the world of human affairs, the oldest people maintain their power, and the youngest, holding to the standard of "no disobedience," accept the rule of tradition. There is no active opposition here; besides, the paternalistic power of the elders would tolerate no opposition.

Paternalistic power is based on education, the transferal of knowledge from the knowledgeable to the ignorant. If the cultural knowledge passed on is useful, there is no need for the learner to oppose the teacher. If the cultural knowledge passed on is useless, education itself becomes totally meaningless, but opposition still does not arise in this relationship between senior and junior.

Opposition is tolerated, and even encouraged, only where there is consensual power. Because consensual power is based on contract, the power holders are closely watched to see whether they comply with the contract. Moreover, opposition—that is, disagreement—is the first step in achieving agreement. Under dictatorial power, there is no open opposition, only passive resistance. The relationship between ruler and ruled presupposes opposition, and thus dictatorial power is required in the first place to suppress any resistance. With temporal power, opposition occurs when there are different solutions to the same problems. Sometimes a society cannot experiment with different schemes at the same time, so disputes occur among the different advocates. These disputes may lead to a "cold war," with each advocate engaged in a propaganda battle to win over the people. Each person, seeking the success of his own scheme, feels that the other schemes distract people's attention and divert support that he needs in order to prevail. Hence, there emerges an intolerance toward others and an attempt at total ideological control. The main thrust of such ideological struggle is to win over opposing alignments, and when such an intolerance occurs, opposition becomes confrontational.

Let us look again at Chinese rural society, a society ruled by the paternalistic power of elders. In this type of society, opposition to what the elders say takes the form of an "interpretation." Such interpretations outwardly maintain the form of paternalistic power but change the content. Except for the Spring and Autumn period (770-476 B.C.) and the Warring States period (475-221 B.C.), when society went through a great social transformation, Chinese intellectual history has followed Confucianism as its primary authority. People have had to justify social change by reinterpreting the old authorities. Such reinterpretations lead to a widening separation between the names of phenomena and their reality. With paternalistic power, people are not allowed to oppose traditional forms. But as long as they pay lip service to the form, they may reinterpret and thereby change the content. The consequence of this practice is inevitable. We say one thing but mean another. People who have grown up in old-style Chinese families all understand how the interpretation of paternal will can be distorted to maintain the facade of "no disobedience." Under such circumstances, hypocrisy is not only unavoidable; it is a necessity. Unable to oppose the impracticable

doctrines and orders issued by the elders, one simply distorts their wishes while giving them face—that is, outward compliance. The gap between the name and underlying reality, however, increases as the pace of social change intensifies. This gap would not develop in a social structure that is totally static, but a totally static social structure does not exist. In a paternalistic social structure, during times of little social change, elders will not tolerate opposition. As the speed of change accelerates, a gap emerges between what the elders demand and what others are actually able to do. Distorted interpretations become commonplace. The result of having the emperor in one's power to order the dukes about in his name is that position and power, name and substance, words and deeds, theory and reality—all tend to separate and lose their interconnectedness.

拾叁 名实的分离

我们把乡土社会看成一个静止的社会不过是为了方便，尤其在和现代社会相比较时，静止是乡土社会的特点，但是事实上完全静止的社会是不存在的，乡土社会不过比现代社会变得慢而已。说变得慢，主要的意思自是指变动的速率，但是不同的速率也引起了变动方式上的殊异。我在本文里将讨论乡土社会速率很慢的变动中所形成的变动方式。

我在上面讨论权力的性质时已提出三种方式：一是从社会冲突中所发生的横暴权力；二是从社会合作中所发生的同意权力；三是从社会继替中所发生的长老权力。现在我又想提出第四种权力，这种权力发生在激烈的社会变迁过程之中。社会继替是指人物在固定的社会结构中的流动，社会变迁却是指社会结构本身的变动。这两种过程并不是冲突的，而是同时存在的，任何社会决不会有一天突然变出一个和旧有结构完全不同的样式，所谓社会变迁，不论怎样快，也是逐步的，所变的，在一个时候说，总是整个结构中的一小部分。因之从这两种社会过程里所发生出来的两种权力也必然同时存在。但是它们的消长却互相关联。如果社会变动得慢，长老权力也就更有势力，变得快，“父不父，子不子”的现象发生了，长老权力也随着缩小。

社会结构自身并没有要变动的需要。有些学者，好像我在上文所提到的那位Spengler，把社会结构（文化中的一主要部分）视作有类于有机体，和我们身体一般，有幼壮老衰等阶段。我并不愿意接受他们的看法，因为我认为社会结构，像文化的其他部分一般，是人造出来的，是用来从环境里取得满足生活需要的工具。社会结构的变动是人要它变的，要它变的原因是在它已不能答复人的需要。好比我们用笔写字，笔和字都是工具，目的是在想用它们来把我们的意思传达给别人。如果我们所要传达的对象是英国人，中文和毛笔就不能是有效的工具了，我们得用别的工具——英文和打字机。

这样说来社会变迁常是发生在旧有社会结构不能应付新环境的时候。新的环境发生了，人们最初遭遇到的是旧方法不能获得有效的结果，生活上发生了困难。人们不会在没有发觉旧方法不适用之前就把它放弃的。旧的生活方法有习惯的惰性，但是如果它已不能答复人们的需要，它终必会失去人们对它的信仰，守住一个没有效力的工具是没有意义的，会引起生活上的不便，甚至蒙受损失。另一方面，新的方法却又不是现存的，必须有人发明，或是有人向别种文化去学习，输入，还得经过试验，才能被人接受，完成社会变迁的过程。在新旧交替之际，不免有一个惶惑、无所适从的时期，在这个时期，心理上充满着紧张、犹豫和不安。这里发生了“文化英雄”，他提得出办法，有能力组织新的试验，能获得别人的信任。这种人可以支配跟从他的群众，发生了一种权力。这种权力和横暴权力并不相同，因为它并不建立在剥削关系之上的；和同意权力又不同，因为它并不是由社会所授权的；和长老权力更不同，因为它并不根据传统的。它是时势所造成的，无以名之，名之曰

时势权力。

这种时势权力在初民社会中常可以看到。在荒原上，人们常常遭遇不平常的环境，他们需要有办法的人才，那是英雄。在战争中，也是非常的局面，这类英雄也脱颖而出。现代社会又是一个变迁激烈的社会，这种权力也在抬头了。最有意思的就是一个落后的国家要赶紧现代化的过程中，这种权力表示得也最清楚。我想我们可以从这角度去看苏联的权力性质。英美的学者把它归入横暴权力的一类里，因为它形式上是独裁的；但是从苏联人民的立场来看，这种独裁和沙皇的独裁却不一样，如果我们采用这个时势权力的概念看去，比较上容易了解它的本质了。

这种权力最不发达的是在安定的社会中。乡土社会，当它的社会结构能答复人们生活的需要时，是一个最容易安定的社会，因之它也是一个很少“领袖”和“英雄”的社会。所谓安定是相对的，指变得很慢。如果我单说“很慢”，这句话并不很明朗，一定要说出慢到什么程度。其实孔子已回答过这问题，他的答案是“三年无改于父之道”。换一句话说来，社会变迁可以吸收在社会继替之中的时候，我们可以称这社会是安定的。

儒家所注重的“孝”道，其实是维持社会安定的手段，孝的解释是“无违”，那就是承认长老权力。长老代表传统，遵守传统也就可以无违于父之教。但是传统的代表是要死亡的，而且自己在时间过程中也会进入长老的地位。如果社会变迁的速率慢到可以和世代交替的速率相等，亲子之间，或是两代之间，不致发生冲突，传统自身慢慢变，还是可以保持长老的领导权。这种社会也就不需要“革命”了。

从整个社会看，一个领导的阶层如果能追得上社会变迁的速率，这社会也可以避免因社会变迁而发生的混乱。英国是一个很好的例子。很多人羡慕英国能不流血而实行种种富于基本性的改革，但很多忽略了他们所以能这样的条件。英国在过去几个世纪中，以整个世界的文化来说是处于领导地位，他是工业革命的老大。英国社会中的领导阶层却又是最能适应环境变动的，环境变动的速率和领导阶层适应变动的速率配得上才不致发生流血的革命。英国是否能保持这个纪录，还得看他们是否能保持这种配合。

乡土社会环境固定，在父死三年之后才改变他的道的速率中，社会变迁也不致引起人事的冲突。在人事范围中，长老保持他们的权力，子弟们在无违的标准中接受传统的统治。在这里不发生“反对”，长老权力也不容忍反对。长老权力是建立在教化作用之上的，教化是有知对无知，如果所传递的文化是有效的，被教的自没有反对的必要，如果所传递的文化已经失效，根本也就失去了教化的意义。“反对”在这种关系里是不发生的。

容忍，甚至奖励，反对在同意权力中才发生，因为同意权力建立在契约上，执行这权力的人是否遵行契约是一个须随时加以监督的问题。而且反对，也就是异议，是获得同意的必要步骤。在横暴权力之下，没有反对，只有反抗，因为反对早就包含在横暴权力的关系中。因之横暴权力必须压制反抗，不能容忍反对。在时势权力中，反对是发生于对同一问题不同的答案上，但是有时，一个社会不能同时试验多种不同的方案，于是在不同方案之间发生了争斗，也可以称作“冷仗”，宣传战，争

取人民的跟从。为了求功，每一个自信可以解决问题的人，会感觉到别种方案会分散群众对自己的方案的注意和拥护，因之产生了不能容忍反对的“思想统制”。在思想争斗中，主要的是阵线，反对变成了对垒。

回到长老权力下的乡土社会说，反对被时间冲淡，成了“注释”。注释是维持长老权力的形式而注入变动的内容。在中国的思想史中，除了社会变迁激速的春秋战国这一个时期，有过百家争鸣的思想争斗的场面外，自从定于一尊之后，也就在注释的方式中求和社会的变动谋适应。注释的变动方式可以引起名实之间发生极大的分离。在长老权力下，传统的形式是不准反对的，但是只要表面上承认这形式，内容却可以经注释而改变。结果不免是口是心非。在中国旧式家庭中生长的人都明白家长的意志怎样在表面的无违下，事实上被歪曲的。虚伪在这种情境中不但是无可避免而且是必需的。不能反对而又不切实用的教条或命令只有加以歪曲，只留一个面子。面子就是表面的无违。名实之间的距离跟着社会变迁速率而增加。在一个完全固定的社会结构里不会发生这距离的，但是事实上完全固定的社会并不存在。在变得很慢的社会中发生了长老权力，这种统治不能容忍反对，社会如果加速地变动时，注释式歪曲原意的办法也就免不了。挟天子以令诸侯的结果，位与权，名与实，言与行，话与事，理论与现实，全趋向于分离了。

⑭ FROM DESIRE TO NECESSITY

My previous discussion of temporal power makes me think of an additional dimension of social change. This dimension is implied in a set of terms that we now hear used a lot, terms such as social planning and, even more extreme, social engineering. Obviously, such terms have a modern meaning that is unfamiliar in a rural society. They indicate that a profound change has occurred in the way people think about their society. We must examine this change in perception if we want to understand the differences between temporal and patriarchal power.

Humans have discovered that society can be planned. This is a great discovery. It demonstrates that humans have already departed from their rural roots, since such an idea simply could not exist in a truly rural society. In rural society, people are able to use their desires (yuwang) as the means to guide their activities. But in modern societies, desires cannot serve as a guide to human behavior. Instead, with the new way of thinking, something called "necessity" (xuyao) serves as the justification for "plans." This shift from desire to necessity marks a very important watershed in human affairs. Let me describe the difference between the concepts of desire and necessity.

In observing human behavior, we see that human beings do not act randomly; they do not act simply for the sake of action. Actions are means to attain specific ends. Consider your own behavior. Each action has its purpose. You pick up chopsticks only when you want to eat; you fix a meal only when you want to satisfy your hunger. There is always a "want" to guide your actions. Whenever you ask others a question—such as "Why have you come?" or "What do you want?"—you can always hear in their answers their explanation for why they behave as they do. Therefore, when we talk of human behavior, we always speak of it as being motivated.

There are two implications to this belief that human behavior consists of motivated actions. One is that human beings are able to control their own behavior. If they want to do something, they do it; if they don't want to do something, they don't do it. This is what we call "will" (yizhi). The other meaning is that people's choices are grounded in their desires. Desires determine the direction of human behavior, the "wants" and "don't wants" that people have. These "wants" (yao) exist prior to behavior. When you have what you want, your desires are satisfied and you will feel happy. If your desires cannot be satisfied and you do not have what you want, you feel unhappy. In

English, the word want expresses both "desire" and "want." The same word in English also means "to be deficient" in something. Therefore, to be deficient or to be wanting in something not only describes a state of being but also suggests a desire to attain. First comes the sensation of being uneasy, then the urge for the human body to act. This urge may be thought of as a "state of tension" (jinzhang zhuangtai), a condition that cannot last long and must be released in some way. Releasing the tension creates action, which brings about a sense of satisfaction in having done something. Desire, tension, action, satisfaction, happiness—these terms encompass the process underlying human behavior.

If desire controls behavior through will, actors must be conscious of their desires; self-awareness means that actors generally know what they want. There is nothing wrong with having desires, but it does raise at least one problem. Human beings may act according to their desires, but are their desires necessarily beneficial to the development of healthy individuals, or to the harmonious cooperation of individuals in society, or to the integrity and continuity of society in general? I do not raise this question to explore whether human nature is good or evil but, rather, to examine the reality of human existence. If we were to suspend our connections with the human realm for a moment and were able to stand, as it were, outside the human species in order to look at human beings as we are able to look at other animals, we would see that human beings have a very long history; they have done many things to maintain their existence and continuity. We see that they act as if healthy individual development and the integrity of society were their goals. But if we were to move closer to these people and question them, they would tell us that their many desires have nothing to do with more general social goals. Maintaining our distance from the human species, we would see men and women meeting each other, giving birth to babies, and cooperating in raising their children—all of which are necessary for the integrity of society. If no babies were born, if nobody raised children, if people died one after another, then wouldn't society be in chaos and wouldn't the human species become extinct? Thereupon, being filled with such insights, we might go to talk to couples about their long-term service to society, but they would laugh at our high-sounding conclusions and would likely say something like this: "We are together for love, not for children; the children just come along with that." Nowhere could we find people who desire only to maintain the human race. Indeed, when looking for a girlfriend, what boy would think of such bookish questions?

Similarly, still maintaining our distance from the human species, every day we see people eating carbohydrates, fats, vitamin A, and

vitamin C—we could give a long list of such nutritional items. Then we could take this information back to the lab and do some research, and, sure enough, we would find that carbohydrates provide energy, that vitamin A provides this and that, and that all nutritional items combine to support life. But if we asked people who live outside modern cities why they eat pepper and garlic, they would answer, "Because they taste good, and, besides, they go with rice."

Love and good food are conscious desires. What directly decides our actions are, most certainly, those desires. But do the actions caused by desires always match the requirements for human existence? This question has sparked many scholarly discussions. If we examine the preceding paragraphs, we may come to the conclusion that human desires are quite subtle. Although human beings may want this or that, the result often exactly fulfills the needed condition for their existence. What are desires? Food and sex—they are characteristically deeply embedded in human biology. There seems to be an ingenious arrangement here: continuity is necessary for the human race, and people of different sexes fall in love; certain nutrients are necessary for life, and people like foods that have the necessary variety of nutrients. In the nineteenth century, a theory based on this kind of reasoning became widely accepted. This theory says that as long as everyone is "selfish"—that is, as long as each works entirely to satisfy the desires brought by instincts—the best and most harmonious order will emerge in society. Adam Smith saw this order—in which individuals acting for themselves would create a good life for all—as being arranged through the working of an "invisible hand."

This theory actually is based not on modern society but on a conception of rural society, because the theory is more or less correct for such a society. The reason for its correctness is not that there really is an "invisible hand" but, rather, that in rural society individual desires often do match the conditions for human existence. The two match because desires are not biological facts but cultural facts. By this I mean that people are taught to think in this way. For instance, people from northern China desire to eat garlic. This desire is not inherited but is instead learned from childhood. The "selfishness" that is a part of this theory is actually the ability to think for oneself, but the way of thinking is learned from the society. The issue is not the "want" itself, but the content of the want, and the content is determined by culture.

I maintain that desire is a cultural fact. This does not mean that all cultural facts match the requirements for human existence; many things in culture are irrelevant or even harmful to those requirements. Consider eating as an example. If all things our culture allows us to eat were in accord with nutritional principles, there would be no need

for medicinal drugs. Even if we ignore drugs and other poisonous foods, ordinary food still proves the saying "Illness enters the body through the mouth" (bing cong kou ru). I often feel it is not very accurate to set up "survival" as an ultimate human value. If there are differences between the human race and other animals and plants, then the most important, in my view, is that humans have found values that go beyond survival, such as truth, goodness, and beauty. I like to illustrate this by saying that "humans are the only kind of animal able to commit suicide." Regardless of this fact, even though humans may have other values beyond mere survival, and even though a part of culture may be irrelevant or even harmful to human existence, a culture that does not provide the conditions necessary for its survival will be eliminated in due course, and so will the people who accept this kind of culture. Over time, they will become extinct. The reason for their gradual elimination is something not only internal to their culture but also external to it, as a part of a natural evolutionary process. This process is unrelated to values. Beauty or ugliness, goodness or evil, truths or lies—all these are irrelevant to it. This life process lays down only a few conditions; if they are fulfilled, you stay; if they are not fulfilled, you go. We should think of Xishi, so ill yet so beautiful; but nature would not allow her to live on just because of her beauty.¹ Disease leads to death; only health is the condition of survival. Nature does not prohibit people from committing suicide, but no power in nature can give life back to those who have already done so.

Another theory is relevant here. At the beginning of his famous book *Folkways*, William Graham Sumner says that for human beings action comes before ideas.² Action is determined by experiences accumulated through trial and error. Ideas only function to maintain those experiences over time; our conscious desires are the commands of culture. This theory is also accurate when applied to rural society. The reason is that rural society is traditional; it is a society based on the accumulation of experiences. These accumulated experiences arise out of a process of "natural selection"; "errors"—actions that do not fulfill the requirements for survival—are eliminated, so that society increasingly develops a set of time-tested recipes for living life. No matter what actors might say about them, these recipes must be beneficial to human existence.

At this point, I should stress that many actions occurring in rural society—actions that seemed to be directed toward some concrete goal or to satisfy some specific desire—turn out, on closer and more objective examination, to have no connection to their stated purpose and are not directed to satisfying the subject's perceived needs. Sorcery is the best example of this kind of behavior. In fact, to drive

away a ghost is to drive away the fear in one's own heart. Whether there are ghosts or not is unimportant, but the fear has to be driven away.

In rural society, culture shapes desires; and desires, in turn, guide behavior. The result is that desires and ensuing behavior fulfill the requirements for existence. But this match between behavior and social continuity is neither conscious nor planned. The match is a subtle one and can be said to be the work of heaven (tiangong) in that it does not flow directly from human will, even though culture is certainly a human creation. This unconscious match between behavior and continuity has its disadvantages. When the environment changes, rural people are unable to make active plans for adapting to the changes. As Sumner said, people, proceeding blindly, are forced through trial and error to find new ways. Fortunately, the rural environment does not change very much, and the speed of that change is not very fast. Therefore, normally, people have time to make their blind tests, and the losses from their errors are usually not fatal. In the initial stage of the industrial revolution, thinkers could still conceive of a social order that was run by an "invisible hand." And, as a matter of fact, even today, in a culture as advanced and a society as complicated as the one in the United States, there is still a strong predisposition to oppose planned economies. But it is dangerous to maintain this laissez-faire spirit, which has been nurtured all along in rural society. If something goes wrong, it will be no small matter.

When society changes fast and the original culture can no longer guarantee satisfaction in life, people have to examine the relationship between their behavior and their goals. They then discover that desires are not a final motivation to action but, rather, serve as a vehicle for society to fulfill the conditions for its existence. It is then that people begin to pay attention to the conditions of existence. In sociology, a new concept appears: the concept of "function." Function means "the effect of a set of actions on the existence of individuals and the integrity of society." Social actors are not necessarily aware of functions. That is the reason we need functional analysis. Functions are like nutrition in food, rather than taste. At this point, people become consciously aware of the conditions necessary for their existence, and they talk of "necessities" as opposed to "desires." People in modern societies have begun to choose food for the sake of nutrition. This is the era of reason, and reason means that people plan their actions according to a known relationship between means and ends. Therefore, this can also be called a scientific era.

In modern society, knowledge is power. This is so because people in society make plans according to their needs. Power gained from knowledge is what I called "temporal power" earlier. In rural society,

people depend on experience and do not need to plan. This is so because, in the process of time, nature has selected for them a traditional life design on which they have come to rely. Each simply acts according to his or her own desires.

拾肆 从欲望到需要

提起了时势权力使我又想到关于社会变迁另一问题，也就是现在我们常常听到的社会计划，甚至社会工程等一套说法。很明显地，这套名字是现代的，不是乡土社会中所熟习的。这里其实包含着一个重要的变化，如果我们要明白时势权力和长老权力的差别，我们还是在这方面加以探讨。人类发现社会也可以计划，是一个重大的发现，也就是说人类已走出了乡土性的社会了。在乡土社会里没有这想法的。在乡土社会人可以靠欲望去行事，而在现代社会中欲望并不能做人们行为的指导了，发生“需要”，因之有“计划”。从欲望到需要是社会变迁中一个很重要的里程碑，让我先把欲望和需要这两个概念区别一下。

观察人类行为，我们常可以看到人类并不是为行为而行为，为活动而活动的，行为或是活动都是手段，是有所为而为之的。不但你自己可以默察自己，一举一动，都有个目的，要吃饭才拿起筷子来，要肚子饿了才吃饭……总是有个“要”在领导自己的活动；你也可问别人：“为什么你来呢？有什么事？”我们也总可以从这问题上得到别人对于他们的行为的解释。于是我们说人类行为有动机的。

说人类行为有动机的包含着两个意思，一是人类对于自己的行为是可以控制的，要这样做就这样做，不要这样做就不这样做，也就是所谓意志；二是人类在取舍之间有所根据，这根据就是欲望。欲望规定了人类行为的方向，就是上面所说要这样要那样的“要”。这个“要”是先于行为的，要得了，也就是欲望满足了，我们会因之觉得愉快；欲望不满足，要而得不到，周身不舒服。在英文里欲望和要都是want，同时want也作缺乏解。缺乏不只是一种状态的描写，而是含有动的意思，这里有股劲，由不舒服而引起的劲，它推动了人类机体有所动作，这个劲也被称作“紧张状态”，表示这状态是不能持久，必须发泄的，发泄而成行为，获得满足。欲望——紧张——动作——满足——愉快，那就是人类行为的过程。

欲望如果要能通过意志对行为有所控制，它必须是行为者所自觉的。自觉是说行为者知道自己要的是什么。在欲望一层上说这是不错的，可是这里却发生了一个问题，人类依着欲望而行为，他们的行为是否必然有利于个体的健全发展，和有利于社会间各个人的融洽配合、社会的完整和持续？这问题在这里提出来并不是想考虑性善性恶，而是从人类生存的事实上发生的。如果我们走出人类的范围，远远地站着，像看其他生物一般地看人类，我们可以看见人类有着相当久的历史了，他们做了很多事，这些事使人类能生存和绵续下去，好像个人的健全发展和社会的完整是他们的目的。但是逼近一看，拉了那些人问一问，他们却说出了很多和这些目的毫不相关的欲望来了。你在远处看男女相接近，生了孩子，男女合作，抚养孩子，这一套行为是社会完整所必需的，如果没有孩子出生，没有人领孩子，人类一个个死去，社会不是会乱了，人类不是断绝了么？你于是很得意去问这些人，他们却对你

说：“我们是为了爱情，我们不要孩子，孩子却来了。”他们会笑你迂阔，天下找不到有维持人类种族的欲望的人，谁在找女朋友时想得着这种书本上的大问题？

同样地，你在远处看，每天人都在吃淀粉、脂肪，吃维他命A、维他命C，一篇很长的单子，你又回去在实验室研究了一下，发现一点不错，淀粉供给热量，维他命A给人这个那个，——合于营养，用以维持生命。但是你去找一个不住在现代都市的乡下老问他，为什么吃辣子、大蒜，他会回答你：“这才好吃，下饭的呀。”

爱情，好吃，是欲望，那是自觉的。直接决定我们行为的确是这些欲望。这些欲望所引导出来的行为是不是总和人类生存的条件相合的呢？这问题曾引起过很多学者的讨论。我们如果从上面这段话看去，不免觉得人类的欲望确乎有点微妙，他们尽管要这个要那个，结果却常常正合于他们生存的条件。欲望是什么呢？食色性也，那是深入生物基础的特性。这里似乎有一种巧妙的安排，为了种族绵续，人会有两性之爱；为了营养，人会有五味之好。因之，在十九世纪发生了一种理论说，每个人只要能“自私”，那就是充分地满足我们本性里带来的欲望，社会就会形成一个最好、最融洽的秩序。亚当斯密说，“冥冥中那只看不见的手”会安排个社会秩序给每个为自己打算的人们去好好生活的。

这种理论所根据的其实并非现代社会而是乡土社会，因为在乡土社会中，这种理论多少是可以说正确的，正确的原因并不是真是有个“冥冥中”的那只手，而是在乡土社会中个人的欲望常是合于人类生存条件的。两者所以合，那是因为欲望并非生物事实，而是文化事实。我说它是文化事实，意思是人造下来教人这样想的。譬如说，北方人有吃大蒜的欲望，并不是遗传的，而是从小养成的。所谓“自私”，为自己打算，怎样打算法却还是由社会上学来的。问题不是在要的本身，而是在要什么的内容。这内容是文化所决定的。

我说欲望是文化事实，这句话并没有保证说一切文化事实都是合于人类生存条件的。文化中有很多与人类生存条件无关甚至有害的。就是以吃一项来说，如果文化所允许我们入口的东西样样都是合于营养原则的，我们也不至有所谓毒物一类的东西了。就是不谈毒物，普通的食物，还是可以助证“病从口入”的说法。再说得远一些，我常觉得把“生存”作为人类最终的价值是不太确切的。人类如果和其他动植物有些不同的地方，最重要的，在我看来，就在人在生存之外找到了若干价值标准，所谓真善美之类。我也常喜欢以“人是生物中唯一能自杀的种类”来说明人之异于禽兽的“几希”。——但是，人类主观上尽管有比生存更重要的价值，文化尽管有一部分可以无关及无益于人类的生存，这些不合于生存的条件文化以及接受不合于生存条件文化的人，却在时间里被淘汰了。他们不存在了。淘汰作用的力量并不限于文化之内，也有在文化之外的，是自然的力量。这力量并不关心于价值问题；美丑，善恶，真伪，对它是无关的，它只列下若干条件，不合则去，合则留。我们可以觉得病西施是美，但是自然却并不因她美而保留她，病的还是要死的，康健才是生存的条件。自然并不禁止人自杀，但是没有力量可以使自杀了的还能存在。

于是另外一种说法发生了。孙末楠在他的名著Folkways开章明义就

说：“人类先有行为，后有思想。决定行为的是从试验与错误的公式中累积出来的经验，思想只有保留这些经验的作用，自觉的欲望是文化的命令。”

在一个乡土社会中，这也是正确的，那是因为乡土社会是个传统社会，传统就是经验的累积，能累积就是说经得起自然选择的，各种“错误”——不合于生存条件的行为——被淘汰之后留下的那一套生活方式。不论行为者对于这套方式怎样说法，它们必然是有助于生存的。

在这里更可以提到的是，在乡土社会中有很多行为我们自以为是用来达到某种欲望或目的，而在客观的检讨中，我们可以看到这些行为却在满足主观上并没有自觉的需要，而且行为和所说的目的之间毫无实在的关联。巫术是这种行为最明显的例子。譬如驱鬼，实际上却是驱除了心理上的恐惧。鬼有没有是不紧要的，恐惧却得驱除。

在乡土社会中欲望经了文化的陶冶可以作为行为的指导，结果是印合于生存的条件。但是这种印合并不是自觉的，并不是计划的，乡土文化中微妙的配搭可以说是天工，而非人力，虽则文化是人为的。这种不自觉的印合，有它的弊病，那就是如果环境变了，人并不能作主动的有计划的适应，只能如孙未楠所说的盲目地经过错误与试验的公式来找新的办法。乡土社会环境不很变，因之文化变迁的速率也慢，人们有时间可以从容地作盲目的试验，错误所引起的损失不会是致命的。在工业革命的早期，思想家还可以把社会秩序交给“冥冥中那只看不见的手”，其实一直到目前，像美国那样发达的文化里，那样复杂的社会里，居然还有这样大的势力在反对计划经济。但是这时候要维持乡土社会中所养成的精神是有危险的了。出起乱子来，却非同小可了。

社会变动得快，原来的文化并不能有效地带来生活上的满足时，人类不能不推求行为和目的之间的关系了。这时发现了欲望并不是最后的动机，而是为了达到生存条件所造下的动机。于是人开始注意到生存条件的本身了——在社会学里发生了一个新的概念，“功能”。功能是从客观地位去看一项行为对于个人生存和社会完整上所发生的作用。功能并不一定是行为者所自觉的，而是分析的结果，是营养而不是味觉。这里我们把生存的条件变成了自觉，自觉的生存条件是“需要”，用以别于“欲望”。现代社会里的人开始为了营养选择他们的食料，这是理性的时代，理性是指人依了已知道的手段和目的的关系去计划他的行为，所以也可以说是科学化了的。

在现代社会里知识即是权力，因为在这种社会里生活的人要依他们的需要去作计划。从知识里得来的权力是我在上文中所称的时势权力；乡土社会是靠经验的，他们不必计划，因为时间过程中，自然替他们选出一个足以依赖的传统的生活方案。各人依着欲望去活动就得了。

后 记

这集子里所收的十四篇论文是从我过去一年所讲“乡村社会学”的课程中所整理出来的一部分。我这门课程已讲过好几遍，最初我采用美国的教本作参考，觉得不很惬意，又曾用我自己调查的材料讲，而那时我正注意中国乡村经济一方面的问题，学生们虽觉得有兴趣，但是在“乡村社会学”中讲经济问题未免太偏，而且同时学校有“土地经济学”和“比较经济制度”等课程，未免重复太多。过去一年我决定另起炉灶，甚至暂时撇开经济问题，专从社会结构本身来发挥。初次试验离开成熟之境还远，但这也算是我个人的一种企图。

以我个人在社会学门内的工作说，这是我所努力的第二期。第一期的工作是实地的社区研究。我离开清华大学研究院之后就选择了这方面。二十四年〔1935年〕的夏天，我和前妻王同惠女士一同到广西瑶山去研究当地瑶民的生活。那年冬天在山里遭遇了不幸，前妻未获生回，我亦负伤，一直在广州医院度过了春天才北返。在养病期间，我整理了前妻的遗稿，写成了《花蓝瑶社会组织》。二十五年夏天我到自己家乡调查了一个村子，秋天到英国，整理材料，在老师Malinowski教授指导之下，写成了Peasant Life in China一书，在二十七年返国前付印，二十八年出版。返国时抗战已进入第二年，所以我只能从安南入云南，住下了，得到中英庚款的资助，在云南开始实地研究工作，写出了一本《禄村农田》。后来得农民银行的资助，成立了一个小规模的研究室，附设于云南大学，系云大和燕京大学合作机关。我那时的工作是帮忙年轻朋友们一起下乡调查，而且因为昆明轰炸频繁，所以在二十九年冬迁到呈贡，古城村的魁星阁。这个研究室从此得到了“魁阁”这个绰号。我们进行的工作有好几个计划，前后参加的也有十多人，有结果的是：张子毅先生的《易村手工业》、《玉村土地与商业》、《洱村小农经济》，史国衡先生的《昆厂劳工》、《个旧矿工》，谷苞先生的《化城镇的基层行政》，田汝康先生的《芒市边民的摆》、《内地女工》，胡庆钧先生的《呈贡基层权力结构》。其中有若干业已出版。我是魁阁的总助手，帮着大家讨论和写作，甚至抄钢笔板和油印。三十二年我到美国去了一年，把《禄村农田》、《易村手工业》和《玉村土地与商业》改写英文，成为Earthbound China一书，《昆厂劳工》改写成China Enters the Machine Age。三十三年回国，我一方面依旧继续做魁阁的研究工作，同时在云大和联大兼课，开始我的第二期工作。第二期工作是社会结构的分析，偏于通论性质，在理论上总结并开导实地研究。《生育制度》是这方面的第一本著作，这本《乡土中国》可以说是第二本。我在这两期的研究工作中虽则各有偏重，但在性质上是联贯的。为了要说明我选择这些方向来发展中国的社会学的理由，我不能不在这里一述我所认识的现代社会学的趋势。

社会学在社会科学中是最年轻的一门。孔德（Comte）在他《实证哲学》里采取这个名字到现在还不过近一百年，而孔德用这名词来预言的那门研究社会现象的科学应当相等于现在我们所谓“社会科学”的统称。斯宾塞（Spencer）也是这样，他所谓社会学是研究社会现象的总论。把社会学降为和政治学、经济学、法律学等社会科学并列的一门学问，并非创立这名称的早年学者所意想得到的。

社会学能不能成为一门特殊的社会科学其实还是一个没有解决的问题。这里牵涉到了社会科学领域的分划。如果我们承认政治学、经济学有它们特殊的领域，我们也承认了社会科学可以依社会制度加以划分：政治学研究政治制度，经济学研究经济制度等。社会现象能分多少制度也就可以成立多少门社会科学。现在的社会学，从这种立场上说来，只是个没有长成的社会科学的老家。一旦长成了，羽毛丰满，就可以闹分家，独立门户去了。这个譬喻确说明了现代社会学中的一个趋势。

讥笑社会学的朋友曾为它造下了个“剩余社会科学”的绰号。早年的学者像孟德斯鸠，像亚当斯密，如果被称作社会学家并非过分，像《法意》，像《原富》一类的名著，包罗万象，单说是政治学和经济学未免偏重。但是不久他们的门徒们把这些大师们的余绪发挥申引，蔚成家数，都以独立门户为荣，有时甚至讨厌老家的渊源。政治学、经济学既已独立，留在“社会学”领域里的只剩了些不太受人问津的、虽则并非不重要的社会制度，好像包括家庭、婚姻、教育等的生育制度，以及宗教制度等等。有一个时期，社会学抱残守缺地只能安于“次要制度”的研究里。这样，它还是守不住这老家的，没有长成的还是会长成的。在最近十多年来，这“剩余领域”又开始分化了。

在这次大战之前的几年里，一时风起云涌地产生了各种专门性质的社会学，好像孟汉（Karl Mannheim）的知识社会学，Joachim Wach的宗教社会学，叶林（Eugen Ehrlich）的法律社会学，甚至人类学家斐司（Raymond Firth）称他We, the Tikopia的调查报告作亲属社会学。这种趋势发展下去，都可以独立成为知识学、宗教学、法律学和亲属学的。它们还愿意拖着社会学的牌子，其实并不是看得起老家，比政治学和经济学心肠软一些，而是因为如果直称知识学或宗教学就不易和已经占领着这些领域的旧学问相混。知识学和知识论字面上太近似，宗教学和神学又使人不易一见就分得清楚。拖着个“社会学”的名词表示是“以科学方法研究该项制度”的意思。“社会学”这名词在这潮流里表面上是热闹了，但是实际上却连“剩余社会科学”的绰号都不够资格了，所剩的几等于零了。

让我们重回到早期的情形看一看。在孔德和斯宾塞之后有一个时期许多别的科学受了社会学的启发，展开了“社会现象和其他现象交互关系”的研究，我们不妨称作“边缘科学”。这种研究在中国社会学中曾占很重要的地位。我记得在十五年左右以前，世界书局曾出过一套《社会学丛书》，其中主要的是：社会的地理基础、心理基础、生物基础、文化基础等的题目。孔德早已指出宇宙现象的级层，凡是在上级的必然以下级为基础，因之也可以用下级来“解释”上级。社会现象正处于顶峰，所以从任何其他现象都可以用来解释它的。从解释进而成为“决定论”，就是说社会现象决定于其他现象。这样引诱了很多在其他科学里训练出来

的学者进入社会学里来讨论社会现象，因而在社会学里引成了许多派别：机械学派、生物学派、地理学派、文化学派。苏洛金（Sorokin）曾写了一本《当代社会学学说》来介绍这许多派别。此书已有中译本（黄凌霜译，商务印书馆出版），我在这里不必赘述。

虽则苏洛金对于各家学说的偏见很有批评，但是我们得承认“边缘科学”的性质是不能不“片面”的。着眼于社会现象和地理接触边缘的，自不能希望他会回到别的边缘。至于后来很多学者一定要比较哪一个边缘为“重要”，因而发生争论，实在是多余的。从边缘说，关系是众多的，也可以是多边的，偏见的形成是执一废百的结果。社会学本身从这些“边缘科学”所得的益处，除了若干多余的争论外还有多少，很难下断语，但是对于其他科学却引起了很多新的发展，好像人文生物学、人文地理等等，在本世纪的前期有了重要的进步，不能不说是受了社会学的影响。

社会现象有它的基础，那是无从否认的；其他现象对社会现象发生影响，也是事实；但是社会学不能被“基础论”所独占，或自足于各种“决定论”，那也是自明的道理。社会学躲到这边缘上来是和我上述的社会科学分家趋势相关的。堂奥既被各个特殊社会科学占领了去，社会学也只能退到门限上，站在门口还要互争谁是大门，怎能不说是可怜相？

社会学也许只有走综合的路线，但是怎样综合呢？苏洛金在批评了各派的偏见之后，提出了个 $X+1$ 的公式，他的意思是尽管各派偏重各派的边缘，总有一个全周。其实他的公式是“综合”不如说是“总和”。“总”是把各边缘加起来，“和”是调解偏见。可是加起来有什么新的贡献呢？和事老的地位也不够作为一门科学的基础。社会学的特色岂能只是面面周到呢？

社会现象在内容上固然可以分成各个制度，但是这些制度并不是孤立的。如果社会学要成为综合性的科学，从边缘入手自不如从堂奥入手。以社会现象本身来看，如果社会学不成为各种社会科学的总称，满足于保存一个空洞的名词，容许各门特殊的社会科学对各个社会制度作专门的研究，它可以从两层上进行综合的工作：一是从各制度的关系上去探讨。譬如某一种政治制度的形式常和某一种经济制度的形式相配合，又譬如在宗教制度中发生了某种变动会在政治或经济制度引起某种影响。从各种制度的相互关系上着眼，我们可以看到全盘社会结构的格式。社会学在这里可以得到各个特殊的社会科学所留下，也是它们无法包括的园地。

以全盘社会结构的格式作为研究对象，这对象并不能是概然性的，必须是具体的社区，因为联系着各个社会制度的是人们的生活，人们的生活有时空的坐落，这就是社区。每一个社区有它一套社会结构，各制度配合的方式。因之，现代社会学的一个趋势就是社区研究，也称作社区分析。

社区分析的初步工作是在一定时空坐落中去描画出一地方人民所赖以生活的社会结构。在这一层上可以说是和历史学的工作相通的。社区分析在目前虽则常以当前的社区作研究对象，但这只是为了方便的原因，如果历史材料充分的话，任何时代的社区都同样地可作分析对象。

社区分析的第二步是比较研究，在比较不同社区的社会结构时，常发现了每个社会结构有它配合的原则，原则不同，表现出来结构的形式

也不一样。于是产生了“格式”的概念。在英美人类学中这种研究的趋势已经十分明显，好像Pattern、Configuration、Integration一类名词都是针对着这种结构方面的研究，我们不妨称之为“结构论”（Structuralism），是“功能论”（Functionalism）的延续。但是在什么决定“格式”的问题上却还没有一致的意见。在这里不免又卷起“边缘科学”的余波，有些注重地理因素，有些注重心理因素。但这余波和早年分派互诤的情形不完全相同，因为社区结构研究中对象是具体的；有这个综合的中心，各种影响这中心的因素都不致成为抽象的理论，而是可以观察、衡量的作用。

在社区分析这方面，现代社会学却和人类学的一部分通了家。人类学原是一门包罗极广的科学，和社会学一般经过了分化过程，研究文化的一部分也发生了社区研究的趋势。所以这两门学问在这一点上辐辏会合。譬如林德（Lynd）的Middletown和马凌诺斯基（Malinowski）在Trobriad岛上的调查报告，性质上是相同的。嗣后人类学者开始研究文明人的社区，如槐南（Warner）的Yankee City Series、艾勃里（Embree）的《须惠村》（日本农村）以及拙作Peasant Life in China and Earthbound China，更不易分辨是人类学或社会学的作品了。美国社会学大师派克（Park）先生很早就说：社会学和人类学应当并家，他所主持的芝加哥都市研究就是应用人类学的方法，也就是我在上面所说的“社区分析”。英国人类学先进白朗（Radcliffe-Brown）先生在芝加哥大学讲学时就用“比较社会学”来称他的课程。

以上所说的只是社会学维持其综合性的一条路线，另一条路线却不是从具体的研究对象上求综合，而是从社会现象的共相上着手。社会制度是从社会活动的功能上分出来的单位：政治、经济、宗教等是指这些活动所满足人们不同的需要。政治活动和经济活动，如果抽去了它们的功能来看，原是相同的，都是人和人之间的相互行为。这些行为又可以从它们的形式上去分类，好像合作、冲突、调和、分离等不同的过程。很早在德国就有形式社会学的发生，席木尔（Simmel）是这一派学者的代表。冯维瑞（Von Wiese）的系统社会学经贝干（Becker）的介绍在美国社会学里也有很大的影响。派克和盘吉斯（Park and Burgess）的《社会学导论》也充分表明这种被称为“纯粹社会学”的立场。

纯粹社会学是超越于各种特殊社会科学之上的，但是从社会行为作为对象，撇开功能立场，而从形式入手研究，又不免进入心理学的范围。这里又使我们回想到孔德在建立他的科学级层论时对于心理学地位的犹豫了。他不知道应当把心理现象放在社会现象之下，还是之上。他这种犹豫是起于心理现象的两元性，其一是现在所谓生理心理学，其二是现在所谓社会心理学。这两种其实并不隶属于一个层次，而是两片夹着社会现象的面包。纯粹社会学可以说是以最上层的一片作对象的。

总结起来说，现代社会学还没有达到一个为所有被称为社会学者共同接受的明白领域。但在发展的趋势上看去，可以说的是社会学很不容易和政治学、经济学等在一个平面上去分得一个独立的范围。它只有从另外一个层次上去得到一个研究社会现象的综合立场。我在这里指出了两条路线，指向两个方向。很可能是再从这两个方向分成两门学问；把社区分析让给新兴的社会人类学，而由“社会学”去发挥社会行为形式的

研究。名称固然是并不重要的，但是社会学内容的常变和复杂确是引起许多误会的原因。

* * *

依我这种对 sociology 趋势的认识来说，《生育制度》可以代表以社会学方法研究某一制度的尝试，而这《乡土中国》却是属于社区分析第二步的比较研究的范围。在比较研究中，先得确立若干可以比较的类型，那就是依不同结构的原则分别确定它所形成的格式。去年春天我曾根据 Mead 女士的 *The American Character* 一书写成一本《美国人的性格》，并在这书的后记里讨论过所谓文化格式的意思。在这里我不再复述了。这两本书可以合着看，因为我在这书里是以中国的事实来说明乡土社会的特性，和 Mead 女士根据美国的事实说明移民社会的特性在方法上是相通的。

我已经很久想整理这些在“乡村社会学”课上所讲的材料，但是总觉得还没有成熟，所以迟迟不敢下笔。去年暑假里，张纯明先生约我为《世纪评论》长期撰稿，盛情难却，才决定在这学期中，随讲随写，随写随寄，随寄随发表，一共已有十几篇。储安平先生约我在“观察丛书”里加入一份，才决定重新编了一下，有好几篇重写了，又大体上修正了一遍。不是他们的督促和鼓励，我是不会写出这本书的，但也是因为他们限期限日的催稿，使我不能等很多概念成熟之后才发表，其中有很多地方是还值得推考。这算不得是定稿，也不能说是完稿，只是一段尝试的记录罢了。

三十七年二月十四日于清华胜因院
(据《上海观察社》1947年版排印)

NOTES

FOREWORD

1 Xiangtu Zhongguo (Shanghai: Shanghai guanchashe, 1947).

2 Xiangtu Zhongguo (Xianggang: Wenxue chubanshe, n.d.).

3 Xiangtu Zhongguo (Xianggang: Sanlian shudian, 1986).

1 SPECIAL CHARACTERISTICS OF RURAL SOCIETY

Unless otherwise indicated, all footnotes to the text are provided by the translators.

1 Fei is alluding to three interrelated variations of Chinese society in the twentieth century. In addition to rural society, which he sees as the foundation for the other two variations, he distinguishes urban society and coastal Westernized society. For his discussion of these variations, see Xiangtu chongjian (Reconstructing Rural China) (Xianggang: Wenxue chubanshe, n.d.), pp. 16-23.

2 The three rivers to which Fei refers are the Yangtze, the Yellow, and the Wei.

3 Zhang Bei is a county in northwestern Hebei province.

4 Ferdinand Töennies, *Community and Association*, trans. Charles P. Loomis (London: Routledge and Kegan Paul, 1955).

5 Emile Durkheim, *The Division of Labor in Society*, trans. George Simpson (New York: Free Press, 1964). In the original, Fei mistakenly inverts the two, equating *Gemeinschaft* with organic solidarity and *Gesellschaft* with mechanical solidarity. We have corrected the error in the translation.

2 BRINGING LITERACY TO THE COUNTRYSIDE

1 In this passage, where Fei addresses "those people who advocate rural work," he is referring to the intellectuals who led the Rural

Reconstruction Movement. The leaders of this movement strongly advocated rural education and other measures to reform the countryside. It was a movement that Fei criticized a number of times. See R. David Arkush, *Fei Xiaotong and Sociology in Revolutionary China* (Cambridge, Mass.: Harvard University Press, 1981), pp. 37, 353.

2 Gui Youguang was a scholar who lived during the Ming dynasty (1368-1644). The book *Xiangjixuan ji*, titled after Gui's name for his study, is a collection of his essays.

3 Fei is referring to the tradition of arranged marriages. After the engagement had been announced, contact between the intended couple was forbidden. Often a bride would first meet her husband on the day of her wedding.

4 Fei's argument at this point seems to draw heavily on the social psychology of George Herbert Mead, whose writings were influential in the Chicago school of sociology. Fei likely learned about this group from Robert Park in China and from travels in the United States. For more on this perspective, see George Herbert Mead, *Mind, Self, and Society* (Chicago: University of Chicago Press, 1934). We should note that Fei advances this perspective by making an especially nice contrast between written and spoken languages.

3 MORE THOUGHTS ON BRINGING LITERACY TO THE COUNTRYSIDE

1 In making this distinction between human and animal communication, Fei follows the thesis developed by George Herbert Mead in *Mind, Self, and Society* (Chicago: University of Chicago Press, 1934), pp. 42-60. More recent research has shown that this distinction is less clear-cut than Mead or Fei suggested.

2 Fei's reference is to the biblical story of creation from Genesis, chap. 1.

3 Lao-tse, *Dao de jing*, chap. 80.

4 The practice of returning the corpse to the lineage burial ground has been so widespread among migrating Chinese in traditional times that their migrant associations took this repatriation of bodies to be one of their chief rationales for existence.

5 Qin (221-206 B.C.) and Han (206 B.C.-A.D. 220) are the names of

the first two dynasties of the imperial period in Chinese history.

6 The meaning of the phrase, which is not necessarily obvious to Westerners, is that, like pigs that are eaten when they grow fat, celebrities draw the attention of people who will try to take advantage of them and lead them and their families to ruin.

4 CHAXUGEJU: THE DIFFERENTIAL MODE OF ASSOCIATION

1 See chapter 2, note 1.

2 Baojia is a system of local control, instituted in several forms during the imperial period. The system was based on mutual responsibility of households. Local populations were divided into units, usually composed of ten households each. Members would mutually have the responsibility of seeing that everyone in the baojia unit maintained good order. If a violation occurred and caught the attention of officials, everyone in the baojia unit would be punished for the crime of one of its members. For Fei's discussion of the baojia system that was instituted during the Republican period, see Xiangtu chongjian (Reconstructing Rural China) (Xianggang: Wenxue chubanshe, n.d.), chap. 4, p. 50.

3 Written in the eighteenth century by Cao Xueqin, *The Dream of the Red Chamber*, also known as *The Story of the Stone*, is China's most famous and widely read novel. The translation by David Hawkes is the best and most complete: Cao Xueqin, *The Story of the Stone* (5 vols.) (Middlesex, England: Penguin Books, 1973).

4 Su Qin, whose story is recounted in Sima Qian's *Shiji* (*The Book of History*), lived during the Warring States period (475-221 B.C.). Su Qin was renowned for his political intrigues and was eventually executed for spying.

5 Fei's note: Pan Guangdan, "Shuo lunzi" (*On Relationships*), *Shehui yanjiu* (*Social Study*), 19.

6 *The Book of Rites*, one of the Confucian classics, was compiled during the Western Han period (206 B.C.-A.D. 25) and contains early discussion of ritual practices.

7 *Analects*, Book 1, chap. 2. The *Analects*, *The Works of Mencius*, *The Great Learning*, and the *Doctrine of the Mean* make up what is known in China as the "Four Books." These books were regarded as Confucian

classics and constituted the core of classical education. The Analects contains a compilation of dialogues between Confucius and his disciples.

8 Zhongyong (Doctrine of the Mean) is one of the four books regarded as the classic texts of Chinese civilization. It is said to have been written by Zisi in the Warring States period (475-221 B.C.).

9 Yang Zhu, a philosopher who lived in the Warring States period (475-221 B.C.), opposed the ethical philosophy of Confucius and Motzu and advocated the importance of individual life and self-interest.

10 Analects, Book 2, chap. 1.

11 Ibid., Book 6, chap. 28. Yao and Shun are the legendary early rulers of China who established China's golden age.

12 Ibid., Book 14, chap. 36.

13 The Great Learning, sec. 4. This book is included among the four great books of Chinese civilization. Its authorship is unclear.

5 THE MORALITY OF PERSONAL RELATIONSHIPS

1 The Great Learning, sec. 6.

2 Analects, Book 1, chap. 2.

3 Ibid., Book 1, chaps. 3 and 8.

4 Ibid., Book 1, chap. 6.

5 Ibid., Book 9, chap. 1. Fei here is pointing out a contradiction in the Analects. There are frequent references to ren, but no precise definition, despite attempts by Confucius's disciples to obtain one.

6 Ibid., Book 12, chap. 3.

7 Ibid., Book 4, chap. 6.

8 Ibid., Book 5, chap. 7.

9 Ibid., Book 7, chap. 6.

10 Ibid., Book 5, chap. 18.

11 Ibid., Book 18, chap. 7.

12 The Works of Mencius, Book 7, chap. 35. The Works of Mencius, included among the four great books of Confucian learning, is a compilation of writings and dialogues attributed to Mencius.

13 Ibid., Book 5, Part I, chap. 3.

14 Ibid., Book 3, chap. 4.

15 Motzu was the founder of an important school of Chinese philosophy that is roughly a contemporary of Confucianism and was one of the contending schools of thought during the Warring States period (475-221 B.C.). One of the principal ideas he emphasized was an all-embracing love.

6 PATRILINEAGES

1 Qianhui (rotating credit associations) are a set group of people, each of whom contributes a specified sum of money that is then loaned to members of the group. Borrowers repay the loan with an agreed-upon interest. Even today, it is a common way of raising money without going to banks.

2 Fei Xiaotong, *Shengyu zhidu* (Shanghai: Shangwu, 1947).

3 Married daughters usually live with their husbands' families. When a family does not have a son, the parents may want their daughter to marry a man who is willing to move in with them.

4 For a discussion of the distinction between lineage and clan, see Hugh Baker, *Chinese Family and Kinship* (New York: Columbia University Press, 1979).

5 Fei Xiaotong, *Meiguoren de xingge* (Shanghai: Shenghuo, 1947).

6 "The three followings and the four virtues" are precepts that come from the book *Nüjie* (Lessons for Women) by Banzhao, a female scholar of the Han period. The three followings mean that a woman's status follows that of her father before marriage, her husband during marriage, and her son in widowhood. The four virtues the women should cultivate are (1) women's moral virtues, (2) women's speech, (3) women's appearance, and (4) women's work.

7 "BETWEEN MEN AND WOMEN, THERE ARE ONLY DIFFERENCES"

1 The reference is to William James, *Principles of Psychology* (New York: Henry Holt, 1890).

2 Oswald Spengler, *The Decline of the West*, trans. Charles F. Atkinson (New York: Knopf, 1926).

3 This phrase originally comes from the *Liji* (Book of Rites). The *Liji* is regarded as one of the Confucian classics. It was compiled during the Western Han period (206 B.C.-A.D. 25) and contains early discussion of ritual practices.

4 The Works of Mencius, Book 4, chap. 17.

5 Feng Xiaqing is believed to have lived in the Yangzhou area during the Ming dynasty (1368-1644). She was talented in writing poetry and painting. When she was sixteen years old, her parents sent her to the Feng family in Hangzhou as a concubine. Feng's wife was very jealous of her and forced her to move into a nunnery. There she supposedly died of a broken heart at the age of eighteen. In later years, her life story was used as the basis for stories and plays. At the nunnery, she is said to have written many poems full of self-pity, and hence the narcissistic tone.

6 *Analects*, Book 3, chap. 12.

8 A RULE OF RITUAL

1 Fei is referring here to the theorists from the school of legal realism, which was then important in the United States. For a brief summary of this school, see Grant Gilmore, *The Ages of American Law* (New Haven, Conn.: Yale University Press, 1977).

2 The Chinese term *li* has numerous meanings, including rites, ritual, and etiquette. We use the word *ritual* to translate the term, but in English "*ritual*" has a pejorative meaning that it does not have in Chinese.

3 *Jing hua yuan* is a novel from the Qing dynasty (1644-1911) written by Li Juchen. A translation is available in English: *Flowers in the Mirror* (London: Arena Books, 1965).

4 *Analects*, Book 4, chap. 7.

5 Yao and Shun are the legendary early rulers of China who established China's golden age.

6 Analects, Book 12, chap. 1.

9 A SOCIETY WITHOUT LITIGATION

1 A few of these stories have been translated into English. See Leon Comber, *The Strange Cases of Magistrate Pao* (Hong Kong: Heinemann Educational Books, 1972), and *Dee Goong An: Three Murder Cases Solved by Judge Dee*, trans. Robert van Gulik (Tokyo: Toppan, 1949). Robert van Gulik has also written a number of Judge Dee mystery novels based on the Chinese originals.

2 Analects, Book 12, chap. 13.

10 AN INACTIVE GOVERNMENT

1 This reference is to the "functional theory of stratification." For an outline of this theory, see Kingsley Davis and Wilbert Moore, "Some Principles of Stratification," *American Sociological Review* 10 (April 1945): 242-49.

2 In the 1986 reissue (Xianggang: Sanlian shudian), pp. 67-68, Fei cut the remainder of this paragraph. The original paragraph, in the 1947 reissue (Shanghai: Shanghai guanchashe), pp. 67-68, ends as follows: "Killing people with abandon, mowing them down like grass, is often seen to be a characteristic of Asian cruelty. If that really is a characteristic of Asians, it is not a genetic one; it does not run in their blood. Instead, it is a characteristic of the place and not of the people. On barren soil, a toiling laborer can only support himself. He lacks value that can be utilized. If another group conquers such people who have no surplus value, they have to kill them, bury them alive, or drive them away. The conquest would be meaningless if the conquerors allowed the defeated to continue farming. In this sense, conquest actually means to conquer the land, not the people. Killing people and grabbing their land is the normal mode of conquest in agrarian societies. East Asia is an area with a large population but little arable lands that are not already fully utilized. Under these circumstances, the value of human life is regarded as extremely low. Cruelty is a consequence of the economy."

3 Chen Sheng and Wu Guang are famous leaders of peasant rebellions at the end of the Qin dynasty (221-206 B.C.).

11 RULE BY ELDERS

1 Fei's reference: Shengyu zhidu (Shanghai: Shangwu, 1947), p. 101.

2 Fei's reference: Shengyu zhidu, p. 101.

3 For a discussion of the principles underlying hierarchy in Chinese lineages, see Hugh Baker, *Chinese Family and Kinship* (New York: Columbia University Press, 1979).

12 CONSANGUINITY AND REGIONALISM

1 The Kula system is an interisland, intertribal trading system found in Melanesia. For a description of Malinowski's work on the Kula system, see Bronislaw Malinowski, *Argonauts of the Western Pacific* (London: George Routledge, 1922).

13 SEPARATING NAMES FROM REALITY

1 The type of power that Fei is describing here, which is awkwardly called "temporal power," is similar to Max Weber's "charismatic domination." Fei's treatment of this kind of power is fairly rudimentary in this chapter. For Weber's discussion of charismatic domination, see *Economy and Society*, ed. Guenther Roth and Claus Wittich (2 vols.) (Berkeley: University of California Press, 1978), chap. 14.

14 FROM DESIRE TO NECESSITY

1 Xishi is a renowned beauty who lived during the Warring States period (475-221 B.C.).

2 William Graham Sumner, *Folkways* (New Haven, Conn.: Yale University Press, 1906).

Chinese Economy in Disequilibrium

目 录

CONTENTS

“博雅双语名家名作”出版说明

序言

Foreword

前言

Chapter 1 Exploring the Issues in Resource Allocation

第一章 资源配置问题的探讨

1.1 RESOURCE ALLOCATION IN THE SOCIALIST ECONOMY:
FROM THE PERSPECTIVE OF DISEQUILIBRIUM

壹 从非均衡的角度看社会主义的资源配置问题

1.2 RESOURCE MISALLOCATION AND POTENTIAL
STAGFLATION IN THE SOCIALIST ECONOMY

贰 资源配置失调与社会主义经济中“滞胀”的可能性

Chapter 2 Market Regulation and Resource Allocation

第二章 市场调节与资源配置

2.1 MARKET SELECTION AND MARKET GUIDANCE

壹 市场选择与市场引导

2.2 INVESTMENT PRINCIPAL, INVESTMENT BEHAVIOR, AND
RESOURCE ALLOCATION

贰 投资主体、投资行为与资源配置

2.3 CONSUMPTION PRINCIPAL, CONSUMPTION BEHAVIOR,
AND RESOURCE ALLOCATION

叁 消费主体、消费行为与资源配置

2.4 MARKET SELF-REGULATION DURING RESOURCE
ALLOCATION

肆 资源配置过程中的市场自我制约

Chapter 3 Government Regulation and Resource Allocation

第三章 政府调节与资源配置

3.1 THE MEANING OF GOVERNMENT REGULATION

壹 政府调节的含义

3.2 NONIDEALIZED GOVERNMENT BEHAVIOR AND ITS IMPACT ON RESOURCE ALLOCATION

贰 政府行为的非理想化及其对资源配置的影响

3.3 THE APPROPRIATENESS AND OPTIMIZATION OF GOVERNMENT BEHAVIOR DURING RESOURCE ALLOCATION

叁 资源配置过程中政府行为的适度与优化

Chapter 4 The Mechanism of the Operation of the Economy

第四章 经济运行的机制

4.1 DUAL MECHANISM OF THE OPERATION OF THE ECONOMY

壹 经济运行的二元机制

4.2 FRICTIONS IN THE OPERATION OF THE ECONOMY

贰 经济运行中的摩擦

Chapter 5 Rationing Equilibrium of the Commodity Market

第五章 商品市场配额均衡

5.1 COMMODITY MARKET EQUILIBRIUM WITH QUANTITY-PRICE ADJUSTMENT

壹 数量—价格调节下的商品市场均衡

5.2 APPLYING QUANTITY-PRICE ADJUSTMENT MEASURES IN THE COMMODITY MARKET

贰 商品市场上数量—价格调节措施的运用

Chapter 6 Easing Supply and Demand Mismatch Under Economic Disequilibrium Conditions

第六章 经济非均衡条件下供求矛盾的缓解

6.1 THE COUNTER EFFECTS OF GOVERNMENT PRICE ADJUSTMENT

壹 政府价格调节的逆效应

6.2 REFORMING THE ENTERPRISE OPERATION MECHANISM

贰 企业运行机制的改造

Chapter 7 Industrial Restructuring

第七章 产业结构调整

7.1 DOMESTIC SOURCE OF FUNDING FOR INDUSTRIAL RESTRUCTURING

壹 产业结构调整在国内资金来源

7.2 INDUSTRIAL RESTRUCTURING AND LONG-TERM ORIENTATION OF CORPORATE BEHAVIOR

贰 产业结构调整和企业行为的长期化

7.3 INDUSTRIAL RESTRUCTURING AND UNBALANCED ECONOMIC GROWTH

壹 产业结构调整与经济的不平衡增长

Chapter 8 Government Regulation of Agriculture

第八章 政府对农业生产的调节

8.1 DEMAND AND SUPPLY OF AGRICULTURAL PRODUCTS UNDER DISEQUILIBRIUM CONDITIONS

壹 非均衡条件下的农产品供求

8.2 TREND OF BALANCED DEMAND AND SUPPLY OF AGRICULTURAL PRODUCTS

贰 农产品供求均衡的趋势

Chapter 9 Establishing the Order of the Socialist Commodity Economy

第九章 社会主义商品经济秩序的建立

9.1 ESTABLISHING THE ORDER OF THE SOCIALIST COMMODITY ECONOMY: NECESSITY AND DIFFICULTY

壹 社会主义商品经济秩序建立的必要性和困难

9.2 INTEREST ADJUSTMENT DURING THE PROCESS OF ESTABLISHING THE ORDER OF THE COMMODITY ECONOMY

贰 建立商品经济秩序过程中的利益调整问题

Chapter 10 The Standardization of Institutional Innovation

第十章 制度创新的规范化

10.1 THE ROLE OF THE GOVERNMENT IN STANDARDIZING INSTITUTIONAL INNOVATION

壹 政府在制度创新规范化中的作用

10.2 THE STANDARDIZATION OF INSTITUTIONAL VARIATION AND INSTITUTIONAL INNOVATION

贰 制度变型与制度创新规范化

GLOSSARY 专有名词表

NOTES 注释

[返回总目录](#)

厉以宁 祖籍江苏仪征，生于南京，北京大学教授、博士生导师。历任北京大学经济管理系主任、光华管理学院院长，现任北京大学社会科学学部主任、光华管理学院名誉院长。

1988年至2002年任七届、八届、九届全国人大常委、全国人大财经委员会副主任、法律委员会副主任，2003年至2007年任十届全国政协常委、全国政协经济委员会副主任。2008年至2012年任十一届全国政协常委、全国政协经济委员会副主任。2013年起任全国政协常委。目前还担任中国国际交流协会顾问、中国国际经济交流中心执行副理事长、中国企业投资协会副会长等职。

出版学术专著二十多部，是我国最早提出股份制改革理论的学者之一。提出了中国经济发展的非均衡理论，并对“转型”进行理论探讨，因为在经济学以及其他学术领域中的杰出贡献而获得“孙冶方经济学奖”等多项荣誉。他的经济理论对我国三十多年来经济改革与发展产生了深远影响。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

外语教学与研究出版社
人文社科出版分社

序言

《非均衡的中国经济》一书中文版初版于1990年问世，交稿则在1988年年底。为什么当时我会撰写这本著作，必须从20世纪80年代中国改革和发展的形势谈起。

中国的改革开始于1979年的农业承包制。安徽、四川等省有些农村发生了农民自发地把农田分了，实现了“包产到户”，农民的积极性空前高涨，产量猛增。中国政府密切注意到这一变化，派出调查组，到安徽、四川等地进行总结，决定在全国范围内推广农业承包制的经验。这是中国改革进程中的“第一声春雷”。几年之后，农贸市场繁荣，食品短缺现象逐渐消失了。又过了几年，实行多年的城市居民食品配给制也取消了。

紧接着，乡镇企业普遍兴起。这些企业，是农民集资办起来的。它们不需要政府投资，产品也不由政府分配。因此，在80年代出现了乡镇企业推销员走遍全国的情况，他们带着样品和订单，到处为本企业的产品寻找市场。这样，大一统的计划经济体制被打破了，在计划体制之外，出现了“乡镇企业商品市场”。

与此同时，1980年在靠近香港的广东深圳，成立了经济特区，按照市场调节方式配置资源，经济增长很快，以致形成了“深圳速度”。人们由此得到重要的启示：市场调节在中国不仅可行，而且是必要的。

农业承包制的推广、乡镇企业的兴起、经济特区的建立，好比最初投入湖中的三块大石头，从此激起了层层波浪，中国经济再也不可能平静下去了。到了20世纪80年代中期，中国经济改革的重心转入了城市。城市究竟怎么改革？计划经济如何一步步地转向市场经济？国内经济学界出现了两种改革思路之争。

当时在经济学界占主流地位的是主张把“放开价格”作为主线的一派。他们认为1949年西德经济改革的经验可以移植到中国。他们问道：西德能这么做，中国为什么不能这么做？他们的意见受到了中国政府的重视。1988年，中国国务院决定推进以价格改革为中心的改革方案。

在这紧要关头，我在1986年4月末，在北京大学作了题为《改革的基本思路》的长篇演讲，指出中国的经济改革不能以价格改革为中心，

而应以所有制改革为中心。我在这次演讲中指出，中国经济改革的失败可能是由于价格改革的失败，而中国经济改革的成功必须取决于所有制改革，也就是企业改革的成功。

这次演讲引起了国内外传媒界的注意。中国国务院认为我的主张值得重视，于是暂缓推出价格改革方案。

为了把我的观点让更多的关心中国经济改革的人了解和认同，从这时起，我便着手撰写如今呈现在读者面前的这本《非均衡的中国经济》——历时三年，反复修改，终于在1988年年底交给出版社，1990年正式出版。

这就是这本书写作和出版的背景。1988年是一个关键的年份，因为这一年，中国政府又重新回到放开价格的方案，准备学习西德的“休克疗法”，通过价格改革，使中国较快地实现体制转轨。我是不同意这一政策的，理由是，中国在计划经济体制下，企业并不是真正的市场主体，而仍然是政府的附属机构，价格刺激并无促进企业优胜劣汰的功能，也起不到调整产业结构的作用。所以在中国，唯有通过所有制改革，使企业成为真正的市场主体，才能适应价格改革的进程。我的《非均衡的中国经济》正是为了明确中国经济改革的基本思路而撰写的。

20世纪80年代和90年代的实践，证明了我的判断符合中国国情。果然，1988年的中国经济因人民预感到即将放开价格，从而引发了抢购风潮，而不得不宣告暂停价格改革。90年代起，中国逐步推出了国有企业实行股份制并成为股份制企业的改革，中国经济改革终于走出了困境。

在《非均衡的中国经济》英文版出版之时，我回顾了当时的情况和中国经济改革的历史，特地写下了这篇序言，供英文版的读者们参考。

本书英文版的出版，得到译者陈菽浪先生，北京大学光华管理学院蔡洪滨教授、周黎安教授、颜色博士，英国伦敦大学孙来祥教授的大力帮助。外研社社长蔡剑峰、总编辑徐建中，外研社人文社科分社吴浩、邓晓菁、易璐、赵雅茹、胡玉岩，以及施普林格出版集团汤恩平（Dr. Niels Peter Thomas）、李琰及柴宁等朋友的认真尽责，使本书能这么快同读者见面。在此双语版出版之际，我一并向他们致以衷心的感谢。

厉以宁

Foreword

"Among all your publications on current Chinese economy, which one is most representative of your academic viewpoints?" If this is the question someone asks me, "it is the book right in front of us, *Chinese Economy in Disequilibrium*," I would answer. Why do I have this answer? I have my own reasons.

Among my publications, *Institutions, Goals and People—Challenges to Economics* (Heilongjiang People's Press, 1986) studied comparative economics. Many of its chapters discussed Chinese economic issues. It also proposed a methodology for studying socialist economic theories. Nevertheless, it is not a book on current Chinese economy.

Socialist Political Economics (The Commercial Press, 1986) is a textbook which described the framework of my economic theories, but barely discussed real economic issues. Moreover, it is a book on socialist political economy intended for beginners. Therefore, it is unlikely to include in-depth discussions and analyses of certain economic theories. Nonetheless, I believe it is the most comprehensive and systematic publication on my own economic theories.

Exploring Reforms of Economic Institutions (The People's Daily Press, 1987) specifically discussed issues associated with the shareholding system, controlling shareholder system and conglomerates in the public ownership system. It did not further discuss any other issues.

Management of National Economy (Hebei People's Press, 1988) is also a textbook, primarily discussing the principles and policies for managing the national economy from short-term, mid-term, and longterm perspectives. Due to the requirements of a textbook, it is difficult to fully discuss in-depth issues related to economic disequilibrium.

Perspectives on Chinese Economic Reforms (China Prospect Press,

1989) summarized the general economic reform plan that I proposed for China, including the main reform directions and corresponding reform measures and execution processes. But it is not a book on disequilibrium.

Where is Chinese Economy Heading (The Commercial Press, Hong Kong, 1989) is a collection of my speeches delivered in Hong Kong at the beginning of 1989. It is intended to address a few specific issues encountered during Chinese economic reforms. Such topics as how to switch from the subcontracting system to the shareholding system, why it is not possible to privatize large and medium state-owned enterprises, and how to manage state assets were elaborated fairly thoroughly in the book. But it did not give a systematic analysis of the disequilibrium conditions prevalent in the Chinese economy.

Compared with the abovementioned publications, *Chinese Economy in Disequilibrium* is different in three aspects: First of all, it is academic research, not a textbook for college students. Although my analysis herein is based on the principles stated in the books of *Socialist Political Economics* and *Management of National Economy*, the theoretical study on economic disequilibrium is far more detailed than that in those two books. Secondly, it focuses on current Chinese economy, unlike the book of *Institutions, Goals and People—Challenges to Economics*, which focused on comparative economics. Thirdly, it features theories, primarily analyzing the characteristics of economic disequilibrium in an attempt to discover the underlying reasons for resource misallocation, distorted industrial structures, and institutional innovation variation. The book does not designate economic disequilibrium as a prerequisite, as did the books of *Exploring Reforms of Economic Institutions*, *Perspectives on Chinese Economic Reforms*, and *Where is Chinese Economy Heading*, but directly discusses specific policies for Chinese economic reforms. With these thoughts, I believe *Chinese Economy in Disequilibrium* is the book that most fully presents my academic views on current Chinese economy.

In my opinion, the book provides featured analyses in the

following eight aspects:

There are two types of economic disequilibrium. Type I disequilibrium refers to the disequilibrium condition under which the market has not been fully developed. Type II disequilibrium refers to the disequilibrium condition under which the market is not fully developed and enterprises lack profit maximization mechanisms and budget constraints. Current Chinese economy belongs to type II disequilibrium. We should do our utmost to first and foremost transit the economy from type II disequilibrium to type I disequilibrium, followed by gradually shrinking the magnitude of imbalance inherent under type I economic disequilibrium condition.

The socialist economy is susceptible to stagflation in economic disequilibrium. There are two types of inflation, open inflation and hidden inflation, with the latter referring to an unchanging price level at which commodities are actually out of stock. There are open and hidden stagnation as well, with the latter referring to the situation of superficial growth in aggregate output with effective supply actually remaining unchanged. Therefore, stagflation has four potential forms of combinations. Any measure to prevent and tackle stagflation must be properly adopted according to the specific situation.

3. The impact of structural factors on current economic imbalances in China cannot be ignored. Difficulties in industrial restructuring are associated with the defects of enterprise operation mechanism, and the shortsightedness of corporate behavior as well as societal behavior. Therefore, the rationalization of industrial structure can only be achieved by accelerating the reconstruction of enterprise operation mechanism and by actively leveraging the leadership of the central government in quota adjustment in the commodity market and the establishment of order in the socialist commodity economy.

4. Economic fluctuations are common in a disequilibrium economy. People tend to ask when an economy will come out of recession. It should be noted that it is relatively easy to pull the economy out of recession that is calculated based on the growth rate

of output, for direct government spending or corporate spending with credit support will generate higher output growth. Nevertheless, it is far more difficult for the economy to come out of recession calculated based on the growth rate of enterprise profitability or the growth rate of actual fiscal revenues (i.e., excluding borrowings and net of inflation rate). We need to reform the enterprise operation mechanism, which is critical to actually pulling the national economy out of recession.

5. There are various rigidities under economic disequilibrium conditions. In addition to many known rigidities, such as wage rigidity, employment rigidity, and welfare rigidity, there is a unique type of rigidity under current disequilibrium conditions (type II disequilibrium) in the Chinese economy, one called "enterprise rigidity." It refers to the situation in which an enterprise is not actually responsible for its own profits and losses or only responsible when it is profitable. Thus bankruptcy is almost out of the question. Without resolving the "enterprise rigidity," China will have to remain in type II economic disequilibrium for a long time.

6. If commodity shortages are prevalent, a dual-track price mechanism applicable to shortage commodities cannot be terminated if there are relatively severe resource constraints. Otherwise, even when the gap between the dual prices, i.e., planned and non-planned price, is eliminated, a gap between two new prices, i.e., open price and underground price, will appear. Therefore, a full price decontrol before all other conditions are ready will only lead to social turmoil and unjustified profits taken by certain people who can take advantage of the gap between open price and underground price.

7. Scarcity of certain resources, as well as the exclusivity stemming from such scarcity, may persist for a long time in the socialist commodity economy. The government has to make necessary adjustments, such as levying resource taxes on the producers of exclusive scarce resources. The government, however, should also be careful not to completely seize everything above normal profits, but

only a portion. Otherwise, it won't help improve resource utilization efficiency.

8. It is essential to further push economic reforms under current economic disequilibrium conditions. We are often confronted with this challenge: A new institution or policy tends to deviate from its original plan (hereinafter referred to as "institutional variation"). This is mainly attributable to such issues as non-standardized institutional innovation, changes in enterprise expectations and personal expectations, and market imperfection. Institutional variation can only be addressed by making appropriate adjustments in these areas.

前言

如果有人问我：“在你撰写过的若干本关于当前中国经济的著作中，你认为最能反映自己的学术观点的是哪一本书？”我将这样回答他：“这就是摆在我们面前的这本《非均衡的中国经济》。”为什么我作出这样的答复？我是有所考虑的。在我已经出版的著作中：

《体制·目标·人：经济学面临的挑战》（黑龙江人民出版社1986年版）是一部比较经济研究的著作。尽管其中有相当多的篇幅讨论了中国经济问题，并且提出了研究社会主义经济理论的方法，但它毕竟不是关于当前中国经济的专著。

《社会主义政治经济学》（商务印书馆1986年版）是一本教科书。它表述了我的经济理论体系，但书中较少涉及现实中的经济问题。更重要的是，它是为社会主义政治经济学的初学者而写的，它不可能就某些经济理论问题进行较深层次的剖析。当然，就个人的经济理论体系的表述而言，我认为该书是最完整、最系统的。

《经济体制改革的探索》（人民日报出版社1987年版）专就公有制基础上的股份制、控股制和企业集团问题作了论述，而并未涉及其他问题。

《国民经济管理学》（河北人民出版社1988年版）也是一本教科书。它主要从近期、中期、长期的角度阐释了国民经济管理的原则和政策措施。但由于教科书有教科书的使命，所以有关非均衡领域内的深层次问题不可能在书中有充分的论述。

《中国经济改革的思路》（中国展望出版社1989年版）集中反映了我为中国经济体制改革所设计的总体方案，包括改革的主线、配套措施和实施步骤，但它并不是一本关于非均衡的理论著作。

《中国经济往何处去》（香港商务印书馆1989年版）是我1989年初在香港的演讲集。它是针对着中国经济改革的若干具体问题而阐发的。在承包制如何向股份制过渡、国营大中型企业为什么不能实行私有化、国有资产如何管理等问题上，书中都有较详细的论述，但它仍然没有就中国经济的非均衡状态进行系统的分析。

现在摆在读者面前的这本《非均衡的中国经济》与上述这些著作有

以下三个重要的区别。第一，它是一本学术专著，而不是专为大学生而写的教科书；虽然我的分析以《社会主义政治经济学》和《国民经济管理学》中已阐述的原理作为出发点，但对非均衡经济的理论分析要比那两部教科书中所阐述的要深入得多。第二，它的重点是现阶段的中国经济，而不像《体制·目标·人》那样以比较经济研究作为重点。第三，它的理论性很突出，即主要从非均衡经济的特征着手分析，以说明资源配置失调、产业结构扭曲、制度创新的变型等现象的深层次原因，而不像《经济体制改革的探索》、《中国经济改革的思路》、《中国经济往何处去》那三本书那样把中国经济的非均衡状态作为既定的前提，从而直接探讨中国经济改革的具体方案的制定。正因为如此，所以我把这本《非均衡的中国经济》视为最能反映我关于当前中国经济的学术观点的著作。

在本书中，我自己感到具有特色的是这样八方面的分析：

（1）经济的非均衡有两类。第一类非均衡指市场不完善条件下的非均衡，第二类非均衡指市场不完善以及企业缺乏利益约束和预算约束条件下的非均衡。当前中国经济处于第二类非均衡状态中。我们应当力求使经济先由第二类非均衡过渡到第一类非均衡，然后再使第一类非均衡中的非均衡程度逐渐缩小。

（2）在非均衡条件下，社会主义经济中有可能发生“滞胀”。“胀”分两类：公开的“胀”和隐蔽的“胀”（指表面上物价未变，实际上有价无货）。“滞”也分两类：公开的“滞”和隐蔽的“滞”（指表面上总产值增长，实际上有效供给并未增加）。于是“滞胀”可能有四种不同的组合方式。为了防止和治理“滞胀”，必须根据具体的情况选择相应的措施。

（3）不可忽视结构因素在当前中国经济失衡中的作用。产业结构调整之所以困难，与企业运行机制的弊病、企业行为短期化，以及社会行为短期化有关。因此，只有加速企业运行机制的改造并积极发挥政府在商品市场配额调整和建立社会主义商品经济秩序中的主导作用，才能促进产业结构合理化。

（4）在非均衡经济中，经济的波动是常见的。人们常问：经济什么时候走出“低谷”？要知道，走出以产值增长率计算的“低谷”比较容易，因为通过政府直接采购产品或企业在信贷支持下采购产品，可以使产值增长率回升。要走出以企业经济效益增长率计算的“低谷”，或以财政实际收入（即扣除物价上涨影响并且不包括债务收入）增长率计算

的“低谷”，远非易事。必须着手企业进行机制的改造，才能使国民经济真正走出“低谷”。

（5）非均衡经济中存在着各种“刚性”。但在当前中国的非均衡（第二类非均衡）经济中，除了有“工资刚性”、“就业刚性”、“福利刚性”等等以外，还存在一种特殊的“刚性”——“企业刚性”。这是指企业实际上不负盈亏或负盈不负亏，从而企业破产难以实现。经济中的许多困难都与此有关。不消除“企业刚性”，中国经济只可能长期处于第二类非均衡状态中。

（6）在商品短缺条件下，如果存在着较大的资源约束，那就不可能取消短缺商品的价格双轨制。否则，即使表面上取消了两价格（计划价格与非计划价格）之差，但实际上又会形成新的两种价格（公开价格与地下价格）之差。因此，在条件尚未成熟之时就过早地全面放开价格，只可能引起社会经济的动荡，并导致一些人利用公开价格与地下价格之差牟利。

（7）在社会主义商品经济中，某些资源的稀缺性以及由于这种稀缺性而引起的独占，将会长期存在。政府应对此进行调节，如向独占稀缺资源的生产者征收一定的资源税等。但必须注意到，政府不应把这些生产者所获得的超过平均利润的那部分收入全部取走，而只应取走其中的一定份额，否则不利于资源利用效率的提高。

（8）在当前中国的非均衡经济中，经济改革的深化非常必要。但经常遇到一个难题，即新的制度和政策都容易走样（本书称之为“制度变型”），这主要与制度创新的不规范、企业和居民个人预期的变化、市场的不完善等等有关。只有从这些方面进行调整，“制度变型”问题才能得到较好的解决。

Chapter 1 Exploring the Issues in Resource Allocation

第一章 资源配置问题的探讨

1.1 RESOURCE ALLOCATION IN THE SOCIALIST ECONOMY: FROM THE PERSPECTIVE OF DISEQUILIBRIUM

1.1.1 Disequilibrium Defined

In economics, disequilibrium is defined relative to Walrasian equilibrium, which is achieved under the assumption of a fully developed market and a flexible price mechanism. Disequilibrium refers to a balance condition under which there is neither a fully developed market nor a flexible price mechanism. In this sense, disequilibrium is also called non-Walrasian equilibrium.

According to the Walrasian theory, given that the market is fully developed and the price mechanism flexible, given also that every market participant possesses perfect information about current and future prices as well as a full understanding of current and future demand and supply, and that prices adjust instantaneously with changes in demand and supply, then, at any price level, aggregate demand is always equal to aggregate supply, and there is no excess demand or excess supply. All transactions are settled at equilibrium prices. If the equilibrium price is not reached, a transaction will not be concluded. Only when price is in equilibrium can a transaction be concluded. According to this theory, excess production, sluggish merchandise sales, chronic unemployment, and inflation due to excess demand will not occur.

The impractical Walrasian equilibrium has long drawn harsh

criticism from some dissenting Western economists. Keynes discussed the issue of chronic unemployment in capitalist society in his book titled *The General Theory of Employment, Interest and Money* published in 1936. Until the early 1960s, however, research on disequilibrium by economists remained limited and sporadic. Even their interpretations of the Keynesian economic theory were drastically divided. Orthodox Keynesian economists believed that Keynesian economic theory belonged to the economics of equilibrium and that Keynes himself did not deny Walrasian equilibrium but simply made some modifications. Other Keynesian economists, however, believed that the Keynesian theory had gone beyond the limit of equilibrium theory by providing an initial and systemic review on disequilibrium theory, as was demonstrated by Keynes' belief that the market mechanism was not always fully effective in coordinating various transactions and that production, employment, and investment would fluctuate, often leading to overproduction, unemployment, and insufficient demand for investment in capitalist society.

Since the late 1960s, the disequilibrium theory has made noticeable progress. Studies on disequilibrium have demonstrated that when a market is not fully developed and prices fail to function and adjust supply and demand, every economic factor will work its way to a point where they are mutually adaptable according to their respective situations to reach equilibrium. Obviously, the equilibrium under disequilibrium conditions is not one in a fully developed market, but one in a market that is not fully developed. It is not an equilibrium accompanied by zero unemployment or inflation rate, but one with certain unemployment rate and inflation rate. In other words, disequilibrium is actually a type of equilibrium, but unlike the equilibrium described in the Walrasian theory, it is real in daily life. This is the definition of disequilibrium in economics.

1.1.2 Resource Allocation Defined

Resource allocation refers to the allocation of various economic

resources, i.e., labor, materials, and capital according to different uses. When resource supplies are limited, it is necessary to work out an efficient way to allocate various economic resources to meet various needs in order to maximize the output of products and services in demand. Any society, including socialist society, can only be considered to have achieved effective resource allocation when every person's talent has been fully employed, every product's utility has been maximized, and every inch of land has been fully utilized. If there are labor, materials, and capital left idle or wasted, the allocation of resources is considered problematic. One of the most important issues that economists study is how to achieve effective allocation of resources in order to fully utilize existing resources and discover potential resources.

Resource allocation can be viewed in two different tiers. The higher tier refers to the allocation of resources among various sectors, regions, and production units. Whether the allocation is effective or not depends on whether each resource is effectively allocated to its best place. The lower tier refers to the organization and utilization of pre-allocated resources by a production unit, a region, or a sector. The effectiveness of the allocation depends on whether or not these resources are utilized to their fullest potential.

These two tiers of resource allocation have certain connections as well as differences. From the perspective of overall society, allocations of existing resources in different areas undoubtedly impact resource utilization efficiency at each economic unit as the total quantity of existing resources is limited, and ineffective resource allocation in the macroeconomy will certainly lead to low utilization efficiency at some production units. On the other hand, if most production units are able to raise resource utilization efficiency to a higher level, the supply of resources in the economy will increase. Compared with unchanged quantity of resources, higher supply of resources is more favorable to adjusting resource allocation in various areas and more conducive to allocating resources effectively. This is the connection between the

two tiers of resource allocation. Their differences, however, are represented by different goals and ways of execution. The goal of the lower tier resource allocation is to raise resource utilization efficiency at a production unit so as to increase total output with fixed amount of input, while that of the higher tier resource allocation is to effectively put every resource to its best use and allow factors of production to regroup to maximize their utility. The two tiers of resource allocation also vary in terms of way of execution, with the lower tier increasing resource utilization efficiency by using production or managerial techniques inside the production unit without transferring production factors. The higher tier resource allocation achieves its goal via rearranging the combination of production factors, regulating property rights, transferring fixed assets, making macroeconomic adjustments, as well as reforming macroeconomic management system.

Realizing effective resource allocation, either at the higher tier or at the lower tier, requires a long process. There is no absolute standard for effective resource allocation, nor is there a limit for how effective resource allocation can be. We can only say that whether resource allocation of this tier or that tier is more effective after certain adjustments or reforms, whether there is some improvement, or how much of an improvement. One of the important topics in the socialist political economics is to study how to manage the economy so as to improve resource allocation and increase effectiveness in the socialist economy, which will lead to higher effectiveness of both the higher tier and the lower tier resource allocation.

1.1.3 The Features of Socialist Economic System and Resource Allocation

Before studying resource allocation in the socialist economy, we must understand the socialist economic system as well as its impact on resource allocation. As various socialist economic systems can be categorized into several forms, resource allocation in the socialist

economy can also be grouped accordingly. Each form of resource allocation has its own features associated with its economic system.

There are three types of economic systems categorized based on Chinese economic realities. The first type is the traditional economic system. The second type is the dual-track economic system whereby the traditional economic system is gradually giving in to the new economic system. The third type is the new economic system. The economic system from the late 1950s to the late 1970s was the traditional economic system, while that since the 1980s is the dual-track economic system, which we are currently under. The new economic system is the system we are aiming to establish through economic reform after breaking away from the dual-track economic system. It is still an economic system under planning and has not yet become reality.

The features of resource allocation under these three economic systems are as follows:

In the traditional economic system, mandatory planning is considered either the only form of economic planning in the socialist economy, i.e., the socialist economy is equivalent to a mandatorily planned economy, or the primary form of the socialist economy in which mandatory allocation is the primary method to allocate resources in the economy. In this economic system, the market does not play any role at all or has a very limited impact on resource allocation. Moreover, as the system does not recognize enterprises as goods producers, business operators, or decision-makers, disregards their private economic interests, and restricts the transfer of production factors, resource allocation at the higher tier is extremely ineffective, causing not only severe imbalances in industrial structure, technological structure, regional economic structure, and employment structure but also tremendous waste and destruction of resources. In terms of the lower tier resource allocation, enterprises have no incentive or possibility to utilize resources effectively, as their production and management decisions are constantly interfered by

government agencies, resulting in low productivity as well as low resource utilization efficiency. These are the main features of resource allocation in the traditional socialist economic system. Therefore, reforming the traditional economic system is a necessary step toward more effective resource allocation.

The dual-track economic system is a system that exists during the transitional period between the traditional and the new economic system. As defects of the traditional economic system become more and more prominent, the economy will have to undergo a systemic reform and a series of new economic issues are likely to emerge afterward. The reason is that the new economic system can only be established on a gradual basis as the old economic system fades away and the transition process from the old system to the new one is relatively long. During this process, some economic activities may still be carried out according to the traditional economic system, while other activities are conducted according to the new economic system. In addition, there are potential scenarios where economic activities are restricted by both the traditional and new economic systems, as the traditional economic system has not been completely terminated while the new economic system has started to play certain roles in the economy, and there may also be gaps where both the traditional and new economic systems fail to function, resulting in economic turmoil. It is necessary to point out here that the dual-track economic system is transitional in itself and resource allocation in the system is relatively complicated. More specifically, the industrial structure is getting more effective, idle or wasted resources are decreasing, and resource utilization efficiency is increasing; on the other hand, infrastructure construction projects are expanding irrationally, and the number of redundant construction projects is still on the rise, straining the supply of raw materials and leading to rampant inflation driven by both higher demand and cost. Under such complex circumstances, even though resource allocation may be better overall than that in the traditional economic system, it is quite possible that the allocation of

resources in certain areas is even worse than that in the traditional economic system. Economic reforms have thus encountered unexpected obstacles. Some people who were optimistic about economic reforms in the first place lose confidence in economic reforms after witnessing chaos during the transitional period between the old and new economic systems. Some even think the traditional economic system has certain merits, for at least it steered clear of the chaos during the transitional period. These are the features of resource allocation in the dual-track economic system. They are also commonly referred to as "transitional symptoms," which are inevitable during the transitional period between the old and new systems, namely, pains brought by the birth of a new economic system.

The new economic system is the target system to be established after socialist economic reforms. It will be an economic system in which enterprises are highly motivated and factors of production can be freely transferred and recombined. The internal operation mechanism of enterprises would be fundamentally different from that under the traditional economic system. The lower tier resource allocation would become more effective as enterprises are more motivated by their economic interests. Because of the normalization of property rights and the possible rearrangement of production factors in the economy, effective allocation of resources among various areas in the economy would likely come true, thus realizing the goal of achieving the effectiveness of the higher tier resource allocation. It is obvious that the new economic system to be established is one that facilitates effective allocation of resources.

1.1.4 Economic Disequilibrium and Socialist Resource Allocation

Analyzing the features of resource allocation in the socialist economy from the economic system perspective helps understand the significance and tasks of economic reforms and economic regulations during the current period as well as in the future. However, simply

analyzing the features based on various socialist economic systems is not enough. It is necessary to take the analysis of resource allocation one step further by incorporating the disequilibrium conditions China's economy is currently under. This way, we can better understand the features of resource allocation in the socialist economy.

According to the above discussions on disequilibrium, we can clearly understand that the disequilibrium theory studies the operation process of the economy under the circumstances that the market is underdeveloped and price signals are ineffective in automatically adjusting supply and demand. In terms of China, the economy under the traditional economic system was no doubt in a state of disequilibrium, while the economy under the current dual-track economic system is still in a state of disequilibrium. For a relatively long period of time in the future, the economy will continue to remain in a state of disequilibrium for reasons including sustained constraints on resources, even after the new economic system has been established and functioning. It may be a little different compared to the past, as the severity of disequilibrium is lower. These are the realities in current Chinese economy and we must not avoid them.

Now, let us focus on resource allocation under the dual-track economic system. The fundamental characteristics of a disequilibrium economy, such as underdeveloped market, unreasonable prices of comparable commodities, distorted price signals, severe constraints on resource supply, and an excess of aggregate demand over aggregate supply, all exist in the current dual-track economic system. More importantly, behind the operation of the economy lies such a fact: Enterprises, especially state-owned enterprises in the dualtrack economic system, have not completely steered clear of their affiliation with government administrative agencies or become goods producers with decision-making authorities and responsibilities for their own profits or losses. Their investment and transaction activities are distorted to a large extent. Even when price signals are accurate, they

cannot serve as an instrument for those enterprises to adjust demand and supply accordingly. Therefore, only after we have a relatively thorough understanding of current Chinese economic realities can we naturally reach the following conclusions based on the view of disequilibrium economy: It is necessary to reform the economic system in order to enhance the effectiveness of resource allocation; among various economic system reforms, the price reform is neither the only important reform nor can it become a breakthrough point of all economic reforms. The key is ownership reform or the reform of enterprise institution. The breakthrough point of economic reforms is first and foremost the vitalization of enterprises by recognizing them as goods producers who make their own decisions, take responsibility for their own profits and losses, and react to price signals to make necessary adjustments to supply and demand.

It is worth noting that since the purpose of economic reforms is to enhance the effectiveness of resource allocation, the mechanism of resource allocation and the mechanism of the operation of the economy need to be reformed. In terms of the reform of enterprise institution, it is the mechanism governing how enterprises themselves operate as well as how factors of production flow and combine that needs to be changed, not administrative affiliation or management scope (e.g., changing from vertical affiliation to horizontal affiliation or vice versa). In terms of price reform, it is the mechanism of price movement and price determination that needs to be changed, not the ratios of prices. As long as enterprises are still affiliated with administrative agencies, they will not be able to operate independently or take responsibility for their own profits and losses. In this case, the only thing reformed with regard to price is the ratio of prices, not the price setting mechanism. Such a price reform can only lead to reverted price ratios, i.e., the ratios of prices will soon return to the unreasonable level the same as before the reform, but with an even higher price level. This will do no good to the improvement of resource allocation.

If the reform of enterprise institution, or the reform of ownership, is set as the top priority, which reaffirms enterprises as goods producers, identifies investors and investees, separates enterprises from government agencies, and develops as well as improves the market system, investment principals will be identified, markets will be established and improved, price will be determined by market, and the issues related to resource allocation will naturally disappear. Hence, in a disequilibrium economy, it would be a mistake to attempt market establishment and price decontrol in the first place without tackling the fundamental obstacles to resource allocation that hinder market perfection and price signaling or without developing an effective resource allocation mechanism by allowing goods producers to become independent decision-makers responsible for their own profits and losses. If that direction is followed, unending inflation will follow, the ratios of merchandise prices will remain irregular, the market will unlikely be fully developed due to absence of decisionmaking and profit-driven enterprises, price signals will still be distorted, and effective resource allocation mechanism will be nothing but a dream. These analyses on disequilibrium are sure to reach this conclusion.

壹 从非均衡的角度看社会主义的资源配置问题

一、非均衡的含义

在经济学中，非均衡是相对于瓦尔拉均衡而言的。瓦尔拉均衡是假设存在着完善的市场和灵敏的价格体系条件下所达到的均衡。非均衡是指不存在完善的市场，不存在灵敏的价格体系的条件下所达到的均衡。因此，非均衡又被称作非瓦尔拉均衡。

根据瓦尔拉的学说，既然市场是完善的，价格体系是灵敏的，每一个参加市场交易的人对于现在的和未来的价格都有完全的信息，对现在的和未来的供求状况都有充分的了解，价格随着供求的变化而随时进行调整，那么在任何一种价格条件下，需求总量必定等于供给总量，社会中的超额需求和超额供给都是不存在的，任何交易的实现，都以均衡价格为条件。没有达到均衡价格，不会成交；只有价格均衡了，才可能进行交易。根据这样的学说，生产的过剩、商品的滞销、经常性的失业，以及与超额需求有关的通货膨胀也就不会出现。

对于这种不符合经济实际的瓦尔拉均衡的分析，虽然早就引起一些持有异议的西方经济学家的尖锐批评，而且凯恩斯在其1936年出版的《就业、利息和货币通论》一书中专就资本主义社会中经常性失业存在等问题进行了阐述，但直到60年代初，经济学界关于非均衡的研究仍是局部性的、非系统的。甚至对凯恩斯本人的经济理论的解释，也存在截然不同的两种观点。占主流地位的凯恩斯理论解释者认为，凯恩斯经济学仍然是一种均衡经济学，凯恩斯只是对瓦尔拉均衡学说作了一定的修改，基本上没有否定它。另一些凯恩斯理论的解释者则认为，凯恩斯经济学已经突破了均衡理论的界限，进行了非均衡理论的最初的、系统性的阐述。这具体表现于：凯恩斯认为市场机制不一定能充分发挥作用，市场难以把各种交易活动协调起来，无论是产量、就业量还是投资量都是波动的，而在资本主义条件下，经常出现的是生产过剩、失业、投资需求的不足。

非均衡理论从60年代后期起有较大的进展。非均衡的研究表明：在市场不完善和价格不能起到自行调整供求的作用的条件下，各种经济力

量将会根据各自的具体情况而被调整到彼此相适应的位置上，并在这个位置上达到均衡。显然，非均衡所达到的均衡，并非市场完善前提下的均衡，而是市场不完善前提下的均衡；并非与零失业率或零通货膨胀率同时存在的均衡，而是伴随着失业或通货膨胀的均衡。换言之，非均衡实际上也是一种均衡，只不过它不是瓦尔拉学说中所论述的那种均衡，而是存在于现实生活中的均衡。这就是经济学中非均衡的含义。

二、资源配置的含义

资源配置是指经济中的各种资源（包括人力、物力、财力）在各种不同的使用方向之间的分配。在资源供给有限的条件下，需要研究的是如何有效地把经济中的各种资源分配于各种不同的用途，以使用这些资源生产出更多地为社会所需要的产品和劳务。任何社会，包括社会主义社会在内，只有做到人尽其才，物尽其用，地尽其利，才能被认为做到了资源的合理配置。如果社会上人力、物力、财力有被闲置而未能得到充分利用的部分，或者，人力、物力、财力有被浪费而未能充分发挥作用的部分，这些都是资源配置方面存在的问题。经济学所要着重研究的问题之一，就是使资源配置趋向合理，以便让现有的资源发挥更大的作用，让潜在的资源被发掘出来。

资源配置可以分为两个层次。较高的层次是指资源如何分配于不同部门、不同地区、不同生产单位，其合理性反映于如何使每一种资源能够有效地配置于最适宜的使用方面。较低的层次是指：在资源分配为既定的条件下，一个生产单位、一个地区、一个部门如何组织并利用这些资源，其合理性反映于如何有效地利用它们，使之发挥尽可能大的作用。

这两个不同层次的资源配置是既有联系，又有区别的。它们之间的联系在于：一方面，就全社会范围而言，现有的资源总量是一定的，现有资源在不同使用方向的分配情况，必然影响到每一个具体单位的资源利用的效率，宏观上资源分配的不合理，必然使相当一部分生产单位的资源利用效率较低；另一方面，假定大多数生产单位的资源利用效率都能在现有基础上提高，那么其结果将导致经济中资源总量增加，而资源总量增加与资源总量不变相比，前者将有利于调整资源在不同使用方向的分配，有助于资源配置合理化。这两个层次的资源配置之间的区别在于：第一，彼此的目标不同。较低层次的资源配置的目标主要是提高生

产单位的资源利用效率，使一定的投入能有更多的产出。较高层次的资源配置的目标则主要是让每一种资源合理分配，使之进入最适宜的使用方面，然后通过生产要素在广泛范围内的重新组合，使生产要素发挥更大的作用。第二，实现的途径不同。较低层次的资源配置可以在不转移生产要素的前提下，通过生产技术措施或生产单位内部组织管理措施来实现资源利用效率的提高。而较高层次资源配置合理化的实现，通常要涉及生产要素流动、产权关系规范化、固定资产的转让、宏观经济调节手段的运用、宏观经济管理体制的改革等问题。

但无论是从较高层次上看还是从较低层次上看，资源配置的合理化都表现为一个长期的过程。资源配置的合理程度没有一个绝对的标准，资源配置的合理化也不会有一个极限。我们只能这么说：通过这一层次或那一层次的调节或改革，资源配置状况是不是比较合理了，是不是比过去改善了，或改善了多少，等等。社会主义政治经济学所要研究的一个重要课题，就是怎样通过经济调节，使社会主义经济中的资源配置状况逐渐好转，逐渐趋于合理，以便在较高层次上和较低层次上都能提高资源利用的效率。

三、社会主义经济体制与资源配置的特点

在研究社会主义经济中的资源配置问题时，有必要先了解社会主义的经济体制以及这种经济体制给资源配置带来的各种影响。由于社会主义经济体制可以区分为各种不同的类型，因此，社会主义经济中的资源配置也可以相应地分成几种类型，每一种类型的资源配置都具有一定的经济体制所赋予的特点。

从我国的实际情况出发，可以大体上分为三类经济体制：一是传统的经济体制；二是在传统经济体制逐渐失去主导地位和新经济体制逐渐成长的条件下的双轨经济体制；三是新的经济体制。可以把50年代末到70年代末这段时间的经济体制称为传统的经济体制；把80年代以来的经济体制称为双轨经济体制。目前我们正处于双轨经济体制之下。至于新经济体制，则是我们力求通过经济改革，在摆脱了双轨经济体制之后所要建立的那种经济体制。后者对我们来说，至今仍然是目标模式，而并非生活中的现实。

三种类型的经济体制之下资源配置的特点如下：

在传统的经济体制之下，指令性计划或者被理解为社会主义经济计

划的惟一形式，即认为社会主义经济等同于指令性经济，或者被理解为社会主义经济的主要形式，从而以指令性方式分配资源成为经济中资源配置的基本方式。在这种经济体制之下，市场或者不起什么作用，或者即使起作用，它对资源配置的影响也是十分有限的。不仅如此，由于否定企业作为商品生产者和经营者的地位，否认企业应当拥有生产经营的自主权，抹煞企业的自身利益，限制生产要素的流动，因此，在高层次的资源配置方面，不仅存在着资源的极其不合理的分配，造成产业结构、技术结构、地区经济结构、就业结构的严重失调，而且资源的浪费、破坏也非常惊人；在低层次的资源配置方面，则由于行政部门对企业生产和经营的横加干预，企业既没有合理使用资源的积极性，也没有这种可能性，所以企业的生产效率低下，资源的使用效率也很低。这就是传统的社会主义经济体制下资源配置的主要特点。对传统经济体制进行改革，是资源配置从不合理趋向合理的必要前提。

双轨经济体制是新旧经济体制交替时期客观存在的一种体制。当传统经济体制的缺陷暴露得越来越明显，从而必须对之进行改革之后，经济中有可能出现一系列新问题。这是因为，旧经济体制只可能逐步退场，新经济体制也只可能逐步建立，新旧体制的交替需要一个较长的过程。在这个过程中，可能有一部分经济活动仍按传统经济体制下的方式进行；另一部分经济活动则开始按新经济体制下的方式进行。此外，还可能发生这类现象：一部分经济活动既要受传统经济体制的制约（因为传统经济体制尚未退出经济活动的舞台），又要受新经济体制的制约（因为新经济体制已经开始在经济生活中发生某些作用）；或者，在一些经济领域内，传统经济体制和新经济体制都不起作用，经济生活中出现了一些空白点，从而产生了一些混乱。必须指出，双轨经济体制本身具有过渡性，而双轨经济体制下的资源配置也具有较大的复杂性，这具体表现于：一方面，产业结构正在朝着比较合理的方面调整，资源的闲置或浪费现象正在减少，资源的使用效率正在提高；另一方面，基本建设规模不合理地扩大，重复建设有增无减，原材料供应更加紧张，由需求与成本两方面的因素所导致的物价上涨难以被抑制住。在这种复杂的情况下，资源配置的整个状况虽然比传统经济体制之下会有所好转，但这并不排除某些方面的资源配置状况也许比传统经济体制之下更差一些。于是就会使经济改革遇到原来预料不到的障碍，即本来对经济改革抱有较大希望的人在目击新旧体制交替时期发生的混乱现象之后，对经

济改革的信心下降了，对经济改革的前景感到没有把握了，甚至认为传统经济体制仍有值得留恋之处，至少不会出现像新旧体制交替时期出现的这些混乱。这就是双轨经济体制之下资源配置的特点，也就是通常所说的新旧体制交替时期不可避免的“过渡性症状”，即伴随新经济体制诞生而来的阵痛。

新经济体制是社会主义经济改革之后所要建立的目标体制。这将是一个企业具有充分活力，生产要素可以自由流动和重新组合的经济体制。由于企业的内部经营机制已经根本不同于传统经济体制之下的情形了，较低层次的资源配置将因企业对自身利益的关心而趋于合理。由于产权关系规范化和生产要素有可能在社会范围内重新组合，资源在社会上不同使用方向之间的合理配置也能成为事实，于是较高层次的资源配置目标将得到实现。可见，我们将要建立的新经济体制，是一个有利于资源合理配置的新体制。

四、经济的非均衡与社会主义的资源配置

从经济体制的角度对社会主义经济中资源配置的特点进行分析，有助于了解现阶段和今后一段时期内经济改革和经济调节的意义和任务。但仅仅从不同的社会主义经济体制的角度来考察，还是不够的。有必要进而从我国经济的非均衡性质来分析资源配置问题，这样才能更好地理解社会主义经济中的资源配置的特点。

根据前面关于非均衡的论述，可以清楚地了解到，非均衡理论所考察的是市场不完善、价格信号不能自行调整供求关系的条件下的经济运行过程。对我国而言，过去，传统经济体制下的经济运行固然是一种非均衡状态的经济运行，而目前，双轨经济体制下的经济运行仍旧是非均衡状态中的经济运行。甚至在今后较长的一段时期内，即使建立了新的经济体制并使之在经济中发挥作用，但由于资源约束的继续存在等原因，经济运行将会继续处于非均衡状态之中，只是非均衡的程度不断减弱而已。这正是我国经济的实际情况，我们不应当回避它。

现在，专就双轨经济体制之下的资源配置问题来说，市场不完善、商品比价不合理、价格信号扭曲、资源供给受到很大限制、社会总需求超过社会总供给……总之，非均衡经济的基本特征，在我国双轨经济体制之下都是存在的。但更重要的是，在经济运行的背后，还存在着一个事实，这就是：在双轨经济体制之下，企业，尤其是国营企业，还没有

完全摆脱（或基本上没有摆脱）行政部门附属物的地位，它们还不是自主经营、自负盈亏的商品生产者，它们的投资行为和交易行为都在相当大的程度上被扭曲，价格信号即使是准确的，它们也不可能成为企业调整供给与需求的手段。因此，只要对我国现实经济情况有比较深刻的了解，从非均衡经济这一立足点来进行考察，那么就会自然而然地得出下述结论：要使资源配置从不合理趋向于比较合理，经济体制改革是必要的；而在经济体制改革中，价格改革既不是惟一重要的改革，更不可能成为改革的突破口。关键在于所有制体制改革，也就是企业体制改革。改革的突破口在于首先应赋予企业以活力，使企业成为自主经营、自负盈亏的商品生产者，能够接受价格信号并根据它们来调整供求的商品生产者。

要知道，既然经济改革的目的在于使资源配置从不合理趋向于比较合理，那么需要改革的就是资源配置的机制、经济运行的机制。以企业体制改革来说，所要改革的是企业自身的经营机制、生产要素流动和组合的机制，而不是隶属关系或管理范围的调整（例如从“条条”变为“块块”，或从“块块”变为“条条”）。在价格改革方面，所要改革的是价格运动的机制、定价的机制，而不是价格比例的调整。只要企业仍然是行政部门的附属物，企业不能自主经营和自负盈亏，那么在价格方面，所改的只能是商品的比价，而不是定价的机制。这样的“价格改革”，其结果只能是“比价回归”，即比价调整以后不久又恢复到原来的不合理比价的位置上，但是价格水平却比以前上升了。这对于资源配置状况的改善是起不到什么积极作用的。

假定把企业体制改革即所有制体制改革作为关键，并把赋予企业以商品生产者地位作为突破口，明确投资主体，实现政企分离，培育市场，使市场完善起来，那么在投资主体明确和市场逐渐完善的基础上，最后必将实现市场定价的格局，资源配置问题的解决也就顺理成章。由此可见，在非均衡经济之中，不从妨碍市场完善和价格信号正常发挥作用的根源上着手来解决资源配置问题，也就是不从先形成自主经营、自负盈亏的商品生产者（企业）方面着手以导致有效的资源配置机制的形成，而试图一开始就建立市场，放开价格，那么恰恰把一切都颠倒过来了。如果那样做，不但只会造成无休止的物价上涨，只会使商品比价依然处于不正常状态，而且由于自主经营、自负盈亏的企业不存在，市场还是不可能完善，价格信号仍然是扭曲的，有效的资源配置机制依旧是

可望而不可即。根据非均衡分析，所得出的必然是这样一个结论。

1.2 RESOURCE MISALLOCATION AND POTENTIAL STAGFLATION IN THE SOCIALIST ECONOMY

1.2.1 The Cause of Stagnation and Inflation in the Socialist Economy

Stagnation refers to economic slowdown, which is characterized by lowering economic growth with growth rate hovering at a low level. Inflation refers to higher price level, characterized by rising prices. Stagflation refers to the phenomenon where stagnation and inflation exist simultaneously.

Stagnation and inflation may occur one at a time or at the same time in the socialist economy, a point I have discussed in *Socialist Political Economics*.¹ What is the root cause of stagnation, inflation, and stagflation in the socialist economy? Can we simply consider them the fallout from administrative mistakes or some coincidental events? The above analyses on economic disequilibrium and the impact on resource allocation from socialist economic system have revealed the fundamental root causes of stagnation, inflation, or stagflation. Administrative mistakes or coincidental events, even though having certain connections with stagnation, inflation, or stagflation, only make situations worse or are factors that induce them.

Current Chinese economy runs in a state of disequilibrium. Both aggregate imbalance and structural imbalance are probable. The former is demonstrated by a mismatch between aggregate supply and aggregate demand, resulting in either economic slowdown or inflation, while the latter manifests as a mismatch between the demand and supply of key products, causing either economic slowdown or inflation. Thus, stagnation or inflation, due to either aggregate or structural factors, will normally occur separately. If aggregate imbalance and structural imbalance occur simultaneously,

there will be four possible scenarios:

1. Stagnation due to aggregate factors and structural factors
2. Inflation due to aggregate factors and structural factors
3. Stagnation due to aggregate factors and inflation due to structural factors
4. Inflation due to aggregate factors and stagnation due to structural factors

Stagnation and inflation occur separately in the first two scenarios and simultaneously in the latter two scenarios, i.e., stagflation. These four scenarios are all probable in a disequilibrium economy. They are relatively easy to understand in the traditional economic system and the dualtrack economic system. If we established the new economic system in the future, could we possibly prevent stagnation, inflation, or stagflation? Not necessarily. As mentioned above, in the new economic system, enterprises will have become goods producers that operate independently and are responsible for their own profits and losses. The market will have become relatively fully developed, if not completely fully. Prices can function normally as signals to adjust demand and supply. However, as long as resource constraints (and possibly demand constraints) persist, the socialist economy in the new economic system will remain a disequilibrium economy or an economy with a relatively low degree of disequilibrium. That being said, stagnation, inflation, or stagflation is still possible.

The above analysis has demonstrated that the root cause of stagnation, inflation, or stagflation in the socialist economy is not the socialist system itself, but aggregate imbalance and structural imbalance during the operation of a disequilibrium economy. Having said that, what is the cause of aggregate imbalance and structural imbalance? To answer this question, we have to look at potential macroeconomic and microeconomic mismatch in an economy.

1.2.2 The Cause of Macroeconomic and Microeconomic

Mismatch

There are circumstances in which macroeconomic and microeconomic mismatch occurs, which is not entirely attributable to the traditional socialist economic system or the dual-track economic system. Let us assume that we have established the new economic system, where enterprises and individuals conduct economic activities independently and make their own decisions based on their best economic interests and intentions. This makes it impossible for them to automatically synchronize their activities with the national economy, hence leading to macroeconomic or microeconomic mismatch. More specifically, in the new economic system, enterprises make their own decisions with regard to the level of inventory and borrowings based on their own expectations of price level, interest rate, or supply and demand in the marketplace. So do individuals, who adjust their personal stock of consumer goods, cash holdings, and form of assets in accordance with their own expectations of price level, interest rate, or supply and demand in the marketplace. These activities will impact the demand and supply of both merchandise and capital in the marketplace. We understand from the changes of enterprise and individual behavior that the fluctuations of inventory in the market will cause abnormal inventory in the economy or excessive money in circulation, which will naturally lead to macroeconomic or microeconomic mismatch. Therefore, it is obvious that any macroeconomic or microeconomic mismatch in the socialist economy as well as the resulting aggregate imbalance and structural imbalance (manifested as stagnation, inflation, or stagflation) will not disappear even after the new economic system is established. However, whenever macroeconomic and microeconomic mismatch occurs, the new economic system is more effective in releasing the power inherent in the economy to offset such mismatch than the traditional economic system or the dual-track economic system, and the influences of government's actions to reduce or eliminate such

mismatch are also more far-reaching in the new economic system than in the traditional economic system or the dual-track economic system. If we conclude that we will always see macroeconomic and microeconomic mismatch and aggregate and structural imbalances in the form of stagnation, inflation, or stagflation in any type of socialist economic system, the traditional economic system or the dual-track economic system will experience more severe mismatch or imbalance than the new economic system, and the cost to the economy to correct such mismatch will also be much larger. If we can summarize the process of socialist economic activities as one that gradually changes from macroeconomic and microeconomic mismatch to moderate match and then to a new level of macroeconomic and microeconomic mismatch, the traditional economic system and the dual-track economic system, in comparison to the new economic system, will need a longer period of time migrating from macroeconomic and microeconomic mismatch to moderate match, face more obstacles down the road, and pay a higher price. They, however, need a relatively short period of time transiting from moderate macroeconomic and microeconomic match to the new macroeconomic and microeconomic mismatch, which tend to develop fairly quickly.

Now, let us go back to disequilibrium economy. It is clear that if the socialist economy turned out to be in the equilibrium described by Walras, excess supply and demand would not exist and aggregate imbalance or structural imbalance would not occur either. It will be impossible to see macroeconomic and microeconomic mismatch, thus eliminating such phenomena as stagnation, inflation, and stagflation. However, the equilibrium economy that Walras described is not real. Disequilibrium is the reality for any economy. Therefore, we may conclude that any imbalance in the socialist economy or any macroeconomic and microeconomic mismatch is a result of the imbalances of economic activities, not administrative mistakes or coincidental events.

1.2.3 Stagflation and Resource Misallocation

Economic slowdown or inflation in the socialist economy represents resource misallocation. It is easier to understand that economic slowdown, as there are bound to be considerable idle resources during economic slowdown. In terms of the production process, idle resources include excess production capacity, idle labor, as well as raw material overstock. In terms of the circulation process, idle resources result from the sluggish sales of manufactured products and abnormal inventory in the marketplace. Of course, serious shortages of certain key products, such as energy, major raw materials, major equipment, and services by the transportation sector, can also cause economic slowdown, which is also a reflection of resource misallocation. Resource misallocation in this scenario manifests as a distorted industrial structure that throws resource allocation out of balance, causing severe product shortages, eventually causing an economic slowdown.

What is the relationship between inflation and resource misallocation in the socialist economy? Why can we say that inflation reflects resource misallocation in the same way as economic slowdown? We can answer these questions by analyzing three different types of inflation:

1. Inflation due to excessive aggregate demand, commonly known as demand-driven inflation

Excessive demand is either caused by escalating investment or rapidly increasing consumption, or both. The reason why demand exceeds supply by a large extent has something to do with resource misallocation, because the participants of resource allocation (i.e., enterprises, individuals, and government) allocate excessive resources to areas whose needs are not justified. In this case, excessive money in circulation is only a phenomenon. The truth behind it is excessive investment or consumption due to resource misallocation.

2. Inflation due to excessively rising cost, commonly known as

cost-driven inflation

Excessively rising cost is ultimately determined by excessively rising prices of production factors, which is in turn caused by excessive demand or severe shortages of the supplies of relevant production factors. Severe shortages of the supplies of certain production factors can be attributed to a distorted industrial structure, constraints on the mobility of production factors, or lack of investment by the producers of production factors. After all, they are all associated with resource misallocation.

3. Inflation due to mismatch between the structures of supply and demand, commonly known as structural inflation

This type of inflation can be found with regard to certain key products when supply fails to meet demand. When certain key products experience excessive demand and shortages of supply, prices will jump and money in circulation will rise, giving rise to inflation. The reason why there is excessive demand for or shortage of supply of key products is still linked to resource misallocation and consequential product structure mismatch or industrial structure mismatch.

Therefore, any type of inflation is associated with resource misallocation. We can conclude that economic slowdown, inflation, and stagflation are all reflective of resource misallocation. In our research on the socialist economy, we must realize that stagnation, inflation, and stagflation are all linked to resource misallocation. With this in mind, we must concentrate on exploring methods that can eliminate resource misallocation, and search for effective resource allocation that can prevent stagnation, inflation, or stagflation.

1.2.4 The Possibility and Prevention of Stagflation

When an economy encounters structural imbalance, simply suppressing aggregate demand will cause excessive economic contraction. At the same time, rising price level due to structural imbalance will remain unchecked. As a result, stagflation will likely occur. This is a serious issue that we must face in managing the

national economy. We must also note that the possibility of stagflation in the economy does not necessarily mean that it will turn into reality. It will require societal purchasing power to turn the possibility of stagflation into reality. It should be noted that even though structural imbalance likely leads to a higher price level, any rise in price level is also related to societal purchasing power. If purchasing power is not strong enough, it will be difficult for the price of shortage merchandise to rise, in spite of structural imbalance between supply and demand. Therefore, if suppressing aggregate demand (e.g., suppressing infrastructure investment, business spending, or residents' disposable income) still leaves us with relatively strong sequential societal purchasing power, which can in turn drive price level higher, we will have to understand the origin of societal purchasing power.

Can it originate from government spending? In other words, can a portion of government spending be diverted toward purchasing shortage commodities? Generally speaking, the possibility does not exist during an excessively contractive period, as suppressing aggregate demand first and foremost entails reducing government spending.

Can it originate from credit expenditures? In other words, can a portion of credit expenditures be diverted toward purchasing shortage commodities? The probability is normally minimal. Suppressing aggregate demand undoubtedly entails reducing credit expenditures.

Can it originate from exports, remittances from expatriates, spending by foreigners within the country (or tourism revenues), or foreign direct investments? All these revenues are likely to become purchasing power for shortage commodities in the domestic market. Suppressing domestic aggregate demand can proceed simultaneously with increasing exports, expatriates' remittances, tourism revenues, and foreign direct investments. Under such circumstance, however, we can prevent price level from rising, in spite of increasing domestic demand for shortage commodities, as long as rising foreign exchange revenues are appropriately utilized to increase supplies of shortage

commodities, such as directly increasing the import of shortage commodities or raw materials for the production of shortage commodities.

Now we have a problem: Since rising purchasing power during the economic contractive period is not caused by government spending, credit expenditures, or foreign exchange revenues, where does it come from?

There are three potential sources:

Personal savings. During the period of economic contraction, residents may withdraw personal savings due to changing expectations and turn them into purchasing power for shortage commodities, thus pushing price level higher.

Personal cash on hand. Cash on hand, considered either pocket money or cash withheld to be spent, will likely be spent and drive price level up when there is change in people's expectations.

Corporate after-tax earnings. Businesses can utilize after-tax earnings to cover corporate expenditures or reward their employees, turning aftertax earnings into personal consumption by employees who purchase shortage commodities and pushing price level higher. But it should be noted that if businesses are driven by profitability and governed by longterm growth strategies, they will, during economic contraction, constrain the spending of after-tax earnings, reduce corporate expenditures and employee compensation, and pay more attention to increasing productivity, lowering cost, and preserving capital. On the contrary, if businesses are not driven by profitability and are shortsighted, they will likely ignore economic contraction and use up all after-tax earnings, thus driving price level higher.

Therefore, if the government adopts measures at time of structural imbalance to reduce aggregate demand without mitigating the impact on the market from personal savings and cash on hand, potential stagflation will turn into reality. Likewise, if the government fails to reform enterprise operation mechanism while reducing aggregate demand, businesses will lack the mechanism to pursue

profitability as well as corporate governance for distributing after-tax earnings, business behavior will remain shortsighted, and potential stagflation will likely turn into reality.

Stagflation is very harmful to the economy. It is not comparable to stable economic growth and even worse than inflation during economic growth. As for current Chinese economy, it is imperative to reduce aggregate demand. Our research will be focused on preventing stagflation while reducing aggregate demand. Of course, we also have to stress the importance of lowering economic imbalance by increasing effective aggregate supply. If excessive reduction of aggregate demand leads to lower effective aggregate supply, the purpose of reducing aggregate demand to balance supply shortage will unlikely be fulfilled. In addition, we must also further analyze the abovementioned issues including personal savings, cash on hand, and enterprise operation mechanism in search of an effective solution to stagflation.

1. Personal savings

In order to avoid run on the bank prompted by changing personal expectations at time of lower aggregate demand, we can raise interest rate as necessary and employ tools such as inflation-protected savings and savings for forward purchases to stabilize personal savings. Meanwhile, the government should divert a portion of personal savings to purchasing houses and financial instruments. Investments in housing and financial instruments are protected against inflation and are able to turn shortterm capital into long-term capital or changing consumption funds into production capital. This is an effective method of redistributing personal savings.

2. Cash on hand

Cash on hand is primarily treated the same way as personal savings. The government should turn cash on hand into personal savings and purchasing power for housing and financial instruments. Meanwhile, the government should also encourage small business owners and peasants to turn their cash on hand into production

capital so as to increase the supply of capital and avoid exorbitant and extravagant consumption.

3. Corporate operation mechanism

Increasing supply relies on deepening enterprise reforms, which, for example, includes motivating enterprises and their employees to facilitate the recombination of production factors and accelerating the adjustment of the industrial structure. Suppressing demand also relies on deepening enterprise reforms. We will discuss later on in the book that reforming enterprises is nothing but reforming corporate operation mechanism and that only when driven by economic interests can an enterprise care about how to use retained earnings, thus preventing corporate shortsightedness. Having said that, how do we reform corporate operation mechanism? Obviously, the subcontracting system is not sufficient, because it does not sever the relationship between enterprises and their administrative agencies. Enterprises under the subcontracting system have not been goods producers with decision-making authorities and financial responsibilities. The subcontracting system should gradually migrate to the shareholding system.² Economic activities under the shareholding system are driven by investors' interests. Macroeconomic regulatory plans can be drafted in accordance with the long-term interests of enterprises structured under the shareholding system. Driven by long-term economic interests, investors will voluntarily control their utilization of after-tax earnings to avoid shortsightedness, i.e., maximizing short-term interests by sacrificing long-term interests. Hence, corporate myopia, i.e., depleting retained earnings, can potentially be prevented.

The above discussions allow us to draw the following conclusion: Stagflation cannot be completely ruled out if there is structural imbalance. Stagflation can be prevented, as long as we devote to increasing effective supply while suppressing demand, take necessary measures to stabilize personal savings, try our best to divert deposits and cash on hand toward purchasing houses and securities, and

deepen enterprise reforms by establishing the enterprise mechanism following the principle of maximizing economic interests. In other words, when these conditions are met, the economy will not be expected to experience stagflation. Instead, the economy will see medium economic growth and declining inflation rate.

This section describes stagflation in the socialist economy through a brief analysis. The following sections will present a detailed analysis of issues related to government regulation and enterprise reforms under the coexistence of commodity supply gap and demand shortfall.

1.2.5 The Need to Reconsider Resource Allocation

One of the purposes of studying economics is to find a satisfactory system or mechanism that facilitates efficient utilization of natural resources and effective resource allocation, which contributes not only to increasing national wealth but also to fair distribution of wealth or income. Ignoring resource allocation is actually forgetting the purpose of economics as a science. Existing research on resource allocation since the inception of classical political economics has revealed two trends: One believes that the market is the only effective mechanism that can perfectly and effectively allocate various limited resources in a society. Resource allocation is no more than the automatic regulation of the economy by the market. The other trend believes that the market mechanism is fairly limited in terms of resource allocation processes and results. The limitation of market regulation reflects either inefficient utilization of societal resources, which causes idling or waste of resources, or a mismatch between resource allocation and income distribution, which leads to wider income gaps despite relatively effective resource allocation and higher national wealth under the market mechanism. Such circumstance calls for government regulation or planned mechanism in replacement of the market mechanism so as to overcome its limitation.

In our study of resource allocation in current Chinese economy, it is not difficult to find that various schools of thoughts on resource

allocation, despite the fact that many are useful, are not applicable to the realities of the Chinese economy. Given the Chinese economic disequilibrium, the belief that the market is the only effective mechanism to allocate resources is apparently incomplete. If the market pricing mechanism is selected as a starting point to resolve resource allocation issues, we will likely see considerable economic chaos. This is because in an economic environment where the market has not been fully developed and enterprises have not become independent decision-makers and often face noneconomic obstacles, to realize efficient utilization and effective allocation of resources first and foremost requires that enterprises be goods producers that are financially independent and responsible for their own investment and operations and that the market continue to perfect. Even after enterprises are motivated, endowed with decisionmaking authorities, full reliance upon price regulation is not sufficient to achieve efficient utilization and effective allocation of resources if constraints on resources are not removed. All these points demonstrate the complexity of resource allocation under disequilibrium conditions, which is why we have to come back and reconsider the issue of resource allocation according to current economic realities in China.

The fact that the Chinese economy is susceptible to stagnation, inflation, or stagflation, which is related to resource misallocation, clearly demonstrates the complexity of resource allocation in the current economy as well as the difficulty to find a viable solution. In other words, neither the model of resolving resource allocation issues by solely using the market mechanism nor one that replaces the market mechanism with the planned mechanism is able to reveal the true root cause of the problems and to provide a real solution. Our emphasis on "realistically describing the Chinese economy only by understanding China in the first place" does not mean we can look down on economic theories that provide appropriate guidance. Without economic theories and the analysis conducted according to these theories, we will be inundated with piles of tedious and

unsystematic details or descriptions. Therefore, we value the guiding role of economic theories. But it does not mean we are able to draw an easy conclusion on resource allocation simply according to some superficial phenomena of economic activities. Instead, it requires us to look for economic theories that can be applied to resolve resource allocation issues in China. Even though there are many difficulties down the road, we will succeed eventually as long as we follow the research path that is consistent with Chinese realities.

As it is necessary to reconsider resource allocation issues, we can naturally reach the following conclusion: A theory on resource allocation applicable to China must follow real Chinese situations. In order to meet this requirement, the theory on economic disequilibrium is hereby proposed as an economic theory that is conducive to resolving resource allocation issues in socialist society.

贰 资源配置失调与社会主义经济中“滞胀”的可能性

一、社会主义经济中“滞”与“胀”的根源

“滞”是指经济停滞，其表现形式主要是经济增长率下降，并停留在低水平上。“胀”是指通货膨胀，其表现形式主要是物价上涨幅度较大。“滞胀”是指这两种现象同时存在。

在社会主义经济中，“滞”与“胀”既有可能单独出现，也有可能一起出现。关于这一点，我已经在《社会主义政治经济学》一书中作了论述。¹问题是，造成社会主义经济中“滞”、“胀”与“滞胀”的根源何在？能不能把这些情况简单地看成是由于政府工作失误或受到偶然事件的影响而带来的后果呢？从前面对于经济的非均衡分析和对于社会主义经济体制给予资源配置的影响的分析可以了解到，无论是“滞”、“胀”还是“滞胀”都有深刻的内在原因，如果说政府工作失误或偶然事件的干扰多少与此有关的话，那么这只是加剧它们或诱发它们的因素而已。

现阶段我国的社会主义经济作为一种非均衡的经济，在运行过程中，总量失衡和结构性失衡都有可能发生，总量失衡表现为由于社会总需求与社会总供给的不一致而导致经济停滞或通货膨胀，结构性失衡表现为由于关键性产品需求与供给的不一致而导致的经济停滞或通货膨胀，这样，“滞”或“胀”或者由于总量方面的原因，或者由于结构方面的原因而单独出现。如果总量失衡与结构性失衡同时发生，那么就可能有下述四种不同的表现：

1. 由总量方面的原因所导致的“滞”和由结构方面的原因所导致的“滞”；
2. 由总量方面的原因所导致的“胀”和由结构方面的原因所导致的“胀”；
3. 由总量方面的原因所导致的“滞”和由结构方面的原因所导致的“胀”；
4. 由总量方面的原因所导致的“胀”和由结构方面的原因所导致的“滞”。

上述第一、二种表现仍属于单独出现的“滞”或“胀”，而第三、四种

表现则是“滞”与“胀”的同时发生，即“滞胀”。应当说，这四种表现，在非均衡经济中都是可能出现的。在传统经济体制之下和双轨经济体制之下，对这些情况的发生可能较易于理解。那么在今后一段时期内，假定建立了新经济体制，是不是就不可能发生“滞”、“胀”与“滞胀”了呢？并非如此。正如前面已经指出的，在新的经济体制之下，企业成了自主经营、自负盈亏的商品生产者，市场已趋向于完善或比较完善，价格信号也能够正常地发挥其调节供给与需求的作用了，但只要继续存在着资源约束（在某种程度上还可能存在着需求约束），那么，新经济体制之下的社会主义经济仍然是非均衡经济，或者说，是一种非均衡程度较轻的经济。即使如此，经济运行过程中的“滞”、“胀”或“滞胀”，仍是有可能发生的。

这表明了社会主义经济中的“滞”、“胀”或“滞胀”的根源不在于社会主义制度本身，而在于非均衡经济运行过程中发生的总量失衡和结构性失衡。那么，总量失衡和结构失衡的原因又何在呢？这就必须从经济运行过程中可能出现的宏观经济与微观经济的不协调谈起。

二、宏观经济与微观经济不协调的原因

宏观经济与微观经济之间存在着不协调的情况。这并不仅仅与传统的社会主义经济体制和双轨经济体制有关。假定建立了新经济体制，那么由于企业经济活动和个人经济行为是分散的，企业和个人按照各自的利益和意图进行经济决策，它们的活动不可能自发地同国民经济运行处于相互适应之中，由此，仍会产生宏观经济与微观经济的不协调。具体地说，在新的经济体制之下，企业会根据自己的价格预期、利息率预期或对于市场供求状况的预期，调整自己的存货水平和资金借入量的行为。这些行为将影响市场商品的可供量和市场的资金供求关系。个人也会根据自己的价格预期、利息率预期或对于市场供求状况的预期，调整自己的消费品存量、现金持有额和资产形式的行为。这些行为将影响市场商品的供求和资金的供求。从企业和个人行为的调整可以了解到，市场存货数量的波动必将导致经济中出现不正常的市场存货或流通中过多的货币量，于是宏观经济与微观经济之间的不协调问题也就自然而然地产生了。可见，在社会主义经济运行过程中，宏观经济与微观经济之间的不协调，以及由于这种不协调而导致的总量失衡、结构性失衡（这些失衡以“滞”、“胀”或“滞胀”等形式表现出来），不会因新经济体制的建

立而不再存在。只是在新经济体制之下，一旦宏观经济与微观经济之间出现不协调的时候，经济本身所具有的使这种不协调趋于缓和的力量要比在传统经济体制和双轨经济体制之下易于发挥作用，通过政府调节来消除或缓解这种不协调现象的效果也比在传统经济体制和双轨经济体制之下大得多。如果说在各种不同的社会主义经济体制之下都会出现宏观经济与微观经济之间的不协调，都会发生总量失衡、结构失衡及其表现形式“滞”、“胀”或“滞胀”的话，那么在传统经济体制和双轨经济体制之下，这种不协调和失衡不仅要比新经济体制之下远为严重，而且在使这种不协调转变为比较协调的过程中，经济本身为之付出的代价也远为巨大。如果把社会主义经济运动的过程概括在从宏、微观经济的不协调到比较协调，再从比较协调到新的不协调的过程的话，那么与新经济体制之下情形相比，在传统经济体制和双轨经济体制之下，从宏、微观经济的不协调到比较协调所需要的时间较长，遇到的障碍较多，为此而付出的代价较大，而从宏、微观经济的比较协调到新的不协调之间的时间较短，即新的不协调可能很快就产生。

现在，把问题再回到非均衡经济方面。可以明确地指出，假定社会主义经济真的是像瓦尔拉所描述的那种均衡经济的话，超额需求或超额供给就都不存在，总量失衡或结构失衡也不可能出现。宏、微观经济之间的不协调就不会发生，于是“滞”、“胀”、“滞胀”之类的现象也都没有存在的可能了。但瓦尔拉所描述的那种均衡经济是不符合实际的，经济中实际存在的是非均衡状态。既然如此，那就可以认为，社会主义经济中的失衡和宏、微观经济的不协调是来自非均衡的经济运行，而主要不是政府工作失误或偶然事件干扰的结果。

三、“滞胀”与资源配置失调

社会主义经济中出现的经济停滞或通货膨胀都反映了资源配置的失调。经济停滞反映资源配置失调，是比较容易理解的。这是因为，在经济停滞的情况下，必然发生资源的严重闲置。这在生产过程中，表现为生产设备的闲置，劳动力未得到充分利用，以及原材料的积压；在流通过程中，表现为已经制成的产品的滞销，表现为市场上出现超正常的存货。当然，关键性产品（如燃料和动力、重要的原材料、重要的设备、运输部门提供的劳务等）的严重短缺也可能导致经济停滞，但这同样是资源配置失调的反映。这种情况下的资源配置失调主要以产业结构的畸

形等形式出现，即由于产业结构畸形引起资源配置失调，引起关键性产品的严重短缺，最终导致经济停滞。

那么，社会主义经济中所发生的通货膨胀同资源配置失调之间又是怎样的关系呢？为什么说通货膨胀与经济停滞一样，也是资源配置失调的反映呢？这可以从三种不同类型的通货膨胀着手分析：

1．由于社会总需求过大而引起的通货膨胀，即通常所说的需求因素导致的通货膨胀。

需求之所以过大，或者是由于投资规模膨胀，或者是由于消费支出增长过快，或者两者兼而有之。需求大大超过供给，这是与资源配置失调有关的，因为资源配置的主体（企业、个人或政府）把过多的资源投入到不应当投入这样众多资源的领域中了。在这种情况下，货币流量过大只是一种现象，在这一现象的背后，则是由于资源配置失调所造成的投资过多或消费支出增长过快。

2．由于成本上升过大而引起的通货膨胀，即通常所说的成本因素导致的通货膨胀。

成本上升幅度之所以过大，归根到底，由生产要素价格上涨过大所决定。生产要素价格之所以上涨过大，则又是由于对生产要素的需求增加过猛以及生产要素供给的严重不足。就生产要素供给的严重不足而言，这或者是由于产业结构的畸形，或者是由于生产要素的流动性受到限制，或者是由于用于提供生产要素的部门的资源投入严重不足，总之，这一切全都与资源的不合理配置有关。

3．由于供给结构与需求结构的不协调而引起的通货膨胀，即通常所说的结构因素导致的通货膨胀。

关于这一类型的通货膨胀，可以从关键性产品的供不应求找到答案，这就是：某些关键性产品的需求过大和供给严重不足，使得这些产品的价格上涨，使得货币流量增加，从而导致了通货膨胀。至于关键性产品为什么会供不应求，仍然与资源配置的失调以及由此引起的产品结构失调、产业结构失调等等联系在一起。

由此看来，三类通货膨胀中的任何一类通货膨胀都与资源配置失调有联系。这样，经济停滞、通货膨胀、经济停滞和通货膨胀的并存都可以被看成是资源配置失调的反映。在社会主义的经济研究中，我们必须认识到“滞”、“胀”或“滞胀”等现象的产生都和资源配置失调有关，因此在研究时，必须致力于探求消除资源配置失调，使资源配置趋于比较合

理和合理的途径，以克服经济中的“滞”、“胀”或“滞胀”现象。

四、“滞胀”的可能性与“滞胀”的防止

在经济中存在着结构性失衡时，如果单纯压缩总需求，以至于经济紧缩过度，同时，物价上涨率由于结构性问题的存在而未能降低，那么经济的“滞胀”就可能出现。这是国民经济管理中需要认真对待的问题。但也应当注意到，经济中出现“滞胀”的可能性并不等于这种可能必定成为现实。可能发生的“滞胀”要变为实际发生的“滞胀”，需要以相应社会购买力的存在作为条件。要知道即使由于商品供求结构不协调而可能出现物价上涨的趋势，但任何物价上涨都与相应的社会购买力的存在有关。如果社会购买力不足，在商品供求结构不协调时，短缺商品的价格仍然难以上涨。因此，在采取压缩总需求（比如说，压缩基本建设投资、压缩社会集团购买力、压缩居民可支配收入）之后仍有较大的社会购买力，并且这种社会购买力足以导致物价上涨的话，那就必须了解这种社会购买力究竟来自何处。

它会不会来自财政支出，即财政支出的一部分会不会转化为对短缺商品的购买力？一般说来，这种可能性在经济紧缩过度时并不存在。压缩总需求首先包括了对财政支出的压缩。

它会不会来自信贷支出，即信贷支出的一部分会不会转化为对短缺商品的购买力？这种可能性在经济紧缩过度时一般也不存在。压缩总需求无疑也包括了对信贷支出的压缩。

它会不会来自出口收入、侨汇收入、国外入境者的支出（即旅游收入）、引进的外资？这是因为，所有这些收入都有可能转化为对国内的短缺商品的购买力；紧缩国内需求与增加出口收入、侨汇收入、旅游收入和引进外资完全可以同时进行。然而，在这种情况下，只要合理地利用所增加的外汇收入，利用它们来增加国内短缺商品的供给（如直接增加短缺商品的进口，或增加有关的生产资料进口），那么即使增加了对短缺商品的购买，也不会导致物价上涨。

于是我们遇到了这样一个问题：既然在经济紧缩时足以引起物价上涨的社会购买力并非来自财政支出、信贷支出和各种外汇收入，那么它们究竟来自何处？

可能有下列三个来源：

第一，来自居民的储蓄存款。在经济紧缩时，如果居民的预期发生

变化，他们是有可能提取存款，使之转化为社会购买力，购买短缺商品，从而引起物价上涨的。

第二，来自居民手头持有的现金。不管这些现金是被当作备用金的还是具有“持币待购”性质的，只要居民的预期发生变化，这些现金就有可能冲向市场，引起物价上涨。

第三，来自企业的税后利润部分。企业可以利用这些货币作为公共消费支出，或把它们分配给本企业的职工，转化为职工的个人消费支出，使之进入市场，购买短缺商品，从而引起物价上涨。但应当指出，如果企业是有利益约束的并且具有长期的发展方针，那么企业将考虑到经济紧缩的客观形势，就会在税后利润的支出方面自行约束，节制公共消费支出和给予职工的收入份额，而宁肯在提高劳动生产率、降低成本、增加积累上下功夫。反之，如果企业缺少利益约束，企业行为是短期化的，那么企业很可能置经济紧缩的形势于不顾，继续采取把税后利润“分光吃尽”的做法，物价也就可能因此而上涨。

由此可见，在存在结构性失衡时，如果政府采取了紧缩需求的措施而又不设法缓解居民储蓄存款和居民手头持有现金对市场的压力，不设法阻止它们对市场可能发生的冲击，那么可能的“滞胀”就会变为实际的“滞胀”。同样的道理，如果政府不在紧缩需求的同时改造企业的运行机制，而仍然使企业缺乏利益的约束，缺乏自我调整税后利润使用方式的机制，以至于企业的行为依旧是短期化的，那么“滞胀”的可能性就会转化为“滞胀”的现实性。

“滞胀”对经济是十分不利的。它不仅与经济的稳定增长无法相比，甚至比“增长中的膨胀”还要坏。就现阶段的我国经济而言，紧缩总需求势在必行。我们要研究的是如何在紧缩总需求的过程中不至于出现“滞胀”。当然，在这里必须强调增加有效供给对于缓和经济失衡的关键意义。如果紧缩需求过度而造成了对有效供给的紧缩，那么紧缩需求以缓和供不应求现象的目的将不可能实现。除此以外，我们还必须就前面已经提到的居民储蓄存款、居民手头持有现金、企业运行机制问题作进一步的分析，以便寻找防止发生“滞胀”的有效对策。

第一，居民储蓄存款问题。

为了防止在紧缩需求过程中居民预期发生大的变动而使提取存款、冲击市场的情况出现，可以适当提高存款利率，开展保值储蓄和实物认购储蓄，以稳定储蓄存款。同时，政府应当引导居民用一部分储蓄存款

购买住宅，购买证券。住宅和证券都是保值性的。对房屋和证券的购买可以把短期资金变为长期资金或把消费基金变为生产基金，这是存款分流的有效渠道。

第二，居民手头持有的现金问题。

对待居民手头持有现金的方式基本上与对待居民储蓄存款的方式相同，即政府应采取措施，使居民把手头现金的一部分变为存款，变为对住宅和证券的购买。同时，对于个体户和农民，应当设法鼓励他们把手头持有的现金作为生产资金，以便增加供给，而不要用于挥霍性的、炫耀性的消费。

第三，企业运行机制问题。

不仅增加供给有赖于企业改革的深化（例如，通过企业改革的深化，可以调动企业和职工的生产积极性，可以促进生产要素重新组合，可以加速产业结构调整等等，以达到增加供给的目的），而且抑制需求也有赖于企业改革的深化。正如本书以后各章将会指出的，企业改革过程就是企业运行机制的改造过程，企业必须有利益的约束，才会关心自己的税后利润的使用方式和使用方向，企业的行为短期化才能避免。那么，究竟怎样改造企业的运行机制呢？承包制在这方面显然是不够的。因为承包制并未割断行政主管部门与企业之间的“脐带”，承包制下的企业还不是真正自主经营、自负盈亏的商品生产者，承包制应当逐渐向股份制过渡。²股份企业的经济活动取决于投资者的利益，宏观经济调节的意图可以同股份企业的长期利益相适应，即投资者为了自身的长期利益，将在经济紧缩期间自行约束税后利润的使用方式和使用方向，而不至于出于短期利益的考虑，只图短期利益最大化，这样，“分光吃尽”税后利润的短期行为也就有可能防止了。

根据以上所述，可以得出如下的结论：在结构性失衡存在的条件下，“滞胀”不是没有出现的可能性的。但是，只要我们在压缩需求的同时致力于有效供给的增加，只要我们采取各种措施来稳定居民储蓄存款，并尽可能把这些存款和居民手头持有的现金引导到对住宅和证券的购买方面去；只要我们深化企业改革，建立企业的利益约束机制，那么“滞胀”可以被防止。换言之，在这种情况下，我们的经济前景将不是“滞胀”，而是经济的中速增长和物价上涨率的下降。

在这一章中，我们只是提出了社会主义经济中的“滞胀”问题，而且只进行了十分粗略的分析。在本书以下各章，我们将对社会主义经济中

的商品供给缺口与商品需求缺口并存条件下的政府调节问题和企业改革问题进行较细致的论述。

五、重新认识资源配置问题的必要性

研究经济学的目的之一是为了找到一种令人满意的体制或机制，以便合理利用资源、配置资源，既能促进社会财富的增加，又能使财富或收入的分配趋于公平。不重视资源配置问题的研究，实际上是忘记了经济学这门科学的这一使命。但自从古典政治经济学产生以来，历来有关资源配置问题的研究有两种趋向。一种趋向是：认为市场机制是能够完善地、合理地在社会有限资源条件下配置各种资源的惟一有效的机制，资源配置学说无非是一种通过市场对经济自发地进行调节的学说。另一种趋向是：从资源配置的过程与效果来看，市场机制具有相当大的局限性，这种局限性或者反映了对社会资源的利用不善，从而造成资源的闲置或浪费；或者反映了资源配置与收入分配之间的不协调，即通过市场机制的作用，即使资源的配置比较合理，社会财富可以增加，但收入分配的失调现象却会变得严重起来，从而必须运用政府的调节职能或计划机制来取代市场机制的作用，至少应用它们来克服市场机制的局限性。

然而，当我们把研究的课题转入我国现阶段的资源配置方面时，不难发现，国外有关资源配置的种种观点，尽管其中有不少可供借鉴的内容，但同我国社会经济的实际状况仍有较大的距离。根据我国经济的非均衡状态，那种把市场机制视为资源配置的惟一有效机制的学说，其局限性是很明显的。假定把市场定价作为解决我国现阶段的资源配置问题的出发点，我们的经济很可能陷入较大的混乱之中。这是因为，在市场不完善、非经济因素干扰较大、企业尚未具有独立经济地位的现实经济环境中，要做到资源的有效利用和合理配置，首要的问题是让企业成为有独立经济地位的商品生产者，自己承担投资风险和经营风险，使市场日益完善。而在企业有了充分的活力之后，如果资源约束的情况仍然未能消除，那么完全依靠价格调节也难以实现资源的有效利用和合理配置的目的。这就是非均衡条件下资源配置问题的复杂性，也是我们必须根据我国经济实际情况重新认识资源配置问题的主要理由。

从我国经济中可能发生的“滞”、“胀”与“滞胀”以及它们与资源配置失调之间的关系，可以清楚地了解到我国现阶段资源配置问题的复杂性和解决这一问题的难度。这就是，无论是按市场机制是解决资源配置问

题的惟一有效机制的模式，还是按计划机制对市场机制替代的模式来分析这些问题，都不可能深刻地揭示其原因和找到对策。我们强调“只有先了解中国，才能对中国经济作出符合实际的说明”，并不意味着我们可以轻视经济理论的指导作用。没有经济理论的指导，没有这种理论指导下的分析，很可能陷入一大堆琐碎的、非系统的具体事实的罗列或描述之中，因此，我们重视经济理论的指导作用，是指不能根据经济生活中的若干表面现象就得出有关我国的资源配置问题的现成的答案，而是要探索可以用来解决我国资源配置问题的经济理论。尽管这种探索会遇到困难，但只要我们循着符合我国国情的研究途径前进，总是会有收获的。

于是，从重新认识资源配置问题的必要性出发，自然而然地会导致如下的论断：必须根据我国的实际情况，探索符合我国国情的资源配置理论。非均衡经济理论作为一种有助于解决社会主义的社会资源合理配置问题的理论，正是为了适应这一要求而被提出的。

Chapter 2 Market Regulation and Resource Allocation

第二章 市场调节与资源配置

2.1 MARKET SELECTION AND MARKET GUIDANCE

2.1.1 Market Selection

Any merchandise for sale is composed of at least two factors of production. For any natural resource to be merchandise, it requires the input of human labor. Therefore, merchandise in a society means a combination of resources. Studying resource allocation in socialist society must start with the combination of resources in the form of merchandise.

The reason why one form of resource combination is preferred over another during a certain period of time in a society is ultimately determined by the needs and wants of human beings for particular merchandise. The way in which certain merchandise is supplied becomes a form of resource combination. This is a normal way of allocating resources. That is, demand guides supply as well as the combination of resources, which impacts resource allocation in a society and allows resources to be properly utilized. If the path is reversed, in which resource combination is determined in the first place, not only any product from the combinations of resources will fail to meet people's needs, resources will also be underutilized. As a result, resources will be utilized inappropriately as well as with low efficiency, and people's demand will be artificially suppressed.

This gives us a first look at the role of the market in resource allocation. That is, the market is an agent who determines resource

combination. In research on resource allocation, market selection refers to the combination of various resources to produce various products to meet certain needs in a normal situation of resource allocation, in which the market serves as an agent to determine resource combination and functions as a bridge between demand and supply. For example, if the total quantity of overall resources is limited, there will be multiple ways of combining resources to produce different merchandise to meet various needs. If the market determines the combination of resources for production of merchandise to meet people's needs, ineffective usage or squandering of resources can be prevented, avoiding low utilization efficiency or suppressing demand.

2.1.2 Resource Combination

As an agent that selects resource combinations, the market functions as if it were a large mixer, which constantly mixes various resources and churns out required combination (products). The mixing process is the determination of resource combination.

Of course, this is just a metaphor. In real life, certain amount of sand, stones, and cement in a mixer will gradually reach a state of even distribution during the mixing process. Comparing the market to a large mixer allows us to get a better understanding of resource allocation. As different resources are put into the large mixer and being constantly mixed, the mixer executes appropriate combination and produces all sorts of merchandise that meets various needs. The result of the mixing not only meets people's needs but also realizes effective resource allocation.¹

Market selection can be seen during the constant movement process as if the market were a large mixer. Market selection activities include economic activities such as market input decision, market output decision, and market distribution decision. Each and every decision is associated with the selection of resource combination. The activities of the market as a large mixer can be divided into three steps: production, sales, and distribution. These three steps happen to

match market input decision, market output decision, and market distribution decision.

Market input decision refers to the decision of each market participant in terms of which resource is used in production, as well as its quantity, input ratio, and way of combination. Therefore, market input decision is a decision on the selection by each market participant of particular resource inputs and resource combination.

Market output decision refers to the decision made by each market participant with respect to where and how to produce certain outputs with certain inputs of resources. The output here mentioned refers to not only how each resource input can be turned into a physical product but also how a physical product can be exchanged for monetary income. Only after resource inputs are turned into monetary income through the production and sales processes can market conclude its input and output processes. Therefore, market output decision is a decision on how to turn a physical product into monetary income with certain combination of resources.

Market distribution decision refers to the decision on the distribution and usage of the monetary income generated from selling physical products. If such income is considered a resource, the next question is how to utilize it. If production, sales, and distribution are considered a continuous economic process, i.e., market input decision, market output decision, and market distribution decision are continuous decisions in a series of economic activities, then the distribution and usage of monetary income is as a matter of fact the initial allocation and usage of resource inputs.

Production is a continuous process. Monetary income will turn into consumption, savings, or investment via the market distribution decision. Each item of monetary expenditures is associated with the selection of resource combination. Consumption is associated with sales activities in the marketplace, which concerns market output decision. Savings and investment are associated with production activities in the marketplace, which concerns market input decision.

All these expenditures are integral parts of market selection, which completes the selection process in the "large mixer," the market.

2.1.3 The Dispersion of Market Decision

Market decision is made by each and every market participant (business or individual) according to their own economic interests. Dispersion is an immanent feature of market decision. More specifically, every business or individual decides on the quantity of resource inputs, how resources are combined, what physical products are produced, how products are sold to generate income, how income from selling products is distributed, and how many resources are redistributed as inputs. In terms of decisions on market input, market output, and market distribution, each separate decision made by each business and individual jointly forms the market decision on or the market selection of resource combination as well as the direction of resource allocation.

The dispersion of market decision indicates that market decision or market selection is composed of each and every unique decision or selection and there is not a predetermined market decision or market selection that leads to a decision for each business or individual. We should note that businesses and individuals have different goals and preferences. Their expectations of the market and profitability in the future also vary. Therefore, the selection or decision of the overall market is determined by the selection or decision made by the majority of businesses and individuals. When the majority of businesses and individuals have similar goals and preferences, with optimistic expectations of the market and profitability in the future and favoring higher input of resources, the selection or decision of the overall market will be expansionary or aggressive. As a result, the economy will grow. On the contrary, when the majority of businesses and individuals have similar goals and preferences, with pessimistic expectations of the market and profitability in the future and favoring lower input of resources, the selection or decision of the overall

market will be contractive and conservative. Economic slowdown and recession will follow.

In an economic environment that is characterized by disperse market decisions, complete and free flow of information not only ensures every market participant is able to make decisions to the best of its interests but is also important in facilitating coordinated market activities. Complete information means that every business and individual has access to information on current resource combination and utilization available in society, which is equivalent to having full knowledge of the decisions or selections made by other businesses and individuals. Free flow of information means that access to information is prompt, fast, and inexpensive. If these conditions are met, different market decisions, in spite of being disperse, are still able to meet the requirement of realizing relatively effective resource allocation. If these conditions are met, disperse decisions will optimize the allocation of resources to the largest extent possible via the interplay between prices and supply and demand, even though there are constraints on supply (or resource supply constraints) or constraints on demand (or market constraints) which cause insufficient supply or demand.

2.1.4 Market Guidance

That supply and demand in the marketplace influence price and price influences supply and demand demonstrates the function of the market in guiding the allocation of resources.

Market guidance is seen from the perspective of a dynamic equilibrium. The economic activities of the overall market can be divided into several stages. Supply and demand in the earlier stage not only determines the price in the current stage but also uses the price as an indicator to influence supply and demand in the next stage, signaling potential price changes as well as the magnitude of such changes. Potential price changes will in turn influence supply and demand as well as the price in the next stage. Various stages will go

on and on, with the market providing guidance on resource utilization and combination in society as well as the possibility and method of turning potential resources into utilizable ones. We can come to the conclusion that what the market guides is the decision or selection of market participants.

Why does demand for certain resources gradually decrease while that for other resources gradually increases? Why is one form of resource combination gradually replaced by another one? Why do resource inputs in one sector gradually transfer to another one? These questions can be illustrated by the dynamic role of market guidance.

When looking at the role of market guidance, should we emphasize absolute price level or relative price level? Both are important. The absolute price of certain resources determines the quantity of aggregate demand and supply; the ratios of the prices of various resources, or relative price levels, determine the combination of resources, the distribution of resources in different areas, and resource utilization efficiency.

Looking at market selection and market guidance mentioned above, we treat businesses and individuals as if they were the same. In reality, businesses and individuals often appear as opposite sides of the supply and demand relationship. When individuals provide businesses with resources, individuals are resource suppliers and businesses are resource recipients. When businesses provide individuals with resource combinations in the form of physical merchandise, businesses are resource suppliers and individuals are resource recipients. Therefore, we must analyze two types of market behavior, investment and consumption.

壹 市场选择与市场引导

一、市场选择

任何供出售的商品都是由两种或两种以上的资源组合而成的。一种天然的资源要成为商品，必须有赖于人的劳动的投入。因此，社会所提供的商品意味着资源的组合。要研究社会主义社会中的资源配置问题，有必要从以商品形式出现的资源组合着手。

为什么在一定时间内，社会上需要这样一些形式的资源的组合，而不需要另外一些形式的资源的组合，归根到底是与人们对商品的需求有关，而一定的商品供给就是一定的资源组合形式。这是正常的资源配置途径，即需求引导供给，引导资源的组合，进而影响社会的资源配置，使资源发挥应有的作用。如果把这个途径颠倒过来，先决定什么样的资源组合，以此生产出产品，再用它们去适应人们的需求，那么不仅适应不了人们的需求，而且资源的作用也不可能被充分发挥出来。这种资源配置途径的后果一定是资源使用不当、低效率以及人们需求的被压抑。

由此可以对于市场在资源配置中的作用有一个初步的了解，即市场首先是资源组合的选择者。在资源配置问题的研究中所说的市场选择，就是指在正常的资源配置途径上，如果客观上存在着人们对商品的一定的需求，那么究竟怎样组合各种不同的资源，生产出各种不同的产品来满足人们的这些需求；市场作为资源组合的选择者，在这里起着沟通需求与供给的作用。比如说，人们对商品的需求是多种多样的，在一定的资源总量的前提下，可以有各种不同的资源组合方式把这些不同的资源组合起来。究竟什么样的资源组合方式能够提供可以满足人们需求的商品，这一切如果由市场来选择，那就可以避免资源的浪费和使用不当，避免低效率，避免人们的需求受到压抑。

二、资源组合

市场作为资源组合的选择者，类似于一个把各种资源投放在内，不断进行搅拌，并提供合乎要求的组合（产品）的大型搅拌机。搅拌过程就是资源组合的选择过程。

当然，这只是一个比喻。在日常生活中，把一定数量的沙、石子和水泥投入搅拌机之后，它们将在搅拌中逐渐处于均匀分布状态。在把市

场比喻为大型搅拌机时，我们可以对资源配置问题有较清楚的认识，即各种资源被投入到这个大型搅拌机内，通过它的不断运动，然后将以恰当的组合形式，产出各种可以满足人们需求的商品。搅拌的结果，一方面满足了人们的需求；另一方面也就实现了资源的合理配置。¹

市场选择体现在市场这个大型搅拌机的不断运动过程之中。市场选择活动包含了市场的投入决策、市场的产出决策、市场的分配决策等经济活动的内容。而每一种决策，都与资源组合方式的选择有关。市场这个大型搅拌机的活动，可以分为生产、销售、分配三个环节。这三个环节，恰好是同市场的投入决策、市场的产出决策、市场的分配决策这三项决策相适应的。

市场的投入决策，是指参加市场活动各个企业和个人决定使用哪些资源进行生产，投入资源的数量是多少，这些资源投入的比例如何，它们如何组合等等。因此，市场的投入决策就是参加市场活动的企业和个人关于资源投入和资源组合的选择。

市场的产出决策，是指各个企业和个人在资源投入之后，将会有一定的产出，但这些产出究竟在什么地方得到实现，以何种方式实现，企业和个人也需要作出选择。产出并不仅仅指如何把各种投入的资源转变为物质形式的产品，而且也是指如何把生产出来的物质形式的产品变为货币收入。只有当投入的资源通过生产过程和销售过程，转变为货币收入之后，市场的投入产出过程才告一段落。因此，市场的产出决策就是参加市场活动的企业和个人对一定资源组合的物质产品转变为货币收入的选择。

市场的分配决策，是指各个企业和个人在把物质形式的产品变为货币收入之后，关于货币收入分配和使用的决策。如果把这笔货币收入视为一项资源，那就又遇到如何使用这一资源，如何把它投放到不同用途上的问题。如果把生产、销售、分配三个环节看成是一个连续的经济活动过程，即把市场的投入决策、市场的产出决策、市场的分配决策看成是一个连续的经济活动过程的连续决策，那么货币收入的分配和使用实际上也就是最初投入的各种资源的分配和使用。

生产是不间断的。通过市场的分配决策，货币收入将分解为消费、储蓄、投资等项，其中每一项货币支出都与资源组合的选择有关。消费部分涉及市场的销售活动，涉及市场的产出决策；储蓄和投资部分涉及市场的生产活动，涉及市场的投入决策。所有这些支出都是市场选择的

组成部分。在市场这个大型搅拌机中，将不断地完成这些选择。

三、市场决策的分散性

市场决策是由参加市场活动的许许多多企业和个人根据各自的利益而作出的，决策的分散性是市场决策的固有特征。具体地说，每个企业和个人决定自己投入多少资源，以何种形式组合资源，生产什么样的物质形式的产品，如何销售它们以取得货币收入，并且如何分配所取得的货币收入，包括再次投入多少资源，等等。在市场的投入、产出、分配等决策中，所有各个由企业和个人作出的分散的决策汇集而成为整个市场关于资源组合和资源投向的选择或决策。

市场决策的分散性表明，整个市场的选择或决策是由各个个别的选择或决策所导致的，而并非先有整个市场的选择或决策，再由它来导致各个个别企业和个人的选择或决策。应当注意的是，各个不同的企业和个人的目标不一定相同，他们的偏好不一定一致，他们对市场前景和各自获利前景的预期也不一定一样，因此，整个市场的选择或决策的倾向是由大多数企业和个人的选择或决策的倾向所决定的。当大多数企业和个人的目标和偏好相似，而且对市场前景和各自获利的前景持有乐观的态度，从而有增加资源投入的倾向时，整个市场的选择或决策将是扩张性的或进取性的，这样，经济就增长。反之，在大多数企业和个人的目标和偏好相似的前提下，当他们对市场前景和各自获利的前景持有悲观的态度，从而有减少资源投入的倾向时，整个市场的选择或决策将是收缩性的或保守性的，这样，经济就停滞、衰退。

在市场决策具有分散性这一固有特征的经济环境中，信息的完备和信息的畅通是保证每个参加市场活动的企业和个人能够作出有利于自己的决策，从而，也就提供了有利整个市场经济活动的协调动作的必要条件。信息的完备包括了每个企业和个人都能了解到社会上现有资源的组合和使用情况，从而等于了解到其他企业和个人所作出的选择或决策；信息的畅通指对这些情况的了解将是及时的、迅速的、低成本的。假定符合了这些条件，那么即使市场决策是分散的，但分散的决策仍然能满足资源配置趋向合理的要求。假定符合了这些条件，那么，即使客观上存在着供给方面的约束（资源的约束）或需求方面的约束（市场的约束），分散的决策也可以在供给不足或需求不足的情况下，通过供求状况对价格的影响以及价格变动对供求变动的影响，尽可能使资源的配置

趋向于合理，尽管这只是一种相对的合理。

四、市场引导

市场的供求状况对价格的影响以及价格变动对供求变动的影响，体现了市场对资源配置的引导作用。

市场的引导是从动态均衡的角度来考察的。可以把整个市场的经济活动划分为若干阶段。前一阶段的市场供求状况不仅决定了现期的价格水平，而且通过价格这一指示器，对后一阶段的供求发生影响，从而预示了价格的可能变动方向与变动幅度，而价格的这一可能的变动又将影响再下一个阶段的供求与价格。如此循环往复，从而使市场引导了社会对资源的利用、资源的组合，以及资源由潜在的变为现实的可能性与具体方式。可以认为，市场所引导的是参加市场活动的各个企业和个人的选择或决策。

为什么社会上对某一种资源的使用量会越来越大，而对另一种资源的使用量却越来越小？为什么这一种资源组合形式会渐渐被另一种资源组合形式所代替？为什么投入这一部门的资源会被转投于另一部门？所有这些问题，都可以从动态的市场引导作用来加以说明。

那么，在考察市场的引导作用时，重要的究竟是绝对价格水平呢，还是相对价格水平？当然，二者是同样重要的。某一种资源的绝对价格水平，制约着对该种资源的需求总量和供给总量；而各种不同的资源之间的价格比例，即它们的相对价格水平，制约着资源的组合形式、资源在不同领域内的分配以及对资源的利用率。

以上，在考察市场选择和市场引导时，都是把作为微观经济单位的企业和个人统一对待的。但在实际经济生活中，企业和个人往往作为供求关系的对立双方而出现。个人向企业提供资源时，个人是资源的供给一方，企业是资源的需求一方。企业向个人提供以物质形式的产品所体现的资源组合时，企业是资源的供给一方，个人则是资源的需求一方。因此，我们有必要转入对投资与消费两种市场行为的分析。

2.2 INVESTMENT PRINCIPAL, INVESTMENT BEHAVIOR, AND RESOURCE ALLOCATION

2.2.1 Investment Principal

When analyzing the role of the market in allocating resources, we can identify two types of investment principal, business and individual. For now, we do not analyze government as one type of investment principal.

In order to be investment principal, a business must have resources to invest and the right to make investment decisions on its own. The motive for businesses to invest is to pursue value appreciation or profitability. There may be motives other than profitability. One of the following two scenarios will apply. In the first scenario, the ultimate motive for businesses to invest is profitability, although they invest due to reasons other than profitability. This is an indirect way for businesses to pursue profitability to ensure that investments will increase total profits. In the second scenario, businesses have other goals besides profitability. Businesses make investments in order to reach those goals. The second scenario does exist, but accounts for a small portion of overall investments. We can ignore this scenario when we study business investments.

Similar to businesses, individuals must also have resources to invest and the right to make investment decisions on their own before they are qualified as investment principal. The motive of investments by individuals is also to pursue value appreciation in order to increase personal income. This does not exclude individuals from having other motives when they invest. These scenarios are insignificant and can be ignored when we analyze investments by individuals.

If both businesses and individuals have the same investment motive, i.e., pursuit of profit or higher income, they will need to

estimate opportunity cost in every scenario, even when there is only one investment opportunity. Estimating opportunity cost is to select the direction of use and the combination of resources. Businesses and individuals will naturally select the direction of use and the combination of resources that are in their best interests before they decide on whether to invest, how to invest, and how much to invest.

2.2.2 The General Principles of Investment Behavior

If a business or individual decides to invest after estimating the opportunity cost of an investment, the investment activities are generally only influenced by price or by market competition. The general principles of investment behavior hereby referred to are applicable to the investment activities under the Walrasian equilibrium condition.

Investment activities consist of a series of transactions. As investment principal, businesses and individuals must have sufficient monetary capital to invest, with some utilized to purchase production materials and some to pay salaries and rents. If they do not have enough monetary capital on hand, they will need to borrow from the capital market and pay interest. Purchasing production materials, paying salaries and rents, raising capital, and paying interest are all transactions. Under the Walrasian equilibrium condition, total demand is always equal to total supply at any price level. No excess demand or supply exists in the economy, and every transaction is conducted at the equilibrium price. Hence, business or personal investors are always able to borrow sufficient capital, if needed, at the equilibrium interest rate determined by the demand and supply of the capital market. If they need to purchase production materials, they will be able to secure the needed quantity at the equilibrium price in the production materials market. If they need labor, they will be able to find sufficient labor to meet production needs at the equilibrium salary level set by the supply and demand of the labor market. In summary, all these meet the investors' needs, as well as their

economic interests.

Likewise, business and personal investors do not have to worry about the sales of the products produced by their investments under the Walrasian equilibrium condition. As the market does not have excess demand and supply, every product they produce will be sold at an equilibrium price. These situations are also consistent with investors' economic interests.

Investment decisions in such economic environment are actually very simple. As investment principal, businesses and individuals simply follow the principles of market competition, which states that the market determines everything and investors do not have to worry about their investments. This is because market information is complete and information flows freely. As a result, investors have a full understanding of the current market as well as the market in the future. There are no unknown uncertainties. As long as investors have enough information, they can proceed with investments, allocating resources, organizing production and sales without concerning about uncertainties, or taking precautionary measures. It is not necessary to reserve excess cash to cope with business uncertainties or to purchase additional inventory. Completely following market arrangement will bring satisfactory results to investors. This is the general investment principle, even though it only exists theoretically under the Walrasian equilibrium condition.

2.2.3 Business and Personal Investment Behavior Under Disequilibrium Conditions

As pointed out in Chap. 1 of this book, disequilibrium but not Walrasian equilibrium exists in real life. In the current socialist economy, the market is not fully developed, information is neither complete nor flowing freely, and price does not function to adjust demand and supply as it is supposed to. These are the striking characteristics of economic disequilibrium, giving rise to a new requirement for the study of investments made by businesses and

individuals.

Under disequilibrium conditions, business and personal investors must consider the constraints on resource supplies before making an investment decision. They include constraints on required capital, required production materials, and labor. If resource supplies are limited, the execution of investment plans will meet obstacles. In addition, current resource supplies as well as the prospect of future supplies are equally important to investors. The production capacity built through an investment requires continuing supplies of resources, particularly raw materials, energy, maintenance parts, and transportation capacity. Therefore, even though current resource supplies seem to have no or limited constraints, investments may still encounter obstacles if future supplies of resources are expected to be constrained.

As investment principal, businesses and individuals must also consider demand constraints, or market constraints, which actually exist under disequilibrium conditions. Market constraints refer to shortage of demand for the products produced by the new production capacity from an investment. If market is limited, fulfilling an investment plan is also not straightforward. Similar to resource supply constraints, current and future markets are equally important to investors. If products from an investment can only sell now, but demand in the future is uncertain, an investor will have to consider the feasibility of the investment.

Besides the constraints on resource supply and demand under disequilibrium conditions, businesses and individuals also have to consider various uncertainties. To ensure that the investment can proceed normally as well as the production capacity built through an investment can operate properly, investors will have to take various precautionary actions, such as raising additional capital to meet overspending and keeping extra cash on hand. Investors may also purchase additional inventory to guard against the potential interruption to raw material supplies or shortage of raw materials,

thus resulting in abnormal inventories of raw materials, energy, equipment, and maintenance parts and greater use of working capital. To prevent market shares from shrinking or to avoid heightened sales competition, investors may have to adopt unusual measures to protect or increase their market shares, which also requires additional working capital. These situations require higher inputs of capital than those without uncertainties.

In addition, in a disequilibrium economy, investors feel compelled to find necessary information themselves, since information is neither complete nor flowing freely in the market, which is one of the characteristics of disequilibrium. These efforts also require additional investments. Marginal benefits from the additional investments in pursuit of information will outweigh potential losses due to incomplete or delayed information, and hence investors are willing to commit these additional investments.

Let us set aside discussions on the gap between the price level under equilibrium conditions and that under disequilibrium conditions. Compared with equilibrium conditions, the need for businesses to stock up abnormal inventory and hold additional capital to protect and increase market share as well as obtain relevant information under disequilibrium conditions requires more capital investment to install the same amount of new production capacity. The price level needs to be considered as well. If funding capital is constrained and the capital market is not fully developed, the interest rate required will be higher than the equilibrium interest rate. If supplies of production materials are constrained and the production materials market is not fully developed, the price of production materials under these conditions will be higher than the equilibrium price. If investors adopt noncompetitive measures to protect their market shares, merchandise selling prices under these conditions will exceed the equilibrium price formed through normal market competition under equilibrium conditions. Higher interest rate and production material prices require higher capital investment. In this

circumstance, the same production capacity under disequilibrium conditions requires higher capital investment than that under equilibrium conditions. Higher merchandise selling prices in turn justify higher capital investment. That is, after factoring in the higher selling prices in the future market, investors would consider additional investment not only indispensable but also rewarding. Thus, extra capital investment is justified.

The above analyses clearly demonstrate that disequilibrium conditions require businesses and individuals to invest more capital to build the same production capacity than equilibrium conditions do. In other words, the total investment to build the same production capacity under disequilibrium conditions will always exceed that under equilibrium conditions. This is the characteristic of business and personal investment behavior under disequilibrium conditions.

2.2.4 The Relationship Between Investment Behavior and Resource Allocation Under Disequilibrium Conditions

Committing additional investment requires not only additional cash but also additional supply of production materials. It is relatively easy to understand additional cash, as the initial form of additional investment is always monetary capital. Additional investment in the form of supply of production materials (i.e., raw materials, energy, equipment, and parts) is reflected in abnormal inventory. Besides, additional costs to protect or increase market share or to obtain information are also partially reflected in the cost of purchasing production materials.

Hence, business and personal investment under disequilibrium conditions, including additional investment, will surely lead to resource allocations that are rather different from those under equilibrium conditions. Under equilibrium conditions, the market plays its roles to ensure resources automatically flow to sectors and regions where they are most profitable, and the changes of supply and demand in the market as well as subsequent price changes will place

various resources in appropriate areas. There may be some cases of local or structural idling or waste of resources during the transfer between various sectors, regions, and investment principals, which normally are unable to be avoided. However, generally speaking, as excess demand and excess supply are equal to zero, resources can be effectively combined and efficiently utilized. However, it is quite different under disequilibrium conditions.

For example, due to resource supply constraints, business and personal investors often commit additional capital investment in excess inventory to protect against supply shortages or interruption, or other uncertainties in the economy, which further widens the existing shortages of resource supply. As a result, the existing imbalance between supply and demand will deteriorate, causing resource misallocation. The phenomenon of stagflation in the socialist economy mentioned earlier is to a certain extent related to the excess inventory that most businesses and individuals build up as a precaution.

Another example can be seen from the impacts of businesses and individuals on the capital market due to their needs for additional investment. Economic disequilibrium indicates that the demand for capital in the capital market probably exceeds the supply of capital during that period. The need for additional investments intensifies capital shortages.

In terms of resource allocation, it is very difficult to allocate resources in a way that contributes to increasing utilization efficiency if there are constraints on supply in the economy. The form of resource combination will have to adjust to the situation of supply shortages. If this situation happens, a portion of resources will remain idle in the economy. If we want to utilize that portion of resources in case of resource supply shortages, we will likely sacrifice the efficiency of resource allocation. Both scenarios are reflective of resource misallocation.

貳 投资主体、投资行为与资源配置

一、投资主体

在分析市场在资源配置中的作用时，可以把投资主体确定为两类：一是企业，二是个人。政府作为投资主体的问题，在这里暂不进行分析。

企业作为投资主体的前提是企业不仅拥有可以用于投资的资源，而且企业有投资的决策权或投资的自主权。企业的投资动机是价值的增值，也就是获取利润。虽然企业在进行投资时也可能具有利润以外的动机，但这不外乎两种情况：第一，企业进行利润以外动机的投资最终仍是为了取得利润，即企业在获取利润的道路上，采取的是一种迂回的方式，以保证这些投资有助于企业的总的利润的增加；第二，企业除了利润目标以外，还有其他的目标，因此企业进行利润以外动机的投资，以实现自己的其他目标。后面这种情况在客观上是存在的，但不在企业的投资中占据主要地位。在分析企业投资时可以略去不计。

同企业一样，个人作为投资主体的前提也是个人既拥有可以用于投资的资源，又拥有投资的决策权或自主权。个人投资的动机同样是价值的增值，以增加个人收入。这也不排斥个人进行投资时还可能有增加个人收入以外的动机，但这种投资在个人的投资中不占据主要地位，所以在分析个人投资时也可以略去不计。

假定作为投资主体的企业和个人都以获取利润或增加收入作为基本的投资动机，那么在任何一种情况下，即使在只存在一种投资机会的情况下，企业和个人都会面临机会成本的估算问题。机会成本的估算就是资源使用方向和资源组合形式的选择。企业和个人必然选择最有利于自己的资源使用方向和资源组合形式，然后决定是否投资，怎样投资，投资多少。

二、投资行为的一般原则

在企业和个人根据机会成本的估算而决定进行某项投资之后，他们的投资行为在一般情况下，只受到价格的制约，也就是只受到市场竞争的制约。这里所说的投资行为的一般原则，是指瓦尔拉均衡状态中的投资行为所遵循的原则而言。

投资行为是由一系列交易行为所组成的。企业和个人作为投资主体，假定他们自己拥有足够的货币资金，他们为了进行投资，必然要利用一部分货币去购买生产资料，利用一部分货币去支付工资，还要利用一部分货币去支付租金。假定他们自己拥有的货币资金不足，他们就需要到货币市场上去筹集资金，并准备为此支付利息。购买生产资料，支付工资和租金，筹集资金和支付利息，这些都是交易行为。在瓦尔拉均衡状态中，在任何一种价格条件下，需求总量与供给总量必定相等，经济中的超额需求和超额供给都不存在，任何交易都是在均衡价格条件下实现的。这样，对企业投资者和个人投资者来说，如果他们需要筹集资金，那么资金可以被筹集到，利息率是由货币市场的供求决定的均衡利息率；如果他们需要购买生产资料，那么所需要的生产资料也能被买到，生产资料市场上的价格是均衡价格；如果他们需要劳动力，那么根据劳动力供求所决定的均衡工资率，就能够有足够的劳动力供生产中使用。总之，一切都符合投资者的心愿，也都符合投资者的利益。

同样的道理，在瓦尔拉均衡状态中，当作为投资主体的企业和个人进行投资，并生产出产品之后，他们不愁自己的产品没有销路。由于市场不会有超额的需求和超额的供给，所以企业和个人生产出来的产品都能够销售出去，销售总是在均衡价格条件下进行的。这一切也都符合投资者的利益。

在这样一种经济环境中，投资行为实际上是十分简单的。企业和个人作为投资主体，所遵循的只是服从市场竞争的原则，即一切都由市场安排好了，用不着自己为此操心。这是因为，市场的信息是完备的，信息是畅通的，投资主体对现在和未来的市场状况有充分的了解，经济中不存在不确定的因素，所以投资主体只要有了充分的信息，就可以进行投资，组合资源，组织生产，销售产品，不需要考虑经济中是否存在不确定性，也不需要事前采取预防性措施。至于保留多余的货币以备经济中不确定事件的发生，或利用多余的货币去贮存超正常储备的商品，这些都是不必要的。一切听从市场的安排，必定能使每个投资者满意，这就是投资行为的一般原则，尽管它仅仅存在于理论上的瓦尔拉均衡之中。

三、非均衡条件下企业和个人的投资行为

正如本书第一章中已经明确指出的，实际生活中存在的不是瓦尔拉

均衡状态，而是非均衡状态。在市场不完善、信息既不完备又不畅通、价格起不到应有的调节供求作用的社会主义现阶段，经济的非均衡性质尤为显著，这就为研究企业和个人的投资行为提出了新的要求。

在非均衡条件下，作为投资主体的企业和个人在进行投资之前，必须考虑客观上存在的资源供给的约束。这里包括所需要的资金供给的约束、所需要的生产资料供给和劳动力供给的约束。如果资源供给是有限的，那么投资愿望的实现就会遇到障碍。不仅如此，资源供给的前景和资源供给的现状对于投资者来说是同样重要的。投资所形成的生产能力，需要有不间断的资源供给，尤其是原材料、燃料、设备零部件、交通运输能力等等的供给。因此，即使从资源供给的现状来看不存在约束或只存在较小的约束，但如果资源供给的前景不容乐观，那么投资也将遇到障碍。

在非均衡条件下，作为投资主体的企业和个人在进行投资之前，还必须考虑客观上存在的需求的约束，即市场方面的约束。这主要指投资形成生产能力之后所生产出来的产品有没有足够的销路。如果市场是有限的，那么投资愿望的实现也会遇到障碍。与资源供给的约束相似，市场的前景和市场的现状对于投资者同样重要。假定所生产出来的产品目前虽然有销路，但未来的销路却没有把握，那么，投资者也会考虑投资的可行性问题。

除了非均衡条件下的资源供给约束和需求约束以外，作为投资主体的企业和个人还需要考虑经济中存在的各种不确定因素。为了保证投资的正常进行和投资以后所形成的生产能力的正常运转，投资者必须采取应付各种不确定性的预防性措施。例如，为了避免资金的不足，投资者可能要多筹集一些资金，或者要多保存一些货币在手中；为了避免生产资料供给的不足或中断，投资者可能要多购买一些生产资料，形成超正常的原材料、燃料、设备及其零部件的储备，从而多占用一些资金；为了避免出现市场被挤占或销售竞争激化等现象，投资者可能采取非正常的方式来保护自己的市场和扩大自己的销路，从而也会多投入一些资金，作为保护和扩大市场的成本。这些情况的出现，会使投资者对资金的需要量大于不存在各种不确定性的条件下所需要的资金量。

此外，由于信息的不完备和信息的不畅通是经济非均衡状态的一个特点，因此在非均衡条件下，投资者会感觉到：既然不可能指望从市场得到完备与及时的信息，那就不如依靠自己的力量去获得所需要的信

息。这也是需要追加投资的，但追加投资而得到利益要比因信息不完备和不及时而受到损失好得多，所以投资者仍然乐于追加这笔投资。

在这里，姑且不谈非均衡条件下与均衡条件下价格水平的差距可能有多大，就以非均衡条件下所形成的超正常储备和追加的保护与扩大市场的投资，以及追加的信息成本而言，在非均衡条件下要形成与均衡条件下所形成的相同的生产能力，就需要有更多的投资。但价格水平仍然是要被考虑的。如果资金供给受到限制，如果货币市场不完善，那么这时的利息率将高于均衡利息率；如果生产资料供给受到限制，如果生产资料市场不完善，那么这时的生产资料价格将高于均衡价格；如果投资者为了保护自己所占有的市场而采取了排斥正常的市场竞争的措施，那么这时的商品销售价格也会高于均衡条件下通过正常的市场竞争所形成的均衡价格。高于均衡利息率的利息率以及高于均衡价格的生产资料价格，都会要求有较多的投资，即这时为形成相同的生产能力而需要的投资量将大于均衡条件下所需要的投资量。至于生产出来的商品的较高的销售价格，则使得追加投资的行为变为现实，即投资者考虑到未来市场上的较高的销售价格，他们会认为追加投资不仅是必不可少的，而且也是可以得到补偿的，于是他们就追加了投资。

以上所分析的这些，可以清楚地说明这样一点：在非均衡条件下，企业和个人的投资会大于均衡条件下为形成同样的生产能力所需要的投资，即为了形成相同的生产能力，非均衡条件下的投资总量将大于均衡条件下的投资总量。这正是非均衡条件下企业和个人投资行为的特点。

四、非均衡条件下投资行为与资源配置的关系

追加投资不仅需要追加货币资金，而且需要追加生产资料的供给。对于前一种追加，比较容易理解，这是因为任何追加投资的最初形式都是货币资金。至于后一种追加，即生产资料供给的追加，则主要反映于超正常的储备（原材料、燃料、设备及其零部件等）的形成；此外，追加的保护和扩大市场的投资以及追加的信息成本，也会部分地体现于生产资料的购买上。

由此看来，在非均衡条件下，企业和个人的投资（包括追加的投资）必然使资源配置状况与均衡条件下有较明显的不同。在均衡条件下，在市场机制充分起作用的条件下，资源将自发地朝着最有利的部门和地区流动，市场供求比例的变化以及由此引起的价格的升降，将把各

种资源分配到适当的位置上。尽管在部门间、地区间、投资主体之间的转移过程中会发生局部的或结构性的资源闲置或浪费现象，而且这种现象通常是难以避免的，但就总体而言，由于超额需求和超额供给都等于零，所以资源能够有效地组合和得到合理的利用。然而，在非均衡条件下，却是另外一种情况了。

例如，由于资源供给约束的存在，作为投资主体的企业和个人为了避免资源供给的不足和中断，为了预防经济中发生预料不到的事件，往往追加投资，形成超正常的储备。这样，必然使得本来就已经出现的资源供给缺口进一步扩大了，这不仅会加剧对已经不平衡的供求关系的干扰，而且会导致资源配置的失调。前面已经提到的社会主义经济中可能出现的“滞胀”现象，在一定程度上与多数企业和个人为采取预防性措施而形成超正常的储备有关。

又如，由于企业和个人追加投资的需要，企业和个人对货币市场的资金供求关系的干扰也是显而易见的。经济的非均衡性表明，这时在货币市场上可能存在资金需求大于资金供给的情况。而由于有追加投资的需要，资金供不应求的缺口将会增大。

再从资源组合的角度来看，一旦经济中存在着资源供给的约束，那么，资源就很难按最有利于提高效率的方式组合起来。资源的组合形式不得不适应于资源供给的短线。按资源供给的短线实现的资源组合，意味着经济中将有一部分资源得不到利用；而要让这部分资源得到利用，并且又要适应资源供给的短线，那么资源的组合就可能是低效率的。这两种情况都是资源配置不当的反映。

2.3 CONSUMPTION PRINCIPAL, CONSUMPTION BEHAVIOR, AND RESOURCE ALLOCATION

2.3.1 Consumption Principal

Consumption principal is analyzed in the same way as investment principal. Consumption principal is divided into business and individual from the perspective of the role of the market in allocating resources. For the time being, we do not analyze government as one type of consumption principal.

The prerequisite for a business to become consumption principal is that the business must have the resources for consumption as well as the right to make independent decisions on consumption. The purpose of business consumption is to cover businesses' public expenses, which are intended to increase employee benefits and fulfill corporate social responsibilities.

The prerequisite for an individual to become consumption principal is no different. That is, individuals must have the resources for consumption as well as the right to make independent decisions on consumption. Personal consumption mainly includes living expenses to meet physical, psychological, and social needs.

As consumption principal, businesses set aside a portion of earnings as public consumption reserves and use them to fund expenditures on public consumption, while individuals pay for consumption using personal disposable income.

2.3.2 The General Principles of Consumption Behavior

Without considering consumption preferences, business and personal consumption under the Walrasian equilibrium condition is normally influenced by prices or by market competition. This is the general principle of consumption behavior.

Consumption behavior, similar to investment behavior, consists of a series of transactional behavior. Business and personal investors use cash to pay for consumer goods. If consumption is funded by consumers' borrowings, they will also need to pay interest. In addition, they may also need to use some of the borrowings to pay for services. All these activities are transactions. Under the Walrasian equilibrium condition, every transaction, including consumption, is done at equilibrium prices. Excess demand for and supply of consumer goods are equal to zero. The market allows every business and individual to purchase the consumer goods they need. Meanwhile, there are no uncertainties in the current market and the market in the future. Business and personal consumers do not have to worry about whether they will be able to purchase the consumer goods they need, which will avoid building up excess consumer goods inventory. Everything in the market is reasonable and satisfies all consumers' needs.

Of course, any new consumer goods or consumption activity due to changing consumer preferences may cause temporary or local mismatch. Even so, the situation does not mean mismatch across the overall consumer goods market.

2.3.3 Business and Personal Consumption Behavior Under Disequilibrium Conditions

Business consumption behavior is somewhat different from personal consumption behavior under disequilibrium conditions, due to resource supply constraints, demand constraints, and uncertainties.

If resource supply is constrained, business and individual consumption will be influenced by these constraints. Resource supply constraints are seen when there are shortages of certain consumer goods that are in demand. Under such circumstance, consumers' wishes to purchase these goods will not be fulfilled.

If consumers are not willing to purchase different goods that are not in shortage or these goods are also more or less in short supply, nonvoluntary savings will arise. In the case of nonvoluntary savings,

consumers increase either bank savings or cash on hand.

If demand is constrained and the constraints on demand are characterized by the oversupply of certain consumer goods, business and personal producers of such goods will have difficulties selling these goods. In this case, if consumer income and preferences remain unchanged, the price of those consumer goods will fall because of restriction on sales, or if the price remains unchanged, production will contract and supply will fall. These situations will not have much influence on consumer behavior. If consumer income remains unchanged and consumer preferences change during this period, consumers will change consumption paradigm, as the price of those consumer goods with sales restrictions will fall, influencing the sales volume of other consumer goods.

Besides resource supply constraints and demand constraints under disequilibrium conditions, businesses and individuals also have to consider various economic uncertainties. To prevent supply shortages or interruptions, consumers may want to take precautionary measures, such as storing excess goods and adjusting the ratio of consumption to savings and consumption to investment, i.e., reducing savings or investment and increasing consumption.

Let us disregard the differences between the price under equilibrium conditions and that under disequilibrium conditions for the moment. Under disequilibrium conditions, consumers build up excess inventories of consumer goods and satisfy higher consumption needs by cutting back on savings or investment to meet any economic uncertainty. Therefore, spending on consumer goods, if physically comparable, is higher under disequilibrium conditions than that under equilibrium conditions. Yet we cannot ignore the price level, for as long as resource supply is constrained and the consumer goods market is not fully developed, consumer goods prices will be higher than under equilibrium conditions. Excess inventories and additional spending on consumer goods also push prices higher. Higher prices in turn lead to higher spending on consumer goods under disequilibrium

conditions than under equilibrium conditions, thus maintaining comparable consumption level. This is the characteristic of business and personal consumption behavior under disequilibrium conditions.

2.3.4 The Relationship Between Consumption Behavior and Resource Allocation Under Disequilibrium Conditions

The impact of business and personal consumption behavior on resource allocation under disequilibrium conditions is in certain ways similar to that of business and personal investment behavior on resource allocation.

We know that under equilibrium conditions, the market mechanism works perfectly. Resources are allocated to sectors, regions, and businesses as needed during the production of consumer goods. There is neither production excess nor shortage, at least not from the perspective of the overall production of consumer goods. However, under disequilibrium conditions, constraints on resource supply and excess inventories of consumer goods further widen the existing gap between resource supply and demand and cause the supply and demand imbalance to deteriorate.

The relationship between consumption behavior and resource allocation under disequilibrium conditions is similar to that between investment behavior and resource allocation. When resource supply constraints or excess inventories of consumer goods emerge, the existing gap between supply and demand will widen, and it will be more difficult for resources to combine in the most efficient way. The way of resource combination will have to adjust to resource supply shortages, keeping a portion of resources in the economy idle or forcing resources to combine with low efficiency.

Moreover, excess inventories of consumer goods and resource allocation with relatively low efficiency will certainly influence the distribution of consumer goods between consumer goods producers and production material producers. The production of consumer goods will certainly reduce the availability of resources used in the

production of production materials, thus hurting economic growth. This is also one of the potential consequences from resource supply constraints.

叁 消费主体、消费行为与资源配置

一、消费主体

与分析投资主体时的分类一样，在分析市场在资源配置中的作用时，也可以把消费主体分为企业和个人，而暂不考察政府作为消费主体的问题。

企业作为消费主体的前提是企业不仅拥有可以用于消费的资源，而且企业有消费的决策权或消费的自主权。企业的消费动机是满足企业公共消费支出的需要，而企业公共消费支出的目的是为了增加企业职工福利以及用于企业的公益事业。

个人作为消费主体的前提与此相同，即个人既拥有可以用于消费的资源，个人又有消费的决策权或消费的自主权。个人的消费支出是生活性的支出，包括用于个人生理的、心理的、社会的需要的生活性支出。

企业作为消费主体，它们用于消费支出的资源来自利润中的公共消费基金。个人作为消费主体，他们用于消费支出的资源来自个人的可支配收入。

二、消费行为的一般原则

假定不考虑消费的偏好问题，那么在一般情况下，也就是指在瓦尔拉均衡状态中，无论企业还是个人的消费都只受到价格的制约，也就是只受到市场竞争的制约。这就是消费行为所遵循的一般原则。

消费行为同投资行为一样，也是由一系列交易行为所组成的。企业和个人作为消费主体，将利用可以用于消费支出的货币去购买消费品。如果存在着消费信贷，那么他们还需要为此支付利息。此外，他们还可能用这些货币去支付购买消费性的劳务支出。所有这些活动都是交易行为。在瓦尔拉均衡状态中，任何交易行为都是在均衡价格条件下实现的，消费领域内的交易也不例外。消费品的超额需求和超额供给都等于零。企业和个人都能购买到自己所需要的消费品，一切都由市场安排好了。同时，由于现在的市场和未来的市场上都不存在不确定的因素，所以作为消费主体的企业和个人在进行消费活动的过程中不必担心购买不到所需要的消费品，从而也就用不着去贮存多余的、超过正常消费量和正常贮存量的消费品。市场上的一切都是合理的，必定能够使消费者满

意。

当然，如果出现了新的消费品或新的消费支出项目，如果消费者的偏好发生了变化，那么消费品市场上有可能出现暂时的、局部性的不协调，但即使如此，仍不意味着整个消费品市场的不协调。

三、非均衡条件下企业和个人的消费行为

非均衡条件下企业和个人的消费行为与上述均衡条件下企业和个人的消费行为有所不同。这种区别是由经济中的资源供给约束、需求约束以及不确定因素的存在所造成的。

假定资源供给的约束是客观存在，那么，企业和个人在消费支出过程中必然要受到这一约束的影响。资源供给的约束表现为某些为消费者所需要的消费品的供不应求，在这种情况下，消费者的消费愿望的实现就会遇到障碍。假定消费者不愿意转而购买其他非短缺的消费品，或者其他消费品也存在不同程度的短缺，那就会产生非自愿储蓄，后者的具体表现形式在这种场合将是存款待购或持币待购。

假定需求约束是客观存在，并且需求约束表现为某些为消费者所需要的消费品的供大于求，那么在这种情况下，提供这些消费品的企业 and 个人的产品销售就会遇到障碍。假定消费者的收入和偏好都不变，这些消费品的价格将因销路受限制而下降；或者，这些消费品的价格不变，但生产收缩，供给量减少。这些对消费行为的影响是不大的。假定在这个过程中，消费者的收入虽然不变，但偏好却发生了变化，于是在消费品的价格因销路受限制而下降的条件下，消费结构会发生变化，从而影响其他消费品的销路。

除了非均衡条件下的资源供给约束和需求约束以外，作为消费主体的企业和个人也要考虑经济中存在的各种不确定因素。为了防止消费品供给的不足或中断，消费者可能在消费品的购买上采取一些预防性的措施，如形成超正常的消费品贮存，或者，调整消费与储蓄、消费与投资之间的比例，即减少储蓄或投资，增加消费。

在这里，姑且不谈非均衡条件下的价格水平与均衡条件下的价格水平的差距有多大，就以非均衡条件下所形成的超正常的消费品贮存，以及为了应付经济中的不确定因素从而减少储蓄或投资而增加消费来说，假定所要达到的消费水平在物质内容上是相同的，那么在非均衡条件下需要有比在均衡条件下更多的消费支出。但消费品的价格水平仍然要被

考虑。如果资源供给受限制，如果消费品市场不完善，这时的消费品价格就会高于均衡价格。而超正常的消费品贮存和消费支出的增加也会使消费品价格水平上升。消费品价格的上升又会使得在非均衡条件下需要有更多的消费支出，才能维持与均衡条件下相同的消费水平。这正是非均衡条件下企业和个人消费行为的特点。

四、非均衡条件下消费行为与资源配置的关系

在非均衡条件下，企业和个人的消费行为对资源配置的影响在某些方面同企业和个人的投资行为对资源配置的影响是相似的。

要知道，在均衡条件下，由于市场机制充分地起作用，在消费品生产过程中，资源将被配置于所需要的部门、地区和企业之间，消费品不会有生产过剩或短缺，至少就整个消费品生产说来是这种情况。但在非均衡条件下，由于资源供给约束的存在和超正常的消费品贮存的出现，必然使得本来就已经出现的资源供给缺口进一步扩大，使本来已经不平衡的供求关系更加不平衡。

同非均衡条件下投资行为与资源配置之间的关系相似，在消费领域内一旦发生了资源供给的约束和超正常的消费品贮存现象，不仅原来的供给缺口会扩大，而且资源也难以按最有利于提高效率的方式组合起来，即资源的组合形式不得不适应资源供给的短线，使经济中的一部分资源得不到利用，或者只能按低效率的方式实现资源的组合。

此外，消费品的超正常贮存和资源以较低效率的方式实现组合，必然会对资源在消费品生产部门与生产资料生产部门之间的分配产生影响，即消费品的生产必然挤占生产资料的生产所需要的资源，从而对经济增长不利。这也是资源供给约束可能造成的后果之一。

2.4 MARKET SELF-REGULATION DURING RESOURCE ALLOCATION

2.4.1 The Definition of Market Self-Regulation During Resource Allocation

Market self-regulation during resource allocation refers to the self-regulation function that the market performs without interference from noneconomic factors. The market prevents the economy either from overheating beyond control or from an excessive contraction that will paralyze the economy. The self-regulation function that the market performs in maintaining economic order is very important.

Why does the market have the self-regulation function? To answer this question, we have to look at the characteristics of economic activities by microeconomic units (i.e., businesses and individuals) who participate in transactions in the marketplace. Without interference from noneconomic factors, economic activities will be spontaneously carried out by separate microeconomic units (i.e., businesses and individuals), who are decision-makers themselves and fully motivated to operate their businesses autonomously to the best of their interests. Their economic activities and vitality are reflected in every transaction that is to pursue their best interests, which is seen in the market. The economic interests of microeconomic units are not all aligned. In terms of relationship in the market, they may be suppliers at one time and buyers at another time and realize their economic interests by way of business transaction. Therefore, for any microeconomic unit, its counterparty is both a partner and a competitor. They have common interests but also conflicts of interest. Therefore, microeconomic units have similarities as well as differences.

If the majority of microeconomic units engage in aggressive and expansionary activities, the economy will tend to be expansionary.

Meanwhile, there must also be a small number of microeconomic units who engage in conservative and contractive activities, which to some extent mitigate or slow down the economic expansion. Moreover, when the majority of microeconomic units engage in expansionary activities, aggregate demand will rise and so will prices, forcing those who engage in expansionary activities in the first place to reconsider their economic interests. Under such circumstance, economic expansion will stop after reaching a certain level. This is a sign of market self-regulation. On the contrary, if the majority of microeconomic units engage in conservative and contractive activities, the economy will slow down and contract. There must also be a small number of microeconomic units who engage in aggressive and expansionary activities at the same time, which to some extent mitigate or slow down the economic recession or contraction. In addition, when the majority of microeconomic units engage in conservative activities, aggregate demand will decline, and so will prices, forcing those who engage in conservative activities in the first place to reconsider their interests. Under such circumstance, economic contraction will stop after reaching a certain level. This is also a sign of market self-regulation.²

2.4.2 Market Self-Regulation and Resource Allocation Under Equilibrium Conditions

If the economy is in Walrasian equilibrium, the self-regulating function of the market will be noticeable. The market performs such a function by enabling each microeconomic unit to balance internal and external cost–benefit relationships.

In terms of internal cost–benefit relationship, every microeconomic unit who faces the decision of whether to commit additional resources must consider the changes in its average cost, marginal cost, average return, and marginal return. If internal benefit increases and internal cost decreases with additional resources, it indicates higher efficiency and these additional resources are

beneficial to the microeconomic unit itself as well as to the overall resource allocation in society. If, on the contrary, additional resources cause internal benefit to decrease and internal cost to increase, the microeconomic unit who makes the investment decision will learn that incremental resources are not cost-effective and hence stop committing more resources. From the perspective of overall resource allocation in society, that incremental resources cause internal benefit to decrease and internal cost to increase indicates lower efficiency or ineffectiveness. Therefore, when a microeconomic unit realizes that additional input of resources is not beneficial and decides to stop committing more resources, it is making a decision in compliance with the efficiency standard of resource allocation. That is, "ineffective and inefficient resource allocation shall be stopped, and effective and efficient resource allocation shall continue."

In terms of external cost-benefit relationship, every microeconomic unit who faces the decision of whether to commit additional resources must consider changing external cost-benefit relationship due to the impacts of additional resources on overall sector capacity or production capacity in the economy. Changing external cost-benefit relationship affects average cost, marginal cost, average return, and marginal return of those microeconomic units, allowing them to learn whether their benefits increase or decrease. They will naturally pursue benefits and minimize costs. From the perspective of resource allocation in the economy, if additional resources lead to higher external costs and lower external benefits, the input of resources is ineffective and inefficient. Therefore, when the majority of microeconomic units find resource input to be uneconomical and decide to stop committing additional resources, their decision is also consistent with the efficiency principle of resource allocation in a society.

The above discussions reveal that under equilibrium conditions where the market is fully developed and pricing is flexible, and resource input by microeconomic units is driven by their own

economic benefit, then resource allocation will surely be influenced by market price, and resources will be invested in effective sectors, regions, and enterprises and withdrawn from ineffective sectors, regions, and enterprises. The function of market self-regulation during resource allocation is demonstrated by the fact that the market does not allow sustained ineffective input of resources, and resource allocation will automatically follow the efficiency principle under market regulation.

2.4.3 Two Different Types of Microeconomic Units and Disequilibrium

The above analysis of market self-regulation during resource allocation reveals that the reason why the market can self-regulate excessive economic expansion and contraction is closely related to the strong motivation of market participants. The state of economic equilibrium is arrived at under the assumption of a fully developed market and flexible prices. But a more important or fundamental precondition is the presence of fully motivated microeconomic units.

We can therefore divide microeconomic units into two types, one with full motivation and one lacking sufficient motivation (or totally without motivation). The reason why microeconomic units are fully motivated is that they are responsible for business operations and their profits or losses and are able to select various investment opportunities and mode of operation in accordance with the best of their interests, distribute after-tax earnings according to their economic interests, and bear investment and operational risks. Such an enterprise is an independent goods producer and operator. Such an individual, in economic terms, is an independent market participant. If microeconomic units do not meet these standards, they must lack full motivation or end up without any motivation.

Under equilibrium conditions, microeconomic units are undoubtedly fully motivated, which has been mentioned in the previous discussions. We need to analyze whether they are fully

motivated under disequilibrium conditions. In order to answer this question, we need to divide economic disequilibrium into two types.

Type I economic disequilibrium refers to a disequilibrium condition under which the market is not fully developed, pricing is not flexible, and there are excess demand and supply as well as constraints on demand and constraints on supply, but microeconomic units who participate in market activities are independent and responsible for their own profits and losses, investment opportunities, and business operations and bear investment and operational risks.

Type II economic disequilibrium refers to a disequilibrium condition under which the market is not fully developed, pricing is not flexible, and there are excess demand and supply as well as constraints on demand and constraints on supply, but microeconomic units who participate in market activities are not independent or responsible for their own profits and losses. They lack the authority to make any decision on investment opportunities and business operations and do not bear investment and operational risks. Such a microeconomic unit has not severed its affiliation with government agencies.

If economic disequilibrium can be categorized into these two types, we can conclude that disequilibrium in a capitalist economy is considered type I disequilibrium, while that in a socialist economy varies. Disequilibrium under the traditional economic system and the dual-track economic system is type II disequilibrium, because enterprises are affiliated with government agencies. Economic reforms will establish the new economic system, under which enterprises are independent goods producers who are in charge of operations, responsible for profits and losses, granted with operating authorities, and accordingly liable for investment and operational risks. The economic disequilibrium in this case is considered type I disequilibrium.

Microeconomic units existing under type II disequilibrium condition clearly lack sufficient motivation or even have no

motivation at all.

Under type I disequilibrium condition, a microeconomic unit itself is fully motivated. However, as they face disequilibrium conditions, they conduct business transactions in an underdeveloped market and with inflexible prices and incomplete and inaccessible market information. In this case, although they are fully motivated, such motivations are constrained by external factors. For example, rigid prices are not necessarily capable of functioning as signals to adjust production, and rigid wages are not necessarily capable of functioning in allocating and combining resources in a way that optimizes resource allocation. Of course, that a microeconomic unit is fully motivated yet such motivations are constrained is quite different from a microeconomic unit that has insufficient motivation. This is the difference between type I disequilibrium and type II disequilibrium.

2.4.4 Market Self-Regulation Under Type I Disequilibrium Condition

As discussed earlier, the market performs self-regulation effectively under equilibrium conditions, i.e., the market will not allow ineffective resource input to exist for a prolonged period of time, due to the following two conditions. First, the market is fully developed and pricing is flexible. Second, microeconomic units are fully motivated and able to produce, operate, and transact in their own interests. However, type I disequilibrium condition only meets one of the two conditions. That is, microeconomic units are fully motivated, but the market is underdeveloped, pricing is inflexible, and there are either resource supply constraints or demand constraints, or both in the economy. How does the market perform self-regulation under such circumstances? How effective is market self-regulation?

The condition that microeconomic units are fully motivated should be considered more important than that the market is fully developed. The reason is that a fully developed market and flexible prices primarily create a benign environment for the development of

the commodity economy, but the condition that microeconomic units are fully motivated resolves the issues related to the economic interests, responsibilities, incentives, and motivations of market participants. If microeconomic units do not take advantage of a fully developed market, in spite of its availability, or flexible prices, and have neither motivation to combine resources effectively or increase utilization efficiency nor any responsibility for economic losses due to resource misallocation, the function of market self-regulation in resource allocation will be discounted. If microeconomic units have no motivations, they are neither sensitive to nor care about economic profits or losses resulting from market activities. The market in this scenario will not be fully developed. A fully developed market exists only when market participants are fully motivated, not vice versa.

The above analyses indicate that the more important condition of those two has existed in an economy in type I disequilibrium. That condition is that microeconomic units are fully motivated. This condition facilitates the function of market self-regulation in resource allocation. Even though the market is not fully developed, pricing is not flexible, and there are resource supply constraints and demand constraints, microeconomic units are able to conduct business transactions in their best interests and intuitively avoid ineffective input of resources or refuse ineffective and inefficient resource combinations and utilization. Therefore, the market can still regulate input and combination of resources in accordance with the efficiency principle during the process of resource allocation, avoiding prolonged ineffective input of resources.

Nevertheless, type I disequilibrium still belongs to the category of disequilibrium. Input of resources in this scenario is after all different from that under equilibrium conditions. The influences of type I disequilibrium on microeconomic business activities are seen in the following three aspects:

When the market is not fully developed and information is not complete or freely accessible, microeconomic units cannot collect

sufficient timely market information, much of which is even misleading. They are forced to make decisions on input of resources and resource combination with limited or even erroneous information. As a result, the economy will likely suffer from low efficiency, and resource allocation in society will be inconsistent with the efficiency principle.

When pricing is inflexible, or in the case of price rigidity, microeconomic units are not free to allocate resources. The reason is that price rigidity does not indicate resource scarcity or reveal the result of resource input and it is not possible for microeconomic units to select required resources optimally during the course of resource combination. If some microeconomic units are unable to optimally select the combination of resources due to price rigidity, it is inevitable to find idle or wasted resources in the economy.

Due to resource supply constraints and demand constraints, the allocation of resources will be short-term whenever there is imbalance between supply and demand. As a matter of fact, this situation means microeconomic units face heightened competition. When under supply constraints, a microeconomic unit as a resource buyer is challenged by limited supply of resources and is forced to make extra efforts to secure supplies. When under demand constraints, a microeconomic unit as a seller is challenged by a limited market and is forced to make extra efforts to sell its products. These extra efforts by microeconomic units to secure supplies or to sell products in the case of constraints on supply and constraints on demand excessively drain societal resources from an overall societal perspective, which is one form of resource misallocation.

The analysis above shows the influences of type I disequilibrium on the business activities and ways of resource utilization of microeconomic units, demonstrating that market self-regulation is functional but constrained under type I disequilibrium condition.

2.4.5 Market Self-Regulation Under Type II Disequilibrium

Condition

Neither of the two conditions (i.e., fully developed market and flexible prices and fully motivated microeconomic units) required of market selfregulation to function during resource allocation exists under type II disequilibrium condition. Thus market self-regulation plays a very limited role during the process of resource allocation.

As discussed earlier, market self-regulation is constrained under type I disequilibrium condition due to underdeveloped market and incomplete and inaccessible market information, together with price rigidity and resource supply constraints and demand constraints. These situations also apply to type II disequilibrium condition. More importantly, as microeconomic units are not fully motivated or even totally lack motivation, constraints on market self-regulation are even more obvious. We will analyze that from the following two perspectives:

The reason why microeconomic units lack motivation is that they are not real economic entities with self-interest that is not directly tied to their operational results. They are not responsible for economic losses resulting from faulty operations or bad investment decisions. As a result, they lack not only motivation and incentive but also pressure and responsibility. They may see no value in pursuing any business that brings in additional profits and contributes to higher resource utilization efficiency for the economy. Meanwhile, they may continue doing whatever may reduce their profits and contribute to lowering resource allocation efficiency for the economy. Market self-regulation appears powerless because of the indifferent attitude of microeconomic units, let alone discussing how to control input of resources and resource utilization following the efficiency principle.

On the other hand, the reason why microeconomic units lack motivation is not only that they do not care about or pay enough attention to operational profits and losses but also that government agencies interfere with their operational decisions and they have to

obey orders from government agencies. Therefore, even though some microeconomic units care for their profits and losses and wish to adjust input of resources and resource utilization in their own economic interests, the affiliation with government agencies makes it difficult for them to do so. Hence market self-regulation cannot function during the allocation of resources.

These two aspects clearly demonstrate that the market cannot actually perform the self-regulation function during resource allocation under type II disequilibrium condition. This is in sharp contrast to type I disequilibrium condition. If we say the function of market self-regulation still exists during the course of resource allocation, although restricted to some extent, under type I disequilibrium condition, it barely functions under type II disequilibrium condition.

The following situations are often seen under type II disequilibrium condition. When input of resources is executed or resources are combined or utilized inappropriately and inefficiently, the market is unable to correct the situation. When the market signals some alerts (such as widening gap between the supply and demand of certain resources, lowering economic efficiency, and increasing price volatilities), microeconomic units cannot gain access to those alerts or fail to make adjustments to input of resources and resource combination after they receive the alerts. They are even reluctant to make any change. Resource misallocation continues or deteriorates, which will give rise to one of the following three scenarios:

The first scenario: Deteriorating resource misallocation causes an economic downturn, forcing the government to intervene using noneconomic measures to tackle resource misallocation. The intervention, or called rectification or policy adjustment, is not done via the market, which is often seen under type II disequilibrium condition. It is necessary to point out that the government hereby mentioned refers to the highest authority. Only after the highest authority detects the severity of resource misallocation and decides to

apply rectification or policy adjustment can those nonmarket measures take effect to tackle resource misallocation. There must be a considerable time lag between when the issue is detected and the decision of rectification or policy adjustment is made, which inevitably brings considerable damage to the economy.

The core issue is how the highest authority rectifies resource misallocation. Only after the highest authority truly understands that the cause and deterioration of resource misallocation is due to type II disequilibrium condition (i.e., underdeveloped market, inflexible prices, and microeconomic units' lack of motivation) and takes actions to resolve type II disequilibrium condition can such rectification measures be truly effective. If the highest authority only plans to use some nonmarket measures to correct resource misallocation while maintaining type II disequilibrium condition, the imbalance between resource supply and resource demand can only be temporarily alleviated. The resource misallocation problem will persist and become complicated and eventually lead to re-rectification or policy readjustment after a certain period of time. In addition, final consequences must be unsolved problems one after another, greater obstacles, more difficult rectification, and worsening rectification results.

The second scenario: Under the circumstance of worsening resource misallocation and resulting economic downturn, the government does not intervene using nonmarket measures. In this case, the government does not intend to correct resource misallocation. The persistence of the situation may lead to numerous unsolved problems. As unsolved problems keep piling up, conflicts between resource supply and resource demand will be fully exposed, and the economy will suffer from stagnation, inflation, or stagflation. Severe stagnation, inflation, or stagflation may even paralyze the economy. Only under that circumstance can we clearly see the market self-regulation function. This is because economic chaos and paralyzed economy will force microeconomic units to find their own way out.

Faced with extreme difficulties and almost despair, they will have to pursue business transactions in their own interests (or in the interests of their employees) in order to survive.

Under type II disequilibrium condition, some of the business transactions conducted by some microeconomic units in pursuit of their own interests are underground. In other words, underground markets quickly develop at this time. These emerging underground markets may cost certain microeconomic units dearly to pursue transactions in their own interests, which are likely to further exacerbate resource misallocation. However, an underground market is after all one kind of market. In this market, counterparties in a transaction may set aside noneconomic interference and allow the scarcity of commodities to determine the price (similar to ones in imperfect competition). Instead, market selfregulation during resource allocation is seen in this kind of market, allowing transactions to be concluded at conditions satisfactory to both counterparties. Underground market activities will more or less alleviate economic hardship and to some extent prevent resource misallocation from devastating the overall economy. As ironic as these phenomena may look, they are likely to occur under type II disequilibrium condition.

The third scenario: Deteriorating resource misallocation and consequential economic downturn allow the government to recognize the root cause of the issue, i.e., worsening economic disequilibrium, as well as the fact that economic disequilibrium is demonstrated not only by underdeveloped markets but more importantly by microeconomic units' lack of motivation. Therefore, the government decides to reform the economic system, adopt appropriate measures to motivate microeconomic units, and gradually develop the market. Meanwhile, the government also introduces some macroeconomic regulations during economic reforms, appropriately coordinating government regulation and market regulation to alleviate conflicting allocation of resources and gradually rationalizing input of resources and resource combination in society.

Undoubtedly, the third scenario is not easy to come by. When the economy is in the midst of type II disequilibrium, it normally follows its trajectory and ultimately ends up in a scenario more similar to the first one. The second scenario is usually the result of natural economic consequences from ineffective government intervention or ineffective policies that are intended to tackle economic chaos, rather than what the government has hoped for under type II disequilibrium condition. If the economy turns out to be close to the second scenario, it is very likely that the government is incapable of correcting resource misallocation as well as regulating underground business activities. But the occurrence of the third scenario needs a series of premises.

First of all, severe resource misallocation and economic downturn have forced the government to recognize the necessity of economic reforms, especially the necessity of endowing microeconomic units with motivation via reforming the economic system.

Secondly, the government has adopted effective measures to reform the economic system, which gradually separate microeconomic units from their affiliation with government agencies, give them internal motivation and external pressures, and prompt them to care for their profits and losses.

Thirdly, the government simultaneously adopts appropriate macroeconomic regulatory measures to alleviate resource misallocation and to allow market self-regulation to function.

Lastly, as reforms of the economic system and government economic regulation make progress, a dual mechanism that consists of market regulation and government regulation gradually comes into being. As the dual mechanism takes effect, resource allocation gradually improves.

It can be seen that any one of these conditions cannot be easily met. If resource misallocation under type II disequilibrium condition has three possible outcomes, only the third scenario is worth pursuing. If the third scenario became a reality, type II economic disequilibrium would become type I economic disequilibrium. If we say that

economic equilibrium is not realistic, type I disequilibrium is the second best choice available.

Of course, under type I disequilibrium condition, the magnitude of disequilibrium varies due to different degree of market underdevelopment, price inflexibility, market information imperfection and inaccessibility, and resource supply constraints and demand constraints. The purpose of research on resource allocation in socialist society is to understand how the government applies the market mechanism and government regulation to facilitate the transition of resource allocation from ineffectiveness to effectiveness under various disequilibrium conditions.

肆 资源配置过程中的市场自我制约

一、资源配置过程中市场自我制约的含义

资源配置过程中的市场自我制约是指在没有非经济因素干扰的情况下，市场有一种自我调理的功能，市场既不至于使经济过度膨胀，使之达到不可收拾的地步，又不至于使经济过度萎缩，使之陷于瘫痪状态。市场的这种自我调理对于维持社会经济的正常运行是不可缺少的。

为什么市场有这种自我调理的功能？这必须从参加市场交易的微观经济单位（企业和个人）经济活动的特点谈起。假定没有非经济因素的干扰，社会的经济活动完全由无数个分散的微观经济单位（企业和个人）自发地进行，每一个微观经济单位都是经济活动的决策者，都能按照自己的利益自主地生产和经营，都能充分发挥自己的活力，那么它们的经济活动及其活力必然反映于它们争取实现自身利益的交换行为之中，也就是在市场上反映出来。所有这些微观经济单位的利益不可能是一致的。在市场关系中，它们在一些场合作为供给一方，在另一些场合作为需求一方，彼此进行交易，它们都指望通过这些交易来实现自己的利益。因此，对每一个微观经济单位来说，其余的微观经济单位既是协作者，又是竞争对手。它们彼此之间既有共同利益的存在，又有利益上的冲突。因此，各个微观经济单位的经济活动既有一致之处，又有不一致之处。

假定多数微观经济单位采取进取的、扩张的活动，社会经济就会趋向于扩张、膨胀。但在这个过程中，必然也有少数微观经济单位采取保守的、收缩的活动，这在一定程度上对社会经济的扩张、膨胀起了缓冲的、抑制的作用。不仅如此，当多数微观经济单位采取进取性的活动时，社会的总需求会增加，价格会上升，从而使原来从事进取性活动的微观经济单位重新考虑自己的利益。这样，社会经济扩张到一定程度之后就不会继续扩张下去，这正是市场的自我制约的一种表现。反之，假定多数微观经济单位采取保守的、收缩的活动，社会经济就会趋向于收缩、停滞。但在这个过程中，必然也有少数微观经济单位采取进取的、扩张的活动，这在一定程度上对社会经济的收缩、停滞起了缓冲的、抑制的作用。不仅如此，当多数微观经济单位采取保守性的活动时，社会

的总需求会减少，价格会下降，从而使原来从事保守性活动的微观经济单位重新考虑自己的利益，这样，社会经济收缩到一定程度之后就不会继续收缩下去，这也是市场的自我制约的表现之一。²

二、均衡条件下市场的自我制约与资源配置

如果经济处于瓦尔拉均衡状态，那么市场在资源配置中的自我制约作用将是明显的。市场的这种自我制约作用可以顺利地通过每一个微观经济单位“内部经济与不经济”、“外部经济与不经济”的变化来实现。

从内部经济与不经济的角度来看，每一个微观经济单位在决定是否增加资源投入时，需要考虑资源投入以后平均成本、边际成本、平均收益、边际收益的变化。单位资源投入以后，如果内部经济增加了，内部不经济减少了，那么这样的资源投入不仅对微观经济单位本身有利，而且从社会资源配置方面来分析也是有效的，因为资源投入所导致的内部经济增加和内部不经济减少意味着资源投入的结果促成效率的提高。如果不是这种情况，即资源投入后内部不经济增加和内部经济减少，那么作为投资决策者和自主者的微观经济单位就会感到资源投入对自己不利，从而会停止资源的投入。从社会资源配置方面来分析，资源投入所导致的内部不经济增加和内部经济减少意味着资源投入是无效的，是促成效率下降的。因此，当微观经济单位感到这种资源投入对自己不利而决定停止资源投入时，这一决策符合社会资源配置的效率标准，即“无效的、促成效率下降的资源配置应当停止，有效的、促成效率提高的资源配置可以进行”的标准。

从外部经济与不经济的角度来看，各个微观经济单位在决定是否增加资源投入时，需要考虑由于资源投入而引起的整个部门的规模、全社会的生产规模的扩大所导致的外部经济与不经济的变动。外部经济与不经济的变动对某些微观经济单位的平均成本、边际成本、平均收益、边际收益变动的影响，将使这些微观经济单位感到自己的利益究竟是增加还是减少。它们必定是趋利而避害的。从社会资源配置方面来分析，资源投入所导致的外部不经济的增加和外部经济的减少，同样意味着资源投入是无效的，是促成效率下降的。因此，当多数微观经济单位感到资源投入的不利性而决定停止资源投入时，这一决策同样符合社会资源配置的效率标准。

由此可见，在均衡条件下，既然市场是完善的，价格是灵活的，微

观经济单位资源投入是受自身利益支配的，那么资源配置必将受到市场价格的制约，资源必将被投入有效的部门、地区和企业，而从无效的部门、地区和企业流出。资源配置过程中的市场自我制约表现为：市场不可能使任何一种无效的资源投入持久化，市场将使资源配置自行符合效率标准。

三、两类不同的微观经济单位和两类不同的非均衡

从以上关于资源配置过程中市场自我制约的分析可以了解到，市场之所以能够在经济运行中对于过度扩张和过度收缩有自行调整和纠正的作用，是同参加市场活动的微观经济单位的充分活力紧密地联系在一起的。经济的均衡状态固然以市场的完善和价格的灵活为前提，但一个更为重要的或更为基本的前提则是微观经济单位的充分活力的存在。

由此可以把微观经济单位分为两类：一类是具有充分活力的微观经济单位，一类是不具有充分活力（直到完全缺乏活力）的微观经济单位。微观经济单位之所以具有充分活力，是因为它自主经营，自负盈亏，能够按照自己的利益进行各种投资机会的选择和生产经营方式的选择，能够按照自己的利益进行税后利润的分配，并且需要自己承担投资和经营的风险。这样的企业就是独立的商品生产者和经营者，这样的个人就是经济学意义上的、独立参加市场活动的交易者。如果微观经济单位不符合这些条件，它们必然不具有充分活力，直到完全缺乏活力。

在均衡条件下，微观经济单位无疑具有充分活力，这一点在前面已经指出。这里需要分析的是，在非均衡条件下，微观经济单位是不是必然不具有充分活力呢？为了说明这个问题，有必要把经济的非均衡区分为两类。

第一类经济非均衡是指：市场不完善，价格不灵活，超额需求或超额供给都是存在的，需求约束或供给约束也都存在着，但参加市场活动的微观经济单位却是自主经营、自负盈亏的独立商品生产者，他们有投资机会和经营方式的自由选择权，他们自行承担投资风险和经营风险。

第二类经济非均衡是指：市场不完善，价格不灵活，超额需求或超额供给都是存在的，需求约束或供给约束也都存在着，不仅如此，参加市场活动的微观经济单位并非自主经营、自负盈亏的独立商品生产者，它们缺乏自由选择投资机会和经营方式的自主权，它们也不自行承担投资风险和经营风险。这样的微观经济单位没有摆脱行政机构附属物的地

位。

如果经济的非均衡分为这样两类的话，那么可以认为：资本主义经济中所出现的非均衡属于上述第一类经济非均衡，至于社会主义经济中的情况，则需要区别对待。在传统的和双轨的经济体制之下，由于企业并没有摆脱行政机构附属物的地位，所以这种非均衡属于上述第二类经济非均衡；通过经济体制改革，建立了新的经济体制，在这种新体制之下，企业成为自主经营、自负盈亏，有投资和经营的自主权并相应地承担投资风险和经营风险的独立商品生产者了，那么这时的经济非均衡，就归入上述第一类经济非均衡。

第二类经济非均衡条件下的微观经济单位，显然是不具有充分活力的，甚至可能完全缺乏活力。

在第一类经济非均衡条件下，从微观经济单位本身来看，它们是具有充分活力的，但由于这些具有充分活力的微观经济单位处于经济非均衡的环境之中，它们在不完善的市场上进行交易活动，而价格又不是灵活的，信息也不完备和畅通，这样，即使它们本身具有充分活力，但这种活力的发挥却不得不受到环境的限制。例如，价格有刚性，它们就不一定能完全根据价格信号来调整生产；工资有刚性，它们也就不一定能完全根据资源的最优组合方式来配置和组合资源，等等。当然，微观经济单位有充分活力，但这种活力受到环境的限制，同它们不具有充分活力仍是很不一样的，这也就是第一类经济非均衡与第二类经济非均衡的区别。

四、第一类非均衡条件下市场的自我制约

前面已经指出，在均衡条件下，资源配置过程中的市场自我制约之所以能够有效，即市场之所以有可能不让任何一种无效的资源投入持久化，归因于两个条件：第一，市场是完善的，价格是灵活的；第二，微观经济单位具有充分活力，能够按照自身的利益进行交易活动和安排生产经营。但在第一类经济非均衡状态中，这两个条件只剩下一个，即微观经济单位虽然具有充分活力的，而市场却不完善，价格也不灵活，经济中或者存在着资源供给的约束，或者存在着需求的约束，或者二者同时存在。在这种情况下，在资源配置过程中，市场的自我制约将以何种方式表现出来呢？市场自我制约的效果又如何呢？

应当把微观经济单位具有充分活力这个条件看成比市场完善这个条

件更加重要。这是因为，市场的完善和价格的灵活，主要是为商品经济的发展创造一个良好的环境，而让微观经济单位具有充分活力，则是解决市场活动参加者的利益、责任、刺激、动力问题。即使市场是完善的，如果微观经济单位不能利用完善的市场和灵活的价格来进行交易，它们缺乏合理组合资源和提高资源利用效率的主动性、积极性，又不承担资源配置不当所造成的经济损失，那么，市场在资源配置过程中的自我制约作用也就非常有限。何况，微观经济单位在没有充分活力的情况下，对参加市场活动的利益与损失不敏感、不重视，那么市场也就可能是不完善的。完善的市场要靠有充分活力的市场活动参加者（微观经济单位）来造就，而不能反过来，由完善的市场来创造有充分活力的市场活动参加者（微观经济单位）。

这意味着，第一类经济非均衡具有使市场自我制约的两个条件中的一个较重要的条件，即微观经济单位具有充分活力这一条件。这对于市场在资源配置中的自我制约作用的发挥是有利的。尽管市场不完善，价格不灵活，资源供给约束或需求约束存在着，但由于微观经济单位能够根据自己的利益来从事交易，它们从本能上是不会把资源投入无效的经济活动中去的，它们从本能上也会拒绝无效的、促成效率下降的资源组合和利用方式，因此，市场在资源配置过程中，实际上仍然按照效率标准来调整资源的投向和资源的组合，避免出现无效的资源投入的持久化。

然而，即使是第一类非均衡，它仍是一种非均衡，这时的资源投入毕竟不同于均衡条件下的情况。第一类非均衡对于微观经济单位的交易活动和资源利用方式的影响，主要表现于以下三个方面：

第一，在市场不完善、信息不完备和不畅通的条件下，微观经济单位在市场上得不到足够的、及时的信息，甚至它们得到的信息中有不少是不正确的。这些微观经济单位不得不在有限的信息，甚至错误的信息指引下进行资源投入和组合的决策，其结果，很可能给经济带来低效率，并且使社会的资源配置不符合效率标准。

第二，在价格不灵活，即存在着价格刚性的条件下，微观经济单位的资源配置的调整要受到限制。这是因为，价格的刚性并不能反映资源的稀缺程度和资源投入的效果，微观经济单位在组合资源时，不可能按照最优的方式来选择所需要的资源。如果个别微观经济单位在价格刚性条件下不能从优化资源组合的角度来利用资源，那么就全社会的范围而

言，资源配置过程中的浪费或闲置就是不可避免的。

第三，由于资源供给约束和需求约束的存在，在供求不能平衡的场合要按照短线来配置资源。对微观经济单位来说，实际上是意味着竞争的加剧，即在供给约束的场合，微观经济单位作为需求一方，面临着资源有限的问题，从而不得不为获得供给而投入更多的力量；而在需求约束的场合，微观经济单位作为供给一方，面临着市场有限的问题，从而不得不为实现自己的销售而投入更多的力量。微观经济单位在供给约束和需求约束的场合，为争取货源和销路而投入的更多的力量，对社会而言，就是资源的超正常的使用。对资源的超正常使用是资源配置不当的一种表现。

第一类非均衡对于微观经济单位的交易活动和资源利用方式的上述影响，反映了市场的自我制约作用在第一类非均衡条件下虽然存在，但却受到了限制。

五、第二类非均衡条件下市场的自我制约

资源配置过程中市场自我制约取得效果的两个条件（市场完善和价格灵活，微观经济单位有充分活力），在第二类经济的非均衡状态中都不存在。这样，资源配置过程中的市场自我制约作用就受到了很大的限制。

前面在谈到第一类非均衡条件下，由于市场不完善和信息不完备、不畅通，由于价格刚性、资源供给约束和需求约束的存在等等而使得资源配置过程中市场自我制约作用受限制的情况，同样存在于第二类非均衡条件之下。但更重要的是，由于微观经济单位没有充分活力，甚至完全缺乏活力，市场自我制约作用所受到的限制就更为突出。可以从以下两方面来进行分析：

一方面，微观经济单位之所以缺乏活力，主要是由于它并未成为真正的利益主体，生产经营的成果同它的利益没有直接的、必然的联系；它也不为生产经营的失误或投资的失误而承担应有的经济损失。这样，微观经济单位既缺少动力和刺激，又缺少压力和责任感。明明是有利于自身经济利益的、从而也是有利于社会资源配置效率提高的，微观经济单位可能无动于衷，不屑去做；明明是不利于自身经济利益的、从而也是促成社会资源配置的效率下降的，微观经济单位可能照常去做。市场的自我制约作用在微观经济单位这种对资源配置的效率麻木不仁的态度

面前显得无能为力，因此也就谈不到如何以效率标准来制约对资源的投入和利用。

另一方面，微观经济单位之所以缺乏活力，并不仅仅由于它对生产经营中的利益与损失关心不够或不予关心，而是由于它的一切生产经营都要受到行政部门的限制，微观经济单位必须按行政部门的命令行事。因此，即使某些微观经济单位关心生产经营的利益与损失，并且希望按照利益原则来调整自己的资源投向和资源使用方式，但它们作为行政机构附属物的地位决定了它们难以按照自己的意愿和利益原则去做。于是资源配置中市场的自我制约作用就无从发挥。

以上这两个方面充分说明，在第二类非均衡条件下，实际上很难使市场在资源配置过程中发挥其应有的自我制约作用。这正是第二类经济非均衡与第一类经济非均衡的显著区别。如果说在第一类非均衡条件下，资源配置过程中的市场自我制约作用虽然受到一定的限制，但毕竟存在并起作用的话，那么在第二类非均衡条件下，资源配置过程中的市场自我制约作用几乎发挥不出什么作用。

于是在第二类经济非均衡条件下经常出现这样的情况：如果资源投入不当，资源组合形式不合理，资源使用的效率下降等情况发生了，市场不可能纠正它们；或者，即使市场会发出警告的信号（某些资源供求缺口的扩大、社会经济效益的降低、价格大幅度变动等等），但微观经济单位接收不到这些信号，或在收到信号之后不可能调整自己的资源投向和资源组合形式，甚至不愿意调整自己的资源投向和资源组合形式。资源配置失调的状况将延续下去，并且越来越严重。那么，最终的结果又将是什么呢？不外乎以下三种情况中的一种：

第一种情况——由于资源配置失调的日趋严重而导致的经济恶化，迫使政府采取非经济的手段来干预经济，扭转资源配置的失调现象。这是一种非市场的制约方式，在第二类非均衡经济中，这种方式的干预（通常被称为“纠偏”、“政策调整”等等）屡见不鲜。需要指出的是，这里所提到的政府，是指最高决策当局而言。只有在最高决策当局察觉到资源配置失调问题的严重性并且下决心“纠偏”、“调整政策”之后，这种非市场的扭转资源配置失调的方式才有可能被运用。从时间上看，等到最高决策当局察觉到问题的严重性并且下决心“纠偏”、“调整政策”时，肯定已有较大的“滞后”，这给经济造成的损失也肯定是相当大的。

问题还在于最高决策当局如何“纠偏”。只有在最高决策当局真正认

识到资源配置失调现象的产生及其日益严重的原因在于第二类经济非均衡（即市场不完善、价格不灵活和微观经济单位缺乏充分活力），并且决心从消除第二类非均衡的措施着手时，这种“纠偏”才能取得真正的效果。否则，如果最高决策当局只是想用某种非经济的干预方式来扭转资源配置失调状况，而又继续保持第二类非均衡经济，那么至多只能暂时缓和一下资源供求的紧张状态，而使得资源配置失调的问题持久化、复杂化，以至于不得不在间隔一段时间之后，再次“纠偏”，再次“调整政策”。不仅如此，最终的结果必定是：问题越积越多，阻力越来越大，“纠偏”越来越困难，“纠偏”所取得的效果也越来越差。

第二种情况——在资源配置失调日趋严重和由此引起的经济恶化的情况下，政府不采取非经济的手段来干预经济，即政府不准备着手扭转资源配置的失调现象。那么，这种情况的继续发展，可能带来如下的结果：问题越积越多，当问题积累到一定程度以后，资源供求之间的矛盾充分暴露出来，这时，不仅经济中出现“滞”、“胀”或“滞胀”现象，而且严重的“滞”、“胀”或“滞胀”可能使经济处于濒临瘫痪的境地。到了这个地步，也只有到了这个地步，市场在资源配置过程中的自我制约作用才会比较明显地表现出来。这是指，经济的混乱和经济濒临瘫痪的状况将迫使微观经济单位自谋出路，于是本来缺乏充分活力的微观经济单位在极度困难和几乎绝望的条件下，不得不为了自身的利益（甚至是为了本单位职工的利益），自行通过交易活动而谋求出路。

在第二类非均衡经济中，这时所出现的微观经济单位之间为自身利益而进行的交易活动，有不少属于地下交易活动。也就是说，地下市场这时将迅速发展起来；而这时迅速发展起来的这些地下市场可能使一些微观经济单位为了进行有利于自己的交易而付出昂贵的代价，还可能使资源配置的方向进一步扭曲。但不管怎样，地下市场毕竟是一种“市场”。在这种“市场”上，供求双方的交易可能摆脱非经济因素的某些干扰，而由商品的稀缺程度以及由此决定的价格（类似于不完全竞争价格）来影响供求双方的交易。市场在资源配置过程中的自我制约作用，在这种“市场”上反而能够表现出来，使供求双方在双方都能接受的条件下成交。地下市场的活动在这种情况下多多少少起着缓解经济困境的作用，使资源配置的失调不至于严重到使整个经济陷于解体的地步。尽管这一切是带有讽刺意味的，但在第二类非均衡经济中，这种现象却很有可能发生。

第三种情况——在资源配置失调日趋严重和由此引起的经济恶化的情况下，政府认识到问题的根源在于经济的非均衡程度加剧，而且认识到经济的非均衡不仅表现于市场的不完善，更重要的是表现于微观经济单位缺少活力，于是政府着手进行经济体制改革，从增加微观经济单位的活力和逐步使市场完善方面采取相应的措施；同时，在经济体制改革过程中，在宏观经济调节方面也采取一些措施，使政府调节与市场调节较好地结合起来，争取缓和资源配置中的矛盾，使社会的资源投向和资源组合逐渐趋于合理。

毫无疑问，第三种情况的出现并不是很容易的。当经济处于第二类非均衡状态之中时，经济的运动有一种惯性，使最终结果更接近于上述第一种情况。至于第二种情况，通常不是第二类经济非均衡条件下政府所希望出现的，而很可能是在政府干预无效，对经济的混乱找不到有效的对策时，经济自发地趋向的结果。如果经济趋向第二种情况，那么这也很可能是由于政府既在资源配置严重失调面前无能为力，而又对地下交易活动无能为力的缘故。但第三种情况的出现却需要有一系列前提：

首先，资源配置的严重失调和经济的恶化使政府认识到经济体制改革的必要性，特别是认识到通过经济体制改革，使微观经济单位具有充分活力的必要性；

其次，政府在经济体制改革方面采取了一些有效的措施，使微观经济单位逐渐摆脱原来作为行政机构附属物的地位，有了内在的动力和外部的压力，关心自己的利益与损失；

再次，与此同时，政府采取适当的宏观经济调节措施，使资源配置的失调状况趋于缓解，使市场的自我制约的作用逐渐发挥出来；

最后，在经济体制改革和政府经济调节都取得成效的基础上，经济中逐渐形成了由市场调节与政府调节共同组成的二元机制；在二元机制起作用的情况下，资源配置状况将会逐渐好转。

可见，这一系列前提中的任何一个前提，都不是轻易地能实现的。但在第二类经济非均衡条件下，如果说资源配置的严重失调最终有三种可能的结果的话，那么惟有第三种结果才值得争取实现。而一旦实现了第三种情况，第二类经济非均衡就转变为第一类经济非均衡。如果说经济的均衡缺乏现实性，那么第一类经济非均衡的实现不失为一种次优的选择。

当然，在第一类经济非均衡条件下，由于有市场不完善程度的差

别、价格不灵活程度的差别、信息不完备和不畅通程度的差别、资源供给约束程度和需求约束程度的差别等等，因此按照这些差别，就会有各种程度不等的非均衡。对社会主义社会的资源配置问题的研究，正是为了说明在程度不等的非均衡条件下如何运用市场机制和政府调节来促进资源配置从不合理转向合理。

Chapter 3 Government Regulation and Resource Allocation

第三章 政府调节与资源配置

3.1 THE MEANING OF GOVERNMENT REGULATION

3.1.1 Government Regulation and Government Planning

Government regulation means the government adopts certain measures in accordance with market situations to regulate the economy and direct the operation of the economy and economic growth toward a specific goal.

The scope of government regulation is wider than what is known as planned regulation, which is a form of government regulation. Generally speaking, planned regulation falls into the category of economic regulation. It refers to the regulation of the economy by the government using plans (including mandatory and nonmandatory plans) and is therefore characterized by "planning." Government regulation is not limited to planning or economic regulation. When necessary, the government may carry out regulation using administrative, legal, and economic measures. When it comes to the economy, the government may regulate it by planned or non-planned measures. Government regulation is not necessarily predetermined or planned ahead of time. If necessary, the government may carry out contingency regulation by taking interim abnormal emergency measures.

The government may adopt the following measures of planned

regulation: planned price regulation, planned fiscal and credit regulation, planned income regulation, and planned exchange rate regulation. These measures are explained in detail as follows:

Under planned price regulation, the government, in accordance with market situation, sets planned price or uses planned price to directly or indirectly influence market price. Planned price regulation can also be executed by using a sole unified price set by the government.

Under planned credit regulation, the government, in accordance with market situation, sets planned interest rate to influence market interest rate or stipulates a planned credit quota as the basis for adjusting credit. Planned credit regulation can be executed by a sole interest rate approved by the government, which is planned interest rate, or by a sole credit mechanism approved by the government, which is planned credit quota.

Under planned fiscal regulation, the government uses fiscal revenue and spending to regulate the economy. The feature of planned fiscal regulation is reflected in the execution of a proposed fiscal budget. The government takes current and future market situations into consideration and uses tax revenues (including tax category and tax rate), other national income, and changing fiscal spending as regulatory tools to influence the market.

Under planned income regulation, the government uses fiscal, credit, and price measures to make planned adjustments to personal income according to its current situation and potential changes so that personal income level, distribution of personal income, and personal income gap are consistent with planned targets.

Under planned exchange rate regulation, the government makes planned adjustments to exchange rate or exchange rate regime according to current balance of payments and potential changes so that foreign exchange inflow and outflow are consistent with predetermined economic targets.

Therefore, as a measure adopted by the government to regulate

the economy, planned regulation is characterized by planning. Government regulation, which has a wider scope than planned regulation, includes not only all of the abovementioned planned regulatory measures but also non-planned regulation and noneconomic regulation. Regulation of price, credit, fiscal spending, revenue, and exchange rate mentioned above can be executed by the government using administrative and legal measures according to the specific situation, which may even include the eventual freezing of price, credit, or income. The government may also use nonplanned emergency regulatory measures, such as levying temporary taxes or planning certain special expenditures to meet specific fiscal needs and taking expedient measures to regulate price and exchange rate. It is obviously incorrect to equate government regulation with planned regulation.

3.1.2 The Government Serving as Market Administrator

We have used a large mixer as metaphor for the market during resource combination. The mixing process is to select resource combination. The activities of the market as a large mixer are broken into three stages, production, sales, and distribution. These three stages correspond to market input decision, market output decision, and market distribution decision. Inside this large mixer, the market constantly makes various selections so that resource combination and resource utilization meet the efficiency standard of resource allocation.

If a large mixer is used as metaphor for market, it needs an administrator in the same way as a mixer needs an operator. The function of the government in resource allocation to some extent is similar to the operator of the large mixer. In the case of insufficient resource supply or demand, the government can adjust resource supply and demand by allocating limited resources to where they are needed or by allocating limited demand to different suppliers. The government can be a direct supplier or buyer itself. Perhaps more

importantly, the government as the market administrator is responsible for maintaining market order and ensuring orderly market activities, the same as a mixer operator is responsible for troubleshooting problems in order to maintain the normal operation of the mixer.¹

As market administrator, the government can be a direct supplier or buyer when necessary and has a clear understanding of its roles in resource allocation. It is necessary to further clarify the role that the government plays in resource allocation as a force that influences market selection, i.e., one that influences the behavior of market participant with regard to input, output, and distribution. What is the relationship between the influence of the government and the operation of the market as a large mixer? To answer this question, we need to look at market selection first.

Market selection is all about the selection of input, output, and distribution, all of which can be considered the selection of resource combination. If resources in an economy are limited and the scarcity of various resources varies, government regulation is to influence the selection of input, output, and distribution by microeconomic units. That is, the government adopts certain measures to direct microeconomic units toward selecting one form of resource allocation over the other in accordance with their economic interests, which leads to a result that fulfills the government's purpose. The role of the government in economic regulation is not to force every microeconomic unit to accept its plan, but jump-start a microeconomic unit's inherent power so that it can pursue its own economic interests. Government regulation is not to lower microeconomic units' motivation or enthusiasm. Even if microeconomic units realize that some government measures discourage a form of resource combination that they initially chose and decide to abandon it, they are still motivated decision-makers on resource combination. The decision to abandon the form of resource combination is made based on their own interests, not because of

administrative pressures from the government.

Let us continue with the mixer metaphor. The market keeps running like a large mixer with inputs of various resources. Its operational power originates from inside. That is, the power of market operations comes from the motivation of microeconomic units to conduct various business transactions. Government regulation measures cannot curb such motivation. The stronger motivation microeconomic units have, the more smoothly the market operates, and the more free and efficient combination of resources the market can achieve with various inputs. On the contrary, if government regulation curbs microeconomic units' motivation, making them dumb and insensitive, the mixer will not operate easily or operates very slowly, unable to fulfill the goal of allocating resources effectively.

3.1.3 Rational Government Regulation

Government regulation should be rational and realistic. Irrational government regulation is very harmful to resource allocation. Under the dual-track economic mechanism, if government regulation works together with the market mechanism, it is rational government regulation. We can explain this issue from the following three aspects:

The first aspect is input. Without government regulation, microeconomic units, in the case of being solely regulated by the market, will decide on the variety and quantity of input factors according to the assessment of the market. If the variety and quantity of various factors decided by microeconomic units are not consistent with demand in the market, the market will change its assessment of the various factors. When microeconomic units learn that the market has changed, they will in turn adjust their factor inputs accordingly. This process will go on and on, bringing the factor inputs by microeconomic units closer to demand in the market in terms of variety and quantity. If at this time the government unreasonably intervenes, distorting market assessment of factor inputs, the market or the government will deliver a distorted message to microeconomic

units. As a result, the gap between microeconomic units' inputs and demand in the market will not shrink but widen.

The second aspect is output. Without government regulation, microeconomic units are solely regulated by the market. Every microeconomic unit as a seller will have to decide on its output in response to the buyer's request, which is made known to the seller primarily via the market. Sellers make constant adjustments to output varieties and quantities to satisfy the changing demand. If the government unreasonably intervenes at this time, sellers will not be able to receive relatively accurate information either from the market or directly from buyers. As a result, the gap between output varieties and quantities and demand in the market will also widen.

The third aspect is distribution. Without government regulation, microeconomic units are solely regulated by the market. Every microeconomic unit will distribute its income among consumption, savings, and investment according to its own situation and market expectations. The comparison of economic interests plays a primary role in each microeconomic unit's decision on how income is distributed. Although the distribution of income decided by each microeconomic unit in its own interests may not be able to satisfy the requirement of resource allocation for the economy, market regulation will induce constant changes in the current and expected interests of microeconomic units. As a result, their distribution of income will change accordingly and toward a closer alignment with the overall resource allocation in the economy. If the government unreasonably intervenes at this time, which causes resource allocation in society to deviate from the efficiency standard and misleads microeconomic units to inappropriately distribute their income when they receive somewhat erroneous market information, the distribution of income by microeconomic units among consumption, savings, and investment will further deviate from the requirement of resource allocation for society.

The above analysis is based on the perspective that the

government indirectly influences market selection. Nevertheless, we have clearly seen serious consequences of irrational government regulation. If the government enforces irrational regulation as a direct supplier or buyer, or directly interferes with input, output, and distribution decisions in an irrational way, or makes wrong decisions that prohibit the market from functioning, the potential losses from resource misallocation due to irrational government regulation will be much larger than what has been discussed in the above analysis.

壹 政府调节的含义

一、政府调节与计划

政府调节是指政府按照市场的实际情况，采取一定的措施，对经济进行调节，使经济的运行和经济的发展符合政府预定的目标。

政府调节的范围要比通常所说的计划调节的范围广泛，计划调节是政府调节的一种形式。一般地说，计划调节是一种经济调节，即政府运用计划（包括指令性计划和指导性计划）所进行的调节，并且它的特点在于“计划性”。政府调节不限于计划方面的调节，也不限于经济的调节。当政府认为有必要时，可以运用行政的、法律的、经济的手段进行调节，而在经济方面，可以用计划的或非计划的手段进行调节。同时，政府的调节不一定是事先安排好的、有计划的，在必要时，政府可以相机地采取调节措施，采取临时的、应急的、非常的手段。

在计划调节方面，政府可以采取的调节措施包括：计划价格调节，计划财政和信贷调节，计划收入调节，计划汇率调节等等。这些措施的主要内容是：

计划价格调节，是指政府根据市场的实际情况，制定计划价格，或用它来直接影响市场价格，或以它作为价格的指导线，作为间接影响市场价格的手段。计划价格调节也可以采取如下形式，即政府以规定的价格作为惟一的价格。

计划信贷调节，是指政府根据市场的实际情况，制定计划利息率来影响市场利息率，或规定计划信贷规模，以此作为调节信贷的依据。计划信贷调节可以采取如下形式，即政府只容许存在单一的利息率，以计划利息率作为惟一的利息率；或者，政府只容许存在单一的信贷制度，即计划的信贷量是惟一的可以存在的信贷量。

计划财政调节，是指政府运用财政的收入和支出来调节经济。财政调节的计划性主要体现于财政预算的编制的执行上，即政府考虑到现实和未来的市场情况，用税收（包括税种、税率）、国家其他收入、各项财政支出的变化作为调节手段对市场发生影响。

计划收入调节，是指政府根据居民收入的现状和今后的变动趋势，运用财政、信贷、价格等手段，对居民收入进行有计划的调节，使居民

收入的平均水平、居民之间的收入分配格局、居民收入的差距等等与政府预定的收入分配目标相符。

计划汇率调节，是指政府根据国际收支的实际情况和变动趋势，有计划地调整汇率或调整汇率制度，使外汇的收入与支出与预定的经济目标相符。

由此可见，计划调节作为政府对经济的调节方式，其特点在于调节的计划性。政府调节的范围要比计划调节广泛，政府调节，除上述内容外，还包括了非计划的调节和非经济的调节。即以前面提到的价格、信贷、财政、收入、汇率的调节而言，政府可以根据实际情况，运用行政、法律等手段来管理市场，直到对价格、信贷、收入采取冻结的措施。政府可以采取紧急的、非计划的调节手段。例如，在财政方面，可以根据需要开征某种临时性的税收，可以根据需要安排某些特别的支出；在价格、汇率等方面，也可以采取某些机动的措施，如果把政府调节与计划调节等同起来，那显然是不妥的。

二、政府作为市场的管理者

前面曾把市场比喻为资源组合的大型搅拌机，搅拌过程就是资源组合的选择过程，市场这个大型搅拌机的活动，可以分为生产、销售、分配三个环节，这三个环节同市场的投入决策、市场的产出决策、市场的分配决策这三项决策相适应；在市场这个大型搅拌机中，将不断完成市场的各种选择，使资源的组合和使用符合资源配置的效率标准。

如果把市场比喻为一个大型搅拌机，那么正如搅拌机需要由管理者进行管理一样，市场也需要管理者。政府调节在资源配置中的作用在某种意义上类似于这个大型搅拌机的管理者。政府可以在资源供给不足或需求不足的场合，调节资源供给和需求，把有限的资源配置于各个需要资源的领域；把有限的市场配置给各个供给者。政府还可以直接作为供给者和需求者起作用。也许更加重要的是，政府作为市场的管理者，有责任维护市场的秩序，保证市场交易活动的正常进行，正如搅拌机的管理者有责任排除搅拌机运行过程中的故障，保证搅拌机正常运转一样。¹

政府作为市场秩序的维护者，作为必要时的直接供给者和直接需求者，对资源配置所起到的作用是比较清楚的。需要进一步阐明的是：政府作为影响市场选择者，作为影响参加市场活动的微观经济单位的投入、产出、分配行为的力量，在资源配置中是怎样发挥作用的？政府的

这些影响与市场这个大型搅拌机的运转之间究竟是什么样的关系？对此，仍有必要从市场选择谈起。

市场选择无非是投入的选择、产出的选择、分配的选择，而所有这些，都可以被看成是资源组合的选择。如果社会经济中的资源供给是有限的，并且不同的资源的短缺程度不相等，那么政府调节的作用在于影响微观经济单位的投入、产出和分配的选择，即政府采取一定的措施，使微观经济单位感到某种资源组合方式对自己比较有利，某种资源组合方式对自己不利，从而作出符合政府意图的选择。政府调节在这里所起的作用，不是把自己的意图强加给各个微观经济单位，而是使微观经济单位产生内在的动力，以自己的选择来谋求利益。微观经济单位的主动性、积极性不会因政府的调节而有所削弱。即使微观经济单位感到政府的某种措施对自己进行某种资源组合方式的选择是不利的，因而放弃了该种资源组合方式，但这时，微观经济单位依然是有活力的资源组合选择的决策者，它放弃该种资源组合方式，是出于对自身利益的考虑，而不是屈服于政府的行政压力。

仍以搅拌机作为比喻。市场作为资源组合的大型搅拌机，当各种资源被投入时，它始终在运转。它运转的动力来自内部，即市场机制运行的动力来自参加市场活动的各个微观经济单位的活力。政府的调节不能挫伤这种活力。微观经济单位越有活力，市场的运行就越顺利，从而投入市场的各种资源也就越能在这个大型搅拌机内自由地组合、有效地组合。反之，如果政府的调节使微观经济单位的活力受到抑制，微观经济单位变得呆滞、麻木，搅拌机就不易运转，或者运转得十分缓慢，以致达不到有效地配置资源的目的。

三、科学的政府调节

政府调节应当有科学的依据，应当符合客观事实。不科学的政府调节对资源配置极其有害。在二元机制中，与市场机制并存并且起作用的政府调节，是指科学的政府调节。关于这个问题，可以从以下三个方面来说明：

第一，从投入的角度来看，如果没有政府调节，那么在单一的市场调节之下，每个微观经济单位将按照市场对所投入的要素的评价而考虑自己的投入品种和数量。如果微观经济单位投入的品种和数量同市场所需要的不一致，那么市场对不同的要素的评价将有所变动，这一变动的

信息被微观经济单位接收后，它们就会相应地调整自己的投入，这一过程不间断地进行，逐渐使微观经济单位所投入的与市场所需要的在品种上和数量上比较接近。这时，如果政府进行了不科学的调节，使得市场对所投入的要素的评价扭曲了，于是市场或政府传递给微观经济单位的将是扭曲的信息，微观经济单位的投入与市场所需要的投入之间的差距不仅不会缩小，反而会越来越大。

第二，从产出的角度来看，如果没有政府调节，那么在单一的市场调节之下，每个作为供给一方的微观经济单位将按照需求一方所提出的要求安排产出，而需求一方所提出的要求主要是通过市场传递给作为供给一方的微观经济单位的。于是，供给一方微观经济单位将按照这些要求不断地调整自己产出的品种和数量，以适应需求。如果政府这时进行了不科学的调节，供给一方微观经济单位不可能从市场上或直接从需求者那里得到比较准确的信息，它们的产出无论在品种上还是在数量上同需求之间的差距也会扩大。

第三，从分配的角度来看，如果没有政府调节，那么在单一的市场调节之下，每个微观经济单位将根据自己的具体情况和市场的前景来分配自己的收入，确定消费、储蓄、投资的比例。在微观经济单位的分配决策中，起主要作用的是利益的比较。尽管各个微观经济单位根据自己的利益而安排的收入分配的格局不一定符合社会资源组合的总的格局的要求，但由于市场机制起作用的结果会使得微观经济单位的目前利益和预期利益不断变动，所以微观经济单位的收入分配格局也会不断变动，并逐渐与社会资源组合的总的格局相接近。这时，如果政府进行了不科学的调节，使社会资源组合背离效率标准，使微观经济单位的收入分配格局在得不到比较准确的市场前景的信息前提下被扭曲，这样，微观经济单位关于消费、储蓄、投资之间的分配比例同社会资源组合的要求的差距也会越来越大。

以上都是从政府作为间接影响市场选择的力量的角度来分析的。即使如此，也可以清楚地了解到不科学的政府调节给资源配置造成的不利后果，假定政府的不科学的调节以直接供给者和直接需求者的身份出现，假定政府直接以不科学的方式干预投入、产出和分配，或者，假定政府以错误的决策来排斥市场的作用，那么，不科学的政府调节给资源配置带来的损失将会比以上所分析的大得多。

3.2 NONIDEALIZED GOVERNMENT BEHAVIOR AND ITS IMPACT ON RESOURCE ALLOCATION

3.2.1 The Meaning of Nonidealized Government Behavior

The criterion of rational or irrational government regulation resides in whether or not the government regulation follows objective economic principles or whether it is consistent with the reality. Yet we cannot neglect the difference between understanding objective economic principles and utilizing these economic principles. The government may try its best to regulate the economy by following objective economic principles. However, it may fail to meet its goals due to various constraints. Therefore, there arises the problem of nonidealized government behavior.

The difference between idealized government behavior and nonidealized government behavior is not because of different government regulation results, but the fact that they represent two different viewpoints. Idealized government behavior is based on the assumption that an ideal government, as the monitor of economic activities, is able to adopt any kind of measure, has access to every piece of information, is capable of thoroughly considering and accurately predicting every ongoing issue and policy execution results using various analytical methods, and can take appropriate measures according to each and every potential event. Such a government is an "almighty" government: As long as it has decided on how to regulate the economy, it will be able to proactively take regulatory measures as planned, which will definitely meet the goals once executed. Therefore, the assumption of idealized government behavior is based on the belief that the government is endowed with supernatural and almighty power. Nonidealized government behavior, on the other hand, refers to the action of the government who is subject to various

subjective and objective constraints and who is not necessarily able to fully satisfy its policy goals. Nonidealized government behavior is based on a belief different from that of idealized government behavior.

This means that an idealized government, the same as an idealized person, only exists in books or the mind of some scholars. It does not exist in reality. Any government, regardless of how experienced or capable its members are, is subject to various subjective or objective constraints. It is impossible for the government to have access to every piece of information or only make decisions after gaining access to every piece of information. Moreover, even if it is possible for the government to use all necessary measures in making a decision, the execution of these measures may be time-consuming and costly and thus practically unworthy. By the same token, it is not possible either for the government to accurately know the economic outlook or the result from executing a policy, most of which is beyond the expectation and control of the government. In a world of uncertainty, the government cannot decide everything, as it is constrained by many factors. Idealizing government behavior is neglecting the complexity and variability of economic activities and overestimating the role of the government in economic activities. Only by assuming nonidealized government behavior can we draw a practical conclusion on the role of government regulation.

3.2.2 The Lag in Policy Effect

In order to further analyze nonidealized government behavior, we need to firstly discuss the lag in policy effect.

Let us assume that the government plays its role in regulating the economy using certain economic policies. For now, let us refrain from discussing some other lag effects, i.e., the lag in recognition by the government of a certain economic phenomenon, the lag in deciding whether the government needs to take regulatory measures, and the lag in selecting regulatory plans or measures. The recognition lag

refers to the time delay between the development of an economic problem and the government's recognition of the problem, as there is normally a period of time before the government can understand the problem. The decision lag refers to the time delay between the government's recognition of a problem and its decision to take action. After the government has a better understanding of an economic problem, it will consider whether it is necessary to use any regulatory measure. There is a period of time before the government can reach a conclusion. If the government believes regulation is not necessary, it will not take action, even after it has recognized and understood the problem. Only after the government has understood the problem and believes that regulation is necessary will it decide to take certain regulatory measures. As for the selection lag, the government must select a regulatory plan or certain regulatory measures after it decides to take action. In this case, it is unlikely that there is an existing plan applicable to the situation or an existing regulatory measure that fully addresses the need. Hence, the government needs a certain period of time to formulate a new plan or a new regulatory measure. Therefore, the time period from when the government decides to carry out regulation till when a regulatory plan or measure is ready for execution is referred to as the selection lag. The fact that policy effect will lag during as well as after the execution of the policy has clearly revealed the limitation of government behavior.

The lag in policy effect refers to the lag in the execution of a certain regulatory measure after the government makes a decision to take such action. As the nature and enforcement of regulatory measures vary, the timing for each measure to take effect will also vary. Therefore, the timing of policy effect will vary. The time period from when government regulatory measures are executed till when they take effect is called the lag in policy effect. Two commonly seen economic regulatory policies, tax policy and interest rate policy, are used here as examples to explain the lag effect. If the government wants to control personal consumption and decides to raise income

tax rate, this policy will work to reduce personal consumption because higher income tax rate reduces personal disposable income. In addition, if the ratio of personal spending to total income remains unchanged and personal preferences may change to a certain degree, reduced personal after-tax income will correspondingly reduce personal consumption. Nevertheless, there is a relatively long time lapse between when the regulatory measure is implemented and when the consumption in the economy starts to contract. The contraction of consumption is not instantly seen as soon as personal income tax rate is raised. In terms of interest rate policy, if the government wants to increase investment and decides to lower the discount rate charged by the central bank, the policy will function to stimulate investment because businesses believe that a lower interest rate will generate higher investment returns. If the expected profitability remains unchanged, the gap between the expected rate of return and the interest rate will widen, hence attracting more investment. There is, however, a relatively long period of time from the start of the regulation till more businesses are interested in applying for loans and increasing investment. The increase in investment in the economy is not instantly seen as soon as the central bank lowers the discount rate.

Other government regulatory measures, such as adjusting exchange rate, changing balance of payments, adjusting planned price, and changing the relationship between aggregate demand and aggregate supply, will also reveal the lag in policy effect. The reason is because economic activities are done in markets and market participants are separate microeconomic units, each of whom has its own economic interests. Whether regulatory measures are effective or not will need to be seen from whether or not microeconomic units will change their economic activities. From the onset of a regulatory measure until every microeconomic unit is influenced by economic activities under the regulatory measure and adjusts its own economic activities accordingly, the length of this process varies, but the lag in policy effect cannot be averted.

It is necessary to note that the lag in policy effect, as analyzed above, is not directly associated with the rationality of government regulation. Under bad government regulation, policy effect should lag to some extent. Under good government regulation, policy effect will also lag. The difference is not whether policy effect will lag or not, but whether policy effect will benefit the economy and facilitate the realization of economic growth target. Of course, if government regulation is good and its policies have thoroughly compared various regulatory plans or measures as well as considered potential new situations during execution, the execution process will be relatively easy and the lag in policy effect can be shortened. However, it does not mean the lag will disappear.

3.2.3 The Imbalance of Policy Effect

The lag in policy effect reflects certain limits of government regulation. However, government regulation is subject to more restrictions. The effect of various policies also varies. The variance of policy effect reflects the complexity of economic activities as well as the fact that policy effects are subject to restrictions.

Many economic issues can be viewed from opposite sides based on different perspectives. For example, price, wage, profit, tax, interest, benefit, and enterprise, of which some rise, some fall, some grow, and some decline. For another example, income can be broken down into consumption and savings, and expenditures into consumption and investment. If the proportion of consumption to income rises, the proportion of savings to income will fall, provided that income is the same. Here is another example that reveals opposite relations. If the proportion of consumption to expenditures rises, the proportion of investment to expenditures will fall, provided that expenditures are the same. As one more example, if a specific resource is used in A, it cannot be used in an area other than A, provided that the total amount of the resource is fixed. If A uses more of the resource, less will be available for areas other than A. The imbalance

in policy effect refers to an unequal impact of a policy, if effective on economic activities, on the opposite sides in the same area. For example, there are many economic phenomena such as price rigidity, wage rigidity, welfare rigidity, and employment rigidity. Any regulatory measure that influences price, wage, welfare, and employment will have unequal impacts on a different area. As price, wage, welfare, and employment are easier to rise than fall, price policy, wage policy, welfare policy, or employment policy tends to be more effective in stimulating growth in price, wage, welfare, or employment than in controlling the rise of price, wage, welfare, or employment and is especially ineffective in lowering price, wage, welfare, or employment. This demonstrates the imbalance in policy effect.

Let us look at income as consumption and savings or expenditures as consumption and investment. The same regulatory measure will have different impacts on these two opposite perspectives. For example, if the proportion of consumption to income is relatively high and that of savings to income is relatively low, any fiscal regulatory measure will likely have a larger impact on consumption, but little impact on savings. Any credit regulatory measure, on the contrary, is likely to have a larger impact on savings, but little impact on consumption. Another example is the switch of savings to investments. The effect of various government regulatory measures can be generally summarized as follows: It is more difficult to accelerate the switch from savings to investments and it is easier to slow the switch from savings to investments. More specifically, if the government raises either taxes on businesses or interest rates on commercial loans, the switch from savings to investments will slow down. On the contrary, if the government lowers taxes on businesses or interest rates on commercial loans, savings will be switched to investments, but the switch is not that easy. Perhaps the government must work harder or adopt more powerful measures to reach its goal. Why? This has something to do with the difference between business motivation

and personal motivation.

It is necessary to know that businesses have motivations different from that of individuals, even though they are both agents of economic activities and subject to government regulatory measures. Business motivations can be summarized as the drive to maximize profit, or at least the primary motivation is to maximize profit, while personal motivations are more complicated. To maximize personal income is just one of the many personal motivations. Besides maximizing income, there are some other motivations that are not necessarily less important. As personal income rises, other motivations will become more important. Businesses are the main conduits of investment, while individuals are the main providers of savings. This means that investment activities are mainly influenced by profit maximization, while saving activities are not necessarily mainly influenced by personal income maximization. The government normally takes the maximization of profit or personal income into consideration when adopting regulatory measures. In particular, the government hopes that the stakeholders of investment or saving activities will be driven by profit or income maximization, which will enable a government regulatory measure to accomplish its mission. Since individuals who provide the majority of savings tend to deviate further away from the focus of maximizing profit or income than businesses who are main participants of investment activities, it will be more difficult for the government to enforce a regulatory measure that targets savings to achieve its anticipated results.

3.2.4 The Decrease of Policy Effect

During our discussions on nonidealized government behavior, we must also pay attention to the decrease of policy effect. The decrease of policy effect refers to a diminishing effect as time elapses after the execution of a government regulatory measure. It may even end up having little impact at all in the end even if it still exists.

We can analyze this situation from four different perspectives:

First, situations change or a new situation appears.

When the government begins to draft a policy or a regulatory measure, it may fail to anticipate future changes or a new situation, or it may underestimate the development of the situation due to subjective restrictions. Therefore, as the policy or the regulatory measure comes across a new unanticipated situation after its execution, the original policy or the original regulatory measure will become less effective. As thorough as the original decision may be, such situational changes will always happen. It reflects the limitation of government behavior.

Second, a government policy or a regulatory measure has some side effects.

Any policy or any regulatory measure may have some side effects. For example, while a policy or a regulatory measure may facilitate the accomplishment of one goal, it may harm another. The latter is referred to as side effect, or negative impact. This side effect may have existed at the beginning of a policy or a regulatory measure and is simply hard to detect. It is gradually seen as time goes by. This side effect may also appear some time after the execution of a policy or a regulatory measure. Anyway, the longer after the execution of a policy or a regulatory measure, the more obvious the side effect will be, the more powerful it will become in reducing policy effect.

Third, microeconomic units adopt counter policies in response to a government policy or a regulatory measure.

Assume that a policy or a regulatory measure places some restrictions on the economic activities of a microeconomic unit or discourages some profit-seeking activities of a microeconomic unit. The microeconomic unit will adopt certain counter policies out of its own economic interests to lower the effect of the policy or the regulatory measure so that its economic interests will not be harmed.

It is necessary to point out that the counter policy employed by a microeconomic unit is normally legal. Of course, there are always some microeconomic units who ignore the regulation and engage in

illegal activities. If this situation occurs, policy effect will definitely decrease. However, such a situation cannot be taken as evidence of nonidealized government behavior. So long as the government strictly abides by the law and vigorously punishes illegal activities, it will have the capability to reduce illegal activities committed by microeconomic units. As for legal counter policies, they are directly associated with non idealized government behavior. This means that once a microeconomic unit finds its economic interests are harmed by a government policy or a regulatory measure, it may try its best to circumvent the restrictions placed by the government regulation and seek on its own a way to gain profits. Or it may take advantage of the market mechanism to flexibly adjust in the relatively familiar economic environment in pursuit of its economic interests. Or it may look for any policy loophole or any ambiguous explanations of a policy or a regulatory measure to support its decisions. All these actions are legal. As no government policy or regulatory measure is ever perfect, it is very possible for a microeconomic unit to legally lower policy effect.

Fourth, microeconomic units take precautionary actions in anticipation of a policy or a regulatory measure.

A microeconomic unit with independent economic interests will collect information from various sources and analyze the information available to forecast subsequent government policies. After the analysis, if the microeconomic unit is able to forecast the next government regulation and anticipate the potential negative impacts these future regulatory measures may bring, it may take precautionary actions so that the policy will be less effective or even ineffective at all. The precautionary actions by microeconomic units can also be taken legally. Of course, just as microeconomic units take precautionary actions in anticipation of government behavior, the government can also take actions to offset these precautionary actions in anticipation of microeconomic units' reactions. Theoretically, the government has every reason and possibility to do so. In reality, the

government is always in a reactive position. The reason is because the government is not as prompt and nimble as a microeconomic unit in the process of making decisions. There is only one government in a country, yet there are numerous businesses and individuals. Numerous businesses and individuals focus their attention on the government, yet the government cannot keep an eye on each and every business and individual. Government activities are easily recognized by the public, yet the government cannot easily understand the action of each business or individual, nor their next action plan. This is the limitation of government behavior.

3.2.5 Resource Allocation Under the Condition of Nonidealized Government Behavior

The above paragraphs discussed the lag in policy effect, the unbalance of policy effect, and the decrease of policy effect. All these issues demonstrate that government behavior is not ideal. If government decisions are relatively consistent with objective economic principles and made on the basis of democracy and science, there will be less nonidealized government behavior. Otherwise, nonidealized government behavior will intensify. In general, nonidealized government behavior is common.

Now let us analyze resource allocation under the condition of nonidealized government behavior. First of all, we will have to analyze resource combination with the government as a direct resource investor and producer. As a direct investor, the government can add to insufficient investment in the market or fill in the gap if microeconomic units do not come up with sufficient investment. As a direct producer, the government can bring additional output to the market or meet any deficiency of output from microeconomic units. In the case of insufficient input or output in the market, it is critical to have input or output from the government. But the input or output from the government must follow economic rules as well as the efficiency principle of resource allocation.

It is more common to see the government use various regulatory measures to influence resource allocation. In this circumstance, the government uses fiscal, monetary, price, or exchange rate regulatory measures to influence either input or output decisions made by the market. These decisions are not exempt from the lag in policy effect, the variance of policy effect, and the decrease of policy effect that we discussed earlier. Nonidealized government behavior will surely be seen more or less, resulting in a gap between actual and expected government regulation effects.

Due to the lag in policy effect, there is a time period before regulatory measures implemented by the government to influence resource allocation can take effect. Of course, theoretically, if the government knows that regulatory measures take effect with a time lag, it will adopt certain regulatory measures beforehand so that the time lag between the start and the functioning of those regulatory measures can be minimized or eliminated. In reality, however, this is not practical. It is nearly impossible that the government can adopt regulatory measures in advance, as it is unlikely for the government to take appropriate regulatory measures before the problem of resource allocation fully emerges. The government is more likely an *ex post* rather than *ex ante* regulator of resource allocation. Therefore, it is inevitable to have the lag before regulatory measures take effect, which will certainly reduce the effect of such measures. Moreover, situations may change during the period from the onset of a regulatory measure till when it takes effect. It is even possible that the second round of regulatory measures is needed due to situational changes before the first round takes effect, or the third round of regulatory measures is called for before the second round becomes effective. Although it is premature to reach the conclusion that government regulation is ineffective, we can at least draw the following two conclusions: (1) it is normally difficult for government regulation to reach resource allocation target; (2) the government is normally in a reactive position during resource allocation or normally

ends up trying to come up with ex post remedies.

Let us look at the imbalance of regulation effect as well as its impacts on resource allocation. The imbalance of policy effect demonstrates that government regulatory measures are not very flexible when the government takes certain measures to influence resource allocation to reach its target, despite its wishes to influence input or output decisions by microeconomic units. Due to price rigidity, wage rigidity, employment rigidity, and welfare rigidity, the government can only reach or approach one regulation target while unable to reach another simultaneously. For example, in spite of great efforts, it is not easy for the government to lower price level, wage level, the number of people employed, or expenditures on welfare. In other words, if under certain circumstances effective resource allocation can be only realized by means of lowering price, wage, employment rate, or the percentage of welfare expenditures to national income or fiscal expenditures, the power of the government will be rather limited. In addition, as we discussed earlier, businesses are the primary source of investments and individuals are the primary source of savings and they have different motivations. The motivation of personal savings is more complicated than that of business investment. Therefore, a regulatory measure is more effective on investment than on savings. This means that under certain circumstances, if the only way to achieve effective resource allocation is to turn savings into investment or lower the switch from savings to investment, the power of the government will be limited.

Lastly, we should also consider the impact of the decrease of policy effect on resource allocation in the economy. This impact perhaps more clearly demonstrates the limitation of government regulation. It should be noted that microeconomic units make decisions on input and output for the market. Their preference for one form of resource allocation over another is more or less associated with their expected economic interests. Government regulation is nothing but a plan to change the expectations of microeconomic units'

economic interests via fiscal, monetary, price, and exchange rate measures so that the government can alter the resource combination originally decided by microeconomic units toward a closer alignment with the government's preset goals. Whether the government can realize its plan or not is not dependent upon its own wishes, but the following three points:

First, are government regulatory measures powerful enough? Are they able to alter microeconomic units' decisions on resource combination?

Based on the discussions on the decrease of policy effect, it is inevitable to have some doubts about this point. Government regulation is not necessarily powerful enough to change the decisions on resource combination made by microeconomic units. Moreover, it may be powerful enough to change resource combination at the beginning when it is executed, but it will gradually become less effective as time passes, reducing the power of the government to alter resource combination decisions.

Second, will a microeconomic unit accept government regulation and alter its original decisions on resource combination after considering cost and benefit?

Although government regulation benefits a microeconomic unit in a certain way, a microeconomic unit may choose to resist the pressure from government regulation and avoid altering its original resource combination decision if either the original resource combination brings more benefits or abandoning the original resource combination incurs higher losses than the losses from rejecting the government regulation. With the decrease of policy effect, microeconomic units tend to maintain their original resource combination. This exactly demonstrates the limitation of policy effect.

Third, do microeconomic units adopt counter policies or precautionary measures?

If microeconomic units consider a counter policy in response to certain government regulatory measures or precautionary measures in

anticipation of government behavior, it will not be easy to guide the input and output decisions made by microeconomic units to be consistent with government's predetermined targets.

These three points generally illustrate that government regulation, in spite of some impacts on resource allocation, is subject to various limitations due to nonidealized government behavior, which makes it very difficult for the government to reach its preset goal for resource allocation.

貳 政府行为的非理想化及其对资源配置的影响

一、政府行为非理想化的含义

政府调节的科学与不科学的基本分界线在于是否按照客观经济规律来进行调节，也就是是否与客观实际相符合。但对于客观经济规律的认识程度与这些规律的运用程度的差别，仍是不容忽视的。政府即使主观上尽力想按照客观经济规律来进行调节，但由于种种条件的限制，结果不一定能实现这一目的。由此产生政府行为的非理想化问题。

政府行为的非理想化与政府行为的理想化不仅仅是政府进行调节的结果的不同，而首先是两种信念的不同。政府行为的理想化建立在这样一个假设之上，即假设存在着一个理想化的政府，它作为经济活动的主持者，它有各种手段可以运用，它可能掌握充分的信息，能够通过分析手段对客观存在的问题和政策实行的后果作出准确的预测和周密的考虑，并能针对各种可能发生的情况一一采取适当的对策。这样的政府，实际上是一个“万能”的政府：只要它准备怎样进行调节，它就能主动地采取调节措施，按原定计划进行调节；一旦它采取相应的调节措施，它就一定能达到目的。因此，政府行为的理想化假设是建立在政府有一种非凡的、万能的力量的信念之上的。政府行为非理想化是指：政府的行为由于受到客观与主观的限制，不一定能充分实现自己的政策目标。它与政府行为理想化分别建立在不同的信念之上。

这也就是说：理想化的政府正如理想化的人一样，是书本上的东西，是某些学者头脑里的东西，实际上是不存在的，任何一个政府，即使它是由最有经验、最有才干的人组成的，也仍然会有种种主观的和客观的限制。它不可能掌握全部信息，从而不可能在掌握了全部信息之后再作出决定。何况，即使它有可能利用一切可能利用的手段作出决定，但为此需要花费的时间可能过长，付出的代价可能太大，所以这也是缺少实用价值的。出于同样的原因，政府也不可能对经济变动的前景和政府实行的后果有确切的了解，许多情况是政府难以预料和难以控制的。在一个充满着不确定性的世界中，政府起不到决定一切的作用，政府的力量受到种种限制，把政府行为理想化，实际上忽略了经济生活的复杂

性、易变性，高估了政府调节在经济生活中的作用。只有从政府行为的非理想化假设出发，才能通过对政府调节作用的分析而得出符合实际的结论。

二、政策效应的滞后性

为了进一步说明政府行为的非理想化，让我们从政府效应的滞后性谈起。

假定政府在经济生活中起着调节作用，而且政府的经济调节是通过一定的政策来实现的。在这里，姑且不谈政府对经济现象的认识的滞后性（即在经济中出现了某种问题，政府对这一问题的认识会有一个过程；从经济中问题的出现到政府对这一问题有了较清楚的认识之间的时间间隔，被称为认识的滞后）、政府对于是否需要采取调节措施的判断的滞后性（即政府在对经济中出现的某一问题有了较清楚的认识之后，便考虑是否采取调节措施，在这里有一个判断的过程；如果政府认为不需要进行调节，那么即使政府认识到问题的存在，仍不会采取调节措施；只有在政府认识问题的存在，并认为需要进行调节时，才会采取调节措施；从政府认识到问题的存在到政府经过判断而决定进行调节之间的时间间隔，被称为判断的滞后）、政府对于调节方案或调节措施的选择的滞后性（即政府在决定进行调节之后，必须对调节的方案或调节的措施作出选择；在这种情况下，很可能没有一种现成的可供采用的方案，或者现有的调节措施不能适应需要，于是政府还必须有一定的时间来等待新的方案或新的调节措施的产生；因此，从政府决定进行调节到政府掌握了某种调节方案或某种调节措施之间的时间间隔，被称为选择的滞后），仅以政府执行过程中和执行以后所出现的政策效应的滞后性而言，政府行为的局限性就表现得相当明显。

政策效应的滞后性是指：在政府决定采取某一种调节措施并把它付诸实施之后，这种调节措施不会立即产生效果；根据调节措施的性质和强度的差异，不同的调节措施起作用的时间不同，效应的出现也有早有晚。从政府实施某种调节到这种调节措施产生效果之间的时间间隔，被称为政策效应的时间差。以政府调节经济时经常采取的税收政策和利率政策为例。如果政府为了控制消费要求，采取提高个人所得税率的措施，那么这一措施之所以能够对消费需求起到紧缩作用，是由于个人所得税率的提高减少了人们纳税后的收入，并且在假定人们的消费支

出的收入中的比例不变，而人们的消费偏好可以有一定的变换条件下，人们由于纳税后收入的减少而相应地减少了消费支出。但这一调节措施从开始实行到社会消费需求的收缩之间有一个较长的过程，并不是一开始提高个人所得税率，社会的消费需求马上就可以被压缩下来。以利率政策来说，如果政府为了扩大投资需求，采取降低中央银行贴现率的措施，那么这一措施之所以能够对投资需求起到刺激作用，是由于企业感到利率的下降使得投资变得有利可图，于是在假定预期利润率不变的条件下，企业会由于预期利润率同利息率之间差距的扩大而相应地增加了投资支出。但这一调节措施从开始实行到企业愿意增加向银行的借款和增加投资之间也有一个较长的过程，并不是中央银行一降低贴现率，社会的投资需求立即就扩大的。

其他的政府调节措施，如调整汇率到国际收支的变动，调整计划价格到社会总需求与总供给之间关系的变化等等，也都有政策效应的滞后。这是因为，经济中的交易活动是通过市场进行的，而参加市场交易的是各个分散的、有自身经济利益的微观经济单位。政府的各种调节措施最终能否发生效果，要由这些微观经济单位、经济活动的变化来体现。从调节措施的开始实行，到各个微观经济单位受到调节措施所导致的经济活动的影响，再到各个微观经济单位以此为依据来调整自己的经济行为，这一过程有长有短，但不管怎样，政策效应的滞后是不能避免的。

要知道，以上所分析的政策效应的滞后性与政府调节是否科学并没有直接的联系。政府调节不是科学的，政策效应有一定的滞后；政府调节具有科学性，政策效应同样会滞后。区别不在于政策效应是否有滞后，而在于政策效应是否有利于经济的运行和实现预定的经济发展目标。当然，如果政府调节是科学的，并且政策在选择调节方案和调节措施时有比较充分的考虑，政策执行过程中又考虑到可能出现的某种新的情况，从而使政策的执行比较顺利，那么政策效应的滞后可以缩短一些，但这依然不意味着政策效应滞后性的消失。

三、政策效应的不平衡性

政策效应的滞后性反映了政府调节的某种程度的局限性。但政府调节的局限性不止于此。政策效应还有不平衡性，这种不平衡性一方面反映了经济生活本身的复杂性，另一方面反映了政策的作用是受限制的。

经济生活中的许多问题，从不同的角度来看，可以分为两个对立的方面。例如，价格、工资、利润、税收、利息、福利、企业等等，有上升，也有下降，有增长，也有减少。又如，收入可以分解为消费和储蓄，支出可以分解为消费和投资；用于消费的收入多了，在一定的收入前提下，用于储蓄的收入就少了；用于消费的支出多了，在一定的支出前提下，用于投资的支出就少了，这也是对立的关系。再如，一定的资源，用于A领域就不能再用于非A领域，A领域用多了，非A领域就必然少用，等等。政策效应的不平衡性是指：一项政策被实施后，假定它在经济生活中发生了作用，但很可能在同一个领域内的两个对立的方面所起的作用是不相等的。例如，经济生活中存在着价格刚性、工资刚性、福利刚性、就业刚性等等现象，对价格、工资、福利、就业等等发生作用的调节措施就会产生不平衡的效应。由于价格、工资、福利、就业都具有易于增长而不易下降这一特殊的性质，这就使得价格政策、工资政策、福利政策、就业政策在刺激价格、工资、福利、企业增长时易于奏效，而在抑制价格、工资、福利、就业增长时，尤其是在降低价格、工资、福利、就业时难于奏效。这就是政策效应不平衡性的一种表现。

再以收入分解为消费与储蓄两个方面或支出分解为消费与投资两个方面来看，同一种政府调节措施对这两个不同的方面的影响也是有差异的。例如，消费在收入中所占比重偏高而储蓄在收入中所占比重偏低时，如果采取财政调节措施，那么对消费可能起到较大作用而对储蓄则起不了多大作用；如果采取信贷调节措施，情况就相反，它们对储蓄可能起到较大作用而对消费则起不了多大作用。又如，在储蓄转化为投资的问题上，政府采取各种调节措施的效应可以大体上归结为：要加速储蓄向投资的转化比较难于取得理想的结果，而要减缓储蓄向投资的转化，则比较易于取得理想的结果。具体地说，只要政府增加企业的税收或提高企业的贷款利息率，储蓄向投资的转化就会减缓下来；而政府降低企业的税收或降低企业的贷款利息率，那么储蓄固然会向投资转化，但不一定转化得那么顺利，那么容易。也许政府必须用更大的努力，或者用更强有力的措施才能达到预定的目的。为什么会这样？这与企业的动机同居民的动机的差异有关。

要知道，尽管企业和居民都是经济活动的主体，在经济活动中都要受到政府的调节措施的影响，但它们的动机是有差异的。企业的动机可以归结为利润最大化，至少可以归结为以利润最大化为重，企业的其他

动机即使存在，但相形之下是次要的。居民的动机要比企业的动机复杂，个人收入的最大化是居民的动机之一，但居民还有其他一些动机，他们并不一定是次要的。随着居民收入水平的上升，其他一些动机的相对重要性也会增大。投资的主体主要是企业，储蓄的主体主要是居民。这意味着，投资行为主要受利润最大化的影响，而储蓄行为则不一定主要受个人收入最大化的影响。政府的调节通常是从利润最大化或收入最大化的角度来考虑的，即政府希望投资行为和储蓄行为的主体会使自己的行为趋向于利润最大化或收入最大化的目标，从而使政府的调节措施生效。现在，既然居民作为储蓄主体的行为比企业作为投资主体的行为更加偏离利润最大化或收入最大化这一主线，所以政府调节储蓄的措施必定比政府调节投资的措施要难以达到预定的效果。

四、政策效力的递减

在讨论政府行为的非理想化时，还有必要考察一下政策效力递减问题。政策效力递减是指：政府的某项调节措施被付诸实施后，一开始可能是比较有效的，但久而久之，它的效力就减少了，以至于到了后来，即使该项调节措施仍然存在，但它的作用却微不足道了。

为什么会有这种情况，可以从四个不同的方面来分析：第一，情况的变化或新情况的出现。

当政府开始制定某种政策或调节措施时，或者没有预料到未来情况的变化和新情况的出现，或者由于主观条件的限制，对形势的发展估计不足，因此，在政策或调节措施付诸实施后，一旦遇到了非预料的新情况，原来制定的政策或调节措施的效力不可避免地会递减。即使当初决策时考虑得再周密，也难免这种情况的发生。这反映了政府行为的局限性。

第二，政策或调节措施的副作用。

任何一项政策或调节措施都可能产生某种副作用。比如说，它在有利于达到这一预定目标的同时，也可能发生不利于实现另一预定目标的作用。后一种作用被称为副作用，它是就消极的意义上说的。这种副作用可能是在某种政策或调节措施一开始实行时就已经存在的，只不过当时不显著，但后来才逐渐表现出来；这种副作用也可能是在某种政策或调节措施实行到一定时期之后才出现的。但不管怎样，政策或调节措施实行的时间越长，它的副作用就越明显。这种副作用对政策的效力的抵

消作用也会越来越大。

第三，微观经济单位针对有关的政策或调节措施而采取“反对策”。

假定某种政策或调节措施会对微观经济单位的经济活动有所限制，或者不利于微观经济单位的盈利行为，于是微观经济单位就会从自身的利益出发，采取某种“反对策”，以便使该种政策或调节措施的效力下降，至少使该种政策或调节措施不至于对自身不利。

应当指出，微观经济单位的“反对策”通常是在合法条件下进行的。当然，这并不排斥微观经济单位可能不顾法令，干出一些违法的事情。如果出现了这种情况，政策的效力肯定会下降。但这种情况的出现不能被看成是政府行为非理想化的证据。只要政府严格按照法律办事，严肃处理违法行为，那么政府是有能力减少微观经济单位的违法行为的。至于在合法条件下进行的“反对策”，则与政府行为的非理想化直接有关。这是指：当微观经济单位发现自己的利益在政府的某种政策或调节措施起作用的情况下有所损失时，它们有可能设法绕过政府调节所设置的束缚性的措施，自行寻找可以实现利益的途径；它们也可能利用市场机制，在比较熟悉的经济环境中，作出灵活的反应，以谋求自己的利益；它们还可以寻找政策与政策之间的间隙，或者利用对某些政策或调节措施的含糊不清的解释，作出有利于自己的决策。这一切都以不违法为前提。由于政策或调节措施不可能达到尽善尽美的程度，因此微观经济单位在合法条件下使政策效力递减，是完全可能的。

第四，微观经济单位通过对政策或调节措施的预测而采取预防性措施。

微观经济单位有自己的独立的经济利益，它们会从各个方面收集信息，并根据已有的信息对政府的政策动向进行分析、预测。如果它们通过这种分析而预测到政府下一步将要采取什么样的调节措施，并且这些即将出台的调节措施可能给自己带来什么样的不利影响，那么就会采取预防性的措施，使政策的效力减少，甚至使政策无效。微观经济单位采取的这种预防性措施，同样可以在合法的条件下进行。当然，在微观经济单位对政府的行为进行预测和采取预防性措施的同时，政府也可以对微观经济单位的行为进行预测并采取抵消这些预防性措施的措施。从理论上说，政府完全有理由这样做，并有可能这样做。但实际上，政府总是处于被动的地位。这是因为，政府的决策过程与微观经济单位的决策过程相比，不如后者及时、灵活。政府是一个，企业和个人是无数个。

无数企业和个人的眼光都集中到政府身上，而政府却无法把眼光具体地投向每一个企业和个人。政府的行为易于被公众所认识，而政府却不易于了解每一个企业和个人的行为，不了解他们下一步可能采取什么样的行动。这也决定了政府行为的局限性。

五、政府行为非理想化条件下的资源配置

以上讨论了政策效应的滞后性、政策效应的不平衡性和政策效力递减问题。这些都说明了政府的行为并不是理想化的。政府的决策比较符合客观经济规律，趋向于民主化、科学化，那么政府行为的非理想化程度就相对地弱一些；反之，则政府行为的非理想化程度就强烈一些。总之，政府行为非理想化的情况普遍存在着。

现在需要研究的是政府行为非理想化条件下的资源配置。首先要研究政府作为直接投入者和直接产出者的资源组合问题。政府作为直接投入者，可以弥补市场的投入不足，即可以弥补微观经济单位的投入不足。政府作为直接产出者，则可以弥补市场的产出不足，也就是弥补微观经济单位的产出不足。在投入不足或产出不足的场合，政府的投入或产出是必要的。但政府的投入或产出应当符合经济规律的要求，符合资源配置的效率标准。

更具有普遍意义的是政府作为各种经济调节手段的运行者对资源配置的作用。在这种场合，无论政府是运用财政、金融、价格、汇率等调节手段来影响市场关于投入的选择，还是政府运用这些调节手段来影响市场关于产出的选择，都同这里已经讨论过的政策效应的滞后、政策效应的不平衡，以及政策效力的递减有关。政府行为的非理想化必然在不同程度上表现出来，使政府调节的实际效果同预定的调节效果有一段差距。

由于政策效应具有滞后性，所以政府用来影响社会资源配置的调节手段在实施之后，要有一段时间间隔才能发挥作用。当然，假定政府了解到自己的调节措施的效应是滞后的，那么从理论上说，政府不妨采取超前性的调节措施，以便把从开始实行调节到调节措施发挥作用之间的时间间隔缩小或消除，但这是不现实的。政府采取超前的调节措施的可能性很小。政府不可能在资源配置问题还没有明显暴露出来的时候就预先采取适当的调节措施。政府更可能是资源配置的事后调节者，而不是事前调节者。这样，调节措施效应的滞后也就难以避免。这种滞后性必

定使调节的效果减少。此外，在开始实行调节到调节措施发挥作用这段时间间隔内，很难认为情况不会发生变化，甚至可能发生这样的情况，即还等不到上一轮的调节发挥作用，由于情况的变化而不得不又推出第二轮的调节措施，而又等不到第二轮的调节发挥作用，情况的再次变化又不得不推出第三轮的调节措施……即使我们还不能由此得出政府调节没有什么效果的论断，但至少可以得出这样两点结论：第一，在资源配置中，政府的调节难以达到预定的目标；第二，在资源配置中，政府常常处于被动的状态，也就是常常处于“事后补救”的境地。

再考虑政府调节效应的不平衡问题及其对资源配置的影响。政策效应的不平衡表明，当政府为了预定目标而采取影响资源配置的措施时，虽然主观上想影响微观经济单位的投入或产出行为，但这些调节措施并不是那么灵活的。价格刚性、工资刚性、就业刚性、福利刚性等等的存在，使得政府只能达到或接近某一方面的调节目的，而难以达到另一方面的调节目的。比如说，即使政府花费较大的努力，要想把价格降下来，把工资降下来，把就业人数减少，或把福利支出减少，都不易做到。换言之，如果说在某种情况下，惟有把价格、工资、就业率、福利支出在国民收入或财政支出中的比例降低才能实现资源的比较合理的配置，那么政府的力量实际是有限的。再说，正如前面已经分析的，由于企业作为投资主体和居民作为储蓄主体各有不同的动机，而且居民的储蓄动机要比企业的投资动机复杂，因此政府的调节措施在影响投资方面所取得的效果要比影响储蓄方面所取得的效果明显。这意味着，如果说在某种情况下，惟有把储蓄转化为投资或者惟有使储蓄少转化为投资才能实现资源的比较合理的配置的话，那么政府的力量实际上也受到了限制。

最后，应考虑政策效力递减对于社会资源配置的影响。这种影响也许更能显著地反映出政府调节的局限性。要知道，在市场中，投入和产出的主体主要是各个微观经济单位，它们之所以采取这种资源组合方式而不采取另一种资源组合方式，是同预期利益的多少联系在一起的。政府的调节无非是想通过财政、金融、价格、汇率等手段来改变微观经济单位的预期利益，从而改变微观经济单位原定的资源组合方式，使它们选择符合政府预定目标的资源组合方式。政府的这种意图究竟能否达到，不依政府的愿望为转移，而要取决于下述三点：

第一，政府的调节措施是否足够有力？是否能够改变微观经济单位

的资源组合的决策？

从政策效力递减的角度来看，对这一点不得不有所怀疑。政府的调节不一定有足以改变微观经济单位资源组合决策的力量。何况，即使政策初始实施时有这种力量，但随着时间的推移，政策效力递减了，政府改变微观经济单位资源组合决策的力量也就减弱了。

第二，微观经济单位在衡量自己的利益与损失后，会不会接受政府的调节而改变原来的资源组合决策？

虽然政府的调节能够给微观经济单位带来一定的好处，但如果微观经济单位按照原定的资源组合来投入和产出却能得到更多的好处；或者，虽然不接受政府的调节会使微观经济单位受到一定的损失，但如果微观经济单位放弃原定的资源组合方式所受到的损失更大，那么在這些场合，微观经济单位很可能不会受政府调节的影响而改变资源组合的原有决策。在政策效力递减的条件下，微观经济单位仍会坚持原来的资源组合方式。这正是政策效力的局限性的表现。

第三，微观经济单位是否采取“反对策”或预防性措施？

如果把微观经济单位对于政府的某些调节措施所采取的“反对策”考虑在内，或者把微观经济单位通过对政府行为的预测而采取的预防性措施考虑在内，那么在资源配置方面，要想让微观经济单位按照政府所预定的目标进行投入和产出，并不是一件容易的事情。

以上三点，从总的方面来看，由于政府行为非理想化的存在，对资源配置的政府调节即使可以起到一定的作用，但仍然会受到种种限制，使政府不容易达到预定的资源配置目标。

3.3 THE APPROPRIATENESS AND OPTIMIZATION OF GOVERNMENT BEHAVIOR DURING RESOURCE ALLOCATION

3.3.1 Government's Dilemma in Regulating Resource Allocation Under Type II Disequilibrium Condition

All discussions above on nonidealized government behavior are not based on type II disequilibrium condition. In other words, the issues of lagging, unbalanced, and decreasing policy effect are independent of whether or not enterprises are able to make their own decisions and responsible for their own profits or losses. We may say that even if enterprises are no longer affiliated with administrative institutions and have become microeconomic units that are able to make decisions on production and operation in accordance with their own economic interests, the effect of government policies will still be lagging, disparate, and diminishing. The lag, disparity, and decrease of policy effect are the inherent limitations of government behavior. Even after the market is fully developed and price signals fully function, the limitation of government behavior will continue to exist. The reason why nonidealized government behavior is prevalent is because it does not disappear after enterprises are fully motivated and the market is fully developed.

Having said that, how effective are government regulatory measures under type II disequilibrium condition where enterprises are not fully motivated and the market is not fully developed? Can we conclude that nonidealized government behavior is no different with or without motivated enterprises and a fully developed market? We are certain that such a conclusion cannot be drawn. Rather, the effect of government regulatory measures will change gradually, which will

lead to more inefficient resource allocation. Let us analyze this issue from the following two aspects:

First, while the market has not been fully developed and information is not complete or timely, prices can still function to flexibly adjust supply and demand.

Under this circumstance, the lag, imbalance, and decrease of policy effect are even more obvious. This is because a policy itself is probably stipulated on the basis of an underdeveloped market and incomplete and untimely information. In addition, during the execution of the policy, the government is unlikely to collect sufficient information on the result of the policy due to the underdeveloped market and incomplete and untimely information. As a result, the gap between the predetermined goals set by the government and the actual policy results will likely get larger. On the other hand, as microeconomic units adopt counter policies based on their own expectations of government behavior, which is also based on an underdeveloped market and incomplete and untimely information, their expectations and counter policies may be excessive, even likely to bring more abnormal interference to government behavior. This will cause the actual policy results to further deviate from the predetermined goals set by the government.

Second, enterprises are not fully motivated and thus unable to pursue their economic interests as independent goods producers.

Compared with the situations of the first aspect, the interference to government regulation by unmotivated enterprises is more severe. The reason is very clear: When the government detects ineffective resource allocation in the economy, it will propose and execute appropriate measures to adjust resource allocation, believing that the measures will motivate microeconomic units to act according to their own economic interests and adopt new forms of resource combination that are consistent with the intention of the government's regulatory measures. However, that belief is contingent upon whether enterprises are fully motivated or whether enterprises are able to pursue their

economic interests as independent goods producers. If this condition is not met, the issue is no longer only lagging or unbalanced policy effect, nor decreasing policy effect, but more of policy ineffectiveness or policy failure.

As far as precautionary measures or counter policies adopted by enterprises are concerned, they should follow certain paths or abide by certain rules as long as enterprises are independent goods producers following economic principles. In other words, enterprises are rational entities following normal rules. Therefore, even if government regulatory measures cannot easily attain the planned results, resource allocation in the economy, in spite of deviation from the government's intention, will still follow certain rules, i.e., the quantity of each entity's marginal benefit, because enterprises pursue resource combination in their own economic interests. If the condition that enterprises follow economic principles is not real or possible, coupled with nonidealized government behavior, resource allocation in society will be in chaos. It will ignore the marginal benefit for society, nor follow the rule of marginal benefit for each entity. We can conclude that this case is the most ineffective resource allocation for an economy. It is very likely to see this scenario under type II disequilibrium condition.

Based on the analysis, we can further understand that resource allocation under type II disequilibrium condition is the worst case among all possible scenarios. That is, enterprises act irrationally and resource allocation is getting much more ineffective.

3.3.2 The Appropriateness of Government Behavior During Resource Allocation

To study the appropriateness of government behavior during resource allocation is to find optimal government behavior during resource allocation. Appropriateness is a prerequisite for optimization. This is a point that must be stressed in our research on government regulation.

The appropriateness of government behavior during resource allocation means that the government should not try to do everything and should not do those things that should be done by the market and that the market is known to be good at. This point is consistent with the analogy of the market as a large mixer for resource combination and the government is the administrator of the mixer. Just as the administrator of a mixer who is unable to replace the mixer itself, the government cannot replace the market. This explains the appropriateness of government behavior.

From the government perspective, an important issue is whether the government is able to understand its mandatory and potential roles during resource allocation. The government has a mandatory role during resource allocation because microeconomic units, due to various limitations of market regulation, are only concerned about their own marginal benefits, not the marginal benefit for society. The potential role of the government during resource allocation means that the government should be down to earth, regulate the economy according to realistic conditions, and refrain from setting excessively high expectations for regulatory measures, because of nonidealized government behavior as well as lagging, unbalanced, and diminishing policy effect. That the government has to understand its roles is the prerequisite for the appropriateness of government regulation. Otherwise, the government is not only unable to suitably arrange its regulation activities, but may even go overboard. That is, the government undertakes a task that should never or can never be done by the government.

If we analyze the issue from the perspective of type II disequilibrium condition, we will get a better understanding. Type II disequilibrium has two features. One, the market is not fully developed. Two, enterprises are not independent goods producers. Given the first feature, i.e., an underdeveloped market, together with incomplete and untimely information, if government regulation is inappropriate or excessive, how much reliable information can the

government rely on to regulate the economy? This means that government behavior must be appropriate in an economic environment in which the market is underdeveloped and information is incomplete and untimely, and the government should not try to do anything that should never or can never be done by the government.

Another feature of type II disequilibrium is that enterprises are not independent goods producers. It appears that the government should do much more as a direct investor and direct producer. But the critical issue in this case is that the relationship between government and enterprise has been reversed. We should first ask the question why enterprises are not independent goods producers. Then we should ask how large of an impact excessive government regulation of resource combination can have on increasing the effectiveness of resource combination under the assumption that enterprises are not independent goods producers.

The above two questions can be answered as follows:

As an enterprise, it should become an independent goods producer and should be responsible for its own operation as well as its profits and losses. If so far enterprises have still been unable to act as independent goods producers and still been distorted as affiliates of administrative agencies, it is not enterprises themselves but the economic system that is responsible for the issue. The reform of the economic system has not been deep enough to change enterprises' affiliation with administrative agencies. In this case, if the government wants to use excessive regulation of resource combination to make up for the deficiency of enterprise motivation, it will be impossible to fundamentally resolve the issue of ineffective resource combination.

Furthermore, as enterprises have not been able to make their own decisions and been held responsible for their own profits and losses, they do not follow the principle of self-interest in determining profitable resource combination. In that case, even if governments carry out excessive regulation of resource allocation, it will possibly further lower enterprise motivation. This will not do any good to

enhancing the effectiveness of resource allocation in society.

Therefore, under the circumstance that enterprises are not independent goods producers, if the goal of government regulation is to promote effective resource allocation in society, the first thing that the government needs to do is to allow enterprises to become independent goods producers who can make their own decisions and are liable for their own profits and losses, rather than excessively regulate resource allocation. Otherwise, the situation of ineffective resource allocation will get worse.

3.3.3 Setting a Security Line and Reserving the Measures of Last Resort

The government cannot ignore two issues during resource allocation or economic regulation, regardless of whether or not the economy is in disequilibrium or whether the disequilibrium is type I or type II as defined earlier. One is to set a security line for the economy and the other is to reserve the economic measures of last resort and get ready to use them when necessary. These two issues fully reveal the government's position and functions in the economy.

The security line for the economy hereby mentioned refers to the boundary, which, once crossed, will prompt the government to take regulatory measures in accordance with its predetermined goals and development plans in order to ensure economic stability and growth and social harmony. This means that if the economy is operating within the boundary, or the security line, the government will not carry out economic regulation, despite uncertainties in the economy, weaknesses exposed during economic growth, or some issues related to social harmony. The market will handle these economic issues without government intervention. If instead the operation of the economy crosses the boundary, or the security line, the government will assume the responsibility for regulating the economy so that it can operate within the security line.

The setting of the security line for the economy by the

government actually allows the government to take a proactive position, i.e., it reserves the right to regulate the economy. The government will decide in accordance with the actual situations at different time on whether or not to use a regulatory measure, what kind of regulatory measures to adopt, the strength of these regulatory measures, or when to terminate the regulatory measures that have been in place. In other words, the government will not regulate the economy unless necessary and will decide according to specific conditions on whether or not to regulate the economy if regulation is optional. The government will regulate the economy only if it is necessary. These situations reflect the appropriateness of government behavior and the flexibility of government regulation.

The security line itself is not only variable but also flexible with certain upper and lower bounds. When the government decomposes its goal into a few specific parameters, the security line it draws is actually decomposed into specific security lines for each parameter. For example, there is an upper bound and a lower bound for economic parameters such as unemployment rate, inflation rate, the ratio of government deficit to national income, and the ratio of foreign debt to GDP. The government may or may not carry out regulation if parameters are within the upper and lower bounds of the security line. The specific upper and lower bounds for each specific security line will be determined according to the actual situation at certain point of time.

The government reserves the economic measures of last resort and is ready to use those measures whenever necessary, which means that the government can use all irregular measures available, together with regular measures, such as fiscal regulation, monetary regulation, price regulation, and exchange rate regulation, to regulate the economy. Such irregular measures include price and wage control, foreign trade and foreign exchange control, emergency taxes or special taxes, commodity rationing, and certain special controls on economic activities. Other irregular measures include freezing price, income, or

foreign exchange. That the government reserves these irregular measures and is ready to use them whenever necessary does not mean it can use them without thorough consideration. It is necessary to know that these measures of last resort demonstrate the government's determination and power to regulate the economy, revealing that the government will not allow the economy to deteriorate while standing by. They are a powerful dose of medication. Yet they come with obvious side effects. Price and wage control and foreign trade and foreign exchange control are harmful to the normal operation of the economy and are detrimental to the market mechanism, especially freezing price, income, and foreign exchange, which may lead to social turmoil, damaging effective resource allocation. Therefore, using these regulatory measures carelessly will undoubtedly bring damage to the economy. Nevertheless, the government still needs to reserve these measures of last resort and gets ready to use them when necessary. This is based on the consideration that between two necessary evils, the lesser will be chosen.

Let us assume that an economy is in dire situation, close to collapse or chaos. Regular economic regulatory measures have basically proven relatively ineffective or no longer effective. At this critical moment, the government can choose to do one of the following: allowing the economic chaos to continue and the economy to suffer more severe damage or allowing the market mechanism to sustain some damage by enforcing irregular regulatory measures to regulate the economy so that the economy will benefit in the long run. The government must choose the latter instead of the former. In addition, economic problems usually come with social and political problems. High unemployment rate, hyperinflation, and severe shortages of living necessities are not only economic problems but also social and political problems. The government also reserves the measures of last resort for the benefit of society, which is consistent with the target of social and political stabilization.

Setting the security line and reserving the measures of last resort

are consistent with the appropriateness of government behavior during resource allocation that we discussed earlier. To the government, the setting of the security line is comparable to the setting of a road sign. When an economy is operating on its normal track, the government does not have to replace the market, nor can it replace the market. As for the measures of last resort, it is an issue of getting ready without pulling the trigger from the government's perspective. The government has those measures of last resort, but refrains from using them under normal situations. This demonstrates that government regulation is a kind of high-level regulation, one that cannot be replaced by market regulation. Getting ready without pulling the trigger reveals that the government always has control of economic regulation.

3.3.4 The Seriousness of the Law and Government Behavior

Economic activities must follow the law. This is the prerequisite of orderly economic activities. The government is the lawmaker and enforcer. No economic activity can violate the law or cross the boundaries set by law. If we can use the analogy that all economic activities, including the action of the government itself and the economic activities of businesses and individuals, must occur inside a large cage, then the large cage will be the boundary of the law. Inside the boundary of the law, all economic activities are allowed. Any economic activity that violates the law shall be prohibited and prosecuted afterward. Everyone is equal before the law and no one is above the law. This ensures that orderly economic activities can be conducted.

Law is serious. A law that is not followed is equivalent to having no law or even worse than that. If the authority of law vanishes, the authority of government as the law enforcer will also vanish. Therefore, once a law is passed, the government must follow it by all means and defend the seriousness of the law. However, it should be noted that protecting the seriousness of the law is not an issue of the

same level as the appropriateness of government behavior during resource allocation. Protecting the seriousness of the law is the prerequisite for government regulation behavior during resource allocation. The appropriateness of government behavior during resource allocation illustrates government behavior. The appropriateness of government behavior during resource allocation means that the government does not have to do whatever market regulation is capable of and instead should do whatever the market is incapable of. Regardless of whether market regulation does everything it is capable of, or the government does everything the market is incapable of, the law should be followed. If government behavior during resource allocation is not to defend the seriousness of the law, the situation of ineffective resource allocation in society will get worse instead of better.

We have to clarify another issue. The government has the responsibility to maintain order in the economy and the marketplace. In order to do this, the government has to use any necessary measure, including legal measures. Legal measures and economic measures coexist. If under certain circumstance the government uses legal measures to regulate the economy and maintain economic order as needed, is this government behavior appropriate? As a matter of fact, there are two different scenarios.

In the first scenario, the government passes a new law and follows it to operate and regulate the economy in order to maintain economic order and promote economic growth. This scenario is not contradictory to the appropriateness of government regulation behavior. The passing of the new law is to standardize the behavior of economic entities, including government, enterprises, and individuals so that either economic regulation or no regulation at all by the government will follow the law. If the new law allows the government to adopt certain measures to regulate the economy, government regulation behavior has gained legal support and is appropriate.

In the second scenario, as situations change, the old law is no

longer applicable and the government either revises it or abolishes it. This indicates that the economic activities of government, enterprises, and individuals are no longer able to follow the old law. Instead, they must follow the revised law or some other laws. That government regulation must follow the law will remain unchanged, which is not contradictory to the appropriateness of government regulation behavior.

The appropriateness of government regulation behavior can be very confusing. This is because people tend to mix government regulation behavior with the legality of the activities by economic entities, i.e., government, enterprises, and individuals. It is necessary to stress once again that protecting the seriousness of the law and how the government regulates the economy are two different issues and cannot be mixed. The government of a nation that has the law and abides by the law is one that can regulate the economy appropriately. A government that mandatorily regulates the economy in any area at any time can also be one without a sound legal system or even totally without the law or without following the law.

3.3.5 The Optimization of Government Behavior During Resource Allocation

The optimization of government behavior during resource allocation means that the government chooses the optimal timing, the optimal regulatory measures or the combination of regulatory measures, and the optimal regulation extensity in accordance with actual situations in order to achieve relatively good results. Just as the government can choose its regulation behavior only if the seriousness of the law is protected, the government can choose its optimal behavior only by following the principle of appropriate government behavior. In other words, the optimization of government behavior is impossible without the appropriateness of government behavior during resource allocation.

Earlier, we have discussed that regardless of whether an economy

is under the condition of type II disequilibrium, government regulation behavior has to be appropriate during resource allocation. This is very clear. Whether government regulation behavior can be optimized during resource allocation is dependent upon the following four conditions:

Firstly, as we discussed previously, it depends on whether government regulation behavior is appropriate. If government regulation violates the principle of appropriate government behavior, either the government is seen undertaking many tasks that should not be done by the government or even that beyond its capability, or the government always tries to replace the market, the optimization of government behavior will be out of the question. Despite its best effort to optimize regulation behavior, the government will be unable to accomplish that.

Secondly, the optimization of government regulation behavior during resource allocation must follow the law and act under the premise of using the law as the criteria. This point has been addressed previously. We can conclude that any government regulation that crosses the boundary set by the law cannot be optimal. It is the same with any government behavior that does not seriously punish business and individual economic activities that cross the boundary set by the law.

Thirdly, the optimization of government regulation behavior should be based on the principle of target multiplicity, in other words, the principle of meeting various targets, because the target resource allocation varies during different periods of time. If government regulatory measures only benefit a single target while unable to balance the pros and cons of various other targets, the optimization of government regulation is not accomplished.

Fourthly, due to nonidealized government behavior, the optimization of government regulation behavior should be based on the principle of limiting the negative roles that the market plays in resource allocation and promoting the positive roles that the market

plays in resource allocation. The reason is as follows: If the measures that the government takes during resource allocation influence direct input and direct output, they will reveal more nonidealized government behavior due to lagging, unbalanced, and decreasing policy effect. If regulation indirectly impacts input and output, which means the government limits some negative roles that the market plays in resource allocation and promotes some positive roles that the market plays in resource allocation, government regulatory measures, if planned systematically, will allow the government to accomplish to the largest extent possible the predetermined regulation targets during resource allocation, in spite of lagging, unbalanced, and decreasing policy effect. In summary, if government regulation behavior needs to be optimized, the government should execute regulation by means of its impact on the market. This is more consistent with the principle of optimizing government regulation behavior compared with government regulation by means of direct input and direct output. Of course, it does not mean that government direct input and direct output is unnecessary under certain circumstances or contradictory to the principle of optimizing government behavior during resource allocation in any scenario. Under certain circumstances, it is still necessary for the government to use direct input and direct output measures in order to achieve predetermined regulation results. We can only say that if policy goals can be achieved either by means of the direct input and direct output from the government or by means of government's impact on the market, the latter is more consistent with the principle of optimizing government regulation behavior.

叁 资源配置过程中政府行为的适度与优化

一、第二类非均衡状态中政府调节资源配置的困难

以上在讨论政府行为的非理想化时，不是根据第二类非均衡状态的特点来进行分析的。也就是说，当问题涉及政策效应的滞后性、政策效应的不平衡性，以及政策效力的递减时，都没有考虑企业是否自主经营、自负盈亏。可以认为，即使企业已经摆脱了行政机构附属物的地位，成为遵循自身利益而生产和经营的微观经济单位，政府调节措施的效应仍然是滞后的和不平衡的，政府的政策效力仍然是递减的。这种滞后、不平衡和递减来自政府行为本身的局限性。市场趋于完善和价格信号开始发挥正常作用之后，政府行为本身的局限性同样会存在。政府行为的非理想化之所以具有普遍意义，就因为它并不因企业的活力变化和市场完善程度的变化而消失。

那么，在企业既没有充分活力，市场也不完善的条件下，即经济处于第二类非均衡的条件下，政府的调节措施的效应又将如何呢？能不能认为，政府行为的非理想化与企业有充分活力或市场完善时政府行为的非理想化没有差别呢？可以肯定地说，我们是得不出这样的结论的。政府调节措施的效应会朝着更不利于资源合理配置的方向变化。让我们从以下两个方面来进行分析：

第一，市场的不完善和信息的不完备、不及时，从而价格是能起到灵活地调节供求的作用。

在这种情况下，政策效应的滞后、不平衡、特别是政策效力的递减将更加明显。这是因为，政策的制定本身可能是以市场不完善条件下不完备的和不及时的信息为基础的，同时，由于政策执行过程中，政府也会因市场不完善和信息不完备、不及时而得不到足以判断政策实行效果的信息，这样，政策的预定目标与政策的实际效果之间的差距可能扩大。另一方面，从微观经济单位对政府行为的预测和微观经济单位所采取的“反对策”来看，由于微观经济单位的这种预测和“反对策”的制定也是建立在市场不完善条件下信息不完备、不及时的基础之上的，所以这种预测和“反对策”很可能过度，即很可能对政府的行为有更大的、反常

的干扰，使政策的预定目标与政策的实际效果之间有更大的差距。

第二，企业缺乏充分活力，从而企业并不能按照独立的商品生产者的利益原则行事。

与上述情况所造成的对政府调节行为的干扰相比，由于企业缺乏充分活力而造成的干扰可能要更严重一些。道理是很清楚的：当政府察觉到社会资源配置不合理时，政府便制定并执行相应的调节资源配置的措施，政府认为这些调节措施之所以会有成效，是因为微观经济单位就此考虑到自己的利益的变动，从而会采取新的资源组合方式，同政府的调节措施的意图相符合。然而，这一切都依存于企业具有充分的活力，即企业能够按照独立的商品生产者的利益原则行事。如果不具备这一条件，那么就不仅仅是政策效应的滞后或不平衡的问题，也不仅仅是政策效力递减的问题，而很可能是政策无效和失效的问题了。

再以企业对政策行为的预测和所采取的预防性措施或“反对策”而论，假定企业是独立的商品生产者，能按照利益原则行事，那么不管怎样，企业的预防性措施或“反对策”总还是有章可循的，或遵循一定的规律而进行的。换言之，企业是有理性的，能按常规行事，因此，尽管政府的调节措施不易于达到预定的目标，但在企业按照自己的利益进行资源组合的条件下，社会的资源配置即使同政府的意图有某种差距，却仍然有一定的运动规律，即仍然根据个别边际收益的多少来进行。而在企业缺乏按利益原则行事的可能性和现实性的条件下，再加上政府行为的非理想化，社会的资源配置将会陷于混乱无序的状态：既不根据社会边际收益来进行，又不根据个别边际收益来进行。这可以说是社会资源配置中最不合理的情况，但它在第二类非均衡状态中完全有可能出现。

从这里我们可以进一步认识到，第二类非均衡状态中的资源配置，是各种可能出现的资源配置中最糟糕的一种：企业不按常规行事，资源配置的不合理必然越来越突出。

二、资源配置过程中政府行为的适度

研究资源配置过程中政府行为的适度，是为了研究资源配置过程中政府行为的优化。适度是优化的前提，在关于政府调节的研究中，这是一个必须阐明的道理。

资源配置过程中政府行为的适度，主要是指政府不要包揽一切，不要去做本来应当由市场去做的、并且市场已经表明它能够做好的事情。

这正如前面在把市场比喻为资源组合的大型搅拌机所说的，政府以搅拌机的管理者的身份出现；正如真正的搅拌机管理者不能代替搅拌机一样，政府也不能代替市场。这就是政府行为的适度。

从政府的角度来看，重要的问题在于政府本身能不能认识到自己在资源配置中应该起的作用和可能起的作用。政府应该起的作用是指：由于市场调节存在着种种局限性，由于微观经济单位可能只从个别边际收益来考虑而忽视社会边际收益，因此政府在资源配置中应该起到应有的作用。政府可能起的作用是指：由于政府行为的非理想化，由于政策效应的滞后、不平衡以及政策效力的递减，因此政府不能把政府调节的期望值定得过高，而宁肯现实一些，从现实的条件出发来进行适度的调节。只要政府能够认识到这些，那么政府调节行为的适度便有了前提，否则，政府不仅不可能使自己的调节行为适度，反而有可能使之过度，即政府硬要去做本来不应该由政府做的事情，或者硬要去做政府力所不及的事情。

从第二类非均衡的情况来考虑，对这个问题会有更深刻的认识。第二类非均衡的两个特点是：第一，市场不完善；第二，企业不是独立的商品生产者。考虑到第一个特点，即市场不完善以及与此相联系的信息不完备、不及时，如果政府的调节不是适度的，而是过度的，试问政府的调节究竟有多少可靠的信息作为依据？这种过度的调节必定是不科学的调节。这就是说，在市场不完善的经济环境中，政府的行为一定要适度；在信息不完备、不及时条件下，政府绝不要去做自己不应该做的事和做不到的事。

第二类非均衡的另一个特点是企业不是独立的商品生产者。从表面上看，政府似乎应当作为直接投入者和直接产出者发挥更大的作用。但问题恰恰是：政府与企业的关系在这里被颠倒过来了。首先要问：为什么企业不是独立的商品生产者？其次要分析的是：假定企业不是独立的商品生产者，那么政府对资源配置调节的过度究竟能在促进资源合理配置方面起到多大的作用？

对这两个问题可以作出这样的答复：

既然是企业，那么它理所当然地应当成为独立的商品生产者，自主经营，自负盈亏。如果说企业至今还未能成为独立的商品生产者，依然被扭曲为行政机构的附属物，那么责任不在于企业本身，而在于经济体制，在于经济体制改革还未深化到改变企业附属于政府机构的地位的程

度。因此，如果政府在这种情况下，想依靠对资源配置调节的过度来弥补企业活力的不足，是不可能从根本上解决资源配置不合理问题的。

进一步说，假定企业至今仍然不是自主经营、自负盈亏的商品生产者，从而企业不是根据利益原则来选择有利的资源组合方式，那么即使政府实行了对资源配置的过度的调节，结果很可能使企业的活力继续削弱。这也极其不利于社会资源配置的合理化。

由此可见，在企业不是独立商品生产者的条件下，如果政府调节的目标是促进社会资源的配置趋向合理，那么政府首先需要做的事情，是设法让企业成为自主经营、自负盈亏的商品生产者，而不是对资源配置的过度调节，否则，资源配置的不合理状况将会加剧。

三、“警戒线”的设置和“最后手段”的备用

不管经济是否处于非均衡条件之下，也不管这种经济的非均衡是属于上述第一类还是属于上述第二类，政府在资源配置过程中或在经济调节过程中，有两件事是不能忽略的，一是在经济方面设置“警戒线”，二是在经济方面保留着“最后手段”并准备在必要时加以运用。这两件事充分表明了政府在经济中的地位和作用。

这里所说的经济方面的“警戒线”，是指政府根据预定的目标以及发展规划，从经济稳定、经济增长、社会协调的角度来考虑，制定必须采取干预措施的限界。这意味着，如果经济运行在这一限界（即“警戒线”）之内，即使经济中有某种不稳定的表现，经济增长过程中有某些不足之处，或社会协调方面存在着某些问题，政府仍然可以不干预经济，而让市场去处理经济中的上述问题。如果经济运行越过了这一限界（即“警戒线”），政府将有责任对经济进行调节，使经济运行回到“警戒线”之内。

政府在经济方面设置“警戒线”，实际上是使自己处于主动的地位，即政府掌握了调节经济的主动权。政府可以根据不同时期的具体情况，决定是否采取调节措施，采取什么样的调节措施，调节措施的强度如何，以及在何种情况下可以取消已经采取的调节措施。换言之，在政府不必进行调节时，政府不进行调节；在政府可调节可不调节时，视具体情况而决定是否调节；只有在政府非调节不可时才进行调节——这些都体现了政府行为的适度和政府调节的灵活性。

“警戒线”本身不仅是可变的，而且还可以有一定的弹性，即一定的

上下限。当政府把所要达到的目标分解为各个具体的指标时，政府所设置的“警戒线”也就分解为与各个具体指标相联系的“警戒线”。比如说，在失业率、物价上涨率、财政赤字占国民收入的比重、外债总额占国民生产总值的比重等方面，都可以有一定的上下限。在“警戒线”的上下限之间，属于政府可调节可不调节之列。与每一个具体指标相联系的“警戒线”的上下限，将根据当时的实际情况来制定。

这里所说的政府在经济方面保留着“最后手段”并准备在必要时加以运用，是指除了通常运用的财政调节、金融调节、价格调节、汇率调节等手段以外，政府在必要时还可以动员一切非常规的手段来干预经济生活。非常规的手段，包括价格和工资的管制措施、外贸和外汇的管理措施、紧急或特别的税收措施、商品的配给措施，以及对某些经济活动的特殊管制措施等等。非常规的手段还包括物价冻结、收入冻结、外汇冻结等。政府保留这些非常规的手段并准备在必要时运用，绝不意味着政府可以轻易地运用它们。要知道，这些“最后手段”的存在，表明了政府调节经济的决心和力量，表明了政府绝不会听任经济无休止地恶化下去。这是政府可以运用的一剂烈药。它的副作用是十分明显的。价格和工资的管制、外贸和外汇的管制等等，都是对经济正常运行有害的调节措施，是对市场机制的破坏。尤其是物价冻结、收入冻结、外汇冻结等，都会导致社会震荡，不利于资源配置的合理化。因此，轻易地运用这些调节手段，无疑会给经济带来损失。但即使如此，政府仍然需要保留这些“最后手段”，并准备在必要时运用它们，这是从“两害相比取其轻”的角度来考虑的。

假定经济已经到了相当严重的、濒临于解体或大动荡的关键时刻，常规的经济调节手段已经被证明效果不大或基本上不起什么作用了，在这种关键时刻，政府面临着如下选择：或者让经济的大动荡继续下去，听任经济遭受更加严重的损失，或者使市场机制的作用受到某种破坏，但为了整个经济的长远利益，政府运用非常规的调节手段来进行非常规的调节。政府必须选择后者而放弃前一种选择。再说，经济问题往往与社会问题、政治问题结合在一起。诸如失业率过大、物价上涨率过大、生活必需品的供给严重不足等等，都不仅仅是经济问题，它们同时是社会问题、政治问题。从社会安定和政局稳定的目标来看，政府保留这种“最后手段”也是符合社会利益的。

“警戒线”的设置和“最后手段”的备用，与前面提到的资源配置过程

中政府行为的适度是一致的。“警戒线”的设置对政府行为而言，相当于路标的设置。当经济在正常运行的轨道上前进时，政府不必去代替市场，政府也代替不了市场。至于“最后手段”，对政府而言，是一个“引而不发”的问题。政府拥有“最后手段”，但政府在一般情况下并不运用它们。这表明政府的调节是高层次的调节，是市场调节无法代替的一种调节。“引而不发”反映了经济调节的主动权始终掌握在政府的手中。

四、法律的严肃性和政府行为

经济活动必须以法为据，有法可循。这是使经济活动具有正常秩序的前提。政府是法律的制定者和维护者。任何经济活动都不能违背法律，越过法律规定的限界。因此，如果说经济活动（包括政府本身的行为、企业和个人的经济活动）有一个“大笼子”的话，那么这个“大笼子”就是法律规定的限界。在法律许可的范围内，一切经济活动都可以进行；一旦违背了法律，任何经济活动都应当被禁止，都应当被追究。在法律面前，一切交易人都是平等的，没有一个交易人是例外。这是开展正常的经济活动的保证。

法律是严肃的。有法而不循，等于无法，甚至还可能比未制定法律时更糟，因为法律的威信丧失了，作为执法者的政府的威信也丧失了。因此，一旦制定了法律，政府必须坚定不移地按照法律行事，维护法律的严肃性。但应该注意到，这与资源配置过程中政府行为的适度不是同一个层次上的问题。资源配置过程中政府的调节行为，是在维护法律的严肃性的前提下进行的。至于资源配置过程中政府行为的适度，则是对政府行为的概括，它是指在市场调节能够做到的范围内政府不必代劳，政府只做市场所做不到的事情。无论是市场调节做它能够做到的事情，还是政府做市场所做不到的事情，都应当遵循法律。政府在资源配置中的行为如果不以维护法律的严肃性为前提，那就只会使社会资源配置状况变得更不合理，而不可能使这种状况好转。

在这里需要说明的另一个问题是：政府有责任维持经济中的秩序、市场中的秩序，为此，政府采取的各种手段中也包括了法律的手段。法律的手段与经济的手段是并存的。如果政府在必要的场合采取了法律手段来调节经济和维持经济中的秩序，那么这是不是政府行为的适度呢？实际上，这里包括了两种不同的情况：

第一种情况，出于维持经济中的秩序和促进经济发展的需要，政府

制定了新的法律，并遵循这种法律来管理经济，调节经济。这种情况与政府调节行为的适度是不矛盾的。新的法律的制定是使包括政府、企业和个人都在内的各个经济主体的行为规范化，无论政府进行经济调节还是不进行经济调节，都应当在法律的范围之内，而不应当越过法律规定的界限。如果说新的法律授权政府采取某种措施来管理，那么这表明政府调节行为具有某种法律依据，表明政府调节行为依然是适度的。

第二种情况，由于形势的变化，原来的法律不适用了，于是政府修改了它，或者废除了它。这反映政府、企业、个人的经济活动不能根据原来的法律来进行，而必须按照修改后的或其他的法律来进行。“政府的调节行为以法律为依据”，这一点并没有变化，这也与政府调节行为的适度不矛盾。

在政府调节行为适度问题上容易被混淆的原因在于：把政府调节措施本身同政府、企业、个人作为经济主体的活动的法律依据二者混为一谈了。需要再次强调：维护法律的严肃性与政府怎样调节经济是两个不同层次的问题。不应当把二者混淆在一起。一个有法可依并依法办事的国家的政府可以是适度调节经济的政府；一个在各个领域内和在各个时期内对经济进行硬性调节的国家的政府，也可能是一个法制极不健全，甚至根本没有法律或有法也不依的政府。

五、资源配置过程中政府行为的优化

资源配置过程中政府行为的优化，是指政府在进行具体调节时，如何选择适当的时机，选择适当的调节措施及其组合，选择适当的调节程度，以便取得较好的结果。正如只有在维护法律严肃性的前提下才能对政府的调节行为作出决策一样，也只有在政府行为适度这一思想指导下，才能作出政府行为优化的选择。换言之，没有政府行为的适度，那么在资源配置过程中，政府行为的优化将是不可能的。

前面已经说明，不管经济是否处于第二类非均衡状态中，在资源配置方面，政府的调节行为都需要适度。这是没有疑义的。至于能不能在资源配置过程中实现政府调节行为的优化，则取决于以下四个条件：

第一，如上所述，以政府调节行为是否适度为条件。如果政府的调节违背了政府行为适度的原则，政府包揽了许多本来不该政府来完成的事情，甚至硬要做一些政府力所不及的事情，或政府总想取市场而代之，这样就谈不到政府调节行为的优化。即使政府力求使调节行为优

化，那也是做不到的。

第二，资源配置过程中政府调节行为的优化以遵守法律，并以法律为准绳作为前提。关于这一点，前面已经谈过了。可以断言，任何以超越法律规定的限界而进行的政府调节都不可能是优化的，对于超越法律规定限界的企业和个人的经济活动不予以严肃处理政府行为，同样不可能是优化的。

第三，考虑到每个时期政府通过资源配置达到的目标的多样性，因此，政府调节行为的优化应当以目标的多样性作为标准，也就是应当以实现多种目标作为标准。假定政府的调节措施只有利于实现单一目标而又无法使各个目标的得与失互补，那就不符合政府调节的优化的要求。

第四，考虑到政府行为的非理想化，政府在资源配置过程中调节行为的优化应当以限制市场在资源配置中的某些消极作用和促进市场在资源配置中的某些积极作用作为原则。这是因为，政府在调节资源配置过程中所采取的措施，如果是直接投入和直接产出的措施，那么考虑到政策效应的滞后、不平衡和政策效力的递减，它们的非理想化程度会更大一些；如果是以间接调节的方式出现，即以限制市场调节的某些消极作用和促进市场调节的某些积极作用的方式出现，那么即使政策效应是滞后的、不平衡的，并且政策效力是递减的，但只要政策措施配套得当，仍然可以使政府在资源配置过程中的调节作用尽可能符合预定的要求。这就是说，要使政府调节行为优化，政府的调节应当通过政府对市场的影响而表现出来。这要比政府的直接投入和直接产出更符合使政府调节行为优化的原则。当然，这并不是排除在某些场合政府直接投入和直接产出的必要性，也不是说政府直接投入和直接产出在任何情况下都是与资源配置过程中政府调节行为优化的原则相抵触的。在某些情况下，为了使政府调节达到预定的效果，直接投入和直接产出仍然不可缺少。这只是说，在政府直接投入和直接产出同政府对市场的影响二者能够实现相同的目标的场合，后者更符合于政府调节行为优化的原则。

Chapter 4 The Mechanism of the Operation of the Economy

第四章 经济运行的机制

4.1 DUAL MECHANISM OF THE OPERATION OF THE ECONOMY

4.1.1 The Coverage of Government Regulation in the Operation of the Economy

We have clearly known from our discussions in Chaps. 2 and 3 that the operation of the socialist economy does not follow a sole mechanism, i.e., the market mechanism or the government regulation mechanism. The dual mechanism of the operation of the socialist economy, which refers to the coexistence of the market mechanism and the government regulation mechanism, has the following meanings:

First of all, the coexistence of the dual mechanism does not mean the economy can be separated into two groups, with one mechanism only good for one group and the other mechanism only good for the other group.

Secondly, the coexistence of the dual mechanism does not mean two mechanisms commingle with each other, with one mechanism primarily working in one area while infiltrating the other area or vice versa.

Thirdly, the coexistence of the dual mechanism does not mean two mechanisms are parallel, being equally important for the operation of the economy.

These clarifications are necessary. The understanding of the dual mechanism in this book focuses on the complementary relationship

between these two mechanisms, of which market regulation works at first, followed by government regulation, which works at a higher level. The analyses on the functions of market regulation and government regulation in resource allocation in Chaps. 2 and 3 in this book have described the complementary relationship between these two mechanisms. It is now necessary for us to draw on prior discussions to further understand the dual mechanism of the operation of the economy.

We have often heard people mention market regulation and government regulation work together on the economy. More specifically, market regulation covers the whole economy and so does government regulation. Both forms of regulation work on the economy simultaneously. This understanding demonstrates some progress when compared with the Group Theory, the Penetration Theory, and the Parallelization Theory. These viewpoints can be summarized as the Coverage Theory. But this theory still has one shortfall, that is, it does not clearly describe the definition of the coverage.

We should note that the government regulation hereby mentioned refers to the regulation of resource allocation by the government as well as the regulation of the operation of the economy by the government. If government regulation is applicable to the law promulgated by government, it will undoubtedly cover the whole society, i.e., any economic activity in society cannot violate the law. If government regulation is applicable to the social and economic development targets set by the government, it will also cover the whole society, as every entity needs to work hard to realize those development targets. If government regulation is applicable to direct input and output, however, it is obvious that it will not be able to cover the whole society. Now the question is: If government regulation refers to various measures that impact market regulation, can we simply say it does or does not cover the whole society? Before answering this question, we have to do some detailed analysis.

First of all, in the socialist commodity economy, the impact of government regulation on resource allocation will certainly reflect the functions of government regulation in various areas in the economy by means of changing the balance of demand and supply in the marketplace. In this sense, government regulation covers the whole society. However, we cannot ignore the fact that the coverage of government regulation in society is a second layer of coverage. That is, this layer of coverage is on top of market regulation. This understanding is consistent with the argument that government regulation is to regulate the economy for the second time. First comes market regulation, which covers the economy for the first time. Government regulation comes next and covers the economy for the second time. Just as government regulation cannot function without the market, it is hard to understand that the coverage of government regulation over the economy for the second time can function without the coverage of market regulation in the economy.

In summary, the Coverage Theory is an opinion on the relationship between market regulation and government regulation. It is different from the Group Theory, the Penetration Theory, or the Parallelization Theory. Although the Coverage Theory is better than the Group Theory, the Penetration Theory, and the Parallelization Theory, we can correctly understand the dual mechanism of the operation of the economy only with the acknowledgement that the coverage that the Coverage Theory refers to is one for the second time.

4.1.2 The Relationship Between the Two Mechanisms

To further understand the dual mechanism of the operation of the economy, we will have to understand the complementary relationship between market regulation and government regulation. As discussed before, the imbalance between aggregate demand and aggregate supply under economic disequilibrium conditions is common, as there are resource supply constraints or resource demand constraints. From

the structural perspective, resource supply constraints and resource demand constraints can happen simultaneously. Therefore, the function of market self-regulation during resource allocation will be restricted in that case. Here arises an important question under disequilibrium conditions: how to use limited resources to satisfy the needs of society and how to adjust limited demand to meet supply in the economy. This is the reason why the issue of rationing equilibrium discussed in the disequilibrium theory is applicable in a relatively wide range of areas. Because either using limited supply of resources to meet demand or adjusting limited demand to meet supply is accomplished through quantitative rationing.

Under the market mechanism in which resource supply constraints exist, the way to allocate limited resources is to follow either the priority principle or the monopoly principle. The priority principle hereby discussed refers to the principle of business transactions that are conducted on a first-come-first-served basis until all limited resources are sold out. The monopoly principle hereby discussed refers to the case in which the suppliers of limited resources are able to sell their commodities at prices higher than equilibrium prices as they enjoy the monopolistic position. Obviously, the monopoly principle is applicable to business transactions under imperfect competition. The priority principle is also applicable to business transactions under imperfect competition. This is because commodity supplies are limited under the circumstance of resource supply constraints. If transactions are done based on the principle of first-come, first-served, information on the timing and location for the sale of certain commodities will be critical. Whoever has access to the information will be the first to come and be served. Those who have no access to the information will actually be excluded from transactions. Therefore, both the priority principle and monopoly principle are transaction principles for imperfect competition. If there were any difference between them, the transactions conducted in accordance with the monopoly principle would be open transactions

under imperfect competition, while those conducted in accordance with the priority principle would retain the form of perfect competition but actually take place under imperfect competition.

Under the market mechanism in which demand constraints exist, the priority principle and monopoly principle are also applicable to allocating limited market or limited demand. The priority principle refers to one that business conduct transactions based on first-come, first-served. The monopoly principle refers to one used by market leaders, who, once become a market monopoly, will squeeze out other competitors to protect their own market and economic interests. Apparently, the monopoly principle is one for transactions under imperfect competition. The priority principle is also related to the information on limited market or limited demand. Whoever has such information will be able to come first and sell first. Whoever has no access to such information will actually be shut out of transactions. By the same token, business transactions that follow the priority principle are transactions under imperfect competition, yet done in the name of perfect competition. Business transactions that follow the monopoly principle, however, are openly known as transactions under imperfect competition.

Therefore, as long as the economy is under disequilibrium conditions, the rationing equilibrium that is realized following either the priority principle or the monopoly principle is always linked to transactions under imperfect competition. If by any chance government regulation is needed, it will apply any one of the following three principles to realize rationing equilibrium and all business transactions that follow these principles will be carried out under imperfect competition. These principles are the equalization principle (i.e., allocating limited commodity supplies equally to each buyer or limited demand equally to each supplier), the target principle (i.e., allocating limited commodity supplies or limited demand in an order of target priority set in advance by the government), and history principle (i.e., allocating limited commodity supplies or limited

demand by ration in accordance with historical records). The complementary relationship between government regulation and market regulation can be considered the complementary relationship between transactions under various forms of imperfect competition, rather than a supplementary relationship between various forms of imperfect competition or a relationship in which perfect competition supplements imperfect competition.

It is meaningful to describe such complementary nature or feature. We have to know that there is a popular belief as follows: Market regulation means that market transactions are conducted under perfect competition and the market will self-regulate until equilibrium is reached, whereas government regulation means that market transactions are conducted under imperfect competition and government interference will destroy perfect competition in the marketplace. Due to various defects of perfect competition, government regulation is justified and indispensable, even though it destroys perfect competition in the marketplace. This belief can lead to the following conclusion: Under a circumstance where market regulation and government regulation coexist, that market regulation and government regulation complement each other becomes perfect competition supplementing imperfect competition or imperfect competition supplementing perfect competition. This is not correct. The reasons are as follows:

First of all, market regulation is not necessarily the market regulation under perfect competition, and market regulation under imperfect competition is also a form of market regulation. Equating market regulation to perfect competition is not only a biased understanding of market regulation but also an incorrect understanding of perfect competition, because perfect competition is never universal as one form of market regulation. The theoretical meaning of perfect competition far exceeds its practical meaning.

Secondly, perfect competition only exists under equilibrium conditions, where neither excess demand nor excess supply exists and

all transactions are concluded at the equilibrium price. In reality, however, disequilibrium is common, and so are resource supply constraints and resource demand constraints. As a result, there is a need for quantitative rationing, and equilibrium can be realized by using quotas. Under this circumstance, market regulation is executed under imperfect competition and so are transactions in the marketplace.

The above two points can lead to the following point:

Thirdly, if the economy is in equilibrium or under perfect competition, it will not be necessary to carry out government regulation, because the market has arranged everything perfectly. Since there is no need for government regulation, the so-called dual mechanism will be unnecessary, let alone two mechanisms complementing each other. If the economy is in disequilibrium, it is necessary to use quantitative quotas to reach ex post equilibrium. And market regulation is conducted under imperfect competition. If government regulation is needed in this case, it must also be executed under imperfect competition. Therefore, that market regulation and government regulation complement each other indicates various transactions under imperfect competition are complementary. The purpose of such complementary relationship is to better regulate quantitative rationing to achieve equilibrium. As we pointed out earlier, that quota allocation under market regulation in the circumstance of resource supply constraints and demand constraints has to be executed following either the priority principle or the monopoly principle, whereas quota allocation under government regulation in the circumstance of resource supply constraints and demand constraints has to be executed in accordance with the equalization principle, the target principle, or the history principle, or certain combinations of these principles. Therefore, the complementary relationship between market regulation and government regulation actually reflects the complementary relationship between business principles or business transactions

under imperfect competition following the priority principle and monopoly principle and those following the equalization principle, the target principle, and the history principle.

If we analyze the issue from the above perspective, we will have to answer this question: Under disequilibrium conditions, what kind of transaction is primary and what is secondary so that limited supplies can meet the needs of various buyers or that limited demand can adjust to the needs of various suppliers?

It seems that this question is related to the degree of economic disequilibrium or the severity of resource supply constraints or demand constraints. If resource supply constraints are relatively light (i.e., slight resource supply gap) or demand constraints are relatively light (i.e., slight demand shortfall), it will be more important to have the market coordinate business transactions, and hence it is less important to have the government regulate the economy. On the contrary, if resource supply constraints are relatively heavy (i.e., severe resource supply gap) or demand constraints are relatively heavy (i.e., severe demand shortfall), it will be less important to have the market coordinate business transactions, and it will be more important to have the government regulate the economy. The importance of market regulation and government regulation in regulating the economy will reverse when resource supply constraints and demand constraints reach a certain level (i.e., supply gap and demand shortfall reaching a certain limit). At that level, as market regulation becomes less important, government regulation becomes more important. All in all, everything will change according to various degrees of economic disequilibrium.

In other words, if we do our analyses on the basis of the complementary relationship, we can draw the following conclusion:

In an economy with both market regulation and government regulation, business transactions under imperfect competition that follow the priority principle and the monopoly principle of market regulation will become less important among all transactions in the

economy as supply gap and demand shortfall increase; business transactions under imperfect transactions that follow the equalization principle, target principle, and history principle of government regulation will become more important among all transactions in the economy as supply gap and demand shortfall increase. If the economy operates toward the direction of lower supply gap and lower demand shortfall, market regulation will become more and more important. On the contrary, if the economy operates toward the direction of larger supply gap and larger demand shortfall, market regulation will become less important and government regulation will become important, regardless of whether you like it or not.

4.1.3 Government Hierarchy and Market Hierarchy

The hierarchy of government refers not only to the supervision and subordination relationship between government agencies or the hierarchy structure of various government institutions but more importantly to the hierarchy of government regulation, or how government regulation is executed by various levels of government institutions. As for the hierarchy of market, it primarily concerns the relationship between the whole and the parts. Just as any kind of market system is composed of a number of interrelated markets, any national market is composed of several regional markets. In addition, if we view the market from the structural perspective, it can be infinitely subdivided until reaching a market that includes only one specific commodity. Understanding the hierarchy of market is to find out how we can fully utilize market regulation functions when the market is continuously subdivided.

The general principle should be as follows: As far as government regulation is concerned, if a subordinate government institution is capable of accomplishing a mission on its own, it is not necessary for its superior to step in and do the job on its behalf. Government shall do whatever the market is incapable of, and a superior government institution shall do whatever its subordinate is incapable of. If both

the superior and subordinate government institutions perform some functions for the second regulation, the regulation by the superior government institution is at a higher level than that by the subordinate government institution, even though they are both conducting the second regulation. Here is a simple example: If there is mismatch between supply and demand in the labor market or the resource market, it will be difficult for the market to resolve the supply constraints or demand constraints of labor or capital on its own, and hence it will be necessary to have the government step in as the organizer of the second regulation to take certain regulatory measures. In this case, if supply gap or demand shortfall has been alleviated by some measures adopted by the regulatory institutions of a town, there will be no need for further regulation by a city, assuming an administrative structure in which a town is governed by a city. If the economic regulatory institutions of a city can adopt effective measures to alleviate demand and supply mismatch, there will be no need for further regulation by the province. Only after provincial government institutions fail to accomplish regulation missions will it be necessary for the central government to function as the organization that performs the second regulation of the economy. This is the meaning of hierarchical government regulation. Every level of the government, from the central government to local governments, should be capable and effective and handle its own responsibilities. Superior government institutions should not take care of everything but instead should delegate those tasks that subordinate government institutions themselves are responsible for. The hierarchical management by various government institutions is not contradictory to government's role as an organization in charge of the second regulation and will even facilitate better government performance in the second regulation.

As of the hierarchy of market, the word "hierarchy" has a different meaning from the one used in hierarchical government regulation or the hierarchical management by government, both of which were

discussed earlier. The hierarchy of market is an analytical method that continuously subdivides the market according to its structure. After all, the market is an integrated system. Various markets that form this system are closely connected. Various regional markets inside a market are also closely interconnected. Market regulation is, after all, a form of systematic regulation, which is very difficult to be separated into subcomponents. This is different from the hierarchical regulation or the hierarchical management by government. We can illustrate this point with a few simple examples:

If supply is less than demand in the consumer goods market, price will rise. Despite that supply and demand are balanced in the production materials market at the beginning, rising consumer goods prices will expand consumer goods production capacity, driving up the prices of production materials. Therefore, market regulation should not be limited to the consumer goods market, but should include the production materials market as well.

If supply is less than demand in the consumer goods market, causing price to rise and production capacity to increase, the supply and demand for capital in the money market will also change correspondingly. As a result, consumer expenditures will increase to accommodate rising consumer goods prices, and money supply (i.e., personal savings) will likely decrease. On the other hand, manufacturers of consumer goods will have higher demand for capital due to rising consumer goods production capacity. Therefore, market regulation should not be limited to the consumer goods market, but should include the money market as well.

As a matter of fact, changes of demand and supply, prices, and production capacity in the consumer goods market will to some extent change not only the production materials market and the money market but also the labor market and the technology market. Under such circumstance, it is impossible for market regulation to function only in one market. Instead, it will impact every relevant market.

Thus, we can give a brief illustration on the relationship between

government hierarchy and market hierarchy. Government hierarchy represents an argument that supports the second regulation. That is, it indicates which scenario would require regulation by subordinate government institutions and which would require regulation by superior government institutions. Market hierarchy is an analytical method of analyzing markets, which clearly illustrates the relationship between various markets via continuously subdividing the market and therefore reveals the holistic feature of market regulation.

Can we draw the following conclusion: Local governments regulate local markets and the central government regulates national markets, which leads to government hierarchy that is in line with market hierarchy? This argument cannot illustrate the relationship between market regulation and government regulation. As long as the market can solve any problem on its own, neither the central government nor local governments should interfere, whether it is local markets or national markets. Although local governments are only authorized to regulate regional markets while the central government can regulate all regional markets, regulating the market is no equivalent to regulating the economy. Regulating the market can be done by following the law to maintain order in the marketplace and allowing markets to perform regulation functions, or regulating the market can be done by government taking certain regulatory measures to influence supply and demand in the market, which also serves the purpose of regulating the economy. The central government and local governments can use the former method or the latter method to regulate the market at the same time. Or the central government uses the former method while local governments use the latter method to regulate the market. It all depends. If the central government uses the latter method to regulate the market, it may apply to regional markets or national markets. Market hierarchy is not the reason to restrict government behavior. If a local government also uses the latter method to regulate the market, it will apply to the markets that are under its jurisdiction. As different regional markets are interconnected

with one influencing another, a regulatory measure once adopted by a local government to adjust regional supply and demand will actually have far-reaching effects that are by no means limited to regional markets. This explains from a different perspective the complexity of the relationship between government hierarchy and market hierarchy.

4.1.4 The Difference Between Fully Developed Market and Complete Market System

Fully developed market and complete market system are different and cannot be misunderstood as one concept. Whether the market is fully developed or not is related to the degree of competitiveness and selfrestraint of the market. The more competitive the market is, the better the market can perform its self-restraining function through market competition as well as changing supply and demand, and the more developed the market will be. On the other hand, the more constraints market competition is subject to, the weaker the market self-restraining function will be and the less developed the market will be. Whether the market system is complete or not refers to the market structure. In the socialist market system, the core of the market system is the commodity market. Labor market, capital market, real estate market, enterprise asset market, and technology information market are the components of the market system. Whether the market structure is balanced is linked to whether the market system is complete. The more complete the market system is and the more coordinated the market structure is, the better the market system will facilitate enterprise production and operation and the better the environment will be to generate economic growth.

When the economy is in equilibrium, not only the market is fully developed, but the market system is also complete and the market structure is balanced. If the economy is in disequilibrium, the market is not fully developed, neither can the market system be complete or the market structure be balanced. In this sense, the degree of market development is associated with how complete the market system is

and how balanced the market structure is. Therefore, in order to develop the socialist market, it is critical to persistently increase the degree of market development and promote a balanced market structure and a complete market system. In reality, when the market is not fully developed, the market system is not complete, and the market structure is not balanced, we need to find out what is the starting point of developing the socialist market. If this issue is not resolved, developing the market will not be a smooth process.

Establishing a fully developed market is a long process. This is because how market mechanism forms and works, how market competition proceeds, and how the market performs self-restraint are all dependent upon whether or not the operation mechanism of market participants (i.e., enterprises) is fully developed and functional. In other words, the market goes through a natural cultivation process. It is the same with any region, including special economic zones. Hence, it is hard for us to imagine that the market can be fully developed before enterprises become goods producers who make their own decisions and are responsible for their own profits and losses. However, complete market system can be established by government policies. This is because whether the market system is complete or not is associated with the progress of reforms of the planned mechanism. Under the traditional planned mechanism, only the consumer goods market exists in the socialist economy. There are no other markets. Hence, it is unnecessary to talk about market system. During the reforms of the planned mechanism, production materials market, capital market, labor market, and technology information market have emerged one after another. Eventually, real estate market and enterprise asset market will also appear. These are the results from the reforms of the planned mechanism initiated by the government. Therefore, even though the market cannot be quickly developed fully, it is absolutely possible for us to take one step ahead to complete the market system. Although emerging production materials market, capital market, labor market,

technology information market, real estate market, and enterprise asset market are not fully developed at the beginning, having these markets is after all better than having nothing. Upon having established the socialist market system to a large extent, we can gradually proceed with coordinating the market structure while improving the market itself.

This is the market environment which Chinese enterprises are currently facing. Even the enterprises in special economic zones face similar market environment. Every enterprise, domestically oriented or internationally oriented, must understand the features of market environment. More specifically, the market system, with the reforms of the planned mechanism, has been largely established, but the market has not been fully developed because the reforms of enterprise operation mechanism are yet to be deepened further and interference with and restrictions on enterprises placed by administrative departments are yet to be removed. In this environment, the operation of enterprises compared to the past has its disadvantages and advantages. The disadvantages lie in the fact that enterprise operation is still subject to interference and restrictions and business profitability motivations are still weak. Enterprises do not compete with each other on the level play field in the marketplace. Fluctuations of market demand and supply do not necessarily effectively affect business operational decisions. It is not possible for enterprises to really pursue profitability and self-expansion through increasing efficiency and competitiveness. However, we have seen some advantages of how enterprises operate compared to the past: After all, there are more than just the consumer goods market. Enterprises are able to obtain resources they need, in spite of only a portion, through transactions in the production materials market, capital market, labor market, technology information market, and real estate market. The rise of the enterprise asset market provides businesses with an opportunity to increase production capacity as well as pursue mergers and acquisitions. This means that businesses

operate in multiple markets at the same time and that the relatively complete market system has reduced some difficulties that businesses face due to relatively underdeveloped market. For businesses, it is more important that they take advantage of the progress of the market development that was nonexistent in the past to alleviate the conflicts arising from underdeveloped market so that they can survive and grow in a market that has not been fully developed. At the same time, as long as the market system is relatively complete, the more proactive businesses are in taking advantage of the existing market system, the faster the market will be fully developed.

壹 经济运行的二元机制

一、经济运行中政府调节的“覆盖面”

从本书第二章和第三章的论述可以清楚地了解到，在社会主义经济中，实际上存在着的不是经济运行的一元机制，即或者只有市场机制，或者只有政府调节机制。社会主义经济运行的二元机制是指市场机制与政府调节机制始终并存。经济运行的二元机制有这样几个含义：

1．二元机制的并存不是指整个经济可以划分为两个“板块”，即一种机制限定在某一个领域内起作用，另一种机制限定在另一个领域内起作用；

2．二元机制的并存不是指两种机制之间存在着相互渗透的关系，即一种机制主要在某一个领域内起作用，同时这种作用渗透到另一个领域内；而另一种机制主要在另一个领域内起作用，同时这种作用又渗透到这个领域中来；

3．二元机制的并存不是指两种机制地位的平列，二者在经济中起着“平分秋色”的作用。

这些澄清都是必要的。在对二元机制的理解中，本书所强调的是：二元机制的互补性反映于市场调节是第一次调节和政府调节是第二次调节、高层次调节。第二章关于市场调节在资源配置中的作用的分析，以及第三章关于政府调节在资源配置中的作用的分析，都已把这种互补关系说明了。现在，有必要在这两章已经论述的基础上，对经济的二元机制再作进一步的理解。

通常听到这样一种说法，即把市场调节与政府调节的关系说成是共同作用于现实经济的关系。具体地说，这种说法是：市场调节是覆盖全社会的，政府调节也是覆盖全社会的，二者同时对整个经济起作用。这种说法与“板块论”、“渗透论”、“平列论”相比，是一个进步。可以把这种观点称为“覆盖论”。但“覆盖论”仍有一个不足之处，即它对于“覆盖”含义的表述仍不明确。

应当注意到，这里所说的政府调节，是指政府在资源配置过程中的调节而言，也是指政府对经济运行的调节而言；如果指政府的法律，那么它们的覆盖面无疑是全社会的，即社会上的任何经济活动都不得与法

律相违背；如果指政府制定的社会经济发展目标，那么这也是覆盖全社会的，全社会都要为这一发展目标而努力；但如果指政府的直接投入和直接产出，那么显然不可能，也不应当覆盖全社会。问题是：如果政府调节指的是政府采取各种影响市场调节的措施，那么能不能简单地说这是覆盖全社会的还是并非覆盖全社会的呢？对此，必须作具体的分析。

首先，在社会主义商品经济中，政府对资源配置进行调节的结果必然使政府调节的作用通过市场供求关系的相应变化而在社会经济的各个方面反映出来。从这个意义上说，政府调节是覆盖于全社会的。但是，我们不应忽略政府调节对全社会的覆盖是一种再覆盖，即覆盖于市场调节之上的覆盖。这种理解恰恰与政府调节作为第二次调节的提法是一致的。市场调节是第一次调节，市场调节对社会经济的覆盖是第一次覆盖，政府调节是第二次调节，政府调节对社会经济的覆盖是第二次覆盖。正如离开了市场的政府调节的作用将无从发挥一样，离开了市场调节对社会经济的覆盖，政府调节对社会经济的第二次覆盖也就难以理解了。

总之，“覆盖论”作为一种不同于“板块论”、“渗透论”、“平列论”的阐释市场调节与政府调节之间关系的论点，固然要优于“板块论”、“渗透论”和“平列论”，但只有把“覆盖论”中的“覆盖”理解为第二次覆盖，才能对经济运行的二元机制有较为正确的认识。

二、二元机制之间的关系

对经济运行二元机制的进一步理解还包括了对市场机制与政府调节机制的互补性的理解。如上所述，在经济非均衡条件下，社会总需求与社会总供给之间的不平衡是经常出现的，这时或者有资源供给的约束，或者有需求的约束。而从结构的角度来看，资源供给的约束和需求的约束可能同时发生。因此，资源配置过程中市场的自我制约便会受到限制。在非均衡条件下所遇到的一个重要问题是：如何使有限的资源去满足社会的需求，以及如何使有限的需求去适应社会的供给。非均衡理论研究中所提出的配额均衡问题之所以具有较广泛的适用意义，正是由于有限资源供给同需求的适应以及有限需求同供给的适应都需要通过数量的配额来实现。

市场机制在资源供给约束的情况下，或者按照优先原则来分配有限的货源，或者按照垄断原则来分配有限的货源。这里所说的优先原则，

是指市场上按照“谁先来，谁先买”的原则来进行交易，直到有限的供给被分光为止。这里所说的垄断原则，是指市场上有限货源的供给者成为垄断的一方，它们可以按照高于供求均衡价格的价格来出售自己的商品。垄断原则显然是不完全竞争下的交易原则，而优先原则同样是不完全竞争下的交易原则，这是因为，在资源供给约束的情况下，货源是有限的，如果要按照“谁先来，谁先买”的原则进行交易，那么有关商品在什么时间开始出售和在什么地点出售的信息便是至关重要的。谁掌握了信息，谁就可以“先来”、“先买”；谁无法得到信息，实际上就被排除在交易之外了。所以说，优先原则与垄断原则都是不完全竞争下的交易原则。如果说二者之间有什么区别的话，那么垄断原则下的交易是公开的不完全竞争下的交易，而优先原则下的交易，则是仍然保留着完全竞争的形式，实际上却是不完全竞争下的交易。

市场机制在需求约束的情况下，也按照优先原则或垄断原则来分配有限的市场或有限的销路。优先原则是指市场上按照“谁先来，谁先卖”的原则来进行交易，垄断原则是指市场的占有者成为垄断的一方，它们可以排斥后来的销售者，以维护自己的销路，维护自己的利益。垄断原则显然是不完全竞争下的交易原则，而优先原则也涉及有限的市场或有限的销路的信息问题。谁掌握了这样的信息，谁就可以“先来”、“先卖”；谁无法得到这样的信息，实际上也就被排除在交易之外。同样的道理，优先原则下的交易是在完全竞争的名义掩盖之下的不完全竞争中的交易，而垄断原则下的交易则是公开的不完全竞争下的交易。

由此看来，在市场调节之下，只要经济处于非均衡状况，通过优先原则或垄断原则所实现的配额均衡总是同不完全竞争下的交易联系在一起。如果在这种情况下需要有政府调节的话，那么不管政府调节是按照平均原则（即把有限的货源平均分配给需求各方，或把有限的市场分配给供给各方）、目标原则（即政府有事先决定好的目标顺序，按照政府所认定的轻重缓急来分配有限的货源或有限的市场），还是历史原则（即政府根据以往所存在的货源分配比例或市场分配比例，进行份额分配）来达到配额均衡的，所有这些都是不完全竞争之下的交易。政府调节与市场调节的互补可以被理解为各种不完全竞争下的交易的互补，而不是不完全竞争形式的补充或完全竞争形式对不完全竞争形式的补充。

说明这一互补的性质或特点是有意义的。要知道，一种比较流行的说法是：市场调节意味着完全竞争下的市场交易活动，一切听任市场自

发调节而最终达到均衡，而政府调节意味着不完全竞争下的市场交易活动，政府的介入破坏了市场的完全竞争状态，只不过由于完全竞争有这样或那样的缺陷，所以即使政府调节破坏了市场的完全竞争状态，也是值得的、必不可少的。由此导致的看法是：在市场机制与政府调节机制并存的场合，市场机制与政府调节机制的互补，或者是完全竞争形式对不完全竞争形式的补充，或者是不完全竞争形式对完全竞争形式的补充。这种说法是不正确的。这是因为：

第一，市场调节并不一定是完全竞争形式的市场调节，不完全竞争形式的市场调节同样是一种市场调节；把市场调节与完全竞争等同起来，不仅把市场调节理解得过于狭隘，而且也是对完全竞争的不正确理解，因为完全竞争作为一种市场调节形式，绝不是普遍存在的。完全竞争的理论意义大大超过了它的实际意义。

第二，完全竞争仅仅出现于均衡条件下，这时，过度的需求和过度的供给都不存在，任何交易都在均衡价格条件下进行。然而实际生活中，非均衡是普遍的，资源供给的约束和需求约束经常出现，于是就会有数量配额，通过配额达到事后的均衡。在这种情况下，市场调节是不完全竞争下的市场调节，市场交易是不完全竞争下的市场交易。

由以上两点，可以得出：

第三，如果经济处于均衡状态，也就是处于完全竞争状态，那就没有必要进行政府调节，因为市场已经使一切尽善尽美了。既然不需要政府调节，那就无所谓二元机制，无所谓两种机制的互补。如果经济处于非均衡状态，那就必须通过数量配额才能达到事后的均衡，市场调节是不完全竞争下的市场调节。这时，如果有政府调节，那么政府调节肯定也是不完全竞争下的调节。可见，在非均衡条件下，市场调节与政府调节的互补是各种不完全竞争下的交易的互补，互补的目的无非是为了更好地进行数量配额调节，实现配额后的均衡。正如前面已指出的市场调节在资源供给约束和需求约束之下所采取的配额调节，或者是按照优先原则进行的，或者是按照垄断原则进行的，而政府调节在资源供给约束和需求约束之下所采取的配额调节，或者是按照平均原则进行的，或者是按照目标原则进行的，或者是按照历史原则进行的，或者这几种原则共同制约着配额调节。因此，市场调节与政府调节的互补实际上就是优先原则、垄断原则等不完全竞争之下的交易原则同平均原则、目标原则、历史原则等不完全竞争之下的交易原则的互补或交易行为的互补。

如果我们从这个角度来进行分析的话，那么需要弄清楚的是：在经济的非均衡条件下，要使有限的货源符合需求各方的要求，或者要使有限的市场适应供给各方的要求，什么样的交易活动是主要的，什么样的交易活动是次要的？

看来，这个问题与经济的非均衡程度有关，也就是与资源供给约束程度和需求约束程度有关。如果资源供给约束程度轻一些（即资源的缺口较小），或需求约束程度轻一些（即市场的缺口较小），那么由市场力量来安排的交易活动就较为重要，由政府力量进行的调节相对地居于较为次要的地位。反之，如果资源供给约束程度强一些（即货源的缺口较大），或需求约束程度强一些（即市场的缺口较大），那么由市场力量来安排的交易活动的重要程度也就会下降，由政府力量进行的调节的重要程度也就会上升。直到资源供给约束和需求约束达到了一定的限度（即货源的缺口和需求的缺口达到了一定的限度），市场调节和政府调节的相对重要程度就会颠倒过来，即前者变得相对的次要一些，后者变得相对的重要一些。总之，一切都随着经济非均衡程度的变化而变化。

换言之，从互补的角度来进行分析，可以得出下述看法：

在市场调节与政府调节并存的经济中，按市场的优先原则、垄断原则等进行的不完全竞争下的交易活动在整个社会的交易活动中的相对重要性，是随着货源缺口的增大或市场缺口的增大而递减的；按政府的平均原则、目标原则、历史原则等进行的不完全竞争下的交易活动在整个社会的交易活动中的相对重要性，是随着货源缺口的增大或市场缺口的增大而递增的。如果经济随着缩小货源缺口或缩小市场缺口的方向运行，那么市场调节必将越来越重要；反之，如果经济随着扩大货源缺口或扩大市场缺口的方向运行，那么不管人们愿意还是不愿意，市场调节的地位必将降低，政府调节就会变得重要起来。

三、政府的分级与市场的分级

在这里，政府的分级不仅是指政府的上下隶属关系或政府各种机构的分级设置，更重要的是指政府调节的分级，也就是政府调节如何通过各级政府调节而实现的问题。至于市场分级，则主要从全部与局部的关系来考虑。由于任何一种市场体系都是由相互有联系的若干个市场所组成，任何一个全国性的市场又是由若干个地区性市场所组成，此外，从市场的结构角度来看，市场还可以无限细分，一直分到某一种具体的商

品的市场。市场分级所要研究的，就是在市场不断细分的条件下市场调节作用将如何发挥出来。

总的原则应当是这样的：在政府进行调节的场合，凡是下级政府能够做到的，上级政府不必代劳。政府做市场所做不到的事情，上级政府做下级政府所做不到的事情。如果说上级政府和下级政府作为政府都起着第二次调节作用的话，那么同样作为第二次调节者，在这里，上级政府的调节与下级政府的调节相比，层次将更高一些。可以举一个简单的例子：假定市场上劳动力供求不协调或资源供求不协调，市场本身难以解决劳动力或资金方面的供给约束或需求约束问题，从而需要政府作为第二次调节者采取一定的调节措施。在这种场合，如果县一级的经济调节机构采取某种措施就已经把供给缺口或需求缺口缓解了，在市管县的政治体制下，市一级就不必再进行调节。假定市一级的经济调节能够采取有效的措施来缓和这些供求矛盾，省一级就不必再进行调节。只有在省一级不可能实现政府调节任务时，中央一级才有必要发挥自己作为第二次调节者的作用，对经济进行调节。这就是政府分层次调节的含义。从中央到地方的各级政府，都应当是精干的、高效率的，每一级政府都做它分内的事情，上级政府不包揽一切，而让下级政府去做它应当做的事情。政府的分层次管理与政府的第二次调节作用不仅是不矛盾的，而且将使政府的第二次调节作用发挥得更好。

从市场分级的角度来看，这里所用的“分级”一词与上面所谈到的政府分级调节或政府分层次管理的含义是不同的。市场分级只不过是市场结构方面对市场进行不断细分的一种分析方法。市场体系始终是一个整体，组成市场体系的各个不同的市场彼此密切地联系在一起，每一个市场的各个不同的局部市场也密切相关。市场调节始终是一种总体的调节，难以把它们分割开来，这与政府的分级调节或分层次管理不一样。可以举几个简单的例子来说明：

1. 如果消费品市场上的供给小于需求，消费品价格上升，那么尽管开始时生产资料市场上的供给与需求是平衡的，但消费品价格的上升会引起消费品生产规模的扩大，从而会引起生产资料价格的上升。因此，市场调节就不限于消费品市场的调节，而且也包括生产资料市场的调节。

2. 如果消费品市场上的供给小于需求，引起消费品价格上升和消费品生产规模扩大，那就会使资金市场上的资金供求发生相应的变化，

即一方面，为了适应消费品价格的上升，消费者的货币支出会增大，从而资金供给的来源（即消费者的储蓄）可能减少；另一方面，由于消费品生产规模扩大，消费品生产单位对资金的需求会增加。因此，市场调节就不限于消费品市场的调节，而且也包括资金市场的调节。

3. 实际上，消费品市场上供求的变化、价格的变化，以及生产规模的相应变化，不仅会引起生产资料市场、资金市场的某些变化，也会引起劳务市场、技术市场等市场的某些变化，这样，市场调节不可能局限于个别市场上，而会涉及各个有关的市场。

由此可以对政府的分级与市场的分级之间的关系作一简略的表述：政府的分级体现了第二次调节论的思想，即在什么样的情况只需要下级政府的调节，什么样的情况下才需要上级政府的调节；而市场的分级则是一种分析市场关系的方法，即通过市场的不断细分，可以较清楚地说明各个个别市场之间的相互联系，说明市场调节的整体性。

那么能不能得出如下的论点，即地方政府管理地方性的市场，中央政府管理全国性的市场，从而使政府的分级与市场的分级吻合呢？这种论点说明不了市场调节与政府调节之间的关系。地方性的市场也好，全国性的市场也好，凡是市场能解决问题，不仅中央政府不必插手，地方政府也不必插手。虽然地方政府的管理范围只限于地方性的市场，中央政府的管理范围可以包括所有各个地方的市场，但管理市场不等于调节经济：管理市场是根据法律来维护秩序，而让市场起着调节作用；管理市场也可能兼有调节经济的作用，即政府采取一定的调节措施，对市场的供求发生影响。中央政府和地方政府既可以用前一种方式来管理市场，也可以采用后一种方式来管理市场；或者，中央政府采用前一种方式来管理市场，地方政府采用后一种方式来管理市场，这一切都根据具体情况而定。假定中央政府采用后一种方式来管理市场，那么这既可能指地方性的市场，也可能指全国性的市场，市场的分级在这里不是限制政府行为的理由。假定地方政府采用后一种方式来管理市场，那么这虽然仅限于地方政府管理范围内的市场，但由于各个地方的市场总是联系在一起的、彼此影响的，所以一旦地方政府针对地方市场的供求状况采取了调节措施，实际上其影响所及，绝不会受到地方性市场的限制。这又从另一个角度说明了政府的分级与市场的分级之间关系的复杂性。

四、市场完善与否和市场体系完整与否的区别

市场的完善与否和市场体系的完整与否是两个不同的问题，不能把它们混为一谈。市场的完善与否是指市场的竞争程度和自我制约程度而言。市场中的竞争越是充分，市场通过竞争和供求关系的变化而引起的自我制约功能发挥得越充分，市场就越完善。反之，市场中的竞争越是受限制，市场越是缺乏自我制约的功能，那么市场的完善程度也就越低。市场体系的完整与否，则是指市场结构而言。在社会主义市场经济体系中，处于中心位置的是商品市场。劳务市场、资金市场、房地产市场、企业资产市场、技术信息市场等等都是市场体系的组成部分。市场结构的协调与市场体系的完整是联系在一起的。市场体系越完整，市场结构越协调，对企业的生产经营越有利，经济的发展也就越具有良好的环境。

在经济处于均衡状态时，不仅市场完善，而且市场体系完整，市场结构协调。如果经济处于非均衡条件下，市场既不完善，市场体系也可能是不完整的，市场结构同样可能不协调。从这个意义上说，市场的完善程度同市场体系的完整程度、市场结构的协调程度密切相关。不断提高市场的完善程度与不断促进市场结构的协调、不断促成市场体系的完整都是发展社会主义市场所必需的。但在实际工作中，我们感到，在市场不完善，而市场体系又不完整、市场结构也不协调的情况下，要发展社会主义市场究竟应当从何着手，这个问题如果没有解决，那么市场的发展将受到阻碍。

市场的完善化需要有一个较长的过程，因为市场机制的形成与发挥作用、市场竞争的开展与市场的自我制约都有赖于参加市场活动的主体（企业）本身运行机制的完善。换言之，市场有一个自然发育的过程。在任何地方都是如此，甚至特区也不例外。因此我们很难设想能在企业尚未成为自主经营、自负盈亏的商品生产者之前形成一个完善的市场。然而市场体系的完整化，则可以通过政府的措施来予以促成。这是因为，市场体系的完整与否同计划体制改革的进度有关。在传统的计划体制之下，社会主义经济中只存在消费品市场，其余各个市场都是不存在的，这样就根本谈不上什么市场体系了。在计划体制改革过程中，生产资料市场、资金市场、劳务市场、技术信息市场相继出现，最终，房地产市场和企业资产市场也开始产生了。这些都是政府采取措施来改革计划体制所取得的成果。可见，即使市场不可能很快地完善起来，但无论如何，我们完全有可能在市场体系的完整化方面先走一步。虽然刚开始

出现的生产资料市场、资金市场、劳务市场、技术信息市场、房地产市场和企业资产市场都是很不完美的，但有这些市场要比缺少这些市场好得多。我们可以在初步形成社会主义市场体系之后，一方面逐渐使市场结构协调，另一方面使市场本身趋于完善。

这就是当前我国企业所处的市场环境。甚至特区的企业也处于类似的市场环境之中。无论企业从事内向型的经营还是外向型的经营，都必须认清市场环境的特点，即通过计划体制的改革，市场体系已经初步形成了，但由于企业运行机制的改革仍有待于深化，再加上行政部门对企业的干预、束缚仍有待于弱化，所以市场至今还是不完美的。在这种市场环境中，企业的经营既有不利的一面，又有与过去相比有利的一面。不利的一面表现于：企业的自主经营权仍受到干预、束缚，企业的利益约束仍然微弱，从而在市场中企业的竞争不是公平的，市场供求的波动不一定对企业的生产经营起着有效的制约作用，企业不可能真正通过效益的提高和竞争来增加自己的收入和实现自我扩张。与过去相比有利的一面表现于：毕竟已经出现了消费品市场以外的其他市场，于是企业可以从生产资料市场、资金市场、劳务市场、技术信息市场、房地产市场等市场上，通过交易活动而取得自己所需要的资源（哪怕只能满足一部分需要），而企业资产市场的出现则为企业的生产规模扩大，为企业的合并、联营提供了较好的条件。这就是说，企业的经营是在多种市场并存的条件下进行的，市场体系的较为完整将减少企业经营中因市场较不完善而带来的困难。对企业来说，重要的是利用市场环境中与过去相比有利的条件，去缓和因市场不完善而产生的矛盾，以便在较不完美的市场环境中生存和发展。同时，只要市场体系已经比较完整，那么企业越是主动地、积极地利用客观存在的市场体系，市场的完善过程也就越有可能加快。

4.2 FRICTIONS IN THE OPERATION OF THE ECONOMY

4.2.1 Frictions in the Operation of the Economy Under Type I Disequilibrium Condition

In the operation of the economy, there are some situations in which the market mechanism and the government regulation mechanism coexist and can work together. In other situations, however, these two mechanisms cannot work together.

Why is the coexistence of these two mechanisms likely to cause frictions during the operation of the economy? This issue is related to economic disequilibrium.

We know that economic disequilibrium can be divided into two types, type I disequilibrium and type II disequilibrium. Therefore, to analyze possible frictions that are brought about by the dual mechanisms, it is also necessary for us to start with the features of the two types of disequilibrium. First, let us look at type I disequilibrium.

Type I disequilibrium refers to an economic condition under which the market is not fully developed, information is incomplete, and price cannot function to adjust demand and supply, as well as the economy muddles along with supply constraints or demand constraints, i.e., resource supply gap and demand shortfall. In this case, the market mechanism and government regulation mechanism cannot work together, which is seen from the following two aspects:

First of all, when the market mechanism cannot fully function, any regulation by government will likely aggravate the situation of underdeveloped market and incomplete information, making it even harder for market participants to make any decision based on market information.

Under type I disequilibrium condition, the market has not been fully developed, and complete and timely information is unavailable.

Therefore, price cannot function to fully adjust demand and supply. This is not hard to understand. If market regulation and government regulation are applied to the economy, with market regulation functioning as fundamental regulation and government regulation functioning as the higher-level regulation, these two mechanisms may have the following frictions: When supply is lower or higher than demand, supply gap or demand shortfall can only be temporarily alleviated after price rises or declines, because the market is not fully developed and price changes are not completely consistent with the requirements of market regulation. If at this time the government adopts regulatory measures, which might be contradictory to the intentions of market regulation, supply gap or demand shortfall can be eliminated. However, the market mechanism will be destroyed. In other words, in this situation, government regulation mechanism can only work by sacrificing the function of the market mechanism to some extent.

How do we evaluate the frictions between these two mechanisms? We can only look at it from the outcome of the regulation. Is it necessary to destroy the market mechanism, even if it is only to a certain degree? Is it worthwhile? Of course, it would be better that the market mechanism is not destroyed while government regulation resolves the issue of excess supply or excess demand. In that case, these two mechanisms can work together, and there will be no frictions between them. In reality, this is not necessarily always the case. Therefore, if we conclude that these two mechanisms cannot work together and as a result, government regulation brings some damage to the market mechanism, we can only judge whether the actions are justified or worthwhile on the basis of the outcome of the regulation.

Secondly, under type I disequilibrium condition, the market mechanism may potentially restrict the functions of government regulation.

That is also directly associated with underdeveloped market,

incomplete and untimely information, the failure of prices to fully function in adjusting supply and demand, as well as resource supply constraints or demand constraints. For example, when it is necessary for the government to carry out regulation, the regulatory measures may not necessarily achieve anticipated results due to the fact that the market has not been fully developed and information has not been complete or timely. In this case, market regulation will restrict government regulation to some extent. Here is the reason: Government uses regulatory measures to send market participants a message on anticipated gains and losses from the regulatory measures and expect them to adjust resource combination and resource investment directions according to their own economic interests. Meanwhile, the market itself also delivers the information on the gains and losses from the regulatory measures to market participants. Because the information delivery channel is not the same and because information is incomplete and untimely, the market mechanism may work with government regulation, which of course is ideal, or may interfere with government regulation, which becomes a hurdle to government regulation. This is also a kind of friction between these two mechanisms during resource combination or the operation of the economy.

In summary, under type I disequilibrium condition, as long as market regulation and government regulation coexist, these two mechanisms may or may not work together. It is possible that they have some frictions, and sometimes it is even unavoidable.

4.2.2 Frictions During the Operation of the Economy Under Type II Disequilibrium Condition

Type II disequilibrium condition is characterized not only by an underdeveloped market but also by enterprises who have not become independent goods producers. As enterprises lack not only the incentives to pursue economic interests but also the mechanism to make their own business decisions, economic disequilibrium is more

severe under type II disequilibrium condition than under type I disequilibrium condition. Possible conflicts arising from the coexistence of market mechanism and government regulation mechanism may also be more severe or frequent. This issue can be illustrated from the following three aspects:

First of all, since enterprises are not independent goods producers, they have not been severed from affiliation with their administrative institutions. It is difficult for them to make decisions on business operations and investments on the basis of the profitability principle. There is a lack of market evaluation standards for good or bad business operational results. As a result, business productivity must be low. In this case, any measure that the government takes to regulate the economy will be unable to achieve anticipated regulation results. The primary reason is that enterprises lack the status of independent goods producers and the market mechanism itself is distorted. Conflicts between government regulation and the distorted market mechanism are inevitable.

Secondly, in addition, if enterprises have not been severed from affiliation with their administrative institutions and the government lacks information on business profits and losses, it is unlikely for the government to adopt reasonable economic regulatory measures. In this case, the measures that the government takes to regulate the economy may also be distorted and make it very difficult to work with the market mechanism.

Thirdly, if supply gap and demand shortfall due to resource supply constraints and demand constraints exist under type II disequilibrium condition, how different are they compared to type I disequilibrium condition? Under type I disequilibrium condition, they are resolved by rationing equilibrium through transactions under imperfect competition that either follow the priority principle and the monopoly principle applicable to market regulation or follow the equalization principle, the target principle, or the history principle that are applicable to government regulation. In spite of frictions

between the market mechanism and the government regulation mechanism, rationing equilibrium can still be reached as long as people continue to do business transactions in the imperfect competition environment. Situations may be different under type II disequilibrium condition. This is because enterprises are not independent goods producers and are unable to decide on resource combination and investment according to their own economic interests. As a result, any distribution principle (including the priority principle and the monopoly principle for market regulation and the equalization principle, the target principle, and the history principle for government regulation) will not follow its original intention and will be distorted whenever enterprises lack independent economic interests and fail to conduct business transactions in their own economic interests. Transactions under imperfect competition will not necessarily lead to rationing equilibrium. Supply gap or demand shortfall will possibly deteriorate. Frictions between the market mechanism and the government regulation mechanism will be more severe than those under type I disequilibrium condition.

4.2.3 Understanding Frictions in the Operation of the Economy

Based on the above analysis, we have clearly understood that frictions in the operation of the economy between the market mechanism and the government regulation mechanism are inevitable in some cases, regardless of the type of disequilibrium. This issue can be considered the limitation of the dual-track mechanism.

The fact that different intensity of frictions exists between the two mechanisms in the operation of the economy only demonstrates the limitation of the dual-track mechanism, revealing that the operation of the economy under disequilibrium conditions is far from perfect. However, it cannot prove the dual mechanism is unjustified.

It should be noted that if an economy is in equilibrium, excess supply or excess demand will not exist, and there will be no need for the dualtrack mechanism. Since economic equilibrium condition only

exists in theory and disequilibrium condition is economic reality, the dualtrack mechanism will exist in the operation of the economy whether you like it or not. Under disequilibrium conditions, in the case of resource supply constraints (supply gap) or resource demand constraints (demand shortfall), we can realize rationing equilibrium only by allowing the dualtrack mechanism to fully function and supporting business transactions under imperfect competition.

Undoubtedly, frictions between the two mechanisms under type II disequilibrium condition are heightened. The lower the degree of economic disequilibrium, the less severe the frictions between these two mechanisms. This point further demonstrates the urgency to deepen the economic restructuring currently being carried out in China, especially the reforms of enterprises. Through deepening the reforms of enterprises, the Chinese economy will gradually transit from type I disequilibrium to type II disequilibrium, and frictions between the two mechanisms will also gradually abate. This will be beneficial to economic growth.

贰 经济运行中的摩擦

一、第一类非均衡条件下经济运行中的摩擦

在经济运行过程中，并存着的市场机制和政府调节机制在某些场合可以保持协调，而在另一些场合，两种机制之间的不协调是难以避免的。

为什么在经济运行过程中二元机制的并存可能引起摩擦和造成两种机制之间的不协调，这是一个与经济的非均衡状态有关的问题。考虑到经济的非均衡分为第一类非均衡和第二类非均衡，因此在分析二元机制可能引起的摩擦问题时，也要从两类经济非均衡的特点着手。现在先考察第一类非均衡条件下的情况。

第一类非均衡是指经济处于市场不完善、信息不完整和不及时、价格不能起充分调节供求作用的情况下，以及经济中存在着资源供给约束或需求约束，即资源缺口或市场缺口等情况。这时，市场机制与政府调节机制的不协调主要表现于以下两个方面。

第一，在市场机制不能充分起作用的条件下，政府的调节有可能加剧市场的不完善、信息的不完备，从而使得每个参加市场活动的交易者更难以按照市场的导向进行决策。

在第一类非均衡条件下，市场完善、信息完整和及时这些条件并不具备，因此价格不能起充分调节供求的作用，这是可以理解的。如果经济中存在着市场调节和政府调节，并且市场调节作为基础性的调节起作用，政府调节作为高层次的调节起作用，那么两种机制之间可能出现如下的摩擦，即在经济中出现供给小于需求或供给大于需求时，由于市场不完善，所以价格上升或下降以后，货源缺口或市场缺口只是略有缓和，价格的变动不能完全符合市场调节的要求；假定这时进行政府调节，但政府的调节措施却可能同市场调节的意图相违背，这样，尽管货源缺口或市场缺口被消除了，但市场机制却遭到破坏。换言之，在这种情况下，政府调节机制是以市场机制一定程度的被破坏作为代价而发挥作用的。

怎样看待两种机制之间的这种不协调呢？这只有从调节的效果来评价。市场机制遭到破坏，哪怕只是一定程度的破坏，是不是必要？是不

是值得？当然，最好是在不破坏市场机制的情况下，通过政府调节而消除经济中所出现的供给小于需求或供给大于需求的现象，如果那样，两种机制就协调了，就没有什么摩擦了，但现实情况不一定如此。所以说，两种机制之间的不协调以及由此而造成政府调节对市场机制的某种程度的破坏，只有从调节的效果来评价，才能判断这样做是不是必要，是不是值得。

第二，市场机制作用的发挥，在第一类非均衡条件下有限制政府调节机制发挥其应有作用的可能性。

这也同市场的不完善、信息的不完整和不及时、价格不能起充分调节供求的作用，以及资源供给约束或需求约束的存在直接有关。比如说，在政府必要进行调节的场合，由于市场不完善、信息不完整和不及时等原因，政府的调节措施不一定能达到预期的效果，在这里，市场调节对政府调节的限制起着一定的作用。这是因为，政府通过自己的调节措施，把调节后的利益和损失等信息传递给参加市场活动的交易者，指望后者根据自己的利益原则来调整自己的资源组合方式和资源投向，而市场本身也从自己的渠道把利益和损失等信息传递给参加市场活动的各个交易者。信息的传递渠道不一致，信息又不是完整的和及时的，这样，市场机制的作用既可能同政府调节的意图相吻合（这当然是合乎理想的），也可能成为对政府调节的一种干扰，从而成为对政府调节的一种限制。这同样是资源配置过程中或经济运行过程中两种机制之间的一种摩擦。

总之，在第一类非均衡条件下，只要市场机制与政府调节机制并存，那么两种机制就有可能处于不协调状态，它们的摩擦的产生是可能的，有时甚至是难以避免的。

二、第二类非均衡条件下经济运行中的摩擦

第二类非均衡的特点除了市场不完善以外，还包括企业的非独立商品生产者的地位。而由于企业缺乏自己的利益刺激和自主经营的机制，经济的非均衡程度与第一类非均衡条件下的情况相比，是加重了，于是市场机制和政府调节机制并存可能引起的摩擦也比第一类非均衡条件下可能引起的摩擦大一些、多一些。这可以从以下三方面来说明：

第一，由于企业不是独立的商品生产者，企业没有摆脱行政机构附属物的地位，所以要使企业按照市场的利益原则进行生产经营和资源投

入，是有困难的。企业经营的好坏缺乏市场评价标准的结果，必然导致企业效率低下。这时，无论政府进行什么样的经济调节，都难以达到政府调节预定的效果。主要原因就在于在企业缺乏独立商品生产者地位的前提下，市场机制本身是扭曲的，政府调节与这种扭曲的市场机制之间的矛盾也就不可避免。

第二，不仅如此，假定企业没有摆脱行政机构附属物的地位，政府对企业的利益状况是缺乏了解的，政府所进行的各种经济调节很难建立在合理的基础上，这样，政府所进行的经济调节也可能是一种扭曲的调节，它与市场机制之间很难协调。

第三，假定在第二类非均衡条件下发生了与资源供给约束和需求约束有关的货源缺口和市场缺口，那么这与第一类非均衡条件下所发生货源缺口和市场缺口有什么区别呢？在第一类非均衡条件下，这些缺口依靠按市场的优先原则、垄断原则等进行的不完全竞争下的交易来实现配额均衡，或者依靠按政府的平均原则、目标原则、历史原则等进行的不完全竞争下的交易来实现配额均衡。不管市场机制与政府调节机制之间存在着什么样的摩擦，只要进行不完全竞争下的交易活动，配额均衡仍是可能实现的。但在第二类非均衡条件下，情况会有所变化。这是因为，企业不是独立的商品生产者，它们不能根据自身的经济利益来组合资源和投入资源，于是任何配额原则（包括市场的优先原则和垄断原则，或者政府的平均原则、目标原则、历史原则），在企业缺乏独立经济利益和不能按自己经济利益进行交易活动的场合都会被扭曲，而与它们本来的含义有较大出入。不完全竞争下的交易未必能实现配额均衡，货源缺口或市场缺口还可能有所加剧。市场机制与政府调节机制之间的摩擦也会大于第一类非均衡条件下两种机制可能引起的摩擦。

三、对经济运行中的摩擦的认识

通过以上的分析可以清楚地了解到，无论是在第一类非均衡条件下还是在第二类非均衡条件下，在某些场合，经济运行过程中市场机制与政府调节机制之间的摩擦是不可避免的。这可以被看成是二元机制的局限性。

经济运行过程中两种机制之间存在着不同程度的摩擦这一事实，实际上只是说明二元机制的局限性，说明非均衡条件下的经济运行不可能尽善尽美，但不能证明二元机制是不必要的。

要知道，如果经济处于均衡状态之中，过度需求和过度供给都不存在，那就不需要有二元机制。既然经济的均衡状态只是纯理论的假设，现实中存在的是非均衡经济，二元机制就不是人们主观上希望还是不希望它出现的经济运行机制，而是客观上必然存在的经济运行机制。在非均衡条件下，只有发挥二元机制的作用，才能够在存在着资源供给约束（货源缺口）或需求约束（市场缺口）的场合，通过不完全竞争下的交易来实现配额均衡。

的确，第二类非均衡条件下二元机制的摩擦是严重的。经济的非均衡程度越轻，两种机制之间的摩擦就越小。这就进一步说明了我国现阶段的深化经济体制改革、尤其是深化企业改革的迫切性。通过企业改革的深化，使我国的经济逐渐由第二类非均衡状态过渡到第一类非均衡状态，二元机制的摩擦也将逐渐减少。这对社会经济的发展是有利的。

Chapter 5 Rationing Equilibrium of the Commodity Market

第五章 商品市场配额均衡

5.1 COMMODITY MARKET EQUILIBRIUM WITH QUANTITY-PRICE ADJUSTMENT

5.1.1 Commodity Supply Gap Under the Dual-Track Economic System

Current economic disequilibria in China have shown that the supply of commodities in the commodity market is limited. The supply gap is related to market underdevelopment as well as enterprises' lack of motivation.

Commodity supply gap will inevitably drive up prices of scarce commodities. If the government adopts compulsory measures to curb rising prices, either black market activities will arise or there will be a phenomenon where some commodities have listing prices, but they are actually out of stock.

If the scarce commodities are raw materials used in production, production costs will rise as prices rise, which will in turn push the overall price level higher. If the scarce commodities are consumer goods, the increase of commodity prices will either drive wages upward or lower real personal disposable income. The former situation occurs when wages are flexible, while the latter one emerges when wages are inflexible or the effect of wage adjustment is lagging. If the rising prices of scarce consumer goods drive wages higher, it

means the cost of production will rise accordingly, and rising costs will contribute to higher price level. If the rising prices of scarce consumer goods cause real personal disposable income to fall, the commodity market will reach the ex post equilibrium in terms of form. In other words, commodity supply gap will disappear. Obviously, this is done at the cost of allowing physical consumption to be insufficient, which means we choose depressing consumption as a viable solution to the commodity supply gap.

Now, the issue that we need to discuss is as follows: Under disequilibrium conditions, the rising prices of production materials or scarce consumer goods are unlikely to bring additional supplies because of resource supply constraints. The price elasticity of commodity supply is relatively low. Under such circumstances, if the price elasticity of demand for commodities is also relatively low, or even normal, the commodity supply gap after prices rise will not disappear. If, instead, the price elasticity of demand for commodities is fairly large, rising prices will likely lead to significantly lower demand for commodities. In other words, the alleviation or elimination of commodity supply gap still hinges on insufficient consumption of physical commodities.

Here is a process we need to pay attention to. That is, the shortage of commodities starts with excess demand. Regardless of whether wage rises in tandem with inflation or not, as long as there are resource supply constraints, the relatively low price elasticity of commodity supply will eventually end the entire process with insufficient consumption. That is, excess demand is unilaterally alleviated by existing insufficient consumption of physical commodities.

The issue does not end here. The existence of the dual-track economic system indicates the existence of type II disequilibrium conditions. The fact that enterprises have not become independent goods producers has significant implications for the supply gap in the commodity market. It should be noted that under the dual-track

economic system, the price of some commodities is fixed while that of some other commodities is determined by the market. Or within the same category, some commodities are sold at fixed price while others are sold at market price. The profit margins are different among those commodities in the same category. In this case, if enterprises are goods producers who take responsibility for their own business decisions as well as profits and losses and carry out business activities in pursuit of their self-interest, they will be able to handle different profit margins under these two pricing mechanisms by adjusting their decisions on resource combination, despite the existence of two pricing mechanisms. For example, when enterprises are unable to secure raw material supplies at fixed price, they will try to make their own business decisions on the basis of profitability. Driven by the principle of profit maximization, enterprises will adjust their production volumes to meet demand shortfall in the commodity market. Even with resource supply constraints that result in almost zero or relatively low price elasticity of commodity supply, as was mentioned earlier, the adjustments to production volumes will to some extent ease the price rise and insufficient consumption of physical commodities that are brought about by commodity supply gap. Nonetheless, if enterprises are not goods producers who are responsible for their own business decisions as well as profits and losses and thus unable to conduct business activities according to their self-interest, the situation will be somewhat different.

In the latter scenario discussed above, once there is supply gap in the commodity market, price rise and insufficient consumption of physical commodities will become inevitable. Meanwhile, enterprises themselves have no incentive or capability to adjust resource combination or production volumes according to their self-interest. They simply follow the intention of administrative institutions and passively endure the losses due to rising production costs brought about by commodity shortages. If enterprises could purchase raw materials at fixed price and sell finished products at market price, they

would make money. But such profitability does not come from higher operational efficiency due to their hard work. If enterprises were to purchase raw materials at market price and sell finished products at fixed price, they would incur losses. Yet such losses do not reflect their operational performance. Even if they could purchase raw materials and sell finished products at fixed price, as long as the fixed prices of raw materials and finished products were not properly set, the consequential profits or losses would not only affect operational performance but also become an important factor that dampens enterprises' motivation to pursue their self-interest. If enterprises lacked the motivation to pursue self-interest, it would be very difficult to reduce commodity supply gap and might even widen the gap. That explains why the commodity supply gap under type II disequilibrium conditions has been so persistent and so hard to alleviate.

5.1.2 The Coexistence of Commodity Supply Gap and Commodity Demand Shortfall Under the Dual-Track Economic System

The socialist economy may experience the coexistence of commodity supply gap and commodity demand shortfall. The former originates from limited supplies and the latter from a limited market. If the structure of commodities is taken into consideration, it won't be difficult to understand the coexistence of supply gap and demand shortfall. In Chap. 1 of this book, we discussed the issues of resource misallocation and stagflation in the socialist economy and analyzed the reasons for the simultaneous existence of stagnation and inflation. These analyses are also applicable to the coexistence of commodity supply gap and commodity demand shortfall. Next, instead of focusing on the reasons why supply gap and demand shortfall exist simultaneously, we will discuss how this coexistence impacts on the equilibrium in the commodity market, including the initial impact and the subsequent impact.

1. The Initial Impact of the Coexistence of Supply Gap and

Demand Shortfall on Commodity Market Equilibrium

When supply gap and demand shortfall exist simultaneously, it is extremely rare to come across a situation where the volume of commodity supply gap exactly equals the volume of commodity demand shortfall in the case of commodity structural imbalance. Oftentimes, either the volume of commodity supply gap is larger than that of commodity demand shortfall, or vice versa. The former situation clearly indicates that commodity supply gap is dominant and commodity demand shortfall is secondary; the latter indicates that commodity demand shortfall is dominant while commodity supply gap is secondary.

Due to differences in commodity structure, commodities in oversupply cannot substitute for commodities in short supply. That is, commodity supply gap and demand shortfall cannot offset each other.

The coexistence of supply gap and demand shortfall has far more complicated implications for commodity market equilibrium than the existence of only one of them does. It is necessary to point out that under economic disequilibrium conditions, prices are not flexible, or at least the magnitude of price changes is asymmetric. In the case of commodity supply gap, prices will rise, whereas at time of commodity demand shortfall, prices will stay put or only decline slightly. Therefore, the price level under the coexistence of both supply gap and demand shortfall still tends to rise. From the perspective of the consumption of physical commodities, rising prices in the case of commodity supply gap will eventually lead to declining real income and insufficient consumption of physical commodities. Under the circumstance of commodity demand shortfall, although prices remain constant or decline slightly, economic slowdown (as demonstrated by the lower production volume of the commodities that see sluggish sales or a declining growth rate of production) will have the following three implications for the economy:

First, economic slowdown or a declining economic growth rate concurrent with a rising price level indicates that there will be

inflation accompanied by higher unemployment or a slowing growth rate of employment.

Second, economic slowdown or a declining economic growth rate concurrent with rising prices indicates that there will be inflation accompanied by lower fiscal income or a slowing growth rate of fiscal income.

Third, higher unemployment or a slowing growth rate of employment, as well as lower fiscal income or a slowing growth rate of fiscal income, will likely lead to lower real income or lower consumption of physical commodities.

Therefore, the coexistence of supply gap and demand shortfall is more or less the same as the situation where only commodity supply gap exists. That is, under disequilibrium conditions, as the price elasticity of commodity supply is relatively low, prices will rise and the consumption of physical commodities will be insufficient, regardless of whether only commodity supply gap exists or it coexists with commodity demand shortfall, and commodity supply gap will be ultimately alleviated by the insufficient consumption of physical commodities. The process of alleviating commodity supply gap becomes much more complicated under the coexistence of commodity supply gap and commodity demand shortfall than under only commodity supply gap. This is related to the subsequent impact on commodity market equilibrium from the coexistence of supply gap and demand shortfall.

2. The Subsequent Impact of the Coexistence of Supply Gap and Demand Shortfall on Commodity Market Equilibrium

We can look at the subsequent impact from the following two perspectives:

First of all, commodity supply gap and commodity demand shortfall do not offset each other, but it is difficult to keep them from influencing each other. For example, the supply of production materials is insufficient, and the demand for consumer goods materials also becomes insufficient; or in another case, some production

materials (such as raw materials) are in short supply, and the demand for other production materials (such as equipment) falters; or the supply of some consumer goods materials (such as food) is insufficient, and the demand for other consumer goods materials (such as consumption materials used in industrial production) also becomes insufficient. In these scenarios, the prices of those commodities with insufficient supply will rise, while the prices of those commodities with insufficient demand will remain where they are due to price rigidity, despite sluggish sales and inventory buildup. In addition, the rising prices of the commodities with insufficient supply will impact the prices of the commodities with insufficient demand. That is, either because the price of one commodity is a component of the cost of another commodity or because the price of one commodity is compared with that of another commodity, ultimately, the prices of the commodities with insufficient demand will rise. The commodities with insufficient demand will in turn influence the commodities with insufficient supply, possibly causing the prices of different commodities to rise one after another. This situation is particularly noticeable under type II disequilibrium conditions.

Secondly, if we ignore the price rigidity associated with the commodities with insufficient demand, their prices will fall once supply exceeds demand, which will cause the production volume of those commodities to fall. In a fully developed market, commodity manufacturers who cut their production volume can transfer resources to other commodity manufacturers with insufficient supply, which will slow down the rise of the prices of those commodities in short supply. Under disequilibrium conditions, however, those commodity manufacturers who cut their production volume are not able to easily transfer idle resources to those who have insufficient supply due to the underdeveloped market and the difficulties in transferring resources. In this case, it is hard to curb the rising prices of the commodities with insufficient supply. This is not the end of the story. The rise in price due to insufficient supply means a decline in real income, while the

lowering of production volume due to insufficient demand means a decline in revenues. Hence, the subsequent production and sales volume of the commodities with either insufficient supply or insufficient demand will change due to changing personal disposable income. The disequilibrium conditions in the commodity market are unlikely to disappear during the transition period. It could get even worse. Therefore, we cannot ignore the subsequent impact, especially under type II disequilibrium conditions.

3. A Further Understanding of Stagflation in the Socialist Economy

The negative effects of commodity supply gap and commodity demand shortfall are normally ignored or underestimated. Similarly, people tend to ignore the likelihood of stagflation in the socialist economy.

The existence of commodity supply gap will drive prices higher. The existence of commodity demand shortfall will slow down commodity sales and lower economic growth. The coexistence of both supply gap and demand shortfall will drive economic growth rate lower (i.e., stagnation) and prices higher (i.e., inflation). In a disequilibrium economy, the following situation is possible: While economic growth rate declines, the slowdown is moderate and the economy continues to grow at a certain rate. While price rises, inflation is moderate and the price index rises slightly. This is seen as proof that stagflation has not developed yet. Underestimating stagflation will lead to erroneous decisions on economic policies and the postponement of the efforts to deal with stagflation that has actually developed.

It must be pointed out that there are two kinds of inflation under disequilibrium conditions, open inflation and hidden inflation. Open inflation refers to the situation where price rises, as shown by rising price index. Hidden inflation refers to the situation where price or price index appears to be unchanged, but commodities are actually out of stock, or people have to wait in a long queue to purchase the

commodities they need (rationing in accordance with the priority principle), or commodities are sold in a fixed or limited quantity to each buyer (rationing according to the equalization principle, target principle, or history principle). From the commodity structure perspective, the prices of some scarce commodities appear in the form of open inflation, while the prices of others appear in the form of hidden inflation. Therefore, open inflation and hidden inflation coexist.

Stagnation in the socialist economy under disequilibrium conditions can also be classified as open stagnation and hidden stagnation. Open stagnation refers to the situation in which economic growth rate declines and hovers at a relatively low level, including almost zero growth rate or even negative growth rate. Hidden stagnation refers to the situation in which total output seems to continue growing, i.e., economic growth rate remains at a certain level, but effective supply has not actually grown. For example, economic growth rate remains at a certain level, but some commodities that have been produced are not really what society needs. Those commodities become inventories stored at factories and department stores, and their sales are slow. Because production continues to grow, people do not realize that this situation is a kind of stagnation—hidden stagnation.

Since there are two types of inflation and two types of stagnation, there are four possible combinations of stagflation. They are:

1. Stagflation due to open inflation and open stagnation
2. Stagflation due to open inflation and hidden stagnation
3. Stagflation due to hidden inflation and open stagnation
4. Stagflation due to hidden inflation and hidden stagnation

Some people do not know that inflation and stagnation can be divided into two different types, nor do they understand that hidden stagnation is also a form of stagnation and hidden inflation is also a form of inflation. Therefore, they have a different understanding of the above four combinations of stagflation. That is, they are of the

opinion that only the first combination is stagflation, the second combination is not stagflation but inflation, the third combination is not stagflation but stagnation, and the fourth combination is not inflation, nor stagnation, nor stagflation. Obviously, the incorrect understanding of stagflation is a very unfavorable factor in the fight against stagflation, as the complexity of economic disequilibrium is underestimated.

As a matter of fact, these four combinations of stagflation are all reflections of the coexistence of commodity supply gap and commodity demand shortfall under disequilibrium conditions. To resolve stagflation in the socialist economy, we need not only take appropriate measures according to specific situations but, more importantly, also understand from a theoretical perspective the various combinations of stagnation and inflation as well as the possibility of stagflation and further study the approaches to achieving rationing equilibrium in the commodity market.

5.1.3 The Possibility of Gradually Achieving Rationing Equilibrium in the Commodity Market

Based on the above analysis, we can draw the following two conclusions: First, the existence of commodity supply gap under the dual-track economic system or the coexistence of commodity supply gap and commodity demand shortfall not only drives prices higher but also decreases personal disposable income, making it very difficult to restore equilibrium in the commodity market. Second, if the economy is under the dual-track system, it means that it has not yet broken away from type II disequilibrium, i.e., not only the market has not been fully developed, but enterprises also have not been able to make independent business decisions and take responsibility for their own profits and losses. Under such circumstances, if commodity supply gap (let alone the coexistence of commodity supply gap and commodity demand shortfall) emerges, it will be necessary to carry out rationing in the commodity market to achieve *ex post* equilibrium, i.e.,

rationing equilibrium. How can we achieve rationing equilibrium? This is a topic yet to be studied.

Of course, rationing equilibrium in the commodity market under the dual-track economic system is still doable. Theoretically, the following three different measures will be effective in gradually achieving rationing equilibrium in the commodity market under the dual-track economic system:

First of all, according to the abovementioned requirements of the transition from type II disequilibrium to type I disequilibrium, if the economy is under the dual-track system, the most important policy is to fully motivate microeconomic units so that they can change their status of having no authority over their own business decisions as well as no responsibility for operational profits and losses.

This is the prerequisite for any microeconomic unit to develop the internal mechanism to achieve organic growth and self-control. As long as microeconomic units can truly establish a profit-oriented mechanism to adjust their production and operation, despite insufficient supply of commodities or insufficient demand for commodities, they can at least adjust to the changing supply and demand in the marketplace so as to prevent commodity supply gap and commodity demand shortfall from deteriorating.

It should be pointed out that the frictions between the traditional economic mechanism and the new economic mechanism under the dual-track economic system do not primarily reflect the conflicts between the two types of prices or markets. Instead, they reflect the lack of motivation of microeconomic units and their inadaptability arising therefrom to the two types of prices or markets, as well as the distorted transactional behavior due to the lack of constraint on microeconomic units imposed by self-interest. We have to keep in mind that as long as the economy is under equilibrium conditions, i.e., perfect competition without excess demand or excess supply and with potentially only one price (market price under perfect competition) or one market (the perfectly competitive market). While under

disequilibrium conditions, there are various cases of imperfect competition in the economy and both commodity supply gap and commodity demand shortfall exist. There are always two types of prices (i.e., a market price under perfect competition and one under imperfect competition) and two types of markets (i.e., perfectly competitive market and imperfectly competitive market). There are always situations that require the use of rationing to cope with limited supplies of resources or limited demand. Therefore, among all commodity market issues under the dual-track economic system, the top priority is to turn microeconomic units into goods producers who can make their own business decisions and take responsibility for their profits and losses and to enable them to adapt to the reality of two concurrent types of prices and markets so that they can perform self-adjustment and exercise self-restraint according to the profitability principle to reduce supply gap or demand shortfall in the commodity market.

Secondly, it is not realistic to postpone resolving the issue of supply gap or demand shortfall in the commodity market until after every microeconomic unit has become a goods producer who makes its own business decisions and is responsible for its profits and losses. Doing so will also bring unnecessary losses to the economy.

Under such circumstances, it is necessary to apply the following measures: In the process of turning microeconomic units into goods producers who make their own business decisions and take responsibility for profits and losses, we need to appropriately handle the relationship between government regulation and market regulation, allowing government regulation and market regulation to work together on supply gap and demand shortfall in the commodity market. With the joint efforts of government regulation and market regulation, rationing equilibrium in the commodity market can come true. The dual regulation is reflected in the process of reaching rationing equilibrium in the commodity market. This means that we shall try our best to allow market regulation to function in the process

of realizing rationing equilibrium in the commodity market and let government regulation, which regulates the economy at a higher level and for the second time, work on any issue associated with rationing equilibrium in the commodity market that market regulation is unable to tackle until the eventual realization of rationing equilibrium. Here, we cannot reverse the roles of the first regulation and the second regulation. Otherwise, it will be difficult to realize rationing equilibrium in the commodity market. Even though rationing equilibrium has been barely realized at one time, it will be more difficult rather than easier to regain rationing equilibrium in the commodity market due to the persisting supply gap or demand shortfall in the commodity market if economic operations are viewed as a continuing process.

Thirdly, since the rationing equilibrium accomplished by means of government regulation and market regulation occurs during the process in which microeconomic units are gradually turned into goods producers that make their own business decisions and are responsible for their profits and losses, we should actively capitalize on the influences of government regulation to help alleviate disequilibrium conditions.

That is to say, we should keep in mind that when microeconomic units are not yet fully capable of making business decisions and taking responsibility for profits and losses, their reactions that interfere with government regulation and market regulation are equivalent to hindering rationing equilibrium in the commodity market. On the other hand, we should note that if we can correctly manage the relationship between government regulation and market regulation and come up with regulatory measures accordingly, we can shorten the process of turning microeconomic units into organizations that are responsible for their operational decisions as well as profits and losses while realizing rationing equilibrium in the commodity market. This is the positive impact of realizing rationing equilibrium on the transition from type II disequilibrium to type I disequilibrium.

壹 数量—价格调节下的商品市场均衡

一、双轨经济体制下的商品供给缺口

根据我国的经济非均衡状况，在商品市场上，货源是有限的。这种货源的短缺既与市场的不完善有关，又与企业缺乏活力有关。

商品供给的缺口必然引起短缺商品的价格上涨。假定政府采取硬性措施来制止价格上涨，那就出现有价无货现象或地下交易活动。

在短缺的货源中，如果短缺的是生产资料，那么短缺商品价格上涨将导致成本上升，而成本上升又将推动价格普遍上涨。如果短缺的是消费品，那么短缺的消费品价格上涨或者会导致工资上升，或者会导致人们实际收入的减少，前者出现于工资具有灵活性的情况下，后者出现于工资缺乏灵活性或工资调整滞后的情况下。假定短缺的消费品价格上涨引起了工资相应上升，那么工资的相应上升意味着成本的相应上升，而成本的上升也将转化为价格的普遍上涨。假定短缺的消费品价格上涨引起了实际收入水平的下降，那么从形式上看，商品市场达到了事后的均衡，即商品供给的缺口消失了，但这是明显地以实物消费量的不足作为代价的，即商品短缺将以消费不足作为可供选择的解决途径。

现在要讨论的问题是：在非均衡条件下，由于资源供给约束的存在，无论是短缺的生产资料价格上涨还是短缺的消费品价格上涨，都不可能利用价格的上涨来促成商品供给的相应增加。商品供给的价格弹性是较弱的。如果商品需求的价格弹性是较弱的或者甚至是正常的，那么在商品供给价格弹性较弱的条件下，价格上涨后商品供给的缺口不可能消失。如果这种情况下商品需求的价格弹性较大，那么价格上涨可能以商品需求的较大幅度下降作为结果，也就是说，商品供给缺口的缓和或消失依然会以实物消费量的不足作为代价。

于是就会有一个值得注意的过程，即商品的短缺以过度需求作为开始，最终，不管工资是否随价格上涨而上升，只要处于资源供给约束的条件下，那么较弱的商品供给价格弹性仍将以消费不足作为整个过程的结束。这就是说，过度需求是由于客观上出现了实物消费量的不足而被强制地缓解。

但问题并不到此为止。由于双轨经济体制的存在意味着第二类非均

衡状态的存在，所以企业缺乏独立商品生产者地位这一事实对商品市场上出现的供给缺口还有着另外的重要影响。要知道，在双轨经济体制之下，一部分商品实行的是固定价格，另一部分商品实行的是市场价格；或者，同一类商品中，有些按固定价格配售，有些按市场价格销售，利润率的差别是存在的。在这种情况下，如果企业是自主经营、自负盈亏的商品生产者，能按自身的经济利益进行经济活动，那么即使存在着两种价格，但企业能够按照自身利益的多少来对待两种价格下的利润率差别，从而以资源组合的调整来适应这种情况。比如说，在企业无法依靠固定价格的原材料供给来满足自己的要求时，它们会参照利润率大小来选择自己的对策，这样，在利益原则的引导下，企业会以调整自己的产量来适应商品市场的短缺。即使在前面已经提到的在商品供给缺乏价格弹性或商品供给价格弹性较弱的资源供给约束条件下，企业产量的调整对由于商品供给缺口存在而引起的物价上涨、实际消费量不足等等仍有一定的缓解作用。然而，如果企业不是自主经营、自负盈亏的商品生产者，不能按自身经济利益进行活动，那么情况便有所不同。

在后面这种情况下，一旦商品市场上出现了供给缺口，物价上涨和实物消费量不足成为不可避免的后果，而企业自身又没有按经济利益来调整资源组合和调整产量的兴趣和可能，企业只好根据行政当局的意图来被动地承受市场商品短缺所带来的成本上升等损失。如果企业按固定价格购进原材料，按市场价格销售产品，那么企业将有盈利，但这不是通过企业努力提高经济效益而得到的。如果企业按市场价格购进原材料，按固定价格销售产品，那么企业会亏损，而这种亏损并不反映企业经营的好坏。即使企业既按固定价格购进原材料，又按固定价格销售产品，但只要原材料和产品的固定价格定得不合理，那么由此造成的企业盈亏不仅与企业经济效益有关，而且是挫伤企业提高自身经济效益的积极性的主要原因。企业提高自身经济效益的积极性受到挫伤，必然使商品供给缺口难以缩小，甚至还会使这一缺口扩大。第二类非均衡条件下商品供给缺口之所以旷日持久，不易缓解，可以由此得到解释。

二、双轨经济体制下商品供给缺口与商品需求缺口的并存

社会主义经济中可能出现商品供给缺口与商品需求缺口并存的情况。前者来自货源的有限，后者来自市场的有限。只要把商品结构问题考虑进去，对两类缺口的并存就不难理解。本书第一章在讨论资源配置

失调与社会主义经济中的“滞胀”问题时，已经对“滞胀”同时出现的原因作了分析。那里的分析对于商品供给缺口和商品需求缺口并存而言，同样适用。下面，着重讨论的并不是两类缺口并存的原因，而是两类缺口并存对商品市场均衡的影响，包括初始影响与继发性影响。

（一）两类缺口并存对商品市场均衡的初始影响

两类缺口并存时，由于商品结构不协调而导致商品供求缺口在总量上完全相等，是极为罕见的。经常发生的，或者是在总量上商品供给缺口大于商品需求缺口，或者是在总量上商品供给缺口小于商品需要缺口。前一种情况显然是：以商品供给缺口为主，商品需求缺口为次；后一种情况显然是以商品需求缺口为主，商品供给缺口为次。

由于商品结构不同，短缺的商品不能依靠过度供给的商品来替代，即货源的缺口与市场的缺口不能相互抵消。

但对于商品市场均衡而言，两类缺口并存的影响却要比一类缺口存在时复杂得多。在这里，需要指出的是，在经济非均衡的条件下，价格是不灵活的，或者说，至少是价格的变动幅度是不对称的。存在着商品供给的缺口时，价格将上涨，而在出现商品需求的缺口时，价格不下降，或只有较小程度的下降。因此，一般价格水平在两类缺口并存时仍有上涨的趋势。再从实物消费量的角度来看，当发生商品供给缺口时，物价的上涨最终会以实际收入下降和实物消费量不足作为代价；而在出现商品需求缺口时，尽管物价不变甚至物价还会有较小幅度的下降，但经济停滞（以滞销商品的生产者生产量减少或生产增长率下降为标志）却会给经济带来以下三方面的结果：

第一，在物价上涨的同时所出现的经济停滞或经济增长率下降，意味着在物价上涨的同时将出现失业的增加或就业增长率的下降；

第二，在物价上涨的同时所出现的经济停滞或经济增长率下降，意味着在物价上涨的同时将出现财政收入的下降或财政收入增长率的下降；

第三，失业的增加或就业增长率的下降，以及财政收入的下降或财政收入增长率的下降，都可能导致实际收入水平的降低或实物消费量的减少。

因此，两类缺口并存与只存在商品供给缺口时所发生的情形有很大的相似之处。这就是在非均衡条件下，以及在商品供给的价格弹性较弱的条件下，无论是只存在商品供给缺口还是商品供给缺口与商品需求缺

口并存，都会引起价格上涨和实物消费量的不足，并且最终都会以实物消费量的不足来缓解商品供给缺口。但这一缓解商品供给缺口的过程，在商品供给缺口与商品需求缺口并存的场合，要比在单纯出现商品供给缺口的场合复杂得多。这与两类缺口并存对商品市场均衡的继发性影响有关。

（二）两类缺口并存对商品市场均衡的继发性影响

关于这种继发性影响，可以从以下两方面来考察：

一方面，商品供给缺口和商品需求缺口尽管不会相互抵消，但彼此交叉影响则很难避免。比如说，假定生产资料的供给不足，消费资料的需求不足；或者，假定一部分生产资料（如原材料）的供给不足，另一部分生产资料（如设备）的需求不足；或者，假定一部分消费资料（如食物）的供给不足，另一部分消费资料（如工业生产的日用消费品）的需求不足，那么在所有这些场合，供给不足的那部分商品的价格将上涨，而需求不足的那部分商品即使滞销、积压，但价格刚性的存在仍会维持这些商品已经达到的价格水平；不仅如此，供给不足的那部分商品价格的上升也会对需求不足的那部分商品价格发生影响，即或者是由各种商品价格互为成本所造成的影响，或者是由于商品比价调整所造成的影响，从而需求不足的那部分商品的价格最终也会上涨。这样，再返回去影响供给不足的商品，价格的交替上涨局面就有可能出现。这在第二类非均衡中尤为明显。

另一方面，假定现在不考虑需求不足的那部分商品的价格刚性的存在，即一旦某些商品出现了供大于求的状况，价格将会下降，于是将导致这部分商品的产量的下降。在市场完善的条件下，产量下降的这些商品的生产部门将发生资源转移，即资源转移到供给不足的商品的生产部门，从而会缓和后者的商品价格的上涨趋势。然而在非均衡条件下，由于市场不完善和资源转移的困难，产量下降的这些商品的生产部门的闲置资源不可能顺利地转入供给不足的商品的生产部门，从而供给不足部门的商品价格上涨趋势仍难以被抑制。但问题并不会到此为止。因供给不足而引起的价格上涨意味着实际收入可能下降，因需求不足而引起的产量下降意味着货币收入也可能下降，这样，无论是供给不足的商品和需求不足的商品的下一轮的产量和销售量都将因居民收入的变动而发生影响，商品市场的非均衡状态不仅不可能在这一变动过程中消失，甚至有可能加剧。可见，这些继发性的影响是不可忽视的，第二类非均衡中

尤其如此。

（三）对社会主义经济中“滞胀”的进一步认识

关于商品供给缺口与商品需求缺口所造成的危害，通常不是被忽略，就是被低估了。这实际上也同对社会主义经济中发生“滞胀”的可能性经常被人们忽视一样。

商品供给缺口的存在，将引起价格的上涨；商品需求缺口的存在，将引起商品滞销而导致的经济增长率下降。两类缺口并存，将会出现一方面经济增长率下降（“滞”），另一方面价格上涨（“胀”）的情况。然而在非均衡经济中，却有可能遇到如下的情况，即经济增长率虽然下降了，但没有下降得那么多，仍然保持着一定的经济增长率；价格虽然上涨了，但没有上涨得那么多，甚至物价指数只有轻微的上升。于是就被看成是“滞胀”并未发生的一个证据。对“滞胀”的认识不足，会在对策的选择上产生失误，从而延误了对已经发生的“滞胀”的治理。

必须指出，在非均衡条件下，社会主义经济中的“胀”分为两类：公开的“胀”和隐蔽的“胀”。公开的“胀”是指价格的上涨，表现为物价指数的上升。隐蔽的“胀”则是指表面上价格未变，物价指数没有上升，但实际上，或者是有价无货，或者要排长队才能买到所需要的商品（根据优先原则实现的配额），或者商品定量、限额供应（根据平均原则、目标原则或历史原则实现的配额）。从商品结构来说，可能有些短缺商品的价格是以公开的“胀”的形式出现的，另一些短缺商品的价格则以隐蔽的“胀”的形式出现。于是公开的“胀”与隐蔽的“胀”并存。

在非均衡条件下，社会主义经济中的“滞”也可以分为两类：公开的“滞”和隐蔽的“滞”。公开的“滞”是指经济增长率下降到较低的水平，包括接近于零或成为负值。隐蔽的“滞”则是指表面上总产值仍有所增长，即经济增长率维持一定的数值，但实际上有效供给却没有增加。比如说，在经济增长率仍维持一定的数值的条件下，所生产的商品中有一些并不是社会所需要的商品，这些商品被生产出来以后，就成为工厂、商店的库存滞销商品。但由于产值仍在增加，所以人们没有认识到这也是一种“滞”，是一种隐蔽的“滞”。

既然“胀”分为两类，“滞”也分为两类，所以在经济生活中，“滞胀”可能有四种不同的组合方式。这就是：

1. 公开的“胀”与公开的“滞”并存而形成的“滞胀”；
2. 公开的“胀”与隐蔽的“滞”并存而形成的“滞胀”；

3. 隐蔽的“胀”与公开的“滞”并存而形成的“滞胀”；

4. 隐蔽的“胀”与隐蔽的“滞”并存而形成的“滞胀”。

有些人不了解“滞”和“胀”都分为两类，不了解隐蔽的“滞”同样是“滞”、隐蔽的“胀”同样是“胀”，因此，对于上述四种不同组合的“滞胀”也会有不同的认识：只承认其中第一种组合的“滞胀”才是“滞胀”；第二种组合的“滞胀”只是“胀”，而不是“滞胀”；第三种组合的“滞胀”也不是“滞胀”，而只是“滞”；至于第四种组合的“滞胀”，则既不是“滞”或“胀”，更不是“滞胀”。这种错误的认识对于“滞胀”的治理显然是十分不利的。它低估了非均衡经济的复杂性。

其实，这四种不同组合的“滞胀”全都是非均衡条件下商品供给缺口与商品需求缺口并存的反映。要解决社会主义经济中的“滞胀”现象，除了要根据具体的情况采取相应的措施以外，更重要的是从理论上认清“滞胀”的不同组合及其出现的可能性，然后再研究商品市场配额均衡实现的方式。

三、商品市场配额均衡逐步实现的可能性

根据以上的分析，我们可以得出以下两个论点：第一，双轨经济体制下的商品供给缺口的存在，甚至商品供给缺口和商品需求缺口的并存，不仅会导致价格上涨，而且还会导致收入下降，使商品市场的均衡状态难以恢复；第二，如果这时是处于双轨经济体制之下，那就表明经济尚未摆脱第二类非均衡状态，即在市场不完善的同时，企业尚未自主经营、自负盈亏，这样，一旦出现了商品供给缺口（更不必说商品供给缺口与商品需求缺口并存了），必须通过商品市场的配额来达到事后的均衡，即配额均衡，但究竟怎样才能实现配额均衡，仍是一个有待于探讨的课题。

当然，双轨经济体制下的商品市场配额均衡是有可能实现的。从理论上讲，以下三方面的措施是促进双轨经济体制下商品市场配额均衡逐步实现的有效措施：

第一，按照前面已经论述的关于从第二类非均衡过渡到第一类非均衡的要求，在双轨经济体制之下，最重要的政策是赋予微观经济单位以充分的活力，使它们从不能自主经营和不能自负盈亏的状态转变为自主经营和自负盈亏。

这是微观经济单位从内部产生自我成长、自我约束的机制必须具备

的前提。只要微观经济单位真正建立了按自身利益来调节生产和经营的机制，那么即使在商品供给不足或商品需求不足存在的场合，微观经济单位至少能够适应市场供求的变化，使商品的供给缺口和商品的需求缺口不至于扩大。

应当指出，双轨经济体制下所产生的传统经济体制与新经济体制的摩擦，主要不是反映了两种价格的摩擦或两种市场的摩擦，而是反映了微观经济单位本身活力的缺乏以及由此而造成的微观经济单位对两种价格、两种市场的不适应，反映了微观经济单位本身缺乏利益的制约以及由此而造成的交易行为的扭曲。要知道，只有在经济处于均衡状态中，也就是处于完全竞争并且既无超额需求、又无超额供给的条件下，才有可能存在一种价格（完全竞争的市场价格）、一种市场（完全竞争的市场），而在非均衡条件下，在经济中存在着各种不完全竞争以及存在着商品供给缺口和商品需求缺口的条件下，经济中始终存在两种价格（即完全竞争的市场价格和不完全竞争的市场价格）、两种市场（完全竞争市场和不完全竞争市场），通过配额来应付有限的货源或有限的市场的情况也是始终存在的。因此，对于双轨经济体制下的商品市场中的问题，首要的是把微观经济单位改变为自主经营、自负盈亏的商品生产者，让它们适应于两种价格、两种市场的事实，并且通过它们根据自身的利益原则而发挥的自我调节和自我制约作用来缩小商品市场上的供给缺口或需求缺口。

第二，要等到所有的微观经济单位都已经转变为自主经营、自负盈亏的商品生产者再着手处理商品市场上的供给缺口或需求缺口问题，是不现实的，而且实践中会使经济蒙受许多不必要的损失。

在这种情况下，需要采取的措施是：在促使微观经济单位转变为自主经营、自负盈亏的商品生产者的过程中，要正确处理政府调节与市场调节之间的关系，让政府调节与市场调节共同对商品市场的供给缺口与需求缺口起作用，商品市场的配额均衡将在政府调节与市场调节起共同作用的条件下实现。两次调节将在商品市场配额均衡实现的过程中体现出来，这是指：尽可能让市场调节在商品市场配额均衡的实现中起作用，而让政府调节作为高层次的调节，对于市场调节所不可能实现的商品市场配额均衡任务起再调节的作用，直到配额均衡逐步实现。在这里，不能把第一次调节与第二次调节的作用颠倒过来，否则，商品市场配额均衡的实现将是困难的，而且即使勉强地达到了配额均衡，但从经

济运行的连续过程来看，在商品市场上继续存在着供给缺口或需求缺口的条件下，再度实现商品市场配额均衡的难度将不会减少，只会增大。

第三，由于通过政府调节与市场调节所实现的配额均衡是在微观经济单位逐步转变为自主经营、自负盈亏的商品生产者的过程中达到的，因此要积极利用政府调节的影响来促进非均衡程度的减轻。

这就是说，一方面应当注意到在微观经济单位尚未完全自主经营、自负盈亏时，它们的实际处境对于政府调节与市场调节的干扰，也就是对于商品市场配额均衡实现的干扰；另一方面则应当注意到，如果正确地处理政府调节与市场调节之间的关系，并根据这种关系来制定调节措施，那么在商品市场配额均衡实现过程中，微观经济单位的自主经营、自负盈亏的实现过程也会加快。这就是商品市场配额均衡的实现对于第二类非均衡向第一类非均衡转变的积极影响。

5.2 APPLYING QUANTITY–PRICE ADJUSTMENT MEASURES IN THE COMMODITY MARKET

5.2.1 Quantity–Price Adjustment Measures in Broad Sense and Narrow Sense

If the economy only encounters commodity supply gap, it is necessary to apply quantity–price adjustment measures in order to achieve ex post equilibrium. It is also necessary to set the priority for quantity adjustment measures and price adjustment measures in the comprehensive adjustment package according to the scale of ex ante disequilibrium conditions in the commodity market so that ex post equilibrium in the commodity market can be realized. Simply put, the more severe the ex ante disequilibrium conditions, the more important the quantity adjustment measures, relatively speaking; the less severe the ex ante disequilibrium conditions in the commodity market, the less important the price adjustment measures, relatively speaking.

In our discussions on quantity adjustment measures and price adjustment measures, both price adjustment measures and quantity adjustment measures are discussed in their broad sense. The broad sense of price adjustment measures is different from their narrow sense. The narrow sense of price adjustment measures refers to the sole adjustment of commodity prices (including the prices of production materials and consumer goods). For example, lowering prices will lower production costs, causing supply to increase; raising prices will lower sales of finished goods and curb demand, both of which can serve the purpose of removing commodity supply gap. The broad sense of price adjustment measures broadens the scope of price adjustment related to the price of commodities to the adjustment of prices in other markets, such as adjusting interest rates in the money market, wages in the labor market, real estate prices or rental rates in

the real estate market, and exchange rates in the foreign exchange market. They are all included in the broad sense of price adjustment measures. The broad sense of quantity adjustment measures is also different from the narrow sense. The narrow sense of quantity adjustment measures refers the sole adjustment of commodity quantities (including the quantities of production materials and consumer goods). For example, under certain circumstances, increasing or lowering the quantity of the commodities that are not subject to rationing and lowering or increasing the quantity of the commodities that are sold at fixed prices will help increase supply or curb demand, thus removing the commodity supply gap. The broad sense of quantity adjustment measures broadens the scope of quantity adjustment from commodity quantities to the quantity in every other market. Here are some examples:

Adjusting credit scale available for the money market is a form of quantity adjustment. Using a dual-credit mechanism (under which planned credit mechanism and market credit mechanism coexist) as well as adjusting the respective weights of planned credit scale and market credit scale in total credit scale are both quantity adjustment measures. Adjusting the required deposit reserve ratio, a tool used by the central bank, is also a quantity adjustment measure, not a price adjustment measure, in spite of some similarities between adjusting the required deposit reserve ratio and adjusting interest rate, because changes of the required deposit reserve ratio directly impact the credit scale of commercial banks.

In terms of the labor market, adjusting the size of employment, changing the structure of the labor force or retirement age, as well as using a dual employment mechanism (under which permanent jobs and contract jobs coexist) are some of the quantity adjustment measures.

In terms of the real estate market, controlling the volume of rental properties or properties available for sale is a quantity adjustment measure.

In terms of the foreign exchange market, using export subsidies and import and export quotas and controlling foreign exchange without adjusting foreign exchange rates are also some of the quantity adjustment measures.

Moreover, fiscal adjustment measures are primarily quantity adjustment measures in a broad sense. They are not price adjustment measures. It is relatively easy to understand the quantitative nature of fiscal expenditure regulation. How to understand the nature of fiscal income regulation? Selling government bonds primarily is a quantity adjustment measure, because the quantity of additional government proceeds is determined by the sale of government bonds. It is the same with the sale of state assets. Price is certainly a factor, but quantity adjustment should come first. As for tax regulation, we should look at it this way: Determining the total quantity of tax revenues and adjusting the tax structure are undoubtedly quantity adjustment measures, whereas determining and adjusting tax rates to a certain extent have some quantity adjustment features. The quantity of taxes is not necessarily related to the ratio of supply to demand on which price adjustment falls back. Some Western economic theories have also regarded taxes as the market price for public goods. We will not talk about to what extent this argument is right or wrong. If we look at the market of public goods, it is different, by nature, from the abovementioned commodity market, money market, real estate market, or foreign exchange market. This is because the most important public goods—national defense, justice, and police—representing security, righteousness, and order, have a sole provider, the government. Buyers have no alternatives, and the price of these most important public goods is determined by the supplier and is normally unrelated to whether or not supply and demand are balanced, nor is it related to the price elasticity of supply or the price elasticity of demand. Therefore, even though we know tax rate regulation to some extent share some of the features of price adjustment, it is quite different from the price adjustment in a normal

market. By the same token, we believe that changing tax rates is to some extent a quantity adjustment measure.

5.2.2 Quantity Adjustment and Price Adjustment Versus Market Regulation and Government Regulation

As discussed above, when only commodity supply gap exists or supply gap and demand shortfall coexist, quantity adjustment measures are always applied in coordination with price adjustment measures. Before learning how quantity adjustment measures and price adjustment measures are coordinated, we have to analyze their relationship.

Can we simply think that price adjustment is primarily related to market regulation and quantity adjustment is primarily related to government regulation? We should admit that the argument has no theoretical grounds, nor is it consistent with the economic realities. Price adjustment can work either under market regulation or under government regulation. The situation where price adjustment works under market regulation refers to the following case: If supply exceeds demand or vice versa in the economy with no government intervention, changing demand or supply in the market will change prices, which will in turn change demand and supply until they reach a balance in the end. Such autonomous changes in prices are the price adjustment under market regulation. The price adjustment that works under government regulation refers to the following case: When supply exceeds demand or vice versa in the economy, the government intervenes by regulating prices to influence demand and supply using measures such as raising or lowering fixed prices, setting a price ceiling or floor on market prices and allowing market prices to fluctuate within a certain band. Therefore, the price adjustment under government regulation means that the government uses price as leverage to regulate demand and supply in the market. The above explanations of the price adjustment under market regulation and government regulation are applicable to price adjustment in both its

narrow sense and broad sense.
